S. Trutta, Lin.; *la Truite Saumonée*, Bl.; *Sea Trout*, Jardine. Usually about eighteen inches in length, and weighing three or four pounds. Mr. Yarrell, however, mentions having seen in London, in 1831, a female weighing seventeen pounds. It is distinguished from the Salmon by the hinder edge of the gill-flap being less rounded, by the union of the opercule with the subopercule, and the lower edge of the latter being oblique so as to form a large angle with the body of the fish, and by the hinder edge of the preopercule being rounded. The teeth are more slender and numerous, and those on the vomer extended further along it, and indenting the tongue deeply between the two rows of teeth there placed. The tail is smaller than in the Salmon, but, like it, is square in the full-grown fish, though less forked in the young. The head is about a fourth of the whole length of the body, which is deep in comparison with its length; the second ray of the dorsal fin longest, and the last directly in the middle of the whole length of the fish, as is the fatty fin midway between it and the extremity of the tail. The scales are rather more oval than in the Salmon; the lateral line straight and in the middle of the body. Upper parts bluish-black, becoming lighter on the sides, and marked principally above the lateral line with spots in form of an X; cheeks, gill-covers, lower part of the sides, and belly white; pectoral fins bluish-white; ventrals and anal white; the other fins of similar colour to the back. In Devonshire, Wales, and Ireland, this fish is called the *White Trout*; it is also found in the Cornish rivers and in the Severn, and is very numerous in the Esk and Eden. Agassiz considers that the species described as *S. Lemanus* by Cuvier, and shortly noticed by him as having the head and body marked with small, round, blackish spots upon a white ground, and the *S. Albus* of Rondeletius, to be identical with this species. The Sea Trout makes its appearance in the Scottish rivers about the first week in June; the run, as it is called, increases gradually to the

middle of the month, when it is at its height, and from that period declines. As the shoals of this species coast along the bays and headlands, they are seen leaping and sporting about in great numbers, and in some of the smaller bays may be traced circling it several times as if employed in feeding. They do not seem to be very choice in their food when in the estuaries, as the contents of the stomachs of those which are then taken are found to consist of the remains of small fish, flies, beetles, or other insects carried out by the wind and tide, of which the *Phylopertha Vulgaris*, or Bracken Clock, forms in some districts the largest portion; the *Talitrus Locusta*, or Common Sandhopper, is their most common food, and the stomach is often completely filled with it. They enter the rivers in great numbers, and on this account are a great nuisance in fishing for Salmon; two or three hundred being often taken at a draught, and those not of the smallest, the size of the meshes in the Salmon net allowing the escape of the small fish.

S. Albus, Flem.; *Phinock*, or *Herling*. Rarely reaches a foot in length. Mr. Yarrell says it so exactly resembles the young of the Sea Trout, that he cannot point out any distinguishing specific character. M. Agassiz considers it to be the same species. It does not come to the rivers till the middle of July, when the Sea Trout has fallen off, and its numbers are in the proportion of ten to one of the latter. It is called by the fishermen the *Smaller Sea Trout*, and Flemming thinks it is probably the *Saumon Cumberland* of Lacepede.

S. Eriox, Lin.; *Bull Trout*, Yarr. Is about a foot and a half or two feet long, and from three to six pounds in weight. The opercule is larger than in either the Salmon or the Sea Trout; its vertical edge is straighter, the hinder angle more extended, its junction with the subopercule nearly parallel with the axis of the body, and the lower edge of the latter parallel to the line of its union with the former; the interopercule much deeper vertically, and the vertical edge of the preopercule more sinuous; its teeth are longer and stronger than in *S. Salar*, but like it the two or three teeth on the vomer are placed only on its front. The head is about a fourth of the whole length of the fish, and its body similar to that of the Salmon, but thicker about the nape and shoulders; the base of all the fins are more muscular, as is also the fleshy part of the tail, the fin of which is square at a twelvemonth, when, and during the second year, it is called a *Whitling* in the Tweed; afterwards it is known as the *Bull Trout*; and the middle rays of the tail continuing to increase in length, the fin becomes of a rounded form, and hence in the Annan it is known as the *Round Tail*. The back and sides above the lateral line are deep grey, marked with numerous and somewhat cruciform purplish spots; the belly silvery, and the sides tinged with yellow. In the spawning season the head of the male becomes olive-brown, the body reddish or orange-brown, but in the female blackish-grey; all the fins dusky except the dorsal, which is reddish-brown spotted with a darker tint, and the caudal, which is dark brown. The dorsal fin commences at the midst of the back, and its base is longer than its longest ray; the fatty fin large, and nearer the tail than the dorsal fin; the scales are thin, and smaller than those of a Salmon of corresponding size. It is found in the North Seas, in the British and Irish Channels; it comes up the Esk between July and September, and is then in spawn; and its fry are believed to go down

SALMO. earlier to the sea than that of the Salmon. The young of this species are known in Northumberland and Durham as the *Warkworth* and *Coquet Trout*. Occasionally it weighs as much as twenty, but more commonly is under fifteen pounds weight. Its flesh when in season is of a pale orange or yellowish-white colour, and it is not considered so good as Salmon.

S. Salmulus, Willugh.; *Parr*, Jard. From five to eight inches in length; the head about one-fifth of the total length; lower jaw shorter than the upper; teeth small, disposed in five rows on the upper surface of the mouth; on each side of the lower jaw a row of small teeth, and on either side of the tongue near its tip two or three small hooked teeth; the opercle rounded and thus approaching the Salmon, but differing from the Trout, in which it is angular; the interopercle longer and narrower; the maxillary bones very short, and rendering the gape much less than in a Trout of the same size; the body of greater girth than in the young Salmon of the same size; the last ray of the dorsal fin midway between the tip of the nose and the end of the upper half of the tail, its third ray the longest, and the whole base of the fin much shorter than it; the fatty fin midway between the first dorsal ray and the end of the upper half of the tail; the pectoral fins of great size, nearly as long as the head; the tail much more deeply forked than in the Trout. The head is green and ash; gill-covers varying green and purple, with one and sometimes two round, dark-coloured spots on each; back and sides dusky, with numerous dark-coloured spots above the lateral line, along which are from sixteen to thirty bright vermilion spots; sides marked with nine or ten oval, dusky bluish bars, which gradually fade and disappear, but much later than in the Salmon; belly white; dorsal fins marked with a few dusky spots, all the others inclining to yellow. In Scotland this fish is known as the *Parr*; in Yorkshire it is called the *Brandling*, or *Fingerling*, from the marks on its sides; in Devonshire it is called the *Heppar*; in Herefordshire it is known as the *Samlet* and the *Laspring*; and in the Thames it bears the name of *Skegger*. It has long been matter of dispute whether the Parr be not the young of the Salmon, Sea Trout, Bull Trout, or Common Trout, and Agassiz still considers it as being identical with the latter species. Jardine and Yarrell, however, both consider it distinct; the former says, "In the markings they are so distinct as to be at once separated from the Trout by any observer;" and the latter observes that their difference from the Salmon "is sufficiently obvious, from the circumstance that Parrs by hundreds may be taken in the rivers all the Summer long after the fry of the year of the larger migratory species have gone down to the sea; and the greater part of these Parrs taken even in Autumn do not exceed five inches in length, when no example of the young Salmon can be found under sixteen or eighteen inches, and the young of the Bull Trout and Salmon Trout (Sea Trout) are large in proportion." They begin to deposit their spawn in the sand during December, and, perhaps, part of January, and as soon as this function is performed retire to the sea in January and February with empty bellies, and of an emaciated appearance. According to the temperature of the weather, the fry are hatched in April or May, and continue in the rivers till Autumn, when the old fish return from the sea, at which time, but not before, they acquire their full size. They frequent the clearest streams with a fine gravelly bottom,

and are seen in shoals constantly day and night in great activity. **SALMO.**

The following species, though never leaving the fresh water, are to be included amongst the migratory, as they are, in like manner with the fish which leave the sea, obliged to leave the lakes or rivers in which they usually reside, and pass up the tributary streams for many miles for the purpose of spawning in suitable localities. They therefore form a link between those species which enter the rivers periodically only, and those which constantly remain there.

S. Lacustris, Lin.; *Illanken*, Bl.; *Lake Trout*. This fish will weigh from thirty to forty pounds; in form it more nearly resembles the Salmon than the Sea Trout, but has a larger head; the lower jaw curves upwards in the second year; the nostrils are each divided by a membranous partition, giving the appearance of a double nostril on either side; the front of the head and cheeks are marbled with greyish and black; the back deep blue gradually lightening towards the lateral line, below which the body is silvery, but neither on the back nor belly are there any red spots or points; all the fins are grey except the dorsal and caudal, which are blue, the latter tipped with black, shovel-shaped, and but slightly forked. This fish, according to Bloch and Agassiz, is the same as *S. Schieffermulleri*, which is found not only in the Baltic, but also in the lakes of Austria and Switzerland. On the coast of Pomerania it is known as the *Silberlachs*, or Silver Salmon, and weighs about six or eight pounds; it is caught in Summer and Autumn, but in Austria it is taken only in May, and hence gets its name *May-forelle*, or May Trout. In Austria and Switzerland it never leaves the fresh water, but remains in the rivers or lakes throughout the year. This curious circumstance of a fish, which in some parts of the world makes an annual visit to the ocean and in another remains stationary, as it is considered impossible for any Salmon to ascend the Rhine by leaping the falls of Schaffhausen, is accounted for by Bloch's supposition, that at the time of the deluge some of this and other species have been permanently transferred from the sea to the lakes. Dr. Wartmann has given, in Bloch's *Ichthyologie*, a very interesting account of this species in the Lake of Constance, from which it appears that, during the Winter, it resorts to the depths of the lake, but on the breaking up of the ice about April it enters the Old Rhine near Rheinegg and Rheinthal, but on account of the rapidity of the current it is a long while in making its way to Gaisau, which is but a little distance from the lake; ten days more are spent in reaching Lustnau, a distance of six miles; and so slow are its motions that the people living at the upper part of that village do not see it till twenty-four hours after it has passed the lower part. It swims leisurely onwards, and at Feldkirch enters the Ill, and hence derives its country name, the *Illanken*. The females enter the river first, the males remaining for some time at the confluence of the river with the Rhine, probably to accustom themselves to the change of water, after which they also ascend and fecundate the spawn. Sometimes the fish make their way up to Coire in the Grisons, and even as far as Rheinwald, a distance of seventy-two miles from the Lake of Constance. When the weather is fine and the water clear, this fish plays about near the surface, but in foul weather it remains constantly at the bottom. After having spawned, they lose a third or even half their weight, and, becoming very poor, speedily

SALMO. return about September to the Lake, and in their passage down the Rhine are floated by the stream with their head opposed to the current, so that they seem to move backwards. Though they deposit a large quantity of ova, the numbers of young fish are comparatively few, as the spawn is preyed upon by Pikes, Eels, Burbot, and Wild Geese; in this way also a great quantity of the fry is destroyed. They feed upon fish, worms, insects, and carrion, and are especially fond of Charr, which they devour with great avidity; and hence, though in great estimation, and considered the best fish produced by the Rhine or by the Lake, the havoc they make among the Charr is not compensated by the small number of them which are taken.

S. Ferox, Jardine; *Great Grey Trout*, Yarr. The length of the head in this species is rather less than a fifth of its total length; the teeth are large, strong, and numerous, forming four lines below and five above, and thus occupying the whole length of the vomer; the free edge of the gill-flap is more angular in the male, and rounded in the female; the junction of the opercle with the subopercle, and the lower edge of the latter, oblique; the dorsal fin begins midway between the tip of the nose and the root of the upper ray of the tail, its third ray longest, and of equal length with the whole base of the fin; fatty fin midway between the dorsal and the extremity of the tail, and opposite the last ray of the anal fin; ventral fins furnished with a long axillary scale; caudal fin always square; scales extremely tough and strong, particularly those forming the lateral line. When in full season, the colours are deep purplish-brown above, changing to reddish-grey, and thence to fine orange-yellow on the breast and belly; gill-covers marked with large, dark spots, and the upper parts and sides of the body marked with spots varying in size and number, in some individuals being few, large, and scattered, in others small and thickset, each spot being surrounded with a paler ring, occasionally assuming a reddish hue. When first caught, the whole body is tinged with rich lake, which fades rapidly as the fish dies. Dorsal fin of same colour as upper parts of body. This fish appears to have been first noticed by Pennant, who says that "in Lough Neagh, in Ireland, are Trouts, called there Buddaghs, which he was told sometimes weighed thirty pounds; and others, probably of the same species, are also taken in Hulse Water, in Cumberland, of a much superior size to those of Lough Neagh." Dr. Heysham says that in the latter lake they sometimes weigh sixty or seventy pounds. They were found in Loch Awe, in Scotland, about forty-five years ago, and have also been met with both in the Orkneys and Shetland Isles. Sir William Jardine says they are distributed in all the larger and deeper lochs of Scotland, roving indiscriminately, and feeding nearly entirely on the smaller fish. They are extremely voracious, and after being hooked and dragged forty or fifty yards will again strike at the bait. It was considered to be similar to the Trout of the Lake of Geneva, which were supposed to be a distinct species, but now believed not to be so.

S. Hucho, Lin.; *le Heuch*, Bl.; *Huchen*, Davy. Sometimes attaining four or five feet in length, and weighing from forty to seventy pounds; in form it resembles an ill-fed Trout, but is longer and thicker; the head, rather pointed, is brown on the upper part and silvery on the cheeks and throat; the sides are silvery tinged with red, and the whole body covered with

violet spots; all the fins have a yellowish tinge, and Bloch says, with the exception of the pectorals, are all similarly spotted to the back; Sir Humphrey Davy, however, says he has never seen any of the fins spotted, but thinks there may be some stream in Bavaria producing such variety, as he considers it, Professor Wagner having told him he had seen this spotting on the fins, although in the specimens at the Munich Collection there is no such marking. The vent is very near the tail, which is forked. According to M. Agassiz the young fish are marked with large, transverse black bands upon the back down to the middle of the sides, which in the second and third year break up into black spots less deep in colour, and gradually subsiding till the whole fish is nearly of a uniform colour; the fins also in the young fish have a reddish tinge. The Huchen is found in the Danube and most of its tributaries. In the Save and Laybach rivers they are always found; but it is generally believed they run from the Danube twice a-year, viz., in Spring and Autumn. Sir Humphrey Davy vouches for their migration in the Spring, having caught several in April in "streams connected with the Save and Laybach rivers which had evidently come from the still dead water into the clear running streams, for they had the Winter leech or louse of the Trout upon them." He doubts it being only a fresh-water fish, though generally so considered, "because it is never found beyond certain falls—as in the Traun, the Drave, and the Save; and there can be no doubt comes into these rivers from the Danube, and, probably, in its largest state, is a fish of the Black Sea." It is not, however, compelled like the Salmon to make an annual visit to the sea, but merely falls back in Winter to the warmer waters of the large rivers, which it leaves in Spring to ascend the cooler streams and breed, and it prefers making its voyage when the water is foul so as to escape notice. The fishermen of Grätz say it spawns in the Mur, between March and May, but Marsigli says in June, in the Danube. As already mentioned, they are never found above the great falls of the streams connected with the Danube, nor in any of those in this district which run into the Rhine and Elbe, or which empty themselves into the Mediterranean, though Trout are found in all, and Salmon and Sea Trout in those connected with the ocean. According to Pallas, it is also found in the rivers of Siberia. The Huchen is the most predaceous fish of this genus; when on the watch, it will be immovable for several minutes like the Pike, and then dash with violence on its prey. To this habit of keeping still may probably be attributed the great number of lice with which in Spring its gills become so infested as almost to preclude respiration, in consequence of which they resort to the most turbulent streams to get rid of their plague, and are stopped neither by torrent nor cataract unless the height be too great for them to overcome it.

SECTION II. *Stationary.*

S. Fario, Lin.; *le Salmone Truite*, Lacep.; *Common Trout*, Flem. From twelve to thirty inches long, of which the head measures one-fifth, exclusive of the caudal fin; and the depth of the body rather more than the length of the head. The head is blunt, and the whole length of the vomer covered with teeth strong and curving backwards, the dorsal and ventral convexities corresponding to each other; the back and

SALMO.

sides marked with numerous reddish-brown spots on a yellow-brown ground; the lower parts of the sides are golden-yellow, and the belly white; the lateral line marked with ten or a dozen bright red spots, and a few of the same colour are both above and below it, but all vary much in size and colour. In the young fish Agassiz says that these spots are yellow, green, brown, and even black and violet, also black and red, but at length they all entirely disappear; the dorsal, caudal, and fatty fins are brown marked with darker spots, and the latter tipped with red; the other fins pale brown; tail a little forked, but becoming square in the old fish. The Trout is found in most rivers and lakes, but prefers the cold streams of the mountains which run swiftly over a gravelly bottom. Risso mentions it as being found in the Maritime Alps at a height of between 4000 and 5000 feet above the sea. It swims with very great rapidity, and, like the Salmon, springs out of water to a considerable height. It is very voracious, and feeds upon small fish, not excepting its own species, on fish spawn, and also upon snails, worms, and aquatic insects. It spawns in September or October, and thrusts itself among the roots of large trees or beneath stones to deposit its eggs. The young Trout are seen constantly sporting over the gravelly shallows, but the older fish remain in deep water concealed under large stones; these haunts they only leave to feed, and, having satisfied their hunger, return to their old station; a circumstance very well known to poachers, who avail themselves of it to capture them by *tickling*. Dr. Brookes, in his *Art of Angling*, 1740, mentions this trick. He says, "I knew one who was very expert in that art; he would grope for them (Trouts) in their lurking places, and gently tickle their sides, which they seemed delighted with, till at length, approaching their gills, he held them fast and made them prisoners." And an old quaint writer, Thomas Cogan, in his *Haven of Health*, 1589, observes, "This fishe of nature loveth flatterie; for being in the water it will suffer it selfe to be rubbed and clawed, and so be taken." Trout are in highest season and exhibit the most beautiful colours from the latter end of May till towards the end of September; this depends on the greater quantity and variety of their food, of which insects seem the most nutritive, according to the observations of Mr. Stoddart in his *Art of Angling as practised in Scotland*, in which a relation is given of some experiments to decide the value of different food. Fish were placed in three different tanks, and it was noticed that "the Trout fed with worms grew slowly and had a clean appearance; those nourished on minnows, which it was observed they darted at with great voracity, became much larger; while such as were fattened upon flies only (the small dark-coloured water-flies found moving about on the surface under banks and shady places) attained in a short time prodigious dimensions, weighing twice as much as both the others together, although the quantity of food swallowed by them was in no wise great." The brilliancy and variety of colour in the Trout seems to depend materially both on the nature of the water in which they live and the kind of food by which they are nourished. The Black Moss Trout of Loch Knitching is said to acquire its colour owing to the drainage of boggy moors into the waters in which it lives; and Sir Humphrey Davy states, that "fish in a cool, clear river, that feed much on larvæ and that swallow their hard cases, become yellower, and their red spots increase so as to out-

number the black ones; and these qualities become fixed in the young fishes and establish a particular variety." Mr. Yarrell also mentions that the albuminous nature of spawn of fish is also the cause of similar brilliant marking. The flesh of Trout varies in colour; sometimes it is found white, and at other times red, the former is its state in Winter, when out of season, and the latter in Summer, according to Bloch. But Davy considers the colour permanent, marking a variety in the fish, and depending originally upon some accidental circumstance as to food and water; for he states that Trout taken from a lake in Scotland, and remarkable for their deep red flesh, when transferred into another lake where the Trout had white flesh, retained their peculiar red colour for many years, and though mingling at spawning time in the brook supplying the lake with those originally belonging to it, could still be distinguished by their darker backs and brighter sides. By degrees their colour became changed, their young were less red than the parent fish, and in about twenty years the colour was so entirely lost that no distinction of colour existed between the two kinds, but all were alike white.

It has not been ascertained to what age the Trout lives, but Stephen Oliver, in his *Scenes and Recollections of Fly Fishing*, 1834, mentions that, "in August 1809, a Trout died which had been for twenty-eight years an inhabitant of the well at Dumbarton Castle. It had never increased in weight from the time of its being put in, when it weighed about a pound; and had become so tame that it would receive its food from the hands of the soldiers." The *Westmoreland Advertiser* of August, 1826, also speaks of a Trout which had lived fifty-three years in a well near Broughton in Furness. The Trout usually taken measure from twelve to seventeen inches, and weigh from one to two pounds, but occasionally they are caught of much larger size. In 1818 a Trout was netted in the Isis, near Oxford, by Rose, a fisherman, which measured thirty inches in length, sixteen in girth, and weighed fourteen pounds and three-quarters. Oliver records one caught at Great Duffield, in September, 1832, which measured thirty-one inches in length, twenty-one in girth, and weighed seventeen pounds. Another is mentioned in the *Linneæan Transactions*, caught in a branch of the Avon about ten feet wide, behind Castle Street, Salisbury, which when first taken from the water weighed twenty-five pounds; it was put in a pond, where it lived four months, and during that time lost three pounds and three-quarters of its weight. Mr. Yarrell mentions a Trout of thirty inches in length, and fifteen pounds in weight; and another of twenty-eight inches length, and eleven pounds weight, both netted and caught in the Spring of 1835.

There is a peculiar kind of Trout found in Lough Neagh, called the *Gillaroo*; this is considered by Pennant, Yarrell, and Agassiz to be merely a variety of the Common Trout; the cuticular covering of the stomach is remarkably thick, but the other coats not thicker than in the Trout; it was filled with the shells of the *Paludina Impura*. In no other respect has any difference between the two fish been ascertained. Sir Humphrey Davy, however, is inclined to believe the *Gillaroo* a distinct species, and says that he has caught some not longer than his finger, in which the stomach was as hard as in the larger ones, with the same thickness of coat, and the same shells contained in it; he

SALMO.

SALMO. also states that he has never met with this fish in any of the lakes on the European Continent; and indeed, **SALMON.** as far as is at present known, it seems confined to the lakes of the County of Galway. Sir Humphrey considers the Gillaroo as forming the link between the Trout and the Charr.

M. Agassiz considers the *S. Erythrinus*, Lin., *Sylvaticus*, Schrank, *Alpinus*, Bl., *Marmoratus* and *Punctatus*, Cuv., to be merely the Common Trout under its different markings.

S. Umbra, Lin.; *l'Ombre Chevalier*, Bl.; *Northern Charr*, Yarr. From nine to twelve inches long, and sometimes reaching two feet; length of the head about one-sixth of the total length; teeth small, four rows below, and as many above, besides which there are a few only in the front of the vomer; dorsal fin commences midway between the nose and the fatty fin, and the hind edge of the latter midway between the last ray of the dorsal and the longest of the caudal fin; pectorals small; ventrals commencing midway between the nose and the root of the tail, their axillary scale half as long as the fin; anal small; caudal deeply forked; upper parts of the head and body umber-brown, lighter on the sides; belly and lower fins deep reddish-orange, the first ray of the ventral and anal white; dorsal and caudal fins dark purplish-brown; gill-covers yellowish-olive; lateral line straight, but rising gradually to the top of the gill-flap; sides, both above and below this line, spotted numerously with red. In this state it is the *S. Salvelinus* of Meidinger. When its colours are not so bright, and the upper parts of the head and body are purplish-brown, becoming lighter towards the sides, which are silvery, the belly pale orange, and the spots above the lateral line white, all the lower fins brownish-red, the dorsal brown, and the tail purplish-brown, it is the *S. Alpinus* of Linnæus. M. Agassiz says, that whilst this species is young it is of a greenish-yellow colour with a white belly, the green subsequently becomes of a deeper colour, and the belly merges into yellow and orange, and finally assumes a golden colour; the sides are early marked with ocellated yellow spots, but ere long these subside entirely. From this variation in colour at the same time of year, the Charr in our several Northern lakes are supposed to be different, and are hence called *Case Charr*, *Gilt Charr*, *Red Charr*, and *Silver Charr*, but Pennant states that, after close examination, he could find no specific difference. Jurine says that, in the Lake of Geneva, the females have the finest colours, whilst, on the contrary, Mr. Mascall states that the males of Ennerdale Lake in Cumberland have the preference. This variation Mr. Yarrell considers dependent on the vigour of the fish rather than being a sexual difference. The Northern Charr is found in the lakes of the North, and of the mountainous parts of

Europe, especially in those of the Lapland Alps, where **SALMO.** it feeds on the larvæ of the Gnats which pester the **SALMON.** Rein-deer. It is found also in many of the English, Scotch, Irish, and Swiss lakes. It prefers the deep water, and rarely leaves the lake excepting at spawning time, which is in November and December, when they pass up the rivers in shoals.

S. Salvelinus, Donovan; *le Saumoneau du Rhin?* Cuv.; *Welsh Charr*, Yarr. Not exceeding seven inches in length; the head about a fifth of the total length, and the depth of the body equal to the length of the head; teeth very large, those on the vomer only near its fore part; dorsal fin commencing midway between the tip of the nose and the root of the tail; hinder edge of the fatty fin midway between the last dorsal and the tip of the longest caudal ray; pectorals large; ventrals half way between the hinder edge of the orbit and the origin of the tail, the maxillary scale not a third of the length of the fin; tail not deeply forked; upper parts of the head and body dark brown or blackish-green, becoming of an olive tinge on the sides, which fades below the lateral line into golden, and becomes deep reddish-orange on the belly; above the lateral line a few small, round, yellowish-white spots, upon and below it numerous red ones; the sides marked with dusky patches common to the young of this genus; all the fins brown except the ventral and anal, which are dark reddish-orange, and the first ray of each of the latter yellowish white. Mr. Yarrell considers this a distinct species from the former, its shape being less elegant and its fins larger. Agassiz, however, thinks it merely the young of the preceding, as already mentioned. It is found in Llanberris Lake or in Llyn Cawellyn, situated on the sides of Snowdon, and is called the *Torgoch*, or *Red Belly*. During Summer the fish remain in the depths of the lakes, but appear in the shallows about the middle of December, probably for the purpose of spawning.

Other species of this genus have been named by various writers, but as their exact place is not at present fully determined, it is better that they should not be here mentioned.

Cook. *Third Voyage*, book iii. ch. xi.

SALPA, in *Zoology*, a genus of *Tunicata*.

Generic character. Body free, oblong, cylindrical, truncated at one or both extremities; head none; exterior tunic soft, with hollow tubercles, which act as suckers, variable in number and disposition; orifices mostly terminal; one larger, transverse, with a movable lip, the other tubercular.

Type of the genus, *S. pennata*, Lamarck; *Anim. sans vert.* vol. iii. p. 110. Several species, all inhabitants of the ocean. The *S. moniliformis* is common amongst the Western Islands of Scotland in August.

SALPIGLOSSIS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Bignoniaceæ*. Generic character: calyx five-angled, five-cleft; corolla funnel-shaped; rudiments of five filaments between the long stamens; style strap-shaped; stigma truncated; capsule two-celled, two-valved.

One species, *S. sinuata*, native of Chili.

SALPINGA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Melastomaceæ*. Generic character: calyx very long, eight or ten-ribbed; corolla, petals four or five, acute, conniving; style short; stigma orbicular; capsule triangular, free within the calyx, three-valved; seed numerous.

Four species, natives of South America.

SALPINGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* rather short, clavate, the basal joint robust, globose, the two following of nearly equal length, obconic, the succeeding two rather stouter, nodose, the remainder forming an elongate five-jointed club, the three first joints of which are transverse, semiglobose, and the terminal one subovate, acute; *palpi* filiform, with the terminal joint rather thickened, obtuse; *labrum* quadrate; head depressed, produced anteriorly into a rostrum, which is generally a little elongate, and contracted in the middle; *thorax* subcor-date, narrowed behind, the lateral margins entire; *elytra* rigid; body oblong-ovate, glabrous, with the head and thorax considerably narrower than the elytra; legs quadrate; *tarsi* heteromorous, the four anterior five-jointed, the two posterior four-jointed.

Type of the genus, *Curculio ruficollis*, Linnæus; Stephens, *Britt. Ent. (Mundibulata)*, vol. iv. p. 217. About eight species, half of which occur in Britain; being usually found beneath the bark of trees.

SALSOLA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Chenopodeæ*.

Generic character: calyx five-leaved, capsular at the base; corolla none; styles two or three; capsule one-seeded; seed spiral.

More than forty species, mostly natives of the sea-shores of Europe; all the species abound in the salt called soda, particularly *S. kali*, a native of the sea-shores of Great Britain.

SALT, *n.*

SALT, *v.*

SALT, *adj.*

SA'LTER,

SA'LTERN,

SA'LTISH,

SA'LTLESS,

SA'LTNESS.

Fr. *sel*; It. *sale*; Sp. *sal*; Lat. *sal*. *Ab αλος, est salis, et per aphæresin, sal.* (Vossius.) The Gr. *αλος, sal*, is derived by Lennep from *αλ-ειν, coacervare*; so named *a naturæ ad coagulandum proclive*; (see the Quotation from Pliny;) further, that the sea is so called, *ob salsedinem aquæ*, from the salt taste of the water. His editor, Scheideus, deduces the word, *a notione exsiliendi, subsultandi*; it being the nature of salt to leap and explode when thrown upon fire: (of course it must have been thrown upon fire before it received this name.) Salt is used, consequentially,

Seasoning, savour, taste, relish; adjectively,

Having a taste, relish, inclination for—salacious. Met.

Wit, humour; high seasoning or savour.

Of salt fysch and eche fresch, and fayre ryneres ther to.

R. Gloucester, p. 1.

Ye ben salt of the erthe, that if the salt vawishe away wherynne schal it be saltid.

Wiclif. Matthew, ch. v. p. 6.

I am your doughter, your Custance, quod she,

That whilom ye han sent into Surrie;

It am I, fader, that in the salte see

Was put alone, and dampned for to die.

Chaucer. *The Man of Lawes Tale*, v. 5463.

But passe thei the salte fome,

To whom Christe bad thei shulen preche

To all the worlde, and his feith teache.

Gower. *Conf. Am.* book iv.

True preaching is a *salting* that stirreth vp by persecution, and an office that no man is mete for, saue he that is seasoned hymselfe.

Tyndall. *Workes*, p. 196.

Every man sees (as I sayd before) new wax is best for printing; new claie fittest for working; new shorn woll aptest for sone and surest dying; new fresh flesh for good and durable *salting*.

Ascham. *Schole-master*, book ii. p. 221.

But of the causes of all these things, and of the ebbing and flowing and *saltness* of the sea; and finally, of the original beginning and nature of heaven and of the world, they hold partly the same opinions that our old philosophers hold.

Sir Thomas More. *Utopia*, book ii. ch. vii.

Salt is either artificiall or naturall; and both the one and the other is to be considered in many and divers sorts, which may be reduced into two causes; for salt commeth either of an humor congealed, or els dried.

Holland. *Plinie*, book xxxi. ch. vii.

Much like as when the beaten marinere,

That long hath wandred in the ocean wide,

Ofte soust in swelling Tethys saltish teare.

Spenser. *Faerie Queene*, book i. can. 3.

He that hath beheld what quantity of lead the test of *saltless* ashes will imbibe, upon the refining of silver, hath encouragement to think it will do very much more in water.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. v.

A salt-eat made at the sallern.

Mortimer.

The earth that is brackish, and standeth much upon *saltpetre*, is thought to be more sound for many plants than others.

Holland. *Plinie*, book xvii. ch. iv.

Now when the solemn rites of prayer were past,

Their salted cakes on crackling flames they cast.

Dryden. *Iliad*, book v.

Where is the salt? where are the hospitable tables? For in despite of these he has been the author of these troubles.

Potter. *Antiquities of Greece*, vol. ii. book iii. ch. xxi. p. 415.

SAL-
SOLA.
SALT.

SALT. I asked of a *salter* how manie fornaces they had at all the three springs, and he numbred them to eightene score.

Holinshed. Description of England, book iii. ch. xiii.

SALTICUS.

I return to the embalming of the Egyptians; and shall next proceed to speak of the surgeon or embalmer, and all other inferior officers under him, such as the dissector, emboweller, pol-
linctor, *salter*, and other dependant servants.

Greenhill. On Embalming, p. 283.

Salt-petre, in Latine, *sal-petræ*, rather so called because, *exudat* & *petris*, it usually sweats out of rocks, than because it is wrought up at the last to a rocky or stony consistency.

Fuller. Worthies. Northamptonshire.

This prickly shrub delights most in barren sandy grounds; and they [prickle-pear, or shrub] thrive best in places that are near the sea; especially where the sand is *saltish*.

Dampier. Voyages, Anno 1685, vol. i. p. 222.

Probably there may be *saltpetre* earth in other places, especially about Passage Fort, where, as I have been informed, the canes will not make good sugar, by reason of the *saltiness* of the soil.

Id. Ib. Anno 1675, vol. ii. part ii. p. 8.

If we had a larger assortment of goods, and a sufficient quantity of *salt* on board, I make no doubt that we might have *salted* as much pork as would have served both ships near twelve months.

Cook. Third Voyage, book iii. ch. vii.

The art of making *salt* was known in very early times to the Gauls and Germans; it is not, therefore, likely that the Britons, who had in several places plenty of *salt-springs*, should be ignorant of it.

Pennant. Journey from Chester.

Whence the sea has derived that peculiar bitterish *saltiness* which we find in it, appears, by Aristotle, to have exercised the curiosity of naturalists in all ages.

Goldsmith. History of the Earth, vol. i. ch. xv. p. 137.

SALT, n. Fr. *sault, saulter*; It. *saltàre*; Sp. *salta*; Lat. *saltus*, from *salire*, to leap or jump; (Gr. αλειν.)
SALTANT, SA'LTANT, }
SALTA'TION. }
SA'LTATORY. } A leap, jump, spring, or bound.

He could make
More wanton *salts* from this brave promontory
Down to this valley, than the nimble roe.

Ben Jonson. The Divelle is an Asse.

And frisking lambs
Make wanton *salts* about their dry-suck'd dams.

Id. Vision of Delight.

When he chaseth and followeth after other beasts, hee goeth allwaies *saltant* or rampant; which he never useth to doe when he is chased in sight, but is onely passant.

Holland. Plinie, book viii. ch. xvi.

HOST. A second, a lavoltetere, a *saltatory*, a dancer with a kit at his bum.

Beaumont and Fletcher. Fair Maid of the Inn, act iii. sc. 1.

Nature to him
Has giv'n a stouter stalk, patient of cold,
Of Phœbus ev'n in youth, his verdant blood
In brisk *saltation* circulates and flows
Indesinently vigorous.

Smart. The Hop-Garden, p. 37.

SALTASH, a Market Town, and formerly a Borough, situated on a steep hill on the right bank of the river Tamar in Cornwall, 220 miles South-West from London. From the reign of Edward VI. to the enactment of the Reform Bill in 1832, Saltash returned two Members to Parliament, the right of election being vested in the Mayor, the Recorder, six Aldermen, and twenty Freeholders. It is now disfranchised. Population, in 1831, 1637.

SALTICUS, in Zoology, a genus of *Arachnidæ*.

Generic character. *Maxillæ* straight, longitudinal, somewhat rhomboidal; *labium* elongate, somewhat oval, the tip obtuse; eyes eight, disposed in the form of a horseshoe, the two middle ones largest; legs eight,

thick and short, formed for leaping, the first pair stoutest, the fourth longest.

Type of the genus, *Aranea scenica*, Linnæus; Latreille, *Gen. Crust.*, &c. vol. i. p. 123. The singular animals included in this genus are known by the names of hunting or jumping spiders; there are ten or twelve species of them found in Britain.

SALTIER, Fr. *saultoir*, St. Andrew's cross, termed so in Heraldry.

Upon his surcoat valiant Nevil bore

A silver *saltire* upon martial red.

Drayton. The Barons' Wars, book ii.

In elder times, ere heralds yet unroll'd

The bleeding ruby in a field of gold,

Or infant language pain'd the tender ear

With fess, bent, argent, chev'ron and *saltier*.

Cawthorn. Nobility, p. 250.

SALTWOOD, a small village with an ancient Church, situated one mile North of Hythe in Kent, is worthy of notice only for the highly interesting remains of its Castle. The walls surround an extensive area, and are strengthened at intervals by square or circular towers, all of which, together with a spacious chapel and other buildings, are now in ruins. The keep is in excellent preservation, and the principal entrance is flanked by two noble towers. The hall within is large, lofty, and the roof vaulted and strongly groined. The situation of the Castle is very picturesque and beautiful, but like many similar places it is not left to the silence and the loneliness which would best accord with its fallen greatness. A farmer and his labourers inhabit the keep, and the eye is consequently offended by the frequent intrusion of objects little in unison with the venerable antiquity which surrounds them. The date of the building is uncertain, and its oldest portions have been attributed in turn to Romans, Saxons, and Normans. The keep was occasionally used as an Archiepiscopal Palace, and was either wholly rebuilt or greatly altered and improved by Archbishop Courtenay in the reign of Richard II., but long before that period it had been a place of strength and importance. Ranulph de Broc, its Castellan in the reign of Henry II., being exasperated against Becket by his excommunication of Robert, his son, from the Archiepiscopal Chair, on Christmas-day, 1170, for some trifling offence, willingly lent his aid to his assassins. Saltwood Castle was their rendezvous, and they slept there the night before the murder, which occurred only five days after the excommunication. Both the De Brocs accompanied the conspirators to Canterbury, and, although not actual sharers in their crime, appear to have witnessed its perpetration. Their descendants, however, were long afterwards resident at Saltwood; and in the North aisle of the Church is the tomb of Thomas Brockhill and his wife, with their effigies inlaid in brass upon it. He is represented in complete armour. The date is 1437.

SALVADORA, in Botany, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx four-cleft; corolla four-cleft; berry one-seeded; seeds furnished with an arillus.

One species, *S. persica*, native of the East Indies.

SALVAGE. See SAVAGE.

SALVAGE, in Law, is a compensation payable by the owners to those persons by whose assistance a ship or its cargo is saved when in danger, or recovered after having been actually lost. This compensation is pay-

SAL-

TICUS.

SAL-

VAGE.

SAL-
VAGE.

able, although the Salvors afford their assistance without any previous communication with the owners, a rule founded on obvious maxims of policy; but when the owners, or persons employed by the owners, are on the spot and refuse the offers of assistance made to them by strangers, the latter cannot, by officiously interfering and obtruding their services, entitle themselves to compensation. There are two occasions when the claim for Salvage arises: 1st, when effects are rescued from the perils of the seas; 2d, when effects are recaptured from an enemy. In the former case there is no rate of Salvage fixed by the Law of England, though by the maritime codes of some foreign States certain rules are laid down by which the amount is to be ascertained. The principle of the English Law is, that the compensation is to be reasonable, and, in determining what is reasonable, regard must be paid to the labour and peril incurred by the Salvors, the promptitude and alacrity manifested by them, the value of the ship and cargo, and the degree of danger to which the latter were exposed, together with any other circumstances which may bear upon the question. When life alone is preserved, Salvage is not payable; but when effects are preserved to which Salvage attaches, the circumstance of life having been also preserved may be taken into consideration. It is the duty of the crew to exert their utmost endeavours for the preservation of the ship and cargo, and therefore they cannot be entitled to Salvage, and passengers stand on a footing somewhat similar; for in the time of danger it is the duty of every one on board to exert himself for the common safety. There is, however, this distinction between the passengers and the crew, namely, that the passengers are at liberty to quit the vessel whenever they please, while it is the duty of the crew to remain so long as there is any reasonable hope of saving the vessel; if, therefore, a passenger, who has the opportunity of quitting the vessel, remains with it, not for the mere purpose of prosecuting his voyage as a passenger, but in order to assist in the preservation of the vessel, he does that which he is not legally required to do, and is entitled to Salvage. When the parties disagree, the amount of Salvage is usually determined either by a jury in Action at Law, or by proceedings in the Court of Admiralty, which latter Court has jurisdiction when the claim arises for services performed on the high seas, or between high and low water mark. The salvors are entitled to retain the effects preserved until their claim is satisfied, or a reasonable compensation is tendered to them. There are various Statutes relating to the mode of affording assistance to ships in distress, and adjusting the Salvage in certain cases. See 12 Anne, stat. ii. cap. 18.; 26. George II. cap. 19.; 48 George III. cap. 130.; 53 George III. cap. 87.; and 1 and 2 George IV. cap. 75 and cap. 76.; some parts of which relate only to the Cinque Ports, and the others to the rest of the Kingdom, but these provisions are too long to be detailed in this Work.

In case of recapture from an enemy, the rate of Salvage is fixed by Act of Parliament. When the recaption is made by private ships, the recaptors are to have one-sixth of the value of the property taken; when by his Majesty's hired armed ships, or the Royal Navy, one eighth; when by the combined operation of private ships and his Majesty's vessels, such Salvage as the Court deems reasonable. If, however, the ship before recaption has been commissioned and set forth by the enemy as a vessel of war, it becomes the entire property

of the recaptors, whether they be private persons, or in his Majesty's service; and this rule applies, although at the time of the recaption the enemy's commission is withdrawn, and the vessel is then being employed merely as a merchant vessel.

When the property of any of the allies of Great Britain is retaken from the common enemy by the subjects of his Majesty, the English Courts adopt the same rule as would be adopted in the Courts of that ally in case their subjects had recaptured British property, which renders it the interest of the allies of Great Britain to deal liberally with the property of British subjects.

SALVA'TION,

SA'LVATORY,

SA'LVABLE,

SALVABI'LITY,

SA'LVAGE,

SA'LVER.

Fr. *salut*; It. *salvazione*; Sp. *salvacion*, from Lat. *salvare*, to save. Generally applied to *Safety*, (sc.) from the effects of evil or sin; security, preservation or conservation.

Salvo, a saving, a reservation, an exception.

Gregore wist this wel. and wilnede to my soule

Salvacion for the sothness. that he seið in myn werkes.

Piers Plouhman. Vision, p. 205.

Whan he withstandeth our temptation,

It is a cause of his *salvation*,

Al be it that it was not our entente

He shuld be *sauf*, but that we wold him hente.

Chaucer. The Freres Tale, v. 7079.

For thy to thy *saluacion*

Thou shalt haue informacion

Such as Siluester shall the teche,

The nedeth of none other leche.

Gower. Conf. Am. book ii.

This name Jesus signifieth a sauioure, and therefore there is nothinge asked in the name of Jesus, but that is wholesome, and helpyng to the *saluacion* of the asker.

Sir Thomas More. Workes, p. 18. *The Type of John Picus*.

— Him the most High

Rapt in a balmie cloud with winged steeds

Did, as thou sawst, receave to walk with God,

High in *salvation* and the climes of bliss

Exempt from death.

Milton. Paradise Lost, book x. l. 705.

I consider the admirable powers of sensation, of phantasie, of memory, in what *salvatories* or repositories the species of things past are conserved.

Hale. Origination of Mankind, p. 156.

We have not only manifested that there is a natural prolepsis, and anticipation of a God in the minds of men, as the object of their fear, preventing reason, but also that the belief thereof is sustained and upheld by the strongest reason; the phænomena of nature being no way *salvable*, nor the causes of things assignable, without a Deity.

Cudworth. Intellectual System, book i. ch. v. p. 691.

The main principle of his religion, as a Papist, is more destructive of the comfort of a conjugal society than are the principles of most hereticks, yea than those of pagans or atheists; for holding that there is no *salvability* but in the church; and that none is in the church, but such as acknowledge subjection to the see of Rome.

Sanderson. Cases of Conscience, p. 3.

Seeing one man does not violate the right of another, by his erroneous opinions, and undue manner of worship, nor is his perdition any prejudice to another man's affairs; therefore the care of each man's *salvation* belongs only to himself.

Locke. Works, vol. ii. p. 249. *A Letter concerning Toleration*.

Between each act the trembling *salvers* ring

From soup to sweet wine, and God bless the king.

Pope. Moral Essays. Essay 4.

I shall inquire what *salvos* or qualifying considerations we may reasonably understand the general doctrine of God the Father's being the only true God, or Lord.

Waterland. Works, vol. ii. p. 72.

By the statute 27 Edw. III. c. 13. if any ship be lost on the shore, and the goods come to land, (which cannot, says the statute,

SAL-
VAGE.SALVA-
TION.

SALVA-
TION.
—
SALVE.

be called wreck,) they shall presently be delivered to the merchants, paying only a reasonable reward to those that saved and preserved them, which is entitled *salvage*.

Blackstone. Commentaries, book i. ch. viii.

SALUBRIOUS,

SALUBRIOUSLY,

SALUBRITY,

SA'LUTARY,

SALUTIFEROUS,

SALUTIFEROUSLY.

Fr. *salubre, salulaire*; It. *salubre, salutare*; Sp. *salubre, salutifero*; Lat. *salubris, salutaris, salutifer*, from *salus, quod inserta liquida a Gr. σως, venit, quod est salvus, safe*. See *SAVE*.

Causing or producing, bringing or bearing, safety, health; healthy, wholesome.

Who, though his heart were sunk and gone, doth in
The precious portion it again receive,
Whilst from the cheerly *salutiferous* cup
A draught of liquid life he drinketh up.

Beaumont. Psyche, can. 7. st. 31.

Give the *salubrious* draughts with your own hand;
Persuasion has the force of a command.

King. Art of Love, part viii. p. 271.

— In senates he, to freedom firm,

Enlighten'd freedom, plann'd *salubrious* laws.

Thomson. To the Memory of Lord Talbot.

Though God be but one, yet hath he about himself innumerable auxiliary powers, all of them *salutiferous* and procuring good of that which is made, &c.

Cudworth. Intellectual System, p. 501.

But that highest and most ancient Being, the Parent of all things, the chief Prince of this great city, and the Emperour of this invincible army, who governeth all things *salutiferously*, Him have they covered, concealed and obscured, by bestowing counterfeit personal names of gods upon each of these things.

Id. Ib. p. 509.

When St. Paul delivered over to Satan, the design of it was kind and *salutary*, that "the spirit might be saved in the day of the Lord Jesus."

Waterland. Works, vol. v. p. 58.

The draught is nauseous, though *salubrious*; hence the writer endeavours to borrow something from art to render it an elegant medicine.

Knox. Winter Evenings. Evening 3.

Does not the sweat of the mason and carpenter, who toil in order to partake the sweat of the peasant, flow as pleasantly and as *salubriously* in the construction and repair of the majestick edifices of religion, as in the painted booths and sordid sties of vice and luxury.

Burke. On the French Revolution.

This great philosopher, Priestley, has lately discovered a method of fabricating a new species of air, of infinitely superior *salubrity* and duration to that vulgar atmospherical air, which, for want of better, we have been obliged to breathe for upwards of five thousand years.

Mason. Ode to Pinchbeck, note 2.

But its aperient quality was so very slight, that what effect it produced was rather *salutary* than hurtful.

Cook. First Voyage, book iii. ch. ix.

Or plough Tunbridgia's *salutiferous* hills
Industrious, and, with draughts chalybeate heal'd,
Confess divine Hygeia's blissful seat.

Smart. The Hop-Garden.

SALVE, v.

SALVE, n.

SA'LIVING, n.

Goth. *salbon, ungere*, to anoint;

A. S. *sealfian*; Ger. *salben*; D.

salsen, salven; Sw. *saliva, unguentum*.

All of which (Junius thinks) have a wonderful affinity with the Gr. ἀλειφειν, to anoint, to rub, or smear with ointment. To *salve* is

To mollify, assuage, or mitigate, to relieve, to aid or help, to remedy, to apply a remedy, to heal, to rescue; to save or keep safe. There seems a confusion in the usage of the verb to *salve*; sometimes as if from the A. S. *sealf-ian*; and, sometimes, as if from *salve*. See *SALVATION*.

For treuthe telleth that love. ys tryacle for synne
And most sovereyne *salve*. for saule and for body.

Piers Plouhman. Vision, p. 20.

VOL. XXVII.

To other woundes, and to broken armes,
Som hadden *salves*, and som hadden charmes.

Chaucer. The Knightes Tale, v. 2713.

As whē we say of a wanton child, this sheepe hath magottes in his tayle, he must be anoynted with byrchin *salve*, which speach I borow of the shepherdes.

Tyndall. Workes, p. 166. Obedience of a Christian Man.

Which Cambell seeing, though he could not *salve*,

Ne done undoe, yet, for to *salve* his name

And purchase honour to his friends behalve,

This goodly counterfesaunce he did frame.

Spenser. Faerie Queene, book iv. can. 4.

All wrongs have mendes, but no amendes of shame,

Now therefore, lady, rise out of your paine,

And see the *salving* of your blotted name.

Id. Ib. book ii. can. 1.

But mine is not, quoth she, like other wovnd;

For which no reason can finde remedye.

Was never such, but mote the like be found,

Said she; and though no reason may apply

Salve to your sore, yet Love can higher styte

Then Reason's reach, and oft hath wonders donne.

Id. Ib. book iii. can. 2.

Epicurus, (who was also an atomick atheist,) having, in all probability, therefore a mind to innovate something, that he might not seem to have borrowed all from Democritus, did by violence introduce liberty of will into his hypothesis; for the *salving* whereof, he ridiculously devized that his Third Motion of Atoms, called by Lucretius, *Exiguum Clinamen Principiorum*.

Cudworth. Intellectual System. Preface, p. 6.

SALVERTIA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Vochysiacæ*. Generic character: calyx five-lobed; corolla, petals five, the two superior petals narrow; stamens inserted into the calyx; style club-shaped; capsule three-celled, three-valved, three-angled; cells one-seeded.

One species, *S. covallariodora*, native of Brazil.

SALVIA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Labiatae*. Generic character: corolla unequal; filaments fixed to a transverse foot-stalk; seeds four, naked.

A very extensive genus, containing more than one hundred species; they are mostly natives of the Northern hemisphere. *S. officinalis*, the common Sage, is a native of the South of Europe; *S. pratensis* and *verbenaca* are natives of England.

SALU'TE, v.

SALU'TE, n.

SALUTA'TION,

SALU'TATORY.

Also written *salve, saluing*, nearer

the Fr. *saluer*; It. *salutare*; Sp. *sa-*

ludar; Lat. *salutare*, to wish health.

(See *SALEW*.) *Salus*,

To hail, to welcome, to greet; to congratulate; to receive with marks of welcome, of respect, of affection, as by firing guns, shaking hands, embracing, joining lips, &c.

For so as the vois of thi *salutacioun* was maad in myn eeris,
the yong child gladide in joye in my wombe.

Wiclif. Luk, ch. i. p. 56.

Swiche *salutations* and contenances

Passen, as doth a shadwe upon a wall.

Chaucer. The Shipman's Tale, v. 13938.

When that noble top doth nod I believe she *salutes* me.

Sidney. Arcadia, book i.

He faire the knight *saluted*, louting low,

Who faire him quited, as that courteous was.

Spenser. Faerie Queene, book i. can. 1.

As thy *salutes* my sorrows do adjourn,

So back to thee their int'rest I return.

Drayton. Mortimer to Queen Isabel, p. 66.

Farewell young princes: to graue Nestor's eare

This *salutation* from my gratitude beare.

Chapman. Homer. Odyssey, book xv.

2 Q

SALVE.

SALUTE.

SALUTE.
—
SALZ-
BURG.

The good emperor never ceas'd by prayers and tears till he was absolv'd; for with coming to the bishop with supplication into the *salutatory* some out-porch of the church, he was charged by him of tyrannical madness against God, for coming in to holy ground.
Milton. Of Reformation in England, book ii.

The morning-lark, the messenger of day,
Saluted in her song the morning gray.
Dryden. Palamon and Arcite, book ii. p. 25.

The most common *salutation* was by the conjunction of their right hands, the right hand being accounted a pledge of fidelity and friendship; whence Pythagoras advised that the right hand should not be given to every man, meaning that all persons were not fit to be made our friends.

Potter. Antiquities of Greece, vol. ii. book iv. ch. xix. p. 275.

I sent a lieutenant ashore to acquaint the governor of our arrival, and to make an excuse for our not *saluting*; for as I could *salute* only with three guns, except the swivels, which I was of opinion would not be heard, I thought it was better to let it alone.

Cook. Third Voyage, book ii. ch. x.

But at the very time while he is bowing at the threshold of the rich man, the philosopher shall pass by, and because he possesses only a competency without superfluity, and without influence, he shall not be honoured with the common civility of a *salutation*.

Knox. Essay 88.

SALZBURG, now a Circle of Upper Austria, (*Ober-Österreich* or *Land ob der Ens*), was formerly an Archbishopric, whose Prelate was a Sovereign Prince; in 1803, the territory was given in indemnity to the Grand Duchy of Tuscany, when it was formed into an Electorate; and, in 1805, it was finally ceded to Austria. It is 100 miles long by 60 in breadth, and is bounded on the North by Bavaria, on the East by Austria and Styria, on the South by Carinthia, and on the West by the Tyrol and Bavaria. The ground rises gradually from North to South, and, in the vicinity of Salzburg, and the adjacent Bavarese district of Berchtesgaden, the number and elevation of the mountains, which form part of the Noric Alps, render the country highly interesting to the geologist. They are composed of granite, freestone, limestone, &c.; and quartz, various precious stones, asbestos, marble, rock-salt, feldspar, and serpentine, with most of the metals, are met with at different heights. The salt-mines of Hallein alone furnish annually 900,000 quintals of this mineral; and in Salzach, one of the most important of the mining districts, the mines worked supply yearly 300 marks of gold, 700 marks of silver, from 300 to 400 quintals of copper, 500 quintals of lead, 15,000 quintals of iron, 10 quintals of arsenic, and 53 quintals of sulphate of iron. In general, the Spring and Autumn are very short in the Salzburg mountains; so that out of 300 species of plants found there, scarcely 20 are annual or biennial, whilst the rest are hardy perennials. Cretinism is a common disease on these high lands. The Circle is traversed by the river Salzach, an affluent of the Inn.

Salzburg, the Capital of the above Circle, is of high antiquity, and has successively borne the names of *Juvavium*, *Hadriana*, and *Petena*. In the year 448 it was laid in ruins by Attila; but was rebuilt by the Dukes of Bavaria, at the instigation of St. Rupert. It is divided into two quarters by the Salzach, is surrounded by a rampart, and has three faubourgs beyond the walls, which are named *Müllen*, *Nounthal*, and *Stein*. This city is very regularly built; but the quietude which reigns throughout its streets, together with the uniformity of its houses, which are built on the Italian model, give it an air of gloom and dreariness. Its principal gateway, which is 150 feet long, and from 20 to 24 broad, is hewn out of a rock; fronting it is a co-

lossal statue of St. Sigismund. The square called Court Square is adorned by a very beautiful fountain; and that before the Cathedral is surrounded by arcades and galleries. This Church, which is the finest of the 17 contained in the city, is said by a German geographer to be built in imitation of St. Peter's at Rome; but the resemblance would seem to exist rather in his imagination than in reality. The bronze statue of the Virgin, over its principal entrance, is much admired. The other buildings of consequence are the Archbishop's Palace, and the strong Castle of *Hohen-Salzburg*. The Lyceum here has a library of 20,000 volumes, and a cabinet of Natural History; there are likewise a Medical and Surgical School, a Gymnasium, a normal School, a Seminary, and a high School. Attached to the Abbey of St. Peter is another Public Library, containing 36,000 volumes. The famous alchemist, Paracelsus, died here, and was buried in the cemetery of St. Sebastian. There are some fine remains of Roman baths in St. John's Hospital; and several of the wealthier inhabitants possess interesting collections of antiquities. The manufactures of the place are unimportant; but it has some carrying trade, and serves as a depôt for the scythes of Styria. Salzburg ranks as the second fortress of Upper Austria. The suffragans of its Archbishop are the Bishops of Lavant, Leoben, and Seckau in Styria; the Bishop of Brixen in the Tyrol; and the Bishop of Gurk in Illyria. The climate of Salzburg is very variable and unhealthy. Population 14,000. North latitude 47° 48', East longitude 13° 4'. In the vicinity of the city, the villa of *Leopoldskron*, with its Picture Gallery, and the Amphitheatre hewn out of the solid rock in the side of the mountain called *Monchberg*, are deserving of notice. The remaining towns of the Circle of Salzburg are *Hallein*, which has a population, including the miners of its district, of 4400 souls; and *Gastein* and *Radstadt*, with a population of 1000 each.

Malte-Brun, Nouvelle Edition, par M. Huot; Balbi; De Braun, Salzburg und Berchtesgaden.

SAMARA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Rhamni*. Generic character: calyx four-parted; corolla, petals four; stamens inserted into the base of the petals; stigma funnel-shaped; drupe one-seeded.

Four species, natives of the East and West Indies and the South of Africa.

SAMBUCUS, in *Botany*, a genus of the class *Pentandria*, order *Trigynia*, natural order *Caprifolia*. Generic character: calyx five-parted; corolla five-cleft; berry three-seeded.

Six species, natives of the Northern hemisphere; *S. ebulus*, the dwarf Elder, and *S. nigra*, the common Elder, are natives of England.

SAMBUKE, a musical instrument; perhaps so called, because made of the *sambuke* or elder tree.

And whatsoever ye iudge, this I am sure, that lutes, harpes, all maner of pypes, baritons, *sambukes*, with other instrumentes every one, whiche standeth by fine and quicke fingeringe, be condemned of Aristotle, as not to be broughte in and used among them, which studye for learynge and vertue.

SAMOLUS, in *Botany*, a genus of the class *Pentan-*
dria, order *Monogynia*. natural order *Primulaceæ*.
 Generic character: corolla salver-shaped, five-cleft, with
 intervening scales; stamens inserted into the tube;
 capsule one-celled, five-toothed, many-seeded.

Two species, *S. valerandi*, native of Europe, and *S.
 repens*, native of New Zealand

S A M O S.

Position.

SAMOS, an island near the coast of Ionia, not far
 from the confines of Caria, lies between 37° 37' and 43°
 N., and extends from 26° 36' to 27° 8' E. By the ancient
 poets and historians it has been called Parthénia, from
 the river Parthenius, Anthemis, (flowery,) Dryusa, (oak-
 bearing,) Melamphylos,* (black-leaved,) and finally,
 Samos, either from the height of its mountains, (Strabo,
 x. p. 457. Eustath. *ad* Dionys. *Perieges*, 533.) or more
 probably, from Cephallenia, which anciently (Hom. *Il.*
 ii. 634.) bore that name, and appears to have sent colo-
 nies to this as well as to the Thracian Samos, (Samo-
 thrace, Strabo, xiv. p. 637.) about ten or eleven cen-
 turies before the beginning of our era. The Turks,
 observing the resemblance of its name to that of an
 useful plant cultivated by its inhabitants, called it Sam-
 sam-ât á-sí, *i. e.* “Sesamum Island.” Its coast, which
 is broken by some deep bays and large promontories,
 has nearly the form of a lozenge, and its diameter from
 East to West is more than double of that from North to
 South. Its circumference, according to the Ancients,
 measured from 600 to 696 stadia, (75 or 87 miles.)
 (Strabo, xiv. p. 637. Plin. *Nat. Hist.* v. 31.) Like
 all the islands in the Ægean, it is very rugged, being,
 in fact, a continuation of Mount Mycalé on the coast of
 Ionia, from which it is separated by a strait scarcely a

mile wide, (7 stadia, Strabo, *loc. cit.*) called by the Turks Dard, or
 dár-bóghází. (Narrow Strait.) Ampelus (now Ampe- Little
 lónas, *i. e.* vineyard) is the name of the mountain which Bogas.
 may be said to occupy the whole island. Its highest Mountains.
 peak, nearly in the centre of Samos, is 3728 feet† above
 the sea; and another towards the cape called Ampelus
 (now Aspro Kavo, White Cape, or Capo de' Colonna) is
 3326 feet in perpendicular altitude, while a third, Mount
 St. Nicolas, rises to 2224 feet. But the highest peak
 is the summit of Cercetes, or Cerceteus, (Κερκέτης,
 Nicander, *Alexipharm.* 152. Κερκετός, Strabo, x. p.
 488.) now Kerkís, (Κερκίς,) near the Western extre-
 mity of the island, which measures 4723 feet above the
 sea. It is terminated by a precipice, “the most tre-
 mendous we had ever seen,” says Dr. E. D. Clarke,
 (*Trav.* iii. 241.) which is remarkable on account of a
 lambent flame said to appear in stormy weather at about
 two-thirds of its height from the water. This mega
 thauma, (μέγα θαύμα,) great wonder, as the islanders
 call it, (Tournefort, i. 435.) is firmly believed to exist
 by all the Greek sailors, and, if not a mere legend, or
 some trick of smugglers and pirates, is probably an elec-
 tric phenomenon like the well-known St. Elmo's fire.
 From this flame is probably derived the present name

* The accurate Chart laid down in 1835 by Lieut. Brock,
 R. N., from which the other measurements are also taken.

* Or Melamphylos, (black-tribed.) Strabo, *loc. cit.*

- SAMOS.** of the precipice, Catevatis, a corruption of Cataebates, (*καταβάτης*), "hurling down thunderbolts." (Jul. Pollux, *Onomast.* i. 1.) It was anciently called Cerce-teus, (*i. e.* Kerketeus, now Kerkés,) Cantharium,* and Ampelos, and is the Capo di San Doménico, or Capo di Samo of the Venetians and Genoese in the Middle Ages. Though this lofty mountain, which in reality forms the whole island, was named Ampelos (vine) by the Ancients, it was in no repute for its wines; whence we may infer that the muscadel grape, so much esteemed for its flavour and the delicious wine made from it, were not known to the Ancients, or at least not in this island, where it is now much cultivated. (Tournefort, i. 409.) The Southern promontory of Samos, called the Heræum (*τὸ Ἡραῖον*) by the Ancients, from the much venerated Temple of Juno. Cabo de Colonna (Cape Columns) by the Genoese, and Aspro Kavo ("Ἀσπρο Κάβο) by the modern Samiotes, runs out 8 or 10 miles into the sea, and is about 15 miles South-West of the ancient Capital, ruins of which may still be traced for some miles along the shore, as is distinctly marked in the beautiful and accurate Chart constructed last year (1836) by Lieut. Brock, one of his Majesty's officers now employed in surveying the Archipelago. The present Capital, called Khora, or Megali Khora, (*Μεγάλη χώρα*, the Great Town,) is at the foot of the mountain, on the flank of which stood the upper part or citadel of the ancient city of Samos, about two miles from the sea; in a narrow valley between high mountains opening into a gradual descent to the level beach, where, as is usual in Turkey, the water is allowed to stagnate and infect the air with very noxious exhalations. To the South-East of the town is Tigani, (*Τηγάνιον*, a little frying-pan,) the ancient harbour, named from its circular form occasioned by the ancient mole or pier, of which considerable remains may still be traced. (Tournefort, i. 415.) At the mouth of the Little Bógház, Tár Bógház,† (Narrow Mouth,) according to Archbishop Georgirenes, (p. 4.) is the islet Narthecis, (*Ναρθηκίς*, Strabo, *loc. cit.*) just below the promontory of Neptune, (Posidium,) to the North of which there is a second port, Kádirghah límání, (*i. e.* Galley Harbour,) at the bottom of which are the ruins of an ancient town (Calami? Liv. xxxvii. 11.) containing the remains of two Temples. Between the promontory called Posidium and the Port of Prasonisí (*τὸ Πρασονησίον*, the Green Island) is a mountainous peninsula, perhaps the ancient Assorum, whence the river Amphilysus sprang. (Stephan. Byzant.) The port last named is near the North-East extremity of the island, and is separated from the deep and spacious harbour of Vathy' (*Βαθύ*, *i. e.* deep, anciently Panormus?) by a lofty projecting ridge 1228 feet above the sea. The harbour of Vathy', which opens to the North-East, is spacious enough to give anchorage to a large fleet, and is so completely land-locked as to be sheltered in almost every quarter. On its Western side, not very far from the entrance, are the ruins of a large ancient city; and on the rising ground near the bottom of the gulf is the modern town of Vathy', the second in the island, and the residence of the European Vice-Consuls. Kárl 'óvah-sí, (Snowy Plain,) about 20 miles West of Vathy', is another large village, which has a roadstead for boats at the mouth of a river. (Ibettes? Plin. v. 31.) A deputy of the Vaivódah, or Turkish Governor, of the island, formerly resided there. Sheítán límání, (Devil's Harbour,) the worst port in the island, is about nine miles West of Kárl 'óvah-sí, and about 13 North-East of Catevatis, the tremendous precipice (*cette roche effroyable*, says Tournefort, i. 407.) which forms the Western extremity of Samos. A low point to the South-East of Katavatis is perhaps the ancient Chesium, whence Diana was styled Chesias, (*Χησιάς*, Callimach. *Hymn. ad Dian.* 228.) and the adjoining stream Chesius. Beyond it is the flat beach of Marathrocampo, (Fennel-field,) separated by a small stream from the Southern promontory, Capo de' Colonna, on which are the villages of Spatharis (*ὁ Σπαθάρης*, the Sword-bearer) and Syreca, (*Συρεκα*), and near its extremity the islet of Samópulo, (*τὸ Σαμόπουλον*, *i. e.* Little Samos,) the Rhypara* of Pliny. (*Nat. Hist.* v. 31.) At the North-East extremity of the peninsula terminating in Cape Colonna is the mouth of the Imbrasus, or Parthenius, (Callimach. *ap. Schol. Apoll. Rhod.*, ii. 868.) in size the second river of the island, (now called *Μεγάλος ποταμός*, Tournefort, i. 415.) Half way between its left bank and the sea are the ruins of the Heræum, or Sanctuary of Juno, once so much admired and visited on account of the beauty and antiquity of its numerous pictures and statues. "The whole Temple and its Chapels are now," says Strabo, (xiv. p. 637.) who wrote in the Ist Century, "a complete picture-gallery, (*πινακοθήκη*), and the Hypæthrum (Colonnade, or Portico) is full of the finest statues." The antiquity of this Temple was so great that many fables were current respecting its origin. In the time of Pausanias (the latter half of the IId Century) the Samians showed a shrub called *Agnus Castus*, (*Ἀγνος*, *Vitex Agnus Castus*, *Λυγαρία*, or in the plural, *Λυγαρίαῖς*, in modern Greek,) growing in the Heræum, near the bank of the Imbrasus, beneath the shade of which they believed Juno to have been born. (*Achaic.* vii. 4, 4.) Her statue there was said to be the work of Smilis, a contemporary of Dædalus. (B. c. 1240.) Of all these wonders of art, the only relics which Tournefort could discover in 1702 were two fragments of columns with some bases, in an unornamented and singular style of sculpture, (i. p. 422.) Herodotus (who says (iii. 60.) that this Temple was the largest of which he had ever heard, and that its first builder was Rhæcus, son of Phileas, a Samian,) calls it one of the three greatest works ever executed by the Greeks, the other two being the mole or pier forming the harbour, and the gallery or tunnel through which water was conveyed to the city. The former was a mound or breakwater 20 orgyias (120 feet) in height, and more than two stadia (a quarter of a mile) long, bending round one side of the harbour and giving to it a circular form, whence its modern name (*Τηγάνιον*) is derived. The latter was a tunnel eight feet in height and width, carried through a mountain 150 orgyias (900 feet) high, to the

* "A certain promontory looking, in some degree, to the Drepanum of Icaria," says Strabo, (xiv. p. 637.) "is called Ampelos;" (vine;) and in another place (p. 639.) he adds, "The Promontory of Icaria, called Dracanum, (*i. e.* Drepanum,) is distant from the Samian promontory, called Cantharium, 80 stadia, (10 miles,) which is the shortest distance between those islands." Ptolemy also places Cape Ampelos six miles South and 50 miles West of the town of Samos; and therefore not where Dr. Cramer has placed it, at Cape Colonna.

† This and some adjacent islets were a nest of pirates in the latter part of the XVIIth Century. (Georgirenes, p. 3.)

* Tragia is the ancient name assigned to this island in the Admiralty Chart; but, as Strabo says that the islands called Tragiæ were in front of Ladé, (*Βάδενah kú,l*) near Miletus, Samópulo can hardly be Tragia, which was probably one of the Tragiæ, if it were not another name of Ladé. (Thucyd. i. 116. Strabo, xiv. 635.)

- SAMOS.** distance of seven stadia, (nearly a mile,) and having through its whole length a canal 20 cubits in depth, and three feet wide, by means of which the city was constantly supplied with water from a copious source. The architect of this great excavation was Eupalinus, son of Naustrophus of Megara. An ancient excavation near an aqueduct, in the ravine passed in the way from Vathy to Khora, appeared to M. de Tournefort (i. 419.) to be one of the entrances to this tunnel. The stream arising from that spring is probably the ancient Leucothea. (Plin. vii. 11.) It is the largest in the island, and falls into the sea at the Eastern end of the Port of Tigáni. The ancient Capital extended from that harbour to the Imbrasus, a distance of six or seven miles. The upper town, or citadel, called Astypalæa, (Polyæn. *Strat.* i.) was built by Polycrates, (B. C. 530.) Its walls, of which large massive fragments still remain, may be easily traced, and are clearly laid down in the Admiralty Chart mentioned above. They seem, by Tournefort's description, (i. 416.) to belong to the second period of the Cyclopean architecture. On the declivity of the mountain is the Church of Our Lady of the Thousand Veils, or of the Cavern, (Παναγία χιλιαρμενιστά, or Σπηλαιανὰ,) adorned with many shafts of ancient columns, and just above the site of an ancient Theatre. Beside numberless fragments of columns, friezes, &c. in the plain below, and the remains of more than one aqueduct, inscriptions occasionally found, and now generally preserved, as well as coins, many of which have been published, bear witness to the power and opulence of this ancient Capital.
- Ancient city.** The surface of the country, being everywhere broken by towering ridges and deep valleys, cannot in many places be cultivated, but in others the soil is extremely fertile, so as to be said proverbially to yield even "hen's milk."* Among the villages deserving of notice are,
- Mitylenous.** 1. Mitylinús, (the Mitylenians,) peopled by a colony from that island established there by the celebrated Kapúdán Páshá Uluj 'Alí, (called Ochiali by European writers,) to whom the island was given as a fief, in A. D. 1550, by Suleiman the Magnificent. (Tournefort, i. 429.) Beside its copious spring already mentioned, Mitylinús is also remarkable on account of an ancient sculptured tablet encased in the wall of its Church at the angle opposite to the great source. (Tournefort, i. 433.) 2. At the distance of four miles from Marathrocampo, on the South side of the island, is the hermitage called the Panayía Phaneromeni, (ἡ Παναγία φανερωμένη, Our Lady manifested,) an almost inaccessible cavern surrounded by bold and picturesque scenery. 3. Panayía is to cacoperaton, (Παναγία εἰς τὸ κακοπέρατον,) "Our Lady at the bad road," is a Chapel of the Virgin in the recess of a cavern, the only approach to which is by a steep path barely half a foot wide, excavated from the side of a frightful precipice. The surrounding mountains, covered with pine, arbutus, and heath, offer a rich harvest to the Naturalist. This hermitage is near Kárl 'ovah-sí, on the North side of the island. 4. Vurliotes, (Βουρλιώταις, i. e. the Vurliotes,) a colony from Vúrlah, on the Gulf of Smyrna, to the South-West of Kelizmán, on the site of the ancient Clazomenæ. These colonies were brought hither in 1550, at the termination of the war with Venice, in the course of which Samos
- had been almost depopulated. This village is at the foot of the coldest mountains in the country; and in its neighbourhood many rare plants are found. 5. Alvanitokhoríð, (Ἀλβανιτοχωρεῖδον,) an Albanian village, was named from an Albanian colony introduced at the same time. It is at the back of Catavatis, not far from the Western end of the island. Castanià, (chestnut tree,) Cumarià, (strawberry tree,) and Plátanos, (plane tree,) the largest of all the villages, are worthy of notice on account of the beauty and fertility of the surrounding country. Pagontus, or Bávonda,* (Ὁ ὑπάγωντας, the departer,) Pyrgos, (ὁ Πύργος, the tower,) and Myli, (οἱ Μύλοι, the mills,) are near the Imbrasus, and Gaítáni (Γαῖτάνι, lace, or hobbin,) near Mitylinús, (Μιτυληνοῦς,) is on the river taking its name from that place. There were, in Tournefort's time, seven Monasteries and four Nunneries, all under the jurisdiction of the Archbishop, whose Diocese includes Icaría also. His revenue, at that period, amounted to about £600 yearly. The Kharáj, or Capitation-tax on 1290 heads, then amounted to 6450 crowns, and the Customs yielded nearly 12,000; so that the whole sum levied by the Turks on the island was about £5000. On the death of Uluj 'Alí, in A. D. 1587, the revenue of this island was settled as an endowment on the Mosque at Tóp-khánah in Ghalatah, founded by that daring and successful pirate in the preceding year, (Von Hammer *Osm. Reich.* iv. 164.) and as being assigned for a charitable purpose, it was not liable to any claim on the part of the Kapudán Páshá.
- The fertility of Samos was anciently proverbial, as has been already remarked. Tournefort was informed that it produced yearly 3000 barrels of muscadet wine, each containing 50 óhs, (about 18 gallons,) 900 barrels of oil, and 27 kilohs (202,500 pounds) of wheat for exportation to France. Large white millet, called by the Greeks kakhrí or kenkhrí, (Κεχρί or Κεγχρί,†) and dári, dárú, or tárú, (i. e. *Sorghum vulgare.*) is much cultivated as a cheap article of food for the poor, particularly in the tract called ὁ ὀπίσω κάμπος, "the back field," near the centre of the island. (Georgirenes, p. 24.) Silk, figs, scammony (Mahmúdiyeh, *Convulvulus scammonia*) of an inferior quality, sesamum, (samsam, or semsem in Turkish, whence the name of the island,) and velanía,‡ are also produced in Samos. Among the rare plants to be sought in this island are a species of teucrium, called by Tournefort (i. 426.) betony-leaved germander, and found near the Convent of Our Lady the Great, (ἡ Παναγία μεγάλη,) about 12 miles to the West of Khóra; and the broad-leaved scandix, which abounds in that neighbourhood, as well as various kinds of pine, (*Pinus pinea, sylvestris,* &c.) some of them, perhaps, not yet described. Game is abundant, particularly the francolin, (τα γενάρι, or Ἀρτιχωνάρι, from the ancient Attagen,) the *Perdix francolinus* of modern Naturalists, in the salt-marshes between Khóra and the Little Bógház. The soil about Págotas (vulgò Bávonda) is strongly impregnated with iron,§ but the Samian earth, so much valued by the Ancients, (Dioscorides, v. 172.) is no longer known.
- Panagia Phaneromeni.**
- Panagia Cacoperata.**
- Vourliotes.**

* Φέρι και ὀρνίθων γάλα. (Menander, ap. Strabo, xiv. p. 637.) Did this proverb allude to the abundance of eggs? The yolk of an egg, beat up as a substitute for cream, is called *lait de poule* in French.

* From the accusative with the article τὸν πόνοντα, pronounced To Bávonda.

† The ancient Cenchrus was probably the *Panicum Italicum* of Linnæus, and Kekhrí is also the modern Greek name of *Panicum Crus Galli*. (*Flora Græca*, i. 40.)

‡ The cup of the Velanfidhi, (Βελανία,) *Quercus Egilops*, used as a mordant by dyers.

§ Le bol est un safran de Mars naturel, dont on retire le fer par le moyen de l'huile de lin. (Tournefort, i. 413.)

SAMOS. Clay for pottery is found near Furni, (the ovens.) a village not noticed by Tournefort. (Georgirenes, p. 21.) Emery, ochre serving for a red dye, and a black earth occurring near Kárl 'ovah-sí, and also used in dyeing, are valuable minerals; its mountains are generally calcareous, consisting of white marble, and fine jasper is found near Plátanos. The zoology of Samos is very imperfectly known.

History. This island is said to have been first occupied by Carians and Leleges, a people originally from Thessaly; (Larcher, *Chronol. d'Hérodote*, p. 193.) it was afterwards inhabited by a colony of Ionians, under Procles, who at length made themselves masters of the whole. They cultivated the Arts, and became skilful navigators. Aminocles of Corinth built four triremes for the Samians, (B. C. 704,) who in the second Messenian War, (B. C. 674,) sent a fleet to the assistance of the Spartans. Samos, however, reached the zenith of its glory in the following century, during the reign of Polycrates, who (B. C. 532) succeeded, with the aid of only fifteen soldiers, in making himself absolute sovereign of the island. (Herod. iii. 120.) He equipped a navy of 100 ships, conquered Lesbos and other islands, and was courted as an ally by his most powerful neighbours. But, as he had attained this eminence in the first instance by murder and treachery, so by treachery did he fall, having been entrapped by the simulated friendship of Orætes, Satrap of Sardes, who put him to death by the tortures of a lingering crucifixion. (B. C. 521, Herod. iii. 125.) Pythagoras and Anacreon were entertained with distinction at his Court. In the Persian invasion, the Samians, then subject to the Great King, were opposed to the Greeks, so that their city and temples escaped the devastation elsewhere inflicted by the Persians on the seats of idolatry; (Herod. vi. 25.) but after the success of the Greeks at Mycale, (B. C. 479,) the Samians expelled the Governor placed over them by the Persian King, and reasserted their independence. On their subsequently rising against the Athenians, however, they were subjugated by Pericles. (B. C. 441.) At a later period, (B. C. 410,) they assisted, under the command of Alcibiades, in re-establishing the freedom of Athens. After the death of Alexander, (B. C. 323,) Samos passed from the dominion of the Ptolemies to that of the Kings of Syria; and on the deposition of Antiochus XII. (B. C. 66) it became a part of the Roman Empire. Together with the rest of the Grecian islands, it continued to be subject to the Roman Emperor during the interval between the division of the Empire (A. D. 364) and its subversion by the Franks, A. D. 1204,) when it probably formed a part of the

dominions* of Baldwin; as the want of a navy seems to have prevented Alexius and Vataces from reconquering it, and it was continually overrun and laid waste by the pirates who for many centuries screened themselves in the rocky creeks of the Little or Eastern Bógház. Its fortunes during the two centuries and a half which elapsed between that period and the final destruction of the Greek Empire, in 1453, are not easily traced. It was at that time,† according to Meletius, (*Geogr.* iii. 218.) in possession of the Genoese family of Giustiniani, who, being unable to repel the continued incursions of the neighbouring pirates, removed its inhabitants, he says, to Chios. Of this, however, no notice occurs in the *Annali di Genoa*, by the Bishop of Nebio, (Genoa, 1537,) himself a member of that family. The island was nearly depopulated in the war with Venice, which was terminated by the peace of 1573. Subsequently to that period, it was given, as before remarked, to Uluj, or Kilij 'Alí, (Ochiali,) the celebrated Turkish High Admiral, who settled its revenue as an endowment on his Mosque at Tóp-khánah, in the suburbs of Ghatalah, opposite to Seraglio Point. Being close to the Asiatic shore, and never having been reckoned as one of the Cyclades, Samos was not included in the territory assigned to the Kingdom of Greece by the Treaty of 1829; but the Samiotes, as well as their neighbours, were blessed with revolutionary demagogues; and so lately as the latter end of 1833, affecting to set the Turks at defiance, provoked the Sultan to despatch a powerful armament for the purpose of reminding them that, for more than two centuries, they had little if any cause to complain of extortion or oppression, having, as a religious endowment, been screened from the dreaded visits of the Kapúdán Páshá.

For authorities, see RHODES, CARIA, &c.; and particularly a little duodecimo volume entitled "*A Description of the Present State of Samos, Nicaria, Patmos, and Mount Athos*," by Joseph Georgirenes, (Γεωργιρένης,) Archbishop of Samos, now living in London. Translated by one that knew the author in Constantinople, London, 1678." The dedication to James Duke of York, in ancient Greek, (an evidence of the author's erudition,) is far from being correctly printed. This book is mentioned by Tournefort, (i. 433.) who says he never could meet with it; but Dapper, from whom he has tacitly borrowed much, has nearly transcribed it, as he candidly acknowledges; (*Beschryving van de Archipelago*, Amst. 1688, p. 74.) hence the many coincidences between the French traveller and Archbishop Georgirenes.

SAMOTHRACE, (ἡ Σαμοθράκη,) a small island in the Ægean Sea, North-East of Lemnos, and North-West of Imbros, has escaped the notice of almost all modern travellers, notwithstanding its claims to attention on account of the sanctity of its sacred mysteries, and the structure and productions of its soil, which has not,

* Among the Provinces enumerated in the Partition Treaty given by Andrea Dandolo, (Muratori, *Script. Rerum Ital.* xii. 326.) as forming a part of the Emperor's (Baldwin) dominions in "the Second Part of the Empire," are Provincia Laodiceæ et Mæandrium Provincia Sampson (Sámsún, i. e. Mount Mycale) et Samaclicum, (Samochicum, sc. mare, the Samian and Chian Sea?)

perhaps, been examined by a single Naturalist. Its highest point, Mount Saoce, is in 40° 26' 57" N. and 25° 36' 23" E.,‡ and according to Pliny (iv. 12.) is 10 miles high; the circumference of the island being 32 miles. It is, as he adds, 22 miles (North by East) from

† Archbishop Georgirenes says that it was then completely abandoned, and that Kilij 'Alí having landed upon it for the purpose of sporting, was so much struck with its fertility as to ask the Sultán Selím (Suleimán?) to allow him to colonize it. (Dapper, p. 72.)

‡ By Captain Gauttier's observations in 1819. (*Connais. des Tens*, 1823, p. 322.)

SAMOS.
—
SAMO-
THRACE.

SAMO-THRACE. Lemnos, 13 miles from Imbros, (North by West,) and 19 miles from the Promontory of Sarpedon, on the coast of Thrace.* Strabo (x. 457.) thinks its name was probably derived from its height, (σάμος,) because Homer says (*Il.* xiii. 13.) that thence "all Ida and the city of Priam were seen;" and in another place (vii. p. 331.) he observes that Samos was the ancient name of the island; probably a Pelasgian word expressive of its great height. Its first inhabitants were supposed to be aboriginal. (αὐτόχθονες, Diod. Sic. v. 47.) They spoke a peculiar language, many fragments of which were preserved in their sacred rites, (ἐν ταῖς θυσίαις.) Their island was named the Thracian, to distinguish it from the Ionian Samos. They affirmed that it had been reduced to very small dimensions by the mighty deluge occasioned by the bursting of the Euxine Sea through the Bosphorus and Hellespont, which took place before the other floods, *i. e.* those of Ogyges (B. C. 1831) and Deucalion (B. C. 1521.) The Cabirian mysteries, a sacred initiation universally venerated by the Ancients, were established in this island at a very early period; but at what time or by what people cannot be satisfactorily determined. It is probable that they were brought from the neighbouring Continent of Thrace. Saon, the reputed son of Jupiter or Mercury, was believed to have first civilized the Samothracians, and divided them into five Tribes. Dardanus, a native of the island, reputed son of Jupiter and Electra, first passed over to Asia on a raft, built the town of Dardanus, and founded the Kingdom afterwards called Troy, whence his subjects were named Dardani. His brother Jasion was initiated by Jupiter in the mysteries long before practised in the island, but then almost abandoned, and Cadmus, who came thither in quest of Europa, after he had been initiated by Jasion, married his sister Harmonia. At her nuptials the gods assisted, and Cybele, who gifted the island with corn, became enamoured of Jasion and married him; the fruit of which marriage was Corybas, who with his mother and uncle Dardanus established her sacred rites in Asia. But the Cabirian mysteries were those for which Samothrace was most frequented. That they were derived from the Pelasgi, and that the latter were a Thracian people who first colonized this island, is highly probable. (Herod. ii. 51.) The persons initiated were believed to be purified from moral imperfections, and secure from danger, especially by sea. (Scholiast. in Aristoph. *Pacem.* 277.) Such was the sanctity of these mysteries that the island was considered as sacred ground, and was left in possession of its native government by the Romans, (*Insula Samothrace, quæ libera*, Plin. v. 12.) when it became subject to them on the defeat of Perseus. (B. C. 168.) The Cabirian mysteries were still celebrated in the reign of Tiberius. (A. D. 18. Tac. *Ann.* ii. 54.) There were two towns, one called Samothrace on the Northern, and the other Demetrium (Liv. xlv. 6.) on the Southern side of the island, but it has nothing like a secure roadstead, (*vel importunissima omnium, (sc. insularum,)* Plin. *loc. cit.*) Dardania, Electis, Melite, and Leucosia, are some of its many ancient names. Samandrakhi, or rather Mandhraki,† is the modern

Towns,

Names

* Pliny says 32 miles from Imbros, and 28 from the coast of Thrace; in the former, his numerals have probably been mistranscribed; in the latter, he perhaps reckoned from the mouth of the Hebrus, opposite to which he places this island; "*Insula Samothrace, ante Hebrum.*"

† Mandhraki, (Μανδράκι,) "a little sheep-fold," was easily formed by the ignorant sailors, who supposed Samothraki to signify

corruption current in the Middle Ages, (Bondelmonti, *Libr. Ins. Archipel.* c. 68. p. 126.) when it was famed for its productiveness, particularly in honey and goats.

See Cramer's *Greece*, i. 335.; and for the Cabirian Mysteries, Kruse's *Hellas*, i. 450, where the mystic names of the Cabiri are well explained; De Sainte-Croix, *Mystères du Paganisme*, i. § 2. p. 38.

Fr. *sanctifier*; It. *santificatore*; Sp. *santificar*; Lat. of the Lower Ages, *sanctificare*, *sanctum facere*, to hallow or make holy. See SACRED, SAINT.

To hallow or make holy; to purify, (sc.) from sin or the consequences of sin; to keep or preserve pure and inviolate. See the Quotation from Tyndall.

Spirituel merchandise is proprely simonie, that is ententif desire to buy thing spirituel, that is, thing which apperteineth to the *seintuarie* of God, and to the cure of the soule.

Chaucer. *The Persones Tale*.

Sanctifie, to cleanse and purify, to appoynt a thing to holy vses, and to seporate from vncleane and vnholly vses.

Tyndall. *Workes*, p. 11.

Sanctuary, a place hallowed and dedicate vnto God.

Id. *Ib.*

& y^t done they went to Westmynster, & toke w^t them all maner of *seyntuary* men.

Fabyan. *Chronycle*, Anno 1380.

Whā the yonge man begynner of all this busynesse sawe this inconuenyēce ensue of his wantonnesse were it by couceyll or otherwise, feryng y^e sequell of y^e mater, yode streyght vnto Westmynster, and there taryed as a *seyntuary* man, tyll all the mater were endid.

Id. *Ib.* Anno 1456.

It appeareth also that in the Old Testament, in the ordering of priests, there were both visible and invisible *sanctification*.

Burnet. *Records*, book iii. No. 21.

And therefore of the out warde formes we take but litle, according to the Nicene Decree, acknowledginge, that spiritual foode to serue to *sanctimonie*, not to sacietie.

Jewell. *Defence of the Apologie*, p. 285.

Ainulphus of royal British blood was an holy hermit, who, waving the vanities of this wicked world, betook himself in this county to a solitary life, renowned for the *sanctity* (or rather *sanctimony*) thereof.

Fuller. *Worthies*. *Bedfords*.

When in that way they went, next Sebert them succeeds. Scarce seconded again for *sanctimonious* deeds.

Drayton. *Poly-obion*, song 11.

ALB. Let these tears tell how I honor ye;
Ye know, dear lady, since ye are mine,
How truly I have lov'd ye, how *sanctimoniously*
Observ'd your honor.

Beaumont and Fletcher. *The Sea Voyage*, act i. sc. 1.

Two of far nobler shape erect and tall,
Godlike erect, with native honour clad
In naked majestie seemd lords of all,
And worthie seemd, for in thir looks divine
The image of their glorious maker shon,
Truth, wisdom, *sanctitude* severe and pure,
Severe, but in true filial freedom plac'd.

Milton. *Paradise Lost*, book iv.

About him all the *sanctities* of heaven
Stood thick as starrs, and from his sight receiv'd
Beatitude past utterance.

Id. *Ib.* book iii.

But cause of feare sure had she none at all
Of him, who goodly learned had of yore
The course of loose effection to forstall,
And lawlesse lust to rule with reasons lore;
That all the while he by his side he bore,
She was as safe as in a *sanctuary*.

Spenser. *Faerie Queene*, book iv. can. 9.

LAER. To cut his throat i' th' church.

KING. No place, indeed, should murder *sancturize*.

Shakspeare. *Hamlet*, act iv. sc. 7.

Those men have little or no sense of religion, that make no conscience of *sanctifying* that day, or that put no difference between it and other days.

Sharp. *Works*, vol. i. Sermon 9.

Wherefore likewise doth Saint Peter ascribe our election to the Father predestinating, to the Son propitiating, to the Holy Ghost *sanctifying*?

Barrow. *Works*, vol. ii. Sermon 34.

Another of these ordinary operations of the Spirit is *sanctification*; which consist in the purifying our wills and affections from those wicked inclinations and inordinate lusts, which countermand God's will in us, and set us at enmity against him.

Scott. *Christian Life*, part ii. ch. vii.

Law is to things, which to free choice relate;
Love is not in our choice, but in our fate;
Laws are put positive; love's power we see,
Is nature's *sanction*, and her first decree.

Dryden. *Palamon and Arcite*, book i.

Ev'n then her awful *sanctity* appear'd;
The swains the local majesty rever'd.

Pitt. *Virgil*. *Aeneid*, book viii.

To form his party histories report,
A *sanctuary* was open'd in his court,
Where glad offenders safely might resort.

Dryden. *Tarquin and Tullia*.

All which operations tending wholly to improve us in piety and virtue, which together make up true *sanctity* or holiness, he is accordingly stiled the *sanctifier*.

Secker. *Sermon* 1. vol. iii.

In the blessed sacrament, (says Bishop Taylor,) we receive him who is life and light, the fountain of grace, the *sanctifier* of our secular comfort, and the author of holiness and glory.

Knox. *On the Lord's Supper*, sec. 32.

All that by sage and *sanctimonious* rites
Might of the gods be ask'd, we have essay'd;
And yet, nor to our wish, nor to their wont,
Gave they benign assent.

Mason. *Caractacus*.

For ill the wizard's pedant arts retain
That *sanctitude* which Macan's laws ordain,
Whose tenets, all replete with love divine,
Prohibit idols from his hallow'd shrine.

Brooke. *Jerusalem Delivered*, book ii.

For solitude, however some may rave,
Seeming a *sanctuary*, proves a grave,
A sepulchre, in which the living lie,
Where all good qualities grow sick and die.

Cowper. *Retirement*.

SAND, n. } A. S. *sand*; Ger., D., and Sw. *sand*;
SAND, v. } *ψαμμος*, from *ψαειν*, *comminuere*; to
SA'NDED, } break or bruise into small particles:—
SA'NDISH, } all the Etymologists (though with some
SA'NDY. } doubt.) The A. S. *sund-rian*, *synd-rian*,
to *sunder*, presents an obvious origin; *sundred*, separated into the smallest particles.

Sanded,—means of a *sandy* colour, which is one of the true denotements of a blood-hound. (Steevens.)

Sand-blind,—having the sight blinded; the appearances of floating particles, small as *sand*.

His folk went vpto lond, him seluen was the last,
To bank ouer the *sond*, plankes thei ouer kast.

R. Brunne, p. 70

Thei gede on the *sand*, to that Ilde wele inouh.

Id. p. 27.

And whanne this was takun up thei usiden helpis, girdinge togidre the schip and dreden lest thei schulen falle into *sondi* places.

Wiclif. *Dedis of Apostlis*, ch. xxvii.

Faire in the *sond*, to bath hire merily,
Lith Pertelote, and all hire susters by.

Chaucer. *The Nonnes Preestes Tale*, v. 15203.

And after hard condicions of peace,
His realme, nor life desired may he brooke;
But fall before his time vngraued amid the *sandes*.

SAND.

SAND. The greatest wonder belonging thereto was this, How those huge chapters of pillars, together with their frizes and architraves, being brought up and raised so high, should be fitted to the sockets of their shafts! but as it is said, he compassed this enterprise and brought it to effect, by the means of certaine bags or sacks filled with sand.
Holland. Plinie, book xxxvi. ch. xiv.

THES. My hounds are bred out of the Spartan kinde,
So flew'd, so *sanded*, and their heads are hung
With eares that sweepe away the morning dew.
Shakspeare. Midsummer Night's Dream, act iv. sc. i.

Travellers and seamen, when they have been *sanded* or dashed on a rock, for ever after fear not that mischance only, but all such dangers whatsoever.

Burton. Anatomy of Melancholy, p. 148.

But th' heedful boteman strongly forth did stretch
His brawnie armes, and all his bodie straine,
That th' utmost *sandy* beach they shortly fetch,
Whiles the dread daunger does behind remaine.

Spenser. Faerie Queene, book ii. can. 12.

Plant the tenuifolia's and ranunculus's in fresh *san'dish* earth,
taken from under the turf.
Evelyn. Kalendar.

Why, signiors, and my honest neighbors, will you impute that as a neglect of my friends, which is an imperfection in me? I have been *san'd-blind* from my infancy.

Beaumont and Fletcher. The Martial Maid, act i. sc. 2.

Philip's great son, whose consecrated name
Memphis adores, the first in regal fame,
Envious of this, detach'd a chosen band
'To range th' extreme of *Aethiopia's sand*?

Hughes. Lucan. Pharsalia, book x.

On some there are a few low bushes of Burton-wood, but they are mostly barren and *sandy*, bearing nothing but only a little chicken-weed.

Dampier. Voyages, Anno 1675.

And the *sands* being composed of parts, almost as small as those of water, they assume similar appearance, rolling onward in waves like those of a troubled sea, and overwhelming all they meet with inevitable destruction.

Goldsmith. History of the Earth, ch. ii.

They established their precepts on the firm basis of revealed religion, and not on the *sandy* foundation of human systems.

Knor. Essay 22.

SANDAL, Fr. *sandale*; It. *sandal*; Sp. *sandalia*; Lat. *sandalium*; Gr. *σανδαλιον*, *pro* *σαδαλιον*. Lemess thinks, from *σαττειν*, *onerare*, to load. Scheideus, from *σανις*, *σανιδος*, *tabula lignea*, because originally made of wooden boards, bound to the soles of the feet.

And commaundide hem that thei schulden not take ony thing in the weye but a yerde oneli, not a scrippe, ne breed, nether money in ther girdil: but schood with *sandalis*, and that thei schulden not be clothid with tweie cootis.

Wiclif. Mark, ch. vi.

A silly man, in simple weeds forworne,
And soild with dust of the long dried way;
His *sandales* were with toilsome travell torne,
And face all tand with scorching sunny ray.

Spenser. Faerie Queene, book i. can. 6.

Neither have they the use of stockings and shoes, but a sort of *sandals* are worn by the better sort.

Dampier. Voyages, Anno 1688.

Whoever may be sovereign of Egypt, it [Anthilla] is assigned perpetually as part of the revenues of the queens, and appropriated to the particular purpose of providing them with *sandals*.

Beloe. Herodotus. Euterpe, ch. xcviil.

SANDALUS, in Zoology, a genus of Coleopterous insects.

Generic character. *Antennae* filiform, short, serrated, inserted beneath a protuberance before the eyes, and composed of eleven joints; *palpi* short, the apical joint oval; mandibles acute, not dentate; body oval, oblong; *elytra* rather soft; *tarsi* pentamerous.

Type of the genus, *S. niger*, Knock; Latreille, Nov. Dict. Hist. Nat. vol. xxx. p. 123. Inhabits Brazil.

SANDORICUM, in Botany, a genus of the class Decandria, order Monogynia, natural order Meliaceae.

VOL. XXVII.

Generic character: calyx five-toothed; nectary cylindrical, truncated, bearing the anthers at its mouth; drupe large; nuts five.

One species, *S. Indicum*, a tree, native of the East Indies.

SANDWICH, a Cinque Port, Borough, and Market Town, situated on the river Stour in Kent, two miles from the sea, and sixty-eight miles East by South from London. Frequent mention of this town occurs in the early annals of England, when its harbour was spacious and of much resort. Sandwich was the landing-place of St. Augustine; the general rendezvous of the fleets and armies of Edward III. during his wars with France; and the port to which, after the battle of Crecy, the Black Prince brought his royal and noble prisoners. Towards the end of the XVth Century, the harbour, which had probably been neglected in the Civil Wars, when Sandwich was ravaged by enemies both foreign and domestic, began to suffer from the accumulation of sand washed up by the waves of the sea, and shortly afterwards the wreck of a large vessel, stranded at its entrance, still further contributed to its decay. That of the town, however, which would naturally have followed, was delayed by its becoming the refuge of numerous Protestants fleeing from religious persecution, to whom the politic Elizabeth gave a liberal and hospitable reception, and received from them in return much valuable information in the manufactures of France and Flanders. Under her letters patent more than four hundred of those unfortunate persons, principally workers in serges, baize, flannel, &c., settled in Sandwich, and soon formed a flourishing community, long since gone to decay. Small vessels only can now navigate the river, and the trade is inconsiderable. Population, in 1831, 3136. Sandown Castle, in the neighbourhood, is one of those strong but tasteless buildings which, like the castles of Walmer and Deal, owe their erection to the precaution of Henry VIII. when he had offended the principal continental powers by the divorce of Queen Catherine, and his quarrel with the Pope. It is a formidable looking fortress, very strongly fortified, surrounded by a deep fosse, and approached by a drawbridge. The upper part of the enormous circular tower in the centre contains a cistern for water, and in the lower is a large vaulted apartment bomb-proof.

SANE, Fr. *saner*, *sanable*; It. *sano*, *sanare*, *SA'NABLE*, *sanabile*; Sp. *sanar*, *sanable*; Lat. *sanation*, *sanabilis*, that may be made sound; *SA'NATIVE*, *sanare*, *sanus*, Gr. *σαος*, sound, whole.

Sanable,—that may be made whole, that may be healed or cured; healable, curable.

Sane, (met.)—sound, healthy in mind or mental faculties.

O medicine *sanatife* to sores langorous.

Chaucer. The Craft of Lovers.

Those that are *sanable* or preservable from this dreadful sin of idolatry may find the efficacy of our antidote.

More. Antidote against Idolatry. Preface.

Neither was it onely the peculiar judgement of the priest, that was here intended; but the thankfulness of the patient; that by the sacrifice which he should bring with him, he might give God the glory of his *sanation*.

Hall. Contemp'tations. The Ten Lepers.

It hath been noted by the aucients, that wounds which are made with brass, heal more easily than wounds made with iron. The cause is, for that brass hath, in it selfe, a *sanative* vertue.

Bacon. Naturall Historie, sec. 787.

Of his complexion he was *sanguin*.
Chaucer. Prologue to the Canterbury Tales, v. 333.

This face had been more comlie, if that hie redde in the cheeke
were somewhat more pure *sanguin* than it is.
Ascham. Schole-master, book ii.

I doubt his will like a hard spleen draws faster than his under-
standing can *sanguify*.
Milton. The Doctrine and Discipline of Divorce, ch. xv.

At the same time I think, I deliberate, I purpose, I command;
in inferiour faculties, I walk, I see, I hear, I digest, I *sanguifie*, I
carnifie.
Hale. Origination of Mankind, p. 31.

In whose white alabaster brest did stick
A cruell knife that made a griesly wownd,
From which forth gusht a stream of goreblood thick,
That all her goodly garments staid arownd,
And into a deepe *sanguine* dide the grassy grownd.
Spenser. Faerie Queene, book ii. can. 1.

Sharpe axes, turbils, two-hand swords, and speares with two heads
borne,
Were then the weapons; faire short swords, with *sanguine* hilts
still worne,
Had use in like sort.
Chapman. Homer. Iliad, book xv.

Now as touching the apparell of these knights, it remaineth
such as King Edward, the first deuiser of this order, left it, that
is to saie, euerie yeare one of the colours, that is to saie, scarlet,
sanguine in grain, blue and white.
Holinshed. Description of England, book ii. ch. v.

LOD. I would send
His face to the cutlers then, and have it *sanguin'd*,
Twill look a great deal sweeter.
Baumont and Fletcher. The Captain, act ii. sc. 2.

This animal of Plato containeth not only *sanguiferous* and re-
parable particles, but is made up of veins, nerves, and arteries.
Sir Thomas Brown. Vulgar Errors.

It [golden rod] is extolled above all other herbes, for the stop-
ping of blood in *sanguinolent* ulcers, and bleeding wounds; and
bath in time past been had in greater estimation and regard then
in these days.
Fuller. Worthies. England, ch. ii.

The lungs are the first and chief instrument of *sanguification*.
Arbuthnot. On Aliments, ch. ii.

Bitters, like choler, are the best *sanguifiers*, and also the best
febrifuges.
Floyer. On the Humours.

Her flag aloft spread ruffling to the wind,
And *sanguine* streamers seem the flood to fire.
Dryden. Annus Mirabilis.

The bars betwixt are easy to remove;
For *sanguinary* laws were never made above.
Id. The Hind and the Panther.

I shall not mention what with warm applications we have done,
to revive the expired motion of the parts even of perfect and *sanguineous* animals, when they seemed to have been killed.
Boyle. Works, vol. iii. p. 124.

There belongs to it the optick nerve, and according to modern
discoveries, lymphæducts, besides *sanguiferous* vessels.
Id. Ib. vol. vi. p. 736.

This task has been undertaken accordingly by every divine,
sanguinely and dogmatically by most, weakly by all of them.
Bolingbroke. Fragment of Essays. Essay 26.

Well—one at least is safe. One shelter'd hare
Has never heard the *sanguinary* yell
Of cruel man, exulting in her woes.
Cowper. Task, book iii.

SANGUINARIA, in *Botany*, a genus of the class
Polyandria, order *Monogynia*, natural order *Papave-*
raceæ. Generic character: calyx two-leaved; corolla,
petals eight; pod ovate, one-celled.

One species, *S. Canadensis*, native of North America.

SANGUINOLARIA, in *Zoology*, a genus of *Ce-*
phalopodous Mollusca.

Generic character. Shell gaping, transverse, some-
what pellucid, slightly gaping at the lateral extremities;
upper edge arched, not parallel to the inferior; hinge
with two approximated teeth in each valve; ligament
exterior.

Type of the genus, *Solen sanguinolentus*, Linnæus;
Lamarck, *Anim. sans vert.*, vol. v. p. 519. Inhabits the
Indian and European Oceans; two species inhabit the
British coasts.

SANGUISORBA, in *Botany*, a genus of the class
Tetrandria, order *Monogynia*, natural order *Rosaceæ*.
Generic character: calyx two-leaved, inferior; corolla
superior; germen situated between the calyx and co-
rolla.

Four species, natives of Europe and North America.

SANHEDRIN, (written by the Jews thus, סנהדרין) a corruption of the Greek word συνέδριον, and the name of certain Jewish tribunals in the last period of the Jews' political existence. According to the Rabbies, there was in every town and village of Judea, whose population amounted to one hundred and twenty, one of these tribunals, consisting of twenty-three persons, called the *Minor Sanhedrin*, and possessing the power of life and death. The word is, however, best known as the name of the Great Council of Seventy-one, which held its sessions within the precincts of the Temple at Jerusalem, and which was called by the Jews the Great Sanhedrin, or the Great House of Judgment. Amongst its seventy-one members the most learned was elected President, with the title of נשיא Nasi, or Prince; and the next in reputation was chosen *Av beth din*, Father of the House of Judgment, or Vice President. This tribunal was self-elective, and filled up vacancies in the

SAN-

GUIFY.

SANHE-

DRIN.

SANHE-
DRIN.

following manner. It sought out throughout the land persons distinguished for learning and piety, and first made them judges in their own city; thence it advanced them to be members of the Minor Sanhedrin, which sat at the Gate of the Mountain of the House; thence to the similar tribunal at the Gate of the Court; and thence to the Supreme Council. The qualifications required in candidates were of the highest order. They were to be handsome, tall, free from all corporeal blemish, of good family, pious, and of good report; skilled in medicine, magic, astronomy, and astrology; acquainted with all the rites of all existing forms of idolatry; and, moreover, able to converse in seventy languages, that is, as the Rabbies suppose, all the languages in the world.

The jurisdiction of the Sanhedrin was unlimited, and from its sentence there was no appeal. The extent of its power may be calculated from an enumeration of those duties which were considered as its peculiar prerogatives. To it belonged exclusively the right to choose a King; to appoint the Minor Sanhedrins throughout all the Tribes and cities of Israel; to judge an idolatrous Tribe; to inflict capital punishment upon a false Prophet, or a High Priest; to administer the waters of jealousy, and to declare war. Such at least are the powers ascribed to it by the Rabbies, and which, if ever exercised, would have made the Judge, the King, and the High Priest mere ciphers. But the Sanhedrin was, besides, the infallible interpreter of the Law for the time being; and to question its decisions was a capital offence. We say, for the time being, for no Sanhedrin was bound to respect the decisions of its predecessors. What was affirmed by the Sanhedrin of one generation might be denied by that of the following generation, and yet both decisions were to be received as the true sense of the Law on pain of strangulation.

The Jews affirm that this tribunal was instituted by Moses, and that it continued to exist thence until after the destruction of the Temple. But this assertion, though received by many Christians of high character for learning, is palpably false. There is no trace of it in the Law, the Prophets, or the historical books; and from those sources it is quite evident that neither Kings nor Priests were subject to any such control. The Jews cite two texts from the Law in proof of their assertion; but those texts prove, on the contrary, that the existence of the Sanhedrin is totally inconsistent with the Mosaic constitution and therefore could not have been instituted by Moses. To prove that the Sanhedrin ought to consist of seventy-one persons, they quote *Numb. xi. 16*, "And the Lord said unto Moses, Gather unto me seventy men of the elders of Israel, whom thou knowest to be the elders of the people, and officers over them." These seventy elders, together with Moses, make seventy-one. To demonstrate the necessity of implicit obedience, they refer to *Deut. xvii. 9, &c.*, "Thou shalt come unto the Priests the Levites, and unto the Judge that shall be in those days, and inquire: and they shall show thee the sentence of judgment. . . . According to the sentence of the Law, which they shall teach thee, and according to the judgment which they shall tell thee, thou shalt do: thou shalt not decline from the sentence which they shall show thee, to the right hand nor to the left." The Jews take for granted that these two passages refer to one and the same tribunal, but this assumption is certainly contrary to truth. Even allowing that the seventy elders were to constitute one judicial body, and not to be scattered through all Israel, it

is plain that they were to be taken indiscriminately from all the Tribes; and in like manner the Rabbies teach that the Sanhedrin was to consist of Priests, Levites, and Israelites, if possible, though they say that if there be no Priests, the Sanhedrin would still be lawful. This first passage then refers to a miscellaneous body taken from all the Tribes of Israel. The second passage, on the contrary, speaks of an exclusive body, where at the very most there could be only one person not a Priest. "Thou shalt come unto the Priests the Levites, and unto the Judge." The Supreme Court established by Moses was to consist exclusively of Priests, with only one exception in favour of the chief civil magistrate, the Judge; and if, as in the days of Eli, the Judge himself happened to be a Priest, then the Supreme Court consisted of none but Priests. In neither case can this exclusive body be identical with that miscellaneous assembly taken promiscuously from all the Tribes of Israel, and therefore that assembly cannot be a Supreme Court, for to suppose two Supreme Courts would be absurd; and therefore the Court of the Seventy Elders cannot be the same as the Sanhedrin described by the Rabbies. And, further, as Moses did establish a Supreme Court consisting solely of Priests together with the Judge, it is evident that he could not have established a second Supreme Court of an entirely different constitution. The Supreme Court established by Moses is totally incompatible with the existence of the Sanhedrin, and we may thence conclude with confidence that it never did exist, so long as the Mosaic constitution remained entire.

If then the Sanhedrin did not originate with Moses, to what period are we to ascribe its rise? Its Greek name suggests the answer, probably it arose in the time of the Greeks. If it had existed previously, the Greek name would never have become universal among the Jews, who heartily hated every thing Grecian, and that with good reason. The probability is that the Greek conquerors erected a new tribunal, and, as they did not care for the precepts of Moses, and were led from political motives to depress the authority of the High Priests and Civil Governors, composed it of all classes of Jews. Those who were made members tasted the sweetness of power, and when the Greeks were gone, determined to keep it. The genius of Pharisaism, which began at that period to acquire influence, and whose great object was to usurp the office and power of the Priests, confirmed them in their determination. The Sanhedrin was a welcome auxiliary for the accomplishment of their purpose, and was therefore perpetuated, and the people were taught to believe that it was a revival of the Mosaic institution of the Seventy Elders. This supposition is strongly confirmed by the total silence of Josephus as to its existence until long after the time of the Maccabees.

But at all events it is certain that the constitution of the Sanhedrin is in direct opposition to that of the Supreme Court instituted by Moses, and that it could not have been established by him. Whenever it arose, it was an unlawful tribunal, which usurped the power committed by Moses to the Priests and Civil Governor; its sentence, therefore, upon the Lord Jesus Christ in no wise affects the validity of his claims, and furnishes no warrant for Jewish unbelief. If the Jews be really zealous for the Law of Moses, they are bound to repudiate the Sanhedrin and all its decisions. If they submit to the Sanhedrin, they not merely condemn Jesus of Nazareth, but declare themselves enemies to the Mosaic Law.

SANHEDRIN, THE PARISIAN. This title is given to the mock deliberative assembly of Jewish deputies convoked by Napoleon, and which met in Paris the 26th July, 1806. Napoleon's professed aim was to reform Judaism, and ameliorate the condition of the Jews; his real object, to make that people the tools of his ambition. The so-called enlightened part of the assembly, who cared nothing for religion, and a great deal for political privileges, was quite willing to forward Napoleon's views, but owing to the constancy, firmness, and honest zeal of the old-fashioned Rabbinic Jews, the project failed, and ended in the establishment of a consistorial system, as oppressive to all devout Jews, as it was contrary to the genius of Judaism. For an account of the proceedings, see *Transactions of the Parisian Sanhedrim*, published in French by M. Diogene Tama, and translated by F. D. Kirwan, London, without any date.

SANICULA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order, *Umbelliferae*. Generic character: umbels crowded, forming a head; florets of the centre abortive; fruit furnished with hooked spines.

Four species, *S. Europæa*, is a native of England.

SANIOUS, Fr. *sanieux*; It. *saniòso*; Lat. *sanius*, from *sanies*, corrupt blood or matter. *Sanies* is said to be of a thinner substance than blood, (*sanguis*), *varie crassa, glutinosa, et colorata*. See Vossius. Fr. *sanieux*,

"Mattery, corrupt, yielding, or full of filthy moisture." Cotgrave.

The owner thereof is lady of estate
Whoos name to tell is dame saunce pere.
Skelton. *The Bouge of Court*.

I am blest in a wife (Heaven make me thankfull)
Inferiour to none, (*sans* pride to speak it,)
Yet if I were a free-man, and could purchase
At any rate the certainty to enjoy
Lisander's conversation while I liv'd,
Forgive me my Calista, and the sex,
I never would seek change.

Beaumont and Fletcher. *The Lover's Progress*, act i. sc. 1.

DOR. Who's that?

ALCI. 'Tis one in armour. A bloody sword in his hand.

DOR. *Sans* question the murtherer. Id. *Ib.* p. 505.

SANSEVIERA, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Asphodelæ*. Generic character: corolla inferior, of one petal, tube slender, border six-parted, revolved; stamens inserted into the border; berry one-seeded.

Three species, natives of Africa and the East Indies.

SANTALUM, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Santalaceæ*. Generic character: corolla, petals four; calyx four-

toothed; stamens inserted into the base of the calyx; berry, inferior, one-seeded.

One species, *S. album*, Sanders wood, native of the East Indies.

SANTOLINA, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic character: calyx imbricated, hemispherical, scales keeled, scariose at the apex; receptacle chaffy; down none.

Twelve species, mostly natives of the Northern hemisphere; *S. maritima* and *ericoides* are natives of England.

SANTON, a holy man. (*Santon*, un saint, sanctus, —Lacombe.)

There was formerly a *santon* whose name was Barsisa, which for the space of an hundred years very frequently apply'd himself to prayer; and scarce ever went out of the grotto in which he made his residence, for fear of exposing himself to the danger of offending God.

Guardian, No. 148.

SANTORIN. See SPORADES.

SANVITALIA, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*, natural order *Compositæ*. Generic character: calyx imbricated, flat; receptacle chaffy; seeds of the rays with three bristles, of the centre winged.

One species, *S. procumbens*, native of Mexico.

SAONE-ET-LOIRE (Department of) is formed out of a part of the ancient Province of Burgundy, and is named from its two principal rivers; one of which, the Saône, traverses it from North to South, and constitutes its South-Eastern limit; the other, the Loire, running in the contrary direction, flows through its South-Western borders. This Department is bounded by that of the Côte-d'Or on the North; by those of Jura and Ain on the East; by the Departments of the Rhône and the Loire on the South; and by those of Allier and Nièvre on the West. It enjoys a very temperate climate, and the air is, in general, healthy.

A chain of mountains, which forms the commencement of the grand range of the Cevennes, crosses the Department from South to North; its most elevated summit is that of Mont-Beuvray, which is about 3300 feet above the level of the sea. It is thus divided by this range into two portions, of which the Western, the larger, belongs to the basin of the Loire, and the Eastern to that of the Rhône. Its surface is luxuriant and agreeably diversified; presenting hills clothed by rich vineyards, beautiful valleys, fertile plains, and vast forests. Large numbers of cattle are bred on its extensive and abundant pasture grounds; and the hay carried from its immense meadows is both considerable in quantity, and mostly of first-rate quality. The country bordering the Saône, in particular, is renowned for its prolific abundance, and picturesque beauties. This river pursues a tranquil course through its lovely basin, bathing numerous towns and villages, and fertilizing vast meadows; beyond which rise verdant hills, dotted with châteaux and country seats, and constantly opening to view romantic sites and smiling landscapes.

The coal measures of this Department are among the richest in France; and although the mines opened are neither so numerous nor productive as the abundance of this mineral would warrant, they may rank next in importance to those of the Departments of the Nord, and of the Loire. They form two large basins, of which that of Autun, lying northerly, covers a surface of 31,000 hectares; but only a fifth of this extent has been leased

SAN-
TALUM.
—
SAONE-
ET-
LOIRE.

SAONE-
ET-
LOIRE.

for mining purposes, and there is only one mine of consequence yet worked in it, that of Epinac. The other basin, that of Blanzv and Creuzot, which lies in the centre of the Department, is more than double the area of the former, and has the advantage of being tracked for about nine leagues by the Canal du Centre; about half of its surface is leased out in mines. There is another smaller coal formation in the South of the Department, which is held by one owner; this estate goes by the name of Chapelle-sous-Dun. Some iron mines are worked, but they are unproductive; there is a lead mine, which is not wrought; and one of manganese, which is in full activity, yields richly, and the lodes are extensive. Besides the above, the chief minerals are rock crystal, marble, freestone, and limestone. The latter is for the most part burnt for manure; the marble is not worked. There are mineral springs, of note even in the time of the Romans, at Bourbon-Lancy.

Vegetable
productions.

The corn, chiefly wheat and rye, and the hay raised in the Department, are more than sufficient for home consumption; but the vegetable produce which enters most largely into exportation are the well-known wines which go under the general name of Vins de Maçon. Two-thirds of the vintage are annually exported to the North of France and to foreign countries. The average yearly quantity produced of these wines is computed at 800,000 *hectolitres*. They are generally classed as ordinary wines; but some of the growths, as those of Romanèche, Thorrens, Moulin-à-Vent, Givry, and Mercurey, &c. are held in high estimation. Flax, fruits, and potatoes form the other principal vegetable productions.

Cattle.

The greatest number of horned cattle and horses is bred in the Southern districts of the Department, termed the Charolais, to which the Swiss are accustomed to resort, and where they buy them whilst young to rear and fatten in their own grazing lands, selling them again in France; they do the same with the swine, of which they are considerable purchasers. Game is abundant; and the rivers and preserves (*étangs*) yield plenty of excellent fish.

Trade and
manufac-
tures.

The chief manufactures are cloths, woollen and cotton coverlets, foot carpets, (*tapis de pied*), clocks, kitchen utensils, earthenware, tiles, &c. There are also tanneries, four paper-mills, twelve iron-works, four brass-foundries, one steel mill, three glass-works, two sugar-refineries, and, above all, coal mines. The trade consists in the products of the above, and in wine, brandy, vinegar, grain, and cattle.

Area.

This Department covers a superficies of 857,678 *hectares*, or 290 geographical square leagues. The high roads extend in length 1266 metres to each square league, and the water lines 825 metres. The forests occupy 132,000 *hectares*; the vineyards 45,000 *hectares*. The gross territorial revenue is estimated at 28,480,000 francs. The Department is divided into five Arrondissements, which are subdivided into 49 Cantons, and these into 595 Communes. Population, 523,970.

Maçon, the chief town of the Department, is agreeably situated in a fertile country, on the right bank of the Saône. It is built partly on the side and partly at the foot of a hill; and, like most old towns, its streets are very irregularly laid out and badly paved. However, the ramparts which formerly hemmed it in have given place to some very pleasant walks, and its quays are very noble piles, long, broad, and lined with rows of handsome houses. The chief buildings of the town are its Hospital, designed by the celebrated Soufflot; the

Hôtel de Ville, in which is deposited the public library, consisting of about four thousand volumes; the *Hôtel de la Préfecture*, which, previously to the Revolution, was the residence of the Bishop; and the new church of St. Vincent. Twelve Churches and its beautiful Cathedral fell sacrifices to the revolutionary mania. The river is crossed by a bridge of twelve arches, which is referred to the XIth Century. There is a small theatre here. Maçon is of high antiquity, having been a burgh of Celtic Gaul; and from the statues, altars, vases, inscriptions, and coins which, from time to time, have been discovered here, it must have become an important and handsome town after the Roman conquest. It was plundered and reduced to ashes by the Huns in 451; sacked by the Saracens in 720; the prey of the murderous bands named *Ecorcheurs* and *Malandrins* in 1361; and the scene of various sieges and atrocities in the religious wars which subsequently desolated France. The situation of the town on the bank of the Saône is favourable to its trade; but, lying in a corner of the Department, it is disadvantageously placed as the head of the local Government. Maçon has a Communal College, and an Agricultural and Scientific Society. Population 10,998. East longitude 4° 35' 44", North latitude 46° 20'.

Autun has been given in its alphabetical order.

Chalons-sur-Saône is a large and handsome town, seated in a fertile plain covered with rich meadows and vineyards. It lies on both banks of the Saône, and at the mouth of the Canal du Centre, which joins the Loire at Digoin; hence it is very advantageously situated for commercial purposes. It is in general well built, especially the parts bordering the river, over which is thrown a stone bridge of five bold arches, and of ancient and singular architecture. Several of the *places*, or squares, are spacious, of pleasing effect, and ornamented with beautiful fountains. The principal edifices are the Cathedral, a Gothic building of the XIVth Century, and the Hospital of St. Lawrence, founded by Francis I. This town was an ancient Roman station, and from its position was selected by Cæsar as the *depôt* of corn and provisions for the troops quartered in the surrounding districts. There are here manufactories of hats, dye-stuffs, with foundries, potteries, and corn and oil-mills worked by steam. Chalons is the emporium of merchandise of every kind for the North and South of France, and enjoys a considerable transit trade. Three steam-boats ply between Chalons and Lyons. It is the staple of iron and of wines for the last-named town and St. Etienne. Population 12,220. East longitude 4° 51', North latitude 46° 47'.

Charolles is a pretty town, the capital of the former Province of Charolais, agreeably seated in a small valley at the confluence of the Semence and Arconce. It is commanded by an eminence, on the summit of which are the picturesque ruins of its ancient castle. In its neighbourhood are the numerous large forges which supply the iron-works of St. Etienne. Population 2984. Louhans is a long, straggling, narrow town, which carries on a considerable trade in the finer wheats, and is a *depôt* for goods from Lyons to Switzerland. It lies at the junction of the Seille and the Solnan. Population 3411. Bourbon-Lancy is celebrated for its hot baths. Romanèche, a small town of 2285 inhabitants, is situated in the midst of a rich wine country, which produces the choicest and most delicate growths of the Department. Near it is the richest mine of manganese

These are instruments and tools belonging to pioners, *sappers*,
diggers, and labouring men.

Translation of Boccacini, (1626,) p. 92.

It [Gibbon] furnishes arguments for the superficial and vicious
in defence of scepticism and profligacy, and thus indirectly tends
to *sap* the foundation of human happiness.

Knox. Essay 23.

At ev'ry draught more large and large they grow,
A bloated mass of rank unwieldy woe;
Till *sapp'd* their strength, and ev'ry part unsound,
Down, down they sink, and spread a ruin round.

Goldsmith. Deserted Village.

SAPERDA, in Zoology, a genus of *Coleopterous*
insects.

Generic character. *Antennæ* as long as, or scarcely
longer than, the body, sometimes a little hairy, twelve
or eleven-jointed, the basal joint stout, not much elon-
gate; the second minute, nodose; third elongate,
remainder diminishing in length to the end; *palpi* four,
terminated by a subfusiform joint, long and rather slen-
der, somewhat filiform; head deflexed vertically, flat in
front, sometimes broader than the thorax, the latter cy-
lindric, not armed with spines on the sides; body
cylindric, depressed on the back; *elytra* long, linear,
sometimes a little narrowed behind, the shoulders gene-
rally prominent; legs moderate; *tibiæ* simple; *tarsi*
pentamerous.

Type of the genus, *S. carcharias*, Linnæus; Ste-
phens, *Britt. Ent. Illust. (Mandibulata)*, vol. iv. p. 239.
A very numerous genus, of which nearly a dozen species
have been found in England, many of them, especially
the type, in profusion: their larvæ are very destructive
to timber trees, boring within the solid wood, and when
numerous, rendering them liable to overthrow by storms
of wind, by destroying their substance.

SAPHY, perhaps, from the Arabic *saft*, "pure,
select, excellent," is the name given by the Negroes to
the amulets with which they are supplied by the Mo-
hammedans, who have themselves no less faith in these
phylacteries. They consist of strips of paper on which
are written sentences from the Korán, often intermixed
with cabalistical characters and numerals. Sometimes
they are long rolls filled with such sentences and prayers
in Arabic, enclosed in silver tubes or silk bags. They
are always worn near the skin, and generally sewn up
in some part of the dress. Most of the Africans, whe-

SAP.
—
SAPHY.

SAPHY. ther Musulmáns or Pagans, men or women, are largely provided with them. They are mentioned by almost all the travellers in Negroland; and Mungo Park was for a time obliged to fabricate them as a means of subsistence. Bowdich's *Ashantee*, p. 271. They seem to be more valued than the feitiços (whence our word fetish) of the Pagan conjurors.

SA-PIENT.

SA'PID, } It. *sapòre*; Lat. *sapidus*, *sapor*.
SAPIDITY, } Some think *sapere* was first applied to
SA'PIDNESS, } things of good or ill taste, and thence
SA'POUR. } to the mind: others reverse the order.

See *sapere*, in Vossius; and **INSIPID**, and **SAVOUR**.

Tasteful; having a high relish or flavour.

There is some *sapor* in all aliments, as being to be distinguished and judged by the gust, which cannot be admitted in ayr.

Sir Thomas Brown. *Vulgar Errors*, book iii. ch. xxi.

Thus camels, to make the water *sapid*, do raise the mud with their feet.

Id. Ib.

As for their taste, if their nutriment be ayr, either can it be an instrument thereof; for the body of that element is ingustible, void of all *sapidity*, and without any action of the tongue, is by the rough artery or weazon conducted into the lungs.

Id. Ib.

When the Israelites fancied the *sapidness* and relish of the flesh-pots, they longed to taste and to return.

Taylor, vol. ii. Sermon 17.

We see that *sapidness* and volatility are wont to denominate the chymists mercury or spirit; and yet how many bodies, think you, may agree in those qualities, which may yet be of very different natures, and disagree in qualities either more numerous, or more considerable, or both?

Boyle. *Works*, vol. i. p. 532.

Now *sapour* being an accident or an affection of matter, that relates to our tongue, palate, and other organs of taste, it may very possibly be, that the small parts of a body may be of such a size and shape, as, either by their extreme littleness, or by their slenderness, or by their figure, to be unable to pierce into and make perceptible impression upon the nerves or membranous parts of the organs of taste.

Id. Ib. vol. i. p. 573.

"I think," says he, "I shall now chiefly apply myself to the reading of such books as are rather persuasive than instructive; such as are *sapid*, pathetic, and divinely relishing."

Knox. *Christian Philosophy*, sec. 32.

SA'PIENT, } Fr. *sapience*; It. *sapiènte*, *sapiènza*;
SA'PIENCE, } Sp. *sapiencia*; Lat. *sapiens*, *sapientia*,
SAPIE'NTIAL. } from *sapere*, to feel strongly, have a clear sense of. *Sapient* and *sapience* are used as equivalent to the English—

Wise, wisdom; sage, sageness.

In what Salamon seith quath hue, in *sapience*.

Piers Ploughman. *Vision*, p. 62.

Seint James eke sayth: If any of you have nede of *sapience*, axe it of God.

Chaucer. *Tale of Melibeus*.

Spot more delicious then those gardens feign'd
 Or of reviv'd Adonis, or renown'd
 Alcinous, host of old Laertes' son;
 Or that, not mystic, where the *sapient* king
 Held dalliance with his faire Egyptian spouse
 Much hie the place admir'd, the person more.

Milton. *Paradise Lost*, book ix.

Eve, now I see thou art exact of taste,
 And elegant, of *sapience* no small part.
 Since to each meaning favour we apply
 And palate call judicious.

Id. Ib.

(Open your Bibles where you will, in all the *sapiential* or prophetic books.

Hall. *Remaines*, p. 66.

At this deep Sidrophel look'd wise,
 And, staring round with owl-like eyes,
 He put his face into a posture
 Of *sapience*, and began to bluster.

Butler. *Hudibras*, part ii. can. 3.

The herds, as *sapient* of the coming storm,
 (For beasts partake some portion of the sky)
 In troops associate.

Grainger. *The Sugar-Cane*, book ii.

How grave his aspect! No Solon ever looked so *sapient* as he does when he is on the point of making a bet, or insidiously plotting a bargain or an intrigue.

Knox. *Essay* 157.

SAPINDUS, in *Botany*, a genus of the class *Octandria*, order *Trigynia*, natural order *Sapindaceæ*. Generic character: calyx four-leaved; corolla, petals four; capsule fleshy, connate, ventricose.

Ten species, natives of the East and West Indies; the fruit of *S. saponaria* has properties resembling soap.

SAPIUM, in *Botany*, a genus of the class *Monoecia*, order *Monadelphia*, natural order *Euphorbiaceæ*. Generic character: male flower, calyx two-cleft; corolla none; filaments two-cleft: female flower, calyx three-toothed; style short; stigma three-cleft; capsule three-celled.

Three species, natives of South America and the East Indies.

SAPONA'CEOUS, } A. S. *sape*; Ger. *seife*; D.

SA'PONARY. } zeep; Sw. *sæpa*; Lat. *sapo*;

Eng. *soap* (q. v.)

Of or pertaining to, having the qualities, the likeness of—*soap*.

It is a *saponaceous* substance, being composed of an alkaline salt, oil, and water, all of which can be extracted from it.

Arbuthnot. *On Aliments*, ch. i.

By digesting a solution of salt of tartar with oil of almonds, I could reduce them to a soft *saponary* substance.

Boyle.

What the white was we could not discover; it was close grained, *saponaceous* to the touch, and almost as heavy as white lead.

Cook. *First Voyage*, book ii. ch. vi.

SAPONARIA, in *Botany*, a genus of the class *Dicandria*, order *Digynia*, natural order *Caryophyllææ*. Generic character: calyx tubular, one-leaved, naked; corolla, petals five, hooked; capsule oblong, one-celled.

Nine species, natives of the Northern hemisphere; *S. officinalis*, Soapwort, is a native of England.

SAPPHICK, a kind of metre, so called from *Sappho*, who wrote in it.

She came to him, and took out of his hand the lute, and laying fast hold of Philoclea's face with her eyes, she sung those *sapphicks*, speaking as it were to her own hope.

Sidney. *Arcadia*, book i.

SAPPHIRE, } Fr. *saphir*, It. *zaffiro*; Sp. *safirs*,
SA'PPHIRINE. } or *zaphio*; Lat. *sapphirus*; Gr.

σαπφειρος. See the Quotation from Pliny.

Of rubies, *saphires*, and of perles white

Were all his clothes brouded up and down,

For he in gemmes gretly gan delite.

Chaucer. *The Monkes Tale*, v. 14386.

And there ypon

The *saphir* is his propre stone.

Gower. *Conf. Am.* book vii.

There fall those *saphire-coloured* brooks,

Which conduit-like with curious crooks

Sweet islands make in that sweet land.

Sidney. *Arcadia*, book ii.

The *sapphire* also glittereth with markes and prickles of gold. *Saphires* are likewise sometime blew: mixed also with purple, although that be very seldom.

Holland. *Plinie*, book xxxvii. ch. ix.

She was too *saphirine* and dear for thee:

Clay, flint, and jet now thy fit dwellings be.

Donne. *Elegy* 11.

Jewellers reckon among *sapphires* not only that sort of azure gems, which usually pass for such, but also another sort of stones, because of their *sapphirine* degree of hardness.

Boyle. *Works*, vol. iii. p. 525.

SA-PIENT

SAP-PHIRE.

SAP-
PHIRE. Sometimes they appeared quite pellucid, at other times assuming various tints of blue, from a pale *sapphirine* to a deep violet colour; which were frequently mixed with a ruby or opaline redness.

Cook. *Third Voyage*, book iii. ch. xiii.

SARA-
GOSSA.

The living throne, the *sapphire* blaze,
Where angels tremble, while they gaze,
He saw
Gray. *Progress of Poesy*.

SAPROMYZA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* deflexed, three-jointed, the terminal joint oblong, compressed, with the tip obtuse, its base with a short plumose or villose dorsal seta; head somewhat hemispherical; *hypostome* a little descending, naked, flat; eyes distant, rounded; wings two, incumbent, parallel; *abdomen* oblong, five-jointed.

Type of the genus, *Musca flava*, Linnæus; Meigen, *Dipt. Europ.* vol. v. p. 258. pl. xlv. fig. 6—12. Above thirty species, about two-thirds of which are found in England.

SAPYGA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* in both sexes as long as the head and thorax, thicker towards their extremities, especially in the males; mandibles very strong, trigonate, many toothed; head large, broader than the thorax, orbiculate, depressed; *thorax* with the first segment, or the collar, distinct; *metathorax* convex; wings four, anterior with the marginal areolet not remote, not folded longitudinally; legs somewhat equal, the hinder pair rather longest, slender; *tibiæ* with two acute spurs at the apex.

Type of the genus, *Apis clavicornis*, Linnæus; Klug, *Monog. Siric.* p. 63. pl. vii. fig. 4—6. Two species, both of which are indigenous, one common; the other local, and consequently less common.

SARABAND, Fr. *sarabande*; It. *sarabanda*; Sp. *zarabanda*; supposed to be of Moorish origin. See *Menage*.

No more for Moorish *sarabands* they call,
Their castanets hang idle on the wall.

Harte. *The Vision of Death*.

SARACA, in *Botany*, a genus of the class *Diadelphia*, order *Hexandria*, natural order *Leguminosæ*. *Generic character*: calyx none; corolla funnel-shaped, four-cleft; filaments three on each side of the orifice of the tube; pod pedicellate.

One species, *S. Indica*, native of the East Indies.

SARAGOSSA, or ZARAGOZA, the Capital of Aragon, lies in a vast, open, and fertile plain, which, besides the Ebro, is fecundated by the two rivers the Galego and the Huerva, and by the canal of Aragon. The first-named river traverses this celebrated city, and is crossed by the finest wooden bridge in Europe, as well as by one of stone. The streets are mostly narrow, irregular, and ill-paved; but the houses, of antique fashion, are in general regularly built. The *Calle Santa*, commonly called the *Calle del Coso*, is the main street, and forms one of the principal promenades of the city; it is straight, very wide, of considerable length, and its buildings are tolerably uniform. Previously to the French invasion, its churches were distinguished as among the most magnificent and rich in Spain, but they have suffered severely along with its other public edifices. Many of them, however, still boast something of their pristine grandeur. In particular, the Church of Our Lady of the Pillar is renowned over the Peninsula, and attracts crowds of pilgrims. It is full 500 feet in length, with three spacious naves, separated by pillars, which on either side

support seven arches. Architecture, sculpture, and painting have emulously united to decorate the interior of this church, with which, however, its exterior is far from corresponding. This is a defect observable likewise in the Cathedral, a Gothic building, and internally of a simple but very noble style of architecture. The University has about 1000 students. A learned society established among the better informed citizens has opened classes for instruction in mathematics, political economy, and natural history; and there is an Academy of Fine Arts, as well as two public Libraries in the city. The trade and manufactures of *Saragossa* are of little importance. Its antiquity is attested by numerous Roman remains still observable; it is conveyed too in its name, which is a corruption of *Cæsar-Augusta*, the city having been so called in honour of Augustus, who enlarged and improved it. *Saragossa* will ever be memorable in History for its glorious defence against the French in 1808-9. Without other walls than one of earth and the breasts of its heroic citizens, and unprovided with the requisite *matériel* or with provisions for sustaining a siege, it fell at last before an overwhelming force, house by house, and street by street, with its defenders buried beneath their ruins. Population 48,000. West longitude 0° 48', North latitude 41° 45'. Laborde, *Itinéraire de l'Espagne*.

SARATOV, a Government of Russia, is bounded on the North by the Governments of Penza and Simbirsk; on the East by that of Orenbourg; on the West by the country of the Don Cossacks and the Government of Tambov; and on the South and South-East by the Government of Astrakhan. According to Schubert, its superficial area is 4292 square geographical miles, or 208,319 square versts; but this cipher is reduced by M. Arsénief to 3620 square geographical miles.

Beyond the Volga, which, traversing the Government Surface, from North to South, divides it into two almost equal portions, there extends one immense *steppe*, destitute of wood and fresh water, and open to the winds; but, on this side, the surface is covered Northwards with a fine black soil, which becomes thin and stony towards the South. The flatness and monotony of the *steppe* is relieved on the North by the last ramifications of the *Obcheï Siert*, which stretch in a series of sandhills, rising from a clay bottom, as far as the Volga. The Western half of the Government is generally undulated. Limestone and slate hills accompany the river in its Southern course, dividing the Volga from the Don, and opposing an apparently insurmountable obstacle to the junction of these two rivers, first proposed by Peter the Great. The line of communication would be through the Medvieditsa and the Ilavlia, affluents of the Don, and thence by a canal to the Volga. Salt lakes abound in the Eastern half of the Government; the largest is that of Ieltonskoé, which is 47 versts in circumference, and has a superficies of 17,000 dessaitines. "Looking on it in the height of Summer," writes Erdmann, "the eye seems to wander over a sea of ice and snow, so great is the illusion produced by the salt crystallized along its banks and over its surface." It yields annually 100,000 tons of salt.

Agriculture can only be carried on on this side of the Volga, the *steppe* on the other side, with the exception of a narrow strip along the river, merely serving for pasturage. In the fertile soil already specified it is considered a bad harvest when the return is not five for one. The grain chiefly raised is rye, wheat, oats, and

SARA-
GOSSA.
—
SARA-
TOV.

SARA-
TOV.

millet; peas, flax, and hemp are also grown; and the colonists settled in the Government have introduced the cultivation of tobacco, hops, and madder. Melons, arbutus, fruit trees, and even vines are reared near Sarepta, and mulberry trees at Saratov and on the Akhtouba. In 1808 the harvest amounted to 6,320,014 chetverts. The breeding of cattle is now the subject of much attention, particularly the improvement of the sheep. The Tatars rear bees; game abounds in the North-Western districts; and the fisheries of the Volga yield not only sufficient for home consumption, but supply a considerable export trade.

Forests, &c.

The Crown forests occupy 418,541 dessaitines; and between the Khoper and the Soura is an oak forest of full 30,000 dessaitines in extent. However, the supply of wood falls short of the demand. Besides salt, the mineral kingdom furnishes mill-stones and a little iron.

Trade and
commerce.

The manufacturing industry of the Government employed, in 1830, about 2300 workmen, distributed in 188 manufactories and work-yards. Tanning, the making of tiles, and manufacture of tobacco are the chief businesses of this portion of the community. The colonists weave linen and cloth. Brandy distilleries are numerous; and tallow and potashes are prepared in large quantities. The water communications of the Government are favourable to commerce. The Tatars trade to a large amount in hides and lamb-skins; and the Calmucks bring large droves of horses to the markets. According to M. Schnitzler, the capital in trade, as declared by 5053 merchants, amounted to 11,175,000 rubles.

Education.

Saratov is dependent, with respect to public instruction, on the jurisdiction of the University of Kasan. In 1832 the Civil Schools were nine, with 40 teachers and 1005 pupils; the Ecclesiastical Schools, in 1831, were seven in number, and had 34 masters and 1435 scholars. In 1830 there was only one printing-office in the Government, and that belonged to the Crown.

Religion.

The Greek Eparchy is of recent date, and does not embrace the entire population. Saratov is a Diocese of the third or fourth class, which comprised, in 1830, 10 Cathedrals, 586 Churches, and three Religious houses. The Mahometans have 124 Mosques. The Protestant Consistory of Saratov has been merged in that of St. Petersburg, but the Moravian brothers of Sarepta have their special synod.

The administration of the Government is on the usual footing, except that the colonists are placed under a separate department. The revenue, in 1808, amounted to 4,074,000 rubles; but we have no data either for its actual state, or for the expenses.

The climate is temperate, the mean heat being $+14^{\circ}$ Reaumur, and the mean cold -4° Reaumur. Violent whirlwinds are not uncommon. The air is dry and healthy.

Towns.

Saratov, the Capital of the Government, is seated on the right bank of the Volga, in an arid and naked valley, lying between the river and some hills of limestone. The town has neither beauty nor regularity. The houses are chiefly of wood; but there are some handsome stone ones, as well as six Churches, two Religious houses, and the Gostinoï-Dvor, of the same material. It has a Gymnasium and a Botanic Garden. The trade is active, as Saratov is the emporium of the colonists. Population, according to the official returns, 35,664 souls. East longitude 46° , North latitude $51^{\circ} 31' 34''$.

Volsk lies likewise on the right side of the Volga, at

VOL. XXVII.

a distance of 130 versts from Saratov, up the river. It is distinguished by the residence of many rich merchants and traders, and numbers 11,000 inhabitants. Its Gostinoï-Dvor is a handsome and convenient edifice. East longitude $47^{\circ} 12'$, North latitude 52° .

Tsaritsyn, which takes its name from the Tsaritsa, lies at the confluence of this river with the Volga, at the South-Western extremity of the Government. It is a fortified town, and always garrisoned. In its vicinity are some mineral springs. Population 5000. East longitude $44^{\circ} 15'$, North latitude $48^{\circ} 34'$.

Sarepta, still further South, is a pretty town, founded by the Moravian brethren in 1765. Comfort and cleanliness, two marvels in Russia, reign throughout it. The streets all terminate in one large market-place, from a fountain in which water is supplied to every house. About 500 families, numbering 3000 souls, are congregated here. The wish of these colonists, at first, was to deliver themselves to agriculture, but this was opposed by the sterility of the soil. At present the population is employed in various manufactures, and in trade.

The population is chiefly composed of Russians, Population Great and Little Tatars, Cossacks, Mordouins, Tchouvaches, Metcheriaks, and Bohemians. The German and other colonists, settled here in 1763, and who were then 10,000 in number only, had increased, in 1811, to 55,000 souls. The total of the population is estimated by Arsénief at 1,100,000. The Government is divided into the following 10 districts: Saratov, Volsk, Khvalinsk, Kouznetzk, Petrovsk, Serdobsck, Balachev, Atkarsk, Kamychin, and Tsaritsyn.

Schnitzler, *La Russie, la Pologne, et la Finlande*; Erdmann, *Reisen im Innern Russlands*; *Journal de St. Petersbourg*, 1826, No. 154.

SA'RCASM, } Fr. *sarcasme*; It. *sarcasmo*;
SARCA'STICK, } Lat. *sarcasmus*; Gr. *σαρκασμος*,
SARCA'STICAL, } (from *σαρκαζειν*, *carne detrahere*,
SARCA'STICALLY. } to tear off the flesh; Gr. *σαρξ*;) met. a biting, bitter mockery or derision.

A keen or cutting reproach, (as if tearing or lacerating the flesh;) cutting and bitterly wounding the feelings.

O let this shrill *sarcasm* of wisdoms, the (how long, ye simple ones) be for ever a sounding in our ears.

Hammond. *Works*, vol. iv. p. 581.

He sets it down after this *sarcastical* manner, below the gravity of an historian; and all the better to conceal his own ignorance, and to tax the government.

Styke. *Memorials*, vol. iii. book ii. ch. xv. Edward VI.

And when they heard of the resurrection of the dead, some mocked, &c., i. e. disputed *sarcastically* and contumeliously against it, that certainly there was no such matter.

Hammond. *Works*, vol. iv. p. 670. Sermon 16.

Like th' Hebrew calf, and down before it
The saints fell prostrate to adore it;
So say the wicked—and will you
Make that *sarcasmus* scandal true,
By running after dogs and bears,
Beasts more unclean than calves or steers?

Butler. *Hudibras*, part i. can. 2.

I shall cite one only for a sample, because he has urged it as ingeniously and *sarcastically* as a man could well do, in a dedication to the pope.

Waterland. *Works*, vol. v. p. 128.

Wit, undistinguishing, is apt to strike
The guilty and not guilty both alike;
I grant the *sarcasm* is too severe,
And we can readily refute it here.

Cowper. *Table Talk*.

I am aware how much by this advice I have laid myself open to the *sarcasms* of those critics who imagine our art to be a matter of inspiration.

Reynolds. *Discourse* 15.

PHAGA.

If he [S. Johnson] were alive, he would crush the swarms of insects that have attacked his character, and with one *sarcastic* blow flap them into non-existence.

Knox. *Winter Evenings*. Evening 12.

SARCENET, Fr. *sarcenet*; Low Lat. *saracenum*. Pannus *saracenicus* operi, (Du Cange,) a very thin and finely woven silk. *Sericum saracenicum*, Skinner. There are no words in Pliny corresponding with those enumerated by his translator.

And surely she [a woman in Coos named Pamphila] is not to be defrauded of her due honour and praise, for the invention of that fine silke, tiffanie, *sarcenet*, and cypres, which, instead of apparell to cover and hide, shew women naked through them.

Holland. *Plinie*, book xi. ch. xxi.

Thou tender heir apparent to a church-ale,
Thou sleight prince of single *sarcenet*.

Beaumont and Fletcher. *Philaster*, act v. sc. 1.

SARCINULA, in *Zoology*, a genus of *Polypi*.

Generic character. Polypiferous mass stony, free, composed of united tubes, which are numerous, cylindrical, parallel, vertical, and united into bundles by intermediate and transverse partitions; the interior of the tubes with radiated laminæ.

Type of the genus, *Madrepora organum*, Linnæus; Lamarck, *Anim. sans vert.* vol. ii. p. 222. Inhabits the Red Sea.

SARCLING, Fr. *sarcler*; It. *sarchellare*; Lat. *sarculum*, a weeding tool, from *sarrire*, to clear, *sc.* of weeds. Gr. *σαρ-ειν*, *purgare*, *verrere*; to cleanse or clear away. Minshew has—

To *sarculate*,—or weed with a hook;

Sarceling time, the time when the countreyman weedeth his corne.

As for the *sarcling* or second harrowing, it dooth much good to corne; for by loosening the ground about it, which by the winter cold was hardened, clunged, and (as it were) hide-bound, it is somewhat enlarged and at libertie against the spring tide, and full gladly admitteth and receiveth the benefite of the freshe and new come sunshine daies.

Holland. *Plinie*, book xviii. ch. xxi.

SARCOCAPNOS, in *Botany*, a genus of the class *Diadelphia*, order *Hexandria*, natural order *Fumariaceæ*. *Generic character*: corolla, petals four, one with a spur at the base; capsule two-valved, two-seeded; valve three-nerved, flat.

Two species, natives of the South of Europe.

SARCODIUM, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. *Generic character*: calyx somewhat truncated, wings of the corolla flat, short, keel-hooked; filaments subulate; pod fleshy, round; seeds reniform.

One species, *S. scandens*, native of the woods of Cochinchina.

SARCOLÆNA, in *Botany*, a genus of the class *Monadelphia*, order *Polyandria*, natural order *Chelidoniaceæ*. *Generic character*: involucre fleshy, pitcher-shaped, five-toothed; corolla, petals five, forming a tube at the base; stamens inserted into the tube; capsule three-celled; cells two-seeded.

Three species, natives of the island of Madagascar.

SARCOPHAGA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* incumbent, three-jointed, the third joint oblong, prismatic, with a plumose dorsal seta at the base, having its apex naked;

head moderate; eyes not united; wings two, divaricating, with a transverse apical nervure.

Type of the genus, *Musca mortuorum*, Linnæus; Donovan, *Britt. Ins.* vol. xv. pl. 507. Thirty species, about half of which are British.

SARCOPHAGY, Fr. *sarcophage*, a stone called cat-flesh, Cotgrave. Lat. *sarcophagus*; Gr. *σαρκάφαγος*, (from *σαρξ*, flesh, and *φαγ-ειν*, to eat.) See the Quotation from Pliny.

Near unto Assos, a citie in Troas, there is found in the quarries a certaine stone called *sarcophagus*, which runneth in a direct veine, and is apt to be cloven and so cut out of the rocke by flakes. The reason of that name is this, because that within the space of fortie daies it is known for certaine to consume the bodies of the dead which are bestowed therein, skin, flesh, and bone, all save the teeth.

Holland. *Plinie*, book xxxvi. ch. xvii.

There was no *sarcophagie* before the flood; and without the eating of flesh, our fathers, from vegetable aliments, preserved themselves unto longer lives then their posterity by any other.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xxv.

SARCOPHYLLUM, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. *Generic character*: calyx bell-shaped, five-parted, regular; pod sword-shaped, acute.

One species, *S. carnosum*, native of the South of Africa.

SARCOSTEMMA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Asclepiadææ*. *Generic character*: masses of pollen ten, smooth, pendulous; crown of stamens double, the exterior cup-shaped, or annular, crenated; corolla rotate.

One species, *C. viminalis*, native of the East Indies.

SARCOTICK, Fr. *sarcotique*; It. *rimedi sarcotici*; Sp. *sarcotico*.

Breeding new flesh, (*σαρξ*.) Cotgrave.

But if too mild detergents or *sarcoticks* caused the flesh to grow lax and spongy, then more powerful driers are required, yea, causthetick or caustick medicaments, as you see cause.

Wiseman. *Surgery*, book ii. ch. vi.

SARDAR (often spelt Serdar, Sirdar, or Surdar) is a Persian word signifying "head possessor," and is used in Turkey, Persia, and India, as the general title of a military commander. The Governors of fortresses are called Serdâr or Diz-dâr (Castellan) by the Turks; and the Grand Vezîr, when in the field as commander-in-chief, is styled Serdâri Efkhem, Most Glorious Generalissimo. (Von Hammer, *Osman. Reich Staatsverfassung*, ii. 84.) In Hindûstân, Serdâr (or headman) is the title of an inferior officer who has the command of twenty men of the Moghul's body-guard; his monthly pay, in the time of Akbar, was from 50 to 200 dâms, (3s. to 12s.) (*Ayeen Akbery*, i. 207.)

SARDINE, } Fr. *sardine*; It. *sardonico*; Sp. *SARDO'NYX*. } *sardonica*; Lat. *sardonix*; Gr. *σαρδο-νυξ*. See the Quotation from Pliny.

Also the name of a fish, probably so called from the Island of Sardinia.

Anoon I was in spirit, and lo a seete was sette in heuene, and upon the seete oon sittynge, and he that saat was lyk the sigt of a stoon iaspis and to *sardyn*.

Wiclif. *Apocalips*, ch. iii.

Now that I have treated of the onyx, I must not defer to say somewhat also of the nature of *sarda*, which maketh the other halfe of the stone *sard-onyx*, and so by that means (as it were by the way) to discourse of those gems that are of an ardent and fierie colour.

Holland. *Plinie*, book xxxvii. ch. vi.

This *sarda* giveth part of the name to the *sard-onyx*; the gem it selfe is verie common, found first about *Sardis*.

Id. *Ib.* book iii. ch. vii.

SARCO-
PHAGA
—
SAR-
DINE.

SARDINIA.

SAR-
DINIA.

SARDINIA (Kingdom of) is bounded on the North by Switzerland, or, speaking more definitely, by the Canton and Lake of Geneva, and the Cantons of the Valais and Tesino; on the East by the last-named Canton, the Austrian Government of Milan, the Duchy of Parma, Tuscany, and the Duchy of Massa, (now a dependency of that of Modena;) on the South by the Mediterranean; on the West by the French Departments of Var, the Upper and Lower Alps, Isère, and Ain.

The ancient possessions of Sardinia, still retained by this monarchy, are Savoy, (with the exception of a fraction of this Duchy ceded to Geneva;) the Principality of Piedmont; the Duchies of Aosta and Montferrat; the Lordship of Vercelli; the Countships of Nice (*Nizza*) and Asti; the Marquisate of Saluzzo; a part of the Duchy of Milan; (namely, the Provinces of Alessandria, Valenza, Valsesia, Novara, Tortona, Vigevano, Lomellina, part of the *Pavesan*, and the greater portion of the Countship of Anghiera;) the Fiefs of Canavese and of Asti; and the Island of Sardinia. The new possessions comprise the former Republic, now the Duchy of Genoa; the Island of Capraja; and the *Langhe* or Imperial Fiefs. Thus the Kingdom of Sardinia comprehends territories of very dissimilar character, though united by political circumstances, and which may be classified into four large and distinct parts, Piedmont, Genoa, Savoy, and Sardinia. The superficial area of the continental portion of the Sardinian States is estimated by Hassel at 15,168 Italian square miles; and, according to the census of 1821, its total population amounted to 3,675,324 souls, which gives 242 inhabitants to the square mile.

Surface.

Piedmont is a continuation of the great Lombard plain, somewhat contracted by the mighty mountain ranges which bound it. These are the Pennine Alps on the North, the Graian and Cottian Alps on the West, and the Maritime Alps and the Apennines on the South. Its broad, fertile valleys, and rich champaigns render it the most valuable possession of the Crown. Its staple produce is silk, which is for the most part exported raw. Genoa is a land of narrow vales and mountain ravines, running from North to South, and formed by transverse ridges of the Maritime Alps and Apennines, thrown off nearly at right angles with the main ranges, and abutting on the sea. Consequently, it is unfitted for general agricultural purposes, but produces olives in abundance, with some silk and wine. Savoy is a rugged, highland country, assimilating to Switzerland rather than Italy, but interspersed with smiling valleys which are fertile in corn and wine, and affording good pasturage on many of its mountain sides. The geology of these countries requires no further illustration than what has been already given in our Articles ALPS and APENNINES.

Rivers.

The continental part of the Kingdom is abundantly watered. Its chief rivers are the Rhône, which defines part of the Western frontier of Savoy, and its affluents, the Arne, Isère, and Arc; the Var, which, traversing the Western portion of the Intendancy of Nice, forms, in the lower part of its course, the boundary between this State and France; the Magra, which bathes the

Duchy of Genoa, with its affluent the Vara; and the Po, which divides Piedmont into two nearly equal portions, and, receiving numerous tributaries, (the Vraita, Maira, Tanaro, Scrivia, Staffora, Tidone, and Trebbia on the right, the Cluson, Dora-Riparia, Orco, Dora-Baltea, Sesia, Gogna, Tordoppio, and Tesino on the left,) waters the Intendancies of Turin, Alessandria, Novara, &c. Thus all its rivers fall into the Mediterranean, with the exception of the Po, which disembogues into the Adriatic. Most of these rivers, from their proximity to their mountain sources, are liable to sudden and destructive inundations.

The continental part of the Kingdom, or the States of Terra Firma, (*Stati di Terra Firma*), is divided into eight Provinces or general Intendancies, which are subdivided into forty smaller Intendancies. Each of the latter again is divided into Communes. The Intendant (*Intendente*) is the Administrator of the Province, and the Syndic (*Sindaco*) that of the Commune. Eight grand military divisions correspond with the eight general Intendancies. There are Chambers (*Camere*) of Agriculture and Commerce in Chambery, Turin, and Nice, and a Chamber of Commerce in Genoa.

The Sardinian Government is a pure despotism. In the continental States, although the privileges of the nobility have been much circumscribed, they are still very great. They alone are eligible to the higher commands in the army, are exempt from all taxes, and are screened from the operation of the ordinary tribunals of the country. With regard to penalties, the following article occurs in the Sardinian regulations: "When the convicted criminals are noble, if their crimes be not such as to carry with them the stain of infamy, *de jure et de facto*, (for in that case they shall not be entitled to any consideration whatsoever,) the judges, out of regard for their rank, instead of infamatory penalties, shall award them such others as are more suitable to their condition, but still proportionate to their guilt." Where the *lex scripta* allows such distinctions, justice must be unknown. Accordingly, the Government, at its pleasure, can reconsider judgments already given, annul arbitrations, alter wills, and delegate all trials or suits, respecting its officials, to Commissioners of its own appointment. The Judges are dependent on the breath of the Court, and even the royal mercies form an article of revenue. All criminal processes are conducted in secret; the defendant is not permitted to be present at the examination of witnesses; and, should his innocence be established, he is only released from prison after the payment of heavy expenses. Sons inherit to the exclusion of the daughters; and all the ancient and contradictory customs of the various Provinces composing the Sardinian States, which had been superseded by the clear and uniform regulations of the French codes, have been re-established in their pristine confusion. Every attempt at emigration is visited by fines and degrading punishments.

Catholicism is the religion of the State; others are only tolerated. The continental Provinces are divided into 21 Bishoprics and three Archbishoprics. The number of Monasteries is 241, of Convents 82; and at their re-establishment, in 1814, property to the

SAR-
DINIA.Admini-
strative
divisions.Govern-
ment.

Religion.

SAR-
DINIA.

value of upwards of 100,000,000 *lire* was assigned to these Religious houses. The revenue of the secular clergy is unknown. Owing to recent alterations, the unjust distinctions which fettered and oppressed the *Vaudois* have been abolished; and this primitive and interesting mountain race are now on an equality with their fellow-citizens. Their pastors are paid by the Government; and some of their countrymen have received commissions in the army from the reigning monarch. The Jews still wear the badge of servitude, and are subjected to grievous restrictions and exactions.

Army and
navy.

The continental portion of the Sardinian army consists of 35,000 men, who, in 1834, were distributed in 319 stations. The royal navy numbers four ships of the line, four frigates, two corvettes, two brigs, and one cutter; mounting in all 526 guns, and whose complement of men is 3450.

Revenue.

The revenue of the Sardinian Kingdom is 69,800,000 *lire* from its continental States, and 2,800,000 from the Island of Sardinia. The entire public debt is 87,000,000 *lire*. On the continent the land-tax may be estimated at 18 *lire* the head, but on the Island it amounts to no more than five *lire*; a fact accounted for by the multiplicity of feudal holdings in the latter.

Trade and
commerce.

In 1822 the entire exports from the continental States amounted to 48,000,000 *lire*, into which raw silk entered for 18,000,000 *lire*, and oil for 16,000,000 *lire*. The entire imports into this portion of the Kingdom, for the same year, amounted to 36,000,000 *lire*, of which sum cottons constituted 19,800,000 *lire*, and woollens 10,500,000 *lire*. There are about 5000 merchant-vessels, of every description, belonging to the different harbours of the Sardinian States; chiefly to Genoa and the other seafaring towns on the Riviera; and about 40,000 seamen. The Genoese trade directly with South America in their own vessels. The principal manufactures are those of paper, coral, silk, velvet, linen, chairs, all which form articles of export, and of glass, muslins, cotton and woollen goods. There are likewise sugar refineries; and arms are manufactured at Turin. The paper-mills are 94 in number, the woollen manufactories 99; the last employ 3539 hands, not including women and girls.

Education.

The means of education for the higher classes are provided on the continent by the Universities of Turin and Genoa; the former founded in 1412, the latter in 1812. The first has about 40 professors, 1250 students, and a library of 112,000 volumes. The last has 36 professors, 500 students, and a library containing 45,000 volumes. They have likewise various Museums, and collections attached to them. There are schools of surgery and medicine, subsidiary to the respective chairs of these sciences founded in the Universities, at Chambery, Mondovi, Nice, and Vercelli. The secondary schools for males are 286 in number, which, taking the population of the States of Terra Firma at 3,750,000, gives the proportion of these establishments for superior instruction as 1 for every 13,112 souls; a proportion which evidences an advance beyond the other Italian States. This grade of education for females, as well as the elementary, is intrusted to the nunneries, 42 of which are devoted to the office. There are elementary schools for boys in almost every Commune; but returns of the numbers who attend are wanting.

The following Table exhibits the capital, population, and number of Communes of each of the eight general Intendancies of the continental Provinces.

Intendancy.	Capital with Population.	Entire Population.	Communes.	SAR- DINIA.
Savoy	Chambery . . .	12,000	501,165	628
Piedmont . .	Turin	117,000	764,549	456
Cuneo	Cuneo, or Coni	18,000	521,631	261
Alessandria	Alessandria . .	35,000	547,662	394
Novara . . .	Novara	15,000	481,450	445
Aosta	Aosta	5,500	71,096	73
Nizza	Nice	30,000	204,538	184
Genoa	Genoa	100,000	583,233	271
Total		3,675,324	2712	

Since Alessandria, Aosta, Genoa, and Nice have been described in their alphabetical order, and Turin will be reserved for a distinct Article, the remaining towns of Terra Firma will demand but very cursory notice.

In the Intendancy of Cuneo, the chief town is *Coni*, or *Cuneo*, the capital, which was formerly a place of great strength, and sustained several sieges; its fortifications were razed in 1801. The trade of the town is not unimportant; and it possesses a literary and phil-harmonic society. Bishop's See. East longitude 7° 40', North latitude 44° 25'. *Mondovi*, *Savigliano*, and *Fossano* are manufacturing towns; the population of the two first is about 15,000, of the last 13,000. *Vinadio* is noted for the baths in its neighbourhood, and for its lead and silver mine.

Novara, the Capital of the Intendancy of the same name, is a pretty and industrious town, which is partially fortified. The Basilica of San Gaudenzio, the Cathedral, and the Bellini Palace are its most remarkable edifices. East longitude 8° 35' 30", North latitude 45° 25' 30". In the same Intendancy we meet with *Vercelli*, formerly a rich and flourishing town, which is distinguished by the beauty of several of its Churches, and has a public Library; it is the residence of the Archbishop: *Vigevano*, a Bishop's See, with manufactures of silk, soap, and other articles: and *Arona*, a bustling little port on *Lago Maggiore*, which carries on a considerable transit trade between Piedmont and Switzerland. The respective populations of the three last-named towns are 15,000, 12,000, and 2000 souls. The magnificent road of the Simplon commences a few miles from *Arona*.

Chambéry, the Capital of the Intendancy of Savoy, lies in a very beautiful valley, formed by ridges thrown off from the Alps, at an elevation of 930 feet above the sea. It is an Archbishop's See, is the residence of the Military Governor of the Province, and the seat of the Senate or High Court of Justice. The most important features of the town are the *Place de Lans*, the castle, the barracks, which can accommodate 4000 men, the Hospital, the new Theatre, the *Promenade de Vernay*, and the beautiful Arcade built at the expense of General de Boignes, who, after an adventurous career in India in the last century, returned home with a considerable fortune, a great part of which he devoted to the service and embellishment of his native city. *Chambéry* has a Royal College, an academy of sciences called the Royal Academy of Savoy, which publishes its memoirs, and combines agricultural, commercial, and statistical, with its scientific objects; a public Library and Cabinet of Natural History, and numerous charitable institutions. The environs of the town are highly picturesque, richly cultivated, and adorned by innumerable magnificent mulberry trees for the rearing of silkworms. East longitude 5° 40' 15", North latitude 45° 35' 35". Seven

SAR-
DINIA.

miles North by East of of *Chambéry* is *Aix*, the *Aquæ Allobrogum* and *Aquæ Gratianæ* or *Domitianæ* of the Romans, and still renowned for its thermal springs. Their temperature is from 112° to 117° Fahrenheit. Population about 2000.

SARDINIA, (Island of,) from the possession of which the reigning house assumed the royal title, is one of the least valuable Provinces of the Sardinian monarchy, although its natural advantages ought to render it the reverse. The early hydrographer, Scylax, had stated Sardinia to be the largest of the Mediterranean Islands; a fact generally doubted, until the recent admeasurements of Captain Smyth, of the Royal Navy, proved it to be larger than Sicily. According to this gentleman, it is 140 nautical miles in length from North to South, or rather from Longo-Sardo to Cape Spartivento, with an average breadth of 60.

Geology
and mine-
ralogy.

The Island is traversed from North to South by a chain of mountains of primitive formation, consisting of granite, with ramifications of schistus, and large masses of quartz, mica, and felspar, and terminating in the height of *Genargentu*, which is 5276 feet above the sea level, and which supplies the snow consumed in the Capital. Two branches are thrown off by this chain to the West. One of them extends in a North-Westerly direction, and forms the *Nurra* range, which is composed of granite, schistus, and limestone; the other, running South-West, forms the mountains of *Sulcis*, which consist of granite and primitive limestone. The volcanic district commences in the vicinity of *Monastir*, runs between *Nurri* and *Sardara*, embraces *Ales*, *Milis*, and *St. Lussurgiu*, extends hence from the centre of the Island to the seashore on the West, and, stretching to *Castel Sardo*, forms the precipices on the Northern coast. The effects of volcanic action are also visible elsewhere; and, near *Giavesu*, there are conclusive evidences of a modern volcano. The tertiary formation lies on the West side of the principal inorganic chain, and besides forming the *Campidano*, or large plain between *Cagliari* and *Oristano*, and the basis on which the volcanic substances rest, constitutes the hills of *Cagliari*, *Sassari*, and *Sarso*. The existence of gold in the Sardinian mountains is very problematical. Silver, copper, and quicksilver occasionally occur; iron is very plentifully distributed; and lead mines are profusely scattered over various parts of the Island. Among the mineral products may also be mentioned porphyry, basalt, alabaster, the marbles of the *Goceano* and *Monte Raso*, rock crystal, carnelians, agates, turquoises, the sardonyx, amethysts, schorls, and jaspers, with the volcanic enamels and pyrites. Almost the only bituminous substances are friable, earthy, and fibrous lignites, and the imperfect Bovey coal found at *Villa-Cidro*, *Chiaromonte*, and other places. Mineral springs abound, but are much neglected.

Agricul-
ture.

The superficial area of the Island is 7264 Italian square miles, one-third of which is occupied by large sandy or stony districts, called *Macchie*; a similar extent may be assigned to forests and pastures; and the remainder is laid out in corn-fields, vineyards, olive-grounds, orchards, and gardens. With regard to vegetation, the Island offers three different zones: that of the mountains, which is analogous to the climate of Corsica; that of the Northern plains and coasts, which assimilates to the climate of Provence, and of part of Italy; whilst the Southern plains and coast recall to mind the naked aspect of Africa. Those fruitful tracts,

the plains, of which the larger are termed *Campidani*, and the secondary ones *Campi*, are watered by numerous small streams, the principal of which are the *Tirsi*, the *Coguinas*, the *Flumendosa*, the *Temus*, and the *Mannu*. About 1,000,000 of *starelli*, or 800,000 acres, are allotted for the growth of corn, the average produce of which returns seven or eight for one. Properly cultivated, the growth might be tripled; and, indeed, in some favoured districts, the yield is from fifteen to twenty. There is no regular system of manuring; paring and burning is the grand restorative; the advantage of laying down grasses when the land is exhausted is unknown; and few of the grounds, except the enclosures called *Tanche*, which are of very limited extent, are irrigated by artificial means. The plough is the simple *aratrum* of the Romans; and the corn is thrashed in the fields by the tread of mares and colts. The only artificial fodder is the *mischiale*, or barley, lucerne, basil, and vetches, mixed in the manner mentioned by Pliny; couch-grass is suffered to grow generally, and is eaten by the cattle; and as no precautions are taken for providing dry forage, or housing the animals, the stock suffers considerably, since the Summer heats destroy all verdure. Cattle, sheep, goats, and swine are divided into two classes: those which work, or yield milk, wool, &c. go under the denomination of *manso*, and are admitted to the best pastures; those intended for slaughter, or kept for breeding, the *rude*, are turned to graze on the hills and wastes till they become almost wild. There is an establishment for the improvement of the breed of horses, and of stock in general, maintained at the expense of Government, but with little effect. The following Table shows the average agricultural produce and quantity of live stock, as given in a detailed statistical report to Government of the ten years between 1815 and 1825:

SAR-
DINIA.

Produce.		
	Starelli sowed.	Starelli reaped.
Wheat	269,383	1,254,982
Barley	97,718	358,000
Legumes	67,845	221,580
Live Stock.		
	Mansi.	Rudi.
Horses	28,800	19,900
Oxen	94,100	148,622
Cows	12,872	..
Calves	7,600	..
Sheep		802,930
Goats		245,900
Kids		299,481
Swine	23,314	150,140

The Island is divided into two Intendancies, the first Govern- ment. of which, or the General Intendancy of *Cagliari*, comprises the six Provinces of *Cagliari*, *Iglesias*, *Isili*, *Lanusei*, *Nuoro*, and *Busachi*; the second, or the General Vice-Intendancy of *Sassari*, comprehends the five Provinces of *Sassari*, *Alghero*, *Cuglieri*, *Ozieri*, and *Tempio*. These eleven Provinces are subdivided into 32 Districts and 360 Communes. It is at present governed by a Viceroy for the House of Savoy, who continues in office for three years, with an annual appointment of 60,000 *lire*. The second person in the State is the Regent, or Great Chancellor, who presides over the tribunals for the general administration of the Kingdom, with a salary of 3000 *scudi*. The civil affairs of the cities are

SAR-
DINIA.

regulated by a bench of magistrates under the *Capo Giurato* or Chief Judge; and those of the Communes by a council of from three to seven members, under a Syndic. These Courts are amenable to the audit of the Intendant-General of Finance. The national concerns are discussed by a representative body, called the *Stamenti*, consisting of the three orders of the State, or the Ecclesiastics, the Nobles, and the Representatives of the Towns and Communes, who hold their deliberations in separate chambers, and communicate by deputies. These *stamenti* are convened and holden at the royal pleasure. The feudal system is in full activity; and although vassals in Sardinia are born free, the degrading services and tenures of feudalism are still in vigour. So heavy is the weight of the grinding extortions of this system, superadded to the burden of royal and other imposts, that in some parts the contributions, taken altogether, amount to nearly seventy per cent. on the earnings of the vassal. Yet the average of the direct taxation is no more than five *lire* the head; a very small sum compared with that paid by other Italian States, and which proves the existence of numerous *privileged properties*. The consequence of this exemption of the feudal holders from any tribute or tax, is the insufficiency of the revenue to meet the expenses of the administration of the Island.

Religion.

Catholicism is the exclusive religion of the Island. There are three Archbishoprics, those of *Cagliari*, *Sassari*, and *Oristano*, and eight Bishoprics. The secular clergy enjoy a revenue of 264,000 *lire*; the regular clergy, whose various establishments amount to 93 Convents for men, and 13 for women, have an income of 696,000 *lire*. The education of those intended for holy orders is rather scholastic and casuistical than general and classical; but the superior classes are, in general, fully capable of executing the duties of their respective charges.

Education.

There is a University at *Cagliari* with a library of 15,000 volumes, and one at *Sassari* with a library of 5000 volumes. The number of professors in the first is 25, of students about 250; in the second the professors are 19 in number, and the students 230. Secondary instruction is provided for by lower Latin schools, one of which is established in each Capital of the eleven Provinces; and, pursuant to a decree dated June, 1823, normal schools for elementary instruction are opened in most of the villages. The *Scolopii* have six schools in the Diocese of *Cagliari*, the Jesuits two in that of *Sassari*. There are no female schools of any kind.

Trade and
commerce.

The value of the imports and exports of the Island is given by Serrestori, as follows:

Imports.		Exports.	
<i>Lire Italiane.</i>		<i>Lire Italiane.</i>	
4,749,000	 1824	 4,387,000	
4,692,000	 1831	 4,355,000	
6,000,000	 1834	 6,000,000	

The consumption of foreign products is averaged by the same economist at nine *lire* for each individual; a proof that ease and competence are confined to a small number. In 1833 the customs amounted to 1,026,000 *lire*. Corn is the principal article of export; and, in good years, the exports from the whole Island may amount to 400,000 *starelli* (500,000 bushels) of wheat, 200,000 *starelli* of barley, 6000 *starelli* of maize, 100,000 *starelli* of beans, 200,000 *starelli* of peas, and 1000 *starelli* of lentils. The culture of vines is gradually growing into importance; about 3500 Catalan pipes are

exported, principally from *Alghero* and *Ogliastra*. Considerable quantities of cheese, and of salt, which is a royal monopoly, are exported. Flax, linseed, hides, oil, saffron, rags, alquifoux, are among the articles of export. The tunny and coral fisheries employ numerous hands; but these, as indeed is almost all the trade of Sardinia, are chiefly in the hands of foreigners. The former fishery has been for some years on the decline, but its profits, in favourable seasons, are enormous; the expenses, at one of the choice stations, in 1823, amounted to £5174 sterling, the receipts to £14,690, thus leaving a clear profit of £9516 sterling. The only manufactures carried on in the Island are those of gunpowder, salt, tobacco, and woollen caps. Almost every article of dress, whether for the gentry or the peasantry, is imported, as well as furniture, soap, stationery, glass, earthenware, &c.; and all colonial produce is supplied by foreigners. Notwithstanding the rich mines of the Island, the Sardis import all their iron and steel. The advantageous position of the Island for commercial purposes is lost upon the natives; a circumstance chiefly attributable to the apathy engendered by the feudal system, and the blind policy of a Government which burdens every exportable article with heavy duties. To such an extent has the industry of the Island been sacrificed by this short-sighted rapacity, that this "benignant nurse" of ancient Rome (Val. Maximus, lib. vii. c. 6.) is sometimes, notwithstanding its scanty population, constrained to supply its deficient harvests by importation. Some ameliorations have, however, been introduced into various departments of industry, and several improvements have been made within these few years. A good road has at length been formed from *Cagliari* to *Sassari*, and cross roads are being carried from it to some of the larger towns. "Let the freedom of exportation, with reasonable duties on imports, and the security of property be established," writes Mr. Macculloch, "and we venture to predict that Sardinia will, at no very remote period, recover her ancient prosperity."

The Sardis are of middle stature and well-shaped, with dark eyes and coarse black hair; but blue eyes and fair complexions are met with in the mountains. They are kind, hospitable, and of frank address; qualities counterbalanced by dissimulation and an insatiable thirst for revenge. The latter passion is the proximate cause of the hordes of banditti which infest the Island; most of whom are men who have fled from justice on account of having committed homicide. The nobles and citizens generally adopt the Italian fashions in their dress; but the *gente mannu*, or country gentlemen, as well as the *mussaras*, or upper class of farmers, and all the peasantry are distinguished by peculiar costumes, among which the sheep and goat skins of antiquity still constitute a characteristic feature. Throughout the Island the *cittadini* hold the *contadini* in utter contempt, a feeling as warmly returned by the rustics. The Sardis are greatly attached to the pleasures of the table; all ranks are earnestly devoted to festivity, and dancing is joyously kept up on all public festivals. Many of their customs and manners, as well as of the peculiarities of their dress, have evidently descended from the Hellenic colonies; some, in particular the partial seclusion of females, who never sit at meals with visitors, are traits probably derived from their ancient Moorish masters. Their superstitions and prejudices are numerous, recalling those of the remotest periods.

The climate of Sardinia is temperate; Captain Smyth Climate.

SAR-
DINIA.

SAR-
DINIA.

found the mean temperature of the thermometer to be about 61° , and the medium height of the barometer about $29^{\circ} 69'$. The weather is proverbially variable as to heat and cold, but hail and thunder-storms rarely occur. The dews, in some measure, compensate for the deficiency of rain, which often greatly distresses the country. "That certain local causes," observes Captain Smyth, "have through all ages tainted the atmosphere of Sardinia, may be gathered from the remarks and sarcasms of a host of early authors." This insalubrity probably arises from the same causes as the *malaria* of Italy and Sicily; but the *intemperie*, as it is termed, differs from the *malaria*, inasmuch as the latter is comparatively harmless, unless imbibed during sleep, whereas the former, though worst at night, is pernicious at all times. It begins during the Summer heat, and continues until the latter end of November. The most prevalent winds are the North-West and the East, the first of which is the healthiest. The *maladetto levante*, so complained of by the natives for its debilitating effects, is a South-East wind, and answers to the *sirocco* of the Neapolitans. Snow is common in the higher grounds in winter. Earthquakes are rare, and happily feeble in their effects.

Natural
history.

The woods and forests abound with stags, muffs, wild boars, and all the variety of game. The oxen are small in size, with long horns; the horses likewise are small but vigorous. Besides the coast fisheries, the lakes at *Oristano*, *Cagliari*, and *Porto Pino* abound with extremely fine mullet, bream, and other fish, which are carefully fattened. Amongst the common orchard fruits are figs, grapes, melons, apples, apricots, peaches, almonds, and the *ficu moriscu*, or prickly pear; walnuts and chestnuts are almost confined to *Arissu*, *Tonara*, and *St. Lussurgiu*; the cultivation of oranges, lemons, citrons, and dates is but little attended to. The value of the yearly export of fruit is little more than £1000 sterling. The vegetables, both wild and cultivated, are particularly fine and abundant. Belief in the existence of the herb which has given rise to the proverb of the *risus Sardonicus* is common, but its "whereabout" unknown; however, whatever be the cause, the honey still retains the bitterness alluded to by Horace. The forests, which are both fine and extensive in the mountainous districts, chiefly consist of oak, beech, chestnut, and cork trees. The eagle builds her eyrie on the mountains; the vulture clears the plains of carrion; the flamingo arrives from Africa about the middle of August; and, two months later, swans, ducks, and geese join them from the Northern regions, and are followed by herons and cormorants. Insects are rare when compared with the other Southern countries of Europe; the only noxious one is the *solifuga*, a species of tarantula. Snakes, vipers, toads, and scorpions are frequently met with; but no reptile in the Island is mortally venomous.

History.

The Island of Sardinia, which borrowed its present Roman name from its Greek appellation of *Σαρδων*, is said to have been so called in honour of one of its first colonizers, Sardus, son of Hercules. It was conquered in turn by the Pelasgi, Phœnicians, Etrusci, and Carthaginians, which last nation remained in possession of it until the first Punic War. Soon after passing into the hands of the Romans, it was erected, in conjunction with Corsica, into a Province; and both its population and fertility were much greater whilst it constituted part of the Empire than at present. The Vandals, the Goths,

the Greek Emperors, and the Arabs were then successively masters of Sardinia, to whom succeeded, in the XIth Century, the Pisans and the Genoese. Two centuries later the Popes endeavoured to annex it to the Papal dominions, and finally gave it in investiture to the Crown of Arragon. But it was only in the XIVth Century that James IV., King of Arragon, gained full and entire possession of the Island. From this period it remained annexed to the Spanish dominions until the War of the Succession, when, in 1708, the English seized it in the name of the Emperor of Germany. In 1720 it was ceded to the Duke of Savoy, in exchange for Sicily, (it cannot be called an equivalent,) and was then erected into a Kingdom. When the French, in 1796, overran Italy, his Sardinian Majesty was obliged to fly from his continental States, and seek refuge in the Island, which remained his sole possession until restored to his ancient dominions by the General Peace of 1814.

Cagliari, (the Roman *Calaris*.) the Capital, lies at the bottom of a gulf, on the Southern extremity of the Island; and is built partly on the sea-side, and partly on the slope of a steep hill, which is crowned by a castle, originally erected by the Pisans. It is divided into four quarters, *Castello*, *Stampace*, *Marina*, and *Villanuova*. The streets are narrow and winding, the houses mean and badly built. Besides its Cathedral, which is rich in marbles, it has 38 Churches, and 21 Religious houses. The chief building is the Palace of the Viceroy. In addition to its University, *Cagliari* has a Museum with good collections of minerals, birds of the Island, and medals; a Royal Society of Agriculture and Public Economy; a College for the Nobility; and a Diocesan Seminary. There are likewise a Royal Mint, an excellent Hospital, and a Theatre. *Cagliari* is the chief port of the Island, indeed almost the only one frequented by foreign vessels, and it enjoys great municipal revenues and privileges. The high judicial court for the South division of the Island, and the commercial tribunal hold their sittings here.

The Gulf of *Cagliari* extends from Pula on the West to Cape Carbonara on the East, a distance of about 24 miles across, and about 12 in depth, with good anchorage everywhere after getting into soundings. A mole projects from the Pratique Office, and there is a very convenient pier harbour capable of holding 14 or 16 vessels of tolerable size, besides small craft. Altogether it is one of the best and safest ports in the Mediterranean. In 1831, 210 ships cleared out of the port of *Cagliari*, whose united tonnage was 22,099 tons, and crews 1636 men. Of these vessels 159 were Sardinian, 20 were Neapolitan, 10 Austrian, six French, five Swedish, four English, two American, two from Tuscany, one from Spain, and one from Russia. The chief manufactory is the royal one of tobacco; and there are extensive saline works, likewise belonging to the Crown, near *Cagliari*. *Cagliari* is an Archbishop's See, which dates from the beginning of the IVth Century, and St. Lucifer was one of its earliest Bishops. Population, in 1825, 27,300. North latitude $39^{\circ} 12' 13''$, East longitude $9^{\circ} 6' 44''$.

There exists in the Intendancy of *Cagliari* a small district called *Barbagia*, consisting chiefly of mountain and forest, which is peopled by the descendants of the Berbers, who took refuge here at the time of the invasion of their native Barbary by the Vandals. Their chief place is *Scalo*, a village with about 12,000 inhabitants.

The only other town of importance is *Sassari*, which

SAR-
DINIA.

SAR-
DINIA.
—
SARGUS.

is an Archbishop's See, and the residence of the Vice-Intendant. It lies in a beautiful valley on the North-West of the Island, rising gently on the slope of a hill, and surrounded with vineyards and olive grounds. Its Gothic castle and walls are still kept up, and its houses are in general well built. The principal buildings are the Government Palace, that of the Archbishop, and the Cathedral, the façade of which is much admired. There are likewise four parochial Churches and thirteen Religious houses. Besides the University, there are a College for the Nobles, a School of applied Mathematics, and a diocesan Seminary. Population about 20,000. North latitude 40° 48', East longitude 8° 45'.

The remaining principal places are *Oristano*, on the West coast, the chief seat of the tunny fishery, with a population of 10,000; *Bosa* with 6000, and *Alghero* with 7000 inhabitants, celebrated for their coral fisheries; *Porto-Conte* and *Castel Sardo*, of consequence from their fortifications, and *Ozieri*, a very populous village of about 8000 inhabitants.

Antiquities. Sardinia abounds in monuments recalling the domination of its successive rulers. The most remarkable are the singular remains termed *Nuragis*, which are strewn over the Island to the number of several hundreds, and which have exercised the antiquarian sagacity of Peyron, Marmara, Mima, Manno, and Petit-Radel.

They are strong buildings, in the form of a truncated cone, composed of masses of stone from two to five or six feet square, arranged in layers, and without cement. Their materials are lava, freestone, or such substances as their respective sites afford, and they generally crown the summits of hills. The entrance is usually very low. The interior is lower than the surrounding surface, and is almost invariably divided into two floors, each consisting of a vaulted room, to which access is gained from a ramp between two concentric walls, leading nearly to the summit, where a flight of steps completes the ascent. The most imposing of these monuments stands between *Sanugheu* and *Fordongianus*, in the district of *Busachi*, and from its height of nearly 60 feet is called *Su Nuraggi longu*. They are generally referred to the Pelasgic period, and probably served both for sepulture and defence, according to circumstances. A very excellent description of one of the most remarkable of them, with plan and sections, is given in the Work of Captain Smyth already referred to, and to which this Article is greatly indebted.

SARDO'NIAN, } Fr. *sardonien*; It. *sardònico*;
SARDO'NIC, } Lat. *sardonius*. *Sardonian* laugh,
SARDO'NICAN. } (γελως σαρδονιος.) a bitter laugh.
See the Quotation from Taylor's *Pausanias*.

Fly, fly to the courts;
Fly to fond worldlings sports,
Where strain'd *sardonick* smiles are closing still,
And grief is forc'd to laugh against her will.
Reliquiæ Wottonianæ, p. 391.

Who [Ulysses] his head
Shrunke quietly aside; and let it shed
His malice on the wall. The suffering man
A laughter raising, most *Sardinian*
With scorn, and wrath mixt.
Chapman. *Homer. Odyssey*, book xx.

Shunning the blow, but gratified his just
Resentment with a broad *sardonick* smile
Of dread significance. *Cowper. Id. Ib.*

This same island [Sardinia] is free from all kinds of poisonous and deadly herbs, excepting one herb, which resembles parsley, and which, they say, causes those who eat it to die laughing. From this circumstance Homer first, and others after him, calls laughter, which conceals some noxious design, *Sardonian*.

Taylor. *Pausanias. Description of Greece*, vol. iii. p. 149.

SARGUS, from the Greek *σαργος*, Geoffr., Cuv. *Sar*. In *Zoology*, a genus of animals belonging to the family *Sparoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Jaws slightly extensible, furnished on the sides with molar teeth disposed like a pavement, and in front with incisive teeth similar to those of man; dorsal fin single and extended; opercles neither spined nor denticulated; height of the body nearly equal to its length.

The most remarkable character of this genus consists in the form of the incisive or front teeth, which, being broad, compressed, and square at the crown, resemble the same class of teeth in the human subject. The square form of the incisive teeth distinguishes this from the genus *Chrysophrys*, in which they are conical.

The Sars are shore fish, are common on the Southern coasts of France, but are not found in the British Channel; they are also met with on the Western coast of Spain, and generally on all the shores washed by the Mediterranean, and also in the Red Sea. Upon the American coast, and some of the islands in the Atlantic, they are also found. They feed generally on small shell-fish and crustaceous animals, for the breaking up of which the form of their molar teeth is well adapted; but some of them appear to feed upon sea-weed.

In some species the incisive teeth are smooth, and the molar are arranged in two or three rows; such are

S. Rondeletii, Cuv.; *Rondeletian Sar*. From seven to twelve inches in length, of which the head makes one-fourth; the body is deep and compressed; the muzzle is obtuse and thick; the mouth moderately wide; incisive teeth in each jaw eight, upright, four-sided, with a cutting edge on their crown, and a tapering fang, and the two outer teeth rather smaller than the others; the molar teeth are placed in the upper jaw immediately behind the incisive in three rows, of which the hinder are the largest, and the middle the smallest; of the lower molars there are but two rows; the lower lip is thin before the incisive, but becomes very thick opposite the molars, forming a deep fold, at the fore corner of which is a fleshy tubercle, similar to a short beard; the eye is situated near the upper part of the cheek; the dorsal fin is low but long, its spines strong, and alternately narrow on one edge and broad on the other to allow its folding up and dropping into a deep groove formed along the back by the elevation of the scales above the root of the fin; the tail is forked, and its upper lobe rather longer than the lower. The whole body, except the forehead and suborbital bones, which are naked, is covered with soft, flexible, slightly adherent, and imbricated scales. The general colour is silvery-grey with a reddish tinge, very pale on the back, and

SARGUS. whitish on the belly; the sides are marked with from twenty to twenty-four leaden-grey or golden longitudinal stripes, deeper above than below the lateral line, and crossed by five or six narrow bands; upon the tail is a deep black spot; the forehead and cheek are deep grey tinged with purple; the edge of the opercle above the angle black, as is also a spot at the root of the pectoral fins, which are grey; ventrals deep black, as also the anal, except at its root, which is grey; the dorsal fin greyish tinged with yellow, its spines silvery, and its soft part edged with black. It is found along the French and Italian coasts, and other shores washed by the Mediterranean. At Alexandria it is called *Ghenyne*, from its being believed to make a grunting noise when captured; Geoffroy named it *S. Raucus*, but the Alexandrian is the same as the species now described. It is also found in the Lake of Biserta. It feeds on small fish, testaceous and molluscos animals, and never goes far from shore like the *Dorado*; and it is caught on the French coast with hooks baited with a paste composed of cheese, stinking Sardines, and flour, or with small fish.

S. Salviani, Cuv.; *Salvian's Sar*. About nine inches in length and two in depth; the size of the head in the same proportion as in the last species, but the muzzle is more projecting, and between the orbits the forehead is protuberant; the eyes are larger and lower on the cheek; lips more delicate, the upper wide and plaited as in the *Labri*, the lower lip has also its tubercle, but it cannot be seen till the edge of the lip is raised; the incisive teeth are narrower and placed more obliquely, and the molar behind those of the upper jaw are much smaller; the tail is more deeply cleft, the scales larger, and the lateral line marked upon a series of smaller scales. The colours of this species are very brilliant; the forehead is grey, and above each eye is a golden spot; between the forehead, dorsal fin, and upper angle of the opercle blackish, inclining to golden towards the back, and deep black near the opercle; the sides are golden-grey striped longitudinally with golden bands, of which the five above the lateral line are very bright, and the ten below paler; the annular spot on the tail is broad, and extended upon the soft part of the dorsal fin and on its scaly sheath; the dorsal fin marked with several blackish spots; pectorals grey; ventrals black, very deep above, and whitish below; anal blackish; caudal whitish. It is found in the Mediterranean, and more common than the preceding species. Throughout Italy it also bears the same name, *Sargo* or *Sargone*; and at Alexandria, where it is extremely common, it is called by the Arabs *Chargouch*, or *Sea Rat*.

S. Annularis, Cuv.; *Sparus Annul.*, Lin.; *Annular Sar*. Of more slender proportions than the preceding; the head a fourth of the total length of the body, which is seven inches; muzzle rather pointed; the profile, being a continuation of the curve of the back, gives to the body an oval form; the protuberance between the eyes slight; upper lip thick and not plaited, lower thin and without a tubercle; incisive teeth vertical, wider, cut more square than in any other species, and more closely resembling the incisive teeth of man; molar teeth very numerous and closely set in three rows in the upper jaw, and in two or three in the lower; caudal fin cleft, and its two lobes rounded on their inner edges. The back of this species is yellow, inclining to golden, and each scale above the lateral line edged with greyish-brown; the belly silvery-grey; the spot on the tail deep

black; dorsal and caudal fins grey tinged with yellowish; pectorals grey; ventrals bright orange-yellow; anal fin orange. They are found in great numbers in the Mediterranean, as well on the rocky coast of France, Tuscany, and Italy, as on the muddy shores of Lower Egypt, and they are also taken off the Canaries. By the French it is called *Sparaillon*, by the Spaniards *Spargoil*, and the Italians know it as the *Sparlo* in some, and the *Carlino*, or *Carlinoto* in other Provinces; at Iviça and Majorca it is called *Esparay*, but never grows to any large size.

S. Vetula, Cuv.; *Ancient Sar*. About a foot in length; profile high, and back much curved; head scarcely a fourth of the total length; muzzle very obtuse and much rounded on account of the great thickness of the jaws, which, besides the incisive, support a much larger number of molar teeth than in the other species, there being four rows in the upper and three in the lower jaw; space between the eyes broad and rounded, but not protuberant. Body golden-grey glossed with silvery, and marked with eighteen or twenty dusky longitudinal stripes upon the sides; upon the upper part of the tail is a black spot which, descending, is lost upon the sides. It is found at Naples and at Martigues. Willughby considered the *Orada Vecchia* of the Venetians to be this species.

S. Nocte, Cuv.; *Spotted-tail Sar*. From seven to nine inches long; its form resembles that of the *S. Annularis*, but it is distinguished by its incisive teeth being narrower and more oblique; it has eight of these in the upper and six in the lower jaw, and its molars are in four rows in the upper and three in the lower jaw, which render the jaw more full. Its colour is greenish-grey tinged with golden, and each side marked with twenty longitudinal grey lines; on either side of the origin of the tail a round black spot divided into halves by the lateral line which traverses it; the dorsal, anal, and caudal fins yellowish; the pectorals reddish and ventrals brownish. It is found in the Red Sea, and called by the Arabs *Nocte*, which signifies, in their language, a spot.

S. Ovis, Cuv.; *Sparus Ovis*, Mitch.; *Sheep's Head Sar*. Sometimes acquires fourteen or fifteen pounds weight, but more commonly varies between four and seven pounds: the proportions of one of four and a half pounds were twenty inches in length, eight in depth, and three in thickness; it is therefore a long and deep but narrow fish; the muzzle is more obtuse than in *S. Vetula*, in consequence of the nape being higher, and the dorsal edge more curved and descending more vertically; the forehead is wider, the limb of the preopercle wider, and the angle of the opercle more acute; the lips are thick and distinct, and in the edge of the lower there is the same fleshy tubercle as in *S. Rondeletii*; the lower jaw shorter than the upper; the incisive teeth are, according to Mitchill, "four in each jaw, and two other teeth situated next to them, one on each side, that may be considered *canine*; the former straight, the latter rather turned inwards." Cuvier says there are eight wide incisive teeth to each jaw. Within these teeth are two or three rows of round-topped molar teeth, of which the outer row in the upper jaw are the most conical. The scales are large, horny, of a square form, with rounded angles, and marked with radiated and concentric lines; they are deeply and firmly connected with the skin. The general colour is white or dusky silvery, with a smutty daubing over the face and

SARGUS. chin, which, together with the form of the mouth, presents a distant resemblance to the face of a Sheep, and hence its trivial Anglo-American name, *Sheep's Head*; the eyes large and brown, connected by a prominent brow, above which is a greenish tinge; belly dull, inclining sometimes to cream colour; the body is marked vertically with six or seven dark bands about an inch in width, which extend from the back to the belly; lateral line brown; rays of all the fins coarse, and the fins themselves blackish, except the pectorals, which are yellowish, long, and pointed. This species is an annual visitant of the coast of Long Island, New York, coming in shoals during the warmest season, viz. from the beginning of June to September, and never leaves the salt water. After September it retires to the depths of the ocean, and does not appear till the following June. According to Lesueur it is also found, though of very small size, in the Lake of Pont Chartrain, near New Orleans, and called by the French colonists *Casse-burgot*, from its breaking up with its teeth the shells on which it feeds. It is the most highly esteemed of any New York fish, and fetches a higher price than any other except Salmon and Trout, but requires cooking soon after being taken, as it quickly becomes tainted. It is caught with nets, and hundreds are often caught at a draught; it is also taken with hook and line, but the tackle requires to be very good, as the fish is very powerful. On some parts of the coast it is also speared by torchlight, as Salmon are in Scotland.

S. Aries, Cuv.; *Ram's Head Sar*. About a foot in length, and very nearly resembling the last species, but the curve of the back is more convex, and the muzzle rather more projecting; the incisive teeth are longer and narrower, and the molar less numerous. The general colour is bright golden-yellow; and the seven vertical bands narrower and lighter than in *S. Rondeletii*; the dorsal fin edged with blackish; the anal browner; ventrals deep blue or black, but no black on the caudal crescent. It is found on the coast of Rio Janeiro, and in the Lagune of Maracaibo.

S. Lineatus, Cuv.; *Lineated Sar*. Nine inches in length, with the muzzle obtuse; it is marked with five very narrow linear stripes descending from the back to the sides; the tail is encircled in a broad black band, and the root of the pectoral fins with a blackish ring. From the Brazils.

S. Fasciatus, Cuv.; *Banded Sar*. About a foot long; the body more lengthy, and the muzzle projecting; incisive teeth narrow and projecting much forward; body almost completely surrounded with five broad bands. From the Brazils.

S. Argenteus, Cuv.; *Silvery Sar*. From eight to nine inches long, with a prominent muzzle and small, projecting, incisive teeth; the molars small also; sides silvery marked with a score of longitudinal grey lines, which are gradually lost on the belly; fins grey, except the ventral, which are black. From the Brazils.

S. Flavolineatus, Cuv.; *Yellow-lined Sar*. Nine inches long; incisive teeth broad and upright; molars of moderate size; the dorsal fin has more spines than any other species. The back is bluish; the belly silvery; and the sides striped longitudinally with thirteen or fourteen stripes, which are golden-yellow on the back, but nearly indistinct on the belly; dorsal fin bluish, and its soft part tinged with reddish; pectorals black; ventrals grey; anal and caudal red. Is found at St. Jago, on the coast of Cuba, where it is called *Grand-goré*.

S. Ascensionis, Cuv.; *Ascension Sar*. Ten inches in length, and nearly resembling *S. Argenteus*, but the body is less deep, the muzzle much shorter, the incisive teeth are broader and more upright, and the molars more numerous. It is of a silvery-grey colour marked longitudinally with pale grey bands. From the Island of Ascension.

S. Unimaculatus, Cuv.; *Perca Unimacul.*, Bl.; *Grammistes Unimacul.*, Schn.; *Single-spotted Sar*. From three to seven inches in length; the head small and scarcely a fourth of the whole length of the fish; muzzle obtuse; gape small, and jaws of equal length; incisive teeth six in the upper and eight in the lower jaw, and each marked with a small notch on the middle of its edge; molars very small, rounded and disposed in three rows in the upper and two in the lower jaw, and at the bottom of the mouth are two larger than the others; eyes placed high in the cheek, and in front of them a slight projection; upon the nape a slight depression; opercule narrow and slightly pointed; pectoral fins long and falciform; caudal forked; lateral line slightly curved. General colour silvery tinged with greyish on the back, and marked on either side with twenty longitudinal stripes or narrow bands of a clear golden colour; membrane of the dorsal fin violet, its spines silvery, and its soft part, as also the anal and caudal fins, yellow; pectorals pale and ventrals blackish. Is very common on the coast of Brazil; and Maregrave states that it lives in fresh as well as in salt water.

S. Rhomboides, Cuv.; *Rhomboidal Sar*. About six inches in length; it has the muzzle more prominent than in the last species, the nape and back less elevated, the scales smaller, and the rays of its fins being more numerous and weaker; incisive teeth notched, and eight in either jaw, in which there are but two rows of molar teeth; general colour silvery longitudinally marked with twenty-four or twenty-five golden bands; four or five brownish stripes, more or less distinct, according to the light, descend from the back to the sides; behind the shoulder a blackish spot crosses the lateral line; dorsal fin greyish; pectorals and ventrals bright yellow; anal yellow edged with violet; caudal olive-green-yellow. It is common on the Northern coasts of America, not lower than Louisiana, and is called by Garden the *Salt-water Bream*. At New Orleans it is called *Filou* or *Coupeur*, perhaps from cutting the fishing lines with its sharp teeth. It is also met with in the Lake of Pont Chartrain, but not in great numbers. It is considered a great delicacy, and eaten fried.

S. Puntazzo, Sparus *Puntazzo*, Gmel.; *Charax*, Risso. About a foot in length, of which the head forms nearly a fourth; the muzzle, pointed and projecting, gives this a more slender appearance than the other species; lips rather thick and plaited on the sides; incisive teeth eight in each jaw, narrow, projecting forwards, and their roots very delicate; a single row of molar teeth, consisting merely of a dozen granules placed on the edges of the jaws, which therefore renders the head much narrower than in any other species; the eyes of moderate size, intermediate between the muzzle and the angle of the opercule, which is sharper than in any other species found in the Mediterranean; forehead slightly prominent; dorsal and anal fins shallow; pectorals pointed; tail slightly forked. General colours silvery-grey glossed with golden and marked with seven narrow, blackish, vertical stripes; on each side of the

SARGUS. tail is a very broad four-sided black spot, and upon the belly some traces of parallel blackish lines; dorsal, ventral, and anal fins blackish; pectorals pale; caudal yellow and bordered with deep black. It feeds on seaweed, and is found throughout the year on the coast of Nice upon the rocks; on the Italian coast it is also met with, and called *Puntazzo*; and on the Island of Iviça it is known as the *Murada*, but is not common. Risso has placed it in a distinct genus, which he calls *Charax*, making the small size of its molar teeth the principal generic character.

See Cuvier and Valenciennes, *Histoire Naturelle des Poissons*; Mitchill, in *Transactions of New York Literary and Philosophical Society*, vol. i.

SARGUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, three-jointed, the basal joint somewhat cylindric, the second cup-shaped, the third denticulate, three-annulate, with a seta at the apex; *scutellum* unarmed; *ocelli* three; wings two.

Type of the genus, *Musca cupraria*, Linnæus; Meigen, *Zweif. Ins.* vol. iii. pl. xxv. fig. 1—15. A beautiful but not very extensive genus, of which most of the species are found in England. Meigen's second section has been lately found with a genus named *Chloromyia*.

SARK, *n.* A. S. *syric*, *syrc*; Sw. *scerk*, from Gr. *σηρικος*, *sericum*, silk, of which *sarks* were first made. See Ihre and Jamieson. *Sark* is a common Scotch word. The A. S. *syric*, also written (Ihre) *scyric*, is probably *scired*, *scert*, (*i. e.* *shirt*), from the v. *sciran*, to cut, to shear.

A shirt; or, as the female covering is called, a *shift*.

Bare in *serke* & breke Isaac away fled.

R. Brunne, p. 161.

Flaunting beaus gang with their breasts open, and their *sarks* over their waistcoats.

Arbuthnot. John Bull.

Boun-
daries.

SARMATIA, the land of the Sarmatæ or Sauromatæ, (Ovid, *Pont.* i. xi. 79.) was a vast tract of country extending from the Sinus Venedicus (Gulf of the Venedi) in the Suecic Sea or Codan Gulf (Sinus Codanus, now the Baltic) to the mouths of Rha, (Volga,) and bounded on the South by the Vistula, the Southern branch or tributary to the Borysthènes, (Priepetz,) that river itself, (Dnièpr,) the Palus Mæotis, (Sea of Azov,) and the Rha, (Volga,) beyond the upper course of which the Sarmatæ extended for some distance Eastwards; but their Northern and North-Eastern boundaries were not known to the Greeks and Romans, and were probably fluctuating, as was always the case with respect to migratory nations. The Tribes to the East of the Tanaïs (Don) were called the Asiatic, those to the West of that river the European Sarmatæ; for the Tanaïs was considered as the boundary between Europe and Asia. The former appear to have occupied the original (Herod. iv. 21.) territory of this people, which extended Northwards and Eastwards for fifteen days' journey (about 300 miles) from the extremity of the Mæotis. They invaded Europe at the suggestion of Mithridates, and gradually abandoned their migratory habits when they had made themselves masters of the shores of the Baltic. (Malte-Brun, *Précis*, i. 3. Plin. iv. 14.) From their position on the Northern declivity of Caucasus, M. Malte-Brun supposes (vi. 80, 109.) the Sarmatians as well as the Huns to have been a Mongol or Tatarian race; but it is difficult from the doubtful accounts left by the Ancients, to form any satisfactory opinion as to their origin and affinities. They were called Hamaxobii, from their habit of living in waggons. Hence they

Divisions.

frequently changed their abode, which accounts for the contradictory statements of ancient writers as to their limits. They appear to have sometimes come down to the Ister, (Danube,) but the Scythians, mentioned by Herodotus (iv. 51.) as having that river for their boundary, while the Tyras (Danastis, or Dnièstr) traversed their country, were probably not considered by him as Sarmatians. Ptolemy expressly says (iii. 5. p. 73.) that the Tyras separated the Dacians from the Sarmatians. On this river, 140 stadia (17½ miles) above its mouth, there was a city of the same name, anciently called Ophiussa, (*i. e.* Snaky, Plin. iv. 12. Steph. Byzant. *in voce*, Strabo, vii. p. 306.) It was a Milesian colony, situate in a fertile country, and possessing a secure harbour. (Scymnus Chius, *Frag.* 5.) Its inhabitants were styled Syritæ. Beyond the Tyras was the Hypanis, (Bog, Ovid, *Pont.* iv. x. 47.) and the Axiaces, a small river, running into the Euxine between the Hypanis and the Borysthènes, (or Danapris, now Dnièpr,) was the proper boundary of the Sarmatians. "The Tyras rises," says Ammianus Marcellinus, (xxii. 18.) "in the mountains of the Neuri, and rushes into the sea with an overwhelming surf, after having been increased by many tributary streams." Ptolemy (iii. v. p. 73.) places the source of its Northern branch, or true Borysthènes, 2° S. of Mount Budinus; that which he calls the Southern branch is now considered as a separate stream, and is called Priepetz. On the bank of the Borysthènes was Olbia, Olbipolis, Borysthènes or Miletopolis, it being a Milesian colony. (Strabo, *loc. cit.*) Sabia seems to have been its first name. (*Anonymi Periplus Pont. Euxin.* § 12.) It was probably 240 stadia (30 miles) above the mouth of the river. (*Anon. ibid.* Steph. Byzant.) Ordessus (Ὀρδεσσός, Ptol. iii. 5. Ordessus. p. 74.) was another port in the Euxine Sea not far from the Borysthènes. Leuce, (ἡ Λευκή, the White Island,) Leuce, sacred to Achilles, was between the Tyras and the Borysthènes, and just beyond it was the peninsula called Achilles' Race-course, (Δρόμος Ἀχιλλέως,) a narrow strip of land about 100 stadia (12½ miles) in length. (Strabo, Achilles. vii. p. 307. Mela, ii. 1.) To the North of this was the Panticapes, which separated the Nomades (migratory) from the Georgi (agricultural) Sarmatians, the latter being on the South side of the river. (Herod. iv. 54.) The Hyacaris, increased by the Gerrhus, flowed into the Gerrhus. Carcinitic Gulf, a little above the Panticapes. (Mela, ii. 1.) The town of Carcine, or Carcinitis, gave its name to that gulf. The Palus or Lacus Mæotis was separated from this gulf by the Tauric isthmus, (now Perecop.) From thence the shore runs in a North-Easterly direction for 9000 stadia (1125 miles) to the mouth of the Tanaïs; (Don;) most of the various Tribes inhabiting the banks of these rivers derived their name from them; but the Callipedæ, on the Hypanis, are an exception. Most of them are occasionally called Scythæ, which is the reason for doubting whether they were genuine Sarmatians. The Basilidæ, (Pomponius Mela, ii. 1.) above the isthmus, were doubtless the Royal Scythians of Herodotus. (iv. 20.) The Jazyges also occupied the shore of the Mæotis; but Ovid (*Pont.* i. xi. 79.) seems to distinguish them from the Sauromatæ. The Neuri were near the source of the Tyras; the Anchetæ near those of the Hypanis; the Rhoxalani (Russians?) to the West of the Alani, who occupied the country near the mouth of the Tanaïs; but that was at a late period, in the time of Ammianus Marcellinus, (xxii. 19.) The latter, if not a mixed, were probably a Gothic race; they are, how-

ever, called Scythians by Josephus, (*De Bello Jud.* vii. 29.) though distinguished from them by Lucian. (*Toraris*, p. 67, 69.) The Geloni (Γελωνοί) of Hellenic origin were mixed with the Budini, (*Herod.* iv. 108.) and, like the Picts, painted their bodies, (*Virg. Georg.* ii. 115.) as did their neighbours the Agathyrsi. (*Virg. Æn.* iv. 146.) The latter are said by Mela (ii. 1.) to be Hamaxobii, which seems to identify them with the Sarmatians. The Melanchlænæ (Black-mantles) and Anthropophagi were to the North and East of the last, and the only Sarmatians who were cannibals. (*Herod.* iv. 106.) The Tanaïtæ were to the South of the Hyperboreans, who lived on the declivity of the Rhipæan or Rhipæan mountains, and were scarcely known to the Greeks, except in the fables of their poets. The Essedones and Arimaspi were both on the Palus Mæotis and the Tanaïs. Among the Sarmatæ mentioned by Ptolemy and later writers the Borusci and the Chuni are deserving of notice, as being probably the forefathers of the Prussi and Huns. An island at the mouth of the Tanaïs was named after that river, and also called Alopecia. (Fox Island.)

For authorities, see DACIA, BLACK SEA, &c.

SARMIENTA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Gesnerææ*. Generic character: corolla pitcher-shaped; three sterile filaments; capsule one-celled, cut round.

One species, native of Peru.

SAROTHTA, in *Botany*, a genus of the class *Pentandria*, order *Trigynia*, natural order *Caryophyllææ*. Generic character: calyx five-parted; corolla, petals five; capsule one-celled, three-valved, coloured.

One species, *S. gentianoides*, native of Virginia.

SARPLIER, *n. Fr. sarpillière*, a piece of canvass, cloth, or other stuff to wrap or pack up wares in. Cotgrave.

So that there was a subsidie paid for all *sarpliers* of wooll that went out of the relme, and in semblable wise for folies and hides.
Holinshed. Chronicles. Edward I. Anno 1294.

SARRACENIA, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Sarraceniacææ*. Generic character: calyx double, three to five-leaved; corolla, petals five; capsule five-celled; style furnished with a large shield-shaped stigma.

Four species, natives of North America; they are bog plants of singular structure; the leaves are in the form of pitchers with a lid; the stigma is very large, and five-angled.

SARROTHRIPUS, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* long, slender, setaceous, simple in both sexes; *palpi* long, filiform, porrected in form of a beak, slender, clothed with long hairy scales, which conceal the terminal joint, which is very long and slender, nearly filiform; *maxillæ* long; head rather short, with a porrected fascicle of scales in front; eyes subglobose; *thorax* short, with a rounded crest behind; wings entire, anterior rounded at the base, the *costa* faintly emarginated in the middle and ciliated; hinder margin rounded and furnished with long cilia, the disc with a few slightly elevated scales; posterior wings ample, faintly notched towards the apex; *cilia* long; *abdomen* somewhat robust in both sexes, stoutest in the females, moderately long and furnished at the tip with a small tuft; legs moderate, intermediate longest, anterior with a long brush of hairs on the inside of the femora and of the tibiæ.

Type of the genus, *Torticus degenerana*, Hübner; *Tor. bifasciana*; Donovan, *Britt. Ins.* vol. xi. pl. 357. fig 3. A native of Britain, to which may be added six other indigenous species, and two or three foreign ones.

SARROTRIUM, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, thick, ten-jointed, the three basal joints rather slender, the second and third being semiglobose, the remainder forming a somewhat oval, fusiform, slightly compressed, and curved club, of which the six basal joints are transverse, very stout in proportion to their length, lentiform, and finished with elongate pile and hairs, the terminal joint subglobose, with the base truncate; *palpi* four, short, unequal; the maxillary with the terminal joint rather thickened, ovate-obtuse; *maxillæ* membranaceous at the apex, bifid; mandibles acutely bidentate; *labrum* exerted, entire; body elongate-quadrate, sublinear; head and *thorax* quadrate; *elytra* elongate, somewhat linear, with the apex rounded; legs short, stout; *tibiæ* subcylindric, armed with very short spurs; *tarsi* short, four-articulate.

Type of the genus, *Hispa mutica*, Linnæus; Curtis, *Britt. Ent.* vol. vii. pl. 314. One species, found in sandy places.

SARTHE (one of the Western Departments of France) is mostly formed out of Upper Maine, with a small portion of Anjou, and derives its name from the river Sarthe, which traverses it from North to South as far as Mans, whence, turning Westward, it falls into the Loire. This Department is bounded on the North by that of Orne; by those of Eure and Loir, and of Loir and Cher on the East; by those of Indre and Loire, and of Maine and Loire on the South; and, on the West, by that of Mayenne. Its superficial area is 639,276 *hectares*, or 323 square geographical leagues; of which space 58,600 *hectares* are covered with wood, and 10,400 *hectares* laid out in vineyards. The high roads are in length 1105 *metres* to the square league, and the water lines 415 *metres*. The territorial revenue of the Department is estimated at 19,596,000 francs; its entire population, according to the census of 1831, is 457,372 inhabitants.

The territory of this Department consists of tolerably fruitful plains, hills covered with vineyards yielding wines of middling quality, extensive forests, and agreeable valleys which are fertilized by innumerable small streams and rivulets. A large portion of the surface is still occupied by uncultivated *landes*, which, however, are susceptible of improvement; these wastes lie between the rivers Sarthe, Huisne, Braye, and Loir. The lands are almost universally enclosed; a custom, apparently, of high antiquity, and from which it may be inferred that this was in old times a grazing rather than an arable country. Notwithstanding the paucity of meadows, a considerable number of cattle, particularly of sheep and swine, are still reared. The poultry is excellent and abundant, and forms an important item of rural economy, as likewise does the rearing of bees.

Wheat and most kinds of grain are raised in sufficient quantity to meet the consumption; the fruits and vegetables are of excellent quality, and in great plenty; and the scarcity of natural is now beginning to be fully remedied by the formation of artificial meadows. The vineyards produce annually about 160,000 *hectolitres* of wine; the orchards about 224,000 *hectolitres* of cider. Game and fresh-water fish abound.

SARRO-
THRI-
PUS.

SARTHE.

SARTHE. The metallic wealth of the Department is chiefly limited to some deposits of iron which are easily wrought, as they mostly lie in soft clays, and some of which are hematic and hepatic. Near some of these veins of iron occur oxides applicable to the arts, as red and yellow ochres. A tubiform ferruginous freestone is met with in layers of sand, near Ponthibaut, the tubes of which vary from 11 to 18 inches in diameter, and from one to three feet in length. There are also large quarries of freestone, marble, slate, limestone, millstones, and a mine of anthracite coal. Tufa, (*tuffeau*), marl, clays in which occur Sienna earth and umber, fossil amber, rock crystal, and kaolin, nearly complete the list of the mineral riches of the Department. Turf is dug out of the marshy *landes*, and there are mineral springs in several of the Communes.

Trade and manufactures. The principal manufactures are sailcloth, coloured cottons for the colonies, muslins, common stuffs, calicos, gloves, and wax tapers. The bleaching establishments are numerous, as are paper-mills, tanneries, and iron-works. The chief articles of trade may be inferred from the manufactures just enumerated, and from what has been said of the agricultural and mineral produce of the Department.

The Department of Sarthe is divided into the four *Arrondissements* of Le Mans, Mamers, St. Calais, and La Flèche, and contains 393 *Communes*.

Le Mans, the chief town of the Department, was founded in the II^d Century by the Romans, and parts of the wall by which it was then surrounded still exist. Few towns have undergone a greater variety of masters, or suffered more from the vicissitudes of war. In the IXth Century it was the common battle ground of the Bretons and Normans; a few centuries later the French and English disputed its possession at various intervals, and with changeful success; it was a victim alike to the troubles of the League and of the Fronde; and, finally, in 1793, Marceau, with the Republican army, made a frightful carnage of the inhabitants, after gaining the long and furiously contested battle which terminated the hopes of the Vendéans. *Le Mans* is agreeably seated on the brow and slope of a hill, at the foot of which flows the Sarthe. The river is crossed by three bridges; that part of the town which lies on its banks is badly built, and the streets are winding and too narrow for carts or carriages; but the upper town, without being regular, is handsomely and commodiously built. Its chief buildings are the Cathedral, a fine Gothic pile, remarkable for the rich tracery of its choir, and the beauty of its stained windows; the Churches of *La Couture* and *St. Julien du Pré*, the latter being a fine specimen of the Roman style; and the *Hôtel de la Préfecture*, where are deposited the Public Library and Museum. The Library comprises 45,000 printed books and 500 manuscripts; many of the latter are Chinese, but the gem of the collection appears to be *Une Vraie Chronique de Messire Bertrand du Glaiequin*, of the XIVth Century. In the Museum are assembled excellent collections of the natural productions of the Department, of armour, Roman antiquities, and some valuable paintings, chiefly of the Flemish school. The Theatre is one of the prettiest in France, and the new *Halle* is a large and convenient building. *Le Mans* is the chief manufacturing town of the Department, and the centre of its corn, cattle, and other trade. Its situation renders it highly convenient as the head of the administration of the Department, and seat of its chief tribunals. In ad-

dition to these, it possesses a Royal Society of Agriculture, Science, and Art; a Medical Society; a Communal College, and other literary and scientific establishments. It was erected into a Bishopric in the III^d Century. Population 19,852. North latitude 48°, East longitude 0° 10'.

Mamers lies in the Northern division of the Department, and is the seat of a Sub-prefecture, with the corresponding legal and commercial tribunals. It has a Communal College, and a Council of Elders, (*Prud'hommes*.) The origin of this town is unknown, but it was probably founded shortly after the arrival of the Franks in Gaul. It was fortified by the Normans, fell at various times into the hands of both French and English, during the invasions of the latter, and its fortifications were raised by order of the Earl of Salisbury in 1428. Since the Revolution this town has been considerably embellished. It consists of about a dozen streets, which terminate in two spacious public places; one of which is ornamented by a new market-house, or *Halle*, and the other by the large and beautiful building which was formerly the Convent of the Visitation, but in which are now united under the same roof the Guildhall, College, Barracks, Prison, and Theatre of the town. Several manufactures are carried on here, particularly those of linen, cotton, and mother-of-pearl buttons. Population 5822. North latitude 48° 21', East longitude 0° 20'.

St. Calais is a small town which owes its name to a saint of the VIth Century, who founded a Monastery here. It is seated in the somewhat sterile basin of the *Anille*, and is surrounded by *landes* and forests. Its chief boasts are its two pretty public walks, and its Gothic parochial Church. There are forges, tanneries, tile and brick works here; and it is the centre of a considerable trade in corn, wine, wood, and cattle. *St. Calais* is the seat of a Sub-prefecture, with tribunals, and a Communal College. Population 3638. North latitude 47° 55', East longitude 0° 45'.

La Flèche is a pretty town, charmingly situated on the right bank of the Loir, in the midst of a fertile valley, and surrounded by hills covered with vineyards. It is on the whole well built; the streets are wide and clean, and ornamented by fountains which are fed by an aqueduct more than 500 toises in length. The remains of its strong castle, which was one of the most celebrated fortresses of Anjou, and which, though frequently besieged, was never taken, are still visible on a small islet of the Loir. The most remarkable building of the town is the College, founded by Henry IV., and which had the honour of educating Descartes, the astronomer Picard, and Prince Eugene. It is now converted into a Military School, in which about 400 pupils are educated at the expense of Government. The Library, which is adorned by several valuable paintings, contains about 20,000 volumes. The only other buildings worthy of note are the Church of St. Thomas, a massive edifice in the Roman style, the *Hôtel de Ville*, and the Hospital. The manufactures and trade of the town are inconsiderable. It is the seat of a Sub-prefecture. Population 6421. North latitude 47° 42', West longitude 0° 6'.

Malte-Brun; *Guide Pittoresque du Voyageur en France*.

SASH, } Fr. *chassis*, a case, (*casse*), sc. for a pane
SA'SHED. } or more panes of glass.

You are to know, sir, that a Jezebel (so called by the neighbourhood from displaying her charms at her window) appears con-

SARTHE.

SASH.

SASH. stantly dress'd at her *sash*, and has a thousand little tricks and fooleries to attract the eyes of all the idle young fellows in the neighbourhood.
SATAN. *Spectator*, No. 175.

Yet who the footman's arrogance can quell,
 Whose flambeau gilds the *sashes* of Pall-mall.
Gay. Trivia, book iii.

Then dedicate each glass to some fair name,
 And on the *sash* the diamond scrawls my flame.
Id. Epistle 2.

The windows are all *sashed* with the finest crystalline glass brought from England.
Lady Montague. Letter 43.

SASH, } Skinner writes it *shash*, and calls it,—a
SA'SHED. } tiara, a Turkish cap. It is also so written (as a known English word) by Sir Thomas Herbert; and is supposed, by Mr. Thomson, to have been adopted during the crusades: but when was this name given to the *girdle* worn by the Christian, in imitation, probably, of the Jewish priest? Skinner, upon the authority of Doct. Th. H. gives an Italian word, *sessà*, a kind of shaggy cloth, with the folds of which the Turks adorn their caps.

A belt, girdle, band, riband.

Shops breathe perfumes, through *sashes* ribbons glow,
 The mutual arms of ladies and the beau.
Gay. Trivia, book ii.

Whether the Druid slipt or broke
 The mistletoe upon the oak?
 If Hector's spear was made of ash?
 Or Agamemnon wore a *sash*?

Cawthorn. The Antiquarians.

They are so *sashed* and plumed, that they are grown infinitely more insolent in their fine clothes, even than they were in their rags.
Burke. On a Regicide Peace.

SA'TAN, } The word is Hebrew, meaning,
SATA'NICK, } as Milton interprets it, the enemy,
SATA'NICAL, } the arch-enemy.
SATA'NICALLY, } The enemy; the devil. *Satanick*,
SA'TANISM, } —devilish; diabolical.
SA'TANIST. }

And thilke dragoun was cast down, the greet olde serpent, that is clepid the deuel, and *Sathanas* that disseyueth al the world.
Wiclif. Apocalips, ch. xii.

And the great dragon, that olde serpent called the deuil and *Sathanas* was caste oute. Which deceaueth all the worlde.
Bible, Anno 1551.

————— To whom th' arch enemy,
 And thence in heav'n call'd *Satan*, with bold words
 Breaking the horrid silence thus began.
Milton. Paradise Lost, book i.

His weakness shall o'ercome *satanic* strength
 And all the world, and mass of sinfull flesh.
Id. Paradise Regained, book i.

For *satanical* it is, [the inquisition,] by the conjunction of three qualities; indefatigable diligence, profound subtilty, and inhuman cruelty.
Trapp. Popery Stated, part ii. sec. 12.

This spiritual assassinaçy, this deepest die of bloud being most *satanically* designed on souls, and (because they cannot get those into their power) practising it in effigie, slaughtering them here in this t'other Calvary, the place for the crucifying of reputations, turning men (upon any, upon no occasion) out of the communion of their charity, when they cannot out of bliss, and no doubt rejecting many, whom the angels entertain most hospitably.
Hammond. Works, vol. iv. p. 470.

So mild was Moses' count'nance, when he pray'd
 For them whose *satanism* his power gainsay'd.
Elegy on Dr. Donne.

There shall be fantastical babblers, and deceitful *satanists*, in these last times, whose words and deeds are all falsehood and lies.
Granger. On Eccl. (1621,) p. 343.

SATE, } Fr. *satiété*; It. *sàzio*, *saziare*,
SA'TELESS, } *sazietà*; Lat. *satiare*, to suffice, to
SA'TIATE, adj. } content, to give enough, from *satis*;
SA'TIATE, v. } perhaps the Gr. *σαττ-ειν*, to stuff or
SATI'ETY, } stow closely.
SATIA'TION. } To have or give enough; to suffice, to content; to give or take till the desire of receiving is over; to glut.

SATE
SATEL-
LITE.

————— But vertue, as it neuer wil be moued,
 Though lewdnesse court it in a shape of heauen:
 So lust, though to a radiant angell link'd,
 Will *sate* it selfe in a celestiall bed, and prey on garbage.
Shakspeare. Hamlet, act i. sc. 5.

Wherefore did nature pour her bounties forth,
 With such a full and unwithdrawing hand,
 Covering the earth with odours, fruits and flocks,
 Thronging the seas with spawn innumerable,
 But all to please, and *sate* the curious taste?
Milton. Comus.

When she had giuen her moane so many teares,
 That now 'twas *satiare*; her yet louing feares
 Askt thus much further.
Chapman. Homer. Odyssey, book xix.

Since sonnets thus in bundles are impress'd,
 And ev'ry drudge doth dull our *satiare* ear.
Drayton. Idea 31.

Thus fairely shee attempered her feast,
 And pleas'd them all with meete *satiety*.
Spenser. Faerie Queene, book ii. can. 9.

————— Nor can be *satiare*
 (As good men should) with this vile warre. *Satiety* of state,
Satiety of sleepe and love, *satiety* of ease,
 Of musicke, dancing, can finde place; yet harsh warre still
 must please
 Past all these pleasures, even past these.

Chapman. Homer. Iliad, book xiii.
 [This is] as if *satiety* were the usher of diseases and mortality.
Whitaker. Blood of the Grape, p. 7.

Such be thy life, O since the glorious rage
 That fir'd thy youth, flames unsubdued by age!
 Though wealth, nor fame, now touch thy *sated* mind,
 Still tinge the canvas, bounteous to mankind.
Tickell. To Sir G. Kneller.

He saw those troops that long had faithful stood
 Friends to his cause, and enemies to good,
 Grown weary of their chief, and *satiare* with blood.
Rowe. Lucan. Pharsalia, book v.

Oh, had thy gentle spirit past in peace,
 The son expiring in the sire's embrace,
 While both thy parents wept thy fatal hour,
 And bending o'er thee, mix'd the tender shower!
 Some comfort that had been, some sad relief,
 To melt in full *satiety* of grief!
Pope. Homer. Iliad, book xxiii.

His very crimes attest his dignity;
 His *sateless* thirst of pleasure, gold, and fame,
 Declares him born for blessings infinite.
Young. Complaint. Night 7.

The variety of objects dissipates care for a short time; but weariness soon ensues, and *satiety* converts the promised pleasure to indifference, at least, if not to pain.
Knox. Christian Philosophy, sec. 57.

SA'TELLITE, } Fr. *satellite*; It. *satellite*; Lat.
SATELLI'TIOUS. } *satelles*. Vossius thinks from a Syriac word meaning *latus*, and applied to one who attended the *side*, upon the person of another.

See the Quotation from Locke for the astronomical usage.

The secondary planets move round about other planets. Besides the moon, which moves about the earth, four moons move about Jupiter, and five about Saturn, which are called their *satellites*.
Locke. Elements of Natural Philosophy, ch. iii.

Their solidity and opacity, and their *satellitious* attendance, their revolutions about the sun, and their rotations about their axes, are exactly the same.
Cheyne. Philosophical Principles.

SATIRE.

SA'TIRE,

SATI'RIC,

SATI'RICAL,

SATI'RICALY,

SATI'RICALNESS,

SA'TIRIST,

SA'TIRIZE, v.

Fr. *satyre*, *satyric*; It. *sàtira*, *satirico*; Sp. *satyra*, *satyrico*; Lat. *satira*, *satyra*, *satura*. The origin of this word has been the subject of much dispute. Dryden's Preface to the Translation of *Juvenal* gives a full view of it. See

the Quotation from him below, and under the word SATYR.

Dryden calls it—

An invective poem: *i. e.* a poem in which the vices and follies of men are inveighed against, exposed, and held out to ridicule or contempt.

His [Heinsius] chief ground is in effect this, that according to the ancient use and law of *satyre*, it should be nearer the comedy than the tragedy, not declaiming against vice, but jeering at it. *Holiday. Juvenal. Preface.*

For a *satyr* as it was born out of a tragedy, so ought to resemble his parentage, to strike high, and adventure dangerously at the most eminent vices among the greatest persons, and not to creep into every blind taphouse that fears a constable more than a *satyr*. *Milton. Apology for Smectymnus, sec. 6.*

And surely Nashe, though he a proser were,
A branch of laurel yet deserves to bear,
Sharply *satyric* was he.

Drayton. To H. Reynolds, Esq.

Or they be morall, which for the most part be mixed with some *satyricall* bitterness.

Spenser. The Shepherd's Calendar. Argument, p. 20.

Thus does he impie the epidemical impietie of those times, wherein hell was counted rather a fable than a place of justice, and only such *satyrically* supposed to believe it, as could not understand it. *Holiday. Juvenal. Satire 2. Illustrations.*

He [Robert Person] had an ill-natured wit, biassed to *satyricallness*. *Fuller. Worthies. Somersetshire.*

I first adventure, with fool-hardy might,
To tread the steps of perilous despite.
I first adventure, follow me who list,
And be the second English *satirist*.

Hall. Satire 1. book i.

Amongst the Romans it [the word *satire*] was not only used for those discourses which decry'd vice, or expos'd folly, but for others also, where virtue was recommended. But in our modern languages we apply it only to invective poems, where the very name of *satire* is formidable to those persons who would appear to the world what they are not in themselves. For in English, to say *satire*, is to mean reflection, as we use that word in the worst sense. *Dryden. Dedication.*

The *satyrique*, says he, is a dramattick poem, annex'd to a tragedy; having a chorus, which consists of *satyrs*; the persone represented in it are illustrious men; the action of it is great; the stile is partly serious, and partly jocular; and the event of the action most commonly is happy. *Id. Ib.*

Your lordship has perceiv'd, by this time, that this *satyrique* tragedy and the Roman *satire* have little resemblance in any of their features. The very kinds are different; for what has a pastoral tragedy to do with a paper of verses *satirically* written? *Id. Ib.*

What ever since that golden age was done,
What humane kind desires, and what they shun,
Rage, passions, pleasures, impotence of will,
Shall this *satyricall* collection fill.

Id. Juvenal. Satire 1. v. 129.

So that the Greek poem, made according to the manner of a *satyr*, and expressing his qualities, must properly be called *satyricall*, and not *satire*. *Id. Ib. Dedication.*

Horace has written many of them [the odes and epodes] *satirically*, against his private enemies. *Id. Ib.*

Both Horace and Quintilian give a kind of primacy of honour to Lucilius, amongst the Latin *satirists*. *Id. Ib.*

Libel and *satire* are promiscuously joined together in the notions of the vulgar, though the *satirist* and libeller differ as much as the libeller and murderer. In the consideration of human life, the

satirist never falls upon persons who are not glaringly faulty, and the libeller on none but who are conspicuously commendable. *Tatler, No. 92.*

SATIRE.
SATISFY.

Covetousness was undoubtedly none of his [Nero] faults; but it is here described as a veil cast over the true meaning of the poet, which was to *satirize* his prodigality and voluptuousness. *Dryden. Persius. Satire 4. Argument.*

Horace, the politest writer whom the world ever produced, adopted *satirical* writing, and succeeded in it, though there is every reason to believe that his natural disposition was not severe. *Knox. Essays, No. 137.*

Selfishness, avarice, and voluptuousness, are *satirically* attributed to them as their distinguished characteristics. *Id. Ib. No. 10.*

To maintain the contrary is to *satirize* his majesty's government; it is to insinuate, that his views and interests are so disjoined from those of his people, that they cannot be effectuated by the uninfluenced concurrence of honest men. *Id. The Spirit of Despotism, sec. 37.*

SATISFY, v.

SATISFA'CTION,

SATISFA'CTORY,

SATISFA'CTORILY,

SATISFA'CTORINESS,

SA'TISFIER.

Fr. *satisfaire*; It. *satisfare*, *soddisfare*; Sp. *satisfacer*; Lat. *satisfacere*; to do enough. See SATE.

To do enough; as much as may be sought or wished, to content, to fulfil, to please fully; to give or pay enough, as much as may be due or required; to content, to appease; to remove all wish for more, all need of more.

But hallowe ye the Lord Crist in your hertis, and euermore be ye redi to *satisfaccioun* to ech man axinge you resoun of that feith and hope that is in you, but with myldnesse and drede. *Wiclif. 1 Peter, ch. iii.*

Graunte me grace of verray penance, confession and *satisfaction* to don in this present lif, thogh the benigne grace of him that is king of kinges and preste of all prestes, that bought us with the precious blode of his herte. *Chaucer. The Persones Tale.*

That masses *satisfactory* should continue to be sung for souls departed, by priests hired thereunto, I think it not convenient. *Burnet. Records, part ii. book i. No. 25.*

Not all so *satisfide*, with greedy eye
He sought, all round about, his thirsty blade
To bathe in blood of faithlesse enemy.

Spenser. Faerie Queene, book i. can. 5.

Hereafter, lest (past fates)
Hell be thy headlong home, retire; make bold stand never neare,
Where he advanceth; but his fate, once *satisfied*, then beare
A free and full sayle: no Greeke else shall end thee.

Chapman. Homer. Iliad, book xx.

His whole felicity is endlesse strife,
No peace, no *satisfaction*, crownes his life.

Beaumont. Of the Miserable State of Man

By a final and *satisfactive* discernment of faith, we lay the last effects upon the first cause of all things. *Brown.*

Now there could be no *satisfactory* confutation of this atheistick hypothesis, without a fair proposal first made of the several grounds of it to their best advantage. *Cudworth. Intellectual System, book i. ch. iii.*

Were you able *satisfactorily* to answer the following queries, this one, while it stands unanswered, would be enough for all. *Waterland. Works, vol. i. part ii. query 2.*

The substance of a speech made in the House of Commons on Monday 4 Decem. 1648, touching the *satisfactoriness* of the king's answer to the propositions of both Houses for settlement of a firm lasting peace, &c. *Ibid. 1648.*

Wood. Athenæ Oxonienses, vol. ii.

A man's own experience may discover unto him the excellency, *satisfactoriness*, and the advantageousness of those graces and virtues that are recommended by Christianity. *Boyle. Works, vol. vi. p. 778.*

For the transgressions of man, man ought to make *satisfaction*; but he could not. God could; but he ought not. And therefore,

SATISFY. that he might *satisfy*—both that ought and could, it was fit that the *satisfier* should be God and man.

SATUR DAY.

It is very true that motives, not at all akin to pride, frequently induce those of high rank to neglect or even refuse *satisfying* their creditors.

The word *satisfaction* is frequently employed to express the full accomplishment of some particular desire; which always communicates a temporary pleasure, whatever may be the nature of that desire.

It was high time to think of settling Omai; and the presence of these chiefs, I guessed, would enable me to do it in the most *satisfactory* manner.

SATIVE, Lat. *sativus*, from *satus*, past participle of *serere*, to sow.

Preferring the domestick or *sative* for the fuller growth.

SA'TRAP, { Fr. *satrape*; It. *satrapo*; Sp. *satrapa*;
SA'TRAPY. { Lat. *satrapa*; Gr. *σατραπης*, a Persian word. See the Quotation from Beloe's *Herodotus*.

Yea, the angels themselves, in whom no disorder is fear'd, as the apostle that saw them in his rapture describes, are distinguish'd and quaternion'd into their celestial principedoms, and *satrapies*, according as God himself has writ his imperial decrees through the great provinces of heaven.

Milton. *The Reason of Church Government*, book i. ch. i.

Th' innumerable host
Roll back by nations, and admit their lord
With all his *satraps*.

The government also of this country, which the Persians call a *satrapy*, is deemed by much the noblest in the empire.

SA'TURATE, v. { Fr. *saturité*; It. *sàturo*, *satu-*
SA'TURATE, adj. { *rità*; Lat. *satur*, from *satis*. See
SATURA'TION, { *SATE*.
SATU'RITY. { To give enough; as much as is wanted, as much as can be received or taken; to fill to excess.

For be the figures of the salts never so various, yet if the atoms of water were fluid and alterable, they wou'd always so conform to those figures, as to fill up all vacuities; and consequently the water would be *saturable* with the same quantity of any salt, which it is not.

To both these may be applied the termes of reduplication and *saturation*; the former, when essence or substance is but once redoubled into it self or into another; the latter, when so oft, that it will not easily admit any thing more.

More. *The Immortality of the Soul*, book i. ch. ii.

Who seeing their *saturitie*,
And practising to winne
His purples thence, Excesse, he sayd,
'Doth worke accesse to sinne.

Warner. *Albion's England*, book v. ch. xxiv.

Still night succeeds,
A soften'd shade, and *saturated* earth
Awaits the morning-beam.

The innocent are gay—the lark is gay,
That dries his feathers, *saturate* with dew,
Beneath the rosy cloud, while yet the beams
Of day-spring over-shoot his humble nest.

Cowper. *Task*, book i.

SATURDAY, A. S. *sæternes dæg*; *saturni dies*. See the Quotation from Verstegan.

Aftur ech of hem in the wike y clepud ys a day;
First (of the) Sonne, & so of othere and the senethe *Saturday*.
And for weder, & other thing on erthe, aftur hem mucche is.

R. Gloucester, p. 113.

And the day unto which we yet give the name of *Saterday*, did first receive by being unto him [the idol Seater] celebrated, the same appellation.

Verstegan. *Decayed Intelligence*, ch. iii.

SATUREJA, in *Botany*, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiata*. Generic character: calyx tubular, striated; segments of the corolla nearly equal; stamens distant.

Twelve species, natives of both hemispheres.

SATU'RNAL, n. { Fr. *saturnales*, *saturnien*; It.
SATURNA'LIAN, { *saturnàli*, *saturnino*; Sp. *satur-*
SATU'RNIAN, { *nales*, *saturnino*; Lat. *satur-*
SA'TURNINE, { *nalìa*, *saturninus*.
SA'TURNIST. { *Saturnalian*,—of or pertaining to the *saturnalia*, feasts of *Saturn*; and, consequently, insubordinate, licentious.

Saturnine,—sad, grave, sedate, gloomy; so applied, because those born under the planet *Saturn* were said by astrologers to be distinguished by disposition, sad, grave, &c.

Seating himselfe within a darkesome cave,
(Such places heavy *saturnists* doe crave)
Where yet the gladsome day was never seene,
Nor Phœbus' piercing beams had ever beene.

Browne. *Britannia's Pastorals*, book ii.

Whether we celebrate the Christian festivals, or the bloody *saturnals*, or barbarous bacchanalia, is no greater matter to him, provided our minds be but canker'd with wrath and malice, and cruelty and revenge.

Here pleas'd behold her mighty wings outspread
To hatch a new *saturnian* age of lead.

Pope. *Dunciad*, book i.

I may cast my readers unto two general divisions, the mercurial and the *saturnine*. The first are the gay parts of my disciples, who require speculations of wit and humour; the others are those of a more solemn and sober turn, who find no pleasure but in papers of morality and sound sense: the former call every thing that is serious stupid; the latter look upon every thing as impertinent that is ludicrous.

Hence so many various systems of morality to suit every man's bent of mind and frame of constitution. The indolent, the active, the sanguine, the flegmatic, and the *saturnine*, have all their correspondent theories.

Warburton. *Divine Legation*, book ix. Introduction.

In order to make this *saturnalian* amusement general in the family, you sent it down stairs.

Burke. *On a Regicide Peace*.

SATURNIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* somewhat cylindric, very short; of the males bipectinated, the pectinations divergent, and diminishing in length to the apex of the antennæ, each joint of which bears two ramifications internally and externally; of the females with each joint bidentate; *palpi* and *maxillæ* obsolete, their place occupied by a dense tuft of hair; head small, scarcely visible from above; *thorax* short, densely hairy; *abdomen* abbreviated in the males, rather long and stout in the females, pilose, slightly tufted at the apex; wings broad, horizontally expanded during repose, entire, rounded, posterior ones simple; *cilia* very short. *Larva* marked with a coloured ring on each segment, adorned with several bundles of hair placed upon distinct warts; *pupa* enclosed in a rigid pear-shaped cocoon.

Type of the genus, *Phalæna (Attacus) Pavonia*, Linnæus; Harris, *Aurelian*, pl. xxv. fig. b—d. The insects comprised in this genus are generally of large size, sometimes more than half a foot in expanse, and are usually adorned with gay and lively colours; there are many species, but one only has hitherto occurred in Britain.

SATYR, Fr. *satyre*; It. *satoro*; Sp. *satiro*; Lat. *satyrus*. See the Quotation from Pliny.

Among the western mountains of India the *satyres* haunt, (the country wherein they are is called the region of the Cartadali.)

SATU-REJA.

SATYR.

SATYR. creatures of all others most swift in footmanship; which one whiles run with all foure; otherwiles upon two feet onely like men; but so light-footed they are, that unlesse they be very old or sicke, they can never be taken.

Holland. Plinie, book vii. ch. ii.

Scaliger the father will have it descend from Greece to Rome; and derives the word *satyre* from *satyrus*, that mixt kind of animal, or, as the ancients thought him, rural god, made up betwixt a man and a goat: with a human head, hook'd nose, powting lips, a bunch, or struma under the chin, prick'd ears, and upright horns; the body shagg'd with hair, especially from the waste, and ending in a goat, with the legs and feet of that creature.

Dryden. Juvenal. Dedication, p. 17.

SATYRIUM, in *Botany*, a genus of the class *Gynandria*, order *Monandria*, natural order *Orchideæ*. Generic character: calyx deflexed, petals connected at the base with the calyx, deflexed, lip turned upwards, concave with a double spur behind; anther reversed; stigma two-lipped.

Eleven species, natives of the South of Africa.

SA'VAGE, adj. Fr. *sauvage*; It. *salvaggio*; Sp. *salvaje*; Low Lat. *salvatus*, pro *silvaticus*, in the woods, (*silvæ*), wild, untamed.
SA'VAGE, n.
SA'VAGE, v.
SA'VAGELY,
SA'VAGENESS,
SA'VAGERY. Wild, untamed, as birds or beasts; brutal, ferocious, cruel.

Greekes weening that were yong of age,
That this tigre had be *sauage*,
And cruelly besetting all the place.

The Story of Thebes, part iii.

As *salvage* bull, whom two fierce mastives bayt,
When rancour doth with rage him once engore,
Forgets with wary warde them to awayt,
But with his dreadfull hornes them drives afore.

Spenser. Faerie Queene, book ii. can. 8.

My heart agrieud that such a wretch should raigne,
Whose bloodie breast so *sauag'd* out of kind,
That Phalaris had nere so foule a mind.

Mirror for Magistrates, p. 442.

If this sort once possess the arteries
Of forlorn man, madness and stupor seize
His *salvag'd* heart, and death dwells in his eyes.

More. Pre-existence of the Soul, 1647, st. 38.

Our scions, put in wild and *savage* stock,
Spirt up so suddenly into the clouds,
And overlook their grafters.

Shakspeare. Henry V. act iii. sc. 5.

Rosse. Your castle is surpriz'd; your wife and babes
Sauagely slaughter'd.

Id. Macbeth, act iv. sc. 3. fol. 147.

Breathe his faults so quaintly,
That they may seem the taints of liberty;
The flash and outbreak of a fiery mind;
A *savageness* in unreclaimed blood,
Of general assault.

Id. Hamlet, act ii. sc. 1.

This is the bloodiest shame,
The wildest *sauagery*, the vilest stroke
That euer wall-ey'd wrath, or staring rage
Presented to the teares of soft remorse.

Id. King John, act iv. sc. 3. fol. 17.

Her fallow leas,
The darnell, hemlock, and ranke femetary,
Doth root vpon; while that the cutler rusts,
That should deracinate such *sauagery*.

Id. Henry V. act v. sc. 2. fol. 92.

And though the blindness of some ferities have *savaged* on the bodies of the dead, and been so injurious unto worms as to disenter the bodies of the deceased, yet had they therein no design upon the soul.

Sir Thomas Brown. Vulgar Errors, book vii. ch. xix.

The sullen door,
Yet uninfected, on its cautious hinge
Fearing to turn, abhors society;
Dependants, friends, relations, Love himself
Savag'd by woe, forget the tender tie,
The sweet engagement of the feeling heart.

Thomson. Summer.

The lion thus, with dreadful anguish stung,
Roars through the desert, and demands his young!
When the grim *savage*, to his rifled den
Too late returning, snuffs the track of men.

Pope. Homer. Iliad, book xviii.

As man in his perfect state is the best of all animals, so, separated from law and right, he is the worst; for out of society we see his nature presently degenerates, and instead of being inclined to assist, grows always most *salvage* and barbarous to his own kind.

Scott. Christian Life, part i. ch. iii.

There can be no true liberty where such licentiousness is suffered with impunity. This is part of the *savageness* of corrupt nature.

Waterland. Works, vol. vi. p. 294.

Without thee what were unenlighten'd man?
A *savage* roaming through the woods and wilds,
In quest of prey; and with th' unfashion'd fur
Rough-clad; devoid of every finer art,
And elegance of life.

Thomson. Summer.

If we contemplate a *savage* nation in any part of the globe, a supine indolence and a carelessness of futurity will be found to constitute their general character.

Gibbon. Roman Empire, ch. ix.

Try if 'twill tame these insolent invaders;
Who thus, in *savageness* of conquest, claim
Whom chance of war has spar'd.

Mason. Caractacus.

SAVANNAH. In the West Indies, says Delpino, *savana* signifies a plain. And see the Quotation from Dampier. But *savana*, in Spanish, Delpino also says, is a large sheet for a bed; and sometimes used for a large linen cloth.

Savannahs are clear pieces of land without woods; not because more barren than the woodland, for they are frequently spots of as good land as any, and often are intermixt with woodland.

Dampier. Voyages, Anno 1683.

The soil, however, is frequently sandy, and many of the lawns, or *savannahs*, are rocky and barren.

Cook. Voyages, book ii. ch. vi.

SAUCE, n. Fr. *sauce*, *sauces*; It. *salsa*; Sp. *salsa*, from *salsus*, savoury; *sale aspersus*. See **INSULSE**. Applied generally to
SAUCE, v.
SAU'GER,
SAU'CY,
SAU'CILY,
SAU'CINESS. Seasoning; to any savoury, relishing addition to food; *sauce*, met. (as *salt* also,) seasoning; wit or humour, carried to excess, in contempt of superiors; and hence, impudent language; impudence.

To *sauce*; to season; to add, or intermix seasoning, or any addition to the main thing.

Saucer, a vessel to contain *sauce*; or to be used for any similar purpose.

Ac here *sauce* was over soure. and unsavourliche grounde
In a mortar post mortem. of meny bitere peynes.

Piers Plouhman. Vision, p. 244.

Wo was his coke, but if his *sauce* were
Poinant and sharpe, and ready all his gere.

Chaucer. Prologue to the Canterbury Tales, v. 234.

Such *sawce* as they haue serued,

To me without desart,

Euen as they haue deserued

Therof God send them part.

Wyat. The Louer Suspected.

They sent vs succor *sauist* with soure despite,
They saued our liues and spoylde vs of the rest,
They stale our goods by day and eke by night,
They shewed the worst and closely kept the best.

Gascoigne. Voyage into Hollande, Anno 1572.

Miso, to whom chearfulness in others was ever a *sauce* of envy in her self, took quickly mark of his behaviour.

Sidney. Arcadia, book iii.

Miso had no sooner espied Basilius, but that, as spitefully as her rotten voice could utter, she set forth the *sauiness* of Amphialus.

Id. Ib. book ii.

SAVAGE.
—
SAUCE.

SAUCE.
—
SAVE.

And ever among she would *sauce* her speeches with such bastinadoes, that poor Dametas began now to think that either a general madding was fallen, or else that all this was but a vision.
Sidney. Arcadia, book iv.

— If it be so, as fast
As she answers thee with frowning looks, ile *sauce*
Her with bitter words; why looke you so vpon me?
Shakspeare. As You Like It, act iii. sc. 5.

Nay we entermingle all climats and coasts of heaven and earth to satisfie our appetite; for to one kind of meat wee must have drugs and spices fetcht as far as from India; to another, out of Ægypt, Candie, and Cyrene; and, in one word, for every dish wee have a several land to find us *sawce*.
Holland. Plinie, book xv. ch. xxvi.

— I remember
My father would prefer the boys he kept
To greater men than he, but did it not
Till they were grown too *saucy* for himself.
Beaumont and Fletcher. Philaster, act ii. sc. 1.

Yet into closets *saucily* dar'st peep,
Telling for truth what thou canst but suppose.
Divulging that which thou should'st not disclose.
Drayton. Legend of Robert Duke of Normandy.

And here I cannot pretermit
To that epitome of wit,
Knowledge and art, to him whom we
Saucily call, and I more *saucily*
Presume to write the little *d*.
Cotton. Epistle to John Bradshaw, Esq.

3 CIT. How now, Goodman squitter-breech, why do you lean on me?

PHIL. Because I will.

3 CIT. Will you, sir *sawce-box*?

1 CIT. Look if one ha'not struck Philip.

Beaumont and Fletcher. A King and No King, act 1.

— When sparkling bowls go round,
And tunnies' tales in savoury *sauce* are drown'd,
Thou mutter'st prayers obscene.
Dryden. Persius. Satire 5.

CAM. (crying out) Ah. Madam, 'tis he himself; but he's as big again as he us'd to be, with eyes like *sawcers*.
Id. An Evening's Love, act iv.

And because none should remember his practices, nor suspect the rest to come, he shaveth his crown as broad as a *sawcer*.
Strype. Memorials, vol. iv. ch. xxxv. Q. Mary I.

A very little wit joined with a great deal of *sauciness* will enable a man to make sport with the most serious arguments.
Scott. Christian Life, part ii. ch. iii.

— And the brown loaf
Lodg'd on the shelf, half eaten without *sauce*
Of sav'ry cheese, or butter, costlier still.
Cowper. The Task, book iv.

But if I put it [a snowball] into a *saucepan* over the fire it will lose its specific essence, being turned into water, and may exchange its quality of freezing for that of scalding.
Search. Light of Nature, vol. ii. part i. ch. i.

Wantonness and *sauciness* are laughed at and encouraged as marks of spirit.
Knox. Liberal Education, sec. 33.

SAVE, v.	} Fr. <i>sauver, sauf</i> ; It. <i>salvare, salvo</i> ; Sp. <i>salvar, salvo</i> ; Lat. <i>salvere, i. e. saluum esse</i> , from the Greek <i>σας</i> , (<i>inserta liquida</i>), to <i>save</i> . To take out, to keep out of harm, ill, danger; to rescue or free from, to preserve from, harm, ill, or danger; to secure, to keep from waste, from expenditure; to reserve; to spare. <i>Saviour</i> , emphatically, the <i>saver</i> or preserver of men.
SA'VER,	
SA'VING, n.	
SA'VINGLY,	
SA'VINGNESS,	
SA'VIOUR,	
SAFE, adj.	
SAFE, v.	
SA'FELY,	
SA'FENESS,	
SA'FETY.	

And be yuolled in holy water, & myd Cristendom monge ze mowe *saustliche* het holy þyng, as he dude, auouge.
R. Gloucester, p. 239.

SAVE.

& if a clerke men founde in his lond þat reft, þorgh slauhter or wounde, or þorgh oþer theft, Men suld schewe his guilte in þe courte of lay, & þer be *saued* or splite, bot Thomas said him nay.
R. Brunne, p. 129.

R. for alle þe pres *saucely* did þam vp ryue.
Id. p. 191.

þe mayden Edward toke, als he was fulle curteys, In *saufte* did hir toke, & þanked þe burgeis.
Id. p. 136.

For wente nevere men þis way. þat he ne was here rifled. *Save* my selve sothliche. and suche as ich lovede.
Piers Plouhman. Vision, p. 326.

Ich shal by seche for alle synfulle. our *Savjour* of grace To a menden ous of oure mysdedes. do mercy to ous alle.
Id. Ib. p. 116.

And if thou werken wott by good consel, I undertake, withouten mast or seyl, Yet shal I saven hire, and thee and me. Hast thou not herd how *saued* was Noe?
Chaucer. The Milleres Tale, v. 3527.

And though that nothing, *save* the death only, Might thee fro me depart trewly, Thou shalt no more departe now fro me Than fro the death, for I woll go with thee.
Id. The Legend of Tisbe of Babilon.

Women may now go *safely* up and down.
Id. The Wif of Bathes Tale, v. 6460.

As for hir soules *safete*, At lord and lady, and hir meine, I aske, whan they hem to me shrive, The propertie of all her live.
Id. The Romant of the Rose.

And God so wise be my succour, But thou yeve me my *Saviour* At Easter, whan it liketh mee, Without preasing more on thee.
Id. Ib.

And ferthermore with good courage He saith, be so he maie hir haue, That Christ, that came this worlde to *saue*, He woll beleue.
Gower. Conf. Am. book ii.

For God sent not his sone into the world that he juge the world, but that the world be *saued* by him.
Wiclif. Jon, ch. iii.

For God sente not hys sonne into the worlde to condempne the worlde, but that the worlde thorowe him myght be *saued*.
Bible, Anno 1551.

But he sigh the wynd strong, and was aferd, and whanne he biganne to drenche he criede and seide, Lord make me *saaf*.
Wiclif. Matthew, ch. xiv.

But when he sawe a myghtye wynde, he was afrayed. And as he beganne to syncke he cryed, sayinge, Master, *saue* me.
Bible, Anno 1551.

I my selfe dyd read the *safeconduite* that come vnto hym, which had but onely this one condition annexed vnto it, that if he came before the feast of Christmasse then next insueing, he should haue free libertie to departe at his pleasure.
Frith. Workes, p. 156.

And therefore (quod the Archebishophe of Yorke) Godde forbydde that anye manne shoulde for anye thyng earthlye enterpryse to breake the immunitie and libertye of that sacred sainctuary, that hath bene the *safegarde* of so many a good mannes life.
More. Workes, p. 46.

This name Jesus signifieth a *saviour*, and therefore nothinge asked in the name of Jesus, but that is wholesome and helping to the saluacion of the asker.
Id. Ib. p. 18.

Flee then, my son, and geue this trauail end; Ne shall I thee forsake in *saufegard* till I haue thee brought vnto thy father's gate.
Surrey. Virgil. Æneis, book ii.

Sagittarius, one of y^e foresayde iii of that company, the whiche myne auctor reportith to be a bysshop, fled to haue *sauegardyd* hym selfe, but in his flyght he was slayne.
Fabyan. Chronicles, part v. ch. 123.

SAVE.

Say, heav'nly powers, where shall we find such love,
Which of ye will be mortal to redeem
Man's mortal crime, and just th' unjust to save,
Dwells in all heaven charitie so deare?

Milton. *Paradise Lost*, book iii.

Seest thou yon dreary plain, forlorn and wilde,
The seat of desolation, voyd of light,
Save what the glimmering of these livid flames
Casts pale and dreadful?

Id. *Ib.* book i.

Hail, Son of God, *Saviour* of men, thy name
Shall be the copious matter of my song
Henceforth, and never shall my harp thy praise
Forget, nor from thy Father's praise disjoine.

Id. *Ib.* book iii.

And who so worketh or ministreth iustice in due order, he not
onlie *safegardeth* himself, but also holdeth people in a suertie of
restfulness, of the which insueth peace and plentie.

Holinshed. *Chronicles*. Richard II. Anno 23.

This not doing the deed, to make him a *saver* he was fain to
crave another help of the same hand under the new name of a
subsidie.

Fuller. *Worthies*. Cornwall.

The meaning of which observation is, that we may understand,
that as in the person prayed for there ought to be the great dispo-
sition of being in a *saveable* condition, so there ought also all the
intermedial aptnesses.

Taylor. *Sermon* 6. vol. i.

And a man cannot ordinarily know that he is in a *saveable* con-
dition.

Id. *Sermon* 1. vol. iii.

My more particular,
And that which most with you should *safe* my going,
Is Fulvia's death.

Shakspeare. *Antony and Cleopatra*, act i. sc. 3.

Daunger without discretion to attempt,
Inglorious, beast-like is! therefore, sir knight,
Aread what course of you is *safest* dempt,
And how with our foe may come to fight.

Spenser. *Faerie Queene*, book iii. can. 11.

Here now behoveth us well to avyse,
And of our *safety* good heede to take;
For here before a perious passage lyes.

Id. *Ib.* book ii. can. 12.

And after her are gone
All the brave knightes, that doen in armes excell,
To *saveguard* her ywandred all alone.

Id. *Ib.* book iii. can. 8.

Ne thenceforth his approved skill, to ward,
Or strike, or hurle rownd in warlike gyre,
Remembred he, ne car'd for his *saufgard*,
But rugely rag'd, and like a cruell tygre far'd.

Id. *Ib.* book ii. can. 5.

He kept the verge of Troy, nor dar'd to wait
Achilles' fury at the Scæan gate;
He try'd it once, and scarce was *sav'd* by fate.

Pope. *Homer*. *Iliad*, book ix.

OF. How sits the conquest on great Arthur's brow?

ALB. As when the lover, with the ring is mixt,
He puts the gain of Britain in a scale,
Which weighing with the loss of Emmeline
He thinks he's scarce a *saver*.

Dryden. *Plays*. *King Arthur*, act ii.

Now ask the fruit of all his favour—
He was not hitherto a *saver*.

Swift. *The Pheasant and the Lark*.

The nature of certain subjects proper for moving the passions
may require a little more latitude, and then, without offence to the
critics, sure there may be room for a *saving* in equity from the
severity of the common law of Parnassus, as well as of the King's
Bench.

Lansdowne. *The British Enchanters*. Preface.

For as much as concerns the main question now in agitation,
(about the *saveableness* of Protestants,) if the first part of your
book be answered, there needs no reply to the second.

Chillingworth. *The Religion of Protestants*, p. 317.

They are capable of being *savingly* born of water and the Spirit,
and of being adopted into sonship with what depends thereupon;
because, though they bring no virtues with them, no positive
righteousness, yet they bring no obstacle or impediment.

Waterland. *Works*, vol. vi. p. 357.

As to the safety and *savingness* which it promiseth (the great
imposture of the times) I do sincerely represent here, both what it
is, and what it can do.

Brevint. *Saul and Samuel*. Preface, p. 5.

From the loud camp retir'd, and noisy court,
In honourable ease and rural sport,
The remnant of his days he *safely* past;
Nor found they lagg'd too slow, nor flew too fast.

Prior. *Henry and Emma*.

If a man should forbear his food or his business till he had cer-
tainty of the *safeness* of what he was going about, he must starve
and die disputing.

South.

As the well-laying the foundations of a house secures the super-
structures against the violences of all future storms and foul wea-
ther, so the first settling of your resolutions upon a firm and stedfast
basis, will be a mighty *safeguard* to it against all ensuing storms
of temptation.

Scott. *Christian Life*, part i. ch. iv.

Proud of his well-spread walls, he views his trees,
That meet, no barren interval between,
With pleasure more than ev'n their fruits afford;
Which, *save* himself who trains them, none can feel.

Cowper. *The Task*, book iii.

Nay if thy poet rightly weens,
(Though little skill'd in ways and means,
Its *save-all* is but shallow.

Mason. *Ode to Pinchbeck*.

These poultry, as they are fed with what would otherwise be
lost, are a mere *save-all*; and as they cost the farmer scarce any
thing, so he can afford to sell them for very little.

Smith. *Wealth of Nations*, book i. ch. xi.

SAVIA, in *Botany*, a genus of the class *Dioecia*,
order *Pentandria*. Generic character: male flower,
calyx five-leaved; corolla, three to five petals; nectary
with a fleshy margin: female flower, styles three, two-
cleft; capsule three-celled.

One species, *S. sessiliflora*, native of the Island of San
Domingo.

SAVIGNYA, in *Botany*, a genus of the class *Tetra-
dynamia*, order *Siliculosa*, natural order *Cruciferae*.
Generic character: cotyledones flat, accumbent; corolla,
petals entire; stamens toothless; pod sessile, elliptical;
seeds very flat, with a broad margin.

One species, *S. Ægyptiaca*, native of Egypt.

SAVINE, Fr. *savinier*; Lat. *sabina*.

There is an herbe, whiche men calleth
Saueyne, and that behoueth nede
To hym that woll his purpose spede.

Gower. *Conf. Am.* book vii.

As for the *savine*, an hearbe or plant it is that will take if it bee
in this sort couched in the ground; also a sprig, if it be slipped off
clean from the stocke, will come againe and root.

Holland. *Plinie*, book xvii. ch. xiii.

SAUNDRES, Fr. *sandal*. "*Sanders*,—a sweet-
smelling wood, brought out of the Indies." Cotgrave.

But of some dele I am beknowe,
That I maie stonde in thilke rowe
Amonge hem, that *saundres* vse,
I woll not me therof excuse.

Gower. *Conf. Am.* book ii.

SAUNTER, n. } Skinner derives from the Fr.

SAU'NTER, } *sauter*, to leap, to skip, i. e. con-

SAU'NTERER. } sequently, to move *desultorily*,

without fixed aim or object. Lye says, some learned
men suppose it formed of the Italian *alla santa terra*,
and refer its origin to the time of the expeditions to the
Holy Land; but he thinks the word too modern for
such an origin; others again from *sans terre*, applied
to wanderers without a home. See Grose. Mr. Thom-
son invents a Bar. Lat. *segnitare*, from *segnis*, idle,
sluggish.

To loiter or linger about; wander, stroll, or move
about idly, sluggishly.

SAUN-
TER.
—
SAVOUR.

Unhappy wretch
What hast thou gotten by this fetch,
Of all thy tricks, in this new trade,
Thy holy brotherhood o' th' blade?
By *sauntering* still on some adventure,
And growing to thy horse a centaur?

Butler. *Hudibras*, part iii. can. 1.

Upon the first suspicion a father has, that his son is of a *sauntering* temper, he must carefully observe him, whether he be listless and indifferent in all his actions, or whether in some things alone he be slow and sluggish, but in others vigorous and eager.

Locke. *Of Education*.

Whether, on the other hand, a handsome seat amidst well-improved lands, fair villages, and a thriving neighbourhood, may not invite a man to dwell on his own estate, and quit the life of an insignificant *saunterer* about town, for that of an useful country-gentleman?

Berkeley. *Works*. *The Querist*, sec. 413.

For in my bed, or in the colonnade
Sauntering, I call reflection to my aid.
This was well done. Here happiness attends.
This conduct makes me pleasing to my friends.

Francis. *Horace*. *Satire* 4. book i.

She walks all the morning *sauntering* about the shop with her armes through her pocket-holes, or stands gaping at the door-sill, and looking at every person that passes by.

The Idler, No. 15.

A fine lady will seem to have more charms to a man of study or business than to a *saunterer*.

Lord Chesterfield.

SA'VOUR, n.	} Fr. <i>savour</i> , <i>savourer</i> ; It. <i>sapore</i> , <i>saporare</i> ; Sp. <i>savor</i> , <i>savorear</i> ; Lat. <i>sapere</i> . See ante, SAPID. <i>Savour</i> is applied either to the Taste or smell; to the relish or flavour, scent, odour; met. quick, keen sensation or perception.
SA'VOUR, v.	
SA'VOURY,	
SA'VOURILY,	
SA'VOURINESS,	
SA'VOURLESS,	
SA'VOURLY,	
SA'VOUROUS.	

Ac eet nat ich bote. or hunger ye take
And send of hus sauce. to *saverie* with thy lippes.
Piers Plouhman. *Vision*, p. 142.

Fayn ich wolde
A saÿe what *savour* hit hadde. Id. *Ib.* p. 309.

Somme aren rÿpe
Swettour and *saverroure*. and also more grettows
Than þat seilde haven þe sonne. Id. *Ib.* p. 307.

And he turnyde and seide to Petir, Sathanas go aftir me, thou art a sleaundre to me, for thou *saverist* not tho thingis that ben of God, but tho thingis that ben of men.

Wiclif. *Matthew*, chap. xvi.

The turned he about, and said vnto Peter, Come after me Satan, thou offendest me, because thou *sauourest* not godlye thynges, but worldly thynges.

Bible, Anno 1551.

For I seie bi the grace that is ghounn to me to alle that ben among ghon, that ghe *sauere* not more than it bihoueth to *sauere*, but for to *sauere* to sobrenesse, and to ech man as God hath departid the mesure of feith.

Wiclif. *Romaynes*, ch. xii.

And the hous was fulfillid of the *sauoure* of the oynement.
Id. *Jon*, ch. xii.

And y^e house was filled of the *sauer* of the ointment.
Tyndall. *Id.*

And every man schal be saltid with fier, and every slayn sacrifice schal be maad *savery* with salt. Salt is good; if salt be unsavery, in what thing schulen ye make it *savery*? have ye salt among you, and have ye pees among you?

Wiclif. *Mark*, ch. ix.

Abide, quod she, my tale is not begonne;
Nay thou shalt drinken of another tonne
Er that I go, shal *savour* worse than ale.
Chaucer. *The Wif of Bathes Prologue*, v. 5751.

I wonder this time of the yere
Whennes that swete *savour* cometh so
Of roses and lilies, that I smelle here.
Id. *The Second Nonnes Tale*, v. 15651.

And further over ther they shul have defaute of all maner delites, for certes delites ben after the appetites of the five wittes; as sight, hering, smelling, *savouring*, and touching.
Chaucer. *The Persones Tale*.

SAVOUR.
—
SAU-
RURUS.

For to ben gay and amorous,
The time is then so *sauorous*.

Id. *The Romant of the Rose*.

If it [love] be wicke, a wonder thinketh me,
Whan every torment and adversite
That cometh of him, may to me *savery* think;
For aie thurst I the more that iche it drinke.

Id. *Troilus and Crescide*, book i.

That what man couth awaie take
The rust, of whiche thei woxen blake,
And the *savour* of the hardnes,
Thei shulden take the sikeness
Of golde or siluer perfectly.

Gower. *Conf. Am.* book iv.

What if the salte haue lost his propre strength and *sauerinesse*, and, as Christe saithe, be good for no vse, scante woorth the castinge on the dounghil.

Jewell. *The Defence of the Apology*, p. 604.

Not such as earth out of her fruitfull wombe
Throwes forth to men, sweet and well *savored*,
But direfull deadly black, both leafe and bloom,
Fitt to adorne the dead and deck the drery toombe.

Spenser. *Faerie Queene*, book ii. can. 7.

Goe whither fate and inclination strong
Leads thee, I shall not lag behinde, nor erre
The way, thou leading, such a sent I draw
Of carnage, prey innumerable, and taste
The *savour* of death from all things there that live.

Milton. *Paradise Lost*, book x.

The vallies there, being watered with sundrie pleasant streames, doo yeeld a sweet and verie *sauorie* grasse, wherewith all sorts of cattell are verie much delighted.

Holinshed. *Description of Scotland*, ch. v.

For the base TrochYTE thinketh it no pain,
To scour vile carrion for a *savoury* gain.

Drayton. *The Owl*.

Other sometimes bearing the image of Christ in her arms, weeping *savourily*, she would make her hair to increase to that length and largeness that it would come to her heels, and cover her all over and the image of Christe in her armes.

More. *An Antidote against Atheism*, book iii. ch. iv.

The learned think them too perspicuous; being named with Juvenal, Persius, and the other antient satires; the unlearned, *savourless*, because too obscure, and obscure because not under their reach.

Hall. *Postscript to Satires*.

His [Rubens] gusto of design *savours* somewhat more of the Flemish than of the beauty of the antique, because he stay'd not long at Rome.

Dryden. *Dufresnoy's Judgment on the Principal Painters*.

There will be something peculiar and distinguishing in his manner, something *savouring* of the pious frame and disposition of his heart.

Waterland. *Works*, vol. viii. p. 418.

There's a dearth of wit in this dull town,
When silly plays so *savourily* go down.

Dryden.

Then when he hath done his best toward the dispatch of his work, his food doth taste *savourily*, then his diversions and recreations have a lively gustfulness, then his sleep is very sound and pleasant; according to that of the preacher, The sleep of a labouring man is sweet.

Barrow. *Sermon* 19. vol. iii.

While as they rode, he better mark'd her face,
Her beauteous features, and her pleasing grace,
That *savour'd* of a court.

Hoole. *Ariosto*, book iv.

Omai himself now began to think that they were of no manner of use to him; that a baked hog was more *savory* food than a boiled one.

Cook. *Third Voyage*, book iii. ch. vi.

SAVOY. See SARDINIA and TARENTEISE.

SAURURUS, in *Botany*, a genus of the class *Hep-tandria*, order *Tetragnynia*, natural order *Saurureæ*. Generic character: calyx, the scales of the catkin, one-

SAURUS. flowered; corolla none; germens four; berries four, one-seeded.

SAURUS. One species, *S. cernuus*, native of Virginia.

SAURUS, from the Greek *σαυρα*, a fish so called; Cuv. *Saury*. In Zoology, a genus of animals belonging to the family *Salmonides*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Head of moderate size, and rather depressed; muzzle more or less acute; nostrils double and in front of the eyes, which are near the top of the snout and close together; gape wide, and extending far behind the eyes; edge of the upper jaw formed entirely by the intermaxillary bones; teeth long, very sharp, and thickly set in both jaws, in the palatine and pharyngeal bones, upon the tongue, and on the inner edges of the branchial arches; branchial membrane supported by from fifteen to eighteen very delicate rays, and branchial opening very large; body roundish and tapering, covered with large oblique scales; cheeks entirely, and gill-flap partially, scaly; ventral fins far forward and lengthy.

This is one of the genera into which the Linnæan genus *Salmo* has been divided by modern zoologists. It is distinguished from the *True Salmons* by the edge of its upper jaw being formed entirely of the intermaxillary bones, and by not having any teeth in the vomer; from the *Smelts*, which have only eight rays in their branchial membrane; and from the *Lavarets* and *Argentines*, which have no teeth in the jaws. Some are met with in the Mediterranean, but the greater number in the Indian Seas and on the coast of Brazil. They are very predaceous. Spix hazards a question as to their entering the rivers like Salmon.

S. Mediterraneus, Cuv.; *Osmerus Saurus*, Lambert, *Mediterranean Saury*. About twelve inches long; head large; muzzle long and depressed; eyes large and approximated; aperture of nostrils simple; opercles covered with small scales; body covered with ciliated scales, of a green colour mingled with bluish, and marked with narrow, irregular, reddish streaks; belly silvery; dorsal fin supported by fifteen rays; pectoral fins reddish; caudal forked. Is found off the coast of Nice, but is rare.

S. Salviani, Cuv.; *Salmo Saurus*, Bl.; *Salvian Saury*. This is considered by Cuvier to be distinct from the preceding species in consequence of its having only twelve rays to its dorsal fin; the back is green, inclining to black; the belly white spotted with blue, brown, and greenish. It is found in the Mediterranean, and at Rome is called *Tarantola*, and in France *Lezard*, from its markings, and the sharp form of its muzzle; it is also met with in the Red Sea and off the Antilles.

S. Fædens, Cuv.; *Salm. Fæt.* Lin.; *Fætid Saury*. About twelve or fourteen inches in length, and of a slender form; head truncated; mouth wide; nostrils round, single, and near the eyes, which are high up, and separated from each other by a groove; pectoral fins short; anal long; rays of all the fins flexible and ramified; back blackish; sides and belly silvery; fins reddish-brown. It is caught on the coast of Carolina, where it is called the *Sea Sparrow Hawk*, but is not common.

S. Tumbil, Cuv.; *Salm. Tumb.* Bl.; *Tumbil Saury*. Mouth very large; jaws narrow and pointed; head and body covered with large round scales; sides of the body yellow with reddish-brown bands descending from the back to the belly, which is silvery; fins yellow at their

base, and blue towards the tips. Is found on the Malabar coast. SAURUS.

S. Lemniscatus, Cuv.; *Osmerus Lemnisc.* Lacep.; *Ribboned Saury*. Head flesh-coloured, marked with small spots of red and blue; body striped longitudinally with blue, and transversely banded with ten or eleven brown stripes; dorsal fin yellow marked with two blue stripes; ventrals varied with yellow and blue; anal blue edged with yellow; and caudal tipped with blue.

S. Variegatus, Cuv.; *Salm. Varieg.* Commers.; *Variegated Saury*. About six inches long, and of a rounded and rather conical shape; back clouded with brown, spotted with red, and striped longitudinally and alternately with red and black; belly whitish; fins red and black. It is caught, though rarely, off the Isle of France.

S. Fasciatus, Cuv.; *Osmerus Fasc.* Risso; *Banded Saury*. From six to twelve inches in length; head elongated; nape smooth; a groove between the orbits; mouth large; body slender, oblong, flattened, and covered with large silvery scales spotted with black on the back, and crossed on the sides with golden and blue bands; belly dingy white; fins streaked with black. Is common on the coast of Nice.

S. Badi, Cuv.; *Yellow Saury*. Eight or ten inches long; head small, depressed, rather flattened on the sides, its upper surface scaly; eyes near the muzzle; hinder nostril the larger; teeth very numerous; gill-flaps scaleless, and only half covering the branchial membrane; body lance-shaped, compressed, and roundish; scales large; back slightly arched; lateral line high, straight, and loricated; general colour dusky yellowish, inclining to a dull white on the belly; dorsal fin composed of twelve declining rays; caudal forked; anal fin far back, opposite the fatty fin, and much smaller than the ventrals, which are opposite the dorsal and of same shape with it, but their rays shorter; pectoral fins short. Found on the Coromandel coast, and called by the natives *Badi Mottah*. It is transparent, like a *Smelt*, but is very dry and insipid.

S. Minutus, Lesuer; *Minute Saury*. About two inches in length; muzzle pointed; head large, and depressed above; first dorsal fin short, elevated, and rather posterior to the ventrals; second dorsal supported by a single divided ray; pectorals rounded and reaching to the ventrals; anal elongated, narrow, and straight; caudal fin forked. From the Isle of France.

S. Myops, Cuv.; *Salmo Myops*, Forst.; *Mouse-eyed Saury*. Head oblong and covered with scales; muzzle very short; eyes small, high up, and near the front of the mouth; body oblong, compressed, and covered with large scales. Is found off St. Helena, and called by the colonists the *Ground Spearing*.

S. Longirostris, Spix; *Long-nosed Saury*. From seven to eight inches and a half in length; head very narrow, attenuated in front with a long sharp snout; flattened above, and marked only on the occiput with striæ; eyes far apart; nostrils very small, and double on each side, the anterior two pyriform, the posterior ovaloid and patulous; gill-flap completely covered with scales; body cylindrical, thickest opposite the dorsal fin, and covered with small, delicate, paper-like scales, and marked very closely with concentric lines; lateral line arched downwards; upper surface olive-green, inclining to golden on the sides; dorsal fin delicate, its anterior rays only simple, the rest cleft at the tip; fatty fin very small; caudal fin deeply cleft, its inner rays

SAURUS. split at the top, the outer simple; anal fin smaller than in the other species, its rays very slender; ventral fins long, its first ray simple and shorter than the others, which, gradually increasing in length, are cleft at the tip; first ray of pectoral fin simple and thicker than the others, the tips of which are split. Is found on the sea-coast of the Brazils, and occasionally visits the rivers.

S. Intermedius, Spix; *Banded Saury*. Eight inches and a half in length; head long, with a projecting muzzle, but less acute than the last species; grooved between the eyes; anterior nostrils small, round, and somewhat tubular, posterior larger, oval, and patulous; cheeks and gill-flaps scaly; body completely cylindrical, and diminishing posteriorly, covered with large and rather angular scales; its colour olive-green, inclining to golden on the sides, and marked with several broad, transverse, blackish bands; all the rays of the dorsal fin split, except the anterior two, which are single; fatty fin small, expanded at its tip, and roundish; forking of tail and rays of caudal fin as in last species; rays of anal fin far apart, all simple; ventral fins very long, all their rays split; pectoral fins subfalcate, the first ray stoutest. Found on the Brazilian coast.

S. Truncatus, Spix; *Truncated Saury*. From six to seven inches long; head obtuse, truncated anteriorly and equally to a fourth part of its length, its upper surface very rough; eyes at the top of the muzzle, and very close to each other; nostrils very small at the very tip of the muzzle, the anterior large and covered with skin, posterior much smaller and pyriform; cheeks scaly; gill-flap bare; body slightly compressed, and diminishing posteriorly, covered with very smooth, delicate, papyraceous scales; general colour olive marked longitudinally with golden stripes; dorsal fin dotted with black, slender, its anterior rays simple, the posterior split at their tips; fatty fin small, wedge-shaped; tail forked, inner rays cleft, outer simple and smaller; rays of anal simple; ventral fins subthoracic, very long, all their rays cleft; pectoral fins small, subfalcate, the first ray stouter than the others, and simple. Found at the mouth of the Brazilian rivers.

S. Ophidion, Cuv.; *Silurus Cirris Carens*, Russ.; *Trifid-tailed Saury*. Nine inches in length; head small, long, declivous, compressed, obtuse, the front depressed and scabrous; mouth low, very wide; teeth very long, flexible, and dissimilar, some of the front and margins large, conical, and curved back, others linear, crowded, and in many rows; eyes very close to muzzle and very small; anterior nostrils small and round, posterior larger and oval; gill-flaps composed of a single soft lamina, open below and exposing the branchial membrane; back slightly arched to fatty fin, then rising a little towards caudal fin, and the tail becoming broader near it; belly almost straight; sides compressed, but roundish; lateral line high, nearly straight, and slightly raised; general colour yellowish-white marked with minute black dots, especially behind the anal fin; dorsal fin composed of twelve descending rays; fatty fin very small; caudal fin composed of three lobes setaceous at the point; each lateral lobe consisting of eight exclusive of the accessory rays; middle lobe pyramidal-shaped, ending in a setaceous thread, and pennated on the sides, is rather longer than the lateral lobes, and measures an inch and a half; anal fin same shape as dorsal; ventrals opposite the dorsal, setaceous, the first ray two inches and two-thirds long; pectoral fins very high, subfalcate, and setaceous, the longest ray measures

two inches and a quarter; the fins are of similar colour to the body, but are not dotted. It is found in the sea off the Coromandel coast, but is not very common. It is almost transparent, is flabby, oily, and soon becomes rancid, but when salted and dried is used in India as a condiment. The natives call it *Wana Mottah*. Cuvier also mentions another species,—

S. Mexicanus, Cuv.; *Mexican Saury*. Which is also nearly transparent, and is found in the Lake of Mexico.

S. Microps, Cuv.; *Salmo Microps*, Lesuer; *Small-eyed Saury*. Total length four inches; of a lengthened form, slightly compressed, thicker in front, and becoming thin and slender towards the tail; snout very short, rather longer than the diameter of the eye; eyes small, very near to the jaws; summit of the head and tip of the muzzle so close together as scarce leaving room for the nostrils, which are small and indistinct; branchial aperture very large; body covered with small, pellucid, and very soft scales marked with concentric lines, rounded; lateral line almost straight; first dorsal fin rather triangular, short, and elevated behind; ventrals under origin of dorsal fin, about an inch and a quarter long, having large base, and terminating in a point extending to near the middle of the anal, which is of moderate size, its posterior edge emarginate; it is placed midway between the ventrals and caudal fins, and opposite fatty fin; pectorals falciform, more than an inch long; tail long and narrow, terminated by a proportionally small fin, slightly emarginate, its upper lobe largest and longest; general colour reddish marked on the back with numerous brownish points. Found in the Indian seas. Lesuer thinks it closely allied to the *Sauri*, but distinguished from them by the teeth in the vomer; and as, on account of its large pectoral and ventral fins, and its movable and barbed teeth, it could not be placed among the true Salmons, Lesuer proposes to make it a new genus, by the name of *Harpodon*. Cuvier, however, thinks Lesuer has mistaken the pharyngeal teeth for teeth in the vomer on account of the shortness of the muzzle, and believes it to be very near the last species, if not identical to it.

See Cuvier, *Règne Animal*; Bloch, *Ichthyologie*; Pat. Russell, *Fishes of the Coromandel Coast*; Spix, *Selecta Genera et Species Piscium*.

SAUSTRA BEADY, *Sahasra-béd'hí*, i. e. thousand-wound (wort) or thousand-wound (stone,) is the Sanskrit name of the *Ferula Asa-fetida*, and of a kind of bastard sorrel, (*Oxalis monadelphica*), as well as of a mineral substance considered by the Hindús as a sovereign panacea. The latter is a reddish talc, which, after having been subjected to a hundred calcinations and concocted with the juice of many herbs, is believed to have acquired the desired efficacy. It is probable that the plants bearing the same name are also supposed to possess similar virtues. Rees, *Cyclopædia*; Sir G. C. Haughton, *Sanskrit and Bengali Dictionary*.

SAUTE: a bitch is said to be salt when in heat. More, *Suffolk Words*.

In as much as the wedding of our virgins (shame it is to speak it) are more lyke unto the saute of a biche, then the marryng of a reasonable creature. Tyndall. *Workes*, p. 107.

SAUTE, i. e. assault.

Sheding of blood, ne manfull hardinesse,
Ne oft wounding at sautes by distresse,
Nor in parting of life nor death also,
All is for nought, Loue taketh no heed therto.

Chaucer. *The Complaint of the Black Knight*.

SAURUS.
SAUTE.

SAUTER. **SAU'TER,** } *Sauter* is the *Psalter* or book of
SAU'TRY. } *Psalms*. *Sautry* is also *Psalterium*, a
SAW. musical instrument, a harp or lyre. See Du Cange.

David in þe *sauter*, of shuche makeþ mynde.
Piers Plouhman. Vision, p. 259.

For him was lever han at his beddes hed
 A twenty bokes, clothed in black or red,
 Of Aristotle, and his philosophie,
 Than robes riche, or fidel, or *sautrie*.
Chaucer. Prologue to the Canterbury Tales, v. 276.

As harpes, pipes, lutes, and *sautry*.
Id. The Flower and the Leaf.

Their instruments were various in their kind,
 Some for the how, and some for breathing wind;
 The *sautry*, pipe, and hautboy's noisy band,
 And the soft lute trembling beneath the touching hand.
Dryden. The Flower and the Leaf.

SAUVEGESIA, in *Botany*, a genus of the class
Pentandria, order *Monogynia*, natural order *Violaceæ*.
 Generic character: calyx five-leaved; corolla, petals
 five, fringed; nectary five-leaved, alternating with the
 petals; capsule three-celled, three-furrowed, three-
 valved, margin of the valves bent inwards, (stipules ci-
 liated.)

Two species, natives of South America and Mada-
 gascar.

SAW, *n.* A. S. *saga*, a saying. See *infra*, **SAY**.

Any thing *said*. A saying; a sententious saying, a
 maxim.

þis þat I haf said it is Pers *sawe*,
 Als he in romance laid, þer hafter gan I drawe.
R. Brunne, p. 205.

To Paris turned þe kýng, for þat ilk *sawe*,
 & þer a samenýng his barons þider gan drawe.
Id. p. 143.

And þat my *sawe* be soth, þe *sauter* bereþ witnesse.
Piers Plouhman. Vision, p. 177.

Ful litel wote Arcite of his felaw,
 That was so neigh to herken of his *saw*,
 For in the bush he sitteth now ful still.
Chaucer. The Knightes Tale, v. 1457.

For Cayton sayth, that he that gilty is,
 Demeth all thing be spoken of him ywis;
 That was the cause, he gan so nigh him drawe
 To his yeman, to herken all his *sawe*.
Id. The Chanones Yemannes Prologue, v. 16154.

The Painym herde, an vnderstoode,
 And thought it was a wonder lawe.
 And thus vpon their sondrie *sawe*
 Talkende both forth thei went.
Gower. Conf. Am. book vii.

Nowe tolden thei, nowe tolde he,
 Thei speaken pleyne after the lawe,
 But he the wordes of his *sawe*
 Coloureth in an other weie
 Spekende.
Id. Ib. book vii.

First and foremost therefore, I will for the most part deale by
 oracles, that is to say, sententious *sawes*, for to determine this
 question in hand; concerning which, there are as many to be found
 in number, and those as true in effect, as in any other part and
 possession of this our life whatsoever.

Holland. Plinie, book xviii. ch. iv.

Severe to censure, earnest to advise,
 And with old *saws* the present age chastise.

Francis. Horace. Art of Poetry.

SAW, *n.* } A. S. *saw-an*, *saga*; Ger. *sceg-en*,
SAW, *v.* } *scege*; D. *saeg-en*, *saeg*; Sw. *scega*,
SAWYER, } *sæg*; Fr. *scier* or *sier*, *scie*; It. *seg-*
SA'WING, *n.* } *are*, *sega*; Sp. *aserrar*, *sierra*. Me-
 nage derives the Fr. from the Lat. *sec-are*, to cut. The
 Spanish is plainly the Lat. *serra*, (from *sec-are*, *q. d.*

secerra, unless formed from the sound. Vossius.) Skin-
 ner, Wachter, and Ihre refer the Northern words to the
 Lat. *sec-are* to cut. To *saw* is (by usage) to cut by
 moving the tool backwards and forwards with pressure
 of the edge upon the material to be cut.

Sawyer was formerly written *sawer*, as *lawyer*, *lawer*.

Carpenter's art was the invention of Dedalus, as also the tooles
 thereto belonging, to wit, the *saw*, the chip, axe, and hatchet,
 the plumbe line, the auger, and wimble, the strong glew, as also
 fish-glew, and stone-saudre.

Holland. Plinie, book vii. ch. lvi.

And because it [elme] twineth and casteth not, it is passing
 good for hinges and hookes, for *sawne* bords, for ledges in dores
 and gates.
Id. Ib. book xvi. ch. xl.

By which meanes the slit is hindred, and the worke goeth not
 forward; which is the cause also that the *sawyers* draw up and let
 downe the saw twice before the teeth send from them any dust into
 the pit.
Id. Ib. book xvi. ch. xliii.

The oke and the box wood, which, although they be greene,
 doe stiffely withstand the *saw-gate*, choking and filling up their
 teeth even.
Id. Ib.

Then *saws* were tooth'd, and sounding axes made,
 (For wedges first did yielding wood invade,)
 And various arts in order did succeed.

Dryden. Virgil. Georgics, book i. p. 305.

The persons I am now arguing against love their palats too
 well to admire those who can discern no difference of tastes; and
 would be well enough contented to be thought deaf if they could
 put no distinction between the pleasant sound of vocal or instru-
 mental musick, and the harsh jarring of two *saws* drawn cross
 each other.
Stillington. Sermon 10. vol. i.

Make chips of elms produce the largest trees,
 Or sowing *saw-dust* furnish nurseries.

Butler. The Elephant in the Moon.

It is that [landscape by Rubens] where two men are *sawing* the
 trunk of a tree.

Reynolds. A Tour to Flanders and Holland.

SAXICAVA, in *Zoology*, a genus of *Cephalopodous*
Mollusca.

Generic character. Shell bivalve, transverse, inequi-
 lateral, gaping anteriorly at the upper margin; hinge
 nearly without teeth; ligament exterior.

S. pholadis, Lamarck, *Anim. sans Vert.* vol. v. p.
 502. Inhabits rocks in the Northern oceans; other
 species are found in the south.

SAXICOLA, from the Latin *saxum*, a rock, and
colo, I inhabit; Bechst. *Wheatear*, *Chat*, Pen. In
Zoology, a genus of animals belonging to the family
Dentirostres, order *Passeres*, class *Aves*.

Generic character. Beak straight, slender, and ra-
 ther wider than deep at its base, its ridge slightly cari-
 nated and advancing on the forehead; point of the
 mandibles awl-shaped, and the upper slightly curved
 and emarginated; gape bearded; nostrils basal, lateral,
 oval, and partially concealed by membrane; tarsi gene-
 rally very long; one toe behind and three before, the
 outer two connected at their base; claws not much
 curved, but that of the hind toe shorter than the toe but
 much curved; first alar quill of moderate length, the
 second much shorter than the third and fourth, which
 are the longest; greater wing coverts much shorter than
 the quill feathers.

This genus, originally forming part of the Linnæan
Motacilla, was detached from it by Bechstein, whose
 arrangement has been followed by most modern orni-
 thologists. Vieillot has, however, applied to it the name
Enanthe, and Stephens that of *Vitiflora*, but without
 good reason for such change of name. The *Saxicolæ*,
 by the breadth of the base of their beak, are connected
 with the true Fly-catchers, *Muscicapæ*, and by their
 habits an almost direct passage to that section of the

SAW.

SAXI-
COLA.

Thrushes, *Turdi*, which live among the rocks. They are all found in the Old World, are shy, living only in pairs upon open moors, or in rocky districts, where, on the least alarm, they hide either behind stones or in holes; but they are never found in woods, and rarely even among bushes. They build their nests either in clefts of rocks or among the roots of shrubs, and are sometimes found at considerable elevations. The great length of their legs renders them good runners, and they feed upon insects and worms, which they catch upon the ground with great activity. They moult only once a-year, but the action of the air and light so much discharges some of their colours that their plumage in Autumn differs remarkably from that of the Spring. The greater number of the species present a general correspondence in the distribution of the black and white upon their tails, the greater part of the tail being white, whilst the middle two quills and the tips of all are black. In Great Britain three species are found, but two of these are migratory; and, though generally they are found in the Southern parts of Europe, and in that part of Africa which borders or is near to the Mediterranean, yet some species are found constantly remaining in high Northern latitudes.

S. Cachinnans, Tem.; *Turdus Leucurus*, Gmel.; *Black Wheatear*, Gould. Seven inches in length; irides dark brown; entire plumage black, except the rump, which is white; the middle two caudal quills black, all the others white, but banded with black near their tips, which are white; beak and legs black. In the female the colours are similar, but the black inclines towards brown. The young of the first year resemble the female. This species feeds on insects, beetles, &c., and is found in the dry rocky districts of Spain, Sicily, the Mediterranean Isles, and the opposite coast of Africa; it is common at Gibraltar, and is also found in the South of France.

S. Œnanthe, Bechst.; *Motacilla Œn.* Gmel.; *le Moteux ou Vitbec*, Buff.; *Wheatear*, Pen. From five to six inches in length; irides dark hazel; upper parts of the body ashy-grey; forehead and stripe above each eye white; throat buff; from the base of the beak extending below the eye and covering the aperture of the ear is a black streak; wings black; rump and tail coverts white; middle two caudal quills black, the others white, except the extreme third next to their tips, which is black; front of the neck tinged with reddish-white; under parts white; beak and legs black. In the female all the parts are ashy-brown, which in the male are black; neck and chest reddish; edges of the wing feathers more or less ferruginous; the black on the tail quills increased at the expense of the white. The young birds resemble the female in plumage, but with a tinge of red, especially on the quills of the wings and tail. The Wheatear is a migratory bird; it comes to this country early in March, and remains here till September, when, collecting together on the Southern downs in large flocks, they take their flight to the continent with the first favourable wind. In its Spring migration it ascends as high Northward as the Orkneys, but it is more common in temperate than in high Northern or Southern latitudes. It especially prefers open and bare grounds, and does not seek for covert, in which respect it differs from the other British species; from this cause, together with some slight variation in figure, it has been formed by Brisson, Stephens, and others into a new genus bearing the name *Vitiflora*, although the *S. Rubetra* and *S.*

Rubicola, which have the same form and habits, are excluded without any sufficient reason. In its manners it is lively though retired, hopping from clod to clod with great activity, and occasionally taking short flights near the ground in pursuit of winged insects, which, together with *Coleoptera* and their larvæ, and also worms, form their food. During pairing time it has a sweet and varied note, which it frequently warbles whilst on the wing in company with its mate, or in the neighbourhood of its nest, which is made either in the Rabbit burrows commonly found on sandy coasts, or when on open downs beneath large stones, or in clefts of rocks, or holes in the ground, or old walls. The nest is made of moss and grass, lined with wool or hair, and contains five or six pale blue eggs. The Wheatear at its first arrival, and just prior to its departure, is fat, of a fine flavour, and considered nearly equal to the Ortolan; it is therefore in much repute as a table delicacy, and caught in considerable numbers for that purpose, principally by shepherds, who, placing two turfs on an edge, attach a horse-hair noose at either end, and the bird running in, either in search of food or to escape notice, is immediately snared by one or other of them. The number of Wheatears caught in this manner is very great; Pennant mentions that at Eastbourn alone 1840 dozen are annually taken.

S. Stapazina, Tem.; *Motacilla Stap.* Gmel.; *Sylvia Stap.* Lath.; *le Culblanc Roux*, Buff.; *Russet Wheatear*, Gould. About five inches and three-quarters in length; space between the eye and beak, ocular circle, throat, scapulars, and wings deep black; crown, rump, and under parts pure white; nape and back light rufous; tail white, excepting the extreme fourth, which is black, as are also the greater part of the outer and the whole of the middle two quill feathers; beak and legs black. After the Autumnal moult the top of the head and back are rather deeply tinged with ashy, the breast becomes reddish, and gradually fades off to whitish, of which colour are the under parts; throat, scapulars, and wings deep black, and most of the feathers tipped with ferruginous; rump always pure white. Temminck says that this variation in the Spring and Autumnal plumage is so great that it cannot be conceived they are the same species; friction, the action of the light, and air affect to such extent the tips of all the feathers, that the reddish with which they are edged at the Autumnal moult subsides entirely towards Spring, and exposes the pure white of the upper part of the feathers; whilst the deep black of the other feathers is perfected in the same way. The old female has the top of the head reddish-brown, with broad, whitish eyebrows extending to the ears; the ocular circle and throat blackish-brown mingled with ashy, and sometimes with reddish; front of throat and chest ferruginous-white; nape and back dirty ferruginous; scapulars black tipped with reddish; wings blackish-brown; the quill feathers edged with reddish; hinder parts as in male, but the black markings of the caudal quills more extensive. The first year's birds differ little from the female. Are found on the rocky hills in the South, but never in the central parts of Europe; are very common on the rocks about the Mediterranean, in the Southern parts of Italy, Dalmatia, and the Archipelago.

S. Aurita, Tem.; *Mot. Stapazina*, var. B. Lath.; *le Culblanc Roussâtre*, Buff.; *Black-eared Wheatear*, Gould. In size and plumage nearly resembling the preceding, but distinguished from it by the whiteness of

SAXI-
COLA.

SAXI-
COLA.

its throat. It is found on the low hills of the South of Europe, and is more common in the North of Italy than the Russet Wheatear, but it is never seen in central Europe.

S. Leucomela, Tem.; *Motac. Leucom.* Pall.; *Pied Wheatear*, Gould. About five and a half inches long; sides of the head, space between the eye and beak, throat, and front of the neck, the back, and wings black; flanks deep ash; all the other parts white, except the extreme third of the tail at its middle two quills, which are black. The female is distinguished by the upper parts being of an ashy-brown, which becomes lighter on the nape and head; throat whitish; front of the neck deep ash tinged with ferruginous; belly ashy. The first year's bird has the throat and front of the neck streaked with ferruginous and black; the white of the head and belly is dingy, and the feathers of the back and wing coverts edged with ferruginous. It is found in the North of Europe, in Russia, and Lapland; it is also met with in Egypt, and has been renamed by M. Lichtenstein *S. Lugens*. It builds in the clefts of rocks, in the holes formed by wasps along the borders of rivers, and rarely under the roofs of old churches and houses.

S. Leucorrhoa, Cuv.; *Mot. Leucorrh.* Gmel.; *le Mot-teux et le Culblanc du Sénégal*, Buff.; *Rufous Wheatear*, Lath. Seven inches in length; upper parts reddish-brown; wing coverts and quills margined with rufous; breast reddish, other under parts yellowish-white, excepting the under tail coverts, which, together with the upper, the rump, and the base of the tail, are pure white; beak and legs black. Native of Senegal.

S. Hottentotta, Cuv.; *Mot. Hotent.* Gmel.; *l'Imitateur*, Le Vaill.; *Cape Wheatear*, Lath. Eight inches long; top of the head and breast varied with pale and dark brown; upper parts fulvous-brown; wings brown edged with yellowish; upper parts of belly and sides fulvous; lower part of belly dingy white; rump pale fulvous; under tail coverts yellowish, and upper white, as is also the base of the tail, the middle of which is black and its tip whitish, except the middle two quills, which are fulvous. Is found at the Cape of Good Hope.

S. Familiaris, Cuv.; *le Traquet Familier*, Le Vaill.; *Familiar Wheatear*. Of a greyish-brown colour, slightly tinged with rufous, and deeper on the upper parts; breasts, flanks, auriculars, and rump rufous; caudal quills brown, all margined externally with rufous, except the middle two; beak brown; legs black. Is found in Southern Africa.

S. Montana, Cuv.; *le Traquet Montagnard*, Le Vaill.; *Mountain Wheatear*. General colour of the plumage black, but the belly, shoulders, tail coverts, and outer margins of the outer caudal quills white; beak and legs black. The young are grey, with a bluish tinge above; the quills edged with grey; shoulders and rump whitish-grey; middle two caudal quills black, the others partially white; beak and legs brown. After the second moult, the crown and nape become grey; shoulders mingled with white; chin, throat, breast, back, and wing coverts black. Native of Southern Africa.

S. Pileata, Cuv.; *Mot. Pil.* Gmel.; *Black-hooded Wheatear*, Steph. Six inches long; head black, with a crescent of the same round the neck; forehead, streak over eyes, and the chin white; back and wings russet-brown; under parts white, as are also the caudal quills, excepting their tips, and the whole of the middle two, which are black; beak black. Is found at the Cape of Good Hope, and called by the colonists *Schaap-Wagter*.

VOL. XXVII.

SAXI-
COLA.

S. Formicivora, Cuv.; *le Traquet Fourmillier*, Le Vaill.; *Ant-eating Wheatear*. Six and a half inches long; its general colour brown, and becomes paler on the under parts; all the feathers edged with pale rufous; chin whitish; upon either shoulder a white patch.

S. Melanura, Tem.; *Black-tailed Wheatear*. Five inches and a half in length; all the upper parts dingy ash-coloured, and the under whitish-ash; wings slightly tinged with brown; tail entirely black and slightly rounded; beak and legs black. Native of Arabia.

S. Monacha, Rupp.; *Monk Wheatear*. Rather more than six and a half inches long; the whole head covered with a white hood extending down to the nape; chest, belly, and rump, and nearly the whole tail white, the middle two quills of the latter being black edged with brown, and towards the tip of the second pair a small black spot; the rest of the plumage, beak, and tail black. From Nubia.

S. Deserti, Rupp.; *Desert Wheatear*. About six inches in length; lore, throat, ears, sides, and a small part of the front of the neck black; a white streak passes from the nostrils to the nape above the eyes; head and back ashy-dun; chest and under parts whitish-dun; upper part of insertion of wing pure white; rump, upper tail coverts, the bases only of all the caudal quills, and the edging of the alar quills whitish; the remainder of the wings and the greater part of the tail black. From Egypt.

S. Isabellina, Tem.; *Bay Wheatear*. Five inches long; upper parts more or less decided bay, assuming a brownish tinge on the auriculars; under parts and half the tail whitish; the middle of the neck and chest tinged with bay; wings dingy brown, and their coverts edged with light brown; larger half of all the caudal quills blackish-brown; beak brown; legs black. Found in Nubia.

S. Bifasciata, Tem.; *Two-banded Wheatear*. Rather more than six inches long, and distinguished from all the other species by its tail being entirely black; head and back brown, with broad dashes of black; a whitish streak passes from above the lore over the eyes; throat, front of neck, wing coverts, and the three or four alar quills next the body deep black; a white band tinged with bay covers the antibrachium; under parts and rump ferruginous. Is a native of Caffraria.

S. Rubetra, Bechst.; *le Grand Traquet ou Tarier*, Buff.; *Whin Chat*, Pen. About four inches and three-quarters in length; top of the head, sides of the neck, and upper parts of the body blackish-brown, and each feather broadly edged with light ferruginous; below the eye a dark streak extending on to the occiput; throat, and a streak above the eyes, white; front of the neck and chest bright pale ferruginous; on the wings and tail a large white spot; the tip of the tail, its middle two quills, and the stems of all blackish-brown. The female is distinguished by having those parts which are white in the male tinged with yellow; the white space above the eye and on the wing of smaller extent; the colours of the chest and belly less pure, and the upper part of the tail reddish-white. Is common throughout Europe, but does not extend so high North as the Wheatear. It is one of our migratory species, but rarely appears in the Southern countries before the middle of April, and not till the end of that month in the Northern. It prefers open moors and commons covered with furze, whence its trivial name, and builds its nest either on the ground or in some low bush, of dried grass and moss,

SAXI-
COLA.

and lined with finer grass; it is hidden with great care, and the entrance not direct, but by a long winding path through the surrounding herbage. It lays five or six eggs of a greenish-blue, speckled with light reddish at the larger end. During the period of incubation, the male bird exhibits great agitation if the nest be approached, flying from bush to bush, and uttering its peculiar cry, *u-tick*, the latter syllable frequently repeated, and so shrilly as to be heard at a great distance.

S. Rubicola, Bechst.; *Mot. Rubic.* Gmel.; *le Traquet*, Buff.; *Stone Chat*, Pen. Four inches and three-quarters long; head, throat, and tail deep black; sides of the neck, scapulars, and rump white; nape and back deep black, but their feathers edged with light ferruginous; wings blackish, edged with ferruginous; chest deep ferruginous; the other under parts reddish-white. The female is characterised by the upper parts being blackish-brown, edged with yellowish-ferruginous: the wings and tail are similarly edged, but otherwise are brown; the black throat is marked with little reddish and whitish spots; the white markings on the sides of the neck and wings smaller than in the male, and the ferruginous of the chest less brilliant. The young, prior to their second moult, resemble the female. After the Autumnal moult, all have the feathers of the head and back tipped with brown, which, however, fade by the action of the air and light, so that in the Spring these parts are entirely black, as already mentioned. According to Temminck this species is indigenous to Africa, and only a bird of passage in Europe; however true this may be in reference to the continent, it is certain that they are resident in this country throughout the year. Like the Whin Chat they prefer low bushes to the ground, but are still more restless, flying constantly from bush to bush, and uttering a kind of clicking call compared to the word *ouistrata*. It builds early, in the bottom of a furze or other bush, a nest consisting of moss and dry grass lined with hair or feathers, and lays five or six greenish-blue eggs, with small reddish-brown spots at the larger end.

S. Caprata, Cuv.; *Mot. Capr.* Lin.; *le Traquet de l'Isle de Luçon*, Buff.; *Manilla Wheatear*. General colour of the plumage blackish-brown; lesser wing coverts nearest the body and vent white; beak and legs dusky. The female has the upper parts brown, and the under rufous; throat whitish; rump and upper tail coverts pale rufous, under dingy reddish-white; tail brown. Is found at Manilla.

S. Fulicata, Cuv.; *Mot. Ful.* Lin.; *le Traquet des Philippines*, Buff.; *Sooty Wheatear*. Rather more than six inches long; general colour violet-black, with a white bar on the wings, and the under tail coverts pale chestnut; beak and legs brown. Native of the Philippine Islands.

S. Philippensis, Cuv.; *Mot. Philip.* Gmel.; *le Grand Traquet des Philippines*, Buff.; *Philippine Wheatear*. Rather more than six inches in length; head reddish-white inclining to yellow; back, wings, and tail violet-black; wing coverts and outer edge of the wing striped with white, some of the greater coverts tipped with white; neck dirty red; breast banded with blue; under parts reddish-white; outer caudal quills edged with rufous-white externally; beak dirty yellow; legs ferruginous. Native of the Philippine Islands.

S. Sperata, Cuv.; *le Traquet du Cap de Bonne Espérance*, Buff.; *Cape Wheatear*. Six inches long; upper parts of the head, neck, and body greenish-brown; alar quills and coverts brown, their edges paler; under

parts grey tinged with rufous; middle two caudal quills dusky brown, the others obliquely brown and fulvous; beak black. Native of the Cape of Good Hope.

See Linnæi *Systema Naturæ* a Gmelin; Buffon, *Histoire Naturelle des Oiseaux*; Temminck, *Planches Coloriées, et Manuel des Oiseaux d'Europe*; Le Vaillant, *Oiseaux d'Afrique*; Pennant, *British Zoology*; Selby, *Illustrations of British Zoology*.

SAXIFRAGA, in Botany, a genus of the class *Decandria*, order *Digynia*, natural order *Saxifrageæ*. Generic character: calyx five-parted; corolla, petals five; capsule two-beaked, one-celled, many seeded.

A numerous genus of elegant, small, herbaceous plants, mostly natives of Alpine situations in the Northern hemisphere; more than seventy species have been described; fifteen of these are natives of Great Britain.

SAXMUNDHAM, a market town in Suffolk, situated on a commanding hill near a small stream which flows into the Alde. It is a Rectory, and has a spacious Church. Distant from London 89 miles North-East. Population, in 1831, 1048.

SAXON. See the Quotation from Verstegan.

This name then of *Saxons* they undoubtedly have (though some hold it unlikely) of their use and wearing of a certain kind of sword or weapon invented and made bowing crooked, much after the fashion of a sithe, in imitation thereof it should seeme to have first bin made. And when of late I conferred with the excellent learned man, M. Justu. Lipsius, about the Saxons' true appellation, (who I also found to concur with me in opinion,) he could presently put me in mind that a sithe is yet at this present in the Nether-lands called a *Saisen*.

Verstegan. *Restitution of Decayed Intelligence*, ch. i.

Elstob, the learned *Saxonist*.

Note in Bishop Nicolson's *Ep. Corr.* ch. i. p. 68.

The language is not much more easy or intelligible than that of many of the Norman Saxon poems quoted in the preceding section; it is full of *Saxonisms*, which indeed abound, more or less, in every writer before Gower and Chaucer.

Warton. *History of English Poetry*, vol. i. p. 49.

SAXONY. This sovereign House is divided into two branches: the Ducal, or *Ernestine*, which is the eldest, but the possessions of which are by far the most inconsiderable; and the Royal, also called the *Albertine*, which constituted the former Electorate, and now possesses the Kingdom of Saxony. The first or eldest branch is divided into four families, to which belong severally the Grand Duchy of Saxe-Weimar, and the three Duchies of Saxe-Cobourg-Gotha, Saxe-Meiningen, and Saxe-Altenburg. The territory of the Duchy of Gotha, on the extinction of this branch of the family in 1825, was portioned out among the three last-named Duchies.

The Kingdom of Saxony is bounded by the Prussian Governments of Merseburg, Frankfort, and Lignitz on the North; by the latter Government, and by a very small portion of the Kingdom of Bohemia, dependent on the Austrian Empire, on the East; by the same Kingdom, and the Bavarian Circle of Upper Mein, on the South; and on the West by the last-named Circle, the possessions of the House of Reuss, the Grand Duchy of Saxe-Weimar, the Duchy of Saxe-Altenburg, and the Prussian Government of Merseburg.

The cessions made to Prussia at the Congress of Vienna stripped Saxony of a considerable portion of her territory, and subtracted from 800,000 to 900,000 souls from her population. Thus diminished, the Kingdom of Saxony consists, at present, of the greater part of the former Electorate, that is to say, of the Erzgebirge,

SAXI-
COLA.

SAXONY.

SAXONY. Voigtland, almost the whole of the Circles of Misnia and Leipsic, and about half of that of Merseburg; of the mediatised States of the Counts of Schœnburg, which are fiefs of the Kingdom of Saxony; and of about two-fifths of the Margravate of Upper Lusatia.

Area and population.

The total superficial extent of the Kingdom is nearly

4999 English square miles. Its population amounted, **SAXONY,** in 1834, to 1,595,668 souls, (775,244 males, 820,424 females,) and hence the average number of inhabitants to the square mile is about 319. The following Table shows the division of the territory and population by Circles.

Circles.	German square Miles.	Number of Towns.	Number of Villages, &c.	Number of Houses.	Total Population.
Dresden	78,783	32	998	53,407	411,864
Leipzig	63,139	38	1001	46,109	361,251
Zwickau	84,227	58	873	66,656	549,811
Bautzen (<i>Budissin</i>) . .	45,527	13	629	42,950	257,444
Military and their families . .	..	..	..	..	15,298
Totals	271,676	141	3501	209,122	1,595,668

Of the towns there are four with and above 10,000 inhabitants each; 26, 4000; 92, 1000; and 19 with less than 1000. Of the villages and hamlets there are 152 with and above 1000 inhabitants each; 2494, 100; and 855 with less than 100. For the whole Kingdom the average proportion of the inhabitants of towns to the rural population is as 1:000 to 2:108; and the average proportion of males to females is as 1:000 to 1:058. On a division of the population by ages, it is found that children under 14 years of age form nearly one-third of the entire population; and a further division shows that the number of householders is 351,723; of married couples 277,812; of married persons living separate 41,213; and of unmarried persons (including the widowed and divorced) 1,028,831. The excess of births over the deaths amounted, in 1834, to 13,122; and the average proportion of deaths, on a comparison with the entire population, is about three per cent.

Surface and geology.

Saxony is a hilly country, but its centre is part of the vast plain of the Elbe, extending along its course for about a hundred miles after it forces itself a channel through the stony barrier of the Erzgebirge. Several of the finest tributaries of this noble river water the Kingdom with their commencing streams, although they do not effect their junction within its present boundaries; the chief of these are the Mulde and the White Elster from the West, and the Black Elster from the East. Its chief affluents, within the Saxon territory, are the Müglitz and the Weistritz. The Southern portion of the Kingdom is formed by the last slopes of the Erzgebirge, or *Metallic Mountains*, which trend off to the East to join the Riesen-birge range. These mountains are mostly covered with gneiss, on a base of granite; but, towards their Eastern extremity, the granite is overlaid by rocks of more recent formation, as by beds of the freestone called *psammites*, and by close-grained limestones. In other parts the granite rests on *talcs*, intermingled with layers of schistus which sometimes cover it, and, at others, support summits of gneiss. Descending from these mountains a porphyritic rock is met with, which contains anthracite; particularly in the vicinity of Lischwitz and Frauenstein. A tract of about 50 miles in length by about 20 in breadth stretches from Dresden to the Eastern borders of the Kingdom, in which the granite shows itself freely on the surface; and Southward of this, as well as on both banks of the Elbe, an excellent and serviceable freestone lies under the chalk, extending over a very wide area. Westward of Dresden, a narrow strip of compact limestone rests on this, which is called the Pirna freestone. The coal measures lie between Schneeberg and Zwickau, and in

the vicinity of Dresden. In the plains the schistous rocks which descend from the Erzgebirge bury themselves under the soil, and are overlaid by porphyries, which rise into detached hills, with their bases resting in the midst of the sands and clays that form the soil of these fertile districts.

The mountains are clothed with extensive and beautiful woods, which, however, since the loss of the vast forests of Lusatia and Thuringia, are inadequate to the supply of the mines and manufactures. The soil is everywhere of good quality, and agriculture is well understood. It receives too encouragement from numerous Societies formed for the advancement of agricultural knowledge; but the corn raised does not meet the consumption of the crowded manufacturing and mining population of the country. Potatoes enter largely into the subsistence of the humbler classes; and fruits and vegetables are produced in abundance. Flax, hemp, hops, and tobacco are grown in some districts; and the vineyards, to which considerable attention has been paid of late years, yield wines of good quality. A large portion of the surface is devoted to the grazing of the fine sheep, whose wool constitutes one of the staples of the country. Their number was estimated by the Baron Von Malchus, in 1828, at 1,300,000. The same writer, in his *Statistik und Staatenkunde*, gives the following summary of the agriculture and live stock of Saxony for the same year: total of cultivated land 4,000,000 acres; arable lands 2,520,000; meadows and pastures 500,000; vineyards 10,000; woodland 800,000; grain 8,400,000 bushels; wine 20,000 eimers; horses and mules 64,000; horned cattle 345,000; swine 151,000; goats 8000. The climate of Saxony is dry and temperate; the mountainous regions alone being exposed to rigorous cold.

Saxony excels the rest of Germany in her manufactures, particularly in cottons; and Hassel asserts that the Saxon ginghams and muslins equal the English in every respect. By a computation made some years back, the cotton manufacture alone employed nearly 400,000 hands; that of cloth about 25,000; the manufacture of different objects in metal 50,000; and that of straw bonnets alone 5000. Altogether it was estimated that nearly 800,000 persons were occupied in the above manufactures, and in those of porcelain, paper, ribands, lace, musical instruments, arms, &c. It may safely be concluded that full three-fifths of the present population of Saxony are employed in her manufactures. Stein computes the total value of the internal trade of the Kingdom at 12,000,000 rix-dollars; and business to the average amount of 18,000,000 rix-dollars is yearly

SAXONY. done at the three great fairs of Leipsic, into which the book trade enters for about 2,000,000 rix-dollars. The badness of the roads and the want of canals operate against trade, which is chiefly carried on by waggons, although a good deal also goes along the Elbe. Saxony is now a member of the Prussian Commercial League.

Mines. It is in its mineral products, however, that the chief wealth of Saxony consists; and, notwithstanding that the mines are in the hands of the Government, they are worked with a science and spirit unequalled by any other country. The silver, annually produced, is estimated at 48,000 marks; the lead at 10,400 hundred-weight; cobalt 8900; tin 2400; copper 600; iron 24,000 tons. About 1,200,000 quintals of sulphur, alum, and nitrate of potash are yearly collected, and upwards of 5000 quintals of arsenic. Considerable quantities of coal, bismuth, manganese, kaolin, (to the which earth the Dresden china is indebted for its superiority to all other European porcelain,) and various precious stones and marbles are likewise yielded by this metalliferous kingdom. The gross annual proceeds from mines and minerals of all kinds have been valued at £350,000. To compensate for the loss of the salt-works, which are situated in that portion of the Saxon territory ceded to Prussia by the Congress of Vienna, it was stipulated that the Prussian Government should supply the Saxon with 250,000 quintals of salt yearly, at a rate which would enable the latter to derive advantages from this monopoly equivalent to those it had obtained previously to the Treaty of 1815.

Government. The Government of Saxony is an hereditary and constitutional Monarchy. The King is of age at eighteen, and nominated to all offices, civil and military. Some Lordships, however, still retain peculiar privileges; and only a third of the taxes levied on them goes to the Government, the remaining two-thirds belonging to the Lord. A General Assembly, convened by order from the Sovereign, is commonly held every six years, under the name of the States, and is composed of three orders: the Clergy, the Nobility, and Deputies from the towns. The States regulate the assessment of the taxes, decide on the amount of the budget, and deliberate on the laws submitted to them by the Monarch. They are divided into two Chambers, and their sittings are now public. Neither of these Chambers enjoys the right of introducing legislative measures, which are proposed by the ministers; and the Chambers are not empowered to reject them, or to withhold the supplies, except conditionally. In case they refuse the supplies, the King can levy the usual taxes for a year; but six months before the expiration of this term, he is bound to convoke an extraordinary assembly of the States. The executive is intrusted to a Cabinet Council, a Treasury Chamber, and a Military Council; the interests of justice are superintended by a high court of appeal, and those of religion by a superior Ecclesiastical Consistory. Each of the Circles which form the territorial division has a local administration and a high court of justice. The peasants are personally free; but as the States consist of the privileged orders and the corporations, both the peasantry and the small proprietors are unrepresented, and consequently have to bear an unequal share of the public burthens.

Revenue. The revenue is estimated at 11,000,000 florins; the public debt at 36,000,000 florins.

Army. The army which, in 1813, numbered 37,000 men, is now reduced to a peace establishment of about 12,000,

with an unorganized reserve of young men, comprising all between the ages of eighteen and thirty-one, who may be called upon to recruit its ranks. The towns have a national guard, in which all citizens above thirty years of age are obliged to do duty; and a body of gen-d'armerie is maintained for the security of the roads. The contingent of Saxony, as a member of the Germanic Confederation, is rated at 14,357 men.

The prevailing religion is that of the Confession of Religion. Augsburg; and, with reference to religious persuasions, the division of the population is, for every 100,000 individuals, 98,091 Lutherans; 101 Reformists; 1749 Catholics; 6 Greek Church; 53 Jewish persuasion. The reigning family professes the Catholic religion.

There are two Royal Provincial Schools (Meissen Education. and Grimma) with 23 professors and masters, and 248 pupils; 12 Gymnasias and other superior Schools, having 124 teachers and 1613 scholars; and 2039 National Schools, (*volkschulen*), with 2695 teachers and 274,305 pupils, the sexes being about equal. Besides these there were in Dresden, in 1831, 48 private Schools, frequented by 3413 pupils; and, in Leipzig, 10 private Schools, with 984 pupils, making a total of 58 private Schools, and 4397 pupils. The Normal Schools (*schullerer-seminarian*) were seven in number, with 11 teachers and 223 students. A comparison of the whole number of persons receiving education, with the entire population, shows the average proportion of the former to the latter to be about 1 in 6, or 178 in every 1000 individuals; which is about the average ratio for the whole of Germany.

The reigning House traces its descent from the illustrious Witikind, Duke of the Saxons. Frederick the Warlike was the first to assume the title of Elector of Saxony, in 1422; and from his two grandsons, Ernest and Albert, proceed the two branches which still reign over the Saxon States. It is to the ill fortune of John Frederick, who, chosen as their leader by the Protestants, fell into the power of the Emperor Charles V., and only saved his life by yielding the Electoral dignity to Maurice, the representative of the *Albertine* family, that this, the younger branch, owes the advantage of possessing four times as much territory as the *Ernestine*. The election of Frederic Augustus I., who abjured the Reformed Religion, to the Crown of Poland, in 1697, drew upon Saxony the vengeance of Charles XII. of Sweden, who invaded the country and levied contributions to the amount of 23,000,000 crowns. In the next century, Saxony became involved in the Seven Years' War, which changed the fertile plains of Saxony into frightful deserts. After the subjugation of Prussia by Napoleon, the policy of the conqueror led him to double the Saxon dominions, and to raise the Electorate into a Kingdom. These arrangements, however, were subverted by the Congress of Vienna, and Saxony reduced to less than her original limits.

Hassel; Stein; Malte-Brun; *Mittheilungen des Statistischen Vereins für das Königreich Sachsen*.

SAY, *n.* } That the word did exist in Goth. is
SA'YING, *n.* } clear from the compounds *innsagaht*,
sermo, Luc. i. 29. *insaht*, *narratio*, Luc. i. 1. In A. S. *sag-an*, *sæg-an*, *seġan*, *dicere*, *narrare*; Ger. *sag-en*; D. *segghen*; Sw. *sæg-a*. Wachter thinks all are of Latin origin; in which language *seco*, *sequo*, and *sequor* were anciently used for *dicere*. See *Sequor*, in Vossius. *Re-sequi*, is *respondere*. *Verba* (Wachter adds) *secare dicuntur*, *sicut dicuntur rampi*. See Wachter and Ihre.

SAXONY.
—
SAY.

SAY.

The Ger. *sag-en*, *scindere*, probably the same word as *sag-en*, is also referred by Wachter to the same Lat. origin. See *ante*, to SAW. To say is

To project or produce; to utter, or to give utterance, *sc.* vocally, or in separate words, or vocal sounds, by speech, or the organs of speech; subsequently—in writing: to speak, to tell, to pronounce, to relate, to repeat, to rehearse, (*sc.* in words, orally or in writing.) *Saying* is distinguished from *singing*, as in the directions to sing or say. See the *Book of Common Prayer*.

My Goddes of heuene and of erþe, wat *segge* now ge?
R. Gloucester, p. 57.

þe prynde, he seide, oþer kyng nys to preyse nogt,
þat in tyme of werre as a lomb ys boþe meke & mylde,
And in tyme of pes as a lyon boþe cruel & wylde.
Id. *Ib.*

Whan þe kyng herd *say*, sho had so wele farn,
þider he went away, to se hir & hir barn.

For to *seggen* as þei seen. *Id.* *Ib.* p. 202.

Certes ich *seyde*. and so me God helpe
Ich am to waik to worche. w^t sykkel oþ^r w^t sythe.
Id. *Ib.* p. 76.

And the tempter came nigh and *seide* to him, yf thou art Godis
sone, *seye* that these stones be maad looves.
Wiclif. Matthew, ch. iv.

Then came to hi the tēpter, and *sayd*: yf thou be y^e sonnne of
God, *commaund* y^t these stones be made bread.
Bible, Anno 1551.

And Pilat axide him, art thou kyng of Jewis? and Jhesus an-
sweride and *seide* to him thou *seist*.
Wiclif. Mark, ch. xv.

And Pylate asked him, arte thou the kynge of the Jewes? and
he answered and *saide* vnto him, thou *sayest* it.
Bible, Anno 1551.

And Jhesus answeride and *seide* to hem, treuly I *sey* to you, if
ye han feith and douten not, not oonly ye schulen do as of the fyge
tre; but also if ye *seyen* to this hill, take and caste thee into the
see, it schal be don so.
Wiclif. Matthew, ch. xxi.

Jesus answered and *sayde* vnto thē, Verely I *say* vnto you, yf ye
shall haue faith and shall not doute, ye shall not onely do that
which I haue done to y^e fygge tre; but also yf ye shall *say* vnto
this mountayn, take thy selfe a waye, and cast thy selfe into the
sea, it shal be done.
Bible, Anno 1551.

That other answered, I not how that may be;
He wote well that the gold is with us tweye,
What shuln we don? what shuln we to him *seye*?
Chaucer. The Pardoner's Tale, v. 12750.

But *sayth* and conseillesh me as you liketh, for
I am redy to do right as ye wol desire.
Id. The Tale of Melibeus.

But soth is *said*, gon sithen are many yeres,
That feld hath eyen, and the wood hath eres.
Id. The Knightes Tale, v. 1453.

Certainly his noble *saiyngs* can I not amend.
Id. The Testament of Loue book iii.

Thus grante I you myn holl voyce,
Chese for vs both, I you praie;
And what as euer that ye *saie*,
Right as ye woll, so woll I.
Gower. Conf. Am. book i.

And she began the wood rage,
And asketh hym, what diuel he thought
And bare on hond, that hym ne rought
What labour that she toke on honde,
And *saith*, that suche an husbonde
Was to a wif not worth a stre.
Id. Ib. book iii.

Demetrius men *saiden* tho
The better knight was of the two,
To whom the lande was attendant,
As he whiche heire was apparent
To regne after his father's daie.

Gower. Conf. Am. book ii.

But it was a common *saying* with him, that suche altercations
were for a logician, and not merely for a philosopher.

Sir Thomas More. Workes, p. 5.

Unjust thou *saist*,
Flatly unjust, to bind with laws the free,
And equal over equals to let reigne,
One over all with unsucceeded power.
Milton. Paradise Lost, book v.

My heart hath beene a store-house long of things
And *sayings* laid up, portending strange events.
Id. Paradise Regained, book ii.

'Tis hard to *say*, if greater want of skill
Appear in writing or in judging ill.
Pope. Essay on Criticism.

I *say* first, of God above, or man below,
What can we reason, but from what we know?
Of man, what see we but his station here,
From which to reason, or to which refer?
Through worlds unnumber'd though the God be known,
'Tis ours to trace him only in our own.
Id. Essay on Man. Epistle 1.

I *say* the pulpit (in the sober use
Of its legitimate, peculiar pow'rs,)
Must stand acknowledg'd, while the world shall stand,
The most important and effectual guard,
Support, and ornament, of virtue's cause.
Cowper. The Task, book ii.

SAY, v. } *i. e.* to *assay*. To try or attempt, to exa-
SAY, n. } mine, to prove.

Which when he spyde upon the earth t'encroch,
Through the dead carcasses he made his way,
Mongst which he found a sword of better *say*,
With which he forth went into th' open light.
Spenser. Faerie Queene, book vi. can. 11.

Once I'll *say*
To strike the ear of time in those fresh strains,
As shall, beside the cunning of their ground,
Give cause to some of wonder, some despite,
And more despair, to imitate their sound.
Ben Jonson. The Poetaster, vol. ii. p. 549. *To the Reader*.

This fellow, captain,
Will come, in time, to be a great distiller,
And give a *say*—I will no *say* directly,
But very fair—at the philosopher's stone.
Id. The Alchemist.

The tailor brings a suit home; he it *says*,
Looks o'er the bill, likes it.
Id. Epigram 12, vol. viii. p. 158.

Edm. In wisdom, I should ask thy name;
But, since thy outside looks so fair and warlike,
And that thy tongue some *'say* of breeding breathes,
What safe and nicely I might well delay
By rule of knighthood, I disdain and spurn.
Shakspeare. Lear, act v. sc. 3.

Weston, their treasure, as their treasurer,
That mine of wisdom, and of counsells deep,
Great *say-master* of state, who cannot erre,
But doth his carract and just standard keepe
In all the prov'd assays.
Ben Jonson. The Vnder-Wood, p. 488.

SAY, n. Fr. *soye*; It. *saia*. Menage and Skinner
derive from the Lat. *sagum*, a military cloak, because
(says Skinner) the kind of stuff called *say* was very
suitable for making such cloaks. The Fr. *saye*, It.
saio, Sp. *sayo*, is a *sagum* or cassock.

His garment neither was of silke nor *say*,
But paynted plumes in goodly order dight,
Like as the sunburnt Indians do aray
Their tawney bodies in their proudest plight.
Spenser. Faerie Queene, book iii. can. 12.

Bules and botches.

Piers Plouhman. *Vision*, p. 396.

And fothermore
Of pockes, and of *scab*, and every sore
Shal every shepe be hole, that of this well
Drinketh a draught; take kepe of that I tell.

Chaucer. *The Pardoner's Tale*, v. 12231.

For thys little *scabbe* of hys folye hee laboureth somewhat to hide and couer, so that a manne must pul of the cloute ere he can spie the botche.

Sir Thomas More. *Workes*, book ii. ch. ii. p. 1078.

There might seeme some deformitie in their owne cankered carcase, by the comparyng of these whole members to their *scabed* body.

Frith. *Workes*, p. 116.

The keepyng of people from heresies and putting the *scabbed* heretikes out of the clene flocke, is one of the special things that the apostle gaue the bishop warning of.

Sir Thomas More. *Workes*, p. 938.

That free from gouts thou may'st preserve thy care,
And clear from *scabs*, produc'd by freezing air.

Dryden. *Virgil. Georgics*, book iii.

Th' infectious *scab*, arising from extremes
Of want, or surfeit, is by water cur'd
Of lime, or sodden stave-acre, or oil
Dispersive of Norwegian tar, renown'd
By virtuous Berkeley, whose benevolence
Explor'd its powers, and easy medicine thence
Sought for the poor.

Dyer. *The Fleece*, book i. p. 231.

A kind of periodic bird, (the cuckoo.)
Of nasty hue, and body *scabby*,
No would-be-play-wright half so shabby.

Lloyd. *To David Garrick, Esq.*, (1760,) p. 84.

SCABBARD, D. *schabbe*; *schobbe* vetus. *Operculum*, Kilian.

In D. and Ger. *scheide* or *scheyde*, a *sheath*, (q. v.) from A. S. *scead-an*, separate, *segregare*, *dividere*; to separate, to dispart. Scabbard (*scauberd*, in R. Gloucester) seems to form more readily from A. S. *scæf-an*. See SCAB.

The sheath or case in which a sword or other instrument is enclosed, and from which it is drawn.

OLD K. You will say so then,

Alas sweet neece, all this is but the *scabbard*,
Now I draw forth the weapon.

Beaumont and Fletcher. *Wit at several Weapons*, act i. sc. 1.

Sometimes it [lightning] hath been known to scorch up the cloathes without penetrating the body; and sometimes again, to break all the bones without discolouring the flesh or cloathes; nay, even to melt the sword without injuring the *scabbard*.

Warburton. *Julian*, book ii. ch. iii.

Some of our people said they could distinguish several of the natives parading about in the clothes of our unfortunate comrades; and among them a chief brandishing Captain Cook's hanger, and a woman holding the *scabbard*.

Cook. *Third Voyage*, book v. ch. iv.

SCABIOSA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Dipsacæ*. Generic character: common calyx many-leaved; proper calyx double, superior; receptacle chaffy or naked; flowers composite.

More than fifty species, mostly natives of the Northern hemisphere. *S. atropurpurea*, the Musk Scabious of the gardens, is a familiar example of the genus. *S. succisa*, *arvensis*, and *columbaria* are natives of England.

SCA'BROUS, } Fr. *scabreux*; It. *scabroso*; Sp.
SCABRE'DITY. } *escabroso*; Lat. *scabrosus*, *scaber*,
from *scabies*. See SCAB.

Rough, rugged, harsh, uneven, halting.

Lucretius is *scabrous* and rough in these; he seeks them as some do Chaucerisms with us, which were better expunged and banished.

Ben Jonson. *Discoveries*.

He will find neves, inequalities, roughnesse, *scabredity*, paleness.

Burton. *Anatomy of Melancholy*, part iii. sec. 2. p. 558.

Then, his verse is *scabrous*, and hobbling, and his words not everywhere well chosen.

Dryden. *Dedication to Juvenal*.

SCÆVA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, nutant, three-jointed, the third joint orbiculate, compressed, with a pubescent seta inserted at the base above; *hypostome* tuberculated; wings two, incumbent, parallel, with the ordinary transverse nervure nearly perpendicular; body of livid colour, usually with bright yellow markings; legs slender, simple.

Type of the genus *S. pyractis*, Fabricius; Meigen, *Zweiflugeligen Insekten*, vol. ii. p. 271. A very numerous genus, of which nearly thirty species occur in this country.

SCÆVOLA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Scævoleæ*. Generic character: corolla of one petal, the tube cleft longitudinally, border five-cleft; drupe inferior, one-seeded; nut two-celled.

Five species, natives of the East Indies and New South Wales.

SCA'FFOLD, } Fr. *eschafaut*, *eschafaud*, *es-*
SCA'FFOLDAGE, } *chaufaudage*; D. *schavat*, Some,
SCA'FFOLDING, n. } says Skinner, derive from Ger. *schawhausz*, and this from the verb *schawen*, *spectare*, and *hausz*, a house; or from the same *schawen*, and *vat*, a vessel, or any thing that can hold or contain, *sc.* spectators; q. d. a place to look or see from. Skinner himself prefers Ger. *schaffen*, *efficere*, *formare*, to make, to frame, to shape; *fabrica tumultuaria*, a fabric hastily raised. Lye refers to the A. S. *scylf*, a *shelf*. The word is applied to

A fabric raised, a stage for a temporary purpose; from which something is to be seen, or on which some spectacle is to be exhibited: or any other structure to be formed, or work to be performed by builders, painters, or other artists.

BARD.SCAF-
FOLD.

SCAF-
FOLD.

SCALE.

Somtime to shew his lightnesse and maistrie
He plaieth Herode on a skaffold hie.

Chaucer. *The Miller's Tale*, v. 3484.

They dradde none assaut,
Of ginne, gonne, nor skaffaut.

Id. *The Romant of the Rose*, p. 201.

Worc'ster (who had escap'd unhappily
His death in battle) on a scaffold dies.

Daniel. *History of Civil Wars*, book iv. p. 482.

And like a strutting player, whose conceit
Lies in his ham-string, and doth thinke it rich
To heare the wooden dialogue and sound
Twixt his stretcht footing and the scaffolage.

Shakspeare. *Troilus and Cressida*, fol. 82.

They [faith and consideration, hearing of God's word, &c.]
are all but scaffolds to that heavenly building of inward purity
and goodness; and when this is once furnished for eternity, then
must those scaffolds all go down as things of no farther use or
necessity.

Scott. *Christian Life*, part i. ch. ii.

Yet this solution but once more affords

New change of terms, and scaffolding of words.

Prior. *Solomon*, book i. *Knowledge*.

As soon as the priests had ended their prayers, the carcass of
the dog, with what belonged to it, were laid on a whatta, or scaf-
fold, about six feet high, that stood close by.

Cook. *Third Voyage*, book iii. ch. ii.

He begins now to look for those excellences which address
themselves to the admiration, and considers deception as a scaf-
folding to be now thrown aside, as of no importance to this finished
fabrick.

Reynolds. *Notes on the Art of Painting*. Note 52.

SCALA'DO, } From the Sp. *escalada*, *scalada*;
SCA'LARY. } Fr. *escalade*; It. *scalata*, the assault
of a city *per scalas*, (Skinner,) by ladders. See ESCA-
LADE.

And therefore friends, while we hold parley here,
Raise your *scalado* on the other side,
But, enter'd, wreak your sufferings.

Beaumont and Fletcher. *The Double Marriage*, act v. sc. 1.

Finally, as touching the honour which geese deserved and woon
by discovering the *skallade* that the Frenchmen made into the
Capitol hill of Rome, I have written heretofore.

Holland. *Plinie*, book xxix. ch. iii.

He [Caius Gracchus] made at nearer distances certain elevated
places and *scalary* ascents, that they might with better ease ascend,
or mount their horses.

Sir Thomas Brown. *Vulgar Errors*, book v. ch. xiii.

SCALARIA, in Zoology, a genus of *Gastropodous*
Mollusca.

Generic character. Shell somewhat turreted, desti-
tute of folds at the columella, the whorls with longitu-
dinal, elevated, margined, interrupted ribs; aperture
almost round, the margins indented circularly, and ter-
minated by a thick reflected ridge.

Type of the genus, *Turbo scalaris*, Linnæus; *S. pre-
tiosa*, Lamarck; D'Argenville, *Conchology*, pl. xi. fig. 5.
An inhabitant of the Indian seas; formerly esteemed of
great value.

SCALE, v. } Skinner says, to *scale*, from the Sp.
SCALE, n. } *escalar*; Fr. *escaller*, *escheller*; It.
SCALES, } *scalare per scalas*, *ascendere*, to mount
SCALL, } or ascend by ladders: *scales*, (of fish,)
SCA'LED, } from the Fr. *escailles*; It. *scaglie*.
SCALD, v. } *Scales*, (of balance,) from the A. S.
SCALD, n. } *sceale*, *lanx*, *trutina*. To *scald*, from
SCA'LELESS, } the Fr. *eschauder*, from the It. *scal-*
SCA'LY. } *dare*, *calida urere*, q. d. *ex-calidare*,

to burn with hot (water.) *Scald head*, he thinks, may
be *caput ustulatum*, or *scaled head*: in this latter he
agrees with Tooke; who derives all these words, and
many others, (see SHELL, SHOAL, &c.) from the A. S.
scyl-an, to divide, to separate, to make a difference, to
discern, to *skill*; and he is elaborate and decisive in his

explanation of some of the passages quoted below; and SCALE.
which explanations are not only applicable to, but con-
firmed by various other passages from our elder writers,
and also quoted below. We have (he observes) *scale*, a
ladder, and thence *scale* of a besieged place. A pair of
scales; a *scale* of degrees; *scale* of a fish or of our dis-
eased skin; *scale* of a bone, or (he might have added)
of any other substance. *Scall* and *scaled* or *scald head*;
in all of which one common meaning presents itself, viz.
divided, *separated*.

Scale, Lat. *scala*, a ladder, so called from the *separa-*
tions between step and step, or of the *separate* stepping-
pieces of which it consists; see ESCALADE.

Scale of a besieged place, consequentially, because
effected by mounting or ascending by a *scale* or ladder;
and to *scale*, to mount, to ascend, to climb.

Scall or *scald*, because the skin or a portion (of the
skin) is *separated* from the flesh by the heat; and
hence, *scalding* hot, is hot enough to *take off* the skin;
burning hot, excessively hot. See the Quotation from Sir
Thomas More.

In *Measure for Measure*, "The corrupt deputy was
scaled by *separating* from him, or stripping off his co-
vering of hypocrisy. The tale of Menenius (in *Corio-*
lanus) was '*scaled* a little more,' by being *divided*
more into particulars and degrees; more circumstan-
tially or at length." Tooke. "*Scaling* his present
bearing with the past," (also in *Coriolanus*,) looking
separately at each, and, thence comparing them.

"An old *seck* is aye *skailing*, (Ray's *Scottish Pro-*
verbs,) i. e. parting, dividing, separating, breaking;"
(Tooke;) the shedding or spilling of the grain is the
consequence.

"*Scale*, to spread, as manure, gravel, or other loose
materials. North. *Skale* or *skail*, to scatter and
throw abroad, as mole hills are when levelled." North.
Grose. See also Bocket, and Jamieson, Nares, and
the Commentators on Shakspeare. Jamieson supplies
some peculiar Scottish usages, all tending to establish
the etymology of Tooke.

Next the foresaid cercle of the A. B. C. vnder the crosse line is
marked the *scale*, in maner of twoo squaires, or els in maner of
ledders, that serueth by his xxii. poinctes, and his diuisions of full
many a subtell conclusion of this forsaid scale.

Chaucer. *The Conclusion of the Astrolabie*.

Under thy long locks thou maist haue the *scall*.

Id. *Words unto his own Scrivener*.

Upon the poore folke they geten
Full much of that they spend or kepe,
Nis none of hem that they nill strepe,
And urine hem selfe well at full,
Without *scalding* they hem pull.

Id. *The Romant of the Rose*.

As hote he was, and likerous as a sparwe,
With *scalled* browes blake, and pilled berd.

Id. *Prologue to the Canterbury Tales*, v. 628.

And euer amonge the holy tales,
Like as thei weren fisshes *scales*
Thei fellen from hym nowe and efte,

Gower. *Conf. Am.* book ii.

The Grekes toward the palace rushed fast
And couered with engines the gates beset,
And rered vp ladders against the walles,
Under the windowes *scaling* by their steppes.

Surrey. *Virgil. Æneis*, book ii.

Than shall al these *scalde* and scabbed peces *scale* clene of, and
the hole body of Christes holy church remaine pure.

Sir Thomas More. *Workes*, p. 185.

He had promised himself not only the conquest of him, but the
scaling of the walls, and delivery of Pamela.

Sidney. *Arcadia*, book iii.

SCALE.

He [Manlius Capitolinus] was the first Roman knight or man of armes, that was honored with a murall crown of gold for *skaling* over the wall in an assault.

Holland. *Plinie*, book vii. ch. xxviii.

Others have besides them, sharpe prickes, as the vrchins; some be *skaled*, as fishes; others are rough-coated, as the soles, and with their skins folke use to polish and smooth wood and yvorie.

Id. *Ib.* book ix. ch. xii.

And here, by this, is your brother saved, your honour untainted, the poor Mariana advantaged, and the corrupt deputy *scaled*.

Shakspeare. *Measure for Measure*, act iii. sc. 1.

I shall tell you
A pretty tale; it may be, you have heard it;
But, since it serves my purpose, I will venture
To *scale* 't a little more.

Id. *Coriolanus*, act i. sc. 1.

Your gravity once laid
My head and heels together in the dungeon,
For cracking a *scaled* officer's crown, for which
A time is come for vengeance, and expect it;
For know, you have not full three hours to live.

Beaumont and Fletcher. *The Bloody Brother*, act i. sc. 1.

Saucy lictors
Will catch at us, like strumpets; and *scaled* rhymers
Ballad us out o' tune.

Shakspeare. *Antony and Cleopatra*, act v. sc. 2.

But you have found,
Scaling his present bearing with his past,
That he's your fixed enemy, and revoke
Your sudden approbation.

Id. *Coriolanus*, act ii. sc. 3.

Satan from hence now on the lower stair
That *scaled* by steps of God to heav'n gate
Look down with wonder at the sudden view
Of all this world at once.

Milton. *Paradise Lost*, book iii.

Now take the right likewise, sayd Artegale,
And counterpeise the same with so much wrong.
So first the right he put into one *scale*;
And then the gyant strove with puissance strong
To fill the other *scale* with so much wrong.

Spenser. *Faerie Queene*, book v. can. 2.

How often have I *scaled* the craggie oke,
All to dislodge the raven of her nest?

Id. *The Shepherd's Calendar*. December.

Her head, altogether bald,
Was overgrown with scurfie and filthy *scaled*.

Id. *Ib.*

But to all weathers,
The chilling frost and *scaled* sun, expose
Their equal face.

Carew. *Cælum Britannicum*.

EVA. This is well; he has made us his vouting-stag. I desire you, that we may be friends; and let us knog our prains together, to be revenge on this same *scall*, scurvy, cogging companion, the host of the Garter.

Shakspeare. *Merry Wives of Windsor*, act iii. sc. 2.

And the right side of his [Hugh de Lacie] face, from the chin upwards, by a mischance was shrewdlie *skalled*.

Holinshed. *Conquest of Ireland*, ch. xxiv.

Baveuse, s. a certain *scaleless* fish, that covers her selfe, when she lists, with her own foam.

Cotgrave. *In v. Baveuse*.

Who when those pittiful outcries he heard
Through all the seas so ruefully resownd,
His charett swifte in hast he thither steard,
Which with a treeme of *scaly* phocas bownd
Was drawne upon the waves, that fomed him arownd.

Spenser. *Faerie Queene*, book iii. can. 8.

Before the gates there sat
On either side a formidable shape;
The one seem'd woman to the waste, and fair,
But ended foul in many a *scaly* fould
Voluminous and vast, a serpent arm'd
With mortal sting.

Milton. *Paradise Lost*, book ii. v. 648.

She came not, like a good old wife, to know
The wholesome nature of all plants that grow;
Nor did so far from her own country roam,
To cure *scaled*-heals and broken shins at home.

Cowley. *Wisdom*.

Trembling he sat, and, shrunk in abject fears,
From his wild visage wip'd the *scaled* tears.

Pope. *Homer. Iliad*, book ii.

A very ravenous wolf, with craving maw,
With hungry teeth and wide-devouring jaw,
He charg'd with fury, as the folks report,
Scaled the high wall, and sack'd a royal fort
Replete with various wealth.

Francis. *Horace. Epistles*, book ii.

The head, back, and tail is fenced with pretty hard scales joyned together with a very thick, tough skin; over its eyes there are two hard *sally* knobs, as big as a man's fist.

Dampier. *Voyages*. Anno 1676.

On the 12th of January, 1780, at noon, we unmoored, and *scaled* the guns, which, on board my ship, now amounted to ten.

Cook. *Third Voyage*, book v. ch. x.

For the mind uses a nicer balance than the master of the mint; a cobweb will draw down the *scale* when nothing offers to counterpoize.

Search. *Light of Nature*, part i. ch. vi.

In the same grove what music void of strife!
Heirs of one stream what tribes of *scaly* life!

Langhorne. *Enlargement of the Mind*. Epistle 1.

SCA'LLOP, or } See ESCALOP.

SCO'LLOP. }

Skinner believes from the A. S. *scala*, *sceala*, shells; and that it signifies a shell generally, and also a kind of shell-fish, *ostreum*, *piscis testaceus*, κατ' ἐξοκην.

To *scallop* is to form a shape in likeness to the edge of the shell of the scallop, i. e. with segments of circles.

Behold, the ensignes of a Christian knight,
Whose field is, like his minde, of siluer bright;
His bloudy crosse supports five golden shels,
A precious pearle in every *scallop* dwels.

J. Beaumont. *Vpon Lord Buckingham's Armes*.

It may be known, that Monteth was a gentleman with a *scaled* coat.

King. *Art of Cookery*.

The wooden head may raise the dancier's bound,
And with the *scallop'd* top his step be crown'd;
Let firm, well-hammer'd soles protect thy feet
Thro' freezing snows, and rains, and soaking sleet.

Gay. *Trivia*, book i.

And luscious *scallops* to allure the tastes
Of rigid zealots to delicious fasts.

Id. *Ib.* book ii.

In the middle is the fire-place, surrounded with heaps of muscle pearl, *scallop*, and crayfish shells.

Cook. *Second Voyage*, book i. ch. vii.

SCALOPS, from the Greek σκαλλω, *I dig*, Cuv.; *Shrew-Mole*, Godm. In *Zoology*, a genus of animals belonging to the family *Insectivora*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth in each jaw two, perpendicular and cuneiform, the lower smallest; no true cuspid teeth; in upper jaw, on either side, six false molar, of which the anterior four are cylindrical, the last two lance-shaped, with their points inclining backwards; three molar with many pointed crowns: in lower jaw, on each side, from four to seven false molar, conical, but obtuse, and three molar with many pointed crowns; muzzle lengthy, and terminating in a cartilaginous button; eyes small; auricles deficient; body thick, cylindrical, without distinct neck; tail short; legs short; feet five-toed, the fore feet very wide and strong, the toes connected to the last joint, their claws large, semi-lanceolate, with narrow and rather obtuse points; claws of hind toes much shorter, compressed, and sharp.

SCA-
LOPS.

This genus was formed by Cuvier upon the individual described by Pennant in his Arctic Zoology by the name *Brown Mole*. He seems, however, to have had some vague notion of the propriety of separating it, together with two other species, from the Moles, and ranging them under a section of the Shrews, as he says, "I call them Moles from their shape, which differs not from the European kind; but those who choose to be very systematic may divide the genus of Shrews, and style these *Sorices Talpæformes*." The animals to which the Shrew-Moles have the nearest affinity in the form and disposition of their teeth is the genus *Mygale*, but the latter are distinguished by having a greater number of false molar teeth. In the shape of their body and the form of their feet they have a general resemblance to the Moles *Talpæ*, in which, however, there are six incisive teeth in either jaw, and distinct upper cuspid teeth; an arrangement from which the Shrew-Moles differ remarkably, whilst the number and indistinct and doubtful form of the teeth supplying the place of the true cuspid approximate them to the Shrews *Sorex*.

The number of teeth assigned to the genus *Scalops* is variously stated by different systematic writers. Desmarest only enumerates thirty in both jaws; F. Cuvier and Godman speak of thirty-six; Harlan of forty, and Richardson of forty-four. This seeming difference, however, may be easily reconciled by the well-known fact that the false molars which occupy the place of the cuspid and anterior molars fall out early and at irregular periods, and thus cause the gaps which have been noticed by some writers as characteristics of the genus. The species described by Dr. Richardson from a specimen in the Hudson's Bay Museum, had a pair of incisive teeth in each jaw, very similar in form and position to the human, but those of the upper were the larger and longer; then in the upper jaw followed on each side six false grinders, the first four conical, and rather trigonal, the fifth slightly compressed, with a minute projection at the hinder end of the base, and the sixth still more compressed, and with a larger projection. Of the following four, which are the true grinders, the first is distinguished from the sixth false, which it nearly resembles, by a minute lobe on its inner side; the next two have three distinct sharp points, of which the inner is the lowest, besides some smaller points; and the last molar is smaller than the preceding two. In the lower jaw the seven small conical, but obtuse, false molars are flattened on their inner side, have their points inclined forwards, and increase in height as they recede from the front of the jaw; the three true molars are similar to those of the upper jaw, but have no inner lobe.

The eyes of this genus are extremely minute, and can scarcely be seen without a good glass. They are entirely hidden by the fur, which, when turned aside, leaves a bare space about as large as a moderate sized pin's head; in the centre of this is seen a small black speck, shown by the microscope to consist of a number of hairs ranged in a semi-elliptical form, and enclosing an aperture in the skin large enough to admit a fine horse-hair. This is the aperture of the eyelids, and behind it is the globe of the eye, not so large as a mustard seed. The vision of the animal must therefore be limited, as the focal distance of such an eye must necessarily be very short.

S. Canadensis, Cuv.; *Sorex Aquaticus*, Lin.; *Brown Mole*, Pen.; *Shrew-Mole*, Godm. Length from the tip of the muzzle to the root of the tail five inches, the tail

itself one inch long. When at rest it more nearly resembles in shape a stuffed bag than a living animal, its head being extended nearly to a point, without any auricles, and the eyes so small and completely covered with fur as to escape notice. It is covered with a soft, close-set, glossy fur, half an inch long, of a uniform bright leaden colour, with silvery glossings when viewed in front, but of a darker hue, with purplish reflexions when observed from behind, a variation depending on the incidence of the light. There is, however, a slightly ferruginous tint around the base of the snout, which is extended on the roots of the fur as far as the ears; immediately behind the chin is a narrow, distinct, transverse, ferruginous band, and a slight tinge of the same colour is seen along the centre of the belly. The *S. Pennsylvanica* of Harlan is probably the same species, but with varying number of false molar teeth, though he states the structure of the true molars is different. The Shrew-Mole is very common in America between Canada and Virginia; Dr. Richardson considers it does not exist on the East side of the Rocky Mountains higher than 50° North latitude, but thinks it may be found higher up on the milder coast of the Pacific. It often lives in the neighbourhood of water-courses or dikes, but not exclusively, for Godman states he has often found them at a very considerable distance from water-courses, and frequently in high rather than in low ground. Like the Mole it burrows with great celerity, and travels under ground with great speed. It tunnels its way by means of its broad strong fore feet, which are thrust forward as far as the tip of the nose, and then being carried outwards the earth is thrown backwards with great rapidity. The burrows consist of oval galleries running directly forwards or in gentle curves, generally at from one to three inches from the surface, but this varying according to the firmness of the soil, so that occasionally the gallery descends much below the surface. The passages frequently communicate with others, and at distances of little more than two feet apart small hillocks of loose earth are frequently thrown up. How these are formed Godman is in doubt; he considers that the earth must have been brought from a distance, as the quantity of soil removed in the construction of the neighbouring galleries is not sufficient for the purpose. He often watched their formation, and states, that "a slight motion is observed at the surface, and presently this loose earth is seen to be worked up through a small orifice, whence, falling on all sides, by its accumulation the hills just mentioned are produced." The food of the Shrew-Mole is earth-worms, grubs, and insects of various kinds, and it is doubtless on account of the near residence of these animals to the surface that the galleries are driven so superficially. It is generally supposed that they, as well as Moles, do much damage to the roots of grass and succulent vegetables, but it is probable that the benefit derived from their incessant pursuit and destruction of slugs, worms, and insects, which are injurious to vegetation, is far greater than the damage they cause by disturbing the earth about the roots of herbage.

They exhibit most activity at early morn, at mid-day, and at even. After heavy rains they are busily employed in repairing the damage done to their burrows by the wet, and if the foul weather continue they resort to the higher land for security. A very peculiar circumstance is their daily appearance at the surface exactly at noon, a fact well known to the country people. When taken out of their galleries and exposed for a few minutes to

SCA-
LOPS.

SCA-
LOPS.SCAM-
BLE.

the air, especially if cold, they shiver as if affected by the change of temperature. Upon the surface they run with more rapidity than their conformation would lead one to expect, the fore and hind feet being moved in quick succession, and trailing the body along with a slight undulatory motion.

The strength of the Shrew-Mole far exceeds that which might be expected in so small an animal; Godman mentions that one which he possessed, after escaping from the basket in which it was confined, hurried round the room, and when impeded by the legs of the heavy chairs did not turn aside, but wedging itself between the chair and the wall thrust it off without much apparent effort till it made a free thoroughfare, and finally hid itself behind a large pile of quarto books more than two feet high, which it also moved away from the wall.

They are tamed without much difficulty, and are observed to pass the greater part of the day in sleep, but at night are very active; they do not appear to see in any light, as they uniformly run their nose against every obstacle several times before learning to avoid those which were permanent. When tamed, they may be kept in boxes of loose earth with dried grass for their bed; eat freely of fresh meat, either cooked or raw, drink freely, and follow the hand of their feeder by scent. They eat in a peculiar manner, doubling the flexible snout so as to thrust the food directly backwards into the mouth, and often after receiving any thing burrow that they may eat it undisturbed.

See Pennant, *Arctic Zoology*; Cuvier, *Règne Animal*; Godman, *American Natural History*; Richardson, *Fauna Boreali Americana*.

SCALP, *n.* } Skinner derives the *scalp* of the head
SCALP, *v.* } (in *It. scalpo della testa*) from the *D. shelve*, a *shell*; and a *scalping* iron, that which takes off the skin of the head; *scalps* it: *chirurgorum scalprum*, a *scalpendo*.

The *scalp* is that which is *shaled*, or *scaled*, or stripped (the skin, hair, &c.) from the *skull*.

Whose iugemēt semeth me som what like, as though mē should gesse y^e beury of one longe before departed, by her *scalpe* taken out of the charnel house.

Sir Thomas More. *Workes*, p. 57.

Upon his crested *scalp* so sore did smite,
That to the skull a yawning wound it made;
The deadly dint his dulled senses all dismay'd.

Spenser. *Faerie Queene*, book i. can. 11.

The anthropophagi about the Northern pole use to drinke out of the skulls of men's heads, and to wear the *scalpes*, haire and all, in steed of mandellions or stomachers, before their breasts, according as Isogonus the Nicean witnesseth.

Holland. *Plinie*, book vii. ch. ii.

The art of *scalping* the head was probably introduced to avoid the trouble and fatigue of carrying these sanguinary trophies to any considerable distance.

Beloe. *Herodotus*, book iv. ch. xi. p. 70.

Her rank oppressions give them cause to rise,
Her want of prudence means, and arms supplies,
Whilst her brave rage, not satisfied with life,
Rising in blood, adopts the *scalping* knife.

Churchill. *Gotham*, book i.

SCAMBLE, *v.* } Skinner says, If he had Greek
SCAMBLER, } enough he would boldly derive
SCAMBLING, *n.* } from the Gr. *σκამβος*, oblique, incurvate, writhing. Dr. Percy thinks *scamble* to be so written for *scramble*, *q. v.* Gifford, in his note upon Ford, says, *scambling* appears to be used for obtaining by impudent importunity, by false pretences, &c. in a word, much in the sense of *skelder*, as we have in John-

son, Dekker, and others. Todd gives it among the words considered by Tooke as false English.

Whereas I bathe not now in blisse pardie,
But boyle in bale and *skamble* thus in skathe,
Bycause I thinke on thine vnconstancie.

Gascoigne. *Don Bartholmew of Bathe*.

It may be in like sort that your honour will take offense at my rash and retchlesse behauiour vsed in the composition of this volume, and much more that being *scambled* vp after this maner, I dare presume to make tendour of the protection thereof vnto your lordship's hands.

Holinshed. *Chronicle*. *Epistle Dedicatorie*.

Yea, but it is a harder, and not so easie for an old man, since the cushion was taken away from it; meaning, since Dr. Scambler had *scambled* away the revenues thereof.

Fuller. *Worthies*. London.

CANT. My lord, I'll tell you,—that self bill is urg'd,
Which in the eleventh year o' the last king's reign
Was like, and had indeed against us pass'd,
But that the *scambling* and unquiet time
Did push it out of further question.

Shakspeare. *Henry V.* act i. sc. 1.

A world of desperate undertakings, possibly,
Procures some hungry meals, some tavern surfeits,
Some frippery to hide nakedness: perhaps
The *scambling* half a ducat now and then
To raar and noise it with the tattling hostess,
For a week's lodging.

Ford. *Chaste and Noble*, act i. sc. 3.

But now the pillars that bare
Up this blessed town in that regular debate, and
Scambling, are dead; the more's the pity.
Beaumont and Fletcher. *Love's Pilgrimage*, act iv. sc. 2

What man! I know them, yea,
And what they weigh, even to the utmost scruple:
Scambling, out-facing, fashion-mong'ring boys,
That lie, and cog, and flout, deprave and slander.
Shakspeare. *Much Ado about Nothing*, act v. sc. 1.

The Scots' proverb, (is) "It is well kenn'd your father's son was never a *scambler*." A *scambler*, in its literal sense, is one who goes about among his friends to get a dinner, by the Irish called a cosherer.

Steevens. *Note on Shakspeare*. *Much Ado about Nothing*, ut supra.

SCAMPER. The *It. scampare*; *Fr. escamper*; *Sp. escampar*, to escape, are derived by Menage from *campus*, thus, *exscampus*, *exscampo*, *scampo*; to run from the field, *ex campo exire*. See to ESCAPE, and SCAPE.

To run with the speed and disorder of those who are pursued by an enemy.

His wandering slaves he did command,
And made them *scamper* right, and in rude ranges run.

Pomfret. *Dies Novissima*.

We were forc'd to cut our cables in all haste, and *scamper* away as well as we could.

Dampier. *Voyages*, Anno 1685.

What causes move us, knowing, as we must,
That these menageries all fail their trust,
To send our sons to scout and *scamper* there,
While colts and puppies cost us so much care?

Cowper. *Tirocinium*.

SCAN, *v.* } *Fr. scandre un vers*; *It. scandere un*
SCAN'SION. } *verso*; *Lat. scandere versus: sic enim*
(says Skinner) *ab uno digito ad alterum quasi per gradus ascendimus*.

To measure, and number the feet of a verse; to examine it; and thus, generally, to examine, to balance, to ponder, to weigh.

All were to little for the merchauntes hande,
And yet my trauerye bigger than his booke:
But when this hotte accompte was coldly scande,
I thought highe time about me for to looke.

Gascoigne. *Memories*.

Whose silver gates (by which there sate an hory
Old aged sire, with hower-glasse in hand,
High Tyme) she entred, were he liefie or sory;
Ne staide till she the highest stage had *scand*,
Where Cynthia did sit, that never still did stand.
Spenser. Faerie Queene, can. 6. *Of Mutabilitie*.

Moreover, it was commonly *scanned* abroad of every body, that
it seemed the goddess was not content, nor glad of Alcibiades'
return: and that she did hide herself, because she would not see
him, nor have him come near her.

North. Plutarch, p. 181.

Bold is the wretch, and blasphemous the man,
Who, finite, will attempt to *scan*
The works of him that's infinitely wise.

Pomfret. Upon the Divine Attributes.

POLY. My reverend city-friends, you are well met!
On what great work were your grave wisdoms set?
Which of my actions were you *scanning* here?

Dryden. Marriage A-la-mode, act. iv. sc. 4.

A pen I handled for a fan,
And learnt not how to dance but *scan*.

Warton. Sappho's Advice.

Wonderful is the advantage of *scansion*, aided by the occasional
admission of the *pes proceleusmaticus*, in detecting the errors of
copyists and printers.

Gifford. Ben Jonson's Works, note.

SCA'NDAL, *n.* } Fr. *scandale*; It. *scandalo*;
SCA'NDAL, *v.* } Sp. *escandalo*; Low Lat. *scan-*
SCA'NDALIZE, *v.* } *dalum*. The Gr. *σκανδαλον*,
SCA'NDALOUS, } *σκανδαλιζω*, are only to be found
SCA'NDALOUSLY, } *apud ecclesiæ scriptores*, Vossius.
SCA'NDALOUSNESS, } *De Vitiis*. He derives *σκανδαλον*
with Scapula from *σκαζ-ειν*, to halt, to trip, to stumble;
and explains it to be any thing laid in the way, that may
cause the passenger, who strikes his foot against it, to
stumble or fall. And hence, in the *New Testament*,
σκανδαλιζ-ειν is, met., to cause one to fall into, to ensnare
into, sin and ruin. (See Parkhurst, and the Quotation
from Sharp.) *Scandal* is—

A cause or occasion of sin; also a charge or imputa-
tion of sin or evil, of guilt or criminality; (*falsely*, is
usually implied or understood.)

Scandal is also applied to things *scandalous*, oppro-
brious, or infamous.

The loss in war, sustained through his blame,
A lasting *scandal* to the English name.

Drayton. The Barons' Wars, book v.

By their petulant life
The goods deuouring, *scandalizing* the wife
Of no meane person; who (they still would say)
Could neuer more see his returning day.

Chapman. Homer. Odyssey, book xxiv.

Must I be *scandal'd* by ye,
That hedg'd in all the helps I had to save ye?
Beaumont and Fletcher. The Humorous Lieutenant, act ii. sc. 2.

CAS. Hear me, the villain
Scandals her, honour'd lords.

Id. The Lawes of Candy, act iv. sc. 1.

Who will live
So innocently pious as to give
The world no *scandal*?

Habington. On the Death of the Earl of S.

For now thou art enforc'd t' apologize
With foreign states, for two enormous things,
Wherein thou dost appear to *scandalize*
The public right, and common cause of kings.

Daniel. History of Civil Wars, book iv.

This, by the calumniators of Epicurus's philosophy, was objected
as one of the most *scandalous* of all their sayings; which, accord-
ing to my charitable understanding, may admit a very virtuous
sense.

Cowley. Of Liberty.

Cupid must go no more so *scandalously* naked, but is enjoyned
to make him breeches, though of his mother's petticoats.

Carew. Caelum Britannicum.

Nor would it much mend the matter if, instead of offences, we
would say *scandals*, and instead of offending we should say *scan-*
dalizing, and instead of being offended we should say being *scan-*
dalized; for tho' these be English words now, and of the very
same sound with the Greek, and are indeed taken from them, yet,
as we commonly apply them, they have a quite different sense in
our language from what those terms have in scripture.

Sharp. Works, vol. vi. *Sermon* 3.

A troop of silly pilgrims, as 'tis said,
Foolishly zealous, *scandalously* play'd,
Instead of heroes, and of love's complaints,
The angels, God, the virgin, and the saints.

Dryden. The Art of Poetry.

When *scandal* has new minted an old lie,
Or tax'd invention for a fresh supply,
'Tis call'd a satire, and the world appears
Gath'ring around it with erected ears.

Cowper. Charity.

Words tending to *scandalize* a magistrate, or person in a
public trust, are reputed more highly injurious than when spoken
of a private man.

Blackstone. Commentaries, vol. iii. book iii. ch. viii.

Then nature injur'd, *scandaliz'd*, defil'd,
Unveil'd her blushing cheek, look'd on, and smil'd.

Cowper. Expostulation.

But if that proves otherwise, and either the *scandalousness* of
their lives, or imminent danger of being at length perverted by
them, requires a more speedy and abrupt step to be taken, we
shall do well, on some flagrant occasion, to renounce all com-
merce with them at once.

Secker. Works, vol. i. *Sermon* 28.

SCANDALUM MAGNATUM, in *Law*, is the
name applied to slander spoken of a Peer, a Judge, or
other great officer of the realm. The defamation of
such persons is regarded as a matter of more serious
consequence than the defamation of a private individual,
and, consequently, words, of which the Law does not
take any notice when they are spoken of a private indi-
vidual, may be actionable when the person defamed fills
any of the high public stations above mentioned. In
the case of a private individual the words must charge
him with some offence punishable by Law, or must be
productive of some actual injury to him, or must be di-
rectly calculated to injure him in the particular trade or
profession which he exercises as a means of livelihood,
otherwise they are not generally actionable; but in the
case of any of the high public officers above mentioned,
words are actionable when they are of a disgraceful
nature, and merely calculated to bring the party defamed
into public hatred and contempt. The remedy is also
of a more extensive nature than in the case of ordinary
slander. A private individual can only recover damages,
the amount of which is at the discretion of the jury. But
as Scandalum Magnatum is regarded not only as inju-
rious to the individual, but as being an offence against
the public, the Law has provided a special action on
the case, by which the party slandered may not only
recover damages for his particular satisfaction, but may
also procure the offender to be punished by imprison-
ment, the length of which depends upon the discretion
of the Judges. It is a *qui tam* action, *i. e.* the plaintiff
sues *tam pro domino rege quam pro seipso*, as well on
behalf of the Crown for the offence against the public, as
on his account. This mode of punishing a party guilty
of the offence of Scandalum Magnatum is provided by
various ancient Statutes; and it is not often enforced in
modern times. See SLANDER.

SCANTINESS,

SCANTLY,

SCANTNESS,

SCANTLE, *v.*

SCANTLET,

SCANTLING, *n.*

Junius has some suspicion, that
Scant may be from the A. S. verb
scan-an, frangere, comminuer; to
break, to reduce to small pieces.

Skinner says,

Scant; to which any thing is
wanting; any thing cut or *shorn*
close; from which the *cantles* or
corners are cut or *shorn* away. See
CANTLE, CANTON;

Curt, short; deficient; scarce;

sparing, parsimonious, penurious.

Scantlet; a short or small piece or portion, a portion
or proportion.

To *scantle*; to shear or divide; to reduce to small
pieces or portions; to diminish, to lessen, to be deficient,
to fail or fall.

And Saint Gregory sayth, that precious clothing is culpable for
the derthe of it, and for his softnesse, and for his strangenesse
and disguising, and for the superfluitee, or for the inordinate
scantnesse of it.

Chaucer. *The Persones Tale.*

the plentie that is to be seene in other countries.

Holinshed. *Description of England*, ch. iv.

But if I may crave your patience till time you see me shoot my SCANT.
bolt, I hope you will not denie, but that as neere the pricke as you
are, and as verie an hagler as I am, yet the *scantling* shall be mine.

Holinshed. *Description of Ireland*, ch. i.

Yet still the more the Hebrews are oppress'd

Like to firm seed they fructify the more,

That by th' eternal providence fore-blest,

Goshen gives roomth, but *scantly* to their store.

Drayton. *Moses His Birth and Miracles*, book i.

She could sell winds to any one that would

Buy them for money, forcing them to hold

What time she listed, tie them in a thread,

Which ever as the seafarer undid,

They rose or *scantled*, as his sails would drive,

To the same port whereas he would arrive.

Id. *The Moon-Calf*.

The soaring kite there *scantled* his large wings,

And to the ark the hovering castril brings.

Id. *Noah's Flood*.

But I dare assure any man, that if he do but search into the
bottom of this enormous disease of the soul, as Trismegist truly
calls it, he will find nothing to be the cause thereof but either
vanity of mind, or brutish sensuality and an untamed desire of
satisfying a man's own will in every thing, an obnoxious con-
science, and a base fear of divine vengeance, ignorance of the
scantness and insufficiency of second causes, a jumbled feculency
and incomposedness of the spirits by reason of perpetual intem-
perance and luxury.

More. *Antidote against Atheism*, book iii. ch. vi.

While the world was but thin, the ages of mankind were longer;
and as the world grew fuller, so their lives were successively
reduced to a shorter *scantlet* till they came to that time of life
which they now have.

Hale. *Origination of Mankind*.

Why am I *scanted* by a niggard birth?

My soul disclaims the kindred of her earth.

Dryden. *Absalom and Achitophel*.

As provisions are the staple commodity of that place and of its
neighbourhood, the knowledge of this circumstance may be of
great use to such cruisers as find their provisions grow *scant*.

Anson. *Voyages*, book ii. ch. viii.

It is wisdom that applies remedy to these mischiefs. Things
must be compared to, and arbitrated by, her standard, or else they
will contain something of monstrous enormity; either strutting in
unwieldy bulk, or sinking in defective *scantness*.

Barrow. *Sermon* 9. vol. i.

But still she found, or rather thought she found,

Her own worth wanting, others to abound;

Ascrib'd above their due to every one,

Unjust and *scanty* to herself alone.

Dryden. *Eleonora*.

For such is the *scantiness* of sensual goods, that we, not being
able to content ourselves with any one of them, are fain to walk
the rounds in a constant succession and circle of varieties.

Scott. *Christian Life*, part iii. ch. iii.

For in this narrow *scantling* of capacity, which we are accus-
tomed to, and sensible of here, wherein we enjoy but one pleasure
at once, which, when all uneasiness is away, is, whilst it lasts,
sufficient to make us think ourselves happy; it is not all remote,
and even apparent good, that affects us.

Locke. *Of Human Understanding*, book ii. ch. xxi.

The wind was *scant*, so that we had to ply up.

Cook. *Third Voyage*, book iii. ch. viii.

The lowest class of labourers, therefore, notwithstanding their
scanty subsistence, must some way or another make shift to con-
tinue their race so far as to keep up their usual numbers.

Smith. *Wealth of Nations*, book i. ch. viii.

One of the arts of supplying the defect of a *scantiness* of dress
by means of the back-ground, may be observed in a whole length
portrait by Vandyck, which is in the cabinet of the Duke of
Montague.

Reynolds. *On the Art of Painting*, note 212.

To suppose the contemplation forced upon him [God] involun-
tarily would be still building with our slender *scantlings* and
judging rashly of his intelligence by our own.

Search. *Light of Nature*, vol. ii. part iii. ch. xxiv.

SCANT.
—
SCAPHI-
SOMA.

His kirtle made of forest green
Reached *scantly* to his knee;
And, at his belt, of arrows keen
A furbished sheaf bore he.

Scott. *Lay of the Last Minstrel*, can. 3.

SCAPE, *v.* } *i. e.* 'Scape, or escape, (*q. v.*)
SCAPE, *n.* } To go away, get away; *sc.* out of the
reach of danger, out of difficulty, out of sight, out of
notice; to avoid or evade.

And slow hem to gronde al for nogt, so pat at þe laste,
Heo, þat mygte of *scape*, bi gone to fle faste.

R. Gloucester, p. 20.

git he *skaped* out, þe monke of prisoun.

R. Brunne, p. 171.

For whanne thei schulen seie pees is and sikyrnesse, thanne
sodeyn deeth schal come on hem as sorowe to a womman that is
with childe, and thei schulen not *scape*.

Wiclif. 1 *Tessalonicensis*, ch. v.

When they shall saye peace and no daunger, then commeth on
them soden destruccion, as ye trauaylynge of a woman wyth chylde,
and they shall not *scape*.

Bible, Anno 1551.

He knew full well there shall not *scapen* one
That Troian is.

Chaucer. *Troilus and Creseide*, book v.

For as a bittur in the eagle's clawe,

That may not hope by flight to *scape* alive,
Still waytes for death with dread and trembling aw.

Spenser. *Faerie Queene*, book ii. can. 8.

1 CRED. I sir, it may be so; but we must be paid, and we will
be paid before you *scape*; we have wife and children, and a charge.

Beaumont and Fletcher *The Honest Man's Fortune*, act ii. sc. 1.

Declaring unto them, that though we do presume the gods are
easie to be pacified, and that they readily pardon all faults and
scapes committed by negligence, yet if it were no more but for
respect of commonwealth's sake they should not slightly nor care-
lessly dissemble or pass over faults committed in those matters.

North. *Plutarch*, p. 206.

— Then lay'st thy *scapes* on names ador'd,
Apollo, Neptune, Jupiter, or Pan,
Satyr, or Fawn, or Silvan?

Milton. *Paradise Regained*, book ii.

For shortlie vpo his deliuerance, he gathered a power of wicked
scape-thrifts, and with the same comming into Inuernes, burnt the
towne.

Holinshed. *Historie of Scotland*. Anno 1427.

Wretch! thou hast '*scap'd*' again, once more thy flight
Has sav'd thee, and the partial god of light.

Pope. *Homer. Iliad*, book xx.

SCAPHIDIUM, in Zoology, a genus of *Coleopte-
rous* insects.

Generic character. *Antennæ* longer than the thorax,
slender at the base, with an abrupt elongate club, com-
posed of five somewhat hemispheric, nearly equal joints,
the terminal one rounded at the tip; *palpi* four, filiform;
head produced in front; *thorax* ample, margined on the
sides; body robust, acuminate at each extremity;
elytra margined, truncate; *scutellum* distinct; legs
slender, elongate; *tibiæ* smooth.

Type of the genus, *S. 4-maculatum*, Olivier, *Entom.*
vol. ii. p. 10, pl. i. fig. 1, *a—c*. A very beautiful in-
sect, found occasionally at the roots of trees, amongst
fungi of various kinds; rather [scarce near London,
but more abundant in the West and in the North of
England: two or three other European species have
been detected.

SCAPHISOMA, in Zoology, a genus of *Coleopte-
rous* insects.

Generic character. *Antennæ* longer than the thorax,
pilose, the two basal joints robust, the rest very slender,
with a slight club, composed of five somewhat oval
joints, the second of which is smaller than the rest;
palpi four, filiform; head produced and narrowed in
front; *thorax* large, its hinder margin produced into an

angle in the middle; *scutellum* not visible; body ro-
bust, acuminate at each extremity; *elytra* truncate;
legs very slender; *tibiæ* simple.

Type of the genus, *Silpha agaricina*, Linnaeus;
Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. iii.
p. 4. Not an uncommon European insect; found
abundantly in some parts of this country: there is pro-
bably a second species, or a very striking variety; they
occur in rotten fungi.

SCAPULAR, } Lat. *scapulæ*, the shoulder-blades,
SCAPULARY. } from *σκαπτεσθαι*, to be hollow; ex-
ternally they project, internally they are hollow. Vossius.
Of or pertaining to

The shoulder-blades.

A *scapulary*; Fr. *scapulaire*; It. *scapulare*; Sp. *esca-
pulario*; so called because thrown over the shoulders.
See the Quotation from Brevint.

What betokeneth your great hood, your *scaplerie*, your knotted
girdle, and your wide cope?

Jack Upland. *Imputed to Chaucer*.

Not one side too heavy for the other, but all in nice æquipoise:
the shoulders, arms, and sides æquilibrated on one part; on the
other part the viscera of the belly counterpoised with the weight of
the *scapular* part, and that useful cushion of flesh behind.

Derham. *Physico-Theology*, book v. ch. ii.

The head of the shoulder-bone being round is inserted into so
shallow a cavity in the *scapular*, that were there no other guards
for it, it would fall out, or be thrust out, almost upon every occa-
sion.

Wiseman. *Surgery*, book vii. ch. v.

The badge it gives, which is call'd the holy *scapulary*, is made of
two small pieces of woollen stuff, about the extent of a hand, hang-
ing by two little laces down from the neck upon both the back and
the brest of the devout person who wears it.

Brevint. *Saul and Samuel*, ch. xiii.

SCAR, *n.* } Fr. *eschar*; Ger. *schar*, *vulnus*, *vel*
SCAR, *v.* } *incisio*, says Wachter, from the Ger.
SCARLESS, } *scheer-en*, *secare*, to *sheer*, to cut; see
SCARRY. } SHEER: and Serenius derives from the

Sw. *skara*, to cut; and in Sw. *skeier*, Ihre says, is a
rock divided from the land; and Tooke considers it
(scar) to be the past participle of the A. S. *scyr-an*, to
shear, to cut, to divide, to separate. Camden says,
scarr is a craggy, stony hill; and Ray, a *scarre*, the cliff
of a rock, and a naked rock on the dry land, from the
Saxon *carre*, *cautes*. Pot-scars, he adds, pot-shreds, or
broken pieces of pots. A scar is any

Cliff, cleft, or division or separation in the skin, in a
bank, hill, or any thing else; the mark left by a cut or
wound.

Scar, in Scarborough, is the same word. Ray.

And eke full ofte a littel *skare*
Upon a banke, er men be ware,
Let in the streme, whiche with gret peine,
If any man it shall restreine.
Where lawe failleth, errour groweth.

Gower. *Conf. Am. Prologue*.

And leaues a *skarre* although the wound be heald,
Which giues disgrace and cannot be conceald.

Gascoigne. *The Fruites of Warre*.

Ne may I (friend) forget
(vnlesse I would but faine)
The salue that doth recure my sore
and heales the *scarre* againe.

Turbervile. *Answers to his Ladie*.

They [radish roots] will bring to the native and lively colour
the parts that are cicatrized or newly *skarred*.

Holland. *Plinie*, book xx. ch. iv.

I know a cave, wherein the bright day's eye,
Look'd never but ascance, through a small creeke
Or little cranny of the fretted *scarre*:
There have I sometimes liv'd.

The Tragedy of Hoffman, (1631.)

SCAPHI-
SOMA.
—

SCAR.
—
SCARA-
MOUCH.

His fury when his waves on furnesse seem to war,
Whose crooked back is arm'd with many a rugged *scarr*.
Drayton. Poly-olbion, song 28.

So after all the spoil, disgrace and wreck,
That time, the world, and death, could bring combin'd,
Amidst that mass of ruins they did make,
Safe and all *scarless* yet remains my mind.
Drummond. Flowers of Sion.

When it is come to Masham, it receiue the Burne by south-
west, (as it did the Wile, from verie deepe *scarrie* rockes, before
at Askaran,) and diuerse other wild rilles not worthie to be remem-
bred.
Holinshead. Description of Britain, ch. xiv.

But if the soil be barren, only *scar*
The surface, and but lightly print the share,
When cold Arcturus rises with the Sun.

Dryden. Virgil. Georgics, book i.

We found in it both the hands of Captain Cook entire, which
were well known from a remarkable *scar* on one of them, that
divided the thumb from the fore-finger the whole length of the
metacarpal bone.
Cook. Third Voyage, book v. ch. iv.

SCARAB, } Lat. *scarabæus*; It. *scarabeo*; Gr.
SCARABEE. } *καρὰβος*.

MART. Note but yonder *scarabs*,
That liv'd upon the dung of her base pleasure,
How from the fear that she may yet prove honest
Hang down their wicked heads.

Beaumont and Fletcher. Thierry and Theodoret, act ii. sc. 1.

Up to my pitch no common judgment flies,
I scorn all earthly dung-bred *scarabies*.

Drayton. Idea 31.

Such as you render the throne of majesty, the court, suspected
and contemptible; you are *scarabees* that batten in her dung, and
have no palats to tast her curious viands.

Beaumont and Fletcher. The Elder Brother, act iv. sc. 1.

How the *scarab* lays its eggs in the leaf, whether by terrebrating
the leaf, or whether the maggot when hatched doth it, I could
never see

Derham. Physico-Theology, book iv. ch. xiv. note.

To signify the sun, they sometimes painted a hawk, and this
was tropical; sometimes a *scarabæus* with a round ball in its claws,
and this, as we see in Clemens, was of the enigmatic kind.

Warburton. The Divine Legation, book iv. sec. 4.

SCARABÆUS, in Zoology, a genus of *Coleopterous*
insects.

Generic character. *Antennæ* short, lamellated, ten-
jointed, *palpi* four, labial with the basal joint quadrate-
oval, longer than broad; *clypeus* somewhat trilobed, or
deeply crenulated in front; body very much depressed,
nearly twice as broad as high; *elytra* nearly quadrate;
legs unequal; anterior *tibiæ* stout, armed externally
with four strong teeth, posterior larger, obliquely trun-
cate at the apex; *tarsi* inserted before the apex, shorter
than the spur, and wanting on the anterior legs.

Type of the genus, *S. sacer*; Linnæus, *Syst. Nat.*
vol. i. part ii. p. 545. A native of Europe: the genus
is a very extensive one; and the typical species has
been long celebrated as having been worshipped by the
ancient Egyptians.

SCARAMOUCH, It. *scaramuccia*; Fr. *escarmo-
cheur*; a skirmisher.

A buffoon so called, from the *skirmishing* antics he
performs.

Th' Italian merry-andrews took their place,
And quite debauch'd the stage with lewd grimace;
Instead of wit, and humours, your delight
Was there to see two hobby-horses fight,
Stout *scaramoucha* with rush lance rode in,
And ran a tilt at centaure arlequin.

Dryden. Epilogue spoken by Mr. Hart.

They [Saturnian and Fescennine verses] were made extempore,
and were, as the French call them, *impromptus*; for which the

Tarsians of old were much renowned; and we see the daily exam-
ples of them in the Italian farces of harlequin and *scaramucha*.

Dryden. Dedication to Juvenal.

Scaramouch is to have the honour of the day, and now marches
to the engagement on the shoulders of the philosopher.

Warburton. On Prod. p. 31.

SCARBOROUGH, a Market, Seaport, and Borough
Town in the North Riding of Yorkshire, situated, as its
name (*scar*, rock) imports, on a steep cliff in the recess
of a beautiful bay on the coast of the German Ocean.
Along the shore beneath the town, which rises above it
in the manner of an amphitheatre, are extensive sands,
fine, smooth, and compact, and equally well adapted for
bathing and for exercise. The quay is good, and the
harbour, protected by piers of great size and strength,
which extend far into the sea, is one of the best in the
Kingdom, and is the only shelter betwixt the Humber
and Tynemouth haven, in which ships of large burden
can find refuge during violent Easterly gales. The
town is handsome and well built, and there are ranges
of houses delightfully situated on the cliff, which afford
excellent accommodation for the visitors who frequent
the place for the benefit of sea-bathing, and to drink
the waters of the spa near the town, where are two
medicinal springs, one of which is a fine chalybeate.
Scarborough is a Vicarage. The Church, which be-
longed to a Cistercian Monastery, retains but few evi-
dences of its antiquity, having nearly been destroyed in
the Civil War, and since rebuilt. In the time of
Leland it had three towers, none of which are now
standing; and on the ruins of that called the transept
tower the present steeple was erected, which is placed
in an unusual situation at the East end of the Church.

On the summit of a lofty eminence East of the town
are the ruins of the Castle, one of the numerous fort-
resses built during the turbulent reign of Stephen.
Prior to the invention of artillery its nearly inaccessible
station rendered it impregnable by storm, and it was in
consequence carefully kept in repair, improved, and
enlarged by several monarchs. In the Civil War Scar-
borough Castle was twice besieged and taken by the
Parliamentary forces, and the area upon which it stands
is still a fortified military station.

Scarborough is a town corporate, and since the
reign of the first Edward has returned two Members to
Parliament. It has a manufactory for sail-cloth, three
rope-walks, and several ship-yards, where vessels of
600 tons are built. Population, in 1831, 8369. Dis-
tance from York 22 miles; from London through Lin-
coln 214 miles.

SCARCE, *adj.*

SCARCE, *adv.*

SCARCELY,

SCARCENESS,

SCARCITY,

SCARCEHEAD.

Fr. *escars*; It. *scarso*; Sp. *es-*

casso; D. *schaers*. Menage forms

the It. *scarso* from *exparcus*; Wach-

ter, from the Ger. *karg*; D. *karig*.

Tooke thinks it may have a North-

ern origin, but proposes nothing.

In Dutch *schaers* is a *share*; from *sheer-en*, A. S. *scyr-*
an, to shear: may not *schaers* (*parcus*) be from the
same source,—*sheared* or *short*, (see *SHORT*),—and thus
mean—*short*; consequentially,

Deficient, wanting, sparing; parsimonious, penu-
rious; and also rare, unfrequent.

Hys moder he dude in warde, & *scars* lyf lede he fonde.

R. Gloucester, p. 334.

For I seie this thing, he that soweth *scarsli* schal also repe
scarsli, and he that sowith in blessingis schal also repe of bless-
yngis.

Wiclif. 2 Corinthians. ch. ix.

The thridde maner is venial sinne; trewely, *scarsely* may any of
thise be without venial sinne, for the corruption and for the delit
therof.

Id. *The Persones Tale.*

Of which ther was a dosein in that hous,
Worthy to ben stewardes of rent and lond.

Of any lord that is in Englelond,
To maken him live by his propre good,
In honour detteles, but if he were wood,
Or live as *scarsly*, as him list desire.

Id. *Prologue to the Canterbury Tales*, v. 579.

But in his court let him first devise
To exile *scarcehead* and couetise.

Lidgate. *The Story of Thebes*, p. 3.

This is to sayn, the more that cloth is wasted, the more must it
cost to the poure peple for the *scarcesse*.

Chaucer. *The Persones Tale.*

I say not that honestee in clothing of man or woman is unco-
venable, but certes the superfluitee or disordinat *scarcitee* of cloth-
ing is reprevable.

Id. *Ib.*

For thy my sonne, as thou arte holde
Touchende of this telle me the shrifte,
Hast thou be *scarce* or large of gifte
Unto thy loue, whom thou seruest.

Gower. *Conf. Am.* book v.

What man that *scarce* is of his good,
And wol not gyue, he shall nought take

Id. *Ib.*

Panthus, quod I, in what estate stand we?
Or for refuge what fortresse shall we take?

Scarce spake I thus, when wailing thus he sayd.

Surrey. *Virgil. Aeneis*, book ii.

And where the riche wanteth, what can the pore finde, who in a
common *scarsitie*, lyueth most *scarsely*, and feeleth quickliest the
sharpnesse of staruing, when euerye man for lack is hungerbitten.

Cheeke. *The Hurt of Sedition*, p. 49.

The grounde was vntylled and vnsowen, wherof ensued great
scarsytie and hunger, and after hunger ensued deth.

Fabyan. *Chronycle*, ch. lxxv.

With loftie eyes, halfe loth to looke so lowe,
She thancked them in her disdainefull wise;
Ne other grace vouchsafed them to shoue
Of princesse worthy; *scarce* them bad arise.

Spenser. *Faerie Queene*, book i. can. 4.

Some great intent
Conceals him; when twelve years he *scarce* had seen,
I lost him, but so found, as well I saw
He could not loose himself; but went about
His Father's business.

Milton. *Paradise Regained*, book ii.

And what the people but a herd confus'd,
A miscellaneous rabble, who extol
Things vulgar, and well weigh'd, *scarce* worth the praise.
They praise and they admire they know not what;
And know not whom, but as one leads the other.

Id. *Ib.* book iii.

And eke so faint in every ioynt and vayne,
Through that fraile fountain, which him feeble made,
That *scarsely* could he weeld his bootlesse single blade.

Spenser. *Faerie Queene*, book i. can. 7.

High o'er his head the circling lash he wields;
His bounding horses *scarsely* touch the fields.

Pope. *Homer. Iliad*, book xxiii.

For the rarity of transparent gems, their lustre, and the great
value which their *scarcesse*, and men's folly sets upon them, im-
boldens some to say, and inclines others to believe, that such rare
and noble productions of nature must be endowed with propor-
tionable, and, consequently, with extraordinary qualities.

Boyle. *Works*, vol. iii. p. 544.

All hands are at work, first to build the house they are to dwell
in, and to divide it into its several apartments, and then to store
them all with provision against the ensuing time of scarcity.

Scott. *Christian Life*, part ii. ch. iv.

Another defect of this great painter [Rubens] is his inattention
to the foldings of his drapery, especially that of his women: it is
scarsely ever cast with any choice or skill.

Reynolds. *A Tour to Flanders and Holland.*

Value is more frequently raised by *scarcity* than by use.

The Idler, No. 103.

SCARE, v. Skinner gives a preference to the It.
scorare, to discourage; *animos seu cor adimere*. To
scare seems to be, to cause to separate or disperse;
(A. S. *scyr-an*, see *ante*, SCAR.) We have the expression
to *sheer off*; applied when it appears dangerous or dis-
agreeable to stay any longer: and see *ante*, to FEAR.

To disperse or put to flight; and hence applied to
the feeling which causes or attends the flight:—

To terrify, to affright or frighten.

Let me twine

Mine armes about that body, where against
My grained ash an hundred times hath broke,
And *scarr'd* the moone with splinters.

Shakspeare. *Coriolanus*, act iv. sc. 5.

Th' insnared fish, here on the toppe doth scud,
There underneath the banckes, then in the mud;
And with his franticke fits so *scares* the shole,
That each one takes his hyde or starting hole.

Browne. *Britannia's Pastorals*, book i. song 5.

Thereat the *scarcrow* wexed wondrous prowd,
Through fortune of his first adventure sayre,
And with big thundring voice reuyld him lowd.

Spenser. *Faerie Queene*, book ii. can. 3.

The very same Metellus became blind in his old age: for he
lost both his eyes in a *share-fire*, at what time as he would have
saved and got away the palladium, i. the image of Minerva, out
of the temple of Vesta.

Holland. *Plinie*, book vii. ch. xliii.

Bob. Oh craven-chicken of a cock o' th' game; well, what
remedy? Did thy father see this, o' my conscience, he would cut off
thy masculine gender, crop thine ears, beat out thine eyes, and set
thee in one of the pear trees for a *scarecrow*.

Beaumont and Fletcher. *Love's Cure*, act ii. sc. 2.

It much conduces, all the cares to know
Of gardening, how to *scare* nocturnal thieves,
And how the little race of birds that hop
From spray to spray, scooping the costliest fruit
Insatiate, undisturb'd.

Philips. *Cider*, book i.

Captain Swan, seeing the blaze by us, cut his cables as we did,
his bark did the like; so we kept under sail all the night, being
more *scar'd* than hurt.

Dampier. *Voyages*. Anno 1685.

And as a child, when *scaring* sounds molest,
Clings close and closer to the mother's breast,
So the loud torrent, and the whirlwind's roar,
But bind him to his native mountains more.

Goldsmith. *The Traveller*.

SCARF, n. } Also written *scarp*.

SCARF, v. } Fr. *escharp*; Ger. *scherpe*. Skinner
derives from the Ger. *scherf*, *segmen*, or rather from the
A. S. *scearp*, clothing, apparel. In A. S. *scearf* is a
fragment, probably from the verb *scyr-an*, to shear, to
separate: and a *scarf*, *fascia qua læsum brachium sus-
penditur, semper ex latiori serico vel linteo descenditur*.
Skinner.

Scarf is applied to

A loose piece, sc. of silk, gauze, &c.; used as an ar-
ticle of dress, or for the purpose mentioned by Skinner,
viz. to support a disabled limb.

Scarf or *scarp*, Fr. *escarpe*, Cotgrave calls "a little
wall without the main rampier of a fort," i. e. separated
from it.

To *scarf*, (see the Quotation from Anson,) to piece or
put parts or pieces together

SCARCE.

The sturdy ploughman doth the soldier see
All *scarfed* with py'd colours to the knee,
Whom Indian pillage hath made fortunate,
And now he gins to loathe his former state.

Hall. *Satire* 6. book iv.

For this was Dony, Florimell's owne dwarfe,
Whom having lost (as ye have heard whyleare)
And finding in the way the scattred *scarfe*,
The fortune of her life long time did feare.

Spenser. *Faerie Queene*, book v. can. 2.

Iris there with humid bow
Waters the odorous banks, that blow
Flowers of more mingled hue
Than her purfled *scarf* can shew.

Milton. *Comus*.

With eager haste away she moves,
Never regarding *scarf* or gloves!
Into the grotto soon she creeps,
And into every thicket peeps.

King. *Art of Love*.

The leak was found to be below the fifteen-foot mark, and was principally occasioned by one of the bolts being worn away and loose in the joining of the stern, where it was *scarfed*.

Anson. *Voyages*, book ii. ch. vii.

SCARIFY, v. } Fr. *scarifier*; It. *scarificare*; Lat.
SCARIFICA'TION. } *scarificare*. But Vossius thinks
scarifo the true Latin word, Gr. *σκαριφ-ασσαι*, *scal-*
pere, *radere*, *superficiem leviter scindere*, slightly to open
or make incision into. Cotgrave says, the A. S. *scyr-an*,
to cut, (see SCAR,) still presents itself as the root.

And for the foresaid corns of the feet especially, if they be *scar-*
rified and scraped before, it is of great efficacie.

Holland. *Plinie*, book xxii. ch. xxiii.

Now concerning the juice or soveraigne liquour beforesaid, the manner was to draw it after two sorts; to wit, by *scarification*, either out of the root, or forth of the stem and maister stalke.

Id. *Ib.* book xix. ch. iii.

We are content to fast, when we perceive it's necessary to obviate an approaching fever; to be cupp'd and *scarified* with all the artifice of pain to prevent or remove a dangerous disease.

Scott. *Christian Life*, ch. iv. p. 1.

They will think you defunct in earnest, and finding your vital motions continue, but no signs of sensation, they will send doctors and surgeons to wrap you in blisters and *scarify* you all over.

Search. *Light of Nature*, vol. ii. part ii. ch. xxiii.

SCARITES, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* moniliform, with the basal joint largest, subconic, the remaining joints gradually thickening to the tip; *palpi* six, external maxillary ones, and terminal joints of the labial, nearly cylindrical; *labrum* very short, tridentate; *labium* short, broad, concave, notched; *mentum* trilobed; mandibles large, porrected, strongly dentate internally; head large; *thorax* broad, lunate; body oblong, more or less depressed; legs short; anterior *tibiæ* strongly palmated, the rest simple; *tarsi* pentamerous.

Type of the genus, *S. subterraneus*, Fabricius; Martyn. *Col.* pl. xxxviii. fig. 46. Supposed (but erroneously) to be a native of England; it is common in North America; other species are, however, found in the South of Europe, not uncommonly: they frequent sandy plains, and the genus is extensive.

SCARLET, adj. } Fr. *escarlata*; Sp. *escarlata*;
SCARLET, n. } It. *scarlato*; Ger. *scharlack*; Low
Lat. *scarlatum*. Of unknown origin. See *Scharlach*,

in Wachter, *Ecarlate*, in *Menage*; *Scarlatum*, in Du Cange.

Hire hosen weren of fine *scarlet* rede,
Ful streite yteyed, and shoon ful moist and newe.

Chaucer. *Prologue to the Canterbury Tales*, v. 458.

Hee had a faire companion of his way,
A goodly lady clad in *scarlot* red,
Purfled with gold and pearle of rich assay.

Spenser. *Faerie Queene*, book i. can. 2.

All sodainely she saw transfigured
Her linnen stole to robe of *scarlet* red,
And moone-like mitre to a crowne of gold.

Id. *Ib.* book v. can. 7.

To say nothing of the graine brought out of Galatia, Affricke, and Portugall, whereof is made the royall *skarlet*, reserved for princes only and great captaines to weare in their rich mantles of estate and coats of armes.

Holland. *Plinie*, book xxii. ch. ii.

When they [the cochineel] fly up they are red, when they fall down they are black; and when first they are quite dry they are white as the sheet wherein they lie, though the colour change a little after. These yield the much esteemed *scarlet*.

Dampier. *Voyages*, Anno 1685.

The meanness which would pass unnoticed, or might even be palliated in his natural station, becomes, when he is invested with the gold chain and the *scarlet* robe, a solemn mockery of magistracy.

Knox. *Winter Evenings*. Evening 56.

There was one piece of *scarlet* broad-cloth, four or five yards in length, conspicuous among the other ornaments; which, no doubt, had been a present from the Spaniards.

Cook. *Third Voyage*, book iii. ch. i.

SCARMOGE. See SKIRMISH.

SCATHE, v. } Goth. *skath-jan*, *ga-shath-jan*;

SCATHE. But he was after demed an enemy to the empyre for harme and
scathes by hym done in Fraunce.

SCARUS.

Fabyon. Chronycle, ch. lxxv.

Whereas I bathe not now in blisse pardie,
But boyle in Bale and skamble thus in skathe,
Bycause I thinke on thine vnconstancie.
Gascoigne. Don Bartholmew of Bathe.

So be it, Troy! and saued by me from scathe,
Kepe faith with me, and stand to thy behest,
If I speake truth, and opening thinges of weight
For graunt of life requite thee large amendes.
Surrey. Virgil. Æneis, book ii.

Astonnied some the scathefull gift beheld,
Behight by vow vnto the chaste Minerve.

Id. Ib. p. 338.

Then said the prophesier: that is the scathfull wind and dreadfull
tempest, which shall blow such calamitie and trouble to the whole
state of the whole realme of Scotland.

Holinshed. Historie of Scotland, Anno 1279.

Thereat sir Guyon smylde; And is that all,
Said he, that thee so sore displeased hath?
Great mercy sure, for to enlarge a thrall,
Whose freedom shall thee turne to greatest scath!
Spenser. Faerie Queene, book ii. can. 5.

I CAP. You are a saucy boy. Is't so, indeed?

This trick may chance to scath you.

Shakspeare. Romeo and Juliet, act i. sc. 5.

As when heaven's fire
Hath scath'd the forest oaks, or mountain pines,
With singed top thir stately growth though bare
Stands on the blasted heath.

Milton. Paradise Lost, book i.

A bawbling vessel was he captain of,
For shallow draught, and bulk, unprizable;
With which such scathful grapple did he make
With the most noble bottom of our fleet,
That very envy, and the tongue of loss,
Cry'd fame and honour on him.

Shakspeare. Twelfth Night, act v. sc. 1.

SCARUS, from the Greek σκαρπω, *I leap*, Lin.,
Cuv.; *Parrot-fish*, Catesby. In *Zoology*, a genus of
animals belonging to the family *Labroides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Jaws composed of the inter-
maxillary and præmandibular bones, convex, rounded,
and furnished with teeth, disposed like scales on their
edge and anterior surface, and moving in succession
from behind forwards; pharyngeal teeth disposed on
two plates in the upper, and on one in the lower jaw, in
some species merely transverse laminae, in others pave-
ment-like; lips fleshy; body covered with large scales;
lateral line uninterrupted.

The fishes forming this genus are usually known by
the name of *Parrot-fish*, on account of the form of their
jaws and the brilliancy of their colours. They are
principally natives of the tropical seas.

Some have the tail crescentic; such are

S. Cretensis, Aldrov. and Cuv.; *Cretan Parrot-fish*.

About thirteen inches in length, the forehead depressed;
upon the outer edge of the upper jaw ten sharp teeth,
disposed in a sinuous form, on the lower numerous fine
teeth; body covered with large scales, and those forming
the unbroken lateral line marked with a foliaceous
engraving; dorsal fin low, commencing immediately
behind the head, and extending along nearly the whole
length of the back; tail crescent-shaped. According to
Aldrovandi, the general colour of the fish is greenish-
yellow above, and the head and sides dusky green; but
Cuvier says it is blue or red, varying with the season.
It is taken off the shores of Crete, and being pickled
with the entrails undisturbed is used as food by the

VOL. XXVII.

natives. Cuvier considers it to be the *Scarus* of the
ancients, and by them esteemed as a great luxury.
According to Macrobius, (*Saturnalia*, lib. iii.) "Octa-
vius, or as some call him, Optatus, (a freedman of
Tiberius Cæsar,) prefect of the fleet, being aware that
the *Scarus* was so entirely unknown upon the shores of
Italy, that there was not even a Latin name for the fish,
distributed an incredible number of these *Scari* in the
sea between Ostia and the Campanian shore, thus
giving a new and wonderful instance of sowing the sea
with fish as the earth is sown with seeds. He also took
great pains for the space of five years to compel every
person who, whilst fishing, captured any of these *Scari* in
their nets, to return them immediately unhurt into the
sea, so that the naturalization should become a public
benefit." Subsequently they became much esteemed as
articles of luxury, and to their high character in this
respect Philemon apud Athenæum says, *Quod si illi
qui vilioribus vescantur piscibus Scarum haberent, aut
ex Atticâ Glauciscum, &c., omnes sane qui gustassent
fierent dii.* It appears, however, that not the whole
fish, but merely its entrails, were considered as a
delicacy; for Martial says,

*Hic Scarus æquoreis qui venit obesus ab undis,
Visceribus bonus est, cætera vile sapit.*

In Disticis.

Willughby differs in opinion from Cuvier as to this
species being the *Scarus* of the ancients, and applies
the above observations to a fish which he calls *Scarus
Bellonii*, which, however, does not appear to belong to
the genus. Bloch, in his *Ichthyologie*, describes one
species by the name of *S. Cretensis*, but says he only
uses this specific name as Aldrovandi had employed it
before, the fish to which he applies the name being a
native of the Indian seas, and not of that washing the
Cretan shores. Schneider states that it is found in both
seas, but Cuvier denies that Bloch and Aldrovandi's
fish are the same species, although he does not mention
in what respects they differ.

S. Coccineus, Schn.; *Sparus Abildgardii*, Bl.;
Violet Parrot-fish. Fifteen inches in length; the
scales very large and thin, rounded on the gill flaps, and
hexagonal on the body; back violet; head, sides, and
fins partly violet and partly yellow. Found at St. Croix,
in South America.

S. Catesbii, Lacep.; *Catesby's Parrot-fish*. General
colour green; upper part of the head brown, its lower
part and the gill-flaps blue, bordered with dusky red;
behind the gill-flap a red streak, and immediately above
it a bright yellow spot; upon each side of the tail an
oval yellow spot; dorsal fin cinnamon colour; pectoral
mingled black, green, and purple, with their upper
edge blue; ventral red, margined with blue; anal green
banded transversely with a red crescent, parallel to the
curve of the tail. This fish is not much esteemed for
its flavour; it is caught upon the coasts of Hispaniola,
Cuba, and the Bahama Islands.

S. Frenatus, Lacep.; *Bridled Parrot-fish*. Has two
bands, one above and the other below the muzzle, con-
nected near the eye, and prolonged to the posterior edge
of the opercule like a bridle. Is found in the tropical seas.

S. Chrysopterus, Schn.; *Golden-finned Parrot-fish*.
Scales very large and rhomboidal, general colour green;
all the fins golden, except the caudal, which is golden
in the middle, and green on the upper and lower edges.
Is found in the American seas.

SCARUS. *S. Capitaneus*, Cuv.; *Scare ennéacanthé, denticulé, chadri*, Lacep.; *Blue Parrot-fish*. The three species just named of Lacepede are considered by Cuvier as belonging to a single species; its general colour is blackish, or deep blue spotted with purple or deep green, or bluish points or streaks on the head; fins margined with blue or green of a more or less deep tinge. Found in the Arabian seas.

S. Vaigiensis, Quoy and Gaym.; *Waigian Parrot-fish*. About three and a half inches long; body slender, and back slightly elevated; head elongated, and forehead flat; general colour greenish, with a broad brown spot on the forehead; body spotted with reddish-brown, as is also the anal fin; dorsal and caudal fins sea-green. From the coasts of the Isle of Waigiou in the South Seas.

S. Flavescens, Schneid.; *Guacamaya*, Paria; *Yellowish Parrot-fish*. Head rose-coloured, except its upper part, which is dusky; fore part of the body cinnamon, with a dusky tinge, hinder part green; belly mingled red and green; fins blackish, their base green, except the pectorals, in which this part is blood-coloured; tail red. Found at the Havannah, where it is known as the *Guacamaya* by the colonists.

Some of those with the crescentic tail have the forehead very full; such are

S. Cæruleus, Schneid.; *Coryphæna Cær.* Bl.; *Cærulean Parrot-fish*. The general colour of this fish is bluish-grey above, and white beneath; its dorsal fin is tinged with brown, and the tail black; the other fins are pale. It is caught off the Bahama Islands, and there known as the *Bone-fish*.

S. Lori, Schn.; *Green Parrot-fish*. Which is entirely green: is also taken in the same seas as the preceding.

Others have the tail square, as

S. Vetula, Schn.; *Old Parrot-fish*. Sides of the head streaked with red and green, general colour green; edge of the pectoral fins yellow; ventrals green, tinged with rose colour; dorsal and anal mingled green, blue, and red; edge of the caudal fin yellow. Native of the South Seas, and called by the Spaniards *Vieja*.

S. Psittacus, Forsk.; *Labrus Psittacus*, Gmel.; *Arabian Parrot-fish*. Edges of the lips blue, as are also a streak from the upper jaw, passing back beneath the eye, a transverse stripe on both sides of the lower lip, a longitudinal stripe at the under part of the head, and another at the lower edge of the gill-flap; general colour greenish, with yellowish stripes; all the fins purple, except the pectoral, which are purple only on their superior edge, and the remaining part blue. It is found at Djedda, and called by the Arabians *Durrat el Varr*, that is, Parrot of the Earth.

S. Chloris, Parra; *Greenish Parrot-fish*. Of a lighter green, with the fins red. Found in the South Seas.

Cuvier also enumerates the

S. Tæniopterus, Desm., as belonging to this division.

Cuvier has ranged those which have the lateral teeth of the upper jaw pointed and distinct under the sub-genus *Calliodon*; such are the following, and some other species which he does not enumerate.

S. Spinidens, Quoy and Gaym.; *Spiny-toothed Parrot-fish*. About four inches long; the head large, but not elevated, in which it resembles the *Labri*; forehead flat, cheeks scaly; curve of the back very slight, that of the belly very prominent; tail round; general colour greenish, spotted with reddish; upper part of the

head brown; pectoral and caudal fins dotted with pale brown. From the coast of the Isle of Waigiou.

Others, which have the thick lips and pavement-like teeth on the pharyngeal bones, and an unbroken lateral line, connecting them with the *Labri*, are formed by Cuvier into his sub-genus *Odax*; such is

S. Pullus, Schn.; *Sparus Pull.* Forster; *Blackish Parrot-fish*. The shape of this fish is slender, and its general colour dusky black. It is found in the South Seas, and called by the New Zealanders *Maràree*.

See Aldrovandi *De Piscibus*; Bloch, *Ichthyologia a Schneider*; Cuvier, *Règne Animal*.

SCATHARUS, from the modern Greek *σκαθαροῦ*, Cuv. In *Zoology*, a genus of animals belonging to the family *Sparoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head short; muzzle obtuse, and mouth small; each jaw armed with a single row of small, flattened, pointed teeth; cheek furnished with six or seven rows of scales; opercle rather broad, and having on it a bony ridge terminating in a sharpish point; interopercle broad and arched; gill membrane supported by six rays; body oval; spines of the dorsal fin slender; pectoral fins rather long.

This genus is formed by Cuvier on a single species,

S. Græcus, Cuv. Found by the Naturalists of the French expedition to the Morea in the Mediterranean. The form of the ridge on the opercle approximates it to the *Sciænoides*, but it has no fullness of the head. It is about seven inches long; the scales are small, and the lateral line marked by a broad deep ribbon parallel to the back; the sides are marked with silvery glossings and longitudinal golden streaks.

See Cuvier and Valenciennes, *Histoire Naturelle des Poissons*.

SCATOPHAGA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* deflexed, three-jointed, with the third joint elongate, prismatic, obtuse, its base above furnished with a naked or plumose seta; head spheroidal; *hypostome* descending, hairy; eyes remote, rounded; wings two, large, incumbent, parallel, considerably longer than the abdomen, which is five-jointed, and linear in the male.

Type of the genus, *Musca stercoraria*, Linnæus; Reaumur, *Ins.* vol. iv. p. 118. pl. xxvi. Rather an extensive genus, of which about twenty species are indigenous; they frequent excrementitious matter.

SCATOPSE, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* short, porrected, cylindric, perfoliate, composed of eleven joints; eyes kidney-shaped; *ocelli* three, placed in a triangle; *palpi* concealed; wings two, ample, with a strong, conspicuous, costal nervure; legs smooth.

Type of the genus *Tipula notata*, Linnæus; Meigen, *Europ. Zweif. Insekt.* vol. i. pl. x. fig. 13. Fourteen European species, the greater portion of which occur in this country; the larvæ are found in dung.

SCA'TTER, v.	} D. schetteren; A. S. scad-ian; D. sheeden, sheyden; Ger. scheiden, to divide, to separate, to disperse. See ante, SCATHE; and SHED, infra.

SCATTER. He that is not with me, is agens me, and he that gedrith not with me, *seaterith* abroad. *Wiclif. Matthew, ch. xii.*

SCAURUS. He that is not wyth me, is agaist me. And he y^t gathereth not wt me, *scattereth* abroad. *Bible, Anno 1551.*

For feare of which persecution they fled into all costes and preached vnto the Jewes that were *scattered*, prouing that Jesus was Christ the Sauour of the world, both by the Scripture and also by miracles. *Tyndall. Workes, p. 275.*

They kepte theym hole togyder without *scatterynge* or spryngynge abroad. *Fabyan. Chronycle, ch. 217.*

The godly matrone by the hand him beares
Forth from her presence, by a narrow way,
Scattered with bushy thornes and ragged breares,
Which still before him she remov'd away.
Spenser. Faerie Queene, book i. can. 10.

Yet oft annoyd with sondry bordragings
Of neighbour Scots, and forrein *scatterlings*
With which the world did in those dayes abound.
Id. Ib. book ii. can. 10.

The idea of God is not a compilement or aggregation of things, which exist *scatteredly* and apart in the world; for then would it be a meer arbitrary thing; and it might be what every one pleased; one adding more things together, and another fewer. *Cudworth. Intellectual System, p. 695.*

And gathering unto him all the *scatterlings* and out-lawes out of all the woods and mountaines, in which they long had lurked, hee marched forth into the English pale. *Spenser. View of the State of Ireland.*

A thousand temptations doth he really prevent, which would otherwise come upon us, *scattering* the snares of our malicious adversary, and counter-working his stratagems. *Sharp. Works. Sermon 14. vol. vi.*

So God sends us from heaven in one volume, a, at least virtual, collection of all those divine truths and holy precepts, others *scatteringly* and sparingly glean out of human books. *Boyle. Works, vol. ii. p. 286.*

But the rest (despairing by reason of the shamefull flight of the gouernor) did *scatteringly* depart wandring whither they thought good, without anie order. *Holinshed. Historie of Scotland, Anno 1544.*

As soon as we got round this cape, we hauled our wind to the westward, in order to get within the islands, which lie *scattered* in the bay in great numbers, and extend out to sea as far as the eye could reach even from the mast-head. *Cook. First Voyage, book ii. ch. ii.*

As we found the hulls of these *scattered* round the places where the Indians had made their fires, we took for granted that they were fit to eat; those however who made the experiment paid dear for their knowledge of the contrary, for they operated both as an emetic and cathartic with great violence. *Id. Ib. ch. vi.*

SCAVENGER, A. S. *scaf-an*; D. *schaben*; Ger. *schaben*, to shave, to scrape. Applied to

Those who *scrape* and clear away the filth from public streets, or other places.

To see the pope's blacke knight, a cloaked frere,
Sweating in the channel like a *scavenger*.
Hall. Satire 7. book iv.

Do not I know thee for the alguazier,
Whose dunghil all the parish *scavengers*
Could never rid?
Beaumont and Fletcher. The Martial Maid, act ii. sc. 1.

The hero or patron in a libel is but a *scavenger* to carry off the dirt, and by that very employment is the filthiest creature in the street. *Tatler, No. 92.*

For thee the *scavenger* bids kennels glide
Within their bounds, and heaps of dirt subside.
Gay. Trivia, book i.

SCAURUS, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, eleven-jointed, the third joint elongate, somewhat cylindric, fourth, fifth, sixth, and seventh short, obconic-cylindric, eighth, ninth, and tenth ovate-cylindric, eleventh as long as the third,

elongate-obconic, with the tip acute; body elongate-ovate; head not so wide as the thorax, which is ample, as broad as, or broader than, the elytra, truncate in front and behind, with the sides rounded and the disk flattish; *elytra* united, inflexed beneath, flat on the back; *abdomen* ovate; legs short; anterior *femora* thickened; *tibiæ* slender, with short spurs; *tarsi* heteromerous.

Type of the genus, *S. striatus*; Fabricius, *Syst. Eleut.* tom. i. p. 122. Inhabits Southern Europe and Northern Africa.

SCELESTICK, Lat. *scelestus*, wicked, from *scelus*, wickedness; Fr. *scélere*, (Cotgrave,) *scélérat*.

For my own part, I think the world hath not better men, then some, that suffer under that name; nor withall, more *scelestique* villaines. *Feltham. Resolve 5. fol. 8.*

SCELIO, in Zoology, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* ten-jointed, of the male filiform and elongate, of the female shorter and distinctly thickened at the apex; the articulations distinct, with the basal ones of equal length; wings four, anterior with a minute nervure towards the costa, slightly branching inwards; mandibles bidentate at the apex; body elongated; head somewhat globose; *abdomen* depressed.

Type of the genus, *S. rugulosus*, Latreille, *Hist. Nat. des Crust. et des Ins.* vol. xiii. p. 227. A native of France and of England, not very uncommon in some parts of the latter country.

SCENE, } Fr. *scène*; It. *scena*; Sp. *scena*;
SCENERY, } Lat. *scena*; Gr. *σκηνή*, com-
SCE'NICK, } monly derived from *σκια*, i. e. *um-*
SCE'NICAL, } *bra*, quia *scena* proprie sit *umbr-*
SCENO'GRAPHY. } *culum seu tabernaculum*; the word
being first applied to the shaded part of a theatre. See the Quotation from Potter.

The shaded part of the theatre assigned to the actors; the dramatic action, part or parts of the dramatic action represented there; the painting before which the actors perform their parts; any view or spectacle; a combination of objects viewed or presenting themselves to the view or sight.

Scenography, Gr. *σκηνή* and *γραφ-ειν*, to describe.

But now prepare thee for another *scene*.
He lookt and saw wide territorie spread
Before him, towns, and rural works between,
Cities of men with lofty gates and towers,
Concours in arms, fierce faces threatening warr,
Giants of mighty bone, and bould emprise.

Milton. Paradise Lost, book xi. l. 637.

They dance over a distracted comedy of love, expressing their confused affections, in the *scenical* persons and habits of the four prime European nations.

Ben Jonson. Love's Triumph.

Scena was a partition assigned for the actors, reaching quite cross the theatre, which, at the first, agreeably to the ancient simplicity, was dressed with boughs and leaves, but in more expensive ages was adorned with rich and costly hangings, to hide the management of machines, and other actions of the players, from the spectators. *Potter. Antiquities of Greece, book i. ch. viii.*

I, to the temple will conduct the crew;
The sacrifice and sacrificers view;
From thence return, attended with my train,
Where the proud theatres disclose the *scene*.
Dryden. Virgil. Georgics, book v. p. 315.

The hills shine out, the rocks in prospect rise,
And streams, and vales, and forests, strike the eyes;
The smiling *scene* wide opens to the sight,
And all th' unmeasur'd ether flames with light.

Pope. Homer. Iliad, book xvi. p. 106.

To make a sketch, or a more perfect model of a picture, is, in the language of poets, to draw up the *scenery* of a play; and the

SCENE. reason is the same for both; to guide the undertaking, and to preserve the remembrance of such things whose natures are difficult to obtain.
SCENT. Dryden. *On Poetry and Painting*.

We shall here also represent to you the ichnography and scenography of the ancient burial-places of the Egyptians, near the pyramids, out of which the mummies are brought; with a prospect of Memphis, Babylon, Cairo.

Greenhill. *Art of Embalming*, p. 203.

The entrance of a new personage upon the stage, forms what is called a new *scene*. These scenes, or successive conversations, should be closely linked and connected with each other; and much of the art of dramatic composition is shown in maintaining this connection.

Blair. *Lecture 45*.

Sophocles increased the number of actors to three, and added the decoration of painted scenery.

Twining. *Aristotle. On Poetry*, part i.

I shall not urge, as of much weight, what hath been observed who take this side of the question, the *scenical* image of Job and his friends sitting together on the ground seven days and seven nights without a word speaking.

Warburton. *The Divine Legation*, book vi. sec. 2.

If he [Gildas] had prepared any thing *scenical* to be acted on the theatre, certainly it would have been a tragedy

Fuller. *Worthies. Somersetshire*.

'Tis yours, this night, to bid the reign commence
Of rescued nature and reviving sense;
To chase the charms of sound, the pomp of show,
For useful mirth and salutary woe;
Bid *scenic* virtue form the rising age,
And truth diffuse her radiance from the stage.

Johnson. *Prologue. Opening Drury Lane*, 1747.

SCENOPINUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* somewhat deflexed, three-jointed, the basal joints small, the third elongate, somewhat cylindric, truncate, not furnished with a seta; *proboscis* retracted, concealed; wings two, incumbent, parallel; *abdomen* linear, flat, composed of eight segments; legs short, slender.

Type of the genus, *Musca fenestralis*, Linnæus; Meigen, *Europ. Zweif. Insekten*, vol. iv. p. 113. pl. xxxvi. fig. 17. A dozen species, most of which have been detected in England.

SCENT, *n.* } Fr. *sentir*; It. *sentire*; Lat. *sentire*, to feel; usually restricted in
SCENT, *v.* }
SCE'NTFUL, } English to the feeling or sense of
SCE'NTLESS, } smell.
SCE'NTINGLY. } To feel, (by the sense of smell,) to
smell; to cause to smell or emit a smell. *Smell*, that which smells or causes the sensation of smelling; an odour, a perfume.

One that had marked him would have judged that his eyes would have run into him, and his soul out of him; so unkindly did either take a *scent* of danger.

Sidney. *Arcadia*, book iii.

There is a fish called a rasoir: looke, whatsoever toucheth it *senteth* presently of yron.

Holland. *Plinie*, book xxxii. ch. ii.

Thunderbolts and lightnings in like manner doe *sent* strongly of brimstone.

Id. *Ib.* book xxxv. ch. xv.

FER. Is Virolet in the conspiracie?

RON. The head of all, he only *scented* me:

And from his fear that I plaid false is fled.

Beaumont and Fletcher. *The Double Marriage*, act i. sc. 1.

That kind of sideritis growing upon mud wals, if it be brused or stamped, yeeldeth a stinking *sent*.

Holland. *Plinie*, book xxv. ch. v.

— A maiden gath'ring on the plains

A *sentfull* nosegay (to set neere her pap,

Or as a favour, for her shepherd's cap,)

Is seene farre off to stray, if she have spide

A flower that might increase her posie's pride.

Browne. *Britannia's Pastorals*, book ii. song 2.

The *sentfull* osprey by the rocke had fish'd,
And many a prittie shrimp in scallops dish'd,
Some way convay'd her.

Browne. *Britannia's Pastorals*, book ii. song 3.

Yet I find but one man, Richard Smart by name, (the more remarkable because but once, and that *scentingly*, mentioned by Mr. Fox,) burnt at Salisbury.

Fuller. *Worthies. Wiltshire*.

And lo! this second Paris come again,
With his unmanly, soft, luxurious train,
In *scented* tresses and a mitre gay,
To bear my bride, his ravish'd prize, away.

Pitt. *Virgil. Æneid*, book iv.

Meantime the king, his son, and Helen, went
Where the rich wardrobe breath'd a costly *scent*.

Pope. *Homer. Odyssey*, book xv.

'Ye blossoms, that one varied landscape rise,
And send your *scentful* tribute to the skies;
Diffusive like yon royal branches smile,
Grace the young year, and glad the grateful isle!

Savage. *The Volunteer Laureat*, No. 2.

The thing which first strikes him and fixes his attention, is the majesty and splendour of the king's own dress; which indeed is described by the single circumstance of the profusion of rich perfumes with which it was *scented*.

Horsley. *Sermon* 8. vol. i.

The *scentless* and the *scented* rose; this red,
And of an humbler growth, the other tall,
And throwing up into the darkest gloom
Of neighb'ring cypress, or more sable yew,
Her silver globes, light as the foamy surf,
That the wind severs from the broken wave.

Cowper. *The Task*, book vi.

SCE'PTRE, } Fr. *sceptre*; It. *scettro*; Sp. *cetro*;
SCE'PTRED. } Lat. *sceptrum*; Gr. *σκηπτρον*, *baculus*,
quo quis innititur, from *σκηπτειν*, *inniti*, a staff, on which any one *leans*. See the Quotation from Potter. It is applied generally to

The ensign of authority; to royal or imperial authority or power.

And she that bare the *sceptre* ful of floures,
Shal bere a distaf hire cost for to quite.

Chaucer. *The Monkes Tale*, v. 14378.

And forsothe this foresaied woman, bare smale bookes in her right hande, and in her left hand she bare a *scepter*.

Id. *Boecius. De Consolatione*, book i.

Thy temples wounded with a thorny crown, thy face spat upon, thy cheeks buffeted, thy head smitten, thy hand *sceptred* with a reed, thyself derided with wry mouths, bended knees, scoffing acclamations!

Hall. *Contemplations. Christ before Pilate*.

But in a body which doth freely yeeld
His partes to reason's rule obedient,
And letteth her that ought the *scepter* weeld,
All happy peace and goodly government
Is settled there in sure establishment.

Spenser. *Faerie Queene*, book ii. can. 11.

— Our faire Phœbus' shine,
Shall light those places,
With lustrous graces,
Where darknesse, with her glomie *sceptred* hand,
Doth now command.

Ben Jonson. *To James Earle of Desmond*.

Sometime let gorgeous tragedy
In *scepter'd* pall come sweeping by,
Presenting Thebes, or Pelops' line,
Or the tale of Troy divine.

Milton. *Il Penseroso*.

It may not be improper to mention in this place, that *σκηπτρον*, the *scepter*, or staff, was always the ensign of judicial and sovereign power; whence, in Homer, it is accounted sacred, and the most solemn oaths are sworn by it.

Potter. *Antiquities of Greece*, book i. ch. xx.

SCEP
TRE.

High on his car Sesostri struck my view,
Whom scepter'd slaves in golden harness drew.
Pope. *The Temple of Fame*.

SCHEME. SCERN, i.e. discern.

But, as he nigher drew, he easily
Might *scerne* that it was not his sweetest sweet.
Spenser. *Faerie Queene*, book iii. can. 10.

SCHÆFFERIA, in *Botany*, a genus of the class *Dioecia*, order *Tetrandria*. Generic character: male flower, calyx four-leaved; corolla, petals four, sometimes none: female flower, calyx and corolla as the male; berry two-celled; seeds solitary.

Two species, shrubs, natives of Jamaica and Hispaniola.

SCHÆNUS, in *Botany*, a genus of the class *Triandria*, order *Monogynia*. Generic character: glumes chaffy, one-valved, heaped together in bundles; corolla none; seed one, nearly round, situated among the glumes.

More than fifty species of rush-like plants, natives of both hemispheres; *S. mariscus*, *nigricans*, *compressus*, *rufus*, and *monoicus*, are natives of Great Britain.

SCHAFFHAUSEN. See SWITZERLAND.

SCHEDULE, also anciently written Cedula, *q. v.* Fr. *schede*, *schedule*, *cedule*; It. *cedola*; Sp. *cedula*; Lat. *schedula*, *scheda*; Gr. *σχῆδη* or *σχῆδη*, a sheet, (of paper,) from *σχίζ-ειν*, to divide, to cleave; Cotgrave calls it

"A scrawl, handwriting, or private instrument in writing. An addition or scrawl, annexed unto a testament or other deed." Also a list, a catalogue.

Then were certain devices for laws delivered to my learned council to pen, as by a *schedule* appeareth.

Burnet. *Records*, vol. ii. part ii. book ii. p. 61.

Of folded *schedules* had she many a one,
Which she perus'd, sign'd, tore, and gave the flood.

Shakspeare. *A Lover's Complaint*, p. 66.

Than sir Loys of Sanxere, marshall of France, signified the state of thenglysshmen to Parys to y^e kyng, and to the knights that were ther, and made writynges and *seadules* to be set vp on the pales, and in other places, sayeng thus, &c.

Lord Berners. *Froissart*. *Cronycle*, vol. i. ch. 273.

SCHELHAMMERA, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Melanthaceæ*. Generic character: corolla bell-shaped, petals six, involute; stamens inserted into the claws of the petals; anthers posterior; stigmas three, recurved; capsule superior, three-celled, three-valved; seeds many.

Two species, natives of New South Wales.

SCHEME, *n.* and *v.* } Gr. *σχῆμα*, *habitus*, from
SCHEMATISM, } *σχεῖν*, *habere*, the habit,
SCHEMATIST, } form. Our application of
SCHEMIST, } this word seems to be modern,
SCHEMER. } and peculiar to our own lan-
guage.

The form or frame, fabric, construction, contrivance; the plan or plot, the design or purpose. Johnson uses the verb in his explanation of *contrive*, and *schemer* is common in speech.

I might tary long time in declaring the nature of diuers *schemes*, which are wordes or sentences altered, either by speaking, or writing, contrarie to the vulgare custome of our speech, without chaunging their nature at al.

Wilson. *The Arte of Rhetorique*, p. 179.

All *schemes* are slighted which attempt to shine
At once with strange and probable design.

Parnell. *On the Different Styles of Poetry*.

They are not either of them ingenerable and incorruptible elements, much less the sole matter of all tangible bodies, but only

two of the primordial and of the most obvious *schematisms* of that, SCHEME. which is indeed the universal matter.

Boyle. *Works*, vol. iii. p. 106.

SCHI-
SANDRA.

The treasurer maketh little use of the *schematists*, who are dayly plying him with their visions, but to be thoroughly convinced by the comparison that his own notions are the best.

Swift. *Letter to Dr. King*.

Baron Puffendorf observed well of those independent *schemists* in the words here following.

Waterland. *Works*, vol. v. p. 500. *Supplement to the Christian Sacrament*.

For useless lay the now-neglected chain;

Threats fail'd, and punishments were *schem'd* in vain.

Lewis. *Thebaid of Statius*, book ii.

The idea of the possibility of multiplying paper money to almost any extent, was the real foundation of what is called the Mississippi *scheme*, the most extravagant project, both of banking and stock-jobbing, that perhaps the world ever saw.

Smith. *Wealth of Nations*, book ii. ch. ii.

SCHÉPPERIA, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Capparideæ*. Generic character: calyx four-leaved, spreading; corolla, petals four; nectary concave; seed-vessel a fleshy pod.

One species, *S. juncea*, native of the South of Africa.

SCHEUCHZERIA, in *Botany*, a genus of the class *Hexandria*, order *Trigynia*, natural order *Juncagineæ*. Generic character: calyx none; corolla six-parted; anthers linear; stigma sessile; capsule inflated, distinct, usually two-seeded.

One species, *S. palustris*, native of Lapland and Canada.

SCHINUS, in *Botany*, a genus of the class *Dioecia*, order *Decandria*, natural order *Anacardiaceæ*. Generic character: male flower, calyx five-cleft; corolla, petals five: female flower, calyx and corolla as the male; berry three-celled.

Six species, native of South America.

SCHIRROUS, or } Fr. *schirre*; It. *scirro*; Lat.
SKI'RRIOUS, } *schirrus*; Gr. *σκιρρ-ος*, *tumor*
SCHIRRO'SITY. } *durus*, a hard swelling, from

σκειρ-ειν, *indurare*, to harden. Cotgrave calls it—

A hard and almost insensible swelling, a kernel, bred between the flesh and skin by cold; or of thick and clammy phlegm.

All hard and *schirrous* tumors, occasioned by the gathering of humors, are healed with vervaine or cinquefoile sodden in vinegre.

Holland. *Plinie*, book xxvi. ch. xii.

As for cesterne waters, the physicians also themselves confesse, that they breed obstructions and *schirrhosities* in the bellie, yea, and otherwise bee hurtfull to the throat.

Id. *Ib.* book xxxi. ch. iii.

The difficulty of swallowing and breathing, occasioned by *schirrosities* of the glands, is not to be cured any otherwise than by extirpation.

Arbuthnot. *On Diet*, ch. iii.

The rough file grates; yet useful is its touch,
As sharp corrosives to the *schirrous* flesh,
Or, to the stubborn temper, keen rebuke.

Jago. *Edge-Hill*, book iii.

A fine portrait of Vesalius the anatomist when young, by Tintoret. He has a *schirrous* bone in his left hand, the other holds a compass.

Reynolds. *Journey to Flanders and Holland*.

SCHISANDRA, in *Botany*, a genus of the class *Monoecia*, order *Pentandria*, natural order *Menispermæ*. Generic character: male flower, calyx nine-leaved, disposed in three series; corolla none; anthers nearly sessile, cohering at their apices: female flower, calyx and corolla as the male; pistils numerous; berry one-seeded, inserted into the elongated receptacle.

One species, *S. coccinea*, native of North America.

SCHISM.

SCHISM, SCHISMA'TICK, SCHISMA'TICAL, SCHISMA'TICALLY, SCHISMA'TICALNESS, SCHISMLESS. Fr. *scisme*; It. *scismo*; Sp. *cisma*; Low Lat. *scisma*; Gr. *σχίσμα*, from *σχίζ-ειν*, to divide or sever. Cotgrave renders Fr. *scismatizer*, to *schismatize* it, to play the *schismatick*. See the Quotation from Locke.

A division, a separation.

Neither had the world any rest this many hundred yeares for reformyng of friers and monkes, and ceasyng of *schismes* that were among our clergy. Tyndall. *Workes*, p. 176.

Euen to be called a rayler, seditious, a maker of discorde, and a troubler of the comō peace, yea a *schismatike* and an hereticke also. Id. *Ib.* p. 196.

Surely by hys holy sainctes and martirs he meaneth theyr holy *scysmatikes* and heretiques.

Sir Thomas More. *Workes*, p. 302.

Therefore we are well assured that your *schismaticall* superintendentship can not stande, though al the power of the world were bente to holde it vp.

Jewell. *Defence of the Apologie*, p. 697.

Item. Whether any such as were ordered *schismatically*, and contrary to the old order and custom of the catholick church, or being unlawfully and *schismatically* married.

Burnet. *Records*, part ii. book ii. No. 15.

Schism is a rent or division in the church, when it comes to the separating of congregations, and may also happen to a true church, as well as to a false.

Milton. *Works*, vol. ii. p. 123. *Of True Religion*, &c.

None gives religion a more dangerous wound

(Of which firme union is a certaine signe)

Then *schismatics*, whose dreames would truth confound,

And to divide what faith should fast combine.

Stirling. *Doomes-day. The Seventh Houre.*

As mischievous a mark as any of her carnality, is her dissension and *schismaticallness* even to mutual persecution; as also the unnatural and unchristian wars of one part of reformed Christendom against the other. More. *On the Seven Churches*, p. 113.

The peace and good of the church is not terminated in the *schismless* estate of one or two kingdoms, but should be provided for the joint consultation of all reformed Christendom; that all controversy may end in the final pronounce or canon of one arch-primate or protestant pope.

Milton. *The Reason of Church Government*, book i. ch. vi.

Schism then, for the same reasons that have already been alledged, is nothing else but a separation made in the communion of the church, upon account of something in divine worship, or ecclesiastical discipline, that is not any necessary part of it.

Locke. *Letter concerning Toleration.*

He that denies not any thing that the Holy Scriptures teach in express words, nor makes a separation upon occasion of any thing that is not manifestly contained in the sacred text; however he may be nicknamed by any sect of Christians, and declared by some, or all of them, to be utterly void of true Christianity; yet in deed and in truth this man cannot be either a heretick or *schismatick*. Id. *Ib.*

But being *schismatically* inclined, he [John Geree] refused to conform to certain ceremonies in the church of England.

Wood. *Athenæ Oxonienses.*

The vulgar thus through imitation err;

As oft the learn'd by being singular;

So much they scorn the crowd, that if the wrong

By chance go right, they purposely go wrong:

Schismatics the plain believers quit,

And are but damn'd for having too much wit.

Pope. *Essay on Criticism.*

The design of all which is to bind us over to the study and practice of unity and concord, and restrain us by the strictest obligations from all *schismaticall*, factious, and turbulent behaviour in those sacred or civil societies whereof we are members.

Scott. *Christian Life*, part i. ch. iii.

The sin of *schism*, as such, is by no means the object of temporal coercion and punishment.

Blackstone. *Commentaries*, book iv. ch. iv.

SCHISM, a rent, a state of division. This word is restricted to Ecclesiastical usage. Dr. Hammond remarks, "It signifies literally *scissure* or *division*, which being a figurative, and withal a *relative* word, referring to some *body*, which is thus cut or divided, but that no natural but political body, the church or congregation of Christians; the literal notation of the word, in the Ecclesiastical use, will be τῆς ἐνότητος διαίρεσις, a *division in or from the unity of the church of Christ*. Only the form and termination of the word must be further noted; which being not σχίσσις, from the active σχίζω, but σχίσμα, from the passive σχιζομαι, the use of such passives is observable, being of the nature (and, for want of conjugations, designed to supply the place) of the Hebrew Hithpael, and so noting *reciprocal action*, or *passion*, where the passion is *from and on himself*, and is most fully expressed by the Latin neutrals, which partake both of active and passive, but are strictly neither of them. . . . The distinct nature of the word is a *voluntary* dividing, or in the neutral expression, which the Fathers familiarly use, a separating or receding of any member from the unity of the body, i. e. of the church of Christ; and so the schismatic is he that *divides himself* from the church of God, not he that is *cast out* by the governors of the church."*

I. The word Schism therefore describes an act or state of separation from the visible unity of the church; for which reason we find that writers in defence of modern Schisms, under the hard necessity of finding, or of forcing a theory which should harmonize with their state of division, have bent themselves with all their strength to overthrow the visible unity of the church. "For if there be no visible church, then no sin of Schism."—"If the visible unity of the church be not founded by God, then is there no crime of Schism in breaking that unity;"† the only sin of Schism which could then remain would be the sin of a contentious spirit, which is, in fact, only to use a name, and to deny the specific kind of sin altogether.

It is necessary in this Article to assume as proved, the doctrine of the visible unity of the church, which will naturally occur in its own place and order. See UNITY.

The following passages from the Fathers will at the same time exhibit the judgment of primitive times respecting the nature of Schism, and also fix the interpretation of such passages of Holy Scripture as are now equally claimed by those who maintain and those who deny the visible unity of the church.

On the words of St. Paul, "Now I beseech you, brethren, by the name of our Lord Jesus Christ, that ye all speak the same thing, and that there be no divisions (σχίσματα) among you."‡ Theodoret says, "He did not blame them for their difference of opinion, but for their strife and contention about their ministers."

St. Chrysostom, also, on the same verse: "The emphatic meaning of the word Schism, and the very term of

* Ham. *Of Schism*, ch. ii. 2. *Works*, vol. i. p. 333.

† Thorndike, *Weights and Measures*, p. 3.

‡ 1 Cor. i. 10.

SCHISM.

SCHISM. the accusation itself, suffices deeply to inculcate them. For the parts did not become many entire members, but even the one (body) perished. Were these (sects) perfect churches, there must needs have been manifold diversity in the system, but in that they are Schisms, the one is destroyed. For when a whole is divided into many, not only is it not multiplied, but even the one perishes. Such is the nature of Schisms.*

And in 1 Cor. xi. 18, "I hear there are Schisms among you." Theodoret writes, "He does not speak of Schisms of opinion, but such as arose from the desire of pre-eminence, with which he had charged them in the beginning of the Epistle."

St. Chrysostom also says, "Let me say this to such as attach themselves indiscriminately to those that divide the church. For if they hold also contrary doctrines, even for this very reason it is not right to mix with them, but if they agree with us, much less: wherefore? because their disease is love of pre-eminence. Know ye not what befell Corah, Dathan, and Abiram? Did not their fellows also share their punishment? What sayest thou? Their faith is the same as ours. They too are orthodox. Why then are they not with us? There is one Lord, one faith, one baptism. If they are right, we are wrong. But if we are right, they are wrong. . . . Tell me, do ye think this enough, to say they are orthodox? But their orders, are they lost? And what good is there in all the rest if these are not perfect? For we must contend as for the faith, so also for the orders of the church. Since, if it be lawful for every man "to fill his hands," as they were wont to say of old, and to become a priest, let all draw near. In vain was this altar builded; in vain is the complement of the church; in vain is the defined number of the priests. Let us away with these things and destroy them. Some man says, God forbid. . . . If they have the same doctrines, the same sacraments, wherefore does another ruler intrude upon a church which is not his own?"†

"Wherefore we tell you these things that ye may not be able in that day to say, Nobody told us. Nobody explained it to us. We knew it not. We thought this sin to be nothing. Wherefore I declare unto you, that rending the church is no less sin than falling into heresy."‡

Zonaras, on the thirty-third Canon of the Council of Laodicea, which forbids Catholics to pray with schismatics, writes, "They are called heretics who err concerning the faith. But schismatics are they that are sound in doctrine, but for some cause or other separate, and set up congregations."§

And so the Fathers of the Latin church, as St. Cyprian, who writes, "He who holds not this unity of the church, does he think he holds the faith? . . . For the blessed apostle St. Paul teaches the same thing, and exhibits the sacredness of unity in these words; 'There is one body, and one spirit, &c.' This unity it is our duty to hold, and to vindicate with firmness, especially ourselves the Bishops, who preside in the church, that we may show the Episcopate to be one, and undivided. . . . The Episcopate is one, a share of which is vested by a common tenure in each alike. The church is one, though extended far and wide by its naturally prolific

tendency, in like manner as the sun has rays many, yet one light; and in a tree many boughs, but their strength, which lies in the firmness of the root, is one; and when many streams flow from one fountain, although by the abundance of the discharge they may seem to be manifold and diverse, yet is unity preserved in their head. Divide the ray from the sun, the unity of light forbids division; break the bough from the tree, it can no longer blossom; cut off the stream from the fountain, and it dries up. So in the church of God. Whosoever separates from the church separates from the promises which are in the church. Nor will he attain the reward of Christ who leaves the church of Christ. . . . The Lord admonishes us, 'He that is not with me is against me, and he that gathereth not with me scattereth.' He that breaks the peace and concord of Christ sets himself against Christ. He that gathereth anywhere but in the church scattereth the church of Christ. . . . The Lord saith, 'I and my Father are one;' and again, of the Father, the Son, and the Holy Ghost it is written, 'And these three are one.' And does any man believe that this unity, which is derived from the indivisibility of God, and blends itself by heavenly mysteries, can be rent in the church, and separated by the repulsion of conflicting wills? He who holds not this unity, holds not the law of God, holds not the faith of the Father and the Son, holds neither life nor salvation. . . .

"The Son himself admonishes us in his Gospel, and says, 'And there shall be one fold and one shepherd.' And does any one think there can be in one place many shepherds, and many flocks? . . . There is one God, there is one Christ, one Church, which is His; one faith, one people, conjoined by the band of concord in the solid unity of one body. The unity may not be sundered, the individual body may not be separated by the dissolution of its joints, or torn in pieces by the rending of its scattered elements."*

And lastly, St. Augustine. "Whosoever they be that agree not with the Holy Scriptures concerning the head, (Christ,) although they be found in all places wheresoever the church is planted, they are not in the church."

And again, "Whosoever shall agree with the Holy Scriptures concerning the head, and yet communicate not in the unity of the church, they are not in the church, because they hold not with the testimony of Christ himself concerning the body of Christ, which is the church."†

Again, "Ye are in our fellowship, in baptism, in the creed, in the other mysteries of the Lord. But in the spirit of unity and the bond of peace, above all in the Catholic church itself, ye are not with us."‡

From these passages it is plain that the Fathers of the church understood and taught the meaning of the word Schism to be the act or state of separation from the visible unity of the body, without any regard to the accidents of motive, or the spirit of contention, or the difference of opinion, which might accompany, but could never change, the nature of the act. Schism was in their belief the antagonist of unity, as falsehood is of truth; and so to be regarded apart from all its accidents, whether before or after the act.

II. Such being the nature of Schism, we must proceed to consider its several kinds.

The church, or kingdom of God upon earth, being a

* St. Chrys. Hom. iii. in Ep. ad Cor.

‡ Ep. xciii. ad Vincent. sec. 46. Aug. tom. ii. 249. ed. Ben.

SCHISM. body no less visible than the empires of the world, must therefore have a visible government, and order of faith and discipline.

Our Lord Jesus Christ committed to his Apostles the mysteries of truth and grace, with authority for the government of his flock, and they again delivered the mysteries of the Gospel to the churches planted throughout the world, and ordained in the name of Christ an order for the perpetual government of the body. The mysteries of grace and truth, *i.e.* the word and sacraments, were a fixed and unchangeable deposit; but the authority committed to the Bishops of the church was designed to be continuous, and endowed with a manifold power for every emergency until the coming of their Lord.

The conditions of communion were therefore a profession of the Catholic faith, and subordination to Apostolical authority. This authority comprehended among its functions, 1. the power of the keys, *i.e.* in giving or refusing the holy sacraments and absolution; 2. the power of enjoining ritual and liturgical observances, and the detail of matters indifferent. Such were the terms on which men were received and suffered to continue in its communion. Now, what the individual was to the particular church, the particular churches were to the church at large. They too were bound to keep the Catholic faith whole and undefiled, and to submit to the collective Apostolical authority of the church Catholic.

And therefore, as the obligations to unity were twofold, internal, *i.e.* of each several member to the church in particular, and external, *i.e.* of each several church to the whole Catholic body, so the act of Schism is likewise twofold.

1. And first of external Schism. The church Catholic, being a body in perfect unity of subordination, has, therefore, many relations between its several integral parts; such as the Patriarchal and Metropolitaneal authority, as well as the equality of the several churches one with another, whether subordinate to any ecclesiastical superior, or of independent jurisdiction.*

External Schism, therefore, *i.e.* the breach of intercommunion, varies in its character, as the act of separation may be from a church possessing Patriarchal, Metropolitaneal, or simply independent authority. Still, whatsoever may be the accidents of Schism, its nature remains the same, *i.e.* a suspension of intercommunion between any two or more churches of the Catholic body. For instance:—

After the Council of Ephesus, (431,) the churches of Mesopotamia and Assyria in the East, taking the Nestorian side, fell away from the unity of the whole.

After the Council of Chalcedon, (451,) the churches of Egypt and Æthiopia, taking the part of Eutyches, separated themselves.

After the failure of the Council of Florence, (1442,) the churches of the East, under the Patriarchate of Constantinople, and those of the Western church, under or in communion with the Patriarchate of Rome, finally separated from each other.

After the Council of Trent, (1564,) the Roman Patriarch, and the churches in communion with Rome, committed a deliberate Schism by erecting new barriers of division from the rest of the Christian church.

In all these cases the several churches retained their internal unity in succession and discipline; they de-

parted indeed from the unity of the faith, the Nestorian and Eutychian churches by rejecting a portion of truth, and the Roman by superadding to the Catholic doctrine the novelties of unauthorized tradition. But their Schism consisted in breaking from intercommunion.

2. And secondly, of internal Schism: of these there are two kinds: 1. where the Apostolical succession has been pretended; 2. where Apostolical discipline has been rejected altogether.

(1.) Of that kind of internal Schism which pretends to perpetuate the Apostolical succession, the following are examples. The Schism in the IVth Century at Antioch, in which was for many years a twofold succession, one acknowledged by the Eastern, and the other by the Western church. The intruding party at length prevailed.

The Schism of Donatus in the African churches lasted for more than one hundred years; the schismatical Bishops being at one time four hundred in number, and only fewer by sixty or seventy than the Catholic. The great Western Schism, in which for fifty years there were two rival Popes at Rome and Avignon, and in the year 1409 a third was elected by the Council of Pisa.

Under this head may be added the Roman Schisms in England and Ireland, in which a succession has been intruded since the beginning of the XVIIth Century.

(2.) A second and the commonest kind of internal Schism is that of one or more members of a church voluntarily withdrawing themselves from communion without any pretension of continuing the Apostolical succession. This has been the prevalent form of Schism in Protestant countries since the Reformation, till at length the very precept and obligation of visible unity have been absolutely denied.

This kind of Schism is wont to take the shape of an established system pretending to primitive purity, or of irregular voluntary combinations, ever dissolving and forming around some new centre. As examples of these may be taken the Presbyterian and Independent bodies at home and abroad, and the unnumbered sects ever subdividing under some new name.

There are two other indirect forms of Schism to be instanced; the first, when any member of a church shall contumaciously refuse to undergo a penance imposed by rightful authority; the second, when any man shall persevere in a state of separation contrary to better instruction, or through neglect of opportunities of being instructed.

III. Such being the *nature* and the several *kinds* of Schism, it remains only to observe that the act of separation, inasmuch as it is a direct breach of a Divine order, must always partake of the nature of sin; and also inasmuch as it is a contravention of God's ordained discipline for his people, it cannot fail to be in every case hurtful both to the party separating and to the church itself.

For Schism is to the church what a wound is to the body; not always deadly, but always injurious, both in its immediate and ultimate effects.

God has been pleased to ordain that unity should be "the sacrament of truth," the mode of its expression, and the safeguard of its very being. Every Schism, therefore, shakes its safety, and makes the voice of the church feeble and tremulous.

The first four General Councils gave united witness to the great Catholic mysteries defined in the creed of Constantinople. From that time successive Schisms

* *Ἀὐτοκεφάλως*, as Cyprus and Britain.

SCHISM. have made the gathering of a General Council impossible; the church has therefore forfeited the Urim and Thummim, by which of old she was wont to inquire of the Lord. Instead of Catholic consent can now be found only the discord of particular churches.

**SCHIZO-
PETA-
LUM.**

Again, Schism exhausts the strength of the church. The one Episcopate, once so mighty in the concord of its diffused multitude, by division is fallen too much under secular dominion. If the kings of the earth have become the hearers of the church, and her benefactors, they have often exercised an injurious lordship over her. The churches of Christendom are being punished for their division by the hard rule of secular authorities.

And further, Schism destroys the purity of the church. As in a healthy constitution of body the morbid humours are thrown out, so from the church, when at unity in herself, were heresies expelled by a healthful universal action. But in a divided state the disease is absorbed into the members, so that they grow severally corrupt, each with its own particular affection. The Catholic features of unity in faith and discipline have been gradually overgrown by particular differences. National customs, civil enactments, private interpretations, false traditions, and the successive, though transitory, influence of individual men all combine by a continued action to heighten differences into repugnancy, and Schism into warfare.

And thus the stream of Apostolical teaching is either in part obstructed, or catches a foreign quality in its course. Divided churches can at best boast only of a comparative purity.

These are some of the many direct evils flowing from external Schism between the several churches of Christendom; but there are ulterior effects of a deeper and more searching kind still to be traced. For external Schism, by shaking the authoritative certainty of Apostolic truth, and the strength of ecclesiastical discipline, and by infecting the purity of the body, generates the inward diseases which end in breaches of subordination and charity. Ill-will and false teaching are the legitimate offspring of Schism, and the perpetual affliction, even where they may fail to effect the final destruction, of particular churches.

Lastly, the chiefest sufferer by an act of Schism is he that commits it. For it is no less than a voluntary excommunication, a self-infliction of that punishment which, by the power of the keys, the church imposes upon the unworthy. A man is thereby cut off from the ordained channels of grace through which the mystical body of Christ is quickened and sanctified. There is a connection between the unity of the church and the perfection of charity in the individual mind, as between the mould and the cast. Subordination and brotherly fellowship are the perfective ordinances as well as the unerring tests of charity. "And this," writes St. Augustine, "is the charity they have not who are cut off from the communion of the church Catholic. And though they speak with the tongue of men and angels, and know all mysteries and all knowledge, it profiteth them nothing; for they have not the love which is of God who love not the unity of the church." Aug. *De Bapt.* lib. iii. c. 16.

**SCHISM.
SCHOLY.**

SCHIVERECKIA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferae*. Generic character: calyx equal at the base; petals entire; stamens large, toothed; silicule ovate; valves convex, longitudinally depressed in the middle; seeds many.

One species *S. podolica*, native of Poland. De Candolle.

SCHIZOCERUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* three-jointed, the two basal joints short, third elongate, furcate, with numerous rows of rigid hairs on each branch; in the female simple, filiform, and naked; mandibles unidentate; head transverse, with a frontal tubercle; *ocelli* three; wings ample, anterior with one perfect marginal areolet, and three imperfect, nearly equal, submarginal ones, the former with its nervure carried to the apex; *abdomen* rather short; legs simple; *tibiæ* with spurs at the apex only.

Type of the genus, *Tenthredo furcata*, Villers, *Entom.*; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. vi. p. 20. Two species, both of which are found, but very rarely, in England.

SCHIZOLÆNA, in *Botany*, a genus of the class *Monadelphia*, order *Polyandria*, natural order *Chenaceæ*. Generic character: involucre two-flowered; calyx three-leaved; corolla, petals five; capsule, enclosed in the involucre, three-celled; cells many-seeded.

Three species, elegant, small-sized trees, natives of Madagascar.

SCHIZOPETALUM, in *Botany*, a genus of the

VOL. XXVII.

class *Tetradynamia*, order *Siliquosa*, natural order *Cruciferae*. Generic character: calyx cylindrical, closed; corolla, petals ovate, deeply cleft; stigma gibbose; silique and seeds unknown.

One species, *S. Walkeri*, native of Chili.

SCHIZOPYGA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* slender, half the length of the body, with the apex a little curved; head short, transverse; eyes prominent; *thorax* somewhat cylindrical; *scutellum* nearly triangular, and slightly tuberculated; wings four, moderate, anterior without a cellule; *abdomen* sessile, with the segments transversely impressed, the sixth and seventh beneath with a longitudinal cleft, where, in the female, the ovipositor, which is very short and erect, arises; legs rather short; *femora* stout.

Type of the genus, *S. podagrica*, Gravenhorst, *Ichneumonologia Europææ*, vol. iii. p. 128. Four species, two of which occur sometimes in England.

SCHMIDELIA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Sapindaceæ*. Generic character: calyx four-parted; corolla, petals four, bearded on the inside; berry one-seeded.

Eighteen species, natives of the Southern hemisphere.

Sith that in salvage forests she did dwell,
So farre from court and royall citadell,
The great *schoolmaistresse* of all courtesy.

Spenser. *Faerie Queene*, book iii. can. 6.

To this abuse, and the mischiefs of confounding the signification of words, logick, and the liberal sciences, as they have been handled in the *schools*, have given reputation.

Locke. *Of Human Understanding*, book iii. ch. x.

He remembers only the name of Conon, and forgets the other on set purpose (whether he means Anaximander or Eudoxus, I dispute not); but he was certainly forgotten, to show his country swain was no great *scholar*.

Dryden. *Virgil. Dedication.*

In the most strict and *scholastical* sense of that word.

Barrgw. *On the Creed.*

As for the obligation, I know no moralists or casuists that treat *scholastically* of justice, but treat of gratitude under that general head, as a part or species of it.

South. *Sermon* 11. vol. i.

It ought to be determined whether those we call monsters be really a distinct species, according to the *scholastic* notion of the word species.

Locke. *Of Human Understanding*, book iii. ch. vi.

Scholasticks have been so intemperate in the use of these words, that they could not make a rational discourse of any thing, though never so small, but they must stuff it with their quiddities, entities, essences, hæceities, and the like.

Cudworth. *Intellectual System*, p. 67.

Men of rank and fortune bring up their children with care, and

bestow upon them every improvement which their capacity will receive; and there is often found, in the genteel and most elevated circles of society, the union of the fine gentleman with the polite and well accomplished *scholar*.

Knox. *Winter Evenings. Evening* 26.

Ye once were justly fam'd for bringing forth,
Undoubted *scholarship* and genuine worth.

Cowper. *Tirocinium.*

The charitable foundations of *scholarships*, exhibitions, bursaries, &c. necessarily attach a certain number of students to certain colleges, independent altogether of the merit of those particular colleges.

Smith. *Wealth of Nations*, book v. ch. i.

Great *schools* rejected then, as those that swell
Beyond a size that can be manag'd well.

Cowper. *Tirocinium.*

He [the father] may also delegate part of his parental authority, during his life, to the tutor or *schoolmaster* of his child; who is then in *loco parentis*, and has such a portion of the power of the parent committed to his charge, viz., that of restraint and correction, as may be necessary to answer the purposes for which he is employed.

Blackstone. *Commentaries*, book i. ch. xvi.

SCHOTIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-cleft; corolla, petals five, inserted into the calyx; pod on a foot-stalk.

One species, *S. speciosa*, native of Senegal.

SCHOUWIA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*. Generic character: silicle oval; valves furnished with a narrow wing at the back.

One species, *S. Arabica*, native of Arabia.

SCHRUHRIA, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*, natural order *Compositæ*. Generic character: calyx five-leaved; radial florets solitary; receptacle naked; down chaffy, five-leaved.

One species, *S. abrotanoides*, native of Mexico.

SCIÆNA.

SCIÆNA, from the Greek *σκια*, a shadow, Lin. *Maigre*, Yarrell. In *Zoology*, a genus of animals belonging to the family *Sciænoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head bulky, entirely covered with scales, supported by cavernous bones; under part of the lower jaw studded with pores; no teeth on the tongue, vomer, or palatine bones; edges of the jaws armed with teeth, in some species all of a size or nearly so, and in others varying, some teeth being of great length; preopercule denticulated; opercule terminating in points; branchial rays seven; dorsal fins two, the second very long, and not entirely distinct from the first; spines of the anal fin of varying size.

The family *Sciænoides*, formed by Cuvier upon the genus *Sciæna* of Linnæus, seems, according to the former author, a repetition of the subdivisions of the family of Perch, but is distinguished from them by having the palate completely smooth, no teeth existing either on the vomer or palatine bones, in which respect they are connected to the hard-cheeked family by the genus *Synanceia*. In very many of their internal details, however, the *Sciænoid* approach the *Percoid* family more closely. By Linnæus the genus *Sciæna* was made to include several kinds of fish, which, together with others, now form the family; but the disposition of zoological writers to form new genera, by subdivision

upon minor and not very important characters, has been exemplified in few instances more fully than in the present; in which it will be seen that the so considered distinctive marks pass so gradually from one to the other genus, as to render it almost impossible to fix satisfactory boundaries; whilst for all practical purposes it is amply sufficient to group those species which more nearly resemble each other into subdivisions of one large genus, a permission granted by Cuvier, and practised by Temminck in his *Manual of Ornithology*. With this notion the present article includes all those species of the genus *Sciæna* of Linnæus, in which the dorsal fin is divided, and the lower jaw beardless; the variation in the size and arrangement of the teeth, and the strength of the spiny rays of the fins affording the opportunity of further dividing it into the three subgenera—*Maigres*, *Otolithes*, and *Corbs*.

True *Maigres*.—*Sciæna*.

Anal spines very slender; no cuspid teeth; a single row of strong, pointed teeth, of nearly equal length; besides which, in the upper jaw, is a narrow band of fine teeth.

S. Aquila, Cuv.; *le Chéilodiptère aigle*, Lacep.; *Maigre*, Yarr. This fish is rarely caught less than three feet in length, and sometimes attains six or seven:

SCIÆNA. it is bulky for its length, and the head to the gills is about a fourth of its whole length; the mouth is not very wide; the lips fleshy; the larger teeth are distant, pointed, and rather curved; in the lower jaw the interspaces have many very small teeth, and in the upper jaw a narrow row of similar teeth behind the larger ones; on each side of the lower jaw, near the chin, are three deep pores; the branchial aperture is large, and extends as far as the anterior margin of the orbit; its membrane is really supported by seven rays, of which the seventh is hidden by the gill-flap, and hence originated Linnæus's incorrect statement of only six rays to the branchial membrane; the first dorsal fin is supported by seven hard spiny rays, and scarcely separated from the second, as the fin membrane is continued from one to the other about a line or two deep; the second fin has from twenty-seven to thirty rays, but none of them are hard; the pectoral and ventral fins are about a sixth of the whole length of the body; the anal fin very short, consisting of but nine rays, of which the first only is spiny, very slender, and almost hidden in the edge of the fin; the caudal fin has seventeen branching rays, and is straight. The colour of the Maigre is silvery-grey, with a brownish tinge towards the back, and whitish on the belly; the first dorsal, the pectoral, and ventral fins are bright red, and the other fins reddish-brown. This fish is a native of the Mediterranean, and occasionally, though rarely, taken in the British Channel. According to Duhamel, the fishermen of Royan consider the appearance of the Maigre as indicative of the approach of the Sardines, whilst at Dieppe it is held to usher in the Herring; a circumstance only explained by the predatory habits of the fish inducing it to hover about the approaching shoals of its finny prey. When moving together in great numbers they are said to utter a very loud grunting noise, which may be heard from the depth of twenty fathoms. In the XVIth Century it was well known in the markets of Paris, where it was called the *Maigre*. Upon the coasts of Languedoc it was called, according to Rondelet, the *Peis-rei*, or Royal-fish. At Nice it is now known as the *Figou* and *Vanloo*; and Cuvier considers it certain that, according to the description left by Salvian, it is the same as the fish in his time called in the Roman markets *Umbrina*, which name Salvian attaches to it, and believes it the same as the famous *Umbra* of the ancients. It was then highly valued as a table dainty, but by some chance has of late years been so scarce, probably from shifting its ground, that Cuvier with the greatest difficulty succeeded in obtaining a few specimens from the coast, the Parisian market being unable to furnish any; though in the XVIth Century so common as to give rise to the proverb, *Il vient de la Rochelle, il est chargé de Maigre*. From the writings of Apuleius it appears that the Maigre was in high repute among the ancient Romans; and Salvian mentions that in his time it was esteemed only second to the Sturgeon, at all times of the year, but especially during the dog-days, when it was in highest season. The parts most valued by epicures were the belly and head, the latter of which it was the custom, when the fish exceeded an ell's length, to present to the three persons who were guardians of the city of Rome. With reference to this custom Paulus Jovius mentions an amusing story. One T. Tamisius, as celebrated among the Roman courtiers for his wit as degraded by his devotion to the pleasures of the table, having been apprized by his servant, who

he was in the habit of setting to watch for the purpose, **SCIÆNA.** that the head of a fine Maigre had been carried to the Triumvirs, hasted off to the Capitol pretending urgent business with the magistrates, and hoping that by spinning out his conversation he might occupy them till dinner time and be invited to partake of the fish. The Triumvirs, however, had determined on sending it to Cardinal Riarius, the nephew of Pope Sixtus IV., and as Tamisius gained the very threshold he met the magnificent head borne away on a large dish and crowned with flowers. He directed his servant to accompany the bearers, and, himself following, was delighted at the present being taken to the Cardinal's, where he fully anticipated partaking of it. Riarius, however, who was rather disposed to pun, on receiving it, observed, "Certainly this great triumviral head is due to the greatest Cardinal," and accordingly forwarded it to Cardinal Frederic Sansuerinus, who was a very fat man. Hither was it followed by Tamisius, blaming Riarius for his ill-timed munificence, but again to be disappointed, as the Cardinal sent it on a golden dish to Chisius, a rich banker, to whom he was under great obligations, who lived on the other side of the Tiber, and built the Farnese palace. Here, weary and dripping with perspiration, Tamisius arrived, and with no better luck, as the banker immediately despatched it, decked with fresh flowers, to his mistress Imperia, who had acquired that name on account of her beauty and elegant allurements. More angered by his disappointment than with his insatiable gluttony, which had caused him so much trouble, Tamisius turned his horse and rode beneath a scorching sun across the Sistine bridge to the house of Imperia; so fierce and violent was his insatiable appetite, that, noble and aged as he was, he shamelessly introduced himself to the table of a courtesan, who was astonished at the arrival of this new admirer.

The ear-stones, which in this and the genus *Umbrina* are larger than in any other genus of fish, were formerly considered to possess medicinal virtues as antidotes to the colic, were hence called Colic-stones, and worn about the neck enclosed in gold.

S. Hololepidota, Cuv.; *le Labre Hololepidote*, Lacep.; *Cape Maigre*. Its general form, proportions, and number of rays similar to the last species; but the head is rather fuller, the teeth rather more delicate, and the branchial rays flatter and more slender. Cuvier almost doubts its being a distinct species. It is very common at the Cape of Good Hope, where it is caught both with hook and net, and is salted and dried like Cod.

S. Pama, Cuv.; *Bola Pama*, Buchan.; *Gangetic Maigre*. It acquires four or five feet in length; the head is large, especially on the sides; the notches in the preopercule are slight, and the bony opercule terminates in two flat points; the lower jaw has but two very minute pores on its extremity, and is scaly, but not the lips; both jaws have a narrow row of fine teeth, besides a row of strong pointed teeth far apart, of which the anterior two are longest in the upper, and the lateral in the lower jaw, with two in the middle rather longer, as in the Otolithes; the first dorsal fin is triangular, and its spines very slender, the soft rays of the second are from forty-one to fifty-five; the anal has but two very small, and hidden in the edge of the fin; the caudal is rhomboidal and much pointed; the back is greenish-brown with golden glossings; the sides and belly silvery; the first dorsal fin is edged with black; both

SCIÆNA. dorsals and the caudal marked with black points. It is caught in great numbers at the mouths of the Ganges, but does not ascend higher than the tide; at Calcutta, those which do not exceed twelve or fifteen inches in length are called *Whitings*.

Otolithes.—Otolithi.

Upper jaw furnished with two strong pointed teeth; two small and scarcely distinguishable pores on the lower jaw; anal spines not so strong as in the Maigres.

S. Rubra; *Otolithus Ruber*, Cuv.; *Johnius Ruber*, Bl.; *Red Otolithe*. Is fifteen inches long, and, when the mouth is closed, resembles a small Maigre; the length of the head is rather more than a third of that of the body; the middle two teeth of the upper jaw are very large and strong, and separated by two of moderate size, on either side are some small conical teeth, and within a row of very fine teeth; two large teeth are also in the lower jaw, of which one is often lost, and the fine teeth are disposed as in the upper jaw; the anal fin is small; the caudal rhomboidal in the young, but as the fish grows becomes round and even truncated; its general colour is reddish, and the lateral line silvery. It is caught upon the Coromandel coast, especially at Pondicherry, where it is taken throughout the year, and called by the natives *Panan*.

S. Argentea; *Otol. Argent*, Kuhl and Van Hass.; *Silvery Otolithe*. According to Kuhl and Van Hasselt this fish is six and a half inches long, very similar to the last species, but its head not so deep; only twenty-eight soft rays to the second dorsal fin, and the caudal very rhomboidal; the back violet; the belly silvery with violet glossings; and the fins yellowish-grey with violet edges. Dussumier, however, met with specimens of twelve and fifteen inches long, and, according to the narration of the fishermen, some attain the size of a Salmon; he says the back is greenish clouded with red, and the belly silvery; the pairs of fins and the anal yellow; the dorsal of the same colour as the back, and the caudal tinged with red. They are caught off the coasts of Batavia and Malacca, and at the latter place known to the natives by the name of *Ikarohampay*.

S. Maculata; *Otol. Mac.* Kuhl and Van Hass.; *Spotted Otolithe*. Nine inches in length; the first dorsal has nine spiny, and the second thirty-one soft rays; the back is yellowish-brown, and the belly white; the cheeks tinged slightly with violet; the fins yellowish-grey; the back, sides, second dorsal, and caudal fin irregularly spotted with brown.

S. Versicolor; *Otol. Versic.* Cuv.; *Varying Otolithe*. About a foot long; it has but twenty-one soft rays to the second dorsal fin; the back is bright green, changing to deep blue and golden; and the belly below the lateral line pearly; fins slightly tinged with yellow; caudal fin slightly rhomboidal. It is found on the Coromandel coast, and called by the natives *Potteekanasah*.

S. Bispinosa; *Otol. Bisp.* Cuv.; *Two-Spined Otolithe*. Four inches and a half in length, with two small, well-defined spines to the angle of the preopercle in addition to the usual notches; its second dorsal fin has thirty-one rays; the caudal fin more pointed than in either of the others; the colour silvery tinged with brown on the back. Found in the neighbourhood of Rangoon.

S. Æquidens; *Otol. Æquid.* Cuv.; *Equal-toothed Otolithe*. From two to three feet in length, and resem-

bling in size the Cape Maigre, from which, however, it is distinguished by its pectoral fins being longer and more pointed; its tail longer and crescentic instead of square; its teeth, except the cuspid, are all equally short.

S. Regalis; *Otol. Reg.* Cuv.; *Labrus Squeteague*, Mitch.; *Royal Otolithe*. Generally not more than fifteen inches in length, but occasionally as much as twenty-seven, and weighing more than six pounds. Like all the other American species of this division, the lower jaw has no cuspid teeth, but has two very strong in the upper jaw; the opercle terminates in two flat points; the two dorsal fins are quite distinct, and the latter with the anal and caudal fin are for the most part covered with small scales; the anal fin has thirteen rays; the head and back are brown, often tinged with greenish; the sides silvery with dusky spots, which are sometimes wanting; ventral and anal fins yellow, all the rest brownish. This species is very common at New York, and is always found in company with the Bar. It is known to the Anglo-Americans by the name of *Weakfish*, because considered by some as a debilitating food, and by others from it pulling but slightly on the line with which it is caught. The fishermen assert that it makes a dull noise like the beat of a drum, which they hear beneath the water when the fish is abundant. It is used for the table, and its horny air-bladder makes as good isinglass as that of the Sturgeon. The Narragansets call it *Squeteague*, and the Mohicans *Checous*. Cuvier considers it to be the same fish as the *Johnius Regalis* of Schneider.

S. Virescens; *Otol. Vir.* Cuv.; *Greenish Otolithe*. About eleven inches long, and very nearly resembling the last species, but it has only seven rays to the anal fin, and its tail is rhomboidal or even pointed; the opercle terminates in a single sharp point; the back is olive-green, and the sides and belly silvery. It is found at Surinam,

S. Toe-roë; *Otol. Toe-roë*, Cuv.; *Tou-rou Otolithe*. About twice as large as the Weakfish, which it resembles, except that its muzzle is shorter and more obtuse, its lower jaw less prominent, and its cuspid teeth are smaller; the number of soft rays to the second dorsal fin only twenty; the tail rhomboidal; its general colour is silvery, with bluish glossings on the opercle. It is found on the South American coasts, and at Surinam is known as the *Toeroë* and *Schell-vish*.

S. Guatucupa; *Otol. Guat.* Cuv.; *Striated Otolithe*. About twenty-seven inches long; is very similar to the last species, but distinguished by its square tail, by the greater length of its head, by the lower jaw being rather longer than the upper, and the teeth of the outer row being smaller and more numerous; by the spine of the anal fin being much shorter, and the second dorsal having only eighteen rays; its general colour is silvery, tinged with greenish-golden on the back; the middle of each scale is marked by a brownish line, which, passing from the back obliquely forwards, is lost on the belly; fins greenish-brown. Found on the coast of Monte Video.

S. Leiarcha; *Otol. Leiarch.* Cuv.; *Short-spined Otolithe*. Ten inches in length, and very similar to the Weakfish, but its anal spine shorter than many other species; its caudal fin square; general colour silvery with a brownish tinge. Found on the Brazilian and Cayenne coasts.

S. Microlepidota; *Otol. Microl.* Cuv.; *Small-scaled Otolithe*. Sixteen inches in length, and remarkable for

SCIÆNA. the small size of its scales, which are especially small on the opercle; its colour is silvery, glossed with green upon the back. Is taken at Surinam.

S. Nebulosa; *Otol. Nebul.* Cuv.; *Cloudy Otolithe*. Both this and the last species have great resemblance to *S. Leiarcha*, but it is distinguished by the round spots and cloudings of the back, and the longitudinal stripes across the rays of the second dorsal fin.

Two species, which have the muzzle short, and some of the teeth very long, and a long pointed tail, have been separated by Cuvier from the sub-genus *Otolithus* for these peculiarities, and called by him *Ancylodon*.

S. Jaculidens; *Ancylodon Jac.* Cuv.; *Lonch. Ancyl. Bl.*; *Spear-toothed Otolithe*. Sometimes attains a foot in length; its card-like teeth are so numerous and in so narrow a row that they are scarcely discernible, but in either jaw are rows of teeth which widen about their middle like the head of a spear; the upper jaw has two rows of these teeth, and between them in the middle are two very large ones; and in the lower jaw the first three teeth, especially the second, and also the fifth, are very long, but do not equal the middle teeth of the upper; the general colour is silvery, tinged with brownish-grey on the back, and indistinctly spotted with brown in numerous close oblique rows; fins yellowish, the second dorsal and caudal marked with very fine brown points. Is found at Surinam and Cayenne.

S. Parvipinnis; *Ancyl. Parvip.* Cuv.; *Short-finned Otolithe*. About six inches long, but remarkably characterised by the complete division and small size of its dorsal fins; its teeth resemble the last species; its colour silvery, tinged with slate-grey on the sides of the back; upper part of the gill-flap blackish; fins yellowish. From Cayenne.

Corbs or Crowfish.—Corvina.

This division is distinguished from the Maigres and Otolithes by the size and length of their anal spine, and from the latter by not having any cuspid teeth; the first row of their teeth is larger than the second, but all are of equal size and pointed.

S. Nigra, Lin.; *Corvina Nigr.* Cuv.; *Black Corb or Crowfish*. From fifteen to eighteen inches in length; the muzzle obtuse, with the mouth at its tip but little projectile, and with not very thick lips; six or seven very small pores in two rows are placed about the muzzle, and four beneath the tip of the lower jaw; the teeth are ranged in two broad bands in each jaw, those of the front row being largest; the opercle terminates in two flattened points; the preopercle rectangular, with its angle rounded, and so finely toothed as to be only ascertained by the touch; the anal fin is twice as deep as the second dorsal, its first spine very short, but its second lengthy and very strong; its general colour deep brown, becoming paler, and assuming a silvery tinge on the belly, and when first taken from the water it has a golden-purple brilliancy; the fins are brown, except the anal and ventral, which are black, and the caudal has a narrow black edging at its extremity and lower margin. It is common in the Mediterranean, and in Spring time visits the chalky strands of the coast to spawn. It is called by the French fishers *Corb* or *Corbeau*; sometimes also *Vergo* and *Durdo*; at Nice, *Cuorb*; at Ivica, *Corba*; and by the Italians *Corvo di Fortierra*. It is often sold in the markets as the Maigre, but it is not of so good flavour as that fish.

S. Canariensis; *Corv. Canar.* Cuv.; *Canary Crowfish*. Very similar both in colour and form to the last species, from which it is distinguished by the greater length of the rays of the fins, especially of the caudal; the anal spine is very slender; and the lower jaw has but three pores. It is caught off the Canaries, and Adanson, by whom it was first noticed, calls it the *Peignet*.

S. Albida; *Corv. Albid.* Cuv.; *White Crowfish*. About two feet long, and, though greatly resembling the general appearance of the Black Crowfish, is distinguished by its colour, which is whitish or light grey; by its teeth being finer, its dorsal spines shorter and stronger, its anal spine stronger and nearly as long as the soft rays; by the toothings of its preopercle being stronger; by the caudal fin being rounded or even pointed, and by its lower jaw having five pores. It is caught at Pondicherry, where it is called *Sapé-Katelé*; and at Mahé, on the Malabar coast, where it is known as the *Marco-charao*: it is used for food.

S. Miles, Cuv.; *le Holocentre Soldado*, Lacep.; *Military Crowfish*. From eighteen to twenty inches in length; has the muzzle and cheek much shorter in proportion than either of the three preceding species; its dorsal spines are more slender, but the second anal spine is at least as long and strong as in the last species; the caudal fin is rounded, and the lower jaw has but four pores; the back is reddish-brown, becoming paler on the sides, and on the belly changed to a bright pearl colour; near each eye is an irregular black spot; the dorsal and anal fins are streaked, spotted, and edged with red; the base of the caudal and other fins yellowish. It is found at Pondicherry, and called the *Tella-katchelée* by the natives; it is also met with in the seas adjoining the Isle of France, according to Commerson; and has been sent from the coasts of Java by Kuhl and Van Hasselt, under the name of *Sciæna Argentea*.

S. Cuja; *Corv. Cuja*, Cuv.; *Cuja Crowfish*. From four to five feet long, with the nape elevated, the anal spines very strong, and the caudal fin rounded; two rows of indistinctly marked toothings on the preopercle, and two flat obtuse points on the opercle; it is of a bright silvery colour, the back tinged with greenish, and marked with close, oblique rows of blackish spots; the first dorsal fin irregularly studded with blackish spots, and the second with irregular longitudinal stripes. It is caught in the Ganges, and is the *Bola Cuja* of Buchanan.

S. Semiluctuosa; *Corv. Semil.* Cuv.; *Half-mourning Crowfish*. Ten inches in length, very similar to the last species, but obliquely streaked throughout with dusky brown upon a silvery ground; the membranous edge of the preopercle scarcely exhibits any toothings; the preopercle is finished by two flat points; the dorsal fin slightly notched; the caudal fin rounded or slightly rhomboidal; all the fins blackish-brown. It is caught off Goa and Pondicherry.

S. Oscula, Lesuer; *Corv. Osc.* Cuv.; *Lesuer's Crowfish*. Sixteen inches long, and very similar in form to the black species, but it has the nape fuller, the teeth finer, and the dorsal spines both shorter and stronger, the second anal spine is also very strong; the lower jaw has five pores; the pharyngeal teeth are large, round, and pavement-like; the head, muzzle, and caudal fin are bluish-grey, inclining to black between the eyes, and becoming greyer on the back and pectorals; under parts white; fins pale grey. Is found

SCIÆNA, in the great lakes of North America, but not much esteemed.

S. Richardsonii; *Corv. Rich. Cuv.*; *Richardson's Crowfish*. Twenty-two inches in length, somewhat resembling the last species, but having the profile more vertical, and distinguished from all the others by having only eighteen soft rays to the second dorsal, and one spine to the anal fin; its colour silvery, clouded with brown more or less deeply on the back. It is caught in Lake Huron, and called by the Indians *Malachegané*, but by the colonists it is known as the *Sheepshead*, and is considered very good eating.

S. Clavigera; *Corv. Clav. Cuv.*; *Club-bearing Crowfish*. About eighteen inches long, and remarkable for having the spiny ray of the second dorsal fin slender at its base, and swelling out like a club towards its tip, which is sharp; its general colour is deep leaden, and the fins blackish. It is taken in the Niger.

S. Nigrita; *Corv. Nigr. Cuv.*; *Niger Crowfish*. From ten to eleven inches in length, very similar to the last species, but having the spine of the second dorsal fin slender and short, and the second anal spine longer and rather stronger; its general colour is golden-brown above, and silvery beneath; the first dorsal fin brown edged with black, and between the rays a single row of dusky black spots; on the second dorsal fin the row is double. Is found in the same neighbourhood as the last species.

The following six species of this subgenus are characterised more especially by the edge of the preopercule being armed with very fine but distinct spines.

S. Argyroleuca; *Corv. Argyr. Cuv.*; *Bodianus Argyr. Mitch.*; *Silvery-white Crowfish*. About eight inches long; it has much the appearance of a Perch, and is hence called by the natives of New York the *Silvery Perch*; its general colour is silvery-white, tinged with steel-blue upon the back, and marked with longitudinal brown stripes; the fins, especially the anal and caudal, are more or less yellow. It is found off the coasts of New York and Martinique. Cuvier thinks it probable that the *Perca Punctata* of Linnaeus, or *Yellow-tail* of Garden, is the same fish.

S. Roncha; *Corv. Ronch. Cuv.*; *Grunting Crowfish*. From six to eleven inches in length, and very similar to the last species; the two or three spines, especially the third, at the angle of the preopercule, are very strong, and the anal spine is as strong as in *S. Miles*, which it also resembles in the falciform shape of its caudal fin. It is found at Maracaibo, where it is called *el Ronco* or *el Roncador*; and at St. Domingo, where it is called *la Gronde*, from the grunting noise it utters.

S. Trispinosa; *Corv. Trisp. Cuv.*; *Great-headed Crowfish*. It has a much broader head and shorter muzzle than the other species of this subgenus; the angle of its preopercule is armed with three very fine strong points; its general colour golden-brown, inclining to silvery on the belly. It is found on the coasts of Brazil and Cayenne, and at the latter is known as the *Acoupa*, or *Greathead*. Cuvier thinks there is little doubt that this fish was imperfectly described by Lacepede as the *Chéilodiptère Acoupa*, and that it is probably the same as the *Bodianus Stellifer* of Bloch.

S. Furcraea; *Corv. Furcr. Cuv.*; *le Persèque Fourcroy*, Lacep.; *Fourcroy's Crowfish*. About seven inches long; it is distinguished from the last two species by having the preopercular spines shorter, and the teeth in the jaws very fine and in a narrow stripe; the pores in

the lower jaw are very small; second spine of the anal fin very strong; the ventral fins terminate in a small short thread; the caudal rhomboidal, and even pointed; its general colour is golden-green.

S. Biloba; *Corv. Bil. Cuv.*; *Cleft-nosed Crowfish*. Very similar to the last species, but distinguished by its muzzle having two lobes, which give it the appearance of being cleft.

S. Axillaris; *Corv. Axill. Cuv.*; *Axillary Crowfish*. About three inches long; is distinguished by the shortness of its body and the size of its head; its general colour is silvery, tinged with brown on the back; above the origin of the pectoral fin is a blackish spot; the first dorsal is blackish, and the other fins grey. It is found on the Malabar coast.

S. Argentea; *Corv. Argent. Cuv.*; *Silvery Crowfish*. Eight inches in length, and much resembles the Haddock by the black spot behind the gill-flap, which, as well as the head, is entirely covered with scales.

The fish forming Bloch's genus *Johnius* differ little from this subdivision except in having the second anal spine shorter than the following soft rays, in which respect they resemble the true Maigres.

Buchanan has included all the species of the Maigres and Crowfish which he found in the Ganges under the generic name of *Bola*, the common name by which they are called in Bengal by the natives; whilst in consequence of the whiteness and slight flavour of their flesh the Anglo-Indians call them *Whitings*: along the coasts of Orixá and Coromandel they are known as the *Katalai*, *Katelé*, or *Katchelè*.

S. Coitor; *Corv. Coit. Cuv.*; *Bola Coitor*, Buch.; *Bola Crowfish*. From eight to twelve inches in length; is of rather more slender form than *S. Nigra*; its pointed caudal fin and thread-like ventrals approximate it to *S. Furcraea*; the toothing of its preopercule not very deep; its general colour silvery, tinged with greenish-brown on the back; the dorsal fins clouded with brown. It is found in the Ganges as high as Cawnpore, and in the Jumna up to Agra; and it is also met with in the Irawadi.

S. Dussumieri; *Corv. Duss. Cuv.*; *Dussumier's Crowfish*. About six inches in length, and resembling the last species, but distinguished by its head and hinder part being shorter, the forehead wider and flatter, and the anal spine only half as long; the caudal fin rather rounded than pointed; its general colour is tawny, tinged with violet and gold, and the fins are yellowish. It is taken on the Malabar coast.

S. Belengerii; *Corv. Beleng. Cuv.*; *Belenger's Crowfish*. Seven inches in length; its muzzle is much shorter than in the last species; but the narrowness of its forehead, the length of its hinder part, and the strength of its anal spine approximate it to *S. Coitor*: its general colour is silvery, tinged with blackish-brown. From the Malabar coast.

S. Kuhlîi; *Corv. Kuhl. Cuv.*; *Kuhl's Crowfish*. Six inches in length, and very similar to *S. Coitor* except in the weakness of its anal spine; the back is of a white hue; the sides silvery clouded with golden and rose colour; dorsal fins bluish, and the second edged with yellow; all the other fins yellow. Found in the river Labouane in the Island of Java.

S. Sina; *Corv. Sin. Cuv.*; *Sina Crowfish*. About twelve inches long, with the muzzle shorter and rounder than in the preceding species; the first row of teeth is strong, pointed, and wide apart, and those of the second

SCIÆNA. in a narrow row; the lower jaw is marked with four pores; the general colour is greyish tinged with vinous. From Pondicherry; also from the Malabar coast, where it is called *Cora*, and from Japan, where it is named *Kuschi*.

S. Lobata; *Corv. Lobat.* Cuv.; *Lobe-lipped Crowfish*. From four to five inches long, and characterised by the membranous lip being divided into four small lobes; the muzzle is full, and the lower jaw has four pores; the second ventral ray prolonged into a short thread; caudal fin rhomboidal; general colour silvery, marked on the back with five broad dusky bands which reach just below the lateral line; fins yellowish. From the Malabar coast.

S. Carutta; *Corv. Car.* Cuv.; *Johnius Car.* Bl.; *Carutia Crowfish*. Scarcely a foot in length; the muzzle short and full; teeth in both jaws very fine, in the lower jaw forming a very wide row; edge of preopercule very indistinctly toothed and vertical; first dorsal fin rather pointed, its spines and those of the anal very strong; caudal rhomboidal or rounded; back and sides vinous-brown; belly white. On the Tranquebar coast it is called *Carutta Katalai* or *Black Katalai*, and at Pondicherry *Karoun-katelé*. Like many other species it ascends the rivers.

S. Carouna; *Corv. Carouna*, Cuv.; *Carouna Crowfish*. About six inches in length, and only distinguished from the last species by its colour; the whole body silvery, tinged with green on the back; fins yellowish, except the first dorsal, which is brown. From the Malabar coast.

S. Maculata; *Corv. Mac.* Cuv.; *John. Mac.*, Bl.; *Spotted Crowfish*. A foot in length; marked with five transverse brown or black stripes, which descend as far as the middle of the body, and then become broken into spots; fins yellowish, except the first dorsal, which is grey, and has near its edge a black stripe; caudal fin rhomboidal. It is called *Pulli-katalei* on the coast of Tranquebar, and *Varii-katelé* at Pondicherry, where it is caught in great numbers and considered good eating: at Vizagapatam it is known as the *Sarikulla*.

S. Catalea; *Corv. Cat.* Cuv.; *Katchelée Crowfish*. Eight or nine inches in length, and in form similar to the last species; but instead of bands it has the back, dorsal and caudal fins dotted with little blackish points. It is found at Pondicherry and on the Malabar coast, and is the *Katchelée* of Russell, who mentions that the Madras fishermen consider it the female of a fish he calls *Nella-katchelée*, which is about two feet and a half long, of a dusky grey colour, tinged with blue towards the back, and only spotted when very young on the dorsal fin. Cuvier considers it to be the *Lutjanus Diacanthus* of Lacepede.

S. Chaptis; *Corv. Chapt.* Cuv.; *Bola Chapt.* Buch.; *Chaptis Crowfish*. Scarcely a foot long, and very similar to the last species; its colour silvery tinged with purplish-green, having golden glossings on the back; the dorsal and caudal fins are spotted and bordered with black. Buchanan says there is a variety of this species at Jessore which grows to the length of three feet.

S. Anei; *Corv. An.* Cuv.; *John. An.* Bl.; *Bol. Coibor*, Buch.; *Anei Crowfish*. According to Bloch its back and fins are silvery tinged with reddish, except the first dorsal fin, which is blackish. Cuvier thinks it probably the *Bola Coibor* of Buchanan, which is four feet

long, the sides golden-yellow, and the belly and fins deep yellow. SCIÆNA.

S. Platycephala, Kuhl and Van Hass.; *Corv. Plat.* Cuv.; *Broad-headed Crowfish*. About a foot long, and very similar to *S. Catalea*; the back is silvery tinged with greenish-brown, the edge of each dorsal scale being marked with a blackish-brown tinge; the scales of the sides marked in the middle with a brown point, and those of the belly with the same inclining to bluish; the fins blackish, but the ventral and anal less so than the others. Found at Java.

S. Senegalensis; *Corv. Seneg.* Cuv.; *Senegal Crowfish*. About fourteen or fifteen inches in length, and also nearly approaching *S. Catalea*; general colour silvery or leaden, and rather brilliant; the cheeks marked with fine streaks; dorsal fins marked with three rows of black spots. Native of Senegal.

S. Imberbis, Mitch.; *Corv. Ocellata*, Cuv.; *Beardless Crowfish*. More than three feet in length; general colour yellowish-white, of an almost metallic lustre on the cheeks, opercules, and near the pectoral fins; on each side of the tail upon the base of the upper rays of the caudal fin a black spot similar to that caused by a branding-iron, or a round black spot surrounded with a paler circle. Dr. Mitchell says it is caught off the coasts of New York, and calls it the *Beardless Drum*, probably from some noise which it utters like the Maigre. It is also found off the Carolina coast, and called by Garden the *Bass*, and by Linnæus *Perca Ocellata*.

S. Dentex; *Corv. Dent.* Cuv.; *Long-toothed Crowfish*. Five inches in length, and in general characters resembling the Indian species; its colour silvery, tinged with grey on the back, and marked indistinctly with longitudinal lines; fins grey and dotted with brown; the base of the pectoral fins blackish. Found at St. Domingo, where it is called the *Grondé*.

Two other American species, very similar to the last division in the small size of their spine and the fine toothing of their preopercule, have their maxillary teeth so fine that they are often overlooked, and hence Lacepede has made of them his genus *Leiostomus*, or Smooth-mouth. They are

S. Humeralis; *Leiost. Hum.* Cuv.; *Black-shouldered Smooth-mouth*. About eight inches in length; general colour bright silvery, tinged with reddish-brown and marked with fourteen or fifteen grey bands passing downwards and forwards to terminate just below the lateral line; fins yellow; the dorsal and anal delicately dotted with black, and the edge of the dorsal and caudal fins edged with black. This is described by Dr. Mitchell by the name of *Labrus Obliquus*.

S. Xanthurus; *Leiost. Xanth.* Lacep.; *Yellow-tailed Smooth-mouth*. Very similar to the last species, but having the nape more convex; the back golden-brown; the belly silvery; fins yellowish-brown. Found on the Carolina coast, where it is called the *Yellow-tail*, and also at Martinique.

Russell, *Fishes of the Coromandel Coast*; Mitchell, *Fishes of New York*, in the *Transactions of the New York Literary and Philosophical Society*, vol. i.; Kuhl, *Beiträge zu Zoologie*; Cuvier and Valenciennes, *Histoire des Poissons*.

SCIA-
GRAPHY.

SCIARA.

SCIA'GRAPHY, }
SCIATE'RICAL.

Gr. σκιαγραφία, from σκία, a shadow, and γραφ-ειν, scribere, describere, to describe, to delineate.

A description or delineation of shade or shadow; the art of shadowing, of delineating.

Sciaterical, Gr. σκιαιτικός, that can or may shade or shadow, or form shades or shadows.

Let those who are delighted with *sciagraphy*, paint out, if they please, these shadow-patriarchs.Fuller. *Holy War*, p. 111.This cunning of shadowes and skill named Gnomonice, Anaximenes the Milesian, the disciple of Anaximander, above-named, invented; and he was the first also that shewed in Lacedæmon the horologue or dial, which they call *sciotericon*.Holland. *Plinie*, book ii. ch. lxxvi.There were also from great antiquity *scioterical* or sun dials, by the shadow of a stile or gnomon denoting the hours of the day.Sir Thomas Brown. *Vulgar Errours*, book v. ch. xviii.Let the plane be *sciaterically* prepared, and it shall be necessary for the shadow of the sun to go back.Gregory. *Posthum*, p. 37.SCIAPHILUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* elbowed, twelve-jointed, rather long and slender; scape elongate, clavate, sometimes extending above the eyes; *funiculus* with its two basal joints rather long, obconic, the remainder sensibly shorter, somewhat nodose; club elongate-ovate, acuminate; head small, produced in front into a rostrum nearly longer than the head, and a little narrower, somewhat flat above, with the tip notched; eyes small, rounded, slightly prominent; *thorax* somewhat transverse, with the sides a little rounded; body oblong-ovate, winged; *elytra* large, oblong-ovate, setose, convex above, especially behind, with the apex slightly acuminate; legs rather long, slender; *femora* strongly clavate, and slightly dentate; *tibiæ* straight, with the apex unarmed; *tarsi* tetramerous.

Type of the genus, *Curculio muricatus*, Fabricius; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. iv. p. 131. Several species, three of which are indigenous.SCIAPTERYX, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* nine-jointed, irregular, rather short and stout, pilose, basal joint robust, second smaller, sub-globose, third as long as the fourth and fifth united, the last somewhat longer than the sixth, which, with the remainder, gradually diminish in length and thickness, the apical one being smallest and rather obtuse; *clypeus* and *labrum* notched; head broad, large, rough; eyes small; *ocelli* three; wings short, broad, punctured, anterior with two marginal areoletts divided by a curved nervure, and with four sub-marginal ones, the basal one small, rounded, second narrow, receiving one recurvent nervure, third somewhat triangular, receiving two recurvent nervures, fourth not extending to the apex of the wings; *abdomen* short, stout, depressed, broad, acute at the apex; legs short, simple; *tibiæ* furnished at the tip alone with two short, blunt spurs.

Type of the genus, *Teuthredo costalis*, Fabricius; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. vi. p. 56. One species; found occasionally in England, and in other parts of Europe.SCIARA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* long, porrect, cylindric, pubescent, sixteen-jointed, the two basal joints

VOL. XXVII.

much thickened; eyes deeply notched; *ocelli* three, unequal; wings two, broad, incumbent, parallel; *palpi* exerted, incurved, three-jointed; legs slender, simple.Type of the genus, *Tipula Thomæ*, Fabricius; Meigen, *Europ. Zweif. Insekten*, vol. i. p. 278, pl. iv. fig. 3. About forty European species, above two-thirds of which are inhabitants of England.SCIATICA, Fr. *isciatique*, *sciatique*; It. and Sp. *sciatica*, a gouty pain in the hip. Cotgrave. Lat. *sciaticus*, *ischiadicus*; Gr. ισχιαδικος, from ισχια, lumbus.Rack'd with *sciatick*, martyr'd with the stone,
Will any mortal let himself alone.

Pope.

SCI'ENCE, n.

SCI'ENTIAL,

SCI'ENTIFICK,

SCI'ENTIFICAL,

SCI'ENTIFICALLY,

SCI'ENCED.

Fr. *science*; It. *scienza*; Sp. *sciencier*; Lat. *scientia*, from *sciens*, present participle of *scire*, to know; Vossius derives from *ισκω*; *εισ-κω*, *εισω*, from *ειδ-ειν*, to see; Lennep from *σχι-ειν*,obsolete theme of *σχιζ-ειν*, *findere*, to cleave, to separate; and thus giving it an origin of much similarity to that of *skill*, from *scyl-an*, to separate, to discern. For the philosophical distribution of *science*, see the Quotation from Locke.*Science* is generally used as equivalent to knowledge, emphatically, not imperfect or pretended.*Science* may be thus briefly distinguished from *art*: *science* is knowledge; *art*—power or skill in the use of it; and thus logic is a *science*, and also an *art*; the *art* is the practical use of the *science*; of the principles of the *science*. See *Treatise on Logic*, PURE SCIENCES, vol. i. p. 203, note.

Painting, Music, &c. are arts; and the best artist is he who uses the science, the principles of the science, with the greatest practical skill and dexterity.

ze syre ich seyde by so pat no man were a grevede
Aile pe science under sonne. and alle sotile craftes
Ich wolde ich knewe and couthe. kyndeliche in myn harte.
Piers Plouhman. *Vision*, p. 274.Thou schalt go bifore the face of the Lord to make redy hise weyes. To geve science of heelth to his puple, into remissionoun of her synnes.
Wiclif. *Luke*, ch. i.Thei ben taught in charite into alle the richessis of the plentee of undirstondyng, into the knowyng of mysterie of God the Fadir of Iesus Crist, in whom all the tresouris of wisdom and of science ben hid.
Id. *Colocensis*, ch. ii.Yonge clerkes, that ben likerous
To reden artes that ben curious,
Seken in every walke and every herne
Particuler sciences for to lerne.Chaucer. *The Frankeleines Tale*, v. 1172.Lo thus dane Aristoteles
These thre sciences hath deuided,
And in nature also decided,
Whereof that eche of hem shall serue.Gower. *Conf. Am.* book vii.And as our vineyards, fallows, meads, and hedges,
Defective in their natures, grow to wildness;
Even so our houses, and ourselves, and children,
Have lost, or do not learn, for want of time,
The sciences that should become our country.Shakspeare. *Henry V.* act v. sc. 2.O sacred, wise, and wisdom-giving plant,
Mother of science, now I feel thy power
Within me cleere, not only to discern
Things in thir causes, but to trace the wayes
Of highest agents, deem'd however wise.Milton. *Paradise Lost*, book ix.His light sciential is, and, past mere nature,
Can salve the rude defects of every creature.Ben Jonson. *Masques at Court*.

SCIENCE.

SCIENCE.

SCINCUS.

So saying, from the tree her step she turn'd,
But first low reverence don, as to the power
That dwelt within, whose presence had infus'd
Into the plant *sciential* sap, deriv'd
From nectar, drink of gods.

Milton. *Paradise Lost*, book ix.

There is not in the world any art or *science*, which, proposing unto itself an end, (as every one doth some end or other,) hath been therefore thought defective, if it have not delivered simply whatsoever is needful to the same end; but all kinds of knowledge have their certain bounds and limits; each of them pre-supposeth many necessary things learned in other *sciences*, and known beforehand.

Hooker. *Ecclesiastical Politie*, book i.

And in these modern times, the most speculative and *scientific* men, both in Germany and Italy, seem to adhere to it.

Howell. *Letter 9*, book iii.

I think, *science* may be divided properly into these three sorts: First, the knowledge of things, as they are in their own proper beings, their constitutions, properties, and operations.

Secondly, the skill of right applying our own powers and actions, for the attainment of things good and useful.

Thirdly, the third branch may be called *σημειωτική*, or the doctrine of signs, the most usual whereof being words, it is aptly enough termed also *logick*.

Locke. *Of Human Understanding*, book iv. ch. xxi.

The necessity of this intuitive knowledge, in each step of *scientific* or demonstrative reasoning, gave occasion, I imagine, to that mistaken axiom, that all reasoning was "*ex præcognitis et præconcessis*."

Id. *Ib.* book iv. ch. ii.

Sometimes it [the understanding] rests upon testimony, when testimony of right has nothing to do, because it is easier to believe than to be *scientifically* instructed.

Id. *Ib.*

The works of speculation or *science* may be reduced to the four classes of philosophy, mathematics, astronomy, and physic.

Gibbon. *Roman Empire*, ch. lii.

A fugitive from Heaven and prayer,
I mock'd at all religious fear,
Deep *scienc'd* in the mazy lore
Of mad philosophy; but now
Hoist sail, and back my voyage plough
To that blest harbour, which I left before.

Francis. *Horace. Ode 34*, book i.

The volumes of *scientific* and literary societies or academies are infinite.

Knox. *Winter Evenings. Evening 2*.

Voyages and travels, when not obscured by *scientific* observations, are always delightful to youthful curiosity.

Id. *Essays. No. 14*.

SCIENTER, in *Law*, is an expression taken from the old pleadings, which were always framed in Latin. When translated literally it bears the adverbial signification "knowingly;" but in legal parlance it is now

used as a noun; *e. g.* if a dog kills sheep, the owner of the dog is not liable to the owner of the sheep unless he had notice of his dog's having such a propensity; in this case a lawyer would say that the *Scienter* must be proved, meaning, that the owner of the dog must be shown to have had notice of the propensity.

SCILLY (Islands of) are a cluster of thirty-eight isles and numerous rocks, which lie about nine leagues West by South of the Land's End in Cornwall, to which most probably they were formerly attached, and from which they are distinctly visible. They are commonly supposed to be the *Cassiterides*, or tin islands, of the ancients; although it seems more likely that it was the Western part of Cornwall which went under this name. Not more than half a dozen of these isles are of any importance. St. Mary's, the largest, contains about 1640 acres; the others, which are given in the order of their size, are Trescau, St. Martin, Bryer, St. Agnes, and Gauilly. Their entire area, as given in the population returns, is only 5570 acres. The inhabitants derive their chief support from fishing, the making of kelp, and acting as pilots; but they likewise raise small quantities of wheat, barley, and oats, and feed some oxen, sheep, and swine. There are various antiquities, chiefly Druidical, in St. Mary's, and two or three of the other isles. St. Mary's has a good port, and is fortified. A lighthouse was erected on St. Agnes island in 1680, the lantern of which is elevated 138 feet above high-water mark, and which, according to the Ordnance Survey, is in latitude 49° 53' 38" North, longitude 6° 19' 23" West.

SCIMITAR, Fr. *cimeterre*; It. *scimitara*; Sp. *cimatarra*; Low Lat. *scimatarra*; Turcis *dicitur quod Latinis—gladius falcatus*; (Vossius, *De Vitiis*, lib. i. ch. vii.) See Cimeter.

A falchion. See the Quotation from Potter.

He dies upon my *scimitar's* sharpe point,
That touches this my first borne sonne and heire.

Shakspeare. *Titus Andronicus*, act iv. sc. 2.

They had sometimes another sword call'd *καπίς*, which was the same with the Roman *ensis falcatus*, and our faulchion, or *scimeter*, and was chiefly us'd by the inhabitants of Argos.

Potter. *Antiquities of Greece*, book iii. ch. iv.

Wit in his [Dr. South] hand was sharp and irresistible, and made its way like the *scymitar* or the battle-axe.

Knox. *Winter Evenings. Evening 62*.

SCINCUS.

SCINCUS, from the Gr. *σκήγγος* or *σκήγκος*, Laurent. Daud.; *Skink*. In *Zoology*, a genus of animals belonging to the family *Scincoida*, order *Sauria*, class *Reptilia*.

Generic character, Body elongated, spindle-shaped, or more or less cylindrical, and covered with imbricated scales, in some instances smooth, in other more or less rough; head oblong; the jaws armed with small close-set teeth, and in some species the palate also; the tongue fleshy and slightly forked at the tip; tympanum more or less distinct, and its anterior edge sometimes furnished with a toothlike process; tail short or very long, cylindrical, and generally covered with imbricated scales, in some species, however, it has transverse plates on its under surface; legs short and slender, having five

distinct toes of equal or nearly equal length, and terminated with short nails.

Daudin has well observed that this genus is easily distinguished from most others of the Saurian reptiles by the elliptical or roundish scales, which, resembling those of the Carp, are imbricated, except on the tails of a few species, and entirely cover the body. Like the Lizards their head is covered with scaly plates, and some have a row of pores upon the thighs. The head and neck run so completely into each other that it is not possible to distinguish them. The body varies in form in different species; in some it is spindle-shaped, and in others regularly cylindrical, more or less lengthened, so as to resemble the Serpent family, and especially the Blind-worms, *Anguis*, with which their internal struc-

SCIENTER.

SCINCUS.

ture possesses many similar characteristics. The tail varies considerably, sometimes it is short, thick, and conical, at other times very long, tapering, and extremely slender towards the tip. They are found in the warmer climates of both the Old and New World, inhabiting dry and rocky places, fond of basking in the sun, and pursuing the small insects, on which they feed with great activity, especially those species which have very long tails. They have laid, at least some of them, under the imputation of being venomous, but as no authenticated instance has yet been adduced of any injury having been sustained from them, it is not very improper to consider this as a vulgar prejudice. Schneider is the first writer who has collected any number of species under this genus, and in his *Historia Amphibiorum* he enumerates twelve, some of which, however, are not Skinks. Daudin followed, and has described twenty-one, besides several varieties, which he has arranged in four sections: *first*, those with concealed tails; *second*, such as are striped with white; *third*, those striped with black; and *fourth*, such as have the body marked with little spots like eyes, or *ocellated*, as he calls them. With reference to this arrangement Kuhl thinks that Daudin's first section should be subdivided into two: the *first* including those with compressed but full body, and almost equal toes; and the *second* comprehending such as have the body slender, the tail long, and the toes long and of unequal length. This arrangement, however, is not very satisfactory, and Cuvier has preferred disposing them in two sections only; *first*, those which have teeth in the palate as well as the jaws, and a toothlike process on the front edge of the tympanum; and, *second*, those which have teeth only in the jaws. But a later writer, Wagler, has distributed the Skinks into five genera, viz. *Scincus*, *Euprepis*, *Gongylus*, *Cyclodus*, and *Trachysaurus*; the latter being assumed from Mr. Gray, and which indeed is almost the only one which would fully justify, from its peculiarities, its separation from the Skinks of Laurenti, Schneider, and Daudin. The species from which these genera are formed will be pointed out as they occur. Cuvier has justly observed that the greater number of Skinks are badly characterised by authors, and it is much to be regretted that the short notice he has left of them has not materially cleared up the difficulty.

SECTION I.—*True Skinks, with two rows of palatine teeth, and a toothlike process on the anterior edge of the tympanum.*

S. Officinalis, Schneid.; *Lacerta Scincus*, Lin.; *Officinal Skink*. About six or eight inches in length, of which not quite a third belongs to the tail, which, thick at its root, becomes taper and flattened towards the tip like a wedge; the head short, with the muzzle sharp and slightly elevated, the upper lip enclosing the lower jaw like the lid of a pot; body rather angular above from the projection of the spinal ridge, but compressed on the sides; legs slender and rather short; their five toes, small, distinct, flat, and serrated on their outer edge, are armed with a flat pointed nail. The general colour is more or less deep ferruginous, marked with transverse brown bands on the back, but becoming whitish on the under part of the body; after death the colour fades, and the animal then assumes the yellowish-white or silvery appearance it possesses when brought

to Europe. It is found in Nubia, Abyssinia, Egypt, and Arabia, and is known to the Arabs by the name *El Adda*. It runs very quickly, though seeming only to crawl, and, with its belly trailing on the ground, hides in the mud, and buries itself so quickly as to disappear almost in the twinkling of an eye. During the day it basks in the sun, and when disturbed endeavours to hide itself beneath the cones or roots of the wormwood. The Orientals considered it not only as a powerful aphrodisiac, but also as possessing other important therapeutic qualities; and hence its fame spread throughout Europe, and it was admitted among the healing drugs of the ancients, being employed either in form of broth, or when dried given in powder. Hasselquist states that it was brought from Upper Egypt and Arabia to Alexandria, whence it was exported to Venice and Marseilles, from which cities it was distributed throughout Europe. Cuvier observes, however, that this species, although in later times used as an article of pharmacy, is not the animal known to the Romans as the Skink, which is the same as the Terrestrial Crocodile of Herodotus, and is really a Monitor, *M. Scincus*; but the same virtues were attributed to it.

S. Tiligugu, Daud.; *Lacerta Tilig*, Gmel.; *Sardinian Skink*. Eight inches in length, of which the tail is not quite half; upper surface brown, dotted with numerous black points, under surface whitish. Is found in Sardinia, and called by the natives *Tiligugu* or *Tilingoni*. In its markings it very nearly resembles *S. Bilineatus*. The species just described has the muzzle sharp and slightly elevated: it is the only species included by Fitzinger and Wagler in their genus *Scincus*. Among those in which the muzzle is blunt Cuvier enumerates

S. Rufescens, Cuv. Which he states as being of a greenish colour with a yellowish line running along each side, and the scales marked with three slight crests; he says it is common throughout all the Indies, but gives no hint of its having been previously described; nor is he more precise with reference to the next,

S. Trivittatus, Cuv. Of a brown colour, with three paler lines running along the back and tail, and some black spots between them. He mentions this as being a native of Southern Africa, and very common about the Cape of Good Hope.

S. Erythrocephalus, Gilliams; *Red-headed Skink*. Eleven inches in length, of which the tail measures six and a half; upper parts reddish-brown tinged with copper; under parts whitish; the head red above and whitish beneath. Is found in the Southern States of America, and commonly known as the *Red-headed Scorpion*.

S. Bicolor, Harl.; *Bicoloured Skink*. Nearly nine inches and a half long, of which the tail exceeds the head and body by an inch, is cylindrical and tapering; upper surface dusky brown, deepest on the head, with two whitish lines on either side of the body; under surface silvery-white; upon the thighs two obsolete lines. Is a native of the Southern States of the American Union.

S. Pavimentatus, Geoffr.; *Tessellated Skink*. About thirteen inches long, of which the tail is two-thirds; the fore longer than the hind legs; upper part of the body brown, marked with nine or ten white stripes formed by a succession of little four-sided spots, and extending from the front of the neck to the middle of the tail, but occasionally interrupted by little brown spots; under

SCINCUS. parts whitish-yellow; on the tail the white spots become smaller, so that near its tip there is scarce any trace of the longitudinal stripes; inside of the limbs whitish-yellow; outside brown, with some little spots ranged in lines; the sides of the head are also similarly but not so distinctly marked. It is found in Egypt. Cuvier has called it *S. Multiseriatus*.

S. Cepedii, Merr.; *S. Gallivasp.* Daud.; *Lacerta Aurata*, Lin.; *Golden Skink*. Eleven inches in length, of which the tail measures four; the muzzle is sharp; the legs an inch and a half long, having five toes of nearly equal length, and tipped with small nails; upper surface brown, spotted with orange; under parts orange. It is found in Jamaica, where it bears the name of *Galleywasp*, from its visiting the kitchens in search of broken food; it is also met with in the Antilles, where the French colonists call it *Brochet de terre*, or *Earth Pike*. It lives in marshy places, and is said by Sloane to be amphibious; feeds on the smaller kinds of sea crabs, and is held by the colonists and negroes to be very poisonous; but neither Sloane nor Brown, who mention this as the common opinion, were able to obtain any authentic information on the point.

S. Schneiderii, Geoffr.; *Schneider's Skink*. Fifteen inches in length, of which the tail has two-thirds; the body and root of the tail are slightly quadrangular, but the latter soon becomes cylindrical, and, though at its origin equalling the body in size, speedily begins to taper and has its extreme fourth very slender; the fore are shorter than the hind feet, owing to the greater length of the middle three toes of the latter; the scales are smooth; upper parts of the body very bright brown inclining to olive; upper part of the tail irregularly varied with black and yellow; head bluish and white; under parts and all the limbs whitish; along each side of the body and tail extends a white line which gradually diminishes on the latter, and on either edge of this line another broader but less distinct; the upper blue, and reaching to the middle of the tail, and the lower light blue, but not passing beyond the insertion of the hind limb. Geoffroy enumerates this among the reptiles of Egypt, and says it is the same animal as that described by Daudin under the name *S. Schneiderii*. Daudin, however, says that his species is found only in the hottest parts of America, especially at Jamaica. Cuvier considers the *Lacerta cyprius scincoides* of Aldrovandi to be Geoffroy's animal, but describes it as of a greenish colour, and the most common throughout the Levant.

The following four species, which have the maxillary teeth compressed and rather vertically truncated, form Wagler's genus *Euprepis*; of these some have the anterior margin of the aural opening armed with a tooth-like scale, and the scales of the back are carinated, or have one or more slight crests; such are

S. Bilineatus, Daud.; *Lacerta Punctata*, Linn.; *Two-lined Skink*. Is distinguished by having a series of brown spots disposed upon the sides between two yellowish lines, which, commencing from the angle of the mouth, run to the root of the tail upon a bright bay ground; the tail is long and pointed. Schneider calls it *S. Punctatus*.

S. Multifasciatus, Kuhl; *Many-banded Skink*. Seven and a half inches long, of which the tail forms nearly five; the toes are of unequal length, the inner the shortest, and the middle and second outer the longest; the upper surface to the origin of the tail golden-yellow, upon each side a broad brown fillet, commencing above

the eye and from the corner of the mouth, passes across the limbs, and terminates on the beginning of the tail, its upper edge is quite distinct from the colour of the back, less so towards the belly, where it breaks up into more or less longitudinal streaks; on the back a narrow brown line extends from the nape not quite half an inch, and is enclosed by the forking origin of the broad brown band which passes down the back to the middle of the tail, where it breaks up into spots; to its outer side are other two lines, one reaching to the middle of the tail, and the other, commencing behind the anterior extremities, terminates just beyond the root of the tail; the middle three lines are crossed by a transverse band; the outer surface of the limbs golden-yellow.

S. Quinquetæniatus, Licht.; *Five-striped Skink*. The tail of this species is rather longer than the body; it is marked on the back with five longitudinal white stripes having black edges, the middle and the outermost being the broadest. Is found in Egypt.

S. Trilineatus, Schn.; *Three-lined Skink*. About three inches long, the tail being rather longer than the body, and having its posterior half covered with four rows of hexagonal scales, so disposed that the upper and lower form plates, the lateral being very small; the upper parts are dusky brown, the under lighter; three white stripes pass along the back to the origin of the tail, where they are lost.

The following species have also the scales carinated, but the form of their teeth is not mentioned.

S. Carinatus, Schn.; *Carinated Skink*. The whole of this animal, except the under part of its tail, is covered with scales, having ridges, generally three in number, on each; the tail is slender, and twice the length of the body, and covered with rather broad plates, in which respect it resembles *S. Tristatus*; the upper parts are dusky brown, the sides and belly whitish; and from the eyes to the origin of the tail passes on each side a whitish band, below which is a second, broader and brown. They are natives of the East Indies.

S. Cæsius, Kuhl; *Speckled Skink*. Body long, but not very slender, equalled in length by the tail, which is thick at its origin and pointed at the tip; head covered with large scales; those of the body large and tricarinated, whilst on the limbs they are very small, and on the ventral surface and tail smooth, the middle row of the latter being broadest; upper parts greyish-blue; under bluish-white; from the nape three white lines pass to the tail, of which the lateral ones are accompanied on either side with oblong black spots. Country unknown.

S. Monotropis, Kuhl; *Unicarinated Skink*. The scales of the back and tail are in this species marked with a single mesial ridge, whilst those on the belly are smooth; the head is large and of a rather dusky golden-ochre colour, without bands; ten transverse stripes are seen upon the back and some others on the tail, which, coalescing, give the tail a brownish appearance. Country unknown.

The following five species, also belonging to the genus *Euprepis*, have not the margin of the ear toothed; the scales of the back are smooth, but in some species, when full grown, are tricarinated, according to Wagler; all except the last are unfurnished with femoral pores.

S. Bistriatus, Spix; *Two-striped Skink*. Fifteen inches in length, of which the tail is two-fifths, and round and tapering towards the tip; body thick and cylindrical; upper surface bronze-green, spotted with

SCINCUS. black on the back, the top of the head tinged with brown, and marked with white beneath the eye and about the ear; under surface pale tawny tinged with bluish-white, a broad black band, bounded above and below by a narrow white stripe, extending from the eye to the thigh; tail dusky above and reddish-yellow beneath; legs spotted with black. Is found in the rocky districts of Para in Brazil.

S. Nigropunctatus, Spix; *Black-spotted Skink*. Seven inches long, of which the tail measures rather more than two; of a dusky brown colour tinged with green, and marked on the back with little black spots; an indistinct black band, unenclosed with stripes, extends backwards as in the last species, of which Wagler thinks it is only the young. Is found in the Brazils.

S. Tristatus, Daud.; *Brownish Skink*. Nine inches in length, of which the tail is rather more than half; the head is scarcely obtuse and of a brownish colour, as are the upper parts, which incline to sooty, and marked with two stripes, the upper pale and the lower white, passing from the ear and lost on the side of the tail; under surface silvery-white. Is found in Carolina in places shaded with foliage, and runs with great swiftness. Prince Maximilian of Wied found it in the Brazils, and has described it by the specific name *S. Striatus*.

S. Quinquelineatus, Schn.; *Lac. Quinq. and Fasciata*, Lin.; *Five-lined Skink*. Seven inches long, the tail and body of equal length; the upper part of the body is blackish-brown, marked with five white or yellowish lines, the middle one of which is forked near the neck, and all disappear about the middle of the tail; under surface silvery-blue; the hind legs and toes are the longer; the upper parts of the limbs are brown, with a whitish mark behind, and the lower whitish. Native of Carolina.

S. Sloanei, Daud.; *Four-striped Skink*. Five and a half inches in length, of which the tail is more than one half; it is of a slender, elegant form, and much resembles the last species, but distinguished by the posterior two-thirds of its tail being covered with verticillated scales; the thighs are furnished with pores; it is brownish above, whitish beneath, and marked by four longitudinal black stripes, commencing from the nose, a broad pair passing across the fore legs as far back as the thighs, and a second pair on the upper part of the body as far as the middle of the back. Is found in the Brazils and Jamaica, and probably in the greater part of South America.

SECTION II.—*Skinks without palatine teeth.* (*Tiliqua*, Gray.)

Of these the following two species form Wagler's genus *Gongylus*, from the rounded form of their body.

S. Ocellatus, Daud.; *Lac. Ocell.* Forsk.; *le Scinque de Chypre*, Petiv.; *Eyed Skink*. Nine inches long, of which the tail measures half, and about as thick as the finger; legs very short, the anterior not exceeding three-quarters of an inch, and the posterior rather less than an inch; upper surface yellowish-brown; tail marked with transverse chocolate-brown bands, having a white spot in the middle; the body similarly marked, but the bands are broken and angular; the throat whitish, with a few brown spots; belly straw-coloured. It is found in the South of Europe, in Egypt, and Arabia, living near houses, and called by the Arabs *Sehlie*.

S. Mabuya, Daud.; *Lac. Mab.* Shaw; *Wood Skink*.

About seven inches and three-quarters long, of which the tail, conical and pointed, is rather more than a fourth; the legs rather short; upper parts shining brownish-ash, becoming paler on the sides and belly, and spotted numerously with black on the upper part of the sides. This species is found throughout the Antilles, climbs upon the trees and negro huts with great agility, and commonly hide themselves in the holes of decayed trees, from which only they emerge during very hot weather; from this circumstance they are called by the Jamaica people *Wood Slaves*. They are said to make a great noise when the weather threatens rain, and are supposed to be venomous, but neither Sloane nor Brown could obtain any proof of this imputation. Whilst young they are the prey of larger animals, and Sloane states that they are devoured by the large Bird Spiders found in hot climates.

The following three species, having the teeth round and very obtuse, form Wagler's genus *Cyclodus*.

S. Flavicularis, Cuv.; *Cyclodus Flavig.* Wagl.; *Yellow-throated Skink*. Thirteen and a half inches in length, of which the tail, forming nearly one-half, is compressed and slightly marked on its upper surface with four ridges; legs short and compressed, the toes of equal length; the whole of the head and throat golden-ochre, except the scales on the vertex, which are edged with blackish; body and tail marked vertically with nineteen impure golden-ochre stripes, and separated by as many, but narrower, brownish stripes, those on the tail form rings, but on the body do not extend lower than the sides; belly marbled with yellow and brownish; from the nape extends back towards the shoulders a semicircular leaden line with its hollow backwards, and from its middle another line passes a short distance on the ridge of the back; the legs are dusky, spotted beneath and more sparingly above with little yellow spots; claws whitish. This species is described by Wagler from a specimen in his own collection, but he is ignorant of what country it is a native. It is not improbable that this may be the *S. Gigas* of Merrem, and if so it is a native of Amboina.

S. Tuberculatus, Merr.; *Lacerta Scincoides*, White; *Tuberculated Skink*. About two feet in length, of which the tail is more than half; it very much resembles *S. Sloanei*, has the back marked with four black stripes spotted with white upon an iron-grey ground. It is found in New Holland.

S. Nigroluteus, Quoy and Gaym.; *Black and Yellow Skink*. Seven inches in girth and eighteen in length, of which the tail, forming one-third, is rounded and has its tip obtuse; the legs are flattened laterally, bent, and inclined backwards, terminating in a kind of hand, of which the toes have a near resemblance to human fingers in length, and armed with a thick nail slightly curved and covered within by a single row of scales, and those of the fore feet are broadest and longest; the general colour is black; the sides of the cheeks and under part of the throat yellow; the chest, belly, and under part of the tail badged with yellow mingled with greenish; the back is marked with bright yellow spots, connected by five lines of the same colour, and extending from the nape to the root of the tail, which is marked with alternate yellow semicircles; on the sides of the body are yellow spots with central black spots, and the limbs are dotted longitudinally with yellow. Is found in the Blue Mountains of New Holland; and very sluggish in its motions, especially when gorged with food.

SCINCUS. Quoy and Gaymard mention that one which they caught had gorged itself so completely as to exhibit few signs of life, and that it was not disturbed from this torpor by a night's jolting in the pocket on horseback.

S. Vittatus, Quoy and Gaym.; *Black-sided Skink*. Nine inches in length, of which more than half belongs to the tail, quadrilateral at its root, then slightly rounded, and a little flattened laterally towards the tip; the fore, shorter than the hind legs, have delicate toes of unequal length and furnished with nails, whilst the hind toes are very similar to those of Lizards, the fourth as in them exceeding the others in length; from this circumstance Quoy and Gaymard have proposed to form them into a new genus, *Scincosaurus*, as they participate in the characters both of the Lizard and Skink. The upper part of the body brown, with blackish spots on the head; on the nape a kind of crescent, more or less distinctly marked, and turned forwards from each side, of which a black stripe passes back and is soon converted into dots, which pass nearly to the middle of the tail; a similar stripe passes along the back; a black band passes back also from near the ear, along the sides, and towards the root of the hind limbs divides into little squares, which, touching one another, terminate at the tail; above the band are irregular black points; the outside of the limbs are similarly marked; under parts bluish-white, marked, as well as the insides of the limbs, with innumerable small lines of blackish points. It is found in Sydney Bay, at Port Jackson, and also in the Isle of Bruny, near Van Diemen's Land. Quoy and Gaymard think this and the following species replace the Lizards, which have not been found hitherto in New Holland.

S. Compressicauda, Quoy and Gaym.; *Flat-tailed Skink*. Eleven inches in length, of which seven belong to the tail; this is large at its origin, gradually diminishes, and has a very slender tip, its upper and under surfaces rounded, but the sides compressed, so that it is of greater depth than width; the disposition of the toes is similar to the last species; from the neck to the root of the tail extends a straight, whitish line, divided longitudinally by a brown streak, and having on either side two streaks punctured with white; the sides, upper part of the tail, and outer surface of the limbs spotted with blackish; the under part of the body and tail, and insides of the limbs of a bluish tinge. Is found at Port Jackson.

The following species from New Holland is also described by Kuhl.

S. Undecimlineatus, Kuhl; *Eleven-striped Skink*. The body long and slender, and the tail of equal length and pointed; scales covering the body round, quite smooth, and very small, those on the tail larger, the middle row of the under and upper surface of the latter are scutular, the scales on the jaws large and angular; limbs short, toes of unequal length; colour bluish-white, marked with eleven brown stripes, three of which run on to the tail, which is yellowish, as are also the limbs, which are marked with three brown lines.

The exact place which the following species should hold it is not easy to determine, as the characters necessary for that purpose are not noted.

S. Unicolor, Harl.; *S. Lateralis*, Say; *Black-striped Skink*. Four inches in length, of which the tail is more than half; muzzle rather short; upper surface light brown; under surface greenish-white; each side marked with a blackish stripe. It is found in the Southern States of the American Union.

S. Savignyi, Sav.; *Savigny's Skink*. Total length SCINCUS, seven inches, of which the tail is rather more than half; general colour brown, almost black upon the nape, but very pale on the tail; throat very deep blackish-brown; belly yellowish-grey; feet greenish-brown; five longitudinal yellow bands pass along the body, of which the lower pair, commencing at the angle of the jaws, extends on to the tail, whilst the upper pair, and the single one running along the spine, commence only above the shoulder. A variety of this species is mentioned which has the scales much smaller, the colours deeper, the longitudinal bands commencing at the back of the head, the throat whitish, and the hind limbs banded with yellow, lengthways on the thighs and obliquely on the legs. Native of Egypt.

The following species, described by Savigny, is perhaps also merely a variety.

S. Vittatus, Oliv.; *Banded Skink*. Six inches and a half in length, of which the tail is more than half; this species differs little from *S. Savignyi*, except in a slight variation of the disposition of the scales on the head; its colour above greyish-brown, marked with five longitudinal yellow stripes edged on either side with a row of black spots; upper part of the head tinged with bluish, under part yellowish; belly dirty white; fore legs striped longitudinally with brown, hind legs with spots of the same colour. Found in Egypt.

S. Jomardii, Sav.; *Jomard's Skink*. Six and a half inches long, of which the tail forms two-thirds, and tapers more regularly than in *S. Savignyi* and *Vittatus*. The scales covering the tail of same form as those of the body; upper part of the head brown clouded with blue; back, tail, and legs brown, the former marked on each side with two narrow longitudinal stripes, of which the upper commences at the corner of the eye and runs on to the tail, whilst the lower, which is broader, passes from the mouth to the root of the hind leg; on each side of the mesial line a row of longitudinal black spots, nearly touching, which commence from the nape and extend along two-thirds of the tail; belly pearly-grey. Native of Egypt.

S. Crotaphomelas, Lacep.; *Black-templed Skink*. Thirteen inches in length, of which the tail forms nearly one-half; is distinguished by a longitudinal blackish streak upon the temple extending above the eye; it has some transverse whitish bands. Is a native of New Holland.

S. Peronii, Dumer.; *Trachysaurus Rugosus*, Gray; *Peron's Skink*. Fourteen inches in length, of which the tail measures four; it is very remarkable for the hard and almost bony texture of its scales, and hence Mr. Gray has formed of it his genus *Trachysaurus*. The upper surface of the body is dusky chestnut, the under paler, the sides indistinctly striped. It is found in King George the Third's Sound, New Holland.

S C I N D.

SCIND. SCIND, or SINDY, more correctly Sind'h, or Sind, is the name of a considerable territory formed by the Delta of the Indus, (Sind'hu,) whence it takes its name, and comprehending the whole of that river from a short distance below its confluence with the united waters of the Panj-áb, to its discharge into the sea. This State is bounded on the West by the mountains of Balúchistán; on the East by the T'har (St'hal) or Great Western Desert, a portion of which is included within its limits; on the North by Kach'h Gandávah, Séwistán, Upper Sind'h, the Panj-áb, and Dáúd-putrah; and on the South by the Indian Ocean and the Ran (Morass) of Kach'h. In the reign of Akbar it formed a part of the Súbahdaries (Governments) of Multán, T'hat'hah, and Gujjarát. Its form is nearly that of an ellipse, measuring in its greatest length about 330 geographical miles, and its greatest breadth about 260 geographical miles. Upper Sind'h, or the Western side of the valley of the Indus, from Sangar (in 30° 54' N. and 80° 14' E.) to Miyá-Rózán, (28° 40' N. and 80° 10' E.) no longer forms a part of the territory subject to the Amírs of Sind'h, having been long since seized by the Sik'h, (*Geogr. Journ.* iii. 139.) in order to facilitate their passage into Afghánistán.

Soil. The country on the Western side of the Indus is more or less hilly, being in fact only a narrow strip lying between that river and the mountains which separate India from Persia; but in the delta below T'hat'hah, and on the whole of the Eastern side of the river, it is either nearly or absolutely level, and for the most part a rich alluvial soil.* The more remote districts to the East, have a greater variety of level, but from want of water are, in many places, unproductive. The evaporation and currents of air produced by the river, the proximity of high mountains to the West, and the dryness of the Eastern desert, have a very beneficial effect on the climate of Sind'h. The air is peculiarly clear, and though the heat, in June and July, varies from 90°

to 100°, (Fahrenheit,) it is never oppressive or unhealthy. Where irrigation can be employed, the soil is highly productive; and but for the short-sighted cupidity of the government, the amount of its produce would be surprisingly large. In 1809 a duty of one rupee (2s. 6d.) was paid on every khanwan, or weight of 120 pounds, beside enormous exactions levied by the revenue officers. The only mineral now exported from Sind is saltpetre; its vegetable productions are assafoetida, bdellium, frankincense, fruit, grain, indigo, madder, oil, potash; its animal products horses' hides, shark-skins, and g'hí, (liquid butter.) In return, European goods and Indian productions are received from Bombay, most of which are conveyed to the countries lying North and West. Their central position, between Afghánistán, the Sik'h dominions, Persia, Arabia, and Hindústán, make the Sind'hians carriers to all those nations, and were it not checked by the jealousy and rapacity of their rulers, their trade would equal, if not exceed, that of any Indian State.

The people of Sind'h are a mixed race, principally Jat'hs or Bálúches, or derived from those different races of men. The former named Ját'h, or more briefly Jat. Ját, are descendants of converted Hindús of the agricultural class, whose unwarlike habits led them to call in the latter, their hardy neighbours in the Western mountains. The Jats are therefore the original owners of the soil. Jókíyás or Jókriyás, also converted Hindús, probably of the Rájput or military class, established in the mountains above Karáchí, are occasionally employed in the armies of Sind'h and settled in the Amír's dominions, though not much favoured by the government. (Burnes, in *Geogr. Journ.* 124.)

The languages spoken in Upper and Lower Sind'h are different dialects of the Hindí,† the relation of which to each other and the neighbouring dialects of Multán and Kach'h, will appear from the following comparative Table of the first five petitions in the Lord's Prayer:—

i. O heaven-in dweller our Father, &c.					ii. Thy name sacred be, &c.				
1. Multání.	Aé	sarag-bich	rahanwálá	asdá	piu.	1. M.	Térá	náw	pavitra t'há.
2. North Sind'h.	Aí	sarag-manj	rahanwára	ásájá	pit.	2. N.S.	Tahaja	nám†	pavitra t'háé.
3. South Sind'h.	Hé	sarag-mén	bihanwára	asájá	b'háb'há.	3. S.S.	Tuhijá	náwun	pavitra t'hiye.
4. Kach'h.	Aí	sarag-mén	rahanwára	asánjé	pi.	4. K.	Tawánjó	nám	pavittar t'hinó.
iii. Thy kingdom come, &c.					iv. Thy will heaven-in as so earth-in done come.				
1. M.	Térá	ráj	áwa.	1. M.	Térá	dilmát'há	sarag-bich	jaha,	taha duniyá-bich, kara wangna.
2. N.S.	Tahaja	ráj	ácha.	2. N.S.	Tahaja	khátirkh-áh	sarag-manj	jahata,	tahata duniyá-manj, kará wangna.
3. S.S.	Tuhijá	rāju	áché.	3. S.S.	Tuhijá	'unsurí	sarag-mén	jíná,	tíná 'álam-men, kiyó wangné.
4. K.	Tawánjó	ráj	áwé.	4. K.	Tawánjó	wishwúwáro	sarag-mén	jédó,	tédó máduwé-mén, kiyó binné.
v. Of us life necessary food this day to us give.									
1. M.	Aská	jívan	láyik	k'háwan	áj	askó	déwa.		
2. N.S.	Ask'há	jívan	láyik	k'háan	áj	ask'há	déó.		
3. S.S.	Asák'he	jíwan	jaharí	khórák	ájú	asák'hé	diyó.		
4. K.	Asánjé	jínéjé	kájé	k'hádá	aj	asánké	dió.		

* The Ganjah hills near Haider-ábád, the capital of Sind'h, scarcely form an exception to the general flatness of the country, being low and of small extent. In Mr. Pottinger's Map they are named "the Jungar mountains."

† Hindí, Hinduwí, or Hindústání, i. e. the language of Hind, the Hindús, or Hindústán, are all dialects of the same tongue, dif-

fering from each other rather more than the Doric and Ionic Greek. The latter, as largely embellished with Persian and Arabic words, is also called Orduwí, i. e. the court language for the Moghuls, who took horse-tails (*túgh*) for their ensigns, held their court in a camp, *Ordú*, whence our term "horde."

‡ The words in Italics are either Persian or Arabic.

SCIND. The Amírs or Princes of Sind'h, and some of their Chiefs, are Shí'ís, or adherents of the sect of Ali; but their subjects are almost universally Sunnís, or followers of the Traditions, (Hadís,) according to the exposition of Abú Hanífah, who is generally followed in Asia, as Sháfi'í is in Egypt, and Málik in Barbary. The rulers of Sind'h are, however, very tolerant, as is usual with the Shí'ís, and most of the traders in their dominions are Hindús. The population of this country is, from the causes already named, very small compared with its extent of productive soil and salubrity of climate. The religious mendicants, so numerous and troublesome in most Mohammedan States, here exceed all bounds. Sayyads, or pretended descendants of Mohammed, who go about on horseback in parties of seven or eight, well dressed and mounted, and preceded by a green flag in token of their origin, demand alms with insufferable insolence, and it is well if they who refuse to give them any thing, escape with nothing worse than abuse. The military force of the Amírs may be estimated at 36,000 men, forming a body of irregular cavalry, occasionally dismounted and acting as infantry. Less skilful in the use of the sword, though more athletic than the Northern Hindús, the cavalry of Sind'h could make no stand against well-disciplined native troops. The foot soldiers carry a shield, dagger, and matchlock, (to which the cavalry soldier adds a sword,) and are overladen with accoutrements, as may be seen in the frontispiece to Lieutenant Pottinger's Work.

Religion.

Population.

Beggars.

Syuds.

Soldiery.

National character. The natives of Sind'h are middle-sized, well-built, and more robust than the Southern Hindús. Black hair and eyes, a dark brown complexion, and fine teeth are their general characteristics. The beauty of their women is remarkable, and still more so is the comparative freedom which they enjoy. The national character has probably been greatly deteriorated by the misrule under which the country has so long groaned. "The Sindians," says Lieutenant Pottinger, (p. 376,) "are avaricious, full of deceit, cruel, ungrateful, and strangers to veracity;" but besides the debasement of the public mind arising from the infamous conduct of its rulers, he is "disposed to attribute the majority of the defects" above enumerated "to that moral turpitude which may almost be pronounced to pervade, in a greater or less degree, the population and society of every nation of Asia." The Sindians are, however, courageous, abstinent, laborious, and submissive; qualities which render them the best mercenaries employed in the Indian armies.

History. The early history of this territory, which is so cut off by the Desert from Hindústán as scarcely to form a part of it, and is now the only Indian State not directly under British influence, is very imperfectly known. It was conquered by Alexander, and held for several centuries by his successors, being probably an appendage to the Indo-Bactrian Empire, of which so many monuments have lately been explored in the Panj-áb and Afghánistán; (*Journ. Asiatique*, ii. 234. *Troisième Série*;) and, following the destinies of Persia, was invaded by the armies of the Khalifs immediately after that kingdom, but without any permanent consequences, till the reign of Walíd ibn' Abdu-l Melik, when T'hat'hah was taken by Mohammed Kásim, sent against it by Hejjáj ibn Yúsuf, Governor of Irák, (A. H. 99, A. D. 718,) in fighting against whom the last Hindú Prince was slain.* The

Mohammedan faith was then established by the conquerors, and for upwards of three centuries the Province was governed by military commanders sent from Baghdád. In the reign of Kádir bi-llah the successes of Mahmúd Sabuktegín, Sultán of Ghazneín,* compelled the Khalif to withdraw his garrisons from Sind'h, and leave that country a prey to the Sultán, who took possession of it, probably in his way to Gujjarát, which he invaded A. H. 415, (A. D. 1024.) In the reign of his son Mas'úd, the Chief of a native Tribe called Súmarah, compelled the Sultán of Ghaznah to acknowledge him as hereditary Prince of Sind'h, on condition of his paying the usual tribute. After the extinction of this dynasty, (A. H. 694, A. D. 1295,) the Chief of the Tribe of Samah, who claimed descent from Jemshíd, obtained the sovereignty, and his posterity preserved their independence till defeated and rendered tributary by the Moghul Emperor, Fírúz Sháh, (A. H. 763, A. D. 1362.) On the conquest of Kandahár by Bábur,† A. H. 928, (A. D. 1522,) Sháh Beg Arghún, sovereign of that country, retreated on Sind'h, of which he made himself master. His son was dispossessed by Mírzá 'I'sa Turkhán, whose descendants occupied the throne, as independent Princes, till the time of Akbar, in A. H. 980, (A. D. 1572.) From that period till the decline of the Moghul Empire after the death of Aurang-zéb, (A. H. 1119, A. D. 1707,) the Sindian Chiefs continued in uninterrupted allegiance to the Emperor, but the Turkhán race had been supplanted by the Kalórah, a Tribe of religious mendicants,‡ who claimed descent from the 'Abbási Khalifs. One of these, Mir Mohammed 'Abbási,§ also called Núr or Mirján Mohammed, was defeated, by Nádir Sháh, who afterwards re-established him, in 1739, as tributary Prince. He lived till A. H. 1185, A. D. 1771, but his family were expelled in A. H. 1193, (A. D. 1779,) by the Chiefs of the Tálpúrí, a Balúch Tribe, who purchased the aid of Taímúr, Sultán of Kábul, by the payment of an annual tribute of twelve laks of rupees, (£135,000.) On the death of the latter, and the civil war which ensued, the Tálpúrí Chiefs ceased to remit any tribute to Kábul, and endeavoured to enlarge their dominions by seizing a part of the adjoining territories. They assumed the title of Amír, (Commander,) and ruled by a joint authority, acknowledging their elder brother, Mír Fat-h 'Alí, as their head; he having received a farmán (patent of investiture) from the Sultán of Kábul. On his death, his three brothers divided their common revenue into four parts, two of which were assigned to Mír Gholám 'Alí, as eldest. Since that period they all rule by joint authority, each absolutely in his own territory; and on the death of any one of them, the next brother takes his place, the son of the deceased ranking only as junior member of this singular confederacy. The annual revenue of Sind'h is said to have amounted, when Lieutenant Pottinger wrote, (in 1814,) to sixty-one laks of rupees, (£762,500,||) but this

SCIND.

Revenue.

* That is the two Ghaznahs; the omission of the final *n* has caused the name to be mistaken for an adjective, and spelt Ghizní, but Ghazneví, not Ghazní, is the derivative of Ghaznah.

† *Ferishtah*, ii. 110.

‡ Perhaps Kurds of the Tribe called Kelhorán.

§ Called Khudáyár in Sir W. Jones's *Life of Nádir Sháh*. (*Works*, 463.) His title 'Abbási (a descendant of 'Abbás) made our early Anglo-Indians suppose him to be an Abyssinian. (Rennell, *Mem.* p. 184.)

|| The value of the rupýah varies from 2s. to 2s. 6d. It is usually estimated at the latter rate by Lieutenant Pottinger, but in p. 401 he uses both valuations, probably on account of a deterioration of the Sindian coin in the interval between 1809 and 1814.

* *Ayín Akbarí*, ii. 119. Pottinger, p. 387-9. The Chach of the latter is the Jaj of the former; probably a corruption of Yajnya.

SCIND. was probably exaggerated. On the death of Sohráb, the elder Amír, his two surviving brothers took possession of his territory, to the utter ruin of his heirs. The entire separation of Sind'h from the British dominions in Hindústán, and the jealousy of the Emírs, which discourages commercial or other intercourse, prevented our countrymen from having any communication with it, hostile or peaceful, till 1808 and 1809, when it was thought necessary to guard against the projects of Bonaparte with respect to that remote part of the British Empire. A treaty was therefore at that time concluded with the Amírs, who had previously formed a very erroneous notion of the views and strength of the British Government. They were not indisposed to invade the adjoining territories; and in 1813 made themselves masters of Amar-kót, a celebrated fortress belonging to the Rájá of Jaud'h-púr, having been prevented from invading Kach'h B'húj, on their South-Eastern frontier, solely by their dread of the British, who were in alliance with the Rájá. Like other Indian Powers, they willingly afford an asylum to the predatory bands who plunder their neighbours, and when, in 1820, one of their agents was killed in an affray on his road to Bombay, he and his followers having been mistaken for robbers, the Amírs, though professing to be satisfied with the explanation given by the British Government, made it a pretext for invading Kach'h, so that the Governor of Bombay thought it necessary to despatch a large force in order to repel them. In consequence of this precaution, they immediately withdrew their forces within their own borders, and a treaty of perpetual friendship between the two Powers was concluded in November of that year.

Towns. The principal towns in Sind are:—

Shikarpoor. 1. Shikár-púr, (*i. e.* Hunting-town,) in 27° 53' N. and 63° 40' E., Capital of a District bearing the same name, and 12 geographical miles North-West of the Indus. Moorzarees. The Muzáris, who give its name to the tract called Muzáriká, in which this town stands at the Northern extremity of the Amír's dominions, are Balúches, a predatory Tribe, almost in a state of independence. The town, which is of a considerable size, is enclosed by a mud wall. Its inhabitants are principally Hindús, who speak a peculiar dialect of the Hindí. Many of them are wealthy, and bankers from Shikár-púr are scattered over the whole of Afghánistán, many of them settling for a time even in Turkistán. Belooches.

Bakkur, Backar, or Buckor. 2. B'hakar, on an island in the Indus, in 27° 42' N. and 69° 2' E., was a strong fortress, Capital of a Perganah (District) in the Government (Súbahdári) of Multán, under the Emperor Akbar, (*Ay. Akb. ii. 112, 270.*) and known to the early navigators of that river under the Arabian name of Mansúrah.* Its walls are brick, loopholed, flanked with towers, and sloping to the water's edge. The interior is crowded with houses and mosques, and the whole in shape is nearly oval, 800 yards long, and 300 in diameter; but it is now strong only by its position on a low flinty rock not 400 yards distant from the river. The water near it is seldom less than four fathoms deep, and full of eddies. The fort is garrisoned by about 100 men, but has very few serviceable guns. (*Geogr. Journ. iii. 133.*) On a rocky hill, about four miles South South-East of

* D'Anville (*Antiq. de l'Inde*, p. 34.) supposes Mansúrah to be identical with Minnagara or Minháwer, lower down the river; Rennell identifies it with B'hákar. (*Mem.* p. 185.) Mansúrah was conquered and colonized by the Arabs in the IXth Century. (Ouseley, *Ibn Haukal*, p. 148.)

B'hakar, are the ruins of Alór or Alwer, once the largest town in the District, (*Ay. Akb. ii. 270.*) and the Capital of a Principality. It is now a mere hamlet, distinguished by a few tombs in ruins and a low bridge, called the Band (Embankment) of Alór, thrown across a valley once a branch of the Indus, which passed by Amar-kót and Lak'h-pat in its way to the sea. (*Geogr. Journ. iii. 134.*) Sakar on the West, and Róhrí on the East, remarkable for its date-grove, may be almost considered as suburbs of B'hakar.

3. Khaír-púr, (Good-town,) about 14 miles South-West of B'hakar, is a modern town, built by the Amír Sohráb, (an ally rather than a feudatory of his brothers Gholám, Karím, and Murád.) It is unfortified, and a mere assemblage of mud houses inhabited by about 15,000 persons, chiefly employed as dyers. It stands on the bank of the Mírwáh, a canal which conveys the water of the Indus for upwards of 90 miles to the South-East.

4. Lár-khánah, (Post-house,) about 55 miles South-South-West of B'hakar, in 27° 26' N. and 68° 9' E., is Capital of the Parganah of Chánd-kóh, and chief town on the Western frontier of Sind'h. It has about 10,000 inhabitants, and is protected by a small mud fort. It stands on the bank of the Núrwhá, a canal which conveys the waters of the Indus to the foot of the Western mountains.

5. Sihwán or Sihwan, in 26° 22' N. and 68° 5' E., the only wealthy town in that part of Sind, owes its opulence to the shrine of La'l Sháhbáz, a Khorásání saint, whose relics are much visited by Musulman pilgrims. It is sometimes called Séwistán, and stands on a rising ground on the South side of an eminence crowned by a very ancient and remarkable castle now in ruins. Its population, amounting to 10,000, is probably very unhealthy, as the Indus, having moved its course two miles Eastward, has left a swamp on nearly all sides of the town. The climate is oppressively hot, the soil productive. Its castle, an oval of 1200 feet in length, 750 in breadth, and 60 in height, seems, according to Lieutenant Burnes's description,† (*Geogr. Journ. iii. 129.*) to have been a colossal Tóp, or sepulchral tower. Near it, the Indus is joined by a large branch or offset, which issues from it opposite to B'hakar-ká, derah, (Valley of B'hakar,) about 15 miles East by North of Lár-khánah, and under the name of Nára runs by a South-Westerly direction into the small lake of Manchár, whence it issues with the name of A'ral, and, taking a South-East direction, rejoins the Indus, as mentioned above, two or three miles to the East of Sihwán.

6. Haider-ábád, (Lion's Abode,†) the present Capital of Sind'h, in 25° 22' N. and 68° 41' E., is properly a fortress on the summit of a low but precipitous rock of an irregular form. Its brick walls, built in a line with the edge of the precipice, are from 15 to 30 feet high, thick below, but tapering upwards, and so close set with embrasures and loopholes as to afford no protection against a well-directed battery. Round towers flank them, at intervals of 300 or 400 paces, and the fort

* "From the section through the hills which it lays open, the whole castle is clearly an artificial mound of earth." The first part of this sentence is unintelligible, no doubt from mistranscription; for the whole paper has been very carelessly edited. In the next sentence we have "Humeron" for "Humaion," and "Omerkole-Akliers, General" for "Omerkote, Akber's General."

† Probably in allusion to 'Alf, who was called Haýder, "the Lion" of God. The Amírs are Shífs, and therefore highly venerate 'Alf. The fort was built by Mír Fat-h 'Alf, founder of the Tálpúrí dynasty.

SCIND. is entered, on the Northern side, by a bridge over a dry ditch ten feet wide and three feet deep. The gate is protected by an immense bastion built over it, but the whole fortress is fast going to ruin. A massy tower in the centre of the town, unconnected with the walls, contains the treasures of the Amírs, whose houses are mere hovels. Some Mosques in the fort, and on a hill South of it the Mausoleum of Mir Gholám 'Alí, who died in 1812, are the only buildings deserving notice. Its artillery is scanty and in bad condition. The pettah or suburb, on a rising ground North of the fortress, contains about 2500 houses, and the population amounts to about 20,000 souls. Haiderábád is on the Eastern side of an island formed by the Faléli or Gúni, formerly the Eastern arm of the Indus, but now dry, excepting in the rainy season. It is about three miles from the main stream of the river, has a considerable trade and skilful mechanics, especially embroiderers, but industry receives no encouragement, and the land is ill cultivated, even in the neighbourhood of the Capital.

Isle of Hyderabad.

Tatta.

7. T'hat'hah or T'hat'há, in 24° 44' N. and 68° 18' E., a little to the North-West of one of the principal forks of the Indus, and three miles distant from it, was the Capital of a Súbah (Government) in the Moghul Empire, and is generally supposed to be near the Pattala of Arrian, (vi. 18.) It stands on an eminence formed of rubbish from the ruins of some ancient city, between two lines of rocky hills, and in the time of the inundation is surrounded by water. Its brick houses, numerous streets, ruined castle, and especially the sculptured sepulchres at Makalí, three miles South-West of it, are marks of its former prosperity, but it is now mean and dirty, and the English factory, purchased by the East-India Company in 1751, and long since abandoned, is the best house in the place. The walls of the town also are now in ruins, but enclose a circumference of four or five miles. Its population was, in 1809, estimated at 15,000, and its manufactures were then reduced to a few white calicoes and coloured sashes.* Bráhmañ-ábád, (Bráhmañ's abode,) an ancient city mentioned by Indian writers, is supposed to have been at or near T'hat'hah.

Crotchey.
Kurrachee.
Karangee.

8. Karáchí, Kráchi, Kráñchi, or Karánj, in 24° 52' N. and 67° 17' E., is the only seaport of Sind'h, about 24 miles East by North from Cape Mowárá.† Its harbour, called Khúr 'Alí,‡ (Port 'Alí,) is small, and obstructed at its mouth by a bar impassable by vessels drawing more than sixteen feet of water. It is commanded by a fort (built in 1797) on the promontory which forms the Western side of the entrance. Within the gulf there are several very high rocks. (Pottinger, p. 332.) The town is near the beach, about six miles from the anchorage, and ill fortified. Its population amounted, in 1813, to 13,000 souls, chiefly Hindús, all engaged in commerce, and paying an annual revenue of 1,43,000 rupees, (£17,875,) including the extortions of the Ijárah-dár or farmer of the customs. The surrounding country, for some miles, is a dead level, covered with fine turf after the rains, but completely naked after the long droughts to which that country is subject. Karáchí originally belonged to the Balúches, but was seized by the Amírs

of Sind during the minority of Mahmúd, Khán of Kel'at soon after the death of his father, Nasír Khán, in 1795. (Pottinger, p. 286-7.) It had, however, been obtained for Sind by exchange, at an earlier period, formed a part of the Sindian territory in 1774, (Vincent, p. 174.) and was then a place of great traffic.

The most remarkable feature in the geography of River Sind'h is the river from which it derives its name: and as our hope of more accurate information respecting the course and tributaries of that celebrated stream has not been disappointed, a fuller account of its course than could have been given in an earlier part of this Work, is here subjoined. With respect to the ancient state of the Indus, scarcely anything positive remains except Arrian's account, taken from the writings of Megasthenes and others of Alexander's officers who accompanied him in his invasion of India. "That country," he says, (v. 6.) "is bounded on the West and South-West, as far as the Great Sea, by the river Indus, (ὁ Ἰνδὸς ποταμὸς,) the greater part of it being a plain gained, as is supposed, from the alluvion left by the rivers: . . . as is the case with respect to Egypt, according to Herodotus and Hecataeus, or whoever wrote the work on Egypt bearing his name. . . . Were all the rivers of Asia Minor mingled together," he adds, "they could not be compared with the Indus, which is a large stream even at its sources, and having received in its course, throughout which it bears the same name, fifteen, all of them greater than those of Asia Minor, discharges itself into the sea." "The Indus," he had before said, (v. iii.) "is the largest of all rivers in Asia and Europe, except the Ganges. Its sources are on this side of Mount Parapamisus or Caucasus;" (i. e. the Indian Caucasus;) "it discharges itself into the Great Southern Indian Sea by two mouths, each of them swampy, like the five mouths of the Ister. (Danube.) It also forms a Delta, very similar to the Egyptian Delta, a figure which is called *Pattala* in the language of the Indians. The Hydaspes, Acesines, Hydraotes, and Hyphasis, also Indian rivers, though greatly exceeding the other Asiatic rivers in size, are much less than the Indus, which is itself inferior to the Ganges. Ctesias says (if his authority can be relied on) that the banks of the Indus, where it is narrowest, are 40 stadia (five miles) distant from each other; 100 stadia (12½ miles) where it is widest, but the mean of these numbers in the greater part of its course." When sailing down the Hydaspes, and near its junction with the Acesines, (Vitastá or J'hélam,) (Arr. vi. 3.) Alexander was informed by the natives that it joined the Acesines, (Chandrab'hágá or Chanáb,) which afterwards joins the Indus; and that their united streams bear the same name, and pour their waters jointly, by two mouths, into the Great Sea. (Arrian, vi. 1.) "After the confluence of the Hydraotes (Írávati or Rávi) with the Acesines, the name of the latter prevails." . . . "That river also, having received the Hyphasis, (Vipásá,*) falls into the Indus, but still retains its own name." (Ib. vi. 14.) "From their junction to the point where the Indus divides into the Delta, the distance amounts to 100, or perhaps more than 100 stadia."† (Ib. 14.)

Five Heads.

Confluence.

* *Lungis*, narrow strips of cloth to be passed between the legs and folded round the waist.

† Called Monze by Captain Robinson, (Vincent, *Nearchus*, p. 176. Rennell, *Mem.* p. 36, 180.) by whom it seems to have been first laid down in 1774. (Vincent, p. vii.) The name is probably local, perhaps a Balúchí term.

‡ A plan of it is given in Dr. Vincent, pl. iv. p. 167.

* The Hindús, however, consider the Hyphasis of Arrian as the Satadrú, (Setlej or G'harah,) Hesydrus of the Greeks, into which their Vipásá, (Hyphasis,) now Biyás or Biyáh, flows at Harí or Hariké, West by North of Lud'hyanah.

† The text of Strabo is here manifestly corrupt, for the distance to the commencement of the Faléli is at least 2240 stadia, and to the Sátá 2560 stadia.

SCIND. "At the confluence of these two streams (the Indus and Acesines) Alexander ordered a city to be built, and docks to be formed, hoping that it would become large and populous." (*Ib.*) Thence he sailed down the river to the royal city of the Sogdians, where he built another town, constructed other docks, and repaired his fleet. **Sogdi.** He then sailed down the stream to the territory of Musicanus, which was, he had been told, the most opulent in all India. He made so quick a voyage down the river that he reached the confines of Musicanus's Kingdom before that Prince had heard of his approach. He proceeded thence towards Pattala, which he found deserted; but he ordered a citadel to be built, and wells to be dug, as the neighbourhood was suffering from drought. (*Ib.* 17.) "Near Pattala (*τὰ Πάτταλα*) the Indus divides its waters into two large streams, each of which retains that name as far as the sea. There Alexander made a harbour and docks; and when his works were somewhat advanced, he determined to sail down to the sea by the right (Western) arm of the river." (*Ib.* 18.) In this design he was frustrated by a severe storm and the excessive violence of the tide, so that when his fleet had reached the widest part of the river, where it was 200 stadia (25 miles) in breadth, they were compelled to take refuge in an artificial channel, (*διώρυγα*), where, on the retreat of the tide, they were, to their great dismay, left upon dry ground. Below this part of the river, they came to a large island named **Cilluta**, (*Κιλλούτα*), which had good harbours and water; and 200 stadia (25 miles) beyond it they found another island, actually in the sea. (*Ib.* 19.) "On another day Alexander visited a second island, also in the ocean, and went out into the open sea to ascertain, he said, whether there were any other land stretching out into the sea near it." The only notice of the appearance of the country near the river is, (*Ib.* 15.) "that the left bank was more passable for a heavy army than the other. After having revisited Pattala, where he found the citadel built, Alexander again sailed down to the sea by the other (left or Eastern) mouth of the Indus, in order to ascertain where its discharge into the sea is most smooth. (*Ib.*) These two mouths of the river Indus are distant from each other, at the utmost, 1800 stadia, (225 miles.)" (*Ib.* 20.) Near the mouth he found a large lake like a gulf or bay of the sea, in which there were seen fishes larger than those of our seas; he also found the passage through this mouth of the river to be easier than the other.* (*Ib.* 20.)

For accurate information as to the present state of this celebrated river we are indebted to the zeal and persevering enterprise of several officers in the East India Company's military service, who, under the judicious patronage of our Indian Government, have in a few years done more than was before effected in centuries towards the improvement of the geography of Southern and Central Asia.

Sind'h. Sind'hu, whence Sind, Hind, and Indus, appears to have originally signified "the Ocean," (*Encycl. Metrop.* xxiii. 665.) and was probably applied to the lower part of this vast river, which, when the tide rises with its greatest strength, presents the appearance of a tempestuous sea; but beyond the Delta, in ancient as well as modern times, it seems to have borne different local

* An excellent version of this portion of Arrian, with a valuable commentary, is given by Dr. Vincent; (p. 118—158;) but the reader must beware of that learned writer's etymologies, which are too frequently a mere *ignis fatuus*.

names throughout the whole of its course.* Its sources, and all the first part of its progress, are still imperfectly known; but Mr. Moorcroft (*As. Rev.* xii. 453.) learned from Ahmed Khán, Kizil-básh, a vakíl or agent of the Rájá of Laták, whom he saw at Górtóp in Thibet, that "a clear, broad, and rapid, but not deep, river," (*Ib.* 443, 444.) which he crossed about 14 miles South by West of that place, passes near Laták or Léh, the Capital of a country so named, and is a part of the stream flowing by Atak, or, in other words, the Indus. Subsequent inquiries have ascertained that this river, called Ek-hang-chu by the Tibetians, is only a tributary to the Sing-hài-chú (also called Sing-zing-kam-pa) or Sind'hu of the Hindús. The source of the latter appears to be nearly in 31° 25' N. and 81° 30' E., 60 or 70 miles to the East of Mr. Moorcroft's furthest point in that parallel. Its course through Rodák to Léh, about 250 miles, is followed by the merchants who go to Górtóp and U'n-dés to purchase shawl-goats. From Laták or Léh, in 34° 9' 21" and 77° 40', it appears to run nearly in a North-Western direction till it reaches the Bálti mountains, whence it shapes its course to the South-West till it reaches Atak, from which place to Mitén† its deviation from a line due South, is considerable. From Mitén to Rukan, near the lake Manchár, its course is nearly South-West, and from thence to Omar-púr, North-East of Haider-ábád, it is about South South-East. A direction nearly South by West brings it to the fork near T'hat'hah; and its two great branches between that place and the ocean, though continually bending and taking a fresh direction, have a constant tendency to the West of South. The whole length of its course cannot be far short of 1200 miles.‡ Its passage through the mountains between Léh and Saigúr, in 35° 8' N. and 74° 30' E., where it emerges from the Hindú Kush or Indian Alps, is doubtless continually hemmed in by precipices, as no route near its banks in that long interval of at least 180 geographical miles has yet been found. Below that point, as far as Tór-bélá, 40 miles East North-East of Atak, where it enters the valley of Chach, and is broken by rocky islands into almost numberless channels, it has a very winding course through high mountains. At the foot of Atak, (Obstruction,) in 33° 51' N. and 72° 10' E., the hills again close in upon the stream, which is there only 780 feet in breadth, but proportionably deep and rapid; when highest, the water rises there nearly 40 feet perpendicular. Another valley of five miles in extent opens five miles further down, but narrows succeed at Níl-áb, (Blue-water,) and continue to Kará-bágh, (Black-garden,) in 33° 7' N. and 71° 40' E., where it passes through the lofty range of salt-hills, enters the rich valley occupied by the Tribe of I'sa Kheil, and runs without further obstruction to the sea. This part of its course, which passes by Derah (Valley of) Ismá'il Khán, Sarwar, Derah Ghází Khán, Harand, and Dájel mael

* Abú Sín (Abú Sind?) to Atak, Rúdi Atak (River of Atak) to the confluence with the Panj-nad, (Five Rivers,) and subsequently Deryái Sind'h. (Sea of Sind'h.) (Pottinger, 356.) Above Sihwán it is also called Sirá, i. e. North; below it Lar, i. e. South. (Burnes, *Geogr. Journ.* iii. 132.)

† Miténdá Kót, i. e. the Castle of Mitén.

‡ Lieutenant Macartney concludes from a detailed calculation, (Elphinstone, *Cambul*, p. 653.) that the distance between its sources and the sea is not less than 1350, and though the Northernmost part of its course forms a large curve, of which he was not aware, yet his estimate must be too high, as he carries the stream a full degree to the North of what appears to be its true course.

SCIND. on the West, and Layáh on the East, is nearly straight. Opposite to Mitén dá kót (the Fort of Mitén) it is joined by the Panj-áb or Panj-nad, (*i. e.* Five Streams,) united in one bearing that name, and also called G'harah. At the Kahíri g'hát (Passage) it is about 3000 feet wide and 12 feet deep when the water is lowest. (Elphinstone, p. 653.) The Easternmost arm of the Indus, called Faléí or Gúní, diverges from it a few miles above Haider-ábád, and is, perhaps, one of the two arms of the river mentioned by Arrian. Of late years it had long ceased to reach the sea, as its course was obstructed by an embankment, (*band*.) thrown across it in 1762 by Gholám Sháh Kalórah, who wished to ruin the people of Kach'h, by whom his troops had been lately defeated. (Burnes, in *As. Tr.* iii. 550, 551.) This mound was thrown up at Mórah, nearly in the parallel of T'hat'hah; and in 1802 'Alí Murád, a chieftain of the T'har or Desert adjoining to the Ran of Kach'h, formed a second band at 'Alí Bander, (Port 'Alí,) a little way down the P'harán, as the river is there called, so that the supply of fresh water from the Indus was completely cut off, and the District of Saírah near Lak'h-pat-Bander, (Port of Lakshapati,) the Western frontier-town of Kach'h, was reduced to a complete waste. In 1819 a very severe earthquake not only formed a lake just beyond Lak'h-pat, but about 45 miles to the north of it threw up an embankment quite across the river, and extending from East to West about 16 miles; this the people called Allah-band, "God's Mound," to distinguish it from those formed by the hand of man. In November, 1826, however, the Indus brought down such a vast body of water as burst through all these barriers, and formed a channel through the Allah-band 120 feet in width, and 12 feet in depth. Thus has one of those great physical changes, which rarely occur, defeated the schemes of disappointed ambition, and restored, we may hope, fertility to a tract which by human malice had been turned into a desert. The stream takes a wide sweep below Lak'h-pat, and at Kótah-sar, about 30 miles below, where it has a width of five miles, is called Kórí,* and gradually forms the estuary which is called the Kórí or Eastern mouth of the Indus. (*Ib.* 556.) About 18 miles West of this is the Sir or second mouth, opening into the Gungarah, another stream which has become salt in consequence of a mound (*band*) thrown across it at Maghribí, about half way from the point opposite to Jarak, where it branches off from the main stream. Above the mound it is called Panyári. The four following mouths are all outlets of the Sata or Eastern arm of the Lower Delta, supposed to be the ancient Pattaléné. Mall, the third mouth, about 25 miles West of the Sir, is navigable for boats of 25 tons, and is the only avenue to the Sháh-bander, (Royal Port,) North-East 20 miles distant; it is therefore much fre-

* Khórí?

SCINTILLANT, } Fr. *scintiller, scintillation*; It.
SCINTILLA'TION, } *scintillare, scintillazione*; Lat.
SCI'NTILLOUS. } *scin-tilla*, which some Latin
Etymologists derive from *scindere, q. d. scindilla; quia flamma videtur quasi scindi, dum scintilla excutitur*; because the flame seems to be split when the spark is thrown out. Vossius thinks this far-fetched, and that *scintilla* is *spintella*, from the Gr. $\sigma\pi\upsilon\delta\eta\rho$, of the same signification.

A spark or sparkling; an atom emitted.

quented. Kháyir and Górah or Wányání,* the fourth and fifth mouths, though opening into wider and deeper streams than any preceding ones, except Kórí, are unnavigable on account of dangerous bars. The Khédiwári or sixth is a small creek communicating with the Hajámarí or seventh, which can admit boats of 50 tons, and carries them to Vikar, 25 miles from the sea. To the West of this are Réchel and Juwáh, the eighth and ninth, both now obstructed by impassable bars, though the former was, within a few years, the most frequented of all the mouths. The tenth is called Pañtiyání, a branch of the Pítí, the principal outlet of the Bagár or Western branch of the Lower Delta. The Pañtiyání mouth is in $24^{\circ} 30'$, and has only 15 feet on its bar at high water. The Kódí or eleventh mouth, now choked up, is about 15 miles West of the Pañtiyání, and three or four East of the Pítí; the twelfth and Westernmost, at the mouth of which there is an island and a sandbank which reduce the navigable channel to 500 yards at low water. Bander Láhorí,† once so much frequented, is on this arm, but is now replaced by Dára-jí, a little higher up. The Bagár is extremely crooked, and varies much in depth. Such is the present state of the mouths of the Indus; and one inference cannot fail to arise from a consideration of the continual changes to which they are liable: viz. that as the depth, direction, and issue of this, and almost every other gigantic river, vary so much in the course of a few years, an inability to reconcile ancient and modern accounts of them need not occasion surprise; nor can we expect to obtain a satisfactory solution of our difficulties till a careful examination of their banks and outlets shall have furnished hydrographical, and well-directed antiquarian researches shall have supplied historical documents for the probable determination of places mentioned by ancient historians and geographers.

SCIO.

SCIO.

Chios. SCIO, which the Italians, from whom this name came to us, pronounce Shio, is meant to represent the modern Greek pronunciation of Chios, (*ἡ Χίος*), the final *s* being usually dropped. That Island therefore still bears its ancient name. By the Greek and Roman Poets it is also called *Æthalia*, *Macris*, *Pityusa*, but these are epithets derived from its *burnt* hue, *oblong* form, and *pine*-forests, rather than proper names. *Leleges*, *Carians*, and *Pelasgi* from *Thessaly* were its first inhabitants; but the second of the above-named Tribes were conquered by a colony of *Abantes*, an *Ionian* race from *Eubœa*, whence *Chios* became one of the twelve States* which formed the *Ionian Confederacy*. (*Strabo*, xiv. 633.) Its circumference is estimated at 900 stadia (112½ miles) by *Strabo*, (*Ib.* 645.) but *Pliny* (v. 31.) gives to it 125 miles or 1000 stadia. It consists of one large mass of mountains, nearly elliptical in form, and separated by a channel of some breadth from the coast of *Asia*. Its shores descend abruptly to the sea on its Northern and Western sides, where their aspect is rugged and dreary; but they sink gradually into luxuriant planes and valleys to the East and South. The fertility of the Island has been as much celebrated by the ancients as by the moderns. Its mastic, mentioned by *Dioscorides*, (i. 90.) is the origin of its Turkish name *Sakiz-âtá-si*, i. e. *Mastic-Island*. The population of the Island is estimated by *Tournefort* (i. 381.) at 113,000, and at 110,000 by *Olivier*, (ii. 72.)

Shape. The principal city, bearing the same name as the Island, is on its Eastern side, nearly midway between its Northern and Southern extremities, in 38° 22' 31" N. and 26° 10' 43" E. *Strabo* (p. 645.) says its harbour was secure, and capable of receiving 80 ships. It is now, however, far from one of the best in the *Archipelago*, being only protected by a low mole erected by the *Genoese*, and having a very narrow and dangerous entrance. (*Tournefort*, i. 371.) Being anciently, as now, much frequented by vessels passing between *Constantinople* and *Egypt*, and the Capital of a fertile island, the commerce of *Scio* was considerable, its inhabitants wealthy, its public buildings splendid and adorned with many fine works of art, several of which were carried off by *Verres*. (*Cic. Orat.* ii. 19.) Some relics of antiquity may still be observed in various parts of the town, such as fragments of sculpture† worked into the walls of houses; and 300 Churches, with many Monasteries, were monuments of its prosperity under the *Genoese*, who possessed it for more than two centuries. Most of these remained uninjured at the time of its utter ruin on the suppression of the insurrection against the *Turks*. Its appearance from the sea, in 1830, soon after that deplorable event, is well described by *M. Michaud*: (*Cor-*

respond. iii. 435.) *L'ancienne Capitale de l'Île paraissait devant nous, au milieu d'une plaine voisine de la mer; derrière la ville s'élèvent des montagnes arides semblables à celles qui dominent la plage de Toulon ... Nous avons pu voir d'assez près les murailles de la cité à moitié démolie et restée sans habitants.* But it may be hoped that in the interval which has since elapsed, it has recovered a part of its former prosperity, as it was then, he adds, governed by a *Páshá*, previously *Musellim* (Governor) of *Smyrna*, who did all in his power to repair the mischief which the barbarous vengeance of the Sultan's troops had so lately occasioned. The Convent of *Nea-Monè*, (*ἡ Νέα Μονή*), the New Neamone. Abode,) five miles from the city, was said to possess one-eighth of all the property in the Island, and at the close of the XVIIth Century to have an annual revenue of more than 50,000 crowns, (£12,500.) It was of great extent, and more like a village than a Religious House. (*Tournefort*, i. 369.) Its Church, a Gothic edifice built by the Emperor *Constantine Monomachus* in the XIth Century, was richly adorned with gilding, pictures, and columns of porphyry from the neighbouring quarries, (*Λατόμια*), celebrated by *Strabo* (xiv. p. 645.) and *Pliny*. (*Nat. Hist.* v. 38.)

To the South of the town was *Posidium*, (*Ποσειδώνιον*), *Posidium* a promontory sacred to *Neptune*, now *Cape Sta. Helena*. Beyond it was the cape and harbour of *Phanæ*, (*Φάναι*), remarkable for its palm grove overshadowing a Temple of *Apollo*; it is now called *Cavo Mastikhi*, (*Κάβος τῆς μαστίχης*), *Cape Mastich*, from the gum for *Mastic*, which this island is famous. Opposite to it is the rock called *Venético*. (*Βενέτικον*, *Melet.* iii. 213.) *Notium*, *Venetico*, the South-Western harbour, now called *Porto Mastikhi*, *Notium* derives its name from the product named above. The wine of this district (*Rex ipse Phanæus*, *Virg. Georg.* ii. 98.) was reckoned the best produced in any of the islands of the *Ægean*. (*Athen.* i. 26.) *Laius*, another port on the Western side of *Chios*, must be the modern *Mestá* or *Mesta*. *Amistá*. The country hitherto described forms the *Kato Arvisia*, or *Apokato-merià*, (*ἡ ἀποκάτω μεριά*), or lower part of the Island, stretching from North-East to South-West. This is more level and fertile than the other, or (*ἡ ἀπάνω μεριά*), the upper part. Of that, the most remarkable place was the *Ariusian tract*, famous for producing a wine which could vie with nectar. (*Vir. Ecl.* v. 71.) It was separated from *Notium* by a dreary tract of rock for nearly 300 stadia. (38 miles.) Beyond this part of the coast is *Bolissus*, (*Βολισσός*), still so named, not far from the Black Cape, (*ἡ Μέλαινη ἄκρα*), now *Cape St. Nicolas*, the North-Western extremity of the Island, opposite to the Island of *Psyra*, (*ἡ Ψύρα*, whence *ἡ Ψαρά*, and *Ἡψυρά*), now *Psará* or *Ipsirá*, 40 stadia (five miles) in circumference, and 50 stadia distant from the cape. On a deep bay further Eastwards is *Kardamyli*; (*Καρδάμυλη*), (*Thucyd.* viii. 24.) and a gulf called *Porto Delpino*, on the North-East side of the Island, not very far from the Capital, marks the site of *Delphinium*, (*Δελφίνιον*, *Thuc.* viii. 25.) which was fortified by the Athenians, and opposite to the *Cænussæ Islands*, (*Οἱ* *Cænussæ*).

* They were *Ephesus*, *Miletus*, *Myus*, *Lebedus*, *Colophon*, *Priene*, *Teos*, *Erythræ*, *Phocæa*, *Clazomenæ*, *Chios*, and *Samos*, to which *Smyrna* was afterwards added. (*Strabo*, xiv. 633.)

† An inscription (*Anthologia Græca*, Append. 148. tom. ii. p. 365. ed. stereotype) published by *Brunk*, from *Vincenz Obsopæus*, who mentions the place whence it came, was a few years ago still in the wall of a house not far from the landing-place.

SCIO. *νοῦσαι*.) now called Agnussæ (*Ἀγνοῦσαι*) by the Greeks, and Spalmatori (the Calkers) by the Italian navigators. (Meletius, iii. 215.)

Spalmatori. The mountains are Mimas on the East, near to which is the islet called Pilos, (*Πῖλος*.) Pellinæus, the highest of all, (*Πελλιναιῶν*.) now St. Elias, or Spartonda, on the North side of the Island, celebrated for its marble quarries, and for the Temple of Jupiter on its summit; (Dionys. *Perieg.* 535.) and Chelipus (*ὁ Χέλινος*) towards the South. On the sea-shore, at the foot of Mount Epos, about four miles from the city, there is a circular basin,* with a bench round it, hewn out of the rock, which is nearly level, and a fragment of rock, about three feet high, and two feet eight inches broad, rising from the centre of the basin, has been hewn into the form of a cube, and sculptured with the figures of animals, long since too much mutilated to be clearly discernible. This is the place commonly shown as the "School of Homer;" and some other ruins near Volissò, still more doubtful as to their former use and design, are shown as the Poet's house; but the claim of Smyrna, as the abode of Homer, is quite as good if not better than that of Chios, and the antiquity of the controversy between the seven cities which claimed him as their denizen, is a plain proof that even in the earliest period of authentic history nothing certain was known about his birthplace or his abode.

Chelipus. Homer's school. His house. The most valuable productions of Scio are gum mastic and oranges, both of which secured for it, under the Turkish Government, privileges which long rendered it the most prosperous of all the islands in the Archipelago. Mastic (*ἡ μαστίχη*) is the gum-resin flowing from the lentisc,† (*Pistacia lentiscus*.) a shrub which forms the hedge of almost every field in Southern Europe, Asia Minor, and the intervening islands. In Scio it is cultivated, and there such varieties of it occur, as usually spring from culture. Incisions in the trunk and branches are made in the beginning of August, and at the end of five weeks the gum is chipped off; fresh incisions are then made, and in the second week of October another harvest is gathered; but from the third week of that month till the end of November, during which time the gum continues to flow, no fresh incisions are made, nor is any more gum collected. The lentisc is seldom more than 14 or 15 feet high, and, as low trailing plants are the most productive, the cultivated shrub is not suffered to shoot upwards. The plantations round twenty-one villages‡ South of the Capital are the only places where the cultivation of this shrub is allowed; and the annual produce, in 1793, was estimated rather above 50,000 ókahs; (about 134^c hundred-weight;) of this 21,000 ókahs were paid as duty to the Sultán, and the remaining 29,000 were sold at 50 párahs (2s.) per ókah to the Aghá, who farmed the revenue. The best mastic was exclusively reserved for the Sultán's Harem, the next for those of the Mamlúk Beys in Egypt, and only that of the third quality found its way into the market. (Olivier, ii. 89.) The oranges of Scio are reckoned the best in the Levant, and the annual export of them amounted, in 1794, to the value of 2,000,000 livres, (£83,000.) Tournefort observes, that Scio did not then produce corn enough for its own sub-

sistence. "The village of Gesmé,* which is the ancient Erythræ," he adds, (p. 372.) "supplies Scio with grain according to some. Gesmé is opposite to Scio, beyond Cape Carabouron." (Kará Búrun or Búrunú.) The same writer mentions as rare plants found in Scio, the two species of Leontice, (*Chrysogonum* and *Leontopetalon*.) and the *Aristolochia hirta*, of which he has given a good figure; (*Voy.* i. 386. *Flora Græca*, tab. 937.) but the two first are common in Greece and Asia Minor, and the last is found occasionally near Smyrna as well as in Cyprus. It is singular that he says of it, *cette fleur n'a point d'odeur*; for it has a very strong smell of carrion, which attracts bluebottle-flies, who are made prisoners by the bristles in the tube of the flower.

The probable origin of the Ionian colony in Chios History. has been already mentioned. The skill of the Chians in navigation, and their activity in commerce, enabled them long to maintain their independence against their powerful neighbours; but they were at length obliged to yield to the overwhelming arms of Persia, and receive Strattis as the Viceroy of the Great King. Though in close alliance with Athens till the end of the Peloponnesian War, they soon found that they were considered as vassals rather than confederates, and therefore joined the Spartans after Athens was weakened by the defeat of her armies in Sicily. They were, however, ultimately subdued by the Athenians, whose cause was favoured by the neighbouring Satraps. In the Social War, the Chians joined the Byzantines and Rhodians, and, having obtained a signal victory over Chabrias, compelled the Athenians to sign a treaty renouncing all claim to submission or tribute. (B. C. 358.) They enjoyed a comparative independence from that time till the Mithridatic War, when their fidelity to Rome called down upon them the vengeance of Mithridates. As subjects of Rome, the Chians suffered little except from the depredations of Verres, and few colonies were treated with more indulgence. As a part of the Byzantine Empire, this Island continued to flourish, but in the XIIth Century it was a prey first to Turkish marauders from the shores of Asia Minor, then split into petty Principalities under chieftains of the Seljûk race, and subsequently to the ill-disciplined bands of the Crusaders, in whose hands it remained till after the expulsion of the Franks from Constantinople, (A. D. 1261,) when it and many other islands were recovered by Michael Palæologus. The expenses, however, incurred in the civil contest between the elder and younger Andronicus in the following century, obliged the competitors to apply for loans from the Genoese, then the most wealthy and powerful of the commercial republics in Italy; so that their successor, John Cantacuzene, was glad to redeem a part of their debt by the cession of Scio and Fogia† to Genoa in

* Gesmé, i. e. Cheshmeh, (the Spring,) is a small town at the head of a deep inlet or gulf, which forms a spacious harbour completely land-locked. It has since acquired great celebrity as the place where the whole Turkish fleet was burnt by the Russians in 1770. Tchismé is merely a Frank corruption, the inhabitants called it *Cheshmeh*; it is near, but not on the site of, Erythræ.

† "La Terra di Fogie Nove," says Giustiniano, Bishop of Nebio, in his *Annals of Genoa*, (fol. 134.) Fogia, a slight alteration of Fôchea, as the Greek islanders now pronounce Phocæa. (*Φόκαια*.) The plural number was also borrowed from the Greeks, who commonly say Phochées (*Phokæes*, *Φοκαῖαι*) instead of Phôchea; it was called New, to distinguish it from the old or original Phocæa, about twelve geographical miles South-West of Fogia Nova. These towns were also called Fogle and Fôglieri by the Italian seamen.

* Well described by Sandys, as he saw it in 1610. (*Trav.* p. 13.)

† Lentiscs grafted upon the terebinth (*tzikudiâ*, *Pistacia terebinthus*) yield only a liquid resin. (Olivier, ii. 90.)

‡ Enumerated by Tournefort, i. 375. A pretty good figure of the lentisc is given in Dapper's *Archipelago*, (p. 80.)

SCIO. 1345; (Giustiniano, fol. 134.) but neither of those places was at that time actually in the possession of the Emperor, for the Genoese were engaged four days in subduing all the country which was in the hands of "certain Greek Lords." (Giustin. fol. 134.) Not long afterwards the sovereignty of the Island was purchased from the republic by the Giustiniano family, whose descendants governed it under the protection of their mother country for more than two hundred years. Their form of government was aristocratic; the supreme power being vested in twenty-four Maóns or Maúns, members of the Giustiniano family, one of whom was elected Podestà, or supreme head of the commonwealth, every two years. From the same body there were chosen every six months four Grand Bailiffs, who took cognizance of all civil causes in the Island, and had power of life and death; but were in all weighty matters aided by the advice of a Council of twelve members, over whom they presided. The other departments of the public service, particularly the mastic-plantations, were in like manner under the direction of officers elected from the noble families. But in proportion as the naval power of the Turks became formidable, that of Genoa declined, so that the Sciotes no longer able to rely on the support of the parent-republic, in order to secure themselves against the hostility of the Sultán, voluntarily craved his protection, and engaged to pay him a yearly tribute of 12,000 ducats, (£6000.) For some years payment was duly made, and the prosperity of the Island rapidly increased; but the tribute having fallen into arrear for two or three years, Piyáleh Páshá, the celebrated High-Admiral, on returning from one of his cruises, cast anchor at Scio on Easter-day, 1566,* invited the Maóns to an entertainment on board his ship, put them in irons, and took possession of the Island. (Dapper, *Archipel.* p. 85.) The castle, after its ill-advised capture by the Florentines in 1595, was strongly garrisoned by the Turks, and the islanders lost many of their privileges. In the Spring of 1694 it was taken by the Venetians, who disgracefully abandoned it before the expiration of that year. The Greeks, then, taking advantage of the circumstances in which they were placed, turned the wrath of the Turks against the Latin (*i. e.* Roman-Catholic) inhabitants, who, but for the interference of the French Consul, would have been reduced to the condition of Rayáhs, (*Ri'áyá.*) (Tournefort, i. 368.) It was subsequently governed by a Kádí (Judge) appointed by the Muftí (Chief Justice) of Constantinople, and an Aghá of the Janissaries, (Yení-cheri-aghá,) who, in time of peace, had about 150 men under his command; in time of war a Páshá was sent with a larger force to guard the Island. (Tournefort, i. 381.) The capitation (*khardj*) is levied at three different rates: the highest ten piastres, the middle five, and the lowest two and a half.† The Island subsequently enjoyed still greater privileges; it was granted as an endowment to one of the ladies of the Sultán's family, at least that part of it in which the lentisc was cultivated: (Olivier, ii. 77.)

* It is singular that M. de Hammer (*Gesch. des Osman. Reichs*, iii. 506.) has given no intimation of the arrear into which the Sciotes had fallen. Dapper has not given his authority, but it was probably Sandys, who, however, (*Travels*, p. 14.) raises the tribute to 14,000 ducats, and says that they were only two years in arrear and suspected of intriguing with the Knights of Malta.

† Then (in 1694) equivalent to 27s. 6d., 13s. 9d., and 6s. 10½d. Olivier states it (in 1794) at 11, 5½, 2½ piastres, then equal to 18s. 8d., 9s. 4d., and 4s. 8d.

hence in no part of the Empire had the Greeks more security and liberty. They were, as in most parts of Europe and Turkey, immediately under the government of ten or twelve Primati or Elders, chosen from their own community, through whom all the assessments and payments to the Turkish Government were made. In this comparatively happy state they might have continued to the present day, but for the restless turbulence, and probably a desire of plunder, which brought some of their revolutionary neighbours, under the name of liberators, to their shores. (Raybaud, ii. 240.) On the 9th of May, 1821, a squadron of insurgent Greeks from Hydra, Spetzia, and Ipsara (Psyra) cast anchor near the "Páshá's Spring,"* and invited the Sciotes to join in the insurrection. The Primati earnestly entreated the strangers to depart immediately, and on assurances made by the feeble and terrified Turkish garrison that the islanders, if they did not join the invaders, would be well treated by the Sultán, gave themselves up as hostages; but a Páshá with a large force was immediately despatched from Constantinople, more hostages were demanded, amounting at length to sixty-four, and the whole population was exposed to the insults and ill-usage of an undisciplined soldiery. While thus required for their fidelity to the Porte, the Sciotes were again urged to join the insurgents by a party of about 500 Samiotes, who landed in Scio on the 11th of March, 1822, under the command of a wild adventurer named Logothetis, (*Λογοθέτης*), who had assumed the title of Lycurgus, and had already effected the ruin of his own country, Samos. He was joined by a Sciote named Antonaki† Burniá, who had served as a private soldier in the French army, and had engaged about 150 of his countrymen to enrol themselves under his command. This party disembarked in the bay of St. Helena, about four miles South of the Capital. The Turks withdrew into the citadel, and this miserable armament would, perhaps, have succeeded in expelling them from the island, but for the folly, rivalry, and jealousy of its commanders. Before any succours could arrive from Greece, the Capudán Páshá, with a fleet of six ships of the line and twenty-six smaller vessels, appeared on the 30th of the same month before the city, which was immediately abandoned by the insurgents. For three days the Turks abstained from renewing the contest, and made the most liberal offers of amnesty to all those who would lay down their arms. The European Vice-Consuls acted as mediators, and many of the Sciotes, deceived by these overtures, surrendered, and were placed for security in the Convent of St. Minas. During the continuance of these negotiations, many thousands of Turks came over from the opposite continent and carried desolation by fire and sword through every part of the Island. The prisoners in the Convent of St. Minas were taken out next day and deliberately massacred. At Vrondado and Thymiana the Sciotes made a very gallant resistance, and at length succeeded in effecting their retreat to Ipsara. But with such unequal forces the contest could not last long; and from the moment the Greeks began to give way the fury and excesses of the Turks knew no bounds. For fifteen days the whole Island was a scene of undistinguishing butchery. More than half its population was swept away either by death or slavery. The

hostages were led to the beach and hung as malefactors, and even at Constantinople the same vengeance was wreaked on the heads of all the Sciote families established there. "Melancholy and utter desolation," says the Rev. Mr. Leeves, who visited Scio six months afterwards, "has befallen this beautiful and once flourishing Island. I could not have conceived, without being an eye-witness, that destruction could have been rendered so complete." In the town; houses, churches, hospitals, schools, and colleges, were all one mass of ruins. Fragments of books, clothes, and furniture were every where strewn about, and the remains of "numerous human bodies lay mouldering where they fell." Scarcely any living being was to be seen. Of a population of 13,000 Greeks scarcely 1000 remained scattered through the most distant villages. Such was the state to which Scio was reduced by the brutal and shortsighted ferocity of the Turks. No wonder then that so few of its sixty-eight villages (Olivier, ii. 78.) appear in the excellent survey made under Captain Copeland's command; and when, as it is to be hoped will ere long be done, their account of the countries surveyed shall have been published, the actual condition of this fine but ill-fated Island will appear more fully, and information will be furnished on which some conjectures as to its future prospects may be grounded.

The following are the leading points in the coasts of Scio, with the heights of some of the mountains, as laid down in the accurate and beautiful chart, on a scale of four inches to a mile, constructed by Lieutenant Brock,

R. N., and Mr. Helpman, Assistant Surveyor, under the direction of Captain Copeland, R. N., in 1835.

SCIOBIUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, very long and slender; scape very long, clavate; the basal joint of the funiculus rather short, obconic, second very long, somewhat filiform, third to seventh longish, slightly obconic; club elongate, very slender, four-articulate; head produced in front into a short, thick rostrum, which is flat above; eyes somewhat rounded, slightly prominent; *thorax* very short, transverse, with the sides a little rounded, the disc rather convex; *elytra* ovate, very convex; legs moderate, stout, nearly equal; *femora* clavate, unarmed; *tibiæ* straight, unarmed at the apex; *tarsi* four-articulate, the penultimate joint broad, bilobed, the ultimate clavate, stout, furnished with two claws.

Type of the genus, *Curculio Tottus*, Sparrman. The only known species are inhabitants of the South of Africa.

SCIODAPHYLLUM, in *Botany*, a genus of the class *Pentandria*, order *Pentagynia*, natural order *Araliaceæ*. *Generic character*: involucre umbellate; calyx superior, five-toothed; corolla petals five, cohering at their apex; berry crowned, five-seeded.

Sixteen species, natives of South America and the Island of Java.

SCIOGRAPHY, Gr. σκία, a shadow, and γραφ-ειν, to describe, to delineate.

The former of these [two atheistic hypotheses] was the more ancient, and the first *sciography* or rude delineation of atheism. Cudworth. *Intellectual System*, p. 836.

SCIOLIST, Lat. *sciolus*, qui putet se multa scire. One who is knowing, wise,—in his own conceit; a pretender to knowledge.

Indeed some *sciolists* will boast to distinguish bones of beasts from men by their porosity, which the learned deride as an unfeeling difference. Fuller. *Worthies*. Essex.

Some have the hap to be term'd learned men, tho' they have gathered up but the scraps of knowledge here and there, tho' they be but smatterers and mere *sciolists*.

Howell. *Letter* 8. book iii.

I could wish these *sciolous* zelotists had more judgement joined with their zeal. Id. *Ib*.

I have inclosed a small part of it within brackets, looking upon it as a marginal gloss made by some ignorant *sciolist*, and afterwards foisted into the text.

Waterland. *Works*, vol. v. p. 166.

The writers against religion have been for the most part men of great pride and audacity; but in learning, little better than *sciolists*; and in judgment, rash and unsound.

Knox. *Sermon* 8.

SCIOMACHY, Gr. σκία, a shadow, and μάχη, a fight or combat. See the Quotation.

But pray, countryman, to avoid this *sciomachy*, or imaginary combat with words, let me know, sir, what you mean by the name of tyrant.

Cowley. *On the Government of Oliver Cromwell*.

SCIOMYZA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* somewhat distant, small, obliquely deflexed, three-jointed, the third joint oblong, obtuse, its base above furnished with a pilose or naked seta; *hypostome* descending; forehead broad, setose or villose; eyes rounded; wings two, incumbent, longer than the abdomen, which is oblong, flat, slightly setose, and composed of five segments.

Type of the genus, *S. simplex*; Meigen, *Zweif. Insekt. Europ.* vol. vi. p. 11. pl. lvi. fig. 6—10. About

Holland. *Plinie*, book vi. ch. xx.

SCIOPHILA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* rather long, somewhat compressed, sixteen-jointed, the two basal joints distinct; *ocelli* three, partial, unequal, approximating, and placed in a triangle; wings two, with a somewhat quadrate, small, intermediate areolet; legs rather long; *tibiæ* with spurs at the apex, and their sides spinous.

Type of the genus, *S. striata*; Meigen, *Zweif. Europ. Ins.* vol. i. p. 245. pl. ix. fig. 5. Eighteen European species, twelve of which are British.

SCIRE FACIAS, Writ of, in *Law*, like most other writs, acquired its name when legal proceedings were carried on in Latin. The writ is directed to the Sheriff, who is commanded to make known to A. B. (*quod scire faciat A. B.*) that he appear in court to show cause why some proceeding should not take place against him at the suit of the party who causes the writ to issue. This writ always relates to some previous matter of record, as a judgment, a recognisance, or letters patent, and it is issued for the purpose of enforcing the record, or setting it aside. If letters patent have been obtained from the Crown by fraud or false suggestion, or if there is any other reason why the letters patent ought to be repealed, this object is effected by a *Scire Facias*, calling on the patentee to show cause why the patent should not be vacated; and this is almost the only occasion on which the writ is used for the purpose of setting aside any matter of record. Its more usual office is to uphold the record, and to enable the party who sues out the writ to obtain satisfaction from the party against whom the record is entered up, by issuing execution upon the record. Thus when bail have entered into a recognisance that if judgment be given against their principal, and he do not pay the debt or render himself to the prison of the Court, the debt may be levied upon the property of the bail; in this case, if default is made by the principal, the plaintiff may have a *Scire Facias* against the bail, calling on them to show cause why execution should not issue against them according to the tenour of the recognisance. A *Scire Facias* is required to enforce a judgment when it has been suffered to lie dormant for a year and a day; in which case a kind of presumption arises that the party must have been satisfied, and accordingly (unless in special cases, as where the delay has been the necessary consequence of some proceeding resorted to by the other party) the party in whose favour the judgment is entered up must have a *Scire Facias* to revive the judgment before he can take out execution. A *Scire Facias* is also necessary when there has been a change in the parties interested in the judgment, so that some new person is to be charged thereby, or to derive a benefit

VOL. XXVII.

therefrom; for the law will not suffer such person to avail himself of, or to sustain a prejudice from, a judgment to which he is no party, without some preliminary proceeding to establish his right or his liability. This change of parties usually happens in cases of death, bankruptcy, or marriage; and, accordingly, if a judgment is entered up for or against any one who afterwards dies or becomes bankrupt, or for or against a woman who afterwards marries, the executor, assignee, or husband must ordinarily be made a party to the judgment before any proceedings can be had upon it. In all these cases the object of the *Scire Facias* is to give the party an opportunity to show cause why the judgment should not be put in force. The proceedings upon a *Scire Facias* resemble those in an ordinary action; the party against whom the writ issues may appear and plead, and judgment is given for or against the writ according to the merits of the defence. There are other occasions upon which a writ of *Scire Facias* is required, but the above are the most usual and most important occasions, and explain the nature and object of the writ.

SCIRPUS, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Cyperaceæ*. *Generic character*: glumes chaffy, imbricated with scales every way, all fertile; corolla none; one seed, naked or villose, or surrounded with short bristles.

An extensive genus of more than one hundred species, mostly natives of watery situations in the Northern hemisphere; thirteen are natives of England. *S. lacustris* is the plant of which the rush bottoms of chairs are made.

SCIRTES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, about half as long as the body, slender, filiform; the basal joint short, robust, the second and third very short, the former subglobose, the latter smaller, subconic, the seven following of nearly equal length, oblong, cylindric, the terminal one rather longer, ovate; mandibles concealed beneath the labrum; *labial palpi* bifurcate; head deflexed, small; *thorax* very short, transverse, the anterior and posterior margins bisinuated, the angles rather acute, the lateral edges slightly margined; body hemispheric, slightly depressed; *elytra* flexible, as long as the abdomen; legs short; *femora* compressed, the posterior pair very much thickened; *tibiæ* armed at the tip with a stout, elongate, slightly bent spine; *tarsi* penta-merous.

Type of the genus, *Chrysomela hemisphæria*, Linnaeus; *S. hemisphærica*, Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iii. p. 282. Found in damp and marshy places in Britain and other parts of Europe; there are several species, three of which only are indigenous.

SCISSARS, Fr. *ciseaux*; It. *cesure*; in Sp. *tigeras* or *tixeras*. See CIZAR. Manifestly, says Junius, from *cissus*, the past participle of *cædere*, or *cid-ere*, to cut. Caseneuve resorts to *siciliri*, used by the Latin writers on affairs of husbandry for secure, to cut. Minshew derives the Fr. from the Lat. *scissus* and the Sp. *tigeras*, from *q. scissuras*.

Scissars are instruments to cut or shear with; small shears.

And mo berdes in two hours
Without rasour or *sisours*
Ymade, than graines be of sands.

Chaucer. *The House of Fame*.

SCISSURELLA, in Zoology, a genus of *Gastropodous Mollusca*.

Generic character. Shell with a depressed spire, the outer lip notched with a deep slit, following the growth of the volutions, obliterated to within a short distance of the margin, and forming a sort of keel upon the back of the shell.

Type of the genus, *S. crispata*; Fleming, *British Animals*, vol. i. p. 366. Inhabits the coast of Scotland.

SCIS-
SIBLE.
—
SCIURUS.

SCIURUS.

SCIURUS, from the Gr. *σκιά*, a shadow, and *οὐρά*, a tail, Lin.; Squirrel, Pen. In Zoology, a genus of animals belonging to the family *Claviculata*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth two above, the upper with the front surface smooth, the lower much compressed, molar teeth four on a side in either jaw, tubercular, and in the upper a fifth, which is very early deciduous; muzzle sharp, and upper lip cleft; eyes large and lively; ears oblong, sometimes tufted; tail distichous, or dichotomous, i. e. disposed in two rows like the barbs of a quill, or cylindrical; hind much longer than fore limbs; feet ambulatory, the anterior four-toed, with a tubercle in place of thumb, sometimes covered with a broad nail, the posterior five-toed; all the nails clawed.

The Squirrels are remarkable for the elegance and activity of their motions, as well as for personal beauty, which is materially increased by their extreme cleanliness. They are especially formed for climbing, and their muscular strength is very great. The springs which they take from branch to branch, or from tree to tree, whilst playing with each other, or in avoiding pursuit, are very astonishing; and if no tree be sufficiently near for them to spring to, they drop, without injury, to the ground from heights which might be expected to crush them. On the ground they move by repeated short leaps, whilst their long tail waves gracefully over them. When listening or feeding, they sit upright on their haunches, with the tail raised against the back, and its point gradually dropping towards the ground. They hold the nuts, upon which they mostly feed, principally between the rudimental thumbs and adjoining palms, turning the nut about till the thinnest part of the shell is found, into which a narrow aperture is soon made with the teeth sufficient to admit the points of the lower front teeth, by which successive pieces of the shell are broken off till the kernel is exposed. As their food is not to be obtained throughout the year, they lay up hoards of nuts and grain against the Winter,

and so well do they remember where these deposits are made that they have no difficulty in finding them even when deeply covered by snow. To these they occasionally resort when the weather is fine to feed, and then returning to their nest or *drey*, as it is called, and which is usually but at a short distance, fall asleep, and continue till awakened by the calls of hunger; they cannot therefore be said to hibernate completely. They build their nests in holes of trees, or in the forks of their branches, and the nest consists of sticks and moss laid together and lined with fur, which the female pulls from her breast when about to bring forth her young. They are extremely prolific when undisturbed, and commit great ravages in the fields; this was and still is the case in America and India, where the country is not so thickly inhabited. Godman mentions, that in the United States they in some seasons migrate in large bodies from one district to another, and are not stopped in their course, although great numbers are destroyed by beasts and birds of prey, and in crossing the rivers. They are generally distributed throughout all parts of the world, except in New Holland, and live in the woods.

By Linnæus there were included in this genus the Squirrels which have cheek-pouches, and which burrow in the earth; these have been separated by Illiger, and form his genus *Tamias*.

Squirrels have been divided by zoological writers into two sections, in consequence of the ears being tipped or not with tufts or pencils of hairs; and Pennant has stated that the American Squirrels have no tufts, on which point he is in error. This division, however, will not hold good, as several species are known to have the ears tufted or fringed in Winter, but not so in Summer. The disposition now usually made is by placing together those which have the tail dichotomous, the fur being spread out on either side like the barbs of a quill, and those in which the fur, being regularly arrayed round the member, gives the tail a cylindrical form; but even with reference to this arrangement there is a gradation from

SCIURUS. the one to the other, some species having the tail dichotomous only at the tip; and also with regard to the cylindrical tail, it is not always of the same thickness throughout, but occasionally either tapers towards the tip, or is thicker and more bushy in the centre than at either extremity. The Indian species, whatever the form of their tail, have been observed by Dr. Horsfield to have a very broad nail on the rudimental thumb, and some of the American have the same peculiarity.

M. Fred. Cuvier, in his *Recherches sur les Rapports des Ecureuils*, in the *Mémoires du Muséum*, adopting Illiger's view as to the exclusion from the Squirrels of those species which form the genus *Tamias* of that writer, further divides the remaining Squirrels into three groups, the *Squirrels*, the *Guerlinguets*, and the *Palmites*. The first of these, by their broad expanding tail, connect the second with the Flying Squirrels, *Pteromys*, whilst the round tail of the second, which renders them less able to leap upwards or to drop from great heights with safety, approximates them to the Ground Squirrels, *Tamias*, which never skip from tree to tree, or from branch to branch, like the Squirrels, with which in most of the essential characters the *Guerlinguets*, *Macroxus* of F. Cuvier, agree. The third, of which the type is the *S. Palmarum*, resembles the Ground Squirrels as well in the form of its head as in the disposition of its colours; and is further distinguished from the Squirrels by its preference of the neighbourhood of houses, on the roofs of which it may be seen playing, making its nest in the holes of walls, and obtruding itself even into the interior of houses for the purpose of feeding on the broken victuals.

True Squirrels.—Sciuri, F. Cuv.

Tail dichotomous; profile nearly vertical, beginning to assume a slight curve at the middle of the forehead, the breadth of which equals its height, and this curve suddenly increasing as it descends to the occipital region; the brain-case exceeds two-thirds of the length of the head; in some the ears are tufted, but in others plain.

a. With the ears tufted.

S. Vulgaris, Lin.; *l'Ecureuil Commun*, Buff.; *Common Squirrel*. Length of the head and body eight and a half inches, of the tail between six and seven inches; eyes black, large, and prominent; head, back, sides, legs, and tail of a reddish-brown colour, more or less bright; chest and belly white; its colour varies considerably, becoming more red and of a coarser texture in Summer even in this country; whilst in the more Northern regions during Winter it assumes a grey colour. This, however, does not seem to depend entirely upon low temperature, for Pallas mentions that a Squirrel brought to him on the 14th of September, and having the usual bright ferruginous colour, though kept in a warm room, began about the 4th of October to be hoary on several parts of its body, and at the end of a month, when the animal died, the whole body had become grey, with the exception only of a small part of the face and the legs. Pennant mentions that in many parts of England a variety is found which have the tail milk-white. It is a native of Europe, of the North and more temperate parts of Asia, and lives in the woods, making its nest occasionally in the holes of trees, but more commonly in the forking of a branch. It prefers the fir for this purpose, and begins building by collecting a consi-

derable quantity of dry grass, which it encloses with a quantity of sticks, so that the nest or *drey*, as it is called, has much resemblance to a bird's nest, and when just ready to drop her young the female, like the doe Rabbit, lines it with fur, which she tears off till her belly is quite bare; this at the same time renders the teats more easy to be found by the young ones, and affords them warmth. In the beginning of June the Squirrel brings four or five young, which at first have a rather odd appearance from the shortness of their tails, which do not acquire their full size for some time. The young continue with the parent animals till the next Spring, when they separate in search of mates. Squirrels rarely forsake their nests, but continue occupying the same quarters for a long time, and seek their food in the neighbourhood. They are very fond of the cones of such trees as the pine, fir, and larch, but they also will bark large boughs, especially of the Scotch fir, to which besides they do considerable damage by gnawing off the tops of the leading shoots. They lay up for their Winter store nuts and acorns, principally the latter, which they carefully deposit in holes of different trees, but never all in one store; to these during Winter, when the weather is fine, they occasionally resort, and, having satisfied their hunger, return to their nests, and drop asleep till again disturbed by the calls of hunger. When taken young, the Squirrel can be easily tamed, and is very entertaining for its playfulness and activity, but is easily angered, is shy of strangers, and disposed to be spiteful. Its cry has some resemblance to that of the Guinea Pig, and when irritated it utters a kind of grunting noise, which is vulgarly known by the expression swearing. In some districts Squirrels are found in great numbers, and Mr. Jesse, in his *Gleanings in Natural History*, mentions that, within the recollection of some old persons, they were so numerous in Richmond Park that parties of fifty or sixty people used to come from London and the neighbourhood for the purpose of killing them, furnished with short sticks headed with lead, with which they knocked the Squirrels down. These Squirrel hunts, as they were called, often led to rencontres with the keepers, and one of them having been nearly killed, the Squirrels were ordered to be destroyed, so that at present scarcely a single one is seen.

S. Alpinus, F. Cuv.; *Alpine Squirrel*. About the same size as the last species, of which it was considered a variety, till its distinct specific characters were pointed out by M. Fred. Cuvier. It has the ears tufted, the upper parts deep brown speckled with white, and the under parts pure white; legs tawny externally, and grey internally; a tawny stripe divides the white neck and the grey upper part of the limbs from the brown back; tail covered with very long fur, black at its tip, and tinged with pale tawny and black at its base. It is found in the Pyrenees, and Cuvier thinks probably in the European Alps.

S. Maximus, Lin.; *le Grand Ecureuil de la Côte de Malabar*, Sonn.; *Malabar Squirrel*, Pen. About the size of a Cat, the head and body measuring fifteen and a half, and the tail fourteen inches; ears tufted with long, bright, reddish-brown hairs; the body covered with long harsh fur; upper parts of the head and neck, the back and sides, and the legs and feet, dark reddish-brown; shoulders, rump, hind parts of the back, and thighs black; under parts, and front and inside of the thighs yellow; front of the face dark reddish-brown; ocular circlets and cheeks dirty brown; and extending

SCIURUS. down upon the latter from the ears a vertical reddish-brown line, between the ears a broad, pale yellow band; tail covered with very long close hair, black, except the tips, which are dirty yellow or white, and capable of erection; on the under surface of the tail the fur is short. It is found in the East Indies, and Horsfield considers the *Bombay Squirrel* of Pennant to be the same species.

S. Macrourus, Gmel.; *Long-tailed Squirrel*, Pen. Fifteen inches long, and the tail nearly twice the length; ears tufted with black hairs; top of the head, upper parts, and thighs black, with a tinge of deep blue; cheeks, legs, and belly dull yellow; from each ear a black bifurcated line descends across the cheeks to the neck; between the ears a yellowish transverse band; nose pink-coloured; lower part of the feet naked and tail ash-coloured, very bushy, quite surrounded with hair at its base, but on the remainder the hairs are flat. Cuvier considers this and the last species to be identical, but this is distinguished by the double black line extending from the ear, which in that is only single. It is found in Malabar and Ceylon, and in the latter country is called *Dandoelana*, or, from the noise it makes, *Roekka*.

S. Madagascariensis, Shaw; *l'Ecureuil de Madagascar*, Buff.; *Madagascar Squirrel*. Seventeen inches in length, and the tail as long; upper parts, outer surface of the fore limbs, the thighs, hind legs, and all the feet deep black; the cheeks, neck, chest, and internal surface of the fore limbs yellowish-white; belly and inner surface of the thighs brown, slightly tinged with yellow; tail entirely black and slender. Native of Madagascar.

S. Magnicaudatus, Harl.; *S. Macrourus*, Say; *Great-tailed Squirrel*, Godm.; Length of the head and body ten and a half inches, and of the tail rather more than nine; the back and sides mixed grey and black; ears bright ferruginous; sides of the head and the orbits pale ferruginous; cheeks dusky; mouth edged with black; under part of head and neck, and upper surface of feet, ferruginous, the belly paler; upper surface of the tail, which is very bushy, ferruginous and black; its under surface bright ferruginous; palms of fore feet very black, and the nail of the rudimental thumb very broad, in which respect it resembles the Indian species. The fur, which in the Summer is about three-quarters of an inch long on the back, in the Winter attains an inch, or an inch and three-quarters in length; and in consequence of this elongation the ears at this period of the year take on a fringed appearance. It is common on the Missouri.

S. Elphinstonii, Sykes; *Elphinstone's Squirrel*. Length of the body twenty, and of the tail rather more than fifteen inches; ears, upper parts, upper half of the fore legs, and outer surface of hind legs, and half down the tail rich reddish-chestnut; under parts, inside of limbs, lower half of fore legs, crown, cheeks, and lower half of tail fine reddish-white, distinct from the other colour; forehead and stripe down the nose reddish-brown, intermingled with white hairs; feet light red. Is found only in the lofty thick woods of the Western Ghauts of India.

S. Hudsonius, Pall.; *Hudson's Bay Squirrel*, Pen. Length of body seven and a half, and of tail five inches; upper parts reddish-brown, varying in intensity and shaded with black, as are also the under part of the head and front of the fore limbs; under parts and insides of the thighs yellowish-white; the colouring of the

back and belly distinctly separated by a black stripe; **SCIURUS.** tail reddish-brown. According to F. Cuvier, there is great variety of colour in this species, depending upon the varying of the several hairs. Of the five specimens in the French Museum, two had the upper parts of a very brown tint, in two the ferruginous predominated on the back as in the Common Squirrel, and in the fifth, which was brown like those first mentioned, the limbs were dotted of the same brown colour as the back, and the lateral black lines scarcely visible. It is a native of Hudson's Bay, and is the same as that called by Warden the *Red Squirrel*. This species is remarkably distinguished from the other Squirrels in rarely mounting upon trees, but finds shelter in the earth among the roots of the pine, on which it lives. There is no variation in its form from the Squirrels in general; and F. Cuvier remarks that its peculiar habits do not account for the difference of habits between it and other Squirrels, but instances a parallel example in the different habits of the Rabbit and Hare, between which there is little variation, though one burrows in the ground and the other is always found sitting on its form. It is very common in the woods of North America, where they are snared, or shot with blunt arrows, by the children of the native Indians.

b. With the ears not tufted.

S. Capistratus, Bosc; *l'Ecureuil à masque*, Cuv.; *Cat Squirrel*. About eleven inches long, and the tail fourteen; is characterised by its head and cheeks being black, the latter mingled with brown, the upper part of the nose and the lips white, as are also the ears, which are round, and have the fur on their outer larger than on the inner surface; the upper parts of the body are covered with fur, of which one portion has the upper half of each hair black and the lower white, and the other the reverse; on the prevalence of either of these two kinds of fur depends the general colour of the animal, and the variation is so great that, according to Godman, in the Philadelphia Museum may be seen almost every colour, from a light grey to black and spotted, pale reddish-brown, and nearly white; and this difference often occurs in individuals of the same litter; the belly is white; legs greyish-brown; tail covered with long fur, of which the roots are black, the tips white, and the intermediate parts tinged twice with black and twice with white. This is one of the largest of the American species, and is found throughout the United States, and especially in South Carolina, in the driest districts among the oak and chestnut forests. Its motions are more slow and heavy than any other species of Squirrel, and it rarely leaps from tree to tree, or even from branch to branch, except when much alarmed or closely pursued. It builds a round nest of leaves and moss with a single entrance, and brings its young early in March. This species is constantly hunted for its flesh, particularly in Autumn, when it is very fat, and is considered very good eating, but its skin is very tough, so that the shot frequently glance off from it. It has a sharp ear and keen sight, and when any one approaches spreads itself out so completely on the dry branch of a tree, that at a distance its ears and tail only can be observed. The enemies of this species are very numerous, the Grey Fox, the Rufous Lynx, the Rattlesnake, and many predaceous birds making it their usual food.

S. Vulpinus, Gmel.; *Fox Squirrel*, Lawson. Measures about fourteen inches in length, and the tail six-

SCIURUS. teen. Godman says it differs in nothing from the last species except in size, and that it frequents the pine forests in considerable number in the Southern States of the Union, its principal subsistence being the seeds of the pine. Cuvier considers this, as well as the two following, to be merely varieties of the *S. Capistratus*.

S. Cinereus, Lin.; *S. Carolinensis*, Gmel.; *le Petit Gris*, Buff.; *Grey Squirrel*, Pen. About ten inches and a half in length, and the tail seven and a half; it varies considerably in colour, but is most commonly of a fine bluish-grey with a golden tinge, especially on the head, on the sides where separating the grey from the white belly, and especially on the fore and upper part of the hind feet, where it is very deep, and is constant, whatever variety there may be in the colour of other parts; the fur of the tail is ringed with fawn and black, and tipped with white, so that when the tail is flattened it is surrounded from right to left with white and black lines, and its middle fawn spotted with black. This is still a very common species throughout the United States, but was formerly very numerous and exceedingly destructive to the Indian corn, coming by hundreds into the fields and climbing up the stalks to eat the sweet corn wrapt up in the heads, and destroying a whole plantation in a night. They were therefore proscribed, and in some places every inhabitant was compelled to bring in annually four Squirrels' heads, whilst in others threepence a-piece was allowed for every one destroyed, which, between January 1749 and January 1750, amounted, in Pennsylvania alone, to £8000. They prefer the oak, hickory, and chestnut woods, making their nests of dried leaves at the forkings of the branches of the tall oaks, and laying up stores of acorns and mast for the winter. When, however, they have once tasted maize or other cultivated grain they leave their former food, and resorting to the fields become, as already mentioned, very destructive to the farmer. Pennant says they very rarely leap from tree to tree, but run up and down the bodies of trees; Godman, on the contrary, says they are remarkable among all the American Squirrels for their activity.

S. Niger, Lin.; *Black Squirrel*. About eight inches in length, and the tail proportionally shorter than in the last species; these, together with its having but four molar teeth, distinguish it from *S. Vulpinus*; whilst its smaller size and the softness of its fur mark it as distinct from the black variety of *S. Cinereus*. During Summer the deep black colour of the body is tinged on the sides with grey, the under parts being deep reddish-brown; but in Winter the colour is pure black, varying slightly in intensity on any part of the body. It is very common in the United States, and is found as high as the fiftieth parallel of latitude.

S. Variegatus, Gmel.; *le Coquallin*, Buff.; *Varied Squirrel*, Pen. About twice the size of the Common Squirrel; the ears plain and white, as is also the tip of the muzzle; upper part and sides of the head bright black, tinged with orange on the cheeks; the other upper parts, and the external surface of the upper parts of the limbs, a mixture of black, ferruginous, orange, and reddish; under parts and insides of the upper parts of the limbs and paws reddish-orange, with a tinge of black on the instep; at the tip of the tail a few white hairs; whiskers and claws black. Is a native of Mexico, and said to live under ground. The Mexican Indians call it *Coztio cotequallin*, or Yellow-belly.

S. Plantani, Ljung; *l'Ecureuil à deux rayes*, Desm.;

Plantain Squirrel, Pen. Seven inches in length, and the tail rather longer; head, upper parts, and outer surfaces of the limbs tawny and brown delicately intermingled; under parts of body and limbs bright fulvous, as are also the ocular circlelets, and a line extending from the shoulder to the thigh; in some specimens the under surface is white; tail marked above with narrow transverse bands of brown, and tawny and brown. It is a native of Java, where it is very common, inhabiting the plantain trees on the sea-coast as well as in the interior districts; it is also found in the tamarind and other fruit trees, especially the cocoa-nut, to which it is extremely destructive, and therefore being much hunted by the natives, it is not often found living constantly in, but only paying marauding visits to, that tree. It is commonly known to the Malays by the name *Ba-djing*. Geoffroy's specific name, *S. Bilineatus*, is, as Dr. Horsfield has justly observed, incorrect, as it has but a single line on either side.

S. Bicolor, Sparrm.; *l'Ecureuil de Java*, F. Cuv.; *Javan Squirrel*, Pen. About twelve inches in length, and the tail as much more, according to Desmarest; but according to Dr. Hamilton the total length is about a yard, of which the tail forms three-fifths; ears short and rather rounded; upper part of the body and all the tail covered with long, harsh, shaggy, black fur, tipped on the loins with chestnut; under surface and insides of thighs and legs tawny, and the fur softer; fore feet black, the thumbs very short and armed with a large rounded nail; hind legs and feet also black. The young male is distinguished by having the tail of the same tawny colour as the belly, but in its adult state it becomes black. Is found in the East Indies and in Java.

S. Prevostii, Desm.; *Prevost's Squirrel*. About the size of the Common Squirrel; upper parts of the head and back black; cheeks, sides of the head and body, and outer surface of the limbs pale yellow, forming a band which separates the colour of the upper from the chestnut colour of the under parts; this band, together with its smaller size, distinguishes it from *S. Bicolor*. It is a native of India.

S. Aureogaster, F. Cuv.; *Golden-bellied Squirrel*. Length ten inches, and the tail eight; head, tip of the lower jaw, back, sides, outer surface of the thighs and the paws grey, with a tinge of tawny around the ears, on the nape and shoulders; throat, chest, belly, fore legs as far as the wrist, inner surface of the thighs, and hind legs bright tawny-golden; upper surface of the tail grey, under surface tawny. Is peculiar to the Western regions of North America from Mexico to California.

S. Nigrovittatus, Horsf.; *Black-banded Squirrel*. Is of rather larger size than *S. Plantani*; upper parts varied with tawny and dusky greyish; under parts grey, tinged with blue; along each side passes a deep black stripe; tail transversely banded with black and fulvous. Is a native of the Island of Java.

S. Anomalus, Guldenst.; *Anomalous Squirrel*. Length of the body thirteen, and of the tail eleven inches; upper parts varied with ashy-black and rufous; under parts, inner surface of limbs, outer surface of fore arms and hind feet and ears foxy; tail very flowing, its upper surface resembling the back, the under bright rufous. By Guldenstaedt it is said to be a native of Georgia, and by Kuhl, of India.

S. Getulus, Lin.; *le Barbaresque*, Buff.; *White-*

SCIURUS, striped Squirrel, Pen. Size of the Common Squirrel; upper surface brown, mingled with ferruginous and ash; sides of the head and neck, and outer surface of the limbs reddish; under parts white with a tinge of yellow; tail ringed alternately with brown and white; four longitudinal white stripes pass along the body upon the tail, the outer two from the top of the shoulder and the inner from the withers; between the latter a pair of black stripes are also continued. It is found in the Northern parts of Africa, especially in Barbary, where it lives upon the palm trees; it is also said to be met with in Asia.

S. Leschenaultii, Desm.; *Leschenault's Squirrel*. Thirty inches in length, of which the tail is one half; the colour of this species varies very considerably, but generally its upper parts are dusky brown inclining to chestnut, whilst the head, throat, under parts, and fore and inner surface of the fore legs are yellowish, or nearly white; muzzle and fore part of the head tinged with greyish; tail dusky brown above, and yellow beneath; in some specimens the colour is uniform, in others there are patches of different shades, but the several hairs are not banded as in most of the species. It very nearly resembles *S. Bicolor*, but in that species the upper parts and the tail of the adult are of the deepest black, whilst in this the tail is often grey or yellowish, and has a different form and termination. It is very common in Java, where it is called *Jelarang*.

The *S. Hypoleucos*, which has the upper parts testaceous and the under nearly white, and first described by Dr. Horsfield as a distinct species, has since been shown by him to be merely a variety of the preceding.

S. Ocularis, A. Smith; *Ocular Squirrel*. Four inches in length, and the tail three and a half; upper parts bluish-grey; under parts whitish, as are also the muzzle, one spot above and another behind each ear; head crossed on either side by a narrow black band including each eye; space behind the chin rufous; tail greyish above and black beneath. Native of Plettenberg's Bay, South Africa.

S. Congicus, Kuhl; *Congo Squirrel*. Six and a half inches long, and the tail not quite so long; upper surface varied with black and greenish-yellow, and marked with two longitudinal whitish stripes, margined on their lower edges with blackish; under surface yellowish-white; tail varied with black and yellowish. Native of Congo.

S. Clarkii, Ham. Smith; *Clark's Squirrel*. Upper parts, cheeks, and tail silvery-grey; shoulders, sides, belly, and inner surface of limbs white, slightly tinged with ochrish; chin spotted with black; tail very broad in the middle, with its tip pointed. Found on the banks of the Missouri.

S. Nigrescens, Bemm.; *Blackish Squirrel*. Length of the body eleven and a half, and of the tail ten and a half inches; a white spot behind each ear; upper parts black, the fur tipped with white, so as to give in certain lights an iron-grey colour; under surface greyish; upper parts of the instep black, but the toes greyish; tail black along its middle and for about the first fourth of its length, its sides and tip nearly white. Is a native of California.

Guerlinguets.—*Macroxus*, F. Cuv.

Tail cylindrical or dichotomous only at its tip; middle of the forehead deeply flattened, its upper part elevated,

as are also the upper and hind parts of the head; the breadth of the forehead equal to its height, and the brain-case forming two-thirds of the length of the head; ears not tufted.

S. Bivittatus, Horsf.; *S. Vittatus*, Raffles.; *Double-banded Squirrel*. Eight inches in length, and the tail as much more; the upper parts of the body and tail mingled yellowish-grey, each hair being twice ringed with black and fawn colour; under parts brownish-red or fulvous; eyes surrounded with a fawn-coloured ring; side of the body marked with two stripes, of which the upper is white and the lower black; tip of the tail fulvous. Is found in the woods of Bencoolen, living principally on palm trees; also at Pulo-Penang and in Malacca. It makes a hole in the cocoa-nut for the purpose of extracting the milk, and is called *Tupai* by the natives of Sumatra.

S. Insignis, Desm.; *le Lary*, F. Cuv.; *Beautiful Squirrel*. Length of the head and body seven and a half inches, of the tail six inches; ears rounded; upper parts and sides greyish-brown inclining to tawny, with three black lines extending from the neck to the rump, of which the middle one runs along the ridge of the spine; under parts white, with an intermediate ferruginous streak extending from the angle of the mouth to the hind limb, and spreading irregularly over the thigh and flank; muzzle, forehead, and feet grey, with a tinge of blackish-brown; tail of deeper colour than the body, obscurely waved with brown and black interspersed with grey hairs; it is cylindrical, but towards the tip the hairs are loosely disposed, but never arranged in two rows. It is found in Sumatra and Java; in the latter island is called the *Bokkol*, but in both is a rare animal.

S. Albovittatus, Desm.; *White-banded Squirrel*. Length of the head and body twelve, and of the tail eight inches; fur very short, coarse, sparing, and close to the skin; upper part of the body tawny-red; the forehead dotted with grey; under parts white, as are also the upper eyelids, the front of the thighs, and insides of the legs; beneath the lower eyelid a brown streak; from the top of the shoulder on either side a white line passes to the fold of the thigh, and narrows at either extremity; tail cylindrical, except its extreme third, which is distichous, varied with black and white, with a white edging above, and tawny in the middle beneath, with a white edge enclosed in black and bordered a second time with white. Desmarest considers this animal as identical with the *Ecureuil Fossoyeur* of Geoffroy; and that the *Ecureuil de Gengi* of Sonnerat is only a variety; if such be the case, it is a native of India, as well as of the Cape of Good Hope.

S. Aestuanus, Gmel.; *Myoxus Guerlingus*, Sh.; *le Grand Guerlinguet*, Buff.; *Guiana Squirrel*. Length of the head and body seven and a half, and of the tail nine inches; upper parts olive-grey, tinged with reddish; under parts pale ferruginous; tail clouded with brown, black, and tawny. Is found in Brazil and Guiana, and feeds upon the fruit of the palm tree.

S. Pusillus, Geoffr.; *le Petit Guerlinguet*, Buff.; *Dwarf Squirrel*. Length of head and body rather more than four inches and a quarter, of the tail three inches and a quarter; upper surface greyish-brown olive, becoming much lighter on the under parts; muzzle tawny; chest and fore part of the belly mouse-grey, tinged with ferruginous; tail covered with tawny and black hair. It is common at Cayenne, and called by the colonists *Rat de bois*, or Wood Rat.

SCIURUS. *S. Annulatus*, Desm.; *Ring-tailed Squirrel*. Nearly six inches long, and the tail five inches in length; upper parts light greenish-grey; under parts and paws white; inner surface and tip of ears black; the tail from a third beyond its base ringed alternately with black and white. Griffiths thinks this probably identical with the following species;

S. Lewisii, Griff.; *Lewis's Squirrel*. Of which the upper parts, sides, posterior part of the thighs, and abdominal collar are ochrish-cinereous, and the whole belly, insides of the limbs and feet, ochrish; tail very full, girt with seven black and six white rings, and its tip black; muzzle black; upper lip white; ocular circlet ochrish-cinereous. Found on the banks of the Missouri.

S. Ferrugineus, F. Cuv.; *Brown Squirrel*. Length eight inches, the tail an inch shorter; upper parts bright chestnut-brown, becoming lighter on the belly; feet black; tail entirely covered, and sometimes terminating in a long white tuft. Native of India.

The three following species have their cylindrical tail narrow at the base, wide in the middle, then tapering, and ending in a long tuft.

S. Finlaysonii, Horsf.; *l'Ecureuil Blanc de Siam*, Buff.; *Finlayson's Squirrel*. Fourteen inches in length, of which the tail forms one half; ears plain; it is almost perfectly white, except the tail, which has a few black hairs, and the black soles of the feet. It is found in the Gulf of Siam upon large trees, on the fruit and bark of which it feeds; it is most frequently seen on a tall species of Aleurites.

S. Affinis, Raffl.; *Raffles's Squirrel*. Nine inches to the root of the tail, which is seven inches long; it resembles *S. Bicolor* and *S. Maximus*, in having the broad flat nail on its rudimental thumb; ears round; upper parts fulvous-brown, tinged with grey, and varied with delicate transverse bands; head, under parts, and tail grey; a stripe of reddish-brown separates the colour of the sides and belly and extends on to the neck. Sir S. Raffles states there is great variation in the colour of this species in different seasons; in February it is light brown or dusky yellow, but five months after becomes grey. It is found in the woods at Singapore and Pulo-Panjang, in the Gulf of Siam.

S. Tenuis, Horsf.; *Slender Squirrel*. Length of head and body five and a half inches, of the tail half an inch less; upper surface varied with dark tawny and blackish-brown, becoming brighter on the sides, but forming no distinct line; under surface and insides of limbs pale yellowish-grey, with a tinge of fulvous; upper surface of the tail obscurely banded with black, and speckled with tawny; it is terminated in a long greyish tuft slightly marked with black. Native of Sincapore.

S. Erythræus, Pall.; *Ruddy Squirrel*, Penn. About the size of the Common Squirrel; the body covered with intermingled yellow and dusky fur, with a dusky blood-red stripe passing along the whole extent of the under surface; tail of the same colour as the back, with a blackish stripe extended along its upper surface; ears slightly tufted. Native of the East Indies.

S. Rufiventer, Geoffr.; *Red-bellied Squirrel*. About the size of the common species, but the tail is shorter than the body; the upper parts are dark greyish-brown, the under bright yellowish-red; the base of the tail has the same colour as the back, but its middle assumes that of the belly, and the extremity is yellowish. It is found in the neighbourhood of New Orleans. Fischer thinks it probably a variety of *S. Capistratus*. It has great similarity to the *Small Brown Squirrel* described by Lewis and Clark, but the tail is shorter, and it very much resembles *S. Erythræus*.

S. Rutilus, Cretsch; *Carroty Squirrel*. Ten and a half inches in length, and the tail as long; upper parts deep carroty in the adult, and dusky carroty in the young; and all the hairs tipped with white, except a few which are tipped with black; belly and legs white; tail carroty at its tip, white, and tufted; above each eye a narrow white stripe. Is common in Abyssinia, where it burrows in the earth.

The following species has so great resemblance to the Ground Squirrels, that F. Cuvier thinks it belongs either to that genus, or is the type of a new genus. It differs from that genus, however, in having

The profile more vertical; the head narrow and more slender, so that the brain-case does not form half of it; tail distichous; ears not tufted.

S. Palmarum, Lin.; *le Palmiste*, Buff.; *Palm Squirrel*. About the same size as the last species; top of the head, upper parts, and sides ferruginous-brown, tinged with grey; under parts dirty white; tail on its upper surface of similar colour to the back; its under surface ferruginous in the middle, bounded by two deep brown lines edged with white; a white line runs down the back, another parallel to it along the sides; eyes surrounded with white, from whence pass back on each side another white stripe. It is found on the Indian Continent, and is considered to be the same species described by Dr. Leach under the name of *S. Penicillatus*.

See Linnæi *Systema Naturæ* a Gmelin; Buffon, *Histoire Naturelle*; Pennant, *British Zoology and History of Quadrupeds*; Godman, *American Natural History*; Kuhl, *Beiträge zur Zoologie*; Horsfield, *Zoological Illustrations*; Cuvier, *Règne Animal*; F. Cuvier, in *Mémoires du Muséum*, vol. x.

SCLAVONIA, (in Hungarian Tot-Orsag,) a district and military division of Hungary, is bounded on the North by the Danube and the Drave, which separate it from Hungary Proper; on the South by the Save, which separates it from Servia; on the East by the same river and by the Lower Theiss, both of which fall into the Danube; and on the West by the Illova, the Louya, and the Save, which partly separate it from Croatia. Its superficial area is about 3478 square miles, and its population 610,408 souls.

The country, thus begirt with rivers, forms a large

island, as it were, in shape an irregular oblong, whose greatest length is about 170 miles, and whose breadth varies from 90 to 20 miles. It is traversed throughout its length by a chain of mountains, called, in the language of the country, *Carievitza*, which is a ramification of the Julian Alps. The general elevation of the chain is not great, but some of the peaks rise to rather a considerable height, as the Papuk, which is 2493 feet above the level of the sea.

Almost all the Eastern portion of the soil consists of Geology. rich alluvion, the most fertile parts of which are some of

SCLA-
VONIA.

the central plains and the borders of the Drave and the Save. The mountain chain just noticed consists of primitive limestone, and its summits are mostly crowned by magnificent forests, though some of them rise up in naked peaks. Towards Peterwardein, serpentine and porphyritic rocks are alternated with those of secondary formation. Veins of different metals, particularly of iron, copper, and lead, occur in the Western half of the chain, but they are for the most part unwrought. Coal is met with in the mountains of *Fruska-Gora*, in Syrmia, or Eastern Slavonia.

Agricul-
ture.

The harvests are abundant, although little indebted to agricultural skill. Wheat is raised in large quantities, but no care is taken to keep it clean, or free from admixture with grain of all kinds and all qualities. Maize will sometimes yield two hundred-fold, and fruits and vegetables are produced in great plenty. The quantity of grain yearly reaped is estimated at 4,000,000 of *metzen*, or about 800,000 quarters. Tobacco is grown in considerable quantity, and is said to equal that of Turkey. Licorice likewise forms an important item of agricultural produce; madder of the finest quality grows wild, and the truffles, which are here left to the swine, are as aromatic as those of Piedmont.

Climate.

The vast forests of the Western half of the country furnish a supply of oak well adapted to naval purposes. They are chiefly tenanted by wolves, bears, and foxes. Otters people the rivers, and the beaver settles in the narrow channels formed by the islands of the Save.

The climate may almost bear comparison with that of Italy. The air in the mountain districts is sharp and invigorating. It is only the neighbourhood of the rivers which is unhealthy, from their repeated overflowings. For eight months of the year the face of the country presents a constant verdure; and the size to which the cattle attain is the best proof of the almost unceasing richness of its pastures.

Adminis-
trative
divisions.

Slavonia is divided into two primary divisions, the Civil and the Military. The first comprises nearly two-thirds of the country; its Capital is Eszek. The latter surrounds the preceding division on the South and West; its Capital is Peterwardein. The Kingdom of Slavonia, or the Civil division of the country, is subdivided into the three Districts of Verocze, Possega, and Syrmia, the chief towns of which are severally Eszek, Posega, and Vukovar: the Generalship of Slavonia, or the Military division, is subdivided into the three regiments of Peterwardein, Brod, and Gradisca, whose head-quarters are the towns of the same name; and the battalion of the Tchaïkists, distributed over thirteen villages. The population of the Civil division amounted, in 1829, to 355,000; that of the Military to 255,408.

Eszek (Oszick) is a fortified town lying on the right bank of the Drave, in the midst of an unhealthy marsh, and which is composed of the fortress and of three large faubourgs, a little detached from it. The wooden bridge built over the river and marsh by Solyman the Great, in 1566, and which was upwards of two miles in length, being a succession of bridges and jetties, was for a century the boast of the Turks, and constituted an important pass, on which many a sanguinary conflict took place. A dike, between two and three miles long, was cut across the surrounding marshes in 1775. Eszek is the seat of a Court of Appeal for the three Districts of the Civil division, and is a place of considerable trade. Population 10,000. North latitude $45^{\circ} 26'$, East longitude $18^{\circ} 46'$.

Peterwardein (Peterwar) is an important fortified town, the residence of the Commandant-General, which is chiefly memorable for the battle gained here by Prince Eugene over the Turks in 1716. Population 4000. North latitude $45^{\circ} 15'$, East longitude $19^{\circ} 55'$.

The only other town deserving mention is *Semlin*, (Zimony,) which, from its situation on the Turkish frontier, is the depôt for the transit trade between Austria and Turkey, and may now be ranked as the second commercial city of Hungary. It lies on the right bank of the Danube, opposite to Belgrade. Population above 9000. North latitude $44^{\circ} 52'$, East longitude $20^{\circ} 32'$.

Busching; Malte-Brun; Balbi.

SCLERANTHUS, in *Botany*, a genus of the class *Decandria*, order *Digynia*, natural order *Scleranthææ*. Generic character: calyx of one leaf, into which the stamens are inserted; corolla none; seeds one or two, enclosed in the calyx.

Three species, natives of the Northern hemisphere.

SCLERIA, in *Botany*, a genus of the class *Monoecia*, order *Triandria*, natural order *Cyperaceæ*. Generic character: male flower, glumes two to six-valved, many-flowered; corolla, glume awnless: female flower, calyx as the male; corolla none; stigmas one to three; nut coloured, nearly globular.

Nineteen species, natives of tropical climates.

SCLEROCARPUS, in *Botany*, a genus of the class *Syngenesia*, order *Frustranea*, natural order *Compositæ*. Generic character: calyx double, both three-leaved; rays of the corolla from one to four only, very short; receptacle chaffy; down none; seeds obovate, shining.

One species, *S. Africanus*, native of Guinea.

SCLEROPTERUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, moderate, rather slender; *funiculus* seven-jointed, all the joints obconic, the apical ones gradually shorter; club oblong-ovate, four-articulate; head produced in front into a longish, stout, curved, and rounded rostrum; eyes lateral, rounded, slightly prominent; *thorax* long, much straightened towards the apex, and slightly produced in front; *elytra* broader than the thorax, ovate; shoulders broad, obtusely angulated; legs stout, anterior longest; *femora* slightly clavate, unarmed; *tibiæ* unequal, anterior elongated, curved towards the apex, four posterior straightish, all truncate at the apex, and unarmed; *tarsi* four-jointed, penultimate joint bilobed.

Type of the genus, *Cryptorhynchus serratus*, Eschscholtz; Schönherr, *Curc. Disp. Meth.* 291. One species only.

SCLEROSCIADIUM, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferæ*. Generic character: calyx five-toothed, persistent; corolla, petals obcordate, apex two or three-toothed; styles on a conical stem, fruit ovate-globose, solid.

One species, *S. humile*, native of Mogadore.

SCLEROTHAMNUS, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-cleft, two-lipped, bracteate; corolla pea-flowered, keel as long as the wings; germen two-seeded, pedicellate; style ascending, filiform; stigma simple; pod ventricose.

One species, *S. microphyllum*, native of New Holland.

SCLEROTICK, Gr. σκληρός, hard, rigid, stiff, from σκλη-ειν, *exsiccare, indurare*, to harden.

SCLA-
VONIA.SCLE-
ROTICK.

SCLERO-TICK. Therefore the ciliary processes, or rather the ligaments in the inside of the *sclerotic* tunics of the eye, by a late ingenious anatomist, do serve, instead of a muscle, by their contraction to alter the figure of the eye, and make it broader.

SCOFF.

Ray. *Of the Creation*, part ii.

SCOFF, v. Manifestly, says Junius, from the
SCOFF, n. Gr. *σκωπ-τείν*, a word of the same
SCO'FFER, meaning; but he does not attempt
SCO'FFERY, to trace its progress into our language.
SCO'FFINGLY. The D. *schobben*, *schoffen*, (he adds,) is *convitiari*, *calumniari*, to reproach, to calumniate; but this must be a consequential usage. The A. S. *sceof-an*; Ger. *schaff-en*; D. *shuyv-en*, to shove, seems to present the true origin. Somner explains the A. S. *asceaf-an*, to shut out or exclude, to explode, to drive, or hiss out: to scoff, then, may mean, to shove or push, sc. contemptuously, as to insult is, to leap on or against, sc. contemptuously; and then, generally,

To act or behave towards with insult, contempt, derision, contumely; to speak of or to, contemptuously, contumeliously, slightly, scornfully.

Bereue me, goddess, (quod he) of thy might
 My skornes all and *scoffes*, that I haue
 No power for to moken any wight,
 That in thy seruice dwell.

Chaucer. *The Court of Love*.

And so in this jolly *scoffing* bravery he went over us all, saying, he left one, because she was over-wayward; another, because she was too soon won.

Sidney. *Arcadia*, book ii.

For all her wordes she drown'd with laughter vaine,
 And wanted grace in utt'ring of the same,
 That turned all her pleasaunce to a *scoffing* game.

Spenser. *Faerie Queene*, book ii. can. 6.

King Henrie the fift in his beginning thought it a meere *scoff-ferie* to pursue anie fallow deere with hounds or greihounds.

Holinshed. *Description of England*, book ii. ch. iv.

You alwayes loue your friends with *scoffes* to try.
 If I can tell, the gods my life confound.
 But where will Cæsar giue his souldiers ground,
 In Italie, or the Triniacrian isle?
 I sweare I know not.

Baumont. *Horace*. *Satire* 6. lib. ii.

Cry the man mercy, loue him, take his offer,
 Foule is most foule, being foule to be a *scoffer*.

Shakspeare. *As You Like It*, fol. 199.

The Ptolemaical systeme he [Alphonso] did *scoffingly* and audaciously profess, that if he had stood by whilst God made the world, he could have directed the frame of it better.

More. *Antidote against Atheism*, ch. v. *Appendix*.

If the more coarsely complexioned, that they may still seem to have something further to object, shall *scoffingly* cavil, as if we had used over-much subtilty in the management of our arguments, I can onely advertise them of this, that subtilty is as consistent with truth as the most grosse theories.

Id. *Ib.* ch. xi.

A Socrates himself, in that loose age,
 Was made the pastime of a *scoffing* stage.

Dryden. *The Art of Poetry*.

Scoffs and reviling are of the growth of all nations; and consequently, that neither the Greek poets borrowed from other people their art of railing.

Id. *Dedication to Juvenal*.

How weak is mortal pride! To heaven alone
 Th' event of actions and our fates are known:
Scoffer, behold what gratitude we bear:
 The victim's heel is answer'd with this spear.

Pope. *Homer*. *Odyssey*, book xxii.

In answer to which divers did exercise their pens, some *scoffingly* and some in earnest.

Wood. *Athenæ Oxonienses* vol. ii.

Alas, not so! the poorest of the flock
 Are proud, and set their faces as a rock;
 Denied that earthly opulence they choose,
 God's better gift they *scoff* at and refuse.

Cowper. *Expostulation*.

If indeed they have, since they came to a full use of reason, deliberately professed Christianity, and then forsaken it, and become railers and *scoffers* at it; this case is worse than if they had never believed.

Secker. *Works*, vol. i. *Sermon* 9.

SCOFF.

SCOLIA.

SCOLD, v.

SCOLD, n.

SCO'LDER,

SCO'LDING, n.

SCO'LDINGLY.

A. S. *be-scyldigan*; D. *be-schuldigen*. A. S. *scyld-an*, *criminari*; (Benson;) Ger. *schelten*; D. *schelden*, *crimen objicere*, *verbis injuriosis infamare*, *laccessere*; to attack with injurious, reproachful, angry language. The Sw. *skälta*, Ihre says, means, to bark, and thence *convitiari*, to scold, and this he refers to the Ger. *gellen*, to yell; (which is also written *schallen*;) in D. *ghillen*, *stridere*, (*schal*, *sonitus*;) A. S. *giellan*, *gyllan*. To scold is To attack, to assail with, to use towards, reproachful, angry language; rude, noisy, quarrelsome language.

To storme and to *scolde*. *sclaunders* to make.

Piers Ploughman. *Vision*, p. 28.

A *sclaunders* tunge, a tunge of a *scolde*,
 Worketh more mischief than can be tolde.

Skelton. *Against Sclaunders*.

And fal from meke learnyng into idle despitions, brawlyng and *scoldyng* about wordes.

Tyndall. *Workes*, p. 372.

In the second chapter he raungeth the field, and searcheth out with all diligence, what worde I haue spoken that might be takē in the worst sence, and calleth them rayling, gesting, and *scolding* wordes.

Frith. *Workes*, p. 66.

Finding himself without the compass of blows, he fell to a fresh *scolding*, in such mannerly manner, as might well shew he had passed thro' the discipline of a tavern.

Sidney. *Arcadia*, book i.

Whether any be braulers, slanderers, chiders, *scolders*, and sowers of discord between one person and another.

Archbishop Cranmer. *Article of Visitation*.

TRA. Saw you no more? Mark'd you not how hir sister
 Began to *scolde*, and raise vp such a storme,
 That mortal eares might hardly indure the din.

Shakspeare. *The Taming of the Shrew*, fol. 211.

GRE. Hortensio, have you told him all her faults?

PETR. I know she is an irkesome brawling *scolde*:

If that be all, masters, I heare no harme.

Id. *Ib.* fol. 214.

He [De Burgo] shewed himself so forward for it [the divorce of K. H. 8. from Qu. Katharine] that the women of Oxon did not only *scolde* at him publicly, but threw stones after him as he passed along the street.

Wood. *Fasti Oxonienses*, vol. i.

But human frailty nicely to unfold,
 Distinguishes a satyr from a *scolde*.

Buckinghamshire. *Essay on Poetry*.

"Good ancient gentlewoman," said this rough old soldier, "spare your breath, and set your hearts at rest, for our master is not a man to be scratched and *scolde*d out of his kingdom."

Warburton. *Bolingbroke on Philosophy*. *Letter* 1.

A common *scolde*, *communis rixatrix*, (for our law Latin confines it to the feminine gender,) is a public nuisance to her neighbourhood.

Blackstone. *Commentaries*, book iv. ch. xiii.

SCOLIA, in Zoology, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform, thick, straight, inserted rather below the middle of the face, thirteen-jointed, and somewhat elongated in the males, fourteen-jointed in the females; mandibles stout; *palpi* short, filiform, maxillary six-jointed, labial four-jointed; eyes emarginate; wings four, anterior with three submarginal areolets, with two perfect discoidal ones, and an open one towards the apex; the second submarginal areolet receiving a recurvent nervure; *abdomen* elongate, slightly pedunculated; legs robust; *femora* compressed; *tibiæ* robust, four posterior with acute spurs at the apex, *tarsi* downy.

Type of the genus, *S. hortorum*, Fabricius. A very

SCOLIA. numerous genus, extending from the South of Europe to Van Diemen's Land, and also occurring in the central portions of America; it requires investigation, as numerous species are as yet undescribed, and of others their synonymy is very much confused; none of them occur in Britain.

SCOLIOPTERYX, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* rather short, robust, bipectinated to the apex in the males, the pectinations very short at the tip, somewhat serrated and pubescent in the females; *palpi* elongate, ascending, clothed with short, capitate scales, which are rather longest in front of the two basal joints, the terminal joint scarcely less robust than the preceding, the basal joint shorter than the apical, rather stouter than the second, which is twice the length of the first, and a little acuminate at the apex, terminal joint nearly as long as the second, linear, its apex a little turned; *maxillæ* rather short; head transverse, with a tuft of scales on the forehead; eyes rather small, globose, naked; *thorax* stout, with a short acute crest in front; *abdomen* rather stout, somewhat depressed, obtuse at the apex, the male with a somewhat quadrate tuft; wings deflexed during repose, anterior

deeply notched, and dentate on the hinder margin, posterior slightly denticulate; legs stout, woolly; two basal joints of the hinder *tarsi* with long fascicles of scales, especially in the male; caterpillar slender, naked; *pupa* folliculate.

Type of the genus, *Phalæna* (*Noctua*) *libatrix*, Linnæus; Don. *Britt. Ins.* vol. vi. pl. 216. Of this singular genus, only one, an indigenous species, is known.

SCLOBATES, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* porrect, slender, and curved at the tip; head transverse, a little swollen in front, and deeply excavated behind; eyes ovate; *thorax* gibbous; *scutellum* triangular, somewhat gibbous; wings moderate; *cellule* wanting; *abdomen* somewhat sessile, oblong-ovate, the apex slightly compressed, the first segment sensibly narrowed towards the base, the lateral tubercles placed before the middle; *ovipositor* scarcely exerted; legs various, four anterior moderate, posterior pair elongate; *tarsi* generally thickened, rarely simple.

Type of the genus, *S. crassitarsis*; Gravenhürst, *Ichneumonologia Europæa*, vol. ii. p. 360. Three species, one of which is found (but rarely) in Britain.

—
SCOLO-
PAX.

S C O L O P A X.

SCOLOPAX, from the Gr. *σκολοπαξ*, a bird which never sits on a tree, Lin.; *Woodcock*, *Snipe*, Pen. In *Zoology*, a genus of animals belonging to the family *Longirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak with its ridge elevated at the base, compressed, slender, long, straight, blunt, and its tip swelling; both mandibles grooved for half their length, and the point of the upper longer than the lower, and its swelling part forming a kind of hook; head compressed; eyes large and set far back; nostrils pierced longitudinally near the edge of the mandible, lateral, basal, and covered with membrane; wings of moderate size, the first alar quill shorter, or not exceeding the length of the second, which is the longest; legs slender and feathered to the knee or within a short distance above it; three toes in front, generally distinct, but in a few instances the middle and outer connected by membrane, and one behind.

The genus *Scolopax* of Linnæus contains very many birds which cannot strictly be included in it, and accordingly, as arranged by Temminck, it is much less extensive. Vieillot and Leach have, however, considered it right to reconstruct the genus, and to restrain it within still narrower limits, and accordingly of the genus, as proposed by Temminck, they have made three, viz. *Rusticola*, *Scolopax*, and *Macroramphus*. In the opinion of the former ornithologist the characters upon which this arrangement has been made are not sufficiently decisive for founding new genera, though sufficient to divide the genus into as many sections, which is the course he has adopted. By the feathering of the whole thigh in the *Woodcocks*, *Rusticolæ* of Vieillot, the genus is connected with land birds, whilst the *Long-beaks*, *Macroramphi* of Leach, by the shortness of their toes and the webbed connection of the middle and outer toes, connect it with the genera *Limosa* and *Totanus*. The true *Snipes*, *Scolopaces* of Vieillot,

occupy an intermediate place. The habits of these sections, however, vary in some degree; those of the first preferring the swamps in woody districts, whilst the species forming the other two sections are found in the open marshes, and some even upon the sea-coast. Their food consists principally of worms and beetles, which the sensitive skin covering their beaks enables them to dig out of the soft mud; and their bills are further adapted for this mode of taking their food, which is commonly called *boring*, by the adaptation of some muscles at the root of the mandibles in such manner as to open them at their tips like the forceps used for the microscope. There is great similarity in the plumage of this genus, which is subject to a double moult annually, and is most brilliant in Summer time. They mostly lead a solitary life, moving about in pairs. A few remain stationary throughout the year, but the greater number are birds of passage twice a year, moving from South to North in the Spring, and from North to South in the Autumn. When arrived in the country where they intend to winter, it is curious to observe that they are constantly changing their stations, and this change seems dependent on the weather, so that whilst to-day they may be found in great numbers among the marshes, yet to-morrow these tracts will be completely deserted, and the birds are found only on the highest moorland ranges, having chosen the twilight of the preceding night to make their departure. In India they move according to the supply of water in the tanks, and at the season when they are comparatively dry quit it altogether. This subject will be resumed in speaking of the *Woodcock*, about the movements of which species the greatest notice has been taken.

SECTION I.—*Woodcocks. Rusticolæ*, Vieill.

Whole thigh feathered as in land birds; eyes set far

SCOLO- back and near the crown, giving the head a square
PAX. form; belly barred.

S. Rusticola, Lin.; *le Bécasse*, Buff.; *Woodcock*, Pen. In length thirteen inches; upper parts varied with chestnut-brown, yellowish, and grey, with black patches; nape and back of the head marked with four transverse brownish-black bars, and the interspaces reddish-white; under parts ferruginous-yellow with brown zigzags; primaries streaked on their outer web with ferruginous and black; caudal quills black, more or less varied with chestnut-brown, tipped above with grey, and beneath with white; beak fleshy, tinged with grey; legs livid. The female, rather larger than the male, is of duller colour, and has upon the alar coverts a great number of white spots.

Woodcocks, as their name implies, live most commonly in the woods where the soil is black and moist; during daytime they hide amongst the closet brushwood, in thickets, by the sides of open glades, or in the neighbourhood of roads, along which they pass to their feeding ground at night and return in the morning. After keeping quietly at roost upon the ground during the whole day, so soon as twilight appears they rouse up and disperse themselves over the adjoining open country, where they are engaged till morning in searching for food by boring the soft ground with their long and sensible beaks. Their digestion is very rapid, and Selby mentions that the quantity of worms they can devour in the course of a night is astonishing. "I have known one," says he, "that consumed at a meal (that is, within a night) more large worms than half filled a watering-pot of considerable size." They can be taught, however, to feed on other food, as proved by Montagu's experiment of feeding one on bread and milk mixed with a few worms: a relish for this it soon acquired and thrived well. The nest of the Woodcock consists merely of a shallow hole lined with dried grass; early in Spring the female deposits four eggs of a yellowish-white colour, blotched with pale chestnut-brown; she sits very close, and will not leave her nest although very closely approached. The young leave the nest as soon as hatched, but on the appearance of any danger the parent bird flutters her wings, endeavouring, like the Partridge, to attract notice to herself whilst her young make their escape.

Though the Woodcock keeps close during the day, if disturbed it rises quickly, and makes its way with great alacrity through the branches of the shrubs and trees till it has fairly got from among them, after which it flies more quietly, and drops into the first thicket it meets with, closing its wings, dropping suddenly, and after running some short distance it settles itself. When running, or when first disturbed, it jerks the tail upwards, partially expanding it, and displaying the white which tips the under surface of the caudal quills. Although the Woodcock is a migratory bird, yet there are ample proofs of its constant residence throughout the year in this country. Pennant mentions that some breed in Case Wood near Tunbridge. Selby says that they also do so in the woody districts near Dunkeld and Blair Athol, and also in Northumberland. Jesse speaks of a gentleman in whose woods, adjoining Woolmer Forest, in Hampshire, these birds breed, as also in Alice Holt Forest. And in the Proceedings of the Committee of the Zoological Society there is a communication from Sir F. Mackenzie relative to their breeding at Corran, on the Eastern coast of Ross-shire. It is, however, certain that by far the greater number migrate to the Northern parts of Europe to breed.

The earliest appearance of the Woodcock on its Autumnal visit to this country generally occurs towards the latter end of September or the beginning of October; few, however, of these remain, the greater proportion passing onwards towards Portugal, and thence to their most Southern destination, Africa. Successive flights continue during the two following months, but as the distance they fly is continually shortening, they are gradually spread over the whole country, at least in such parts of it as suit their particular habits; the South-Western coasts of England and Ireland being the districts first settled by them, whilst those which are found in the Northern counties rarely appear before the latter end of November or the beginning of December. It is a curious circumstance that the inhabitants of the Western coast consider the Woodcock to arrive from the Westward; and in support of this opinion it is well known that previous to their arrival in Cornwall they are found in the Scilly Isles, which are seventeen miles distant from the main land, and in such exhausted state that they can be easily caught. On the contrary, those who live in the Eastern counties believe the Woodcock comes from the Eastward; and they notice that the coming of the Redwing (*Turdus Iliacus*) indicates the approach of the Woodcock, whilst its arrival is accompanied by that of the Royston Crow, (*Corvus Cornix*.) Their approach has but rarely been observed, as they generally come to land during the night; Selby states in the greatest number in hazy weather with little wind, and that blowing from the North-East. After such a night he has found them in great numbers, on the borders of plantations, in hedges, and even in turnip fields, but on the following day not a bird is to be seen, the whole flight having proceeded on their journey. Pennant thinks the wind has materially to do with their arrival; whilst, on the contrary, Major Morrison, in the *Edinburgh Philosophical Journal* for January, 1824, states that "the period for the appearance of the Woodcock in England does not seem to be retarded by either a long series of calm, moderate, or tempestuous weather, or from the long prevalence of the wind in any particular quarter; hence it may be inferred that the Woodcock is favoured by nature with an instinct peculiar to its species, which, during its transit from one country to another, however distant, secures its safety." And he further notices the probability of the extraordinary instinct of the Woodcock enabling it at the outset of its journey to rise into the higher regions of the atmosphere, where it may find a current suitable for its journey, which gained, it can be propelled along at a rate varying from forty to eighty miles an hour, as is shown by balloon travelling. And he conceives that the unerring certainty with which they drop on an island, however small, in the ocean, depends on some change which the air feels in its passage over the land. This notion is supported by the report of a keen sportsman to Selby, who stated that he had been in the habit of frequenting the sea-shore at an early hour in the morning, and had more than once observed the arrival of a flight of Woodcocks from the North-East just at day dawn. His notice was first attracted by a peculiar noise in the air above his head, which, upon attending to it, he found proceeded from birds descending in a direction almost perpendicular, and which, upon approaching land, separated and flew towards the shore, where they alighted among the hedges, and proved to be Woodcocks. It has also been observed as a very remarkable circumstance, that among

SCOLO-
PAX.

SCOLO-
PAX.

the numerous migratory birds which have taken refuge on board ship during their flight, or among the thousands which have been found drowned on the sea-shore, not a single instance is mentioned of a Woodcock so circumstanced. It does not appear that the exertions of these birds during their migration are either so long continued or so violent as to injure them, for especially in the later season they come to our coast in high condition. Some writers, among whom is Bewick, think that the Woodcocks return from year to year to their old resorts, and instances are given of such assumed preference. One was caught in 1797 in a rabbit-net at Whitcombe, in Dorsetshire; a piece of brass was fastened round its leg and it was set free; this bird was shot in the same wood in the following year. A white Woodcock was seen in Penrice Wood, Glamorganshire, for three successive Winters, was repeatedly flushed and shot at in the very same place where first seen, but escaped, and at last was found dead with many others in consequence of the severe Winter of 1793, in the same wood. Major Morison also mentions a slate-coloured Woodcock seen for three successive Winters on the same estate in Ireland, which, after being carefully preserved by the proprietor, was at last shot by a stranger. It may be a question, however, whether these are instances of the Woodcock returning to its old resort, or rather whether the bird has not remained stationary throughout the year. Towards the latter end of February, when they begin to assume their Spring plumage, their flesh loses its fine flavour, and the skin becomes dry and scurfy; they begin to pair, and Pennant states that towards the middle of March they flock towards the coast, and, if the wind be propitious, that is, blowing from the South and South-West, are gone immediately; but if otherwise, they are detained in the neighbouring woods till a favourable wind springs up, of which they avail themselves, so that where hundreds have been seen one day, not a bird is to be found on the following.

The regularity with which these birds visit their feeding grounds has led to the practice of capturing them by nets set across their track, which is still employed in Devonshire and Cornwall. But they are also taken by springes formed of an elastic stick with one end driven into the ground, and the other furnished with a horse-hair noose, which, the stick being bent, is passed through a hole in a peg fastened to the ground, and kept open by a fine trigger which is easily disturbed by the pressure of the bird's foot. These springes are set where the borings are most numerous, and to them the Woodcocks are led by a low fence of twigs, or stones heaped so as to leave no aperture through which they can stray, and stretching out usually in an oblique direction for some distance from the springes. Over these boundaries they rarely attempt to walk or even to fly, but continue on their course till caught in the springe.

S. Minor, Lin.; *Rusticola Minor*, Vieill.; *American Woodcock*. Ten inches and a half in length; forehead and line over the eye reddish-tawny; crown black, marked with three narrow brownish-white bands; edges of back and scapulars pale bluish-white; back and scapulars deep black, each feather tipped with light brown and bright ferruginous, delicately zigzagged with black upon the lighter parts; the whole of the under parts reddish-tawny; cheeks barred with black, and varied with light brown; sides of the neck inclining to ash primary quills dusky brown; caudal quills black, marked

along the outer edge with small pale brown spots, and tipped with drab above and silvery-white beneath; bill brownish flesh-colour; legs and feet pale reddish flesh-colour. The female is an inch and a half longer, has the beak nearly three inches long, the black on the back less intense, and the sides beneath the wings slightly barred with dusky. This species is never found in Europe but only in America, where it replaces the European Woodcock, from which it is distinguished by the under parts being plain without zigzags, and Temminck says, from not having the nape barred transversely. It makes its appearance in the United States, extending up as high as the St. Lawrence, early in March, remains during the Summer, breeds in the intermediate places, and on the approach of Winter retires towards the torrid zone. It makes a nest of a few withered leaves and stalks of grass loosely put together, on the ground, often at the root of a stump in the retired part of the woods; and deposits, early in April, four or five eggs about an inch and a half long, tapering suddenly to the smaller end, of a dun-clay colour thickly spotted with brown, particularly at the large end, and intermingled with purple. Wilson says of this species, that "he rises by a kind of spiral course to a considerable height in the air, uttering at times a sudden *quack*, till having gained his utmost height, he hovers around in a wild irregular manner, making a sort of murmuring sound; then descends with rapidity as he rose. When uttering his common note on the ground, he seems to do it with difficulty, throwing his head towards the earth and frequently jetting up his tail. These notes and manœuvres are most usual in Spring, and are the call of the male to his favourite female."

S. Saturata, Horsf.; *Javan Woodcock*. Size of the last species; but is distinguished from it and the preceding by the darkness and uniformity of its colour, and by the regularity and simplicity of its transverse bands; upper parts varied with deep chestnut and brown transverse bands, the latter being much the broader; back of the head and upper surface of neck very dark coloured, nearly approaching to black, and the nape marked with three transverse chestnut bands; middle of the back marked with large brown patches; throat, front of the neck, and chest marked with equal chestnut and brown bands; on the abdomen, vent, and thighs the alternate bands are pale, inclining to yellowish-white; extremity of the tail dark, and tipped with sooty above and white beneath; bill and feet brownish, inclining to tawny. Is found in the forests of Mount Prahu, 7000 feet above the level of the sea.

S. Sabini, Vig.; *Sabine's Woodcock*. This species, though in size resembling the Snipe, is, from the feathering of its thighs and the general colour of its plumage, more nearly allied to the Woodcocks, and may be considered as forming the transition from one to the other section of the genus *Scolopax*. In length it is rather more than nine and a quarter inches; and at once distinguished from every other European species by the absence of white from its plumage, or any of those lighter tints of ferruginous-yellow extending more or less in stripes on the back and heads of all; top of the head and back black, barred on the latter transversely with chestnut; under parts dusky black, thickly barred with dull chestnut; quills blackish-brown; tail black at the base, chestnut at the tip, barred with narrow black lines, and consisting of twelve quills, in which it agrees with *S. Gallinula*, but is distinguished from *S. Galli-*

SCOLO-
PAX.

SCOLO-
PAX.

nago, which has fourteen, and from *S. Major*, which has sixteen. It is further distinguished from *S. Gallinula* by its beak being a third longer; the beak is dusky black, and the base of the upper mandible pale chestnut; legs dark olive-green. The limbs are stouter than in *S. Gallinago*, but rather shorter and much weaker than in *S. Major*, though nearly of equal length. It has only been thrice found: once in Ireland, in August, 1822; once near Rochester, in Kent, in October, 1824; and again in Ireland at the latter end of November or the beginning of December, 1827, near Garvagh, county of Londonderry. This bird did not call when raised like the other Common Snipes which sprung up with it, and like the Jack Snipe, *S. Gallinula*, it dropped near the sportsman without seeming to regard his presence, nor did he succeed in killing it till after the third shot.

SECTION II.—Snipes. Scolopaces, Vieill.

The lower part of the thigh featherless; eyes and form of the head as in the Woodcocks; belly generally white and not barred.

S. Major, Lin.; *la Grande ou Double Bécassine*, Temm.; *Great Snipe*, Pen. Is ten and a quarter inches long, has the tail composed of sixteen quills, and the web of the first alar quill whitish; top of the head black, divided by a central yellowish-white stripe; eye-streak, cheeks, and throat yellowish-white; upper parts varied with black and light ferruginous, the latter colour disposed longitudinally; lesser wing-coverts tipped with white; breast, sides, and flanks white, with transverse triangular deep brown bars; middle two caudal quills black for two-thirds of their length, the remaining third bright chestnut-brown, with a narrow black bar near the tip which is reddish-white; the outer quills quite white for nearly their whole length; bill blackish-brown; legs olive. This species is spread over great part of continental Europe, especially towards the East and over the North of Asia. In some countries its visits are regular, and in others only accidental, the latter being the case with those which are seen in England. Temminck states that he has received a specimen from North America, but the species is not mentioned by Wilson, in his *American Ornithology*, nor has Charles Bonaparte ever met with it there; it must therefore, as he says, "be exceedingly rare" on that continent. In most countries it is migratory, returning to the vast marshes of the North during Summer, where it breeds, forming its scanty nest of decayed grasses and water plants, which it places in some tolerably dry spot near a standing water, and depositing four eggs of a yellowish-white or pale olive-green blotched with dark brown. It descends Southwards on the approach of Winter, and does not appear to collect in flocks for the purpose of migration, but each individual or each pair acts independently for itself, and hence, being found alone, is in many parts of England called the *Solitary Snipe*. Its flight is less tortuous and rapid than the Common Snipe, and performed more steadily and evenly, like the Woodcock. When disturbed, it utters a cry like the common species, but shorter and hoarser.

S. Gallinago, Lin.; *la Bécassine*, Buff.; *Common Snipe*, Mont. Ten inches in length; the tail composed of fourteen quills; the webs of all the alar quills brown; upper parts varied nearly as in the last species; neck and chest streaked longitudinally with dark brown; flanks transversely marked with white and blackish;

SCOLO-
PAX.

middle of the belly and vent pure white; caudal quills black for two-thirds of their length, the remainder reddish-brown, with a black bar near the tip; beak brown, its base ashy; legs pale greenish. This species, according to Selby's observation, is confined to Europe and the North of Asia; it is strictly indigenous to our islands, though the greater mass retire Northward to breed, leaving a few on our extensive moors and marshy districts, where, about the beginning of April, they prepare their nest, which is formed by lining dried grasses and heath in a shallow depression in the ground beneath a tuft of heath or rushes in the bogs of our moors. Here the female deposits four yellowish-grey eggs, inclining to oil-green, and blotched with different shades of reddish-brown. The young quit the nest speedily after their exclusion, and run about after the parent birds with great activity, whilst covered only with a party-coloured down of buff and brown. When seeking for his mate at pairing time, the male utters a piping or clicking note, often repeated whilst on the wing, "accompanied," says Selby, "at intervals by a humming or bleating noise not unlike that of a Goat, produced apparently by a peculiar action of the wings, as the bird, whenever this sound is emitted, is observed to descend with great velocity and with a trembling motion of the pinions." At this time, especially towards evening and during the whole period of incubation, it soars to a great height, and, remaining long on the wing, its note is heard when the bird is far beyond sight. The bill of the young bird is at first very short, and does not acquire its full length till they are two or three months old, and its flexibility readily distinguishes them when all other sign of their youthfulness has disappeared. As Winter approaches they descend to the fenny districts, moist pastures, and wet stubble, where their food is in greatest plenty; but rarely remain long in one place, the prevalence of particular winds seeming to affect them, so that the spot to-day teeming with them is to-morrow found deserted. In severe frosts they betake themselves to the heads of springs, at which, from their higher temperature not being so quickly frozen, they obtain a scanty supply of food; but very many perish. When disturbed from a spot in which they have been long domiciled they lie very close, and will not rise till the intruder is close upon them; but if in great numbers, they are more easily roused, and one starting up and giving alarm as it rises on the wing by a cry resembling the word *chissick*, lispingly pronounced, the whole flock are speedily in motion, first flying horizontal in a zigzag direction against the wind and close to the ground for about sixty or eighty yards, and then, towering up to a great height, continue flying, till, having caught sight of a fit resting-place, they descend almost perpendicularly with the swiftness of a dart. It is highly valued as a table delicacy, and often caught in the fens with Lark nets, or taken like the Woodcock with springes.

S. Gallinula, Lin.; *la Petite Bécassine*, Buff.; *la Bécassine Sourde*, Temm.; *Jack Snipe*, Pen. Six inches and a half long; the tail composed of twelve quills; from the bill to the nape extends a broad black streak spotted with ferruginous, and having on either side of it above the eyes a broad yellowish stripe; back and scapular feathers black, with green and purple glossings, the latter long and narrow edged with yellowish, and forming two well-marked bands down the back; throat whitish; upper part of the chest yellowish-

SCOLO-
PAX.

brown, with brown spots; belly white; flanks and vent streaked longitudinally with brown; tail brownish-black, edged with pale chestnut-brown; beak bluish at the base and black towards the tip; legs livid-olive. This species is the smallest of the species, rarely exceeding two ounces in weight. During Autumn and Winter it is as numerous in this country as the Common Snipe, but early in Spring it migrates to high Northern latitudes for the purpose of incubation, where it deposits four or five oblong whitish eggs spotted with ferruginous. Gould states that Europe alone seems the proper habitat of this species, for although occasionally met with elsewhere it is exceedingly rare; but Selby thinks it also is indigenous to Northern Asia. It always seeks out the softest and most miry parts of bogs, sits very close, and, from the similarity of its colour with that of the ground on which it squats, and its motionless manner of lying, it is often discerned with great difficulty, and may be almost trodden upon before it rises; indeed it has occasionally been taken by hand under the pointer's very nose. Its flight is direct, resembling that of the Woodcock when flying in open space, with its wings considerably bent, and forming an acute angle with the body. It flies but a very short distance, drops in the first miry spot, and is roused with more difficulty than at first. It has not been observed to utter any kind of cry.

S. Wilsonii, Tem.; *S. Gallinago?* Wils.; *Wilson's Snipe*. Nine inches in length; the tail consisting of sixteen quills, and the lateral only half the width of the intermediate quills; crown of the head black, divided by a middle pale brown irregular line, and bounded on either side by a similar but broader one above each eye; from the bill to the eye a narrow dusky band runs; back and scapulars deep black, the latter waved with ferruginous, and broadly edged exteriorly with white; wings dusky, all the feathers and the coverts tipped with white; outer quill edged with white; neck and upper part of the breast pale brown varied with white and dusky; belly pure white, sides barred with dusky; tail-coverts pale ferruginous; caudal quills deep black, ending in a bright ferruginous bar crossed by a narrow wavy ferruginous line, and tipped with white; bill brown and its tip black; legs and feet pale ashy-green. The colours of the female less bright. They are natives of North America, make their appearance in Pennsylvania in the beginning of March, and, after remaining in the low grounds for some weeks, the greater part fly Northward to breed, but a few are still found in the marshes during Summer, and probably breed there. Vast numbers winter on the rice grounds of the Southern States of the American Union, from which they disappear early in Spring. They have the same soaring irregular flight as the European Snipe, the same bleating note, and occasional rapid descent and spring from the marshes, with the like feeble squeak. They are commonly known in the American States as the European Snipe; but Wilson pointed out their difference in size and the greater number of their caudal quills, and considered it most probable that they were a distinct species, which has been verified both by Charles Bonaparte and Temminck, the former of whom considered them as identical with *S. Brehmii*, whilst the latter holds them as a distinct species.

S. Brehmii, Kaup; *Brehm's Snipe*. This species resembles our common Snipe so much that it is often mistaken for it; it is intermediate between *S. Major* and *S. Gallinago*, agreeing with the former in the

number of its caudal quills, (sixteen,) and with the latter in size, form, and general colour, but it differs from both in being mute, like *S. Gallinula*. As distinguishing characters it has the belly white, the first caudal quill white on its outer vane, and marked with two dusky transverse bands, whilst its inner vane is greyish-black, and unbanded near the shaft. Kaup was the first who noticed it as a distinct species, and met with it in the hard Winter of 1822-23, by a brook near Gottingen, and he considers that it is often to be met with in collections under the name of *S. Gallinago*, with which it is usually confounded.

S. Paludosa, Lath.; *la Bécassine des Savannes*, Buff.; *Savannah Snipe*. About eleven inches and a half in length; lateral caudal quills very narrow and acuminate; head marked with two black bands interposed between three ferruginous and one brown on either side, between the beak and the eye; whole neck marked with large blackish spots, becoming larger on the breast; all the under parts streaked with brown bands on a light ferruginous ground; scapulars pure black, their outer edges broadly bordered with bright ferruginous; wing-coverts marked transversely with reddish-white on a black ground; alar quills marbled and covered with ferruginous zigzags; lateral caudal quills marked with whitish and brown, the four middle quills broad, and having a large black spot at their tip. They are very common in the Falkland Islands, and also in the great Savannahs of America, especially about the marshes, but not such as are overflowed by the salt tide. During the rainy season they seek the higher ground, and in the shallow cavity of a hillock lined with grass deposit two eggs. They move about in twos or threes, and if one be met with it is the sure indication of the neighbourhood of another. Towards evening they may be heard calling to one another in a hoarse rough cry, *ka, ka, ka, ka*, like the cluck of our domestic fowls. When in the Autumn the Savannahs occasionally take fire, they are driven in great numbers to the parts adjoining, but they avoid the woods, and, when pursued, never drop, but fly straight off to regain the Savannahs from whence they have come; in this respect they differ from the European Snipe, but like it always spring up from beneath the foot of the sportsman.

S. Gigantea, Natter.; *Gigantic Snipe*. The whole length is fifteen inches, and the beak very strong and powerful, which distinctly characterises it from the other species; the head and neck are marked as in the last species, but the neck less widely spotted; the chest and flanks are marked with black crescents on a white ground; the middle of the belly pure white; scapulars and wings black, edged externally with bright ferruginous, tipped with reddish-white, and marked with ferruginous zigzags far apart, the alar quills varied with ashy zigzags; lateral caudal quills very narrow, acuminate, marked with black and ashy; of the four middle ones the two middlemost are black, with a very broad edging of bright ferruginous, marbled with black; all the coverts light ferruginous, with zigzags of a deeper tint. It is a native of the Brazils.

SECTION III.—*Long-beaks*, Selby. *Macroramphi*, Leach.

The middle and outer toes united by membrane as far as the first joint.

SCOLO-
PIA.

S. Grisea, Gmel.; *la Bécassine ponctuée*, Tem.; *Red-breasted Snipe*, Pen. Rather more than ten inches in length; caudal quills *twelve*, marked with numerous white and blackish bands; top of the head, neck, chest, and wing-coverts spotless ashy-brown; as is also a spot between the beak and eye; back and scapulars light brown, all the feathers tipped with deeper; eyebrows, throat, belly, and thighs, pure white; flanks whitish, varied with light brown; rump and under tail-coverts white, with broad blackish crescents; upper tail-coverts banded transversely with black; caudal quills marked with closely approximated bands of black and white; beak brown; legs yellow. Such is its Winter plumage, and it has been described by Wilson as a new species by the name of *S. Paykullii*. In its Summer garb the top of the head, the nape, back, and scapulars are tinged with reddish-brown, as are also the neck and chest, hence it is called by Pennant the *Red-breasted Snipe*; the cheeks and eyebrows light reddish, and the wing-coverts ashy, edged with white. It is then *S. Novæboracensis* of Wilson. This bird is really a native of America, but it has been twice met with in Europe, once in Sweden, and once on the coast of Devonshire. This species is always found in Brazil, notwithstanding the numbers which migrate, and, according to Prince Maximilian, extends as far as 18° South latitude. Its manners and habits appear rather to resemble those of the Godwits and Tringas, than either the Snipes or Woodcocks. It is seldom or never seen inland, but lives in the marshes near the sea-side, and resorts to the sand bars and mud flats at low water in search of food. They breed, Wilson thinks, not far North of the United States, which they do not leave till early in May and return about the beginning of August. During their stay they fly about in flocks, sometimes very high, and, uttering a loud shrill whistle, form, divide, and, reuniting, make several circuitous manœuvres, and then drop down in such numbers, and so close together, that eighty-five have been shot at one discharge of a musket. They are in best order in September, and are most preferred for the table. On the approach of Winter they migrate further to the Southward, and reappear on the coast of New Jersey early in the following April.

Richardson says it is well known in the fur countries, and has an extensive breeding range from Lake Superior to the Arctic Sea. And he also further states, that the individuals killed on the Saskatchewan plains had their crops filled with leeches and fragments of coleoptera.

S. Frenata, Illig.; *Bridled Snipe*. Ten inches and a quarter long; top of the head marked longitudinally with two broad blackish-brown stripes, separated by a narrow reddish-ferruginous streak; from the nostril a tawny-ferruginous stripe passes above the eye to the nape, and beneath it a blackish-brown stripe as far as the eye; nape, aural region, and side of the head reddish-yellow; lower part of the neck and chest tawny-reddish-yellow, tinged with dusky brown; belly and vent white, marked on the sides and vent with well-defined, broad, dusky greyish-brown, angular spots; back dusky brown, and some of its feathers having their outer web ferruginous, forming longitudinal stripes and spots; scapulars and wing-coverts dusky greyish-brown, with white ferruginous spottings; alar quills dusky brown, the first having its edge lighter, the others tipped with white; outer two caudal quills white barred with black, the third for half its length blackish, the others for the first half of their length black, the other half ferruginous, marked near their end with a fine transverse black band, and tipped with white; upper tail-coverts ferruginous, under black; beak having the half nearest its base pale brownish flesh-colour, and the other half blackish-brown; legs brownish flesh-coloured. The female is distinguished by the stripes on the back being paler, and the breast, flanks, and wing-coverts more deeply speckled. It is very common in the marshy districts of Brazil; its flight is quick and sometimes very high, like our Common Snipe. It is said to deposit two eggs on a little hillock in the marshes.

SCOLOP-
SIDES.

SCOLOPENDRA, in Zoology, a genus of *Myriapoda*.

Generic character. *Antennæ* conic-setaceous, composed of seventeen subconic joints; mouth covered by hemispheric galeæ; *labrum* divided by a fissure; exterior *palpi* with a double peduncle; mandibles strong, hairy, with a lateral, palpiform appendage, their apex pierced; eyes granulated, eight in number, four on each side of the head, placed in a rhomboid form; body depressed, long, linear, vermiform, the segments margined; legs numerous, about twenty-three pair; three anterior pair very short; hinder pair long.

Type of the genus *S. Morsitans*; Donovan, *Indian Insects*; Leach, *Zool. Misc.* vol. iii. pl. 138. The animals of this genus are generally of large size, sometimes nearly a foot in length; there appears to be a great number of species, but their characters have not been elaborated; they frequent the tropical regions.

SCOLOPIA, in Botany, a genus of the class *Icosandria*, order *Monogynia*. *Generic character*: calyx

inferior, three or four-parted; corolla, petals three or four; berry crowned by the style, one-celled, six-seeded; seeds arillate.

One species, *S. pusilla*, native of Ceylon.

SCOLOPSIDES, from the Greek *σκολοψ*, a sharp stake, and *ειδος*, a form, Cuv. In Zoology, a genus of animals belonging to the family *Sciænoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Mouth moderately wide; two scarcely distinguishable pores beneath the lower jaw, or none at all; teeth very fine; eyes large; second suborbital bone terminating in a rounded lobe, generally denticulated, and having at the angle which joins the orbit a spiny point directed backwards and crossing a similar point on the third suborbital; branchial rays five; body oval or oblong; scales large; dorsal fin continuous, its rays dropping into a groove on the back, with the spines alternately broad on the right and left; caudal fin more or less cleft.

This genus of fishes, established by Cuvier, is connected

SCOLOP-
SIDES.

with the *Sciænæ*, and especially with the *Diagrammas* and *Pristipomes*, by the toothing of the preopercule; their general form resembles that of the latter genus, which have the dorsal fin continuous, but some have the elevated profile and convex nape of the *Pristipomes* with a divided dorsal fin, and of the greater part of the *Diagrammas*. They are, however, specially distinguished from these by the number of their branchial rays which do not exceed five, and if there be a sixth it is extremely slender. They are all natives of the Indian Seas, and do not attain a great size.

S. Kate, Cuv.; *Anthias Japonicus*, Bl.; *le Lutjan Japonaise*, Lacep. Six inches in length; body oval and rather compressed; tip of the muzzle, jaws, and suborbital bones scaleless, but the other parts of the head covered with scales; the rounded hinder edge of the first suborbital bone scarcely denticulated; angle of the preopercule rounded, and having a slightly re-entering concavity above, the angle and whole ascending edge finely toothed; posterior edge of the opercule armed with a small sharp point, at its base a groove or a vertical line finely toothed; spines of the dorsal fin strong; the first of the anal short, but the second and third also strong; caudal fin forked, its lobes obtuse; colour grey, inclining to vinous. Is caught throughout the year off Pondicherry, but not in great quantity, and is considered good eating; it is called *Mountékan-vekaté*.

S. Kurita, Cuv. Eight inches long; denticles of the suborbital bone more numerous and better marked, and the concavity of the preopercule deeper than in the last species; body also deeper; its dorsal fin has two more soft rays and the anal one; upper part of the body dusky red, mingled with yellowish-green; under part white, tinged with yellow; fins golden.

S. Ruppelii, Cuv. Five inches in length; very similar to the last, but distinguished by the ascending edge of the preopercule being less concave; it is of a greenish-grey colour, and all the fins reddish. Native of the Red Sea.

S. Vosmeri, Cuv.; *S. Argyrosoma*, Kuhl and Van Hass.; *Anthias Vosm.* Bl. From seven to eight inches long; the body deeper than that of the first species, and the nape more convex; the spine of the first suborbital bone has two or three denticles, and those of the lower half of the ascending edge of the preopercule are straight and projecting outwards; the scales forming the lateral line are less than the others; first anal spine very long, equalling half the length of the second, whilst in *S. Kate* it is only one-third; general colour silvery, inclined to golden, and tinged with reddish; the disc of each scale forms a deeper spot towards the middle of the upper part of the body; below the lateral line a band of brighter silvery than the other parts; fins grey. Native of Java.

S. Torquatus, Cuv. Five inches in length; has the preopercule armed like *S. Vosmeri*, but the edge of the suborbital bone below the spine has its notches almost imperceptible; it is characterised by a broad pale band, which, passing from the nape, covers the opercule, and joins the pale tint of the breast. Is found at Batavia.

S. Bilineatus, Cuv.; *Anth. Bilin.* Bl.; *le Lutjan Elliptique*, Lacep. Six inches in length; its general form more oblong; the suborbital bone terminating in a strong spine, with two or three denticulations below; angle of the preopercule rounded, its denticulations tolerably well marked, as are also those on its ascending

edge, although they are very fine, and never straight; the opercule has a strong spine, but neither grooves nor denticles; general colour silvery, with some brown lines passing along the back, and two bluish stripes passing from the edge to the beginning of the soft part of the dorsal fin.

S. Margaritifer, Cuv. Eight inches in length; its proportions more lengthy; suborbital lengthy, and its spine very long and strong, with only three denticles below; preopercular denticles strong, unequal, and partially straightened, its angle not prominent; back greenish-blue, becoming lighter on the sides, and each scale spotted at its base with silvery; belly white; dorsal fin grey, the others paler. From the Isle of Waigiou.

S. Monogramma, Cuv. Twelve inches long; distinguished by the naked vertical part at the base of the opercule being marked with two grooves; spine of first suborbital bone strong, its denticles hardly visible, those of the preopercule also very fine, its angle moderately prominent; anal spines of moderate size; upper lobe of caudal fin more lengthy; colour silvery, tinged with violet on the back; a broad black band runs longitudinally below the lateral line; muzzle marked transversely with two blue or violet stripes; fins rosy or yellowish, the base of the pectoral streaked with violet; tail yellow, edged with bluish. Found at Java, where it is called by the natives *Passir-passir*, and also at Batavia.

S. Taniatus, Ehrenb. Six inches long; similar in form to the preceding, but without any grooves on the opercule, and the suborbital has four denticles, of which the second is pointed; back and sides greenish; belly whitish; above the lateral line a broad brown band passes from the shoulder to the caudal fin, and a blue streak passes from the eye to the muzzle; the pectoral, the edge of the soft part of the dorsal, and the caudal fin tinged with rosy; the ground colour of all the fins greyish. It is found in the Red Sea, and is called by the Arabs *Koont*.

S. Bimaculatus, Rupp. From six to seven inches long; very similar to *S. Monogramma*, and like it has the double groove on the opercule very distinct, but its suborbital bone is narrower and the body less deep; its colour is silvery, with a greenish tinge towards the back; from the anterior third of the body a broad blackish band extends below the lateral line to the tail; fins reddish. Is found both in the Red Sea and at Trincomalee.

S. Temporalis, Cuv. Nearly a foot long, with a double groove on the opercule, and the upper lobe of the caudal fin terminating in a thread-like process; its suborbital bone deeper than in the last species, and the denticles more distinct; but its principal distinction consists in the naked patch on the muzzle being extended above the eyebrow, and even on to the temple; back greenish, with longitudinal orange stripes, and a broad yellow band extending along each side; many of the scales spotted with silvery, and these arranged in rows; forehead marked with three transverse blue bands, of which the upper forms a ring on the temple; a fourth, extending from the muzzle beneath the eye, crosses the opercule, and is lost on the shoulder; upper lobe of the caudal fin yellow, lower reddish; other fins reddish. Found at the Isle of Waigiou, where it is called *Indosse*, also on the coast of New Guinea, and on the Isle of Vanicolo.

S. Frenatus, Cuv. Six inches long; its opercule doubly grooved, the angle of the preopercule projecting,

VOL. XXVII.

S. Scomber, Lin.; *le Maquereau Commun*, Cuv.; *Mackerel*, Pen. Length from one to two feet, of which the head measures rather more than a fifth; lips rather fleshy; teeth resembling little pointed cones, placed in a single row, in number from seventy-six to eighty in each jaw, and slightly curved inwards; the outer edge of each palatine bone furnished with a row of similar teeth, and at each angle in front of the vomer are three or four teeth; pharyngeal bones implanted with long, slender, and threadlike teeth; the eye covered before and behind with a thick, transparent, and almost gelatinous membrane, cleft vertically in an elliptical form, so that only a third of the diameter of the eye is visible; preopercule smooth, nearly triangular; opercule irregularly quadrangular, interopercule extending along the lower edge of the preopercule, and narrower before than behind; first dorsal fin commences at the anterior third of the body, of a triangular form, and can be shut up into a groove in the back; the distance between the first and second dorsal fin one-sixth of the total length; pectoral and ventral fins anterior to the first dorsal; false dorsal fins five, of which the last appears like two united by membrane; anal fin of similar form and size to the second dorsal, behind it also five false anal fins similar to

SCOM-
BER.

those on the back; caudal fin crescent-shaped; the cheek is covered with some peculiar long-pointed scales directed backwards, which seem to form plaits rather than scales; the body covered with very small scales, as it were blended in with the skin; lateral line, passing along the upper part of the body, straight from the head to the tail; the colour of the back is blue-steel, iridescent with green, gold, and purple, relieved with nearly straight or undulating black lines, the former characterising the male and the latter the female fish, running downwards and forwards a little below the lateral line, and in number about thirty; along each side and parallel with the lateral line run one or two blackish longitudinal streaks, interrupted and almost lost near the tail; sides and belly silvery, with purple and gold glossings; anal, and often the ventral, fins flesh-coloured; the false anal fins silvery, and all the other fins grey. Mr. Yarrell mentions, as a further sexual distinction, that the gill-cover and body have a more attenuated form in the male, whilst in the female the former is shorter and the latter deeper. Towards the latter end of May, and during the months of June, July, and even in the early part of August, Mackerel are caught full of roe, but they begin to spawn in June, and, according to Bloch, 540,000 eggs have been counted in the roe of a single female. Mr. Yarrell states that he has observed Mackerel caught on the sandy shores of Worthing drop their roe earlier than those taken in the deep water of Brighton. By the end of August the young Mackerel, which are called *Shiners*, have attained four or six inches in length; in November they are half grown, and then taking to the deep water are seen no more through the Winter. Some of the old fish, however, remain off the coast, and are occasionally taken every month throughout the year. Mackerel, according to Mr. Yarrell, feed probably on the fry of other fish, and at Hastings follow towards the shore a small kind of *Clupea*, commonly known there as *Mackerel Mint*, and which he suspects to be the young of the Sprat. Mackerel are included amongst the fish which are called migratory, and said to pass from the North Seas downward towards the South, and Anderson has described their track; he states that in Spring they coast along Iceland, Scotland, and Ireland, and, passing into the Atlantic, send one column along the coasts of Portugal and Spain which enters the Mediterranean, whilst the other, entering the British Channel, appears on the French and English coasts in May, and, passing Northwards, visits those of Holland and Friesland in June, whence, continuing to Jutland, it sends a detachment around that island which pass into the Baltic, whilst the remainder, proceeding along the coasts of Norway, return to the North Sea whence they had set out. According to Duhamel they retire during the Winter to the bays and shoals of Newfoundland, where they bury themselves in the mud and remain till the ice has broken up, when they again approach the coast. This notice of Duhamel's is supported by Lacépède's narrative of the observations of an old French Admiral, who states that he had during Spring seen upon the coast of Greenland, in the bays which are full of soft mud and seaweed, millions of Mackerel with their heads buried some inches in the mud and their tails sticking up, so that when first seen by his sailors they were afraid of running their boats in shore for fear of damaging them against what they supposed to be beds of coral. It is more probable, however, that the migration of the Mackerel, instead of being from North to South, is merely from

deep water, to which they had retired during Winter, to the coast; and this appears more likely to be the case, as they are taken nearly at the same time in the Mediterranean, in the British Channel, and in the North Sea. They have been met with as far South as the Canaries, but there is no notice of their being found nearer the tropics. The largest are said to be taken at the entrance of the British Channel between Sorlingues and the Ile de Bas, but their flavour is not so good as those of less size. Different localities appear to have some effect on the edible qualities of this fish; those of the Channel are considered the best, at Amsterdam it is esteemed of little value, and the Icelanders set so little store on it that they will not take the trouble to fish for it. In England and France, however, Mackerel are highly prized, and their great number render them so important an article of food to the poor of both countries, that the French Court, during the war in 1779, thought it worth while to make an application to the English Ministry with the view of allowing the fishermen of both nations to continue their employment, without molestation by the ships of either country. It was not thought right by the British Government to bind themselves to such proposition by treaty; but a tacit understanding upon the point took place, and as Gillingwater mentions, in his *Historical Account of the Ancient Town of Lowestoft*, the Mackerel fishery was carried on undisturbed by either of the contending parties during that war.

Mackerel are most commonly caught in *drift* or *drownets*, of a hundred and twenty feet in length, and eighteen or twenty in depth, made of small, fine, reddish-brown twine, and with meshes of rather more than two inches and a half in size, well corked at the top, but not leaded at bottom. Each boat, containing four men and a boy, or five men, is provided with a hundred of these nets, and twelve, fifteen, or eighteen of them being attached together by their ends, are fastened by their corked edge to a thick strong rope called the *drift-rope*, to one end of which a large buoy being fixed, the buoy is thrown overboard, and the boat being put before the wind, as she sails the rope and nets are handed over her stern till the whole are *shot*, when the drift-rope is carried forward and made fast to the bow of the vessel, and upon it she rides as if at anchor, and thus keeps it constantly strained. The nets are shot in the evening, as in day-time the fish would see and avoid them, and usually remain out through the night, but sometimes are hauled in and shot a second time. In the nets thus stretched, from three-quarters of a mile to a mile and a half in length, according to the number of parties engaged, the Mackerel, prowling about in the dark, become entangled, getting their heads beyond the gill-flaps into the meshes, but not being able to pass further on account of the greater size of their body they are held as in a noose, till taken out by the fishermen. When the nets are to be taken in, a capstan on one side of the deck is manned, upon which the drift-rope is wound in, and as it comes up, a man standing in the vessel's bows unties the nets from the drift-rope whilst others hand them in with the fish which are caught upon the other side; the whole range of nets having been thus taken in, the boats return to shore with their cargo or *sivver*, as it is called, on the coast of Sussex. At the beginning of the season two hundred and a half of fish, at six score and twelve to the hundred, is considered a good *sivver* for one night, as they sell at from four to five pounds a

SCOM-
BER.

SCOM-
BER.

hundred; but at the latter part of the season a good siver is about eight hundred, when the fish only fetch about twelve shillings a hundred.

A Mackerel boat with its fittings is worth about £350, and the nets are worth £2 a piece. The fishermen attached to the boats are paid by shares; twenty nets take equal share with one man, and the boat has to her share twenty-five nets; the latter belongs to the captain, who, being usually owner, takes forty-five nets for his share. About £200 is considered a good sum for one boat to earn in the season; but when divided between men, nets, and boat, the sum to each man is but trifling; he receiving £15, whilst each net has 12s., and the boat £18, the remaining sum, about £30, being retained for provision and repairs; so that it may be computed that few men earn more than a guinea a week during the season, whilst very many do not get even that.

On the Cornish coast, in deep water, the fishing is sometimes conducted differently; a very deep net with meshes too small for the Mackerel to get through them is made use of, and two boats are employed in working it. Whilst one of the boats rows round the shoal and throws the net overboard, the other keeps the end of it steady, and warps it round so as to prevent the escape of the fish, which being thus encircled, the men draw the net together at the ends and bottom, and, then raising it from the ground, the fish are brought to the surface and taken into the boat. But if the net be cast near the shore, it is, after having been properly laid out, closed and dragged to the beach like a ground net.

About the latter end of May, on the Sussex coast, another mode of fishing is employed called *railing* or *trailing*, which consists in fishing with a line, whilst the boat is under sail with a fresh breeze; the line for this purpose is about forty or fifty yards long, with a weight of a sugarloaf form, and from ten to fourteen pounds in weight, attached near its bottom, and baited with a piece of Mackerel to resemble a small fish; this is a very killing bait, but a slip of red leather or scarlet cloth will often answer the same purpose. By this method two men will take from five hundred to a thousand fish in a day if the weather be favourable. The French also practise this method; they call the line a *libouret*, and it differs from our line in having instead of one hook several small lines of different lengths to prevent tangling, each of which is armed with a hook. In the French boats six men are often employed fishing at once with lines, and sometimes one person is sufficiently adroit to manage two lines. If they catch more than they can dispose of whilst fresh, they salt and barrel them like Herrings.

The fish which are taken on the Kentish and Sussex coasts are forwarded to London by vans provided for that purpose, but from Suffolk and Essex they are usually forwarded by fast-sailing cutters which bring them up the river to Billingsgate. Mackerel are considered to be in best season in May and June, and it is a vulgar notion that they are not in perfection till gooseberry sauce can be procured. They require to be eaten as fresh as possible, as from their fatness they soon become putrid. Accordingly facilities for their sale superior to that for other fish have been afforded. And Mr. Yarrell states that in 1698 they were first allowed to be cried in London on Sunday, a practice still continued. He mentions some curious particulars of the number and prices given for these fish. In 1807 the first Brighton boat-load of Mackerel sold at Billingsgate for forty

guineas a hundred, or seven shillings a piece, reckoning six score to the hundred; whilst the next boat-load fetched only thirteen guineas a hundred. In the following year at Dover they were so plentiful that sixty were sold for a shilling. And in the month of June, same year, the shoal was so great, that at Brighton the meshes of one boat's nets were so filled that it was impossible to haul them in, and the whole sank together, a loss of £60 to the men, exclusive of the loss of the fish. On the 30th of June, 1823, the catch of sixteen Lowestoffe boats amounted to £5252; and during the season 122 lasts, of 10,000 to the last, were taken at Yarmouth. In March, 1833, four Hastings boats brought ashore 10,800; and on the following day two boats brought in 7000. Early in February, 1834, one boat's crew from the same place cleared £100 by fish caught in one night; and on the 14th and 22d of the following month they were selling in the streets of London for three a shilling.

From the intestines of the Mackerel was manufactured the celebrated pickle of the Ancients called *garum*. Pliny, in his thirty-first book, speaks of it as *liquoris exquisiti genus quod garum vocavere, intestinis piscium cæterisque quæ abjiciendæ essent, sale maceratis ut sit illa putrescentium sanies*. And Horace, in his Satire on the supper of Nasidienus, mentions it as sauce to the *Muræna* swimming in Shrimps:

*His mistum jus est oleo, quod prima Venafri
Pressit cella, garo de succis piscis Iberi.*

The best *garum* was made after two receipts. In one the intestines of Mackerel, or even other small fish, such as Atherines, Anchovies, and small Mulletts, were salted and put in a vessel, which was then exposed to the sun for some days; from time to time the mixture was stirred up till it had reached a certain stage of decomposition, and being then put into an osier basket, the more fluid part drained through and formed the *garum*, whilst the solid part remaining in the basket was called *alec*. The Bithyanean preparation consisted of fish mixed with flour and two-thirds of salt put together in a pot, and after a night the mixture was exposed in an earthen vessel for two or three months to the sun, stirred about with a bundle of feathers, and then covered over. To this mess some persons added a double proportion of wine. Another, and more speedy way of making this composition, instead of exposing it to the sun, was to make a brine sufficiently strong to float an egg, into which the fish was thrown with a little thyme, and after boiling and cooling, the liquid was strained several times through some woollen till it had become clear. This execrable stuff had, as might be supposed, a most horrible smell, of which Martial observes:

*Unguentum fuerat, quod onyx modo parva gerebat:
Olfecit postquam Papilus, ecce garum est.*

Lib. vii. Epig. 93.

But, notwithstanding, it appears to have been a very favourite condiment. Martial mentions it as a sauce for Oysters:

*Ebria Bajano veni modo concha Lucrmo:
Nobile nunc sitio luxuriosa garum.*

Lib. xiii. Epig. 82.

And, according to Pliny, Apicius thought it excellent with Mullet: *Mullos, Apicius, ad omne luxus ingenium mirus, in sociorum garo (nam ea quoque res cognomen invenit) necari eos præcellens putavit*, lib. ix. c. 17. This *garum sociorum* was manufactured at Clazomene,

SCOM-
BER.

SCOM-
BER.

Pompeii, and Lepte; but the most celebrated came from Carthage, and was made from Mackerel alone, which were caught, according to Pliny, solely for that purpose, *ad nihil aliud (quam ad garum faciendum) utiles*. It was so valuable that 500 sesterces, about £4. 3s. 4d. of our money, were paid for a gallon of it. The garum above mentioned was used by the rich, but another, and inferior kind, manufactured from the intestines of the Thunny, and called *muria*, was the sauce of the poor.

β. *With an air-bladder.*

S. Pneumatophorus, Lar.; *Little Mediterranean Mackerel*. From eight to ten inches in length, is very similar in form and proportions to the common species, but distinguished from it by having only nine apparent and a tenth ray nearly hidden in the flesh belonging to the first dorsal fin, which in the former are usually twelve, but occasionally vary from ten to fourteen; in this species the teeth are more numerous, closer set, and finer, amounting to fifty or fifty-two on each side in either jaw; the opercle is narrower, and at the edge of its bony part opposite the top of the pectoral fin is a rounded notch; the lower edge of the preopercle is nearly straight; its general colour is more inclined to green than blue; the transverse bands on either side have a double curve, and are narrower, and upon the forehead between and before the eyes is a whitish patch. This species is common, and lives in shoals off the Balearic Isles; at Iviça it is called *Cavallo*. It is not met with in the British Channel nor in the Gulf of Gascony.

S. Colias, Gmel.; *Large-eyed Mackerel*. About fifteen inches long, and distinguished from the last species by its larger scales, especially on the pectoral region, where it forms a kind of corselet; the number of teeth is from one hundred and twenty to one hundred and thirty-two in each jaw; the streaks of black upon the blue form meshes, in the middle of which there are often small spots; the longitudinal stripes separating the blue back from the white belly are less distinct, and upon the belly there are numerous small grey spots which only appear occasionally. The air-bladder in this species is much larger than in the last. It seems to be common upon the French and Italian coasts of the Mediterranean; at Marseilles it is called *Aourneon-bias*, and at Nice *Cavaluco*. Cuvier considers it the same as *S. Macroptthalmus* of Rafinesque.

S. Grex, Mitch.; *le petit Maquereau d'Atlantique*, Cuv.; *Thimble-eyed*, *Bull-eyed*, or *Chub Mackerel*. From ten to eighteen inches in length, and the teeth varying from fifty-five to sixty-four; it is very similar to the Little Mediterranean species, but the deep lines on the back are more irregular, tortuous, and intermingled, differences scarcely sufficient to form a separate species, were it not further distinguished by anatomical characters. The species found on the New York coast, and described by Mitchill, is palish green, and less mottled near the lateral line than the meandering lines of pale and dark green on the back, the rest of the surface pigeon's-neck hue, variegated and changeable like copper. Occasionally it appears in prodigious numbers off this coast, as was the case in 1781 and 1813, when the bays,

creeks, and coves were literally alive with them. It is found on the Eastern shores of both North and South America, and also off the Cape of Good Hope; it may therefore be considered as belonging generally to the Atlantic, but especially to its Western shores.

S. Vernalis, Mitch.; *Spring Mackerel*. Seventeen inches in length, and having ninety-two teeth in each jaw; its general form similar to the preceding, but it has the back marked with deep blue, parallel, curved bands, reaching below the lateral line, with the intervening spaces paler blue and reddish-brown; head bluish, with black spots and marks, and smutty patches near the pectoral and ventral fins. Is caught with hooks in great numbers off Sandyhook.

S. Australasicus, Cuv.; *Australian Mackerel*. Seven inches long; the angle of the preopercle marked with radiated striæ; back leaden; sides and belly silvery. From the coast of New Holland.

S. Kanagurta, Cuv.; *Kanagurta*, Russ.; *Pondicherry Mackerel*. Ten inches in length, shorter and deeper than the common species; the opercle and subopercle especially narrower from before to behind, and the ascending edge more vertical than in *S. Pneumatophorus* and *Colias*; teeth so fine as to be scarcely perceptible to the naked eye and hardly to be felt with the finger; its colour is very similar to the European species, the green of the back changes to golden or blue, and the sides and belly are pearly. It is taken off the Malabar coast, where it is called *Kanagurta*, and at Pondicherry is known as the *Kanan-kajouté*.

S. Loo, Cuv.; *Loo Mackerel*. Of larger size than the Common Mackerel, but resembling the last species in the smallness of its teeth and most of its other characters; its back is green, spotted and marked with two golden-yellow lines, having iridescent reflexions; sides and belly silvery tinged with rose; upper fins brown, lower silvery. It is found on the coast of New Ireland and of the Island of Waigiou.

S. Delphinus, Cuv.; *Fort Dauphin Mackerel*. Ten inches long, resembling the Common Mackerel in size and colour, but rather thicker; it has five black spots at the base of the first dorsal fin, and there are a greater number and smaller near the second; upper fins blue, lower silvery; when the mouth is widely opened a heart-shaped black spot is seen at the base of the lower jaw. It is found near Fort Dauphin, in the Island of Madagascar.

S. Japonicus, Houtt.; *Japan Mackerel*. Eight inches long, and very similar in colour to a Herring; its teeth very fine. Cuvier thinks it may be the same as *S. Kanagurta*. From Japan.

S. Auratus, Houtt.; *Golden Mackerel*. Ten inches in length, and of similar form to the last species; its colour yellowish-brown or golden. From Japan.

S. Capensis, Cuv.; *Cape Mackerel*. In size and form resembling the common species, but distinguished from it by having the teeth finer, closer, and more numerous, and the ribs wider.

See Linnæi *Systema Naturæ* a Gmelin; Yarrell, *History of British Fishes*; Pat. Russell, *Fishes of the Coromandel Coast*; Mitchill, *On the Fishes of New York*, in *Transactions of the Literary and Philosophical Society of New York*; Moss, *History of Hastings*.

SCOM-
BER.

SCOM-FIT. SCOMFIT, *i. e.* dis-comfited.

Thenne it foloweth in the Storye of Brenne, when he was thus
scomfyted of the Romaynes, he tourned his people towarde the
SCONCE. Macedoynes or Greks, and deuyded his people in ii hosts.
Fabyan. Chronycle, vol. i. ch. xxxi.

SCOMM, *n.* } Lat. *scommā*; Gr. *σκωμμα*, from
SCOMMA'TICK. } *σκωπτειν*, *irridere*, *cavillari*, a scoff, a
taunt. A *scomm* is

A scoff, a mock; also, a scoffer, a mocker, a buffoon.

The *scomms*, or buffoons of quality, are volvish in conversation.

L'Estrange.

His vain ostentation is worthily scoffed with [the] *scomm* of
the orator. *Fotherby. Atheom. (1622,) p. 189.*

The heroique poem dramatique is tragedy. The *scommatique*
narrative is satyre; dramatique is comedy.

Hobbes. Answer to Preface to Gondibert.

SCONCE, } See ENSCONCE. Ger. *schantz*; D.

SCONCE. } *schantse*; Sw. *skans*, *munimentum*.

Wachter writes learnedly and elaborately, but not satis-
factorily. Ihe thinks the opinion of Junius more pro-
bable, that *schantze* in D. formerly signified the branches
of cut trees tied together in bundles, that these bundles
of branches were used in forming ramparts, and that
hence the name *schantze* was extended to the rampart or
fortification itself. And he derives from the A. S. *scæn-*
an, *frangere*, *comminuere*, to break, to separate into
small parts. Skinner thinks *sconce* originally signified—

A bulwark or defence, then the head; to *sconce*, to
put, to impose upon the head, *sc.* a charge, a fine;
and hence to fine. In Lancashire, a lantern is called a
scoance, and the name in other parts is not uncommon
for a utensil to hold a candle. In the North, Grose
says, a fixed seat by the side of a fire-place is so called;
perhaps from its snugness and security.

My meaning was further at the head of the river in the place of
my descent, where I would haue left my boates, to haue raised a
sconce with a small trench, and a pallisado vpon the top of it.

Hakluyt. Voyages, vol. iii. p. 256.

Amphialus at the same time issued out, and, winning with an
abundance of courage one of the *sconces* which Basilius had
builded, made way for his friend Anaxius.

Sidney. Arcadia, book iii.

ANT. S. Now, as I am a Christian, answer me,
In what safe place you have bestow'd my money;
Or shall I brake that merry *sconce* of yours,
That stands on tricks when I am indispos'd.

Shakspeare. Comedy of Errors, act i. sc. 2.

KING. What will they do with this poor prince, the gods know,
and I fear.

Dr. Why, sir, they'll flea him, and make church buckets on's
skin to squench rebellion, then clap a rivet in's *sconce*, and hang
him up for a sign.

Beaumont and Fletcher. Pilaster, act iv. sc. 1.

YOUNG LO. What art thou now then?

SAV. If you consider me in little, I am with your worship's
reverence sir, a rascal; one that upon the next anger of your
brother must raise a *sconce* by the high way, and sell switches.

Id. The Scornful Lady, act iv. sc. 1.

Besides Agricola had this excellence in him, so providently to
chuse his places where to fortify, as not another general then
alive. No *sconce* or fortress of his raising was ever known either
to have been forc'd, or yielded up, or quitted.

Milton. The History of England, book ii.

Yet they found the rebels' horse (superior in number by much
to theirs) drawn up in five bodies on the South side of the town,
near their *sconce*; as if, upon the advantage of that ground, they
meant to fight.

Clarendon. History of the Rebellion, vol. ii. p. 544.

At length upon the hearing of one of Sir Hen. Savile's mathe-
matics lectures by accident, or rather to save the *sconce* of a groat,
if he had been absent, he was so extreemly taken with it, that he
immediately fell to the study of that noble science.

Wood. Athenæ Oxonienses, vol. i.

If golden *sconces* hang not on the walls,
To light the costly suppers and the balls;
If the proud palace shines not with the state
Of burnish'd bowls, and of reflected plate;
If well-tun'd harps, nor the more pleasing sound
Of voices, from the vaulted roofs rebound;
Yet on the grass, beneath a poplar shade,
By the cool stream, our careless limbs are lay'd.

Dryden. Lucretius, book i.

You may likewise stick the candle so loose, that it will fall upon
the glass of the *sconce* and break it into shatters.

MEM. Pease-pudding not boiled enough. Cook reprimanded,
and *sconced* in my presence. *The Idler, No. 33.*

SCOOP, *n.* } D. *schoepe*, *schuppe*, a shovel; *shoep-*
SCOOP, *v.* } *en*, Ger. *schopfen*, to draw out. The

SCO'PPER, *v.* } origin may be the A. S. *scypp-an*, to
frame, form, or fashion, to shape.

A *scoop*, any thing, something, *formed* (in contradis-
tinction to a flat instrument or tool) to dig out with, to
hollow, to excavate with.

To *scoop*; to hollow, to excavate; to draw or take
out in a *scoop*, to lade.

LIV. Never hope it.

'Tis as easie with a sive to *scoop* the ocean,
As to tame Petruchio.

Beaumont and Fletcher. The Woman's Prize, act i. sc. 2.

The savorie pulp they chew, and in the rinde
Still as they thirsted *scoop* the brimming stream.

Milton. Paradise Lost, book iv.

What do we with all our endeavours, but as that fond man, who
wearies himself lading out the channel with a shallow dish, while
the spring runs full and unchecked? Vain man! can he possibly
hope to *scoppet* it out so fast as it fills?

Hall. Sermons. Ps. lx. v. 2.

These

With weighty rains, and melted Alpine snows,
The mountain-cisterns fill, those ample stores
Of water, *scoop'd* among the hollow rocks.

Thomson. Autumn.

Nor did I acquaint them with what I intended to do, but placed
her towards the light, and passed a *scoop-like* instrument up.

Wiseman. Surgery, book iii. ch. v

Onward, methinks, and diligently slow,
The firm connected bulwark seems to grow;
Spreads its long arms amidst the wat'ry roar,
Scoops out an empire, and usurps the shore.

Goldsmith. The Traveller.

SCOPARIA, in Botany, a genus of the class *Te-*
trandria, order *Monogynia*, natural order *Scrophula-*
rineæ. Generic character: calyx four-parted; corolla
four-parted, rotate, throat pilose; capsule one-celled,
two-valved, many-seeded.

Three species, natives of the West Indies and the
South of Africa.

SCOPE, It. *scopo*; Lat. *scopus*; Gr. *σκοπος*, that
which is looked at, viewed, aimed at, from *σκεπτεσθαι*,
to view, to observe.

That which is viewed or observed; the mark, aim,
intention, design, purpose; the space or extent viewed;
generally, space, room, extent, enlargement.

LUC. Why how now, Claudio? whence comes this restraint?

CLA. From too much liberty, (my Lucio,) liberty.

As surfet is the father of much fast,
So euery *scope* by the immoderate vse
Turnes to restraint.

Shakspeare. Measure for Measure, act i. sc. 3. fol. 62.

ANG. I did but smile till now;

Now, good my Lord, giue me the *scope* of iustice;
My patience here is touch'd.

Id. Ib. act v. sc. 1. fol. 81.

If thou didst see upon what rack my tormented soul is set, little
would you think I had any *scope* now to leap to any new change.

Sidney. Arcadia, book iii.

SCONCE.

SCOPE.

SCOPE.

SCOPUS.

Which when the prince beheld, a lothfull sight,
And that perforce, for want of longer light,
He mote surceasse his suit, and lose the hope
Of his long labour; he gan fowly wyte
His wicked fortune that had turn'd aslope,
And cursed night that reft from him so goodly scope.
Spenser. Faerie Queene, book iii. can. 4.

I think I could easily demonstrate that from Adam to Moses,
from Moses to the Prophets, from the Prophets to Jesus Christ,
the main *scope* and design of all divine revelation hath been the
gradual discovery of this great mystery of the mediation.

Scott. Christian Life, part ii. ch. ii.

Dumb as a senator, and as a priest,
A piece of mere church-furniture at best;
To live estrang'd from God his total *scope*,
And his end sure, without one glimpse of hope.

Cowper. Tirocinium.

SCOPELOPUS, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* simple; body slender,
acute at the apex; wings triangular, entire, anterior
without stigmata; legs dissimilar, posterior pair stout,
very hairy, the hair forming a large brush-like appendage.

Type of the genus, *Phytometra scopulæpes*; Haworth,
Lepidoptera Britannica, p. 260; *Sc. inops*, Stephens,
Illust. Britt. Ent. (Haustellata), vol. iii. p. 124. A
native of Georgia, but introduced, by mistake, as a na-
tive of England.

SCOPPET. See SCOOP.

SCOPTICAL, Gr. *σκιωπτικός*, from *σκιωπ-ειν*, *irri-
dere, cavillari*, to scoff, to haunt. See *ante*, SCOMM.
Scoffing, taunting, deriding.

Another most ingenious and spritfull imitation of the life and
ridiculous humour of Ajax I must needs note here, because it flies
all his translators and interpreters; who take it meere for serious,
when it is apparantly *scoptically* and rediculous, with which our
author would delight his understanding reader, and mixe mirth
with matter.

Chapman. Homer. Iliad, book xvii. Comment.

And Hellen (in contempt of her too much observing men) bids
her renounce heaven, and come live with Paris till he make her
his wife or servant; *scoptically* or scornfully speaking it; which
doth Villa, Embanus, and al other interpreters, (but these *ad-ver-
bum*) have vtterly mist.

Id. Ib. p. 3. Preface.

And in the meane time shew you, that in this first and next
verse, Homer (speaking *scoptically*) breakes open the fountaine of
his ridiculous humor following; neuer by anie interpreter vnder-
stood, or touched at, being yet the most ingenious conceited per-
son that any man can shew in any heroically poeme, or in any
comick poet.

Id. Ib. book ii. Comment.

SCOPULA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* long, slender, and
simple, slightly pubescent within in the males; *palpi*
moderate, acute, nearly horizontal, the terminal joint
obtuse; *thorax* not crested; wings four, glossy, anterior
pair rather narrow, slightly acute, the hinder margin
somewhat truncate, the disc of sombre hue, with pale or
dark spots, posterior pair rather ample; body shortish;
legs, especially the hinder pair, long and slender.

Type of the genus, *Phalæna (Pyralis) sticticalis*,
Linnaeus; Stephens, *Illust. Britt. Ent. (Haust.)* vol.
iv. p. 59. Four species, three of which are doubt-
less British, the typical one rather scarce, the others
abundant.

SCOPUS, from the Gr. *σκια*, a shadow, Briss.;
Umbre, Lath. In Zoology, a genus of animals belong-
ing to the family *Cultriostres*, order *Grallæ*, class *Aves*.

Generic character. Beak compressed, blunt; upper
mandible surmounted along its whole length with a
distinct ridge; nostrils in a groove, linear, long, and

partially closed with membrane; first and second alar
quills shorter than the third and fourth, which are the
longest; legs of moderate length, four-toed, the middle
one shorter than the tarsus, the hind toe reaching the
ground, the toes webbed to the first joint.

This genus, to which, from its umber colour, the name
Scopus has been applied, and rather oddly derived by
Brisson from *σκια*, a shadow, very nearly resembles the
Ciconia, from which it is distinguished by the cutting
ridge on the upper mandible, and by its lateral grooves, in
which the nostrils are placed. Of its habits nothing is
known, and there is but a single species.

S. Umbretta, Lath.; *l'Ombrette*, Buff.; *Tufted Umbre*.
Length twenty inches, of which the beak is three and a
half; from the occiput projects a tuft of loose feathers,
which, however, are not indicated in Buffon's figure;
Latham therefore considered it as the female, which,
according to Adanson's observation, it has proved to be.
The whole plumage of a brown colour, similar to the
earth called umber, paler on the under parts, and palest
on the shafts of the neck feathers; tail marked with
three or four bars of a deeper hue, and tipped with the
same; bill brown; legs dusky. It is a native of the
Cape of Good Hope and Senegal, and Bruce has figured
one which he calls *Hermetto*.

See Brisson, *Ornithologia*; Buffon, *Histoire des
Oiseaux*.

SCO'RIBUTE, *n.*

SCORBU'TICK, *adj.*

SCORBU'TICK, *n.*

SCORBU'TICAL,

SCORBU'TICALLY.

Fr. *scorbut, scorbutique*; It.
scorbuto, scorbutico; Low Lat.
scorbutus, the scurvy; D. *scheur
buick*; Ger. *scharboch*; Sw.
skörbjug. Wachter thinks the
Ger., D., and Sw. have sprung from the Lat., and that
the Lat. may have been formed from the D. *scherpte*,
acrimonia; and he calls it a disease arising from acri-
mony of blood. But see SCURVY.

Another obseruation of this our author, is the scurvie or *scorbute*,
whereunto they are much subject in navigations neere the Line;
the cause he ascribeth, the weaknesse of the stomach in immode-
rate heate; salt meats, specially fish, calmes, and the sea-water.

Purchas. His Pilgrimage, book ix. ch. xiii. sec. 2.

I confess, that the *scorbute* did justly punish me for defaults in
the best philosophy. My inward discomforts begot the disease.

Boyle. Works, vol. vi. p. 350.

It being moreover the heighth of the dry season, and my men
growing *scorbutick* for want of refreshments, so that I had little
incouragement to search further, I resolved to leave this coast.

Dampier. Voyages, Anno 1699.

A person about forty years of age, of a full and *scorbutical* body,
by some accident broke her shin, and endeavoured the curing of
it; but it daily growing more painful, and not to be endured, I
was sent for, and observing the ulcer, proposed digestion, as the
only way to remove the pain.

Wiseman. Surgery, book ii. ch. iv.

Thus in *scorbutically*-habited ill bodies, abounding with caco-
chymia, we frequently see these simple ulcers afflicted with sharp
humours, which corrode them, and render them painful sordid
ulcers.

Id. Ib.

Spoon-wort was there, *scorbutics* to supply.

Harte. Eulogius.

Mention hath already been made of sweet wort being given to
such as were *scorbutic*.

Cook. Second Voyage, book i. ch. iii.

SCORCH, Skinner derives from the Fr. *escorcher*;
It. *scorticare*; Lat. *excorticare*, i. e. *cortice exuere*; be-
cause the skin, which is, as it were, the bark of the body,
falls off when *scorched*. Lye has found two instances of
scorched, ustus, (parched.) Serenius has no doubt that
the old Goth. *skior, ignis*, is the origin. Skinner's opi-
nion seems rational. To *scorch* is—

SCOPUS.

SCORCH

SCORCH. To burn the outward part, the skin, the surface; to burn superficially or slightly; to parch, to dry—with heat.
SCORE. Or it may be from the A. S. *scyr-an*, to *scar*, *q. v.*; and see **SCALD**, and the Quotation from Plinie, in *v. SINGE*.

And eke Nero governed all the peoples, that the violent wind
 Nothus skordith, and baketh the brennyng sandes, by his drie
 heate, that is to saie, al the peoples in the southe.

Chaucer. Boecius. De Consolatione, book ii.

But such as once haue fealt the skortching fire,
 Will seldome (efte) to play with flame desire.

Gascoigne. The Fruites of Warre.

His tenants deliuered their evidences to their landlord, who did
 scantlie well peruse them, when he floong them all in the fire.
 The poore tenants espieng this subtill pranke to be verie vnfitting
 for a bishop, could not bridle their toongs, but brake out on a sud-
 den: Thou an archbishop? naie, thou art a *scorch villein*.

Holinshed. Description of Ireland, ch. v.

Besides, it causeth it to seeme *scorched* and full of knots, yea
 and to grow like a dwarfe or wreckling.

Holland. Plinie, book xvii. ch. xxii.

The heate whereof, and harmefull pestilence,
 So sore him noyd, that forst him to retire
 A little backward for his best defence,
 To save his body from the *scorching* fire.

Spenser. Faerie Queene, book i. can. 11.

The excessive *scorchings* of this and the two following months
 (and not seldom the winters also) do frequently indanger the un-
 timely falling of blossom and fruit before their maturity.

Evelyn. Kalendar. June.

For oft these valleys shift
 Their green-embroider'd robe to fiery brown,
 And swift to green again, as *scorching* suns,
 Or streaming dews and torrent rains, prevail.

Thomson. Summer.

Some of the pieces which were then brought from its repositories
 appeared to have been *scorched* with the fire which happened in
 the town-house soon after the bank was established.

Smith. Wealth of Nations, book iv. ch. ii.

SCORE, v. Skinner resorts to the Lat. *excorti-*
SCORE, n. } *care*. See *ante*, **SCORCH**. To find
 it in the A. S. *scyr-an*, to shear, to cut, to divide to se-
 parate.

Score—for the number twenty;—our ancestors are
 supposed, that they might avoid the embarrassment of
 large numbers, when they had made twice ten notches,
 to have cut off the piece or tally (*taglie*) containing them;
 and afterwards to have counted the *scores* or pieces cut
 off, and reckoned by the number of separate pieces or
 by *scores*. See Tooke.

Score, n., an account or reckoning by divisions, marks,
 or notches, cut in pieces of stick or wood. To cut, to
 make an incision, to mark by a line cut; to set a mark
 upon, to charge or set it to the account.

In þe vyf hondred ȝer of grace Seynt Austyn hyder com
 And four *score* ȝer and tuo, to prechy Cristendom.

R. Gloucester, p. 230.

For I wol pay you wel and redily,
 Fro day to day, and if so be I faille,
 I am your wif, *score* it upon my taile,
 And I shal pay as sone as ever I may.

Chaucer. The Shipman's Tale, v. 13344.

I wote not wel howe many *score*,
 Suche as I spake of nowe tofore,
 Louers, that comen to beholde.

Gower. Conf. Am. book viii.

Soone after in the stede of those three *score* and tenne, he chose
 other three *score* and tenne discyples as I before shewed you,
 whome he sent aboute to preache as he had sent his xii. apostles
 before.

Sir Thomas More. Workes, p. 1075.

The mightie shield all *scored* full they view
 Of pictures faire, ranged in meet array.

Fairfax. Godfrey of Bulloigne, book xvii. st. 58.

1 GUARD. Bear up, man,
 'Tis but a scratch.

GET. Scoring a man o'r the coxcomb
 Is but a scratch with you.

Beaumont and Fletcher. The Prophetess, act iv. sc. 5.

Thou hast most traterously corrupted the youth of the realme,
 in erecting a grammar-schoole; and whereas before, our forefathers
 had no other bookes but the *score* and the tally, thou hast caused
 printing to be vs'd, and contrary to the king, his crowne, and dig-
 nity, thou hast built a paper-mill.

Shakspeare. Henry VI. act iv. sc. 7.

And on his brest a bloodie cross he bore,
 The deare remembrance of his dying Lord,
 For whose sweete sake that glorious badge he wore,
 And dead, as living ever, him ador'd:
 Upon his shield the like was also *scor'd*,
 For soveraine hope, which in his helpe he had.

Spenser. Faerie Queene, book i. can. 1.

The litte that I have growes dayly more
 Without my care, but onely to attend it;
 My lambes doe every yeare increase their *score*,
 And my flockes father daily doth amend it.

Id. Ib. book vi. can. 9.

Frank to the mansion-house now come,
 Rejoic'd to find himself at home;
 Neighbours around, and cousins went
 By *scores*, to pay their compliment.

Somerville. The Yeoman of Kent.

It very ill becomes this gentleman, when he has such large
scores of his own, and while he bends under the weight of many
 insuperable objections, to grow so exceeding flippant, and above
 measure assuming, upon the strength only of two or three stale
 cavils, borrowed from ancient heresies.

Waterland. Works, vol. iv. p. 12.

The obligation to these ordinary performances is not grounded
 upon any peculiar respects, special qualifications, or singular
 acs of men, (which are contingent and variable,) but upon the
 etible *score* of common humanity.

Barrow. Sermon 21. vol. ii.

They have likewise a method of *scoring* them with a heated in-
 strument, so as to give them the appearance of being painted in a
 variety of neat and elegant designs.

Cook. Third Voyage, vol. vii. book v. ch. vii.

SCORIOUS, Lat. *scoria*; Gr. *σκωρια*, from *σχωρ*,
stercus, *q. d. metalli stercus*. See the Quotation from
 Pliny.

The gross substances cast up from the pot or vessell and swim-
 ming aloft (whether it be the drosse comming of gold thus tried,
 by heat of the furnace, or any other metall) is named *scoria*.

Holland. Plinie, book xxxiii. ch. iv.

For by the fire they omit not only many drossie and *scorious*
 parts, but whatsoever they had received from the earth or load-
 stone.

Sir Thomas Brown. Vulgar Errours, book ii. ch. ii.

SCORN, v.

SCORN, n.

SCO'RNER,

SCO'RNING, n.

SCO'RNFUL,

SCO'RNFULLY.

D. *schernen*; Fr. *escorner*; It.
schernire; Sp. *escarneier*; It. *scor-*
no, *scornare*. Menage derives from
schernir. The Fr. *escorner*, It. *scor-*
nare, mean to strip off the horns, to
 deprive of the horns, (*cornu*), and,
 consequentially, to deface; to disgrace; and hence

To strip, deprive or divest of grace or favour, of respect
 or honour; to disrespect, to dishonour, to disdain; to
 contemn; to treat disdainfully or contemptuously.

Treus þou askes a þrowe, for tuo ȝere or þre,
 þo men, þat þe knowe, say þou *skornes* me.

R. Brunne, p. 195.

The septune *scorned* me.

Piers Plouhman. Vision, p. 192.

And aftir that they hadden *scorned* him thei unclothiden him of
 the mantel.

Wiclif. Matthew, ch. xxvii.

The damsel is not deed but slepith, and thei *scorneden* him.

Id. Mark, ch. v.

SCORE.

SCORN.

SCORN. The maiden is not dead, but slepeth. And they laughed him
to scorne. *Bible, Anno 1551.*

His felaw that lay by his beddes side,
Gan for to laugh, and scorned him ful faste.
Chaucer. The Nonnes Preestes Tale, v. 15092.

So loveth she this hendy Nicholas,
That Absalon may blow the buckes horne;
He ne had for his labour but a scorne.
Id. The Milleres Tale, v. 3388.

Afterward speke we of *scorning*, which is a wicked sinne, and
namely, whan he *scorneth* a man for his good werkes; for certes,
the *scorners* faren like the foule tode, may not endure to smell
eete savour of the vine, whan it flourisheth.

Id. The Persones Tale.

But such a *scornefull* chere wherewith she him rewarded
Was neuer sene I trow the like to such as well deserved.
Surrey. Song of a Lady that refused to dance with him.

Our poet ever writ
Language so good, mixt with such sprightly wit,
He made the theatre so sovereign
With his rare scenes, he *scorn'd* this crouching vein.
Beaumont and Fletcher. The Nice Valour. Prol.

If wrathfull wight; then fowle rebuke and shame
Be theirs that have so cruell thee forlorne!
But, if through inwarde grieve, or wilfull *scorne*
Of life, it be; then better doe advise.
Spenser. Faerie Queene, book iv. can. 8.

To love myself I learned had in schoole.
Thus I triumphed long in lover's paine,
And, sitting carelesse on the *scorner's* stoole,
Did laugh at those that did lament and plaine!
But all is now repayd with interest againe.
Id. Ib. book vi. can. 8.

The folly of man
Let in these wasteful furies, who impute
Folly to mee, so doth the Prince of Hell
And his adherents, that with so much ease
I suffer them to enter and possess
A place so heav'nly, and conniving seem
To gratifie my *scorneful* enemies.
Milton. Paradise Lost, book x.

The goodly horse of hot and fiery strain
In his high courage hardly brook'd his food,
That ditch or mound not lately could contain.
On the firm ground so *scornfully* that stood,
Crest-fall'n hangs down his hardly manag'd head.
Drayton. Moses His Birth and Miracles, book ii.

He declareth that when the faithfull are so ful, that they can
no more endure the oppressions and *scornings* of the wicked, there
is alway helpe aboue, if with hungry desires they call for it.
Bible, Anno 1583. Psalm 123. note b.

It was this that raised his spirits, and made him [Job] stand
his ground against the opposition of his friends, and the *scorn* of
his enemies.
Stillington. Sermon 9. vol. ii.

All but themselves they looked on with a very *scornful* piety,
and thought that God hated them because they did.
Id. Sermon 8. vol. i. p. 346.

Let us possess our souls in patience and peace; and go on in
the plain paths of godliness and honesty, without turning to the
right or to the left, for whatever men *scornfully* witty can say of
us, or to us.
Atterbury. Sermon 5. vol. i.

Or tell me, if you can, what pow'r maintains
A Briton's *scorn* of arbitrary chains;
That were a theme might animate the dead,
And move the lips of poets cast in lead.
Cowper. Table Talk.

Every instance, greater or less, of wilfully disregarding truth,
instead of seeking and embracing it, argues a proportionable de-
pravity of heart; whether the dislike be manifested in a studious
opposition to it, or an indolent *scorn* of it.

Secker. Works, vol. i. Sermon 1.

The frontispiece to the *Rules of Holy Dying* cannot but excite
mirth even in those who do not habitually sit in the seat of the
scorner.
Knox. Winter Evenings. Evening 44.

SCORPÆNA, Lin. Cuv. In *Zoology*, a genus **SCOR-**
of animals belonging to the family *Triglidæ*, order **PÆNA.**
Acanthopterygii, class *Pisces*.

Generic character. Head compressed laterally, spiny
and tubercular, but not covered with scales; teeth very
fine on both jaws, and also on the vomer and palatine
bones; branchial rays seven; body covered with scales;
fleshy or cutaneous processes on the head and body;
simple, but articulated rays at the lower part of the pec-
toral fins; dorsal fin not divided.

This genus very nearly approaches the *Cotti* in having
the head spiny and the large pectoral fins furnished
with large single rays, but it is distinguished by the
lateral compression of the head, by the existence of
palatine teeth, and by the dorsal fin being undivided.
From the genus *Sebaste*, which was included in it by
Linnæus, it is distinguished by its scaleless head, which
has more spines, and by the fleshy processes which *Se-*
baste has not.

The great size and roughness of the head, and the
soft spongy skin with which they are generally enve-
loped, give to the *Scorpæna* a frightful and disgusting
appearance, whilst their prickles render them formid-
able; hence the names Sea Scorpion, Toad, and Devil
have been freely applied to them. They are found in
the Mediterranean, Atlantic, Indian, and South Seas.
Two species are found in the former, where they live in
shoals in the open sea, and their spines are said to cause
dangerous wounds; but neither these nor their hideous
aspect prevent their use as a food, their flesh being
considered good.

S. Scrofa, Lin.; *la Grande Scorpène Rouge*, Cuv.;
Great Red Scorpæna. From fifteen to eighteen inches
in length, of which more than one-third belongs to the
head; its depth at the pectoral fins about four inches;
head, chest, and around the pectoral and ventral fins
scaleless; on the back the scales are broader than their
length, on the sides the length and breadth are equal,
and on the belly the scales are oblong; lateral line con-
cave upwards; nostrils rather large, of equal size, placed
in front of each other, and nearer the eye than the
muzzle, beyond which the lower jaw projects; mouth
oblique, and gape wide; each jaw armed with broad
bands of fine teeth, a similar row crosses the vomer,
another runs along the outer edge of each palatine bone,
and the pharyngeal bones and tubercles on the branchial
arches also similarly armed, but the tongue is smooth;
first suborbital bone very irregular, its anterior extre-
mity sending out three little spines which project over,
but do not conceal the maxillary bone; second subor-
bital, covering the upper part of the cheek, has a double
ridge in the middle, with two or three little spines;
preopercule rounded, its edge having three spines, of
which the upper is the longest, and has a small one at
its base; upon the bony opercule two ridges, terminating
in two sharp points, which, reaching beyond the mem-
branous covering, end in a rounded angle; branchial
rays seven on a side, the membranes deeply cleft, and
the gills therefore very wide. The spines on the head
in the recent state not so distinct as when the soft parts
have become dry; on each nasal bone there is one, upon
the upper elevated edge of the orbit three, the two ridges
in the broad concave space between the orbits have each
a little spine behind the orbit, and terminate on the nape
each in two spines, one behind the other; behind and
to the outer side of the orbit are three very small spines,
and the scapular and clavicular bones have each one of

SCOR-
PÆNA.

the fleshy or skinny flaps which vary in number and size according to age, sex, and season. Cuvier mentions in one fish which had the most, six small ones to the anterior edge of the muzzle, one at the edge of the anterior opening of the nostril, two above the orbit, of which the second is the larger, wider, and more scalloped, a slender one on each side of the crest of the skull, a pretty large one on the anterior suborbital bone, some small ones on the cheek and upper jaw, and eight of unequal size on either side of the under surface of the lower jaw, several along the limb of the preopercule, of which the lower two are pretty large, and a great number on the nape and sides of the body, of which those following the lateral line are larger and more scalloped than the others; dorsal fin about half of the fish's length, and commencing above the suprascapular bone, its membrane deeply notched between the rays, of which there are twelve hard and nine soft, of the former the first is shorter than the second, and the third is the longest, after which they diminish to the eleventh, which is the same length as the first; anal fin, corresponding to the two anterior thirds of the dorsal, has three large, short spines, and five soft ones; pectoral fins rounded, about three inches long; ventrals about same length, and their membrane connected to the skin of the abdomen by half its length; caudal fin rounded, about a fourth or fifth of the whole length of the fish, and as deep as it is long. The colour is very variable, one of the most beautiful was generally of a red lead marked with irregular brownish and white marblings and lines; the pectoral fins are spotted with brown, as are also the soft part of the dorsal fin and the caudal, but of a lighter hue; the anal fin had its spots more red; spongy part of the dorsal marked with irregular oblique whitish lines edged with brown, and some spots of light rose-colour on the sides, and from the sixth to the ninth ray a large black spot; ventral fins and chest light rose-colour. The younger the fish is the more numerous, delicate, and varied are the marblings and lines, and the flaps or fleshy processes large and scalloped in proportion. At a certain age and at certain seasons the general colour is tinged with yellow or brown, and hence alone Cuvier considers the difference between the *S. Scrofa* and *S. Lutea* of Risso.

This species abounds throughout the Mediterranean, but is rare in the Atlantic, and not found higher than the Gulf of Gascony. On the Provençal and Ligurian coasts it is found among the rocks, but at Iviça in the open sea. The coast of Negropont is said to produce the largest fish. It is commonly used for food, and is considered well flavoured, though the flesh is rather leathery.

S. Porcus, Lin.; *la Petite Scorpène Brune ou Rascasse*, Cuv.; *Little Brown Scorpæna*. From eight to ten inches in length, and very closely resembling the last species, but differs in having the head shorter and body deeper; the rays of the dorsal fin more regular, and the fourth the longest, the scales smaller and rougher, the fleshy processes much less numerous, those on the cheek being very small, but upon the lower jaw and sides of the body they are entirely deficient; the colour brown, the belly and the ventral fins rose-coloured, and the marbling in larger patches. It is found in the Mediterranean, also in the British Channel, and is the *Diable de Mer de Dieppe* of Duhamel; it is said to have been taken in Torbay, but no mention of it is made by Pennant or Yarrell. It is also found at Teneriffe, and even off New York.

VOL. XXVII.

SCOR-
PÆNA.

S. Braziliensis, Cuv.; *Brazilian Scorpæna*. Seven or eight inches long, and very similar to the first species, especially in the scales, but the dorsal fin resembles the second; its pectoral fins are longer than either; no fleshy processes beneath the lower jaw, but upon the head and lateral line; its general colour brown, becoming paler on the belly, with some deeper brown marbling upon the pairs of fins, and some indistinct whitish streaks upon the dorsal. From the Brazilian coast.

S. Bufo, Cuv.; *Sea-toad Scorpæna*. About eighteen inches in length, and characterised by the black studded with numerous round milk-white spots which colour the junction of the pectoral fins with the body; its scales and fleshy processes resemble those of *S. Scrofa*, but the head is shorter and thicker, the spines larger and more elevated, the edges of the nasal spine toothed, and the spines of the dorsal fin more even. The colours are disposed in marblings, spots, and points of brown-grey and rose-colour, or brown-rose and violet, and the belly red; dorsal fin marked between the sixth and seventh ray with a large black spot. Is found at the Brazils, also at Martinique, where it is called *Crapaud de Mer*, and at Cuba; it is considered very savoury, and excellent soup is made from it.

S. Grandicornis, Cuv.; *le Scorpène Plumier*, Lacep.; *Plumerian Scorpæna*. From four to six inches long; in its scales and the number of fleshy processes it resembles *S. Scrofa*, but its anal spines are strong like *S. Porcus*, those of the back are also strong; its head shorter than either of the European species, and the spines upon the skull and above each orbit more prominent and pointed; the large fleshy folds above the eyes are two-thirds of the length of the head, and divided on both sides into little filaments, so also are all the others, and the processes running along the lateral line especially are so notched that they assume somewhat the form of a feather. The general colour is brownish, clouded with a deeper tinge, and the belly whitish; the junction of the pectoral fin with the body has a brown spot studded with little white points, more numerous and close than in the last species; the back and sides are similarly marked, two or three spots being on each scale; spiny part of the dorsal fin marked with a brown band. It is found at Martinique, Porto Rico, and St. Domingo; at the latter its flesh is considered poisonous, and causing death in a day, hence they call it *Racasse vingt-quatre heures*.

S. Inermis, Cuv.; *Unarmed Scorpæna*. A very small species, has the spines and crests on the head so extremely small as to be scarcely visible; the fleshy processes very few on the body and none on the head; eyes much larger than in the other species; its colour reddish, with brown-clouded marblings; belly paler; the fins marked with pale brown spots. From Martinique.

S. Diabolus, Cuv.; *Devil Scorpæna*. According to Renard five feet in length, whilst Valentyn describes it as only two feet long; its general form similar to *S. Bufo*, but its pectoral junction has not the white spots on a black ground; it is more particularly characterised by the ridges on the opercule being fasciculated or collected together, and their points divided into several teeth; upon the middle of the great suborbital bone a group of four or five little spines; those on the edge of the anterior suborbital flat and slightly scalloped; nasal spines studded with little points; below the eye a large

3 G

SCOR-
PÆNA.

hollow in the cheek, and the skull slightly hollowed; fleshy processes very numerous, beneath the jaw and upon the sides of the body are many broad, thin, and ciliated, but there are none above the eyes; pectoral fins covered with very small ones; dorsal spines strong, but neither very high nor irregular; the colours consist of various shades of brown, and grey, and red marblings; the junction of the pectoral fins with the body is spotted and pointed with brown on a paler ground, the surface of these fins next the body opaque-white, and between the first rays two transverse black bands. This fish is a native of the Indian and South Seas. In the Moluccas it is called *Ikan Satan*, and Renard states that two blacks who had been wounded by its spines died in great torture.

S. Nesogallica, Cuv.; *Bourbon Scorpæna*. Very similar to the last species, but the upper point of its opercle is simply forked, and the lower often single; the concavity in its skull much deeper; its pectoral junction white, and regularly marked with round black points. From the Isle of France.

S. Erythræa, Cuv.; *Erythræan Scorpæna*. Five, six, or seven inches long; very similar to *S. Porcus*, but distinguished by having but one short, broad, denticulated, fleshy process above the eye, two short and delicate ones to the upper lip, and one to each nostril; the rest very insignificant; inner face of the pectoral fin and its junction with the body sprinkled in chequers, with round brown spots on a ground dotted with white. Native of the Red Sea.

S. Venosa, Cuv.; *Venous Scorpæna*. Six inches in length; is distinguished by the skin of the head being as it were veined with little lines, which, joining in every direction, form little meshes, easily mistaken for scales; general form that of *S. Scrofa*, but the head smaller and its spines more elevated, sharp, and pointed; the dorsal and anal spines are stronger than in that species, head and back dusky, with a mixture of dusky red; throat and belly rose-coloured; fins irregularly streaked with black and red. It is very common in the gulf of Bengal, and known to the natives as the *Mooro-bontoo*.

S. Cirrhosa, Cuv.; *Cirrhated Scorpæna*. Eight inches in length, and has great resemblance to both the European species in the curving of the head and shoulder, the spines being placed in the same situation, but being narrower and more prominent; the tentacles above the eye are so small as to be scarcely visible; on each branch of the lower jaw are three much larger than the others, but those about the body are small and flat; the ground of the back and sides is rose-colour, and of the belly white; dusky-brownish marblings, and many small brown and black spots are spread upon the rose-colour, and impinge even on the white; two or three round whitish spots on a brown ground are found at the junction of the pectoral fin; the dorsal fin has no black spot. It is found at Japan, where it is called *Ibrocabu*, and also on the Malabar coast.

S. Novæ Guineæ, Cuv.; *New Guinea Scorpæna*. Six inches long, and very similar to the last species, but distinguished by its dorsal spines being more slender, by the space between the eyes being very concave and narrow, and behind this a pit; the colours same as the last. From New Guinea.

S. Papuensis, Cuv.; *Papuan Scorpæna*. Six inches in length; the space between the eyes narrow and concave, and the head longer than the last species; junction

of the pectoral fins whitish, and nearly spotless. From New Guinea. SCOR-
PÆNA.

S. Picta, Kuhl and Van Hass.; *Painted Scorpæna*. Five inches in length; the head shorter than in all the other species; the three spines at the anterior edge of the first suborbital bone curve forwards, whilst in all the other species the last dips down and curves back; in the scales and anal spines, especially the second, it resembles *S. Porcus*; it has many little fleshy processes on the sides of the body, but neither above the orbit nor on the lower jaw; the distribution of the colours similar to the generality of the other species, but no points either at the junction of the pectoral fins or on the dorsal. From Java. SCORPIO.

S. Mauriliana, Cuv.; *Maurice's Scorpæna*. Three inches long; the head round and short, and the spines on the top of the head prominent as in *S. Picta*, but those of the great suborbital bone much less, and the lower spine of the anterior suborbital not curving forwards; colour reddish marbled with brown, spotted with whitish on the belly, and the fins marked with bands and marblings of brown points. Found on the coasts of the Isle of France, where it is called *Mauritius knorhaantje*, or Little Cock of the Woods, a name there applied also to the *Cotti* and *Gurnards*.

S. Strongia, Cuv.; *Oualan Scorpæna*. Two inches long, and more nearly resembling *S. Scrofa* than any other species of those seas; its head oblong and compressed; the superior spines moderately elevated, and those of the great suborbital bone nearly reduced to a crest; general colour whitish studded with black. From Oualan, or Strong Island, to the East of the Canaries.

S. Laniana, Cuv.; *Armed Scorpæna*. A small species, two inches long, of which the third denticule of the anterior edge of the suborbital is directed outwards, giving it the form of a defensive weapon on either side; the other spines of the head pretty strong; those of the back nearly equal; tail rounded; general colour reddish with black marblings, and sprinkled with white points: there do not appear to be any cutaneous processes. From the Isle of Guam.

S. Rubropunctata, Ehrenb.; *Red-spotted Scorpæna*. Two inches in length, and very nearly resembling *S. Scrofa*; general colour whitish, spotted with red, and marked with four broad purplish-brown bands, also spotted with red, the first, running from the skull to the throat, surrounds the eye, the second passes from the middle of the spiny part of the dorsal fin behind the ventrals to the belly, the third from the last dorsal spine to the beginning of the anal, the latter two connected above, and the fourth upon the base of the caudal fin; soft part of the dorsal, the anal, caudal, and pectoral fins yellow, dotted with red, and the ventrals purplish-brown. It is taken in the Red Sea, and the Arabs call it *Durhabahr*.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier et Valenciennes, *Histoire des Poissons*; Russell, *Fishes of the Coromandel Coast*.

SCORPIO, in Zoology, a genus of *Arachnoïda*.

Generic character. Head, thorax, and abdomen united, forming an elongate-ovate mass; mandibles short, rounded, narrow, hirsute; legs twelve, anterior pair extremely short, second pair much elongated, the last joint, thickened at its apex, armed with forceps, (these are sometimes considered analogous to palpi,) the remaining four pair formed for walking, and resembling each other; eyes six or eight, two large approxi-

SCORPIO. mating ones on the disc of the thorax behind, and two or three small contiguous ones on each side of the anterior lateral margin; breast with two pectinated plates; tail six-jointed, the terminal joint armed with an elongate, curved spine, perforated near the apex for the passage of poison.

SCORPIURUS.

Type of the genus, *S. Europæus*; Scopoli, *Ent. Carn.* No. 1122; Shaw, *Gen. Zool.* vol. vi. pl. 130. A numerous and disgusting tribe of animals, very abundant in the hotter regions of the globe, the Northern limits appearing to be the South of France and Portugal; though in very warm Summers individuals have been found in the ports of England; the *Buthus Occitanus* (Leach, *Zool. Misc.* vol. iii. pl. 143) having been frequently taken near London, on the banks of the Thames, by the docks, and other commercial places.

SCORPION, Fr. *scorpion*; It. *scorpion*; Sp. *escorpion*; Lat. *scorpio*; Gr. *σκόριος*. Of uncertain Etymology. Some suggest the Gr. *σκόριζ-ειν*,—to scatter, to cast. Applied met., from the sting of the animal, to A severe lash or scourge.

And lo y have gown to you power to trede on serpentis and *scorpions*, and on al the vertu of the enemy; and no thing schal anoye you. *Wiclif. Luke, ch. x.*

Beholde I geue vnto you power to treade on serpentes, and *scorpions*, and ouer all maner power of y^e enemye; and nothyng shal hurt you. *Bible, Anno 1551.*

Or if he axe an eg; whether he schal areche him a *scorpion*? *Wiclif. Luke, ch. xi.*

Or yf he aske an egge: wyll he offer him a *scorpion*? *Bible, Anno 1551.*

The land *scorpions* doe lay certaine little worms or grubs in manner of eggs; and when they have so done, perish likewise for their labour, as the spider. *Holland. Plinie, book xi. ch. xxv.*

I speak my thoughts freely, though I know the editors of newspapers have vengeance in their own hands, and are able to repel their assailants with a lash of *scorpions*. *Knox. Winter Evenings. Evening 20.*

SCORPIS, Cuv. In *Zoology*, a genus of animals belonging to the family *Squamipennes*, order *Acanthopterygii*, class *Pisces*.

Generic character. Jaws of equal length when closed, but when opened the lower rather the longest; the upper jaw slightly projectile; upon each a wide band of fine close-set teeth, and to their outer side a row of strong cylindrical pointed teeth, curving slightly inwards; on the palate are five large circles of fine teeth; the second dorsal and anal fin elongated each into a point.

This genus connects *Platax* with *Trachinotus*, having the general form of the former with the peculiar arrangement of the second dorsal and anal fin of the latter. There is but one species, which is from King George's Sound, in New Holland.

S. Georgianus, Cuv. Eleven inches in length and five in depth; the whole head, except the muzzle and tip of the jaws, is scaly, as is also the branchiostegous membrane; branchial rays seven; the dorsal and anal fins are covered to their tips with small scales; caudal fin crescentic and scaly to its middle; scales of the body very small and rectangular; general colour deep brown, inclining to silvery on the breast and belly.

See Cuvier and Valenciennes, *Histoire des Poissons*.

SCORPIURUS, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx five-cleft, keel of the

corolla two-cleft, beneath; pod, with divisions, revolute, furrowed.

Four species, natives of the South of Europe. *S. vermiculata* is sometimes cultivated on account of its singular seed-vessel: it is called the caterpillar plant.

SCORSE, v. } Grose says, *scorse* or *scoace*, in the
SCORSE, n. } Exmore dialect, is to *exchange*; In Scotch, *cose* or *coos* has the same signification. Lye thinks *scorse* is a corrupt writing of *cose*, which he derives from *kidsa*, *eligere*, to *cheese* or *choose*. The A. S. *ceos-an*, had before been given by the *Glossary* to G. Douglas, and this reason added, That an exchange is a mutual or alternate election or choosing, (or taking, for that is the literal meaning. See **CHOOSE**.)

A *horse-courser* or *corser*, or, as Lye thinks, a *horse-coser*, is a horse-dealer.

But Paridell sore brused with the blow

Could not arise, the counterchaunge to *scorse*;
Till that young squyre him reared from below;
Then drew he his bright sword, and gan about him throw.
Spenser. Faerie Queene, book iii. can. 9.

But in this song of mine, he seriously that reads,
Shall find, ere I have done, the Briton (so extoll'd,
Whose height each mountaine strives so vainly to uphold)
Match'd with as valiant men, and of as clean a might,
As skilful to command, and as inur'd to fight.
Who, when their fortune will'd that after they should *scorse*
Blows with the big-bon'd Dane, exchanging force by force.
Drayton. Poly-olbion, song 12.

WASPE. Will you *scourse* with him? you are in Smithfield, you may fit yourself with a fine easy going street-nag, for your saddle, again Michaelmas term, do.

Ben Jonson. Bartholomew Fair, act iii. sc. 1.

And therein sat an old, old man, halfe blind,
And all decrepit in his feeble corse,
Yet lively vigour rested in his mind,
And recompent them with a better *scorse*:
Weake body well is chang'd for mind's redoubled force.
Spenser. Faerie Queene, book ii. can. 9.

SCORSED, that is *coursed*, chased, from It. *scorso*, past participle of *scorere*, (*currere*,) to run.

Him first from court he to the citties coursed,
And from the citties to the townes him prest,
And from the townes into the countrie forsed,
And from the country back to private farmes he *scorsed*.
Spenser. Faerie Queene, book vi. can. 9.

SCORZONERA, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic character: calyx imbricated, margin of the scales scariose; receptacle naked; down plumose.

Nine species, natives of the South of Europe.

SCOT, Fr. *escot*, *ecot*; It. *scotto*; Sp. *escote*. Tooke derives from the A. S. *scyt-an*, to throw, to cast.

Scot, or *shot*, is a *cast*; so much cast or thrown down; *sc.* as a share of the reckoning, of the whole sum to be paid. See **ESCOT**, and **SHOT**.

But yet or we entre I shall counsell that we ryde to the froter of our enemyes, for I thinke there be some among theym that to auance themselfe, or to seke for some forage, woll come abrode in the mornynge, we may fortune to mete with suche that shall pay for our *scotte*.

Lord Berners. Froissart. Cronycle, vol. i. ch. 207.

He cannot scape yet *scotfree* vncontrold.

Mirroure for Magistrates, p. 159.

'Twas time to counterfet, or that hotte termagant Scot had paid me *scot* and lot too. Counterfeit?

Shakspeare. Henry IV. act v. sc. 4. fol. 74.

SCOTCH, in *Macbeth*, the first folio reads *scorch'd*: in the other examples *scotch'd*, and *scotches*: in the Scottish they have to *scutch*, which, Jamieson says, means to beat, to drub. In *scutching* lint, he adds, the

SCORPIURUS.

SCOTCH.

SCOTCH. flax is beat with a *switch*, and he thinks *scutch* and *switch* may be radically the same. Our older Lexicographers have not the word. To *lash* is to throw or cast out, to strike with any thing thrown out, to cut with it. To *scotch* may have a similar meaning, from A. S. *scyt-an*, to shoot or throw out, consequently to strike, To cut, to give or make a cut, or incision.

MACB. We have *scotch'd* the snake nor kill'd it.
Shakspeare. Macbeth, act iii. sc. 2. fol. 140.

SCAR. We'll beat 'em into bench-holes; I have yet room for six *scotches* more.

Id. Antony and Cleopatra, act iv. sc. 8. fol. 360.

Then give him [the eel] three or four *scotches* with a knife; and then put into his belly and those *scotches*—sweet herbs.

Walton. Angler, part i. can. 13.

Thou sycophant, unsheath thy shamefull blade,
Plucke out thy bloudie fawchon (dastard thou)
Wherewith thou hast many a skirmish made
And *scotcht* the braynes of many a learned brow.

Turbervile. To the rayling route of Sycophants.

He was too hard for him directly, to say the troth on't; before Corioles, he *scotcht* him and notch him like a carbinado.

Shakspeare. Coriolanus, act iv. sc. 5. fol. 23.

A cook perhaps has mighty things profess'd,
Then sent up but two dishes nicely dress'd;
What signify *scotcht*-collops to a feast.

King. The Art of Cookery.

SCOTIAS, in Zoology, a genus of Coleopterous insects.

Generic character. *Antennæ* filiform, approximating, the articulations cylindric, the second, third, and fourth rather thickened; the terminal joint slightly elongate, and obtusely acuminate at the apex; head deeply inserted in the thorax, which is short, transverse, smooth, produced in the middle behind, in place of the scutellum, which is wanting; eyes minute; body ovate, gibbous, compressed laterally; *elytra* connate, glossy, smooth; legs elongate; *femora* suddenly clavate at the apex; *tarsi* short, five-jointed.

Type of the genus, *Plinus scotias*, Fabricius; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. iii. p. 336. Four species, one of which occurs (but rarely) in England. The modern name of this genus is *Gibbium*.

SCOTIMYZA, in Zoology, a genus of Dipterous insects.

Generic character. *Antennæ* inclined, three-jointed, the basal joint short, second cup-shaped, third oval, furnished with a downy style; head hemispheric; face naked, slightly prominent; front bristly; *thorax* with a deep transverse channel; *abdomen* slender, depressed; legs slightly elongated; *tarsi* with longish joints; wings two, elongate, narrow, with the mediastinal nervure double, the first transverse one placed near the middle of the wing, and close to the inner margin.

Type of the genus, *S. fuscipennis*; Macquart, *Suites à Buffon, (Diptères)*, vol. ii. p. 540, pl. xxii. fig. 3. The insects of this genus are found on the borders of rivers; the typical species inhabits France.

SCOTIPTERA, in Zoology, a genus of Dipterous insects.

Generic character. Body elongate, cylindric; face projecting; *epistome* not prominent; *antennæ* extending to the *epistome*, with the third joint longer than the second; style plumose; wings two, with the first hinder areolet open; *abdomen* narrow; legs very long.

Type of the genus, *S. pellucida*; Macquart, *Suites à Buffon, (Diptères)*, vol. ii. p. 215, pl. xv. fig. 18. The only known species inhabit Brazil.

SCOTLAND. It has been thought expedient to defer our account of this important portion of the British Empire, until the completion of the *New Statistical Account*, now in course of publication and nearly concluded. The editor of that patriotic and admirable work justly remarks, that it will present "not merely a new statistical account, but, in a great measure, the statistical account of a new country;" and having already included a notice of Scotland under the general head of Britain, the giving, as soon as possible, the latest and most authentic information, seems preferable to adhering to alphabetical arrangement at the expense of correctness.

SCOTOMY, It. *scotomia*; Lat. *scotoma*; Gr. σκοτωμα, from σκοροναι; σκορος, darkness, dimness: generally applied to

The dimness accompanying a dizziness.

Mos. O, sir, 'tis past the *scotomy*; he now
Hath lost his feeling, and hath left to snort.

Ben Jonson. The Fox, act i. sc. 1.

I have got the *scotomy* in my head already,
The whimsey: you all turn round—do not you dance, gallants?
Massinger. The Old Law, act iii. sc. 2.

SCOTOPHILA, in Zoology, a genus of Lepidopterous insects.

Generic character. *Antennæ* long, pubescent beneath, stout, a little serrated, and slightly pectinated in the males, slender and simple in the females; *palpi* rather distinct, porrected obliquely, slender at the base, subclavate, the two basal joints clothed with rather elongate scales, the apical one minute, exposed, somewhat acute; the basal joint about two-thirds the length of the second, stout, kidney-shaped, the second more slender, rather tumid at the base, the apex attenuated and truncate; terminal subovate, obtuse; *maxillæ* elongate; head small; eyes globose, naked; *thorax* somewhat quadrate, not crested; *abdomen* moderate, rather depressed, acute at the tip in the females, with a tuft in the males; wings entire, deflexed, the anterior pair narrow, the posterior large. Caterpillar naked; *pupa* subterranean.

Type of the genus, *Noc. porphyrea*; *Wien. Verzeichniss*; Stephens, *Illust. Britt. Entom. (Haust.)* vol. iii. p. 18. One species, a native of this country, frequenting heaths, but very local.

SCOTOSIA, in Zoology, a genus of Lepidopterous insects.

Generic character. *Antennæ* simple in both sexes, slightly pubescent within in the males; *palpi* long, slender, porrected in form of a beak, clothed with long, pilose scales at the apex, and nearly connecting the terminal joint, triarticulate; the basal joint short, robust, curved, the second longer, rather slender at the base, and a little attenuated at the apex, terminal elongate, lanceolate; *maxillæ* rather long; head small, with a tuft of scales in front between the eyes, which are globose and prominent; *thorax* slender, with a scaly tuft behind; wings disposed in a triangle during repose, anterior slightly indented, posterior deeply notched on the hinder margin, all traversed with numerous, more or less distinct, oblique dark lines; *abdomen* slender, very long, and with a tuft at the apex in the males, the terminal joint produced into two broad, elongate, vertical plates, extending beyond the tufts, shorter, and carinated down the back in the females, and with a short anal tuft. Caterpillar with ten legs, simple, streaked; *pupa* subterranean.

SCOT-
LAND.
SCOTO-
SIA.

SCO
TOSIA. Type of the genus, *Geometra Rhamnata*; *Wien. Verzeichniss*; Stephens, *Illust. Britt. Entom. (Haust.)* vol. iii. p. 260. Three indigenous species; all somewhat rare.

SCOUR.

SCOTTEA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx imbricated with bractæ, five-toothed, teeth rather unequal; corolla pea-flowered, standard complex, shorter than the keel, wings equal to the keel; stamens all connected; pod pedicellate, compressed; both margins thickened.

One species, *S. dentata*, native of New Holland.

SCO'UNDREL, adj. } Fr. *maraude*, a scoundrel;

SCO'UNDREL, n. } *maraudaille*, scoundrelism.

Cotgrave.

Skinner says, either from the Ger. and D. *schande*, ignominy, *q. d.* an ignominious or infamous man; or from the It. *scandaruoto*, from *scondere*, (*abscondere*), to hide; a hider, and thus a rogue, *q. v.* The instances of the usage of this word are so modern, that it seems difficult to connect it with an A. S. origin; otherwise the first Etymology of Skinner's seems plausible. Ger. and D. *schande*, A. S. *scande*; from *scun-ian*, *ascunian*, to shun; to avoid, to fly from, to detest, to eschew. Somner. *Scoundrel* would then mean

One *shunned*: because, infamous; and hence, an infamous fellow; a base villain, or rascal.

These are the goddesses enroll'd
In Curll's collection, new and old,
Whose *scoundrel* fathers would not know 'em,
If they should meet them in a poem.

Swift. *To Stella*.

Go! if your ancient, but ignoble blood
Has crept through *scoundrels* ever since the flood,
Go! and pretend your family is young;
Nor own your fathers have been fools so long.

Pope. *Essay on Man. Epistle 4.*

And, as to the thief, he appeared to be a hardened *scoundrel*; I punished him more severely than I had ever done any one culprit before.

Cook. *Third Voyage*, book iii. ch. vi.

He [Concannen by name] married there an opulent widow, and died very rich, a few years ago here in England; but of so *scoundrel* a temper, that he avoided ever coming into my sight.

Warburton. *Letters. Letter 93.*

SCOUR, v. } Goth. *scauron*; Ger. *scheuren*; D.
SCO'URER, } *shueren*; Sw. *skura*; Fr. *escurer*; It.
SCO'URING, n. } *scurare*,—*fricare*, *defricare*, *mundare*, *purgare fricando*, to rub, to cleanse, or clear off foulness by rubbing: the A. S. *scyr-an*, *tondere*, to shear; *radere*, to clear away by scraping or rubbing, seems to be the original word.

To clear off or away; (by rubbing;) to cleanse, to purify, to purge:

To clear away forcibly by rapid motion; to move rapidly; to run, to range swiftly. In these latter applications the It. *scorrere*, (Lat. *currere*), to run, to overrun, is considered by Thomson to be the root. See SCUR, SCURRY.

Her haire was as yellowe of hewe
As any bason scoured newe.

Chaucer. *The Romant of the Rose.*

This Edgar, amöge other of his polytyke dedes, vsed, in the somer tyme, to *scoure* the see with certeyne shyppes of warre, and agayne the wynter he prouyded to laye the sayd shyppes in sure hauyns.

Fabyan. *Chronycle*, ch. 193.

Those doctours knew of none authoritie that one byshop should haue aboue another, neither thought or once dreamed that euer any such should be, or of any such whispering or of pardons, or *scouryng* of purgatory, as they haue fayned.

Tyndall. *Workes*, p. 176.

[These] being but newe *scourers* of olde heresie.

Martin. *Mammon of Priests, Anno 1554*, sig. b. 1.

For they themselves were evill groomes, they sayd,
Unwont with heards to watch, or pasture sheepe,
But to forray the land, or *scoure* the deepe.

Spenser. *Faerie Queene*, book vi. can. 11.

There is a kind of poppies much sought after for blanching and bleaching of linnen cloths; for being *skoured* therewith, it is wonderfull how white and pure they will looke.

Holland. *Plinie*, book xix. ch. i.

They dwelt in the furthest part of Italy, that bordereth upon the great Alpes, and the row of Alpes, whereof the foot joyneth to the Thuscan sea, and pointeth towards Afric, and are mingled with the Gauls and Spaniards, neighbours unto the sea coast; who *scouring* all the Mediterranean sea at that time, unto the straight of Hercules' pillar, did, with their little light pinnaces of pirates, let all the traffick and intercourse of merchandize.

Sir Thomas North. *Plutarch*, fol. 207.

It hath come to passe, that some apothecaries, upon stamping of coloquintida, have been put into a great *skouring* by the vapour only.

Bacon. *Natural History*, sec. 921.

Thus outlaws open villany maintain,
They steal not, but in squadrons *scour* the plain.

Dryden. *The Medal*.

Part *scour* the rusty shields with seam, and part
New grind the blunted ax, and point the dart.

Id. *Virgil. Æneid*, book vii.

Will. Parker was an honest poor man, (as a schismatical writer tells you) and a *scourer* or calender of worsteds at Norwich.

Wood. *Athenæ Oxonienses*, p. 1.

He knew the Arabs *scour'd* the country far,
Yet never deem'd their insolence would dare
To storm his trenches with offensive war.

Hoole. *Jerusalem Delivered*, book ix.

SCOURGE, n. } Fr. *escourgée*, a scourge or whip;
SCOURGE, v. } It. *scoreggiare*. From *corium*,
SCO'URGER, } *corigia*, *coreggia*, *scoreggia*. Me-
SCO'URGING, n. } nage. Lat. *scutica*; It. *scorrazza*,
quo quis excoriatur, aut excorigitur, ut ita dicam.
Martinius. The Fr. *escourgée*, and the Lat. *corrigia*, a thong, a latchet.

A thong, a lash, a whip, (*sc.* of strips of leather, cords, &c.) a chastisement, a punishment, an affliction.

Hii nome hym & *scourged* hym, & suppe naked hym bounde
To a tre.

R. Gloucester, p. 263.

Therefore Pilat took thanne Iesus and *scourgide*.

Wiclif. *John*, ch. xix.

Then Pylate toke Iesus and *scourged* hym.

Tyndall. *Id.*

And whanne he hadde maad as it were a *scourge* of smale cordis, he droof out alle of the temple, & oxan, & scheep.

Wiclif. *John*, ch. ii.

And he made a *scourge* of small cordes, and draue the al out of the temple, with the shepe and oxen.

Tyndall. *Id.*

And suffreth us, as for our exercise,
With sharpe *scourges* of adversitee
Ful often to be bete in sondry wise.

Chaucer. *The Clerkes Tale*, v. 8969.

Plato had a cause his seruaunte to *scourge*, and yet cleped he his neighbour to performe the doing, himself would not, lest wrath had mad him a maistred, and so might he haue laid on to moche.

Id. *The Testament of Loue*.

My Ratclif, when thy retchlesse youth offendes,
Receue thy *scourge* by others' chastisement.

Surrey. *Exhortacion to learne*, &c.

Other tasted of mockynges and *scourginges*, more ouer of bondes and prysonment.

Bible, Anno 1551.

1 BISH. Put on his spurs, and girt him with the sword,
The *scourge* of infidels, and tipes of speed.

Beaumont and Fletcher. *The Knight of Malta*, act iv. sc. 1.

SCOUR.

SCOURGE.

SCOURGE.

SCOUT.

Let tyrants govern with an iron rod,
Oppress, destroy, and be the scourge of God.

Pope. *Homer. Odyssey*, book ii. p. 173.

The sect of the *scourgers* (i.e. flagellants) broached several capital errors. Tyndall. *Rapin. History of England*.

These are occasions wherein we ought to kiss the rod which *scourges* us, and reverence that authority which we think has been unjustly exercised against us.

Bolingbroke. *Works*, vol. ii. p. 434.

Nor can despotism itself do any great matter without aid of free will; for rewards, honours, and encouragements, those engines of free agency, contribute more to the valour of armies, than any *scourges* of punishment, or peremptory edicts concluding, For such is our will.

Search. *Light of Nature*, vol. ii. part iii. ch. xxvi.

SCOUT, n. } Fr. *escoute*, a spie, eaves dropper,

SCOUT, v. } prying companion; also a scout, scout-watch, or sentinel; the discoverer or forerunner of an army. Cotgrave. Skinner derives from *escouter*, (*auscultare*), to listen. Junius gives the D. *schowts*, *speculatores*, from *schouwen*, *speculari*, and derives from the Gr. of the later ages *σκούλται*, *auscultatores*, listeners. Tooke says, a *scout* means (*subaud.* some one, any one) sent out, (used in old English as equivalent to thrown or cast, and past participle of *scyt-an*; to throw, to cast forth, to throw out.)

One sent out before an army to collect intelligence by any means.

To *scout*; to throw or cast away; to reject; to act as a *scout*, or as one sent out as a spy; to go out or about as a spy.

To *scout*; met. to reject, to repel or repulse.

————— The best sort of those,
That woo thy mother, watchfull *scouts* addresse
Both in the streights of th' Ithacensian seas,
And dusty Samos.

Chapman. *Homer. Odyssey*, book xv.

Such was his hap to warre both night and daye,
To watche and warde at euey time and tyde,
Though foes were farre yet *showted* he alwaye.

Gascoigne. *Dan Bartholmew of Bathe*.

Thus cotynually they were faine to make watche by their constables in y^e felde, and high wayes about y^e courte, and to sende out *scout* watches a myle of, to se euer if any suche people were comyng to them warde, as they were enfourmed of, to the entent that if theyr *scoutwatche* hard any noyse, or mouyng of people drawing to the cite warde, than incontynent they shulde gyue them knowledge.

Lord Berners. *Froissart. Cronycle*, ch. xvi.

MOUNT. What were those past by?

ROC. Some *scout* of soldiers, I think.

Beaumont and Fletcher. *The Knight of Malta*, act iv. sc. 2.

Whereas his posting *scouts* king Henry's power descry'd,
Tow'rds whom with speedy march this valiant general hy'd.

Drayton. *Poly-olbion*, song 22.

JUN. Take more men,

And *scout* him round.

Beaumont and Fletcher. *Bonduca*, act iv. sc. 2.

See tools of arbitrary sway,
And priests, like locusts, *scout* away
Before the western wind.

Walsh. *Imitation of Horace*.

About that time he, [Michael Hudson,] being esteemed an understanding and sober person and of great fidelity, was made *scout-master* general to the army in the North parts of England.

Wood. *Athenæ Oxonienses*, vol. ii.

One Sir Will. Neale, knight, had been *scout-master* general to K. Ch. I, and a stout proper man and a good soldier.

Id. *Ib.*

What causes move us, knowing as we must,
That these menageries all fail their trust,
To send our sons to *scout* and scamper there,
While colts and puppies cost us so much care?

Cowper. *Tirocinium*.

When lo! so will'd her fate, a numerous band
Of Christian *scouts* were ambush'd near at hand,
Dispatch'd to impede the passage, o'er the plain,
Of sheep and oxen to the Pagan train.

Hoole. *Jerusalem Delivered*, book vi.

SCOWL, n. } A. S. *sceol-eag*; Ger. *shæl*, *shiel*.

SCOWL, v. } Wachter derives from the Gr. *εἰλ-ειν*, *vertere*, *contorquere*, to turn, to twist. Tooke thinks *scowl* is the past participle of *scyll-an*, to separate; that *sceol-eag* are *separated eyes*, or eyes looking different ways; and he produces this very early usage,—“Than scripture scorned me and a *skile* loked.” *Vision of Piers Plouhman*, fol. 53. p. 1. pass. 11.

A *scowl* (of the eyes) is a look or cast of the eyes (with contracted brows) indifferently, sideways, or straightforwards: a frowning look of anger or discontent. To *scowl*, formed upon the noun, is,

To look frowningly, with anger or discontent, gloom or sullenness.

Miso, having now her authority increased, came with *scowling* eyes to deliver a slaving good morrow to the two ladies.

Sidney. *Arcadia*, book ii.

But with bent luring browes, as she would threat,
She *scowl'd*, and frown'd with froward countenance;
Unworthy of faire ladies comely governaunce.

Spenser. *Faerie Queene*, book ii. can. 2.

Euen so, or with much more contempt, men's eyes
Did *scowle* on Richard.

Shakspeare. *Richard II.* act v. sc. 2. fol. 42.

As when from mountain tops the dusky clouds
Ascending, while the North wind sleeps, o'erspread
Heav'n's chearful face, the luring element
Scowls o're the dark'n'd lantskip, snow or shoure.

Milton. *Paradise Lost*, book ii

I've seen the morning's lovely ray
Hover o'er the new-born day,
With rosy wings so richly bright,
As if he scorn'd to think of night,
When a ruddy storm, whose *scowl*
Made heaven's radiant face look foul,
Call'd for an untimely night
To blot the newly blossom'd light.

Crashaw. *The Delights of the Muses*.

————— In rueful gaze
The cattle stand, and on the *scowling* heavens
Cast a deploring eye, by man forsook,
Who to the crowded cottage hies him fast,
Or seeks the shelter of the downward cave.

Thomson. *Summer*.

Each letter'd, grave, pedantic dunce
Wakes from his lethargy at once,
Shrugs, shakes his head, and rubs his eye,
And, being dull, looks wondrous wise,
With solemn phiz, and critic *scowl*.

Lloyd. *To William Hogarth, Esq.*

Lower'd the grim morn, in murky dies,
Damp mists involv'd the *scowling* skies,
And dimm'd the struggling day.

Warton. *The Suicide*.

SCRABBLE, D. *schraepen*, *schrabben*, *schraeffen*, *schraeffeten*. To *scrape*, of which word (*scrape*) *scrabble* is the diminutive, with the mere change of *p* into *b*.

And he changed his behaviour before them, and fained him selfe mad in their hands, and *scrabled* on the doores of the gate, and let his spettel fall downe vpon his beard.

Bible. *Samuel*, ch. xxi. v. 13.

SCRAG, n. }

SCRA'GGED, }

SCRA'GGY. }

Scrag appears to be formed from *crag*; and in G. Douglas, *crabs* are called *scrabbis*. Lye has *hrac-od*, *laceratus*, ragged: the common prefix *ge-* forms *geh-rac-od*, whence *geh-rag*, *grag*, *crag*, a ragged or broken mass.

SCOUT.

SCRAG.

SCRAG. Any thing *ragged*, cleft, *crack'd* or broken; any thing bare or meager, spare or lean.

SCRANNEL.

I believe their honest and ingenuous natures coming to the universities to store themselves with good and solid learning, and there unfortunately fed with nothing else but the *scragged* and thorny lectures of monkish and miserable sophistry, were sent home again with such a scholastical bur in their throats, as hath stopp'd and hinder'd all true and generous philosophy from entering.

Milton. *The Reason of Church Government*, book ii.

Nor untrembling canst thou see,
How from a *scraggy* rock, whose prominence
Half overshades the ocean.

Philip. *Cider*, book i.

The Bashee Island hath one steep *scraggy* hill, but Goat Island is all flat and very even.

Dampier. *Voyages*. Anno 1687.

Such a constitution is easily known by the outward appearances of the body being lean, warm, hairy, *scraggy*, dry, without a disease, with hard and firm muscles.

Arbuthnot. *Nature of Aliments*, ch. vi.

SCRALLING, perhaps *scrabbling* or *scrambling*.

Let him but attempt to touch the eggs, they will shew like young *scralling* pullets without feather or downe.

Holinshed. *Description of Ireland*, ch. iv.

SCRAMBLE, v. } *Scramble, certatim arripere*,
SCRAMBLE, n. } either from the D. *krabbelen*, to
SCRAMBLER. } tear with the nails, or from
screop-an, D. *schreffen, radere, scalpere*; q. d. *corraddere*, to scrape together. Skinner. In the North it is called a *scraffle*. In the Lancashire dialect, a striving to catch things on the hands and knees on the floor is called a *scramble*, *scrabble*, or *scrattle*.

The cowardly wretch fell down, crying for succour, and *scrambling* through the legs of them that were about him.

Sidney. *Arcadia*, book ii.

DOR. I thank ye, dear friend,

I know she loves him.

ALICE. Yes, and will not lose him,

Unless he leap into the moon, believe that,

And then she'll *scramble* too.

Beaumont and Fletcher. *Monsieur Thomas*, act ii. sc. 1

I love a souldier, and can lead him on,
And if he fight well, I dare make him drunk;
This is my vertue, and if this will do,
I'll *scramble* yet amongst 'em.

Id. *The Captain*, act ii. sc. 1.

With him, that power his pride had lov'd so well,
His monstrous universal empire, fell;
No heir, no just successor left behind,
Eternal wars he to his friends assign'd,
To tear the world, and *scramble* for mankind.

Rowe. *Lucan. Pharsalia*, book x.

All the little *scramblers* after fame fall upon him.

Addison.

To the undiscerning eye of giddy ambition it naturally presents itself, amidst the confused *scramble* of politics and war, as a very dazzling object to fight for.

Smith. *Wealth of Nations*, vol. ii. book iv. ch. vii.

But because the desire of money is constantly, almost every where the same, its vent varies very little, but as its greater scarcity enhances its price, and increases the *scramble*, there being nothing else that does easily supply the want of it.

Locke. *Of lowering of Interest*.

SCRANNEL, *scrannil*, a meager or lean person. *Gloss. of Lanc. Words*. The word seems connected with, if not the same as, *cranny*, a small chink or fissure; and applied by Milton to pipes, as if not sound or airtight. And hence,

Harsh, shrill, shrieking: sharp, meager, spare.

And when they list, their lean and flashy songs
Grate on their *scrannel* pipes of wretched straw.

Milton. *Lycidas*.

Unlike to living sounds it came,
Unmix'd, unmelodis'd with breath;
But, grinding through some *scrannel* frame,
Creak'd from the bony lungs of death.

Langhorne. *Fables of Flora*. Fable 11.

SCRAP, or } A *scrap* (of food) *quod a cibo abra-*

SCRAPE. } sum. Skinner: the past participle of

A. S. *screop-an*; any thing, something *scraped off*. Tooke.

A small, a minute portion.

A poore man shall as soone breake his recke as his fast with them, but of the *scraps* and wyth the dogges, when dinner is done.

Tyndall. *Workes*, p. 134.

He drinke water, and lives on wort leaves, pulse, like a hogge, or *scraps* like a dogge.

Burton. *Anatomy of Melancholy*, p. 157.

But of a little remnant, got by fraud,
(For all ill turns he lov'd, all good detested, and believ'd no God,) Thrice in a week he chang'd a hoarded groat,
With which of beggar's *scraps* he bought.

Otway. *Complaint of his Muse*.

There are no tame animals here except dogs, and of these we saw but two or three, which frequently came about the tents, to pick up the *scraps* and bones that happened to lie scattered near them.

Cook. *Voyages*, book ii. ch. v.

SCRAPE, v.

SCRAPE, n.

SCRA'PER, n.

SCR'APING, n.

SCR'APINGLY.

A. S. *screop-an*; D. *schrabben, schrapen*; Ger. *schrappen*; Sw. *skrapa*; *radere, corradere, scalpere*: to rase, to scrub, q. v.

To draw one thing (usually, something edged, an edged tool or instrument) over the surface in contact with the surface of another thing or substance; (to *rub*;) to draw or get together by *scraps*, by bits or small portions, by parsimonious earnings or savings. *Scrape*, n., met.,

A state of difficulty, generally, the effect of heedlessness or mischievousness.

And *scrapid* the door welplich, and wynyd wyth his mowith
After a doggis lyden, as ner as he couith.

Chaucer. *The Pardoner and Tapstere*.

And then shall he dooe therein as did a lyke learned priest, that through out al the ghospels *scraped* out diabolus, and wrote Jesus Christus, because he thought the deuils name was not mete to stande in so good a place.

Sir Thomas More. *Workes*, fol. 421.

And how soon einig may be turned into ewig, not with *scrape* of knife, but with the least dash of a pen, so that it shall neuer be percieued, a man that will proue may easely see.

Ascham. *Discourse of Germany*.

The abbot of St. Alban's sent the book so disfigured with *scrapings* and blottings out, with other such writings as there were found, unto the king.

State Trials. 1 Henry V. 1413.

Thereafter all that mucky pelfe he tooke,
The spoile of people's evil gotten good,
The which her sire had *scrap't* by hooke and crooke,
And burning all to ashes pour'd it down the brooke.

Spenser. *Faerie Queene*, book v. can. 2.

The same experience hath taught, that for old olive trees (overgrowne with a kind of mossie skurfe) it is passing good ech other yeare to *scrape* and claw them well.

Holland. *Plinie*, book xvii. ch. xviii.

Yet this inestimable pearle, wil all
Our dunghil chanticheres, but obuious call;
Each moderne *scraper*, this gem scratching by;
His oate preferring far.

Chapman. *Homer. Odyssey*, book xxiv.

SCRANNEL.

SCRAPE.

SCRAPE.
—
SCRATCH.

Unblest with his ill-gotten store,
Th' insatiate youth still craves for more;
To counsel deaf, t' examples blind,
Scrapes up whatever he can find.
Somerville. The Bald Batchelor.

Having laid a pretty quantity of these *scrapings* together, I found, as I looked for, that the heap they composed was white.
Boyle. Works, vol. i. fol. 721. Experimental History of Colours.

That live *scrapingly* and uncharitably, and uselessly to the world, all their lives long, and then when they come to die, think to atone for their sins and neglects of this kind by shewing some extraordinary bounty to the poor, or devoting some part of their estates to public or pious uses?

Sharp. Works, vol. i. Sermon 3.

To arrive at this surprising expedition, this musical legerdemain, it is, indeed, necessary to do little else than *scrape* and pipe.

Knox. Essay, No. 70.

The too eager pursuit of this his old enemy through thick and thin has led him into many of these *scrapes*.

Warburton. The Divine Legation, book ii.

SCRAPTIA, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, naked, with the joints for the most part somewhat cylindric and nearly equal, short, the second shortest, the third and some of the following narrowed at the base, the fourth longer than the third, and the apical one cylindric, with the tip acute or obtuse; *palpi* four, exerted, maxillary with the terminal joint large, securiform; *labial* obtrigonal, with the angles produced on each side; *mentum* very short, embracing the labium like a ring; head exerted, deflexed; eyes hirsute; *thorax* nearly semicircular, rounded in front, transverse behind; *scutellum* distinct; body oblong-ovate, soft; *elytra* immarginate; legs moderate; *tibiæ* somewhat cylindric, armed with short spurs; *tarsi* heteromerous, elongate, with the penultimate joint bilobed.

Type of the genus, *S. fusca*, Latreille; a rare insect: a second species, the *S. nigricans*, Stephens, *Illust. Britt. Entom. (Mandibulata.)* vol. v. p. 29, pl. xxiv. fig. 3, has been taken in this country.

SCRAT, *i. e.* Scratch, *q. v.*

Ambitious mind, a world of wealth would haue,
So *scrats*, and scrapes, for scorfe and scornie drosse.
Mirroure for Magistrates, p. 506.

It is an ordinary thing for women in such cases to *scrat* the faces, slit the noses of such as they suspect.

Burton. Anatomy of Melancholy, p. 610.

SCRAT, *n.* A. S. *scritta*, *hermaphroditus*: because such being supposed to have a small scrat or scratch; or fissure.

At the same time word was brought out of Vmbria, that there was an hermaphrodite or *skrat* found, almost twelve years old.

Holland. Livie, fol. 1036.

SCRATCH, *v.* } D. *krassen, kratsen, or kretsen*;
SCRATCH, *n.* } Ger. *kreetzen*; Fr. *grater*; It.
SCRA'TCHING, *n.* } *grattare*. Chaucer writes "*cratch-*
SCRA'TCHINGLY. } *ing of cheeks*." See CRATCH.

To make narrow or lineal separations of the surface by drawing a rough or hard substance over it; to tear the surface; (*sc.* with the nails, with any thing pointed;) to draw irregular lines; to write irregularly, badly.

The which kind of pleasure, if any man take for his felicity, that man must needs grant that then he shall be in most felicity, if he live that life which is led in continual hunger, thirst, itching, eating, drinking, *scratching*, and rubbing!

More. Utopia, book ii. ch. vii. v. 2. p. 115.

Himself, which methinks is strange, shewing at one instant both steadiness and nimbleness; sometimes making him turn close

to the ground, like a cat, when *scratchingly* she wheels about after a mouse. *Sidney. Arcadia, vol. i. book ii. p. 202.*

How can I tell, but that his talents may
Yet *scratch* my sonne, or rend his tender hand.
Spenser. Faerie Queene, book i. can. 12.

THO. 'Tis most necessary,
Hang up your jupils and your Portugal possets,
Your barley broths, and sorrel sops, they are mangy,
And breed the *scratches* only.
Beaumont and Fletcher. Monsieur Thomas, act iii. sc. 1.

Can we not leave this worme? or will we not?
Is that the truer excuse? or have we got
In this, and like, an itch of vanitie,
That *scratching* now's our best felicitie?
Ben Jonson. Epistle to a Friend.

Thou'lt ha' vapours i' thy leg again presently; pray thee go in,
it may turn to the *scratches* else.

Id. Bartholomew Fair.

Thou hast but done what boys or women can;
Such hands may wound, but not incense a man.
Nor boast the *scratch* thy feeble arrow gave,
A coward's weapon never hurts the brave.
Pope. Homer. Iliad, book xi.

Black soot, or yellow walnut, shall disgrace
This little red and white of Emma's face.
These nails with *scratches* shall deform my breast,
Lest by my look or colour be express'd
The mark of aught high-born, or ever better dress'd.
Prior. Henry and Emma.

No skill in swordmanship, however just,
Can be secure against a madman's thrust;
And even virtue, so unfairly match'd,
Although immortal, may be prick'd or *scratch'd*.
Cowper. Charity.

If it were not so common among us we should be astonished to think how a man, by looking upon a few *scratches* upon paper, according to the shapes in which they are drawn, shall come to the knowledge of what his senses and his experience could not have informed him.

Search. Light of Nature, vol. ii. part i. ch. xxi.

SCRAW. The Quotation explains the Irish usage of the word.

Neither should that odious custom be allowed of cutting *scraws*, (as they call them,) which is flaying off the green surface of the ground to cover their cabins, or make up their ditches.

Swift. Drapier's Letters. Letter 7.

SCRAWL, *v.* } Contracted (says Skinner) from
SCRAWL, *n.* } *scrabble*, to scrape or scratch, *sc.* ill-formed letters.

Beware of Latin authors all!
Nor think your verses sterling,
Though with a golden pen you *scrawl*,
And scribble in a Berlin. *Swift.*

But as the name of every plant and flower
(So common that each peasant knows its power)
Physicians in mysterious cant express,
T' amuse the patient, and enhance their fees;
So from the letters of our native tongue,
Put in Greek *scrawls*, a mystery too is sprung.
Tickell. The Hornbook.

In sable *scrawls* I Nero's name perus'd,
And Herod's, with a sanguine stain suffus'd.
Harte. The Vision of Death.

SCREEK, *v. or* } Also written to *shriek*, *q. v.*
SCREECH, } A *screech* or *shriek* is the cry of
SCREEK, *n.* } terror or passion, perhaps it may
SCREECH. } be called sharper and harsher than
a scream; but, in human beings especially, scarcely to be distinguished from it. In Lancashire they use *reak*, and also *ream*.

SCRATCH.
—
SCREEK.

SCREAM.

SCREEN.

But scorning all these kindes
I would become a cat,
To combat with the creeping mouse
and scratch the screeching rat.

Turberville. The Louer.

The litle babe did loudly *scrike* and squall,
And all the woods with piteous plaints did fill.
Spenser. Faerie Queene, book vi. can. 4.

Let *screeching* owls rest in your razed roofs.

Hall. Satire 9. book i.

It keepeth them from starting or *skriching* in their sleep for feare, and allaieth the paine which they feelee in toothing.

Holland. Plinie, book xxviii. ch. xix.

Under his cave the buzzing *screech-owl* sings,
Beating the windows with her fatal wings.

Drayton. The Barons' Wars, book v.

The birds obscene, that nightly flock'd to taste,
With hollow *screeches* fled the dire repast;
And ravenous dogs, allur'd by scented blood,
And starving wolves ran howling to the wood.

Pope. Thebais of Statius, book i.

Others peep forth into the light, as it were only to see it; and having, by a *skreek* or two, given testimony to the misery of this life, presently die and vanish.

Bull. Sermon 1. vol. iii.

The owl at freedom's window scream'd,
The *screech-owl*, prophet dire, whose breath
Brings sickness, and whose note is death.

Churchill. The Duellist, book i.

As soon as learning began to dawn, toward the beginning of the sixteenth century, these birds of night were forced to fly from day, though they *screeched* and clapped their wings for a while.

Bolingbroke. Essays. Authority in Matters of Religion.

SCREAM, v. } In Lancashire, to *ream*, q. v.; from
SCREAM, n. } A. S. *hræman*, *plorare*, *clamare*, *ejulare*, to weep, to cry, to weep with crying and bewayling. Somner. In Sw. *skreema* is *terrefacere*; in D. *schroom*, horror; *schroomen*, *horrere*, *horrescere*. Ihre and Kilian.

Scream is especially applied to—the cry of terror uttered by females; of children in pain or passion; though not confined to these.

Where we lay, our chimneys were blowne downe,
And (as they say) lamentings heard i' th' ayre;
Strange *schreemes* of death.

Shakspeare. Macbeth, act ii. sc. 3. fol. 137.

MACH. I haue done the deed:

Didst thou not heare a noyse?

LADY. I heard the owl *schreame*, and the crickets cry.

Did not you speake?

Id. Ib. act ii. sc. 2. fol. 136.

For soon a whirlwind rose around,
And from afar he heard a *screaming* sound,
As of a dame distress'd, who cry'd for aid,
And fill'd with loud laments the secret shade.

Dryden. Theodore and Honoria.

From trembling tombs the ghosts of greatness rise,
And o'er their bodies hang with wistful eyes;
Or discontented stalk and mix their howls
With howling wolves, their *screams* with screaming owls.

Savage. The Wanderer, ch. iv.

The famish'd eagle *screams*, and passes by.

Gray. The Bard.

SCREEN, v. } Fr. *escran*, *escreen*, *ecrene*; Low
SCREEN, n. or } Lat. *screona*, *screuna*; in some places
SKREEN. } the holes or caverns dug in the earth, and covered with heaps of dirt, (of which Tacitus speaks as usual among the ancient Germans, *Ger. c.* 16.) are at this day called *escrenes*. See Du Cange, Voss. *De Vit.* lib. ii. c. 17., and Menage. The editor of Menage derives from the *Ger. schrein*, *arca*; and this, Wachter says, is the Low Lat. *screona*, also from *scrinium*. See SHRINE. Skinner thinks from *Ger. schirmen*, *tegere*, *prolegere*, to cover, to protect, to defend.

VOL. XXVII.

A *screen* is—any thing that covers, hides, conceals, protects.

SCREEN.

SCREW.

He brought our Saviour to the Western side
Of that high mountain, whence he might behold
Another plain, long but in bredth not wide,
Wash'd by the Southern sea, and on the North
To equal length back'd with a ridge of hills
That *screen'd* the fruits of th' earth and seats of men
From cold Septentrion blasts.

Milton. Paradise Regained, book iv.

There, as they entred at the *scriene*, they saw
Some one, whose tongue was for his trespassse vyle
Nayld to a post, adiudged so by law.

Spenser. Faerie Queene, book v. can. 9.

The whiles the prince hard preased in betweene,
And entraunce wonne; streight th' other fled away,
And ran into the hall, where he did weene
Himselfe to save; but he there slew him at the *skreene*.

Id. Ib. book v. can. 11.

The trees (as *screenlike* greatnesse) shades his raye,
As it should shine on none but such as they.

Browne. Britannia's Pastorals, book ii. song 5.

A little within the shoar where we anchored was a town of negroes, natives of this coast. It was *skreen'd* from our sight by a large grove of trees that grew between them and the shoar.

Dampier. Voyages, Anno 1683.

Beneath a table, trembling with dismay,
Couch'd close to earth, unhappy Medon lay,
Wrapp'd in a new-slain ox's ample hide;
Swift at the word he cast his *screen* aside.

Pope. Homer. Odyssey, book xxii.

He therefore, timely warn'd, himself supplies
Her want of care, *screening* and keeping warm
The plenteous bloom, that no rough blast may sweep
His garlands from the boughs.

Cowper. The Task, book iii.

Our fathers knew the value of a *screen*
From sultry suns; and in their shaded walks
And long protracted bow'rs, enjoy'd at noon
The gloom and coolness of declining day.

Id. Ib. book i. p. 668.

SCREEN, n. } Perhaps, consequentially, from *screen*,
SCREEN, v. } *supra*; which, being sometimes made of twigs at some distance apart, would serve as a *sifter*. Some say from the Bar. Lat. *secerniculum*, from *secernere*. See SECERN.

A skuttle or *skreene*, to rid soil from the corn.

Tusser. Husbandry Furniture.

Mixing it with one part of rotten cow-dung, (some prefer horse-dung,) or very mellow soil, *screen'd* and prepar'd some time before.

Evelyn. Kalendar, fol. 461. May.

SCREW, n. } Fr. *escroue*; D. *schroef*; Ger.
SCREW, v. } *schrawbe*. Skinner derives the Fr. from *ex* and *roue*; because it is turned round like a wheel. Wachter from the *Ger.*, which he says is the genuine word, and Germanic in its origin. See the Quotation from Wilkins for a scientific description of the *screw*. To *screw*, met., is

To twist close, to distort.

To twist close, to pinch hard; to squeeze tight.

No more; to what end?

Why should I write this downe, that's riueted,
Screw'd to my memorie.

Shakspeare. Cymbeline, act ii. sc. 2. fol. 376.

With stormes of whistlings then, his flocks he draue
Vp to the mountaines; and occasion gaue
For me to vse my wits; which to their height
I striu'd to *skrew* vp.

Chapman. Homer. Odyssey, book ix.

The salt rilles also that crosse the same doo so separat the one of them from the other, that they resemble the slope course of the cutting part of a *scrue* or gimlet, in verie perfect maner, if a man

SCREW. doo imagine himself to looke downe from the top of the mast vpon them.
Holinshed. Description of Britaine, ch. x.

SCRIBE. Why, suppose I had a delicate *screw'd* gun, if I left her clean, and found her foul, I should discover, to my cost, she had been shot in.
Dryden. Marriage A-la-mode, act v. sc. 1.

That which is usually recited for the sixth and last mechanic faculty is the *screw*, which is described to be a kind of wedge that is multiplied, or continued by a helical (*spiral*) revolution about a cylinder, receiving its motion not from any stroke, but from a vectis at one end of it.
Wilkins. Archimedes, ch. ix.

If while our backs are turned an unlucky boy *screws* a piece of deal upon one of the leaves, we do not reckon the chip or the deal a part of the table.
Search. Light of Nature, vol. ii. part i. ch. ii.

How readily, upon the gospel plan,
That question has its answer—What is man?
Sinful and weak, in ev'ry sense a wretch;
An instrument, whose chords upon the stretch,
And strain'd to the last *screw* that he can bear,
Yield only discord in his Maker's ear.

Cowper. Truth.

SCRIBE,
SCRIBBLE, v.
SCRIBBLE, n.
SCRIBBLER,
SCRIBBLING, n.
SCRIBABLE,
SCRIBACIOUS.

Fr. *scribe, escrivaine, escrivaille*; It. *scriba*; Sp. *escriba*; Lat. *scrib-ere*. Becan (see Vossius) derives from the D. *schrabben*, (to scrape,) because a line or stroke in writing is formed by *scraping* or drawing (*sc.* a stile, a pen) over the surface, (of paper, parchment, or other substance.) *Scribble* would then be *scrabble*, with the mere difference of the vowel. Vossius thinks *scrib-ere* is manifestly from Gr. *γραφειν*, *γ* changed into *c*. The origin of all is probably the same. See GRAVE; and below the Quotation from South. To *scribble*,

To write careless, hasty, ill-formed letters; to write carelessly, hastily.

And I seye to you that but your rigtwisnesse be more plentuous thanne of *Scribis* and Farisees, ye schul not entre in to the kyngdom of hevenes.
Wiclif. Matthew, ch. v.

For I saye vnto you, excepte your ryghteousnes excede the ryghteousnes of the *Scrybes* and Pharyses, ye can not entre into the kingdō of heauē.
Bible, Anno 1551.

In sooth to say, though all the erth so wanne
Were parchment smooth, white, and *scribabell*,
And the great sea, that called is the oceane,
Were touned into ink blacker than sabell,
Euery stick a pen, each man a *scriuener* abell,
Not coud they write woman's trechery.
Beware therfore, the blind eateth many a fie.

Ballad on Woman's Chastity. Imputed to Chaucer.

One of the foresayde jj parsonis so condempned was *scribe* to the Pope, and that other was donar.
Fabyan. Chronycle, ch. 159.

Thereat Jove waxeth wroth, and in his spright
Did inly grudge, yet did it well conceale;
And bade Dan Phœbus *scribe* her appellation seale.

Spenser. Faerie Queene, can. 6.

My hasty hand forthwith doth *scribble* on apace,
Least willing hart might thinke, it ment to come behind.

Gascoigne. The Louer declareth his Affection, &c.

For al y^e time betwene his death and the p-clamig could scant haue suffised vnto y^e bare wryting alone, all had it bene but in paper and *scribled* forth in hast at aduētūre.

Sir Thomas More. Workes, p. 56.

My lowely and myek *scribling* unto your noble grace at this time is, grudging in my conscience, that the religion which we do observe and keep is no rule of S. Benet, nor yet no commandment of God.

Strype. Eccles. Memor. book i. ch. xxxv. Henry VIII.

But soon forgetting what she went about,
Poor queen, she fell to *scribling* to her lover;
Here she put in, and there she blotted out,
Her passion did so violently move her.

Drayton. The Barons' Wars, book vi.

Lastly, that in my tedious *scribble*
I may not seem incorrigible,
I will conclude.

Cotton. Epistle to Bradshaw.

We have some letters of Popes, (though not many,) for Popes were then not very *scribacious*, or not so pragmatical.

Barrow. Of the Pope's Supremacy.

This is the same, (some few alterations being made,) with a fanatical *scribble* publish'd open and bare-fac'd to the world.

Wood. Athenæ Oxonienses, vol. ii. p. 896.

And Martin Mar-prelate, the Marvel of those times, was the first Presbyterian *scribbler* who sanctified libels and scurrility to the use of the good old cause.

Dryden. Religio Laici. Preface.

Leave dangerous truths to unsuccessful satires,
And flattery to some fulsome dedicators,
Whom, when they praise, the world believes no more
Than when they promise to give *scribbling* o'er.

Pope. Essay on Criticism.

Scribe was a name which, among the Jews, was applied to two sorts of officers: 1. to a civil, and so it signifies a notary, or, in a large sense, any one employed to draw up deeds and writings; 2. this name *Scribe* signifies a church officer, one skilful and conversant in the law to interpret and explain it.

South. Sermons, vol. iv.

But this was one of the charitable expedients employed to set me right, and to prevent the disgrace of *scribbling* much to no purpose.

Warburton. The Divine Legation, book v. sec. 4.

That pestilent herd of libertine *scribblers* I would hunt down, as good King Edgar did his wolves; from the mighty author of *Christianity as old as the Creation*, to the drunken blaspheming cobbler, who wrote against Jesus and the resurrection.

Id. Remarks on Occasional Reflections.

SCRIBE, the title of a certain class of law-officers and teachers amongst the Jews; in Hebrew סופר, in the

Septuagint and New Testament γραμματεὺς. The Talmud* says that the name is derived from ספר to num-

ber, because the Scribes numbered or counted all the words and letters of the Old Testament, and that it signifies *Numberer*. But this is not true. The Greek translators, who were long anterior to the Talmudists, and therefore more likely to know the original signification, evidently understood the word to signify *Scribe*, and translated it accordingly; and to this agrees the usage of the Hebrew Scriptures. ספר signifies *to write*, as well as *to count*, as is evident from its derivative ספיר, *a writing*; and also from the use of the word סופר in

Judges v. 14.; Ps. xlv. 1.; and Ezekiel ix. 2, 3. There is still a class of men amongst the Jews known by this name, whose business is to write the copies of the Law for the Synagogues, phylacteries, mezuzzoth, &c., and whose existence throws some light upon the office of the ancient Scribes. They were probably the authorized notaries or solicitors, to whose care not only the copying of the sacred books, but the drawing up of all legal documents, was intrusted, and to whom consequently the people applied in all cases of legal difficulty; and as the civil law was also the law of God, the transition from the office of expounders of the law to that of religious teachers, as we find them in the New Testament, was easy and natural. The Talmud uses the word "Scribes" and "Rabbies" indifferently of the same persons, and it was of course the interest of the Rabbies to identify themselves with the Scribes, as they thereby communicated to their office an antiquity and an authority which belonged only to the latter. But from the Tal-

* Tract. Kiddushin, fol. 30. See Buxtorf, Tiberias, c. viii. p. 43.

SCRIBE. mud itself it is plain that the two offices are distinct. In the passage quoted above it is asked, "Why were the ancients called Scribes?" which question plainly shows that the office of Scribe was ancient, and that of Rabbi a modern invention. With the Scribes probably arose the oral law. The precedents and usages of the courts of law formed the first basis of tradition, and opened the door for the usurpation of the priestly office. In course of time came the Pharisees and the Rabbies, and they not only availed themselves of the power which the Scribes had already acquired, but gradually ejected the Scribes also, so that for ages the Scribes have ceased to be religious teachers, and sunk down into the more humble employment of mere scribes.

From the New Testament it appears that, in our Lord's time, the Scribes were teachers of religion and expounders of the Scriptures; for it is said, "When Jesus had ended these sayings, the people were astonished at his doctrines, for he taught them as one having authority, and not as the Scribes," Matt. vii. 28, 29. And again, "Why then say the Scribes that Elias must first come?" Matt. xvii. 10. And again, "How say the Scribes that Christ is the Son of David?" Mark xii. 35. From all which it is evident that their authority as teachers was very great. But it is not so easy to define the precise nature of their office, nor to assign the difference between it and that of the *νομικοι*, *lawyers*, and the *νομοδιδασκαλοι*, *doctors of the law*. Some suppose that all the three words are synonymous, and others that either the first two, or the last two stand for the same office. From Luke xi. 44. however, it appears that the *lawyers* were not identical with the Scribes. The Lord had said, "Woe unto you Scribes and Pharisees,"—"Then answered one of the lawyers, *νομικων*, and said unto him, Master, thus saying, thou reproachest us also. And he said, Woe unto you also, ye lawyers." Here the Scribes and lawyers are plainly distinguished. From Acts v. 34. where Gamaliel is called *νομοδιδασκαλος*, a doctor of the law, it would appear that this latter title stands for Rabbi, which always stands before Gamaliel's name in the Talmud; and that therefore Scribe is to be distinguished from doctor of the law as well as from lawyer.

From the Talmud it appears that with the Scribes originated the Masora, so that whatever be their faults, their learned labours have at least been useful in preserving the sacred text. Eighteen criticisms are particularly noticed as *תקן סופרים*, *the correction of the Scribes*, which are enumerated in Buxtorf, *Lex. Talmud.* col. 2630.

SCRIMER, A. S. *scrimbre*, (or *scirmbre*, a fencer, Verstegan,) a sword-player, a master of defence, or fencing-master. Somner. D. *schetmer*; Fr. *escumeur*, from *shirmen*, to defend. See *ante*, **SCREEN**, and *infra*, **SKIRMISH**.

— The *scrimers* of their nation,
He swore, had neither motion, guard, nor eye,
If you oppos'd them.

Shakspeare. *Hamlet*, act iv. sc. 7.

SCRINE, i. e. *shrine*, q. v., Lat. *scrinium*, anciently, says Verstegan, a chest or cofer.

Help then, O holy virgin, chiefe of nyne,
The weaker novice to perform thy will;
Lay forth out of thine everlasting *scryne*
The antique rolles, which there lye hidden still,
Of faerie knights.

Spenser. *Faerie Queene*, book i. Introduction.

This man of infinite remembrance was,
And things foregone through many ages held,
Which he recorded still as they did pas,
Ne suffred them to perish through long eld,
As all things els the which this world doth weld;
But laid them up in his immortal *scrine*,
Where they for ever incorrupted dweld.

Spenser. *Faerie Queene*, book ii. can. 9.

SCRIP, } Sw. *skrappa*, *shreppa*.

SCRIPPAGE, } Minshew derives from *scirpus*, a rush, whence *scripea*, a basket made of rushes. Skinner prefers A. S. *scræpe*, meet, convenient, fit, q. d. *theca commoda*. May it not be

A *scrap*-bag, a small bag or sack for *scraps*.

And he seide to hem, whanne I sente you without sachel and scrippe, and schoon, wher any thing failide to you? And thei seiden nothing.

Wiclif. *Luke* ch. xxii.

And he said vnto them; when I sent you wythout wallet, and scripppe, and shoes, lacked ye any thyng? And they said, no.

Bible, Anno 1551.

Whan folk in chirche had yewe him what hem lest,
He went his way, no lenger wold he rest,
With scrippe and tipped staf ytucked hie.

Chaucer. *The Sompnoures Tale*, v. 7316.

— This house in all times
Was full of shipmen and pilgrimes,
With scrippes brette full of leasings,
Entermelled with tidings.

Id. *The House of Fame*, book iii.

He picks out five, away with him to bring,
Such as we knew would fit his trusty sling,
And in his scrip them closely doth bestow,
By which he vows Goliath's overthrow.

Drayton. *David and Goliath*.

Clo. Come, shepheard, let vs make an honorable reitret, though not with bagge and baggage, yet with scrip and scrippage.

Shakspeare. *As You Like It*, act iii. sc. 2. fol. 196.

Blest be Telemachus! in every deed
Inspire him, Jove! in every wish succeed!
This said, the portion from his son convey'd
With smiles receiving on his scrip he lay'd.

Pope. *Homer. Odyssey*, book xvii.

SCRIPT,

SCRIPTURE,

SCRIPTURAL,

SCRIPTORY,

SCRIPTURIST,

SCRIPTURIENT.

Lat. *scriptum*, past participle of *scrib-ere*, to write. *Scripture*, Fr. *escripture*; It. *scrittura*; Sp. *escritura*; Lat. *scriptura*. See *ante*, **SCRIBE**. *Script*, or *scrip*, Any thing written, usually applied to some legal or mercantile instrument in writing.

Scripture, a writing; emphatically, holy or sacred writings; the *scriptures* contained in or comprising the Bible. See the Quotation from Hooker.

And he bigan at Moyse, and at alle the profetis, and declaride to hem in alle *Scripturis* that weren of him.

Wiclif. *Luke* ch. xxiv.

And he began at Moses, and at all the prophetes, and interpreted vnto the in all *Scriptures* which were wrytten of hym.

Bible, Anno 1551.

I trow it were to longe you to tary,
If I you told of every *script* and bond,
By which that she was feoffed in his lond,
Or for to rekkon of hire rich array.

Chaucer. *The Marchantes Tale*, v. 9500.

The statue of Mars upon a carte stood
Armed, and loked grim as he were wood,
And over his hed ther shinen two figures
Of sterres, that ben cleped in *scriptures*.

Id. *The Knightes Tale*, v. 2083.

Of whiche thyng all the ordinaunce and the sothe (for as moche as folke that been to comen after our daies, shal knowen it) I haue putte it in *scripture*, and in remembrance.

Id. *Boecius. De Consolatione*, book i.

SCRIVENER.

Whiche Daniell in his *scripture*
Expowned, as to fore it tolde.

Gower. *Conf. Am. Prologue.*

Thane the olde man sayde, Sir, surely vnder this tombe lyeth
your father; than the lorde of Manny redde the *scripture* on the
tombe, the whiche was in Latyn, and ther he founde y^t the olde
man had sayd trouth, and gaue hym his rewarde.

Lord Berners. *Frassart. Cronycle*, vol. i. ch. 110.

But herein appeared his true hautinesse of mind indeed, and
that unmatched spirit of his, that when upon the battell at Pharsalia,
as wel the cofers and caskets, with letters and other writings
of Pompey, as also those of Scipioes before Thapsus, came into his
hands, he was most true unto them, and burnt al, without reading
one *script* or scroll.

Holland. *Plinie*, book vii. ch. xxv.

With such differences of reeds, vallatory, sagittary, *scriptory*,
and others, that might be furnished in Judea.

Sir Thomas Brown. *Miscellany*, p. 82.

By *Scripture* it hath in the wisdom of God seemed meet to de-
liver vnto the world much, but personally expedient to be practised
of certaine men; many deepe and profound points of doctrine, as
being the maine originall ground whereupon the precepts of dutie
depend; many prophesies, the cleere performance whereof might
coufirme the world in beliefe of things vnseene; many histories to
serue as looking-glasses to behold the mercy, the truth, the
righteousnesse of God towards all that faithfully serue, obey, and
honour him; yea, many entire meditations of pietie, to be as pat-
ternes and presidents in cases of like nature; many things needfull
for explication, many for application vnto particular occasions, such
as the prouidence of God from time to time hath taken to haue
the seuerall bookes of his holy ordinance written.

Hooker. *Ecclesiasticall Politie*, book i. sec. 13.

It is ridiculous to say that bills of exchange shall pay our debts
abroad; that cannot be, till *scrips* of paper can be made current
coin. (*Scrips* of paper Locke afterwards calls three or four lines
writ on paper.)

Locke. *Considerations on Interest*, &c.

For if you will stand to what you have granted, that *Scripture*
is as perfect a rule of faith as a writing can be; you must then
grant it both so compleat that it needs no addition, and so evident
that it needs no interpretation; for both these properties are requi-
site to a perfect rule, and a writing is capable of both these pro-
perties.

Chillingworth. *Religion of Protestants*, part i. ch. ii.

This grand *scripturient* paper-spiller,
This endless, needless margin filler,
Was strangely tost from post to pillar.

Wood. *Athenæ Oxonienses*, vol. ii. Wm. Prynne.

It must argue great conceitedness and self-sufficiency for a man
to expect to be heard or attended to as a *scripturist*, or a textuary,
in opposition to the Christian world, unless he first fairly considers
and confutes what the ablest writers have pleaded for the received
instruction, and next as fairly proves and enforces his own.

Waterland. *Works*, vol. vii. p. 9. Introduction.

Whoever expects to find in the *Scriptures* a specific direction for
every moral doubt that arises, looks for more than he will meet
with.

Paley. *Philosophy*, ch. iv.

Giving up as indefensible which is truly *scriptural*, is so far
casting off *Scripture*, and unbelievers will refute our interpretations
and take advantage of our concessions; whereas, keeping close to
the plan of God's word, we need not fear maintaining our ground.

Secker. *Sermon 35*. vol. ii.

SCRIVELSBY, a Parish in Lincolnshire, the ma-
norial rights of which are held by the feudal tenure called
Grand Sergeantry, *i. e.* by the performance of some
definite personal service to the reigning monarch. The
Lord of Scrivelsby manor holds in its right the office of
Champion of England at a coronation, the particular
duties of which are explained under its proper head.
Scrivelsby is a rectory. Population, in 1831, 129.
Distant from London 136 miles.

SCRIVENER, (see *ante*, SCRIBE,) Fr. *escrivain*;
Sp. *escribano*, a writer; one who writes or draws up in
writing—legal, commercial, or mercantile securities; se-
curities for money.

The wofull complaint, which that ye shall here,
But even like as doth a *skriuenere*,
That can no more what that he shall write,
But as his maister beside doth indite.

Chaucer. *The Complaint of the Black Knight*.

Touching thy letter, thou art wise inough,
I wot thou nilte it deigneliche endite,
As make it with these argumentes tough,
Ne *scriveinishe* or craftely thou it write.

Id. *Troilus and Creseide*, book ii.

This also is to be noted as a testimonie remaining still of our
language, deriued from the Saxons, that the generall name for the
most part of euerie skillfull artificer in his trade endeth in
here with *vs*, albeit the *h* be left out, and *er* onlie inserted, as *scri-
uenhere*, writehere, shiphere, &c., for *scriuener*, writer, and shipper,
&c., beside manie other reliques of that speech, neuer to be abolished.

Holinshed. *Description of Britaine*, ch. vi.

Send for your daughter by your seruant here,
My boy shall fetch the *scriuener* presentlie.

Shakspeare. *Taming of the Shrew*, act v. sc. 4. fol. 225.

Laughing we leave an entertainment rare,
The paltry pomp of Fundi's foolish mayor,
The *scrivener* Luscus; now with pride elate,
With incense fum'd, and big with robes of state.

Francis. *Horace. Satire 5*. book i.

SCROFULA, } It. *scrofa*, *scrofolia*; Fr. *scrofoles*;
SCROFULOUS. } Lat. *scrofula*, from *scrofa*, a sow.
The disease and the animal have the same Gr. name
χοιρας.

A cataplasme of the leaves and hog's grease incorporat together,
doth resolve the *scrophules* or swelling kernels called the king's
evil.

Holland. *Plinie*, book xxii. ch. xiv.

Excess, the *scrofulous* and itchy plague,
That seizes first the opulent, descends
To the next rank contagious, and in time
Taints downwards all the graduated scale
Of order, from the chariot to the plough.

Cowper. *The Task*, book iv.

SCROLL, or } Fr. *escroue*. (See ESCROW.) The
SCROWL. } book wherein a gaoler sets down and
registers the names and surnames of his prisoners; a
roll containing the particulars of the court's expense; a
survey of ground held by a copyholder. See Cotgrave.
Minshew thinks *scroll* is corrupted from *roll*; and Skin-
ner derives *escroue* (see SCREW) from *ex* and *roue*, a
wheel. We say indifferently,

A scroll or roll of parchment; a paper or writing,
rolled or folded up.

Knowynge that y^e sayd Baylly vsed to bere *scrowys* and pro-
phecye aboute hy, shewyng to his cōpany that he was an en-
chaunter and of ylle disposicon, and that they shuld well knowe
by such bokes as he bare vpon hym.

Fabyan. *Chronycle*, Henry VI. Anno 1450.

All though he had and myght sufficiently haue declared his
renouncement by the redynge of an other meane persone, yet he,
for the more suretie of the mater, and for the sayde resygnacyon,
shuld haue his full force and strengthe, he therfore redde the
scrowle of resygnacyon hymselfe, in maner and fourme as foloweth.

Id. *Chronycle*, Anno 1398.

To whose hands, custody, knowledg, or possession, any of the
said accompts, books, *scroles*, instruments, or other writings con-
cerning the premises, or any part thereof, did, or is, come.

Burnet. *Records*, part ii. book ii. No. 28.

What wonder though my melancholious muse,
Whose generous course some lucklesse starre controules,
Her bold attempts to prosecute refuse,
And would faine burie my abortiue *scroules*.

Stirling. *Of an Inundation of Douer*.

But herein appeared his [Cæsar's] true hautinesse of mind in-
deed, and that unmatched spirit of his, that when upon the
battell at Pharsalia, as wel the cofers and caskets with letters and

SCRUB.

Holland. Plinie, book vii. ch. xxv.

When the strangers go away, their peans [guides among the Moors] desire them to give their names in writing, with a certificate of their honest and diligent serving 'em, and these they shew to the next comers, to get into business; some being able to produce a large *scrowl* of such certificates.

Dampier. Voyages. Anno 1689.

There is in the poor-house in this city his own [De Vos] portrait by himself, in black, leaning on the back of a chair, with a *scroll* of blue paper in his hand, so highly finished in the broad manner of Correggio that nothing can exceed it.

Reynolds. A Tour to Flanders and Holland.

SCROPHULARIA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Labiata*. Generic character: calyx five-cleft; corolla nearly globular, reversed; capsule superior, two-celled.

Seventeen species, natives of the Northern hemisphere. *S. nodosa*, *aquatica*, *scorodonia*, and *vernalis*, are natives of England.

SCROYLE. These *scroyles* of Angiers; Fr. *escrouelles*, i. e. scabby, scrophulous fellows. Whalley and Steevens. Fr. *les escrouelles*, the king's evil. Cotgrave.

BAST. By heaven, these *scroyles* of Angiers flout you, kings.
Shakspeare. King John, act ii. sc. 2. fol. 245.

Hang them, *scroyles*! there's nothing in them i' the world.
Ben Jonson. Every Man in his Humour, act i. sc. 1.

I cry thee mercy, my good *scroyle*, was't thou?
Id. The Poetaster, act iv. sc. 1.

SCRUB, v. } To *scrub* is to *scrape*, by the change
SCRUB, n. } of the vowel *a* into *u*, and of the *p* into
b. See **SCRAPE**. The difference of usage now depends upon *that* with which the act is performed; thus, the butcher *scrapes* his block with a knife, and *scrubs* or rubs it with a brush. A *scrub*, one who *scrubs* or *scrapes* together; any one, any thing mean.

Now sooping in side robes of royalty,
That erst did *skrub* in lowsy brokery.
Hall. Satire 2. book i.

Must I, thought I, giue ayme to such
A *skrub* and such a saint,
That skowndrell, and this counterfeit;
Confounded so I faint.
Warner. Albion's England, book vi. ch. xxxi.

GRA. Now by this hand I gaue it to a youth,
A kinde of boy, a little *scrubbed* boy,
No higher then thy selfe, the judge's clearke.
Shakspeare. Merchant of Venice, act v. sc. 1. fol. 183.

The yawning youth, scarce half awake, essays
His lazy limbs and dozy head to raise;
Then rubs his grummy eyes, and *scrubs* his pate.
Dryden. Persius. Satire 3.

We lay here all the day, and *scrubb'd* our new bark, that if ever we should be chased we might the better escape.
Dampier. Voyages. Anno 1681.

When that was done we heeled her, *scrubbed* her bottom, and tallowed it.
Id. Ib. Anno 1687.

And neighbouring jades resolv'd to tarry,
Rather than with such *scrubs* they'd marry.
King. Art of Love, part ii.

As the hair was got off one part, another was applied to the fire till they had got off the whole, yet not so clean but that another operation was necessary; which was to carry it to the sea side, and there give it a good *scrubbing* with sandy stones and sand.
Cook. First Voyage, book ii. ch. xv.

Well, all this is very pleasing, but how goes on business in the shop—(I beg pardon)—in the warehouse? O, the *scrubs* mind that.
Knox. Winter Evenings. Evening 9.

SCRUPLE, n.

SCRUPLE, v.

SCRUPLER,

SCRUPULIZE, v.

SCRUPULOUS,

SCRUPULOUSLY,

SCRUPULOUSNESS,

SCRUPULO'SITY.

Fr. *scrupule*; It. *scrupolo*; Sp. *escrupulo*; Lat. *scrupulus*, from *scrupus*, *saxum asperum*, a sharp stone; hence a hurt, a hinderance, an impediment. Met. A difficulty, a hesitation, a doubt, a fear, an apprehension; a nicety, a delicacy.

SCRUPLE.

A weight equalling twenty grains, or the third part of a drachm; any small portion.

And sith I looke in this matter but only vnto God, it maketh me little matter, though men cal it as it please the, and say it is no conscience but a foolish *scruple*.

Sir Thomas More. Workes, p. 1435.

Thinke you that Apostles would not haue bene to *scrupulous* to haue dronke his very blood? seing it was so playne agaynst Moses' lawe if they had vnderstand hym so grossely as ye do.

Frith. Workes, p. 143.

He ware vpon his head a diademe of purple, interpaied with white, like as Darius was accustomed, and fashioned his appaile after the manner of the Persians, wythout *scrupulositie* of anye euill token that it signified for the victorer to chaunge his habite into the fashion of him whome he had vanquished.

Brende. Quintus Curtius, fol. 151.

From the bough
She gave him of that fair enticing fruit
With liberal hand; he *scrupl'd* not to eat
Against his better knowledge, not deceav'd,
But fondly overcome with formal charm.

Milton. Paradise Lost, book ix.

If you please, fetch hither that of Greeklade, (to the third song,) which I will not importune you to believe; but without *scruple* you cannot but credit that of a monk of St. Dewi's.

Drayton. Poly-olbion, song 11.

Away with those nice *scruplers*, who for some further ends have endeavoured to keep us in an undue sense.

Hall. Remaines, p. 295.

The much urging this article not to be found in ancient creeds; not to have been taught or beleaved of the Eastern churches; not of that of Constantinople; and I know not what else, tending to make men first waver in their faith, then to doubt of their faith, and at length flatly to denie their faith; if in this, why not in other articles that eyther are or may be so *scrupulized*, all made ours, laid unto our charge by our adversary, and made the publick doctrine of our church?

Mountague. Appeale to Cæsar, ch. xviii.

The consideration whereof ought eternally to silence their *scrupulosity* who are so amused that the harms of the body should be the pains of the soul, the body in the mean time being not pained.

More. Immortality of the Soul, part ii. p. 104.

We shall therefore choose rather to break those laws of method, (neglecting the *scrupulosity* thereof,) and subjoyn them immediately in this place, craving the reader's pardon for this preposterousness.

Cudworth. Intellectual System, book i. ch. iii.

Captain Swan having received the two letters, did not doubt but that the English did design to settle a factory here; therefore he did not much *scruple* the honesty of these people, but immediately ordered us to get the ship into the river.

Dampier. Voyages. Anno 1686.

It may indeed, and doth sometimes happen, that this perplexity and *scrupulosity* about actions doth proceed from distemper and indisposition of body; and, where it doth so, it is a spice of that religious melancholy I am here to speak of.

Sharp. Sermon 2. vol. iii.

In matters, I mean, where duty doth intervene, and where pure conscience ought to guide and govern us; from making professions and ostentations, (void of substance, of truth, of knowledge, of good purpose,) great semblances of peculiar sanctimony, integrity, *scrupulosity*, spirituality, refinedness, like those Pharisees so often therefore taxed in the Gospel.

Barrow. Sermon 11. vol. i.

And there is no occasion to be *scrupulously* nice and critical in distinguishing to which of the parts the name strictly belongs.

Waterland. Works, vol. vii. p. 24.

SCRU-
PLE.
—
SCRUZE.

The *scrupulousness* of the parents or friends of the deceased persons deprives us oftentimes of the opportunities of anatomizing the bodies of men, and much more those of women.

Boyle. *Works*, vol. ii. p. 68.

I have been so severe in rejecting not only relations, but even authors not otherwise obscure, that, how much soever I foresaw my *scrupulousness* might impoverish my history, yet there are some whole treatises about cold countries, whence I have shunned to borrow any one authority.

Id. *Ib.* p. 478. *Preface*.

In what more the love of God consists I know not, so that I *scruple* not to rest it on reason, rather than on passion.

Gilpin. *Hints for Sermons*, sec. 29.

Pleasure and interest are his chief good, his only objects of serious pursuit, and in the attainment of these he is not *scrupulously* delicate.

Knox. *Essays*. No. 102.

Motives, indeed, are not to be too *scrupulously* inquired into while actions are found to be laudable.

Id. *Sermons. Religion the chief Concern of Life*.

SCRUTA'TOR, } Fr. *scrutateur*, *scrutine*; It.
SCRU'TINY, n. } *scrutatore*, *scrutinio*; Sp. *escru-*
SCRU'TINIZE, v. } *tinader*, *escrutinio*; Lat. *scru-*
SCRU'TINOUS. } *tator*, *scrutinium*; from *scru-*

tari, to search into; from Lat. *scruta*, Gr. *χρῆτη*, *γρῆτη*, orts, lumber; things thrown aside together as litter or refuse; and thence *scrutari*, to look into such things, *sc.* for some article that may be applied to a use. See Vossius, in *v. Scruta*. And, generally, *scrutiny* is

A search, an examination, an inquiry, an investigation.

Of all gentylwomen he hath the *scruteny*
In Fame's courte reportyng the same.

Skelton. *The Crowne of Laurell*.

For at three months a *scrutiny* was held,
And searchers then sent every where about,
That in that time if any were conceal'd,
They should make proof and straightly bring them out.

Drayton. *Moses His Birth and Miracles*, book i.

But age is froward, uneasy. *scrutinious*,
Hard to be pleas'd, and parsimonious.

Denham. *Of Old Age*, p. 4.

The manner of election was by *scrutiny*. The deputies of every province in *scripto* exhibites y^e one. The *scrutators* were two of the seculars.

Hales. *Letter from the Synod of Dort*, (Nov. 1618.)

The compromissarii should chuse according to the votes of such, whose votes they were obliged to *scrutinize*.

Ayliffe. *Parergon*.

Nor did he [Eusebius] live to see how easily the Arian sophistry was defeated and baffled after it had passed the *scrutiny* of such masterly hands.

Waterland. *Works*, vol. iii. p. 155.

And he should be chiefly conversant in such authors as require close attention, and will abide the test of a rational, though candid, *scrutiny*.

Knox. *Winter Evenings*. Evening 42.

Every thing about him is, on some account or other, declared to be good; and he thinks it presumption to *scrutinize* into its defects, or to endeavour to imagine how it might be better.

Goldsmith. *History of the Earth*, ch. iii.

As all good history deals with the motives of men's actions, so the peculiar business (as it seems to me) of religious history is to *scrutinize* their religious motives. Of these the principall is the consideration of a future state.

Warburton. *The Divine Legation*, book v.

I have likewise *scrutinized* minutely the motions of free-will, explained the difference between necessity and certainty, and shewn the consistence of liberty with pre-appointment.

Search. *Light of Nature*, vol. ii. part iii. ch. xxviii.

SCRUZE, v. } For squeeze; to compress or press
SCRU'ZING, n. } close together. It seems, Lye adds,
to be formed from *screw*. Phillips, in his *New World of Words*, says, the obsolete verb "*scruse*" is to crowd or

press hard; through heedless pronunciation corrupted by Londoners to *scrouge*. (Johnson and Pegge.) It is probably from to *crush*.

The soveraine weede betwixt two marbles plaine
Shee powned small, and did in peeces bruze;
And then atweene her lilly handes twaine
Into his wound the juice thereof did *scruze*.

Spenser. *Faerie Queene*, book iii. can. 5.

Tho up he caught him twixt his puissant hands,
And having *scruz'd* out of his carrion corse
The lothfull life, now loos'd from sinfull bands,
Upon his shoulders carried him perforce
Above three furlongs.

Id. *Ib.* book ii. can. 11.

And as for immoderation in drinking, the first news that we hear of wine is in Noah's drunkenness; he was the true Janus, the inventor of the *scrusing* of the grape to his cost.

Hall. *Chris. Moder.* sec. 2.

SCRY, *i. e.* *ascry*, *q. v.*

And so with the *scry*, he was fayne to flye in his shirte barefote and barelegged, fro house to house, fro garden to garden, in great dout and feare of taking by the Frenchmen, who had scaled and won the fortresse.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 272.

On Christmas day, nor all the feestes after, there was nothing doone; howbeit, the Englysshmen euery nyght looked to be waked with *scryes*.

Id. *Ib.* vol. i. ch. 371.

SCRYDE, *i. e.* *descried*, *q. v.*

They both arose, and at him loudly cryde,
As it had bene two shepheards cures had *scryde*
A ravenous wolfe amongst the scattered flockes.

Spenser. *Faerie Queene*, book 5. can. 12.

SCUD, v. } Ger. *schliessen*, *celeriter moveri*;
SCUD, n. } *schieten*, *fugere*; Sw. *skutta*, *cursi-*
SCU'DDING, n. } *tare*; to move quickly, to fly, to run;

from A. S. *scyt-an*, to shoot, *q. v.*

To shoot along, run, flee, or flit along; move speedily or rapidly. And see the last Quotation from Falconer.

The baron of Ophalie not sleeping nor slacking his matter, *squdded* with all hast into England.

Holinshed. *Description of Ireland. Anno 1290*.

The Driades were wont about thy lawns to rove,
To trip from wood to wood, and *scud* from grove to grove.
And all the bending forest lent an ear.

Drayton. *Poly-olbion*, song 26.

When he hath gained the thickets and woods, and gotten once into the forrests out of sight, then he *skuds* away, then hee runneth amaine for life.

Holland. *Plinie*, book viii. ch. xvi.

She rais'd her voice on high, and sung so clear,
The fawns came *scudding* from the groves to hear;
And all the bending forest lent an ear.

Dryden. *The Flower and the Leaf*.

All which time we *scudded*, or run before the wind very swift, tho' only with our bare poles, that is, without any sail abroad.

Dampier. *Voyages*, Anno 1687.

The jilt, not many hours before,
With the Plate-fleet had left the shore,
Laughs at the credulous fool behind,
And joyful *skuds* before the wind.

Somerville. *The Fortune Hunter*, can. 5.

The black'ning ocean curls, the winds arise,
And the dark *scud* in swift succession flies.

Falconer. *The Shipwreck*, can. 2.

Scudding is that movement in navigation by which a ship is carried precipitately before a tempest.

Id. *Ib.* Note.

SCU'FFLE, n. } Skinner thinks it to be *shuffle*,
SCU'FFLE, v. } (*q. v.*) with the change of *h* into *c*,
and to mean

A confused and tumultuous contest or fight.

—
SCULK.

Neither had this *skuffling* an end vntill night was begun: at what time the Latines, Rutiles, and Troians left the wild medley, howbeit not discontinuing their malice.

Warner. *Albion's England*. Add. to book ii.

GET. Scoring a man o'r the coxcomb
Is but a scratch with you! o' your occupation,
Your scurvy *scuffling* trade; I was told before—
My face was bad enough; but now I look
Like bloody bone and raw head, to fright children.

Beaumont and Fletcher. *The Prophetess*, act iv. sc. 5.

DI. All they were but scratches; but the loss of blood made him faint.

CLE. We dally, gentlemen.

THRA. Away.

DI. We'l *scuffle* hard before he perish.

Id. *Philaster*, act v. sc. 1.

His captaine's heart,
Which in the *scuffles* of great fights hath burst
The buckles on his brest, reneages all temper,
And is become the bellows and the fan
To coole a gypsie's lust.

Shakspeare. *Antony and Cleopatra*, act i. sc. 1. fol. 340.

A worthie sport it is to see the manner of their *skuffling*.

Holland. *Plinie*, book x. ch. iii.

By an odd chance, though not uncommon in blind *scuffles*, the infidels and we have changed weapons.

Warburton. *The Divine Legation*, book iv. sec. 2.

The meek and bashful boy will soon be taught,
To be as bold and forward as he ought;
The rude will *scuffle* through with ease enough,
Great schools suit best the sturdy and the rough.

Cowper. *Tirocinium*.

The officer refusing to give it up, and being joined by the crew of the pinnace, which was waiting for Captain Cook, a *scuffle* ensued, in which Pareea was knocked down, by a violent blow on the head, with an oar.

Cook. *Third Voyage*, book v. ch. iii.

SCULK, or } The D. *schuylen*; Sw. *skyla*, and
SKULK. } *scholka*, are *latitare*, *occultare*, to lye
hidden, to hide, to conceal. In R. Gloucester and
Gower, it is—

To move or go under covert, secretly, slyly; and the origin seems to be the A. S. *scyl-an*, to separate, to secrete. And see to SHEER.

To secrete, to go secretly or concealedly, to go or move into, be, or stay in secret places; to conceal, to lurk.

Bote hii þus mýd *scolkyng* vp þe Englysse wende.

R. Gloucester, p. 256.

When he seeth the lusty knightes
Reuden, where these women are,
Away he *sculketh* as an hare.

Gower. *Conf. Am.* book iv.

PAC. Are not you he that rather than you durst goe an industrious voyage, being press'd to the islands, *skulk'd* till the fleet was gone?

Beaumont and Fletcher. *The Martial Maid*, act ii. sc. 1.

And as a lyon *skulking* all in night,
Farre off in pastures; and come home, all dight
In iawes and brest-lockes, with an oxes blood,
New feasted on him, his lookes full of mood.

Chapman. *Homer. Odyssey*, book xxii.

But I suppose they chose Perico rather for the scene of their enterprise, partly because they might there best *skulk* among the islands.

Dampier. *Voyages*, Anno 1685.

They would forthwith publish slanders unpunished, the authors being anonymous, and *skulking* under the wings of publishers; a set of men who neither scrupled to vend either calumny or blasphemy, as long as the town would call for it.

Pope. *Scriblerus of the Poem Dunciad*, p. 297.

The thief discover'd straight his prey forsook,
And *skulk'd* amid the sedges of the brook.

Beattie. *Virgil*, part iii.

SCULL, n., or } Skinner says, the *shell* of the SCULL.
SKULL. } head, but why so used he does not explain. *Scull*, Tooke considers to be the past participle of *scyl-an*, to divide, to separate; whether applied to The separated bone of the head, or to A division or portion of fish divided or separated from the main body, i. e. to *shoals* of fish.

See SCALE, SHOAL, and SHOULDER.

Corineus tok hys bowe of hym, & smot hym a wonde
A bouen on þe *scolle* with ys owne bowe anon,
þat þe *scolle* to breke in peses mony on.

R. Gloucester, p. 16.

And with the staf she drow ay nere and nere,
And wend han hit this Alein atte full,
And smote the miller on the pilled *skull*,
That doun he goth, and cried, "Harrow! I die."

Chaucer. *The Reves Tale*, v. 4233.

And she to his byddyng obeide,
And toke the *sculle*, and what hir liste
She drinketh, as she, whiche nothyng wist
What cup it was; and than all out
The kyng in audience about
Hath tolde, it was hir father's *sculle*.

Gower. *Conf. Am.* book i.

Ryuers ren nat till the sprynge be full,
Better a dumme mouthe than a brayneles *scull*.

Skelton. *The Crowne of Laurell*.

The Anthropophagi about the North pole use to drinke out of the *sculs* of men's heads, and to weare the scalpes, haire and all, in stead of mandellions or stomachers before their breasts, according as Isogonus the Nicean witnesseth.

Holland. *Plinie*, book vii. ch. ii.

But all the ground with *sculs* was scattered,
And dead men's bones, which round about were flong;
Whose lives, it seemed, whilome there were shed,
And their vile carcases now left unburied.

Spenser. *Faerie Queene*, book ii. can. 7.

The cormorant next comes, by his devouring kind,
Which flying o'er the fen immediately doth find
The fleet best stor'd of fish, when from his wings at full,
As though he shot himself into the thicken'd *skull*,
He under water goes, and so the *shoal* pursues.

Drayton. *Poly-olbion*, song 25.

Anon, he's there afoot,
And there they fly, or die, like *scated sculls*
Before the belching whale.

Shakspeare. *Troilus and Cressida*, act v. sc. 5.

Forthwith the sounds and seas, each creek and bay
With frie innumerable swarme, and *shoales*
Of fish that with their finns and shining *scales*
Glide under the green wave, in *sculles* that oft
Bank the mid sea.

Milton. *Paradise Lost*, book vii.

The followers of Odin sung the praise of death in their hymns, witness the Ode of good king Lodbrog; and had no better a reason for it than the hope of drinking beer in the *sculls* of their enemies at the palace of Odin.

Bolingbroke. *Fragments of Essays*.

The *scull*, below the eyebrows, they cut off, and having cleansed it thoroughly, if they are poor they merely cover it with a piece of leather; if they are rich, in addition to this they decorate the inside with gold; it is afterwards used as a drinking cup.

Beloe. *History of Herodotus*, book iv. ch. lxx.

SCULL, } Minshew derives from the hollowness
SCULLER. } of a boat like a *shell* or *scull*; or it may be, Skinner adds, from the Fr. *escuelle*, Lat. *scutula*, from some resemblance to a platter or charger. G. Douglas uses the word *skul*, "for a vessel to contain liquids. 'We kest on mony a *skul* of warme milk,' vol. xx. p. 29. In flakoun (flagon) and in *skull*, vol. v. p. 210." The Glossarist declares for the Etymology of Minshew. And see Ithre, in v. SKOAL, and Jamieson.

SCULL.
—
SCULP-
TOR.

ONO. I erre you have the marshaling of all the ghosts too, that passe the Stygian ferry, and I suspect you for a share with the old sculler there, if the truth were knowne; but let that scape.

Ben Jonson. *Cynthia's Revels*, act i. sc. 1.

Struck with dumb wonder at those songs,
He [the dog] wish'd more ears, and fewer tongues.
Charon amaz'd his oar foreslows,
While the boat the sculler rows.

Fletcher. *Boethius*, book iii.

What should he do, who twice had lost his love?
What notes invent, what new petitions move?
Her soul already was consign'd to fate,
And shivering in the leaky sculler sate.

Dryden. *Virgil. Georgics*, book iv.

This is his moral, say his under-pullers,
The poor and innocent are safe in scullers.

Byrom. *Remarks on Horace*, p. 238.

SCULLION, } Old Fr. *sculier*; "Officier qui a
SCULLERY. } *soin de la vaisselle, des plats et des*
assietes." Roquefort. Fr. *escuelle*, a platter; *q. d. es-*
cuellion, a washer of plates and dishes. Skinner. Lat.
scutula.

The servant whose duty it is to clean the plates and dishes; or other kitchen utensils. And hence applied to any thing low and mean.

They bee not vned to coulde, as you may see by their smooked *scolions'* faces, handes, and feete, with all the place where they stande.

Barnes. *Workes*, p. 341.

At Christmas a fire happened at the king's palace at Westminster; the effect, as it seems, of the great feasting there. For it fell chiefly in the kitchen and office adjoining, as the *scullery*.

Strype. *Eccles. Memorials*. Edward VI. ch. xxiv.

Which brought forth his *scullionly* paraphrase on St. Paul, whom he brings in, discoursing such idle stuff to the maids and widows, as his own servile inurbanity forbears not to put in the apostle's mouth, of the soul's conversing.

Milton. *Colasterion*.

This botcher looks as if he were a dough-bak'd, a little butter now, and I would eat him like an oaten-cake; his father's diet was new cheese and onions when he got him; what a *scullion-fac'd* rascal 'tis.

Beaumont and Fletcher. *Love's Cure*, act ii. sc. 1.

Upon an address from parliament to remove his chancellor and treasurer, his answer was, "that he (Richard the Second) would not remove, at their request, the meanest *scullion* out of his kitchen."

Bolingbroke. *Remarks on the History of England*.

I shall pay so much respect to my contemporaries as never to offend their delicacy willingly; therefore shall choose such illustrations as may appear fashionable and courtly, as well as clear and luminous, wherever I have the option; but where I want skill to compass both, shall hope for indulgence if I prefer clearness and aptness before neatness and politeness, and fetch comparisons from the stable or the *scullery*, when none occur suitable to my purpose in the parlour or the drawing room.

Search. *Light of Nature*. Introduction, p. xxxv.

SCULPTOR, See INSCULP.
SCULPTURE, n. } Fr. *sculpteur*; It. *scultore*; Sp.
SCULPTURE, v. } *escultor, esculpidor*; Lat. *sculptor*,
SCULPTILE, } from *sculpere*, to cut, to grave,
SCULPT. } which (Vossius) differs from *scal-*
pere only in usage; and he derives from the Gr. $\gamma\lambda\alpha\phi\omega$,
with the Æolic prefix, $\sigma\gamma\lambda\alpha\phi\omega$, $\sigma\gamma\lambda\upsilon\phi\omega$,

To grave or ingrave, to cut or carve into, to inscribe.

Zeuxis fonde first the portrature;
And Promætheus the sculpture,
After what forme that hem thought,
The resemblance anon thei wrought.

Gower. *Conf. Am.* book iv.

O, that the tenor of my just complaint
Were *sculpt* with steel on rocks of adamant!

Sandys.

The same description [Moses with horns] we find in a silver medal; that is upon one side Moses horned, and on the reverse the commandment against *sculptile* images.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. ix.

Anon out of the earth a fabrick huge
Rose like an exhalation, with the sound
Of dulcet symphonies and voyces sweet,
Built like a temple, where pilasters round
Were set, and Doric pillars overlaid
With golden architrave; nor did there want
Cornice or freeze, with bossy *sculptures* grav'n.

Milton. *Paradise Lost*, book i.

A pleasing vigour his fair face express'd;
His neck, his hands, his shoulders, and his breast,
Did next in gracefulness and beauty stand,
To breathing figures of the *sculptor's* hand.

Dryden. *Ovid. Metamorphoses*, book xii.

Still as a tomb-stone, never to be mov'd,
On some good man or woman unprov'd
Lays its eternal weight; or fix'd as stands
A marble courser by the *sculptor's* hands,
Plac'd on the hero's grave.

Pope. *Homer. Iliad*, book xvii.

What are to him the *sculptures* of the shield,
Heaven's planets, earth, and Ocean's watery field?

Dryden. *Ovid. Metamorphoses*, book xiii.

— The massy *sculptur'd* vase,
Glittering with golden studs, four handles grace;
And curling vines around each handle roll'd,
Support two turtledoves emboss'd in gold.

Pope. *Homer. Iliad*, book xi.

If these observations have hitherto referred principally to painting, let it be remembered that this art is much more extensive and complicated than *sculpture*, and affords therefore a more ample field for criticism; and as the greater includes the less, the leading principles of *sculpture* are comprised in those of painting.

Reynolds. *Works*, vol. ii. p. 11. Discourse 10.

SCUPPER;—*skupper* holes, says Skinner, are holes in the benches of a ship, (*in transtris*), through which the water flows; from the Ger. *schopsfen*, *haurire*, because through them the water is drawn or drained off. They are said to be,

Holes in the deck, through which the water drains off.

No sooner we were at sea, but by the violence of the storm and the working of the ship, we made a great quantity of water through our holes, ports, and *scuppers*.

Anson. *Voyages*, book iii. ch. iv.

SCUR, v. } i. e. to scour; to move rapidly, to clear
SCURRY, v. } the ground swiftly.
SCURRER.

I have seen these Britains, that you magnifie,
Run as they would outrun time, and roaring
Basely, for mercy roaring; the light shadows,
That in a thought *scur* o'r the fields of corn,
Halted on crutches to 'em.

Beaumont and Fletcher. *Bonduca*, act i. sc. 1.

Then he [Hannibal] commanded the horsemen of the Numidians to *scurry* to the trenches of the Romans, to intice them to come to battell.

Sir Thomas North. *Plutarch*, fol. 882.

And he sente forth the *scurriers* to aduyse the dealynge of their ennemyes, and to se where they were, and what nombre they were of.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. xxxiii.

SCURF, } D. *schorft, schorftig, scurf, scurfy*;
SCURFY, } A. S. *sceorf-a*, from *sceorf-ian*, *ro-*
SCURFINNESS, } *dere, mandere*, to gnaw, to bite;
SCURVY, n. } Skinner, with whom Lye coincides,
SCURVY, adj. } *quod in morbum istum edacem op-*
SCURVILY. } *time quadrat. Scurvie or scorbie*,

says Junius, is the disease which is commonly called *scorbute*. He and Skinner give the words *scorbie* or *scorbute* the same origin. See SCORBUTE. *Scurvy* seems no other than *scurfy*. See ROYNE. *Scurvy*, met., is

SCULP-
TOR.
—
SCURF.

SCURF. Shabby, mean, vile, worthless; despicable, contemptible.

SCUR-RILE.

He said, "He never denied pilgrimages, but that much *scurff* must be pared away, ere it could be well done; as superstition, idolatry."

Strype. Eccles. Memorials, book i. ch. xxii. *Henry VIII.*

Her crafty head was altogether bald,
And, as in hate of honorable eld,
Was overgrowne with *scurfe* and filthy scald.
Spenser. Faerie Queene, book i. can. 9.

And euer to remayne
In wretched beggary,
And maungy misery,
In lousy lothsumnesse,
And scabbed *scorffynesse*.

Shelton. D. of Albany, &c.

A sorte of foule drabbes
All *scuruy* with scabbes.

Id. Elinour Rimming.

Pr. Is she not very angry?
Ser. You'll find that quickly:
May be she'll call ye saucy *scurvey* fellow,
Or some such familiar name.

Beaumont and Fletcher. The Wild-goose Chase, act ii. sc. 2.

Such boyst'rous trifles thy muse would not brooke,
Save when she'd show how *scurvity* they looke.

Berkenhead. On the Collection of Beaumont and Fletcher's Works.

A cake of *scurf* lies baking on the ground,
And prickly stubs, instead of trees, are found.
Dryden. Palamon and Arcite, book ii.

But here comes folks a-preaching to us
A saving doctrine to undo us,
Whose notions fanciful and *scurvy*,
Turn old religion topsy-turvy.
Lloyd. The Cobbler of Tessington's Letter.

Upon examination, we found their teeth loose; and that many of them had every other symptom of an inveterate sea *scurvy*.

Cook. Second Voyage, book i. ch. iv.

She makes forward advances to the unwary to bring them to her, but when she has gotten them fast in her fetters she uses them *scurvily*, allowing them no rest in her service, and feeding them only with delusive expectations and stale scraps of enjoyment that have utterly lost their savour.

Search. Light of Nature, vol. i. part ii. ch. xxxii.

SCU'RRILE, } Fr. *scurrilité*; It. *scurrilita*;
SCURRI'LITY, } Lat. *scurrilis*, from *scurra*, a jester,
SCU'RRILIOUS, } a scoffer. Of uncertain Etymo-
SCU'RRILIOUSLY. } logy; perhaps from A. S. *scyr-an*.
See **SCOUR.** The adjective is applied from the lowest uses of jesting or scoffing.

Jesting or scoffing, like a vulgar buffoon; with vulgar, low calumny or scandal; low, vulgar, indecent, or unbecoming.

Now I need not to tell that *scurrilitie*, or ale-house iesting, would be thought odious, or grosse mirth would be deemed madness.
Wilson. The Arte of Rhetorique, p. 4.

And sacred silver mistress, lend thine ear
(Which ne'er heard *scurril* term, into whose port
Ne'er entred wanton sound) to my petition,
Season'd with holy fear.

Beaumont and Fletcher. The Two Noble Kinsmen, act v. sc. 1.

The people's guilty too, of brow more bold,
That sits, and dares thrice-*scurrile* lords behold.
Holyday. Juvenal. Satire 8.

One would suspect him [John Standish] not the same man called by Bale a *scurrilous* fool, and admired by Pits for piety and learning, jealous lest another man should be more wise to salvation than himself.
Fuller. Worthies. Lancashire.

Herein onelie are the inferiour sort somewhat to be blamed, that being thus assembled, their talke is now and then such as savoureth of *scurrilitie* and ribaldrie.

Holinshed. Description of England, book ii. ch. vi.

VOL. XXVII.

If either you, or I, know the right way
To part *scurrilitie* from wit, or can
A lawfull verse, by th' eare, or finger scan.

Ben Jonson. Horace.

He is ever merry but still modest; not dissolved into indecent laughter, or tickled with wit *scurrilous* or injurious.

Habington. Castara, p. 3.

If we are of a sanguine and jovial disposition, our idle hours will be so many tempting opportunities to intemperance and wantonness, profaneness and *scurrility*, and all the other wickednesses of a lewd and dissolute conversation.

Scott. Christian Life, part i. ch. iv.

But Ponet, late bishop of Winton, now in exile, excellently answered this *scurrilous* book, with great learning and clearness.

Strype. Eccles. Memorials, ch. xx. *Mary.*

In this book he is exceeding bitter against Morus, and pretends to give a true history of his notorious impurities both at Geneva and Leyden, and an account of his own particular life, to vindicate himself from what, as he thought, was *scurrilously* said of him by Morus.

Wood. Fasti Oxonienses, vol. i. fol. 265.

It may be so; but then remember, it was not till you yourselves had led the way to the abuse of words; and had called calumny plain dealing; and a *scurril* license urbanity.

Warburton. Dedication to the Freethinkers.

We must acknowledge, and we ought to lament, that our public papers have abounded in *scurrility*.

Bolingbroke. Answer to the Defence.

Within a few years satire has reassumed her original rude form of *scurrilous* and petulant abuse.

Knox. Essay on Satire.

SCUSE, i. e. excuse.

Por. That *scuse* serves many men to saue their gifts,
And if your wife be not a mad woman,
And know how well I haue deserv'd this ring,
Shee would not hold out enemy for euer
For giuing it to me.

Shakspeare. Merchant of Venice, act iv. sc. 1. fol. 181.

SCUT. Lye suggests the Goth. *skaut*, *fimbria*, the edge or border; it is perhaps from the A. S. *scyt-an*, to shoot; that which *shoots* up, *sc.* like
The short, erect tail of a hare.

Mased as a Marche hare, he ran lyke a *scut*.

Shelton. The Crowne of Laurell.

The husband (should) take a frogg and spit her (as it were) alength upon a reed, so as it goe in at the *skut* or matrixe behind, and come foorth againe at the mouth.

Holland. Plinie, book xxxii. ch. v.

Which in the hare holds not the common position, but is aversly seated, and in its distention enclines unto the coecix or *scut*.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xv.

SCUTE,

SCU'TAGE,

SCU'TCHEON.

SCUTE.

SCUTI-
GERA.

And in iij convenient places of the said grave stone I will be sett iij platts graven with iij *skochens* of armys folowing, that is to say, at the hede the armes of the citie of London, and the Drapers' armes, and at the fett myn owne armes, and my merchaunt marke.

Fabyan. Chronicles. Preface.

For within the chappel of Bellona, he caused to bee set up the *scutcheons* and shields of his auncestours; taking great contentment to have the armes of his predecessours seene on high, and the same accompanied with the titles of their honourable dignities to be read.

Holland. Plinie, book xxxv. ch. iii.

And following these vain pleasures and delights, when he was in his galley, he caused the plancks of the poop thereof to be cut and broken up, that he might lie the softer; for his bed was not laid upon the overlop, but laid upon girthes strained over the hole, cut out and fastened to the sides; and he carried to the wars with him a guilded *scuchion*, wherein he had no cognizance nor ordinary device of the Athenians, but onely had the image of Cupid in it, holding lightning in his hand.

North. Plutarch. Lives, p. 171.

This pecuniary satisfaction (in lieu of personal attendance, *scutifer*, bearing a shield) at last came to be levied, by assessment at so much for every knight's fee, under the name of *scutage*.

Blackstone. Commentaries, book i. ch. viii.

The king could require in war the persona. attendance of his vassals, that is, almost all the landed proprietors; and if they declined the service, they were obliged to pay him a composition in money, which was called a *scutage*.

Hume. History of England, vol. ii. Appendix 2.

Though all the titles, coronets, and stars,
That statesmen aim at, and that Malton bears,
Enrich your 'scutcheon, dignify your crest,
Beam on your coach, and blaze upon your breast.

Cawthorn. The Equality of Human Conditions.

SCUTELLA, in Zoology, a genus of *Echinodermata*.

Generic character. Body flattened, elliptical or sub-orbicular, enveloped in a crustaceous covering, armed with innumerable spiniform tubercles and movable spines, slightly convex above, flat below, with the margin thin, slightly bordered, and furnished with very small spines; the disc divided into numerous compartments, which are bordered, short, and resemble petals of a flower; mouth below, central; anus between the mouth and margin.

Type of the genus, *S. dentata*, Lamarck; *Kleine, pl. xlix. fig. 6, 7.* Inhabitants of tropical seas; some few species occur in a fossil state.

SCUTELLARIA, in Botany, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiatæ*. *Generic character:* border of the calyx entire, closed and covered with a lid after flowering; corolla tubular, elongated.

Twenty-two species, natives of the Northern hemisphere. *S. galericulata* and *S. minos* are natives of England.

SCUTELLERA, in Zoology, a genus of *Hemipterous* insects.

Generic character. *Antennæ* longer than the head, inserted near the inner margin of the eyes, five-jointed, the second joint shorter than the third; *labrum* long and subulate; *thorax* narrowed in front; *scutellum* ample, covering the whole of the abdomen; body oblong-oval, generally of brilliant colours; *tarsi* three-jointed, the basal joint short.

Type of the genus, *S. sexmaculata*; *Leach, Zool. Misc. vol. i. pl. xxxvi. fig. 1.* Rather an extensive genus, the species of which inhabit the tropical regions of the globe, and are usually adorned with brilliant metallic colours.

SCUTIGERA, in Zoology, a genus of *Myriapoda*.

Generic character. *Antennæ* setaceous, composed of

numerous joints, longer than the head; mouth with two mandibles; *labrum* multifid; with two slender palpi, and two pediform appendages, pierced at the end for the passage of a poisonous fluid; body elongated, linear, with fifteen pair of legs; eyes granulated, compound; legs elongated, unequal.

Type of the genus, *Scolopendra coleoptrata*; *Linnaeus, Syst. Nat. vol. ii. pl. 1062.* Inhabits Southern Europe.

SCUTTLE, *Fr. escoutilles*; *Sp. escotilla*. Skinner thinks may be from the *D. schuyte*, a boat, or from *schuttell*, *scutella*, a kind of dish or platter; it is more probably from the *A. S. scyt-an*, to shoot.

The *scuttles* in the deck of a ship, the opening through which goods, &c. are shot into the hold.

A coal *scuttle*; to shoot coals into the cellar is a common expression; from the *scuttle* they are shot or thrown upon the fire.

To *scuttle off* or away, is to *scud* or *scuddle off*.

To *scuttle* a ship; to make openings or holes.

The commodore, having no occasion for these other vessels, had ordered the masts of all five of them to be cut away at his first arrival; and on his leaving the place they were towed out of the harbour, and *scuttled* and sunk.

Anson. Voyages, book iii. ch. iv.

We hoysed out our boat, and took up some of them; as also a small hatch, or *scuttle* rather, belonging to some bark.

Dampier. Voyages. Anno 1688.

Then we jogg'd on again to the Northward, and saw many small dolphins and whales, and abundance of *scuttle-shells* swimming on the sea.

Id. Ib. Anno 1699.

SCUTTLE, *D. schotel*; *Fr. escuelle*; *It. scodella*; *Sp. escudilla*; *Lat. scutella, scutula*, a dish, a platter, from *scutum*, says Vossius, because the *scutella* was formed like an oblong shield. *Scull* is,

A Scotch name for a basket of a semicircular form. *Jamieson.* It is, perhaps, the same word as the preceding.

A *skuttle* or *skreene*, to rid soil from the corn.

Tusser. Husbandry Furniture, p. 14.

The earth and stones they are fain to carry from under their feet in *scuttles* and baskets.

Hakewell. On Providence.

SCUTULA, in Botany, a genus of the class *Octandria*, order *Monogynia*. *Generic character:* calyx spreading, shield-formed; corolla, petals five, nearly round, acuminate, conniving; berry situated in the calyx, eight-celled, one-seeded; seeds compressed.

Two species, natives of CochinChina.

SCYDMÆNUS, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* eleven-jointed, rather long, clavate, the basal joint robust, slightly elongate, the second also rather large, the three or four terminal ones gradually thickening, with the last longest, acuminate or ovate, the intermediate joints smallest, and slightly variable in the different species; *palpi* four, maxillary elongate, four-jointed, the third joint large, pear-shaped, the fourth minute, subulate; head ovate-orbicular, nutant; eyes large, prominent; *thorax* narrower than the elytra, attenuated behind; *elytra* ample, free, ovate, convex, entire, their base generally furrowed; legs slender; *femora* clavate; *tibiæ* slightly curved; *tarsi* pentamerous.

Type of the genus, *S. tarsatus*, *Kunze*; *Denny, Monogr., Pselaph., et Scydmaen., pl. xi. fig. 1.* A genus consisting of numerous, very minute species, of which nearly twenty are found in England.

SCUTI-

MÆNUS.

SCYL-
LÆA.
—
SCYL-
LION.

SCYLLÆA, in Zoology, a genus of *Gasteropodous Mollusca*.

Generic character. Body gelatinous, oblong, greatly compressed on the sides, channelled beneath; back with an elevated crest, with four alary processes disposed in pairs; *branchiæ* external, expanded in fascicles over the internal face of the dorsal processes; head slightly prominent; *tentacula* two, dilated above and narrowed towards their base.

Type of the genus, *S. pelagica*; Cuvier, *Ann. Mus.* vol. vi. pl. lxi. fig. 1, 3, 4. Inhabits the Atlantic Ocean.

SCYLLARUS, in Zoology, a genus of *Decapodous Crustacea*.

Generic character. *Antennæ* four, the lateral ones with four flattened joints at the base, the intermediate pair filiform, bifid at the apex; eyes distant; body oblong; *carapace* large, broad, slightly convex; tail extended, semicylindrical, terminated by a scale-like fan-shaped fin; legs ten in number, simple, terminated with a claw at the apex.

Type of the genus, *S. arctus*, Fabricius; *Cancer arctus*, Linn. *Syst. Nat.* vol. i. pl. ii. p. 1053. A native of the European Ocean; supposed, but erroneously, to occur on the English coasts: there are several other species of the genus.

SCYLLION, from the Gr. σκυλιον, a shark, Cuv.; *Dogfish*, Yarr. In Zoology, a genus of animals belonging to the family *Plagiostomi*, order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Muzzle short and obtuse; nostrils near the mouth, more or less closed by cutaneous lobes; teeth each having a long point in the centre, and a very small one on either side; inspiracles or temporal apertures; branchial openings partly above the pectoral fins; dorsal fins far back, the first a little before the ventrals; caudal fin long and truncated at its tip: oviparous.

This genus, separated by Cuvier from the True Sharks, (*Squali*, Lin.) is distinguished from them by the shortness of the muzzle, by the nostrils extending into grooves, and by the truncated form of their tail. Their teeth consist of a middle spear-like piece, at the base of which on either side is a smaller process, and they are placed in two, three, or four rows in each jaw. They are oviparous, and deposit their eggs several times in the year among fuci and other marine plants, in the sand and mud, where, when first hatched, the young fish are amply provided with nourishment.

From a variation in the position of the anal fin as regards the second dorsal, Cuvier has divided them into two sections, to the former of which all the European species as well as some others belong.

a. *With the anal fin opposite the interval between the dorsal fins.*

S. Canicula, Cuv.; *Squalus Canicula*, Lin.; *la Roussette*, Bl.; *Spotted and Lesser-spotted Shark*, Penn.; *Small-spotted Dogfish*, Yarr. From eighteen to thirty inches in length; the body thickest at the pectoral fins, and thence regularly tapering to the tail; head large, flattened above; eyes large and orbits elongated, with an aperture behind each; mouth horse-shoe shaped, and each jaw armed with four rows of teeth; lobes of the nostrils united and concealing the upper lip; five branchial openings on each side, the first of which is the largest, and the fifth the smallest, between the mouth and the pectoral fins, which are large; first

dorsal fin opposite the space between the ventral and anal fins; ventral fins of a triangular shape, their bases united almost throughout their whole length in the male, but less so in the female; between them the lengthened vent; upper parts marked with small reddish-brown spots on a very pale reddish-brown ground; sides and belly pale ochrish-white; pupils black with white irides; the skin glossy, with numerous close, small, hard points, which feel rough if the finger be carried along them from the tail forwards, but smooth in the opposite direction; it is used for polishing wood. This species is found not only in the British, but also in the Mediterranean and in the Indian Seas; it is very common on our Southern coast, and in Cornwall is called the *Morgay*. It lives near the bottom, feeding on mollusca and small fish, and is very voracious. Very good oil is obtained from its liver.

S. Catula, Cuv.; *Squal. Catulus et Stellaris*, Lin.; *le Rochier*, Lacep.; *Large-spotted Dogfish*, Yarr. From two to three feet long, and differing from the last species in the nostrils being smaller, not united, and leaving the mouth and upper lip distinct, and in the ventral fins being cut square; upper parts brownish-grey, slightly tinged with red; back, sides, and tail sparingly marked with large deep brown or black spots; under parts whitish; pupils green, irides greyish. It lives among the rocks, and is found, though not so commonly, in the same seas as the last species. In Scotland it is called the *Bounce*. In February and March the female is found full of forty or fifty pale yellow eggs, which she deposits in May among the rocks. Cuvier considers the *Roussette Tigrée* of Bloch distinct from *S. Canicula*, with which Bloch considers it identical, and supposes it to be a foreign species very nearly allied to *S. Catula*.

S. Melanostoma, Bonap.; *le Squale Mélastome*, Blainv.; *Black-mouthed Dogfish*, Yarr. Length twenty-five inches; head flat on the top, rather wide behind; nostrils double, one beneath linear, the other on the margin; temporal apertures nearly angular; pectoral fins wide; upper lobe of the tail in a line with the body, bent downwards towards its extremity, rounded, incised, or jagged, its upper edge armed with a double row of prickles pointing outward and downward on either side; under lobe rather narrow and expanded beneath; mouth dark coloured within; head and back light brown, with two rows of ocellated spots on either side, one commencing at the neck and running along the back, the other behind the eye, running along the upper side of the belly and becoming obsolete at the ventral fins; between these rows numerous irregular spots; hinder part of the back and fins barred and clouded with various tints of brown and yellow. Is common in the Mediterranean, but rare on the British coast; it has been caught off Polperro in Cornwall, and described by Mr. Couch as the *Eyed Dogfish*. Risso has described this species under the name of *Roussette d'Artesi*.

S. Africanus, Gmel.; *le Galonné*, Brouss.; *Striped Dogfish*. Two feet and a half in length; the tongue and palate covered with small blunt tubercles; pectoral fins large; ventrals nearly triangular; caudal fin rounded at its lower extremity; this species is distinguished by seven parallel longitudinal stripes passing from the tip of the nose to that of the tail. Is taken off the African coast, at False Bay, at the Cape of Good Hope.

S. Freycineti, Cuv.; *Freycinet's Dogfish*. About a foot long; muzzle obtuse and rounded; mouth near the nostrils, which are fringed; lips projecting and plaited;

SCYL-
LION.

SCYL-
LION.

temporal apertures very large, close to and below the eyes; fourth and fifth branchial openings closer than the rest, and partially hidden by the base of the pectoral fins; both dorsal fins of equal size, triangular, and obtuse, the beginning of the first corresponds to the middle of the ventral fins; anal fin small, long, and entirely passing back beneath the caudal fin, which it touches, and seems to form its first lobe; caudal fin compressed, truncated at its tip, which shows an indication of a cleft, and composed of two lobes, of which the first is the larger; its general colour reddish, with broad reddish-brown rings, which become more distinct towards the tail; dorsal fins each marked with two round spots. Caught off the Isle of Waigiou.

S. Edwardsii, Cuv.; *Greater Catfish*, Edw. Cuvier considers this species as distinct from *S. Stellaris*, with which it is often confounded; it may, however, turn out to be merely the young of that species. Edwards states that the back is of a brownish colour, varied with broken irregular bars of dark blackish, and the belly white; all the fins spotted with ashy. His specimens were very young, and taken off the Cape of Good Hope.

S. Gunneri, Cuv.; *Squal. Catulus*, Gunn.; *Gunner's Dogfish*. Nearly four feet in length; muzzle long, transparent, and studded on both its upper and under surfaces with numerous delicate pores; skin rough, especially on the back; the prevailing colour grey, whence by some persons it has been called the *Grey Shark*, tinged with reddish on the back, but becoming lighter on the under parts; numerous large and small dark coloured spots, each surrounded by a white ring, are sprinkled over the body, the most distinct and the largest of which are those ranged in regular order just above the lateral line. It is in general considered to be the same as *S. Catulus*, but Cuvier thinks it a distinct species.

β. *With the anal fin posterior to the second dorsal; nasal lobes prolonged into beards or cirrhi; temporal apertures very small; fifth branchial aperture often lost in the fourth.*

S. Punctatus, Cuv.; *Squal. Punct.* Schn.; *Squal. Barbatus*, Gmel.; *le Squale Pointillé*, Lacep.; *White-pointed Dogfish*. Three and a half feet in length; has the pectoral fins large, and commencing at the third branchial aperture; the under lobe of the caudal fin deeply notched; upper part of the body and tail uniformly reddish; under parts tawny sprinkled with small white spots. Found on the coasts of South America, Jamaica, and New Holland.

S. Tigrinus, Cuv.; *Squal. Tigr.* Forst.; *Sq. Fasciatus*, Bl.; *Sq. Longicaudus*, Gmel.; *le Tigré*, Brouss.; *Tigerine Dogfish*. From twelve to fifteen feet in length; caudal fin very long, and both its lobes on the under edge of the tail; upper part of the body and the fins black, spotted and striped with white like the markings of a Tiger's skin. Is found in the Indian Seas, occasionally taken off the Coromandel coast, where it is called by the natives *Poollee Makum*; in the Canton river it is found in great numbers, and is said to feed on crustaceous and testaceous animals.

S. Lobatus, Cuv.; *Squal. Lob.* Schn.; *Watts's Shark*, Phill.; *Watts's Dogfish*. Nineteen inches in length; between the mouth and the first branchial apertures five pairs of cartilaginous jagged appendages; mouth near the muzzle, with nine large curved teeth in three rows,

and numerous smaller ones on the sides of both jaws; caudal fin deeply cleft, the anterior lobe the longest; colour of the body brown, of different shades, with three rows of large, pale, irregular spots, mostly dark within, one of these passes down the middle and the others on either side, below which are several more, but less distinct. Found in Sydney Cove, Port Jackson.

S. Russellii, Cuv.; *Russell's Dogfish*. Thirteen inches long; pectoral fins large and orbicular, commencing at the second branchial aperture; upper lobe of the caudal fin narrow, its lower lobe cleft; upper parts dusky brown, marked with twelve or thirteen longitudinal bright brown stripes extending from the muzzle to the point of the tail; under surface dusky white. Is caught off the Coromandel coast, and called by the natives of Vizagapatam *Bokee-Sorra*.

See Linnæi *Systema Naturæ* a Gmelin; Broussonet, *Mémoires sur les Chiens de Mer*, in *Histoire de l'Académie des Sciences*, 1780; Gunner, in *Det Trondhiemske Selskabs Skrifter*; Bloch, *Ichthyologia* a Schneider; Patrick Russell, *Fishes of the Coromandel Coast*; Risso, *Histoire Naturelle de l'Europe Méridionale*; Yarrell, *History of British Fishes*.

SCYMNUS, from the Gr. σκυμνος, a kind of shark, Cuv. In *Zoology*, a genus of animals belonging to the family *Plagiostomi*, order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Body tapering, long, and covered with tubercles; muzzle short but not blunt; teeth pyramidal, sharp, and serrated in one or two rows in the lower, and in several in the upper jaw; temporal apertures; two dorsal fins without spines, the second above the ventrals; no anal fin; tail short: ovoviviparous.

This genus, established by Cuvier, is distinguished from *Scyllion* by having no anal fin, and from *Spinax* by the absence of the dorsal spines and the form of the teeth. They are very voracious, but when caught make no resistance whilst taking out of the water. On the French coast and in the North of Europe they are taken with hooks attached to chains, on which they are unable to act with their teeth; and from their bulky liver is extracted large quantities of oil, which is used for softening hides.

S. Nicæensis, Riss. Three feet in length; head of moderate size; muzzle rounded and short; nostrils large and orbicular; upper jaw armed with five rows of long, narrow, sharp, curved teeth far apart, lower jaw having six rows of a flattened pyramidal form, finely toothed, close set, and mostly movable; temporal apertures large and semilunar; branchial apertures very small and of equal size; pectoral fins very large; first dorsal small, and nearer to the head than the middle of the body; the second very large; ventrals large and far apart; caudal sinuous below, and terminating in a point; the colour is reddish-brown-violet. The female is distinguished by having seven rows of teeth in the upper, and eight in the lower jaw; her ventral fins are almost close; she is of larger dimensions, and the ground colour of the body is sprinkled with black spots. It is found off the coast of Nice, and frequents deep rocky bottoms, which it seldom leaves. About February the sexes come together, and three months after the female drops, at intervals of several days, from ten to sixteen living young. This species was named by Gmelin *Squalus Americanus*, from supposing that Cape Breton near Bayonne and Cape Breton of Newfoundland were the same place. The fish is not found in America.

SCYL-
LION.
—
SCYM-
NUS.

SCYM-
NUS.

S. Sparophagus, Cuv.; *Dalatias Sparoph.* Rafin. From four to five feet in length; teeth placed in one row in the lower, and two in the upper jaw; eyes round, very small, and black; back dusky; belly whitish. This fish is caught on the Sicilian coast, and called by the fishermen *Mangia-luvaro*, from its feeding on a species of Sparus known to them by the name *Luvaro*. Its flesh is delicate, and more esteemed than that of Sharks in general.

S. Rostratus, Riss. Thirteen inches in length; the muzzle very long and rounded in front; mouth semi-lunar; upper teeth pointed and curved laterally, lower straight and pointed; the body tapering, covered with a skin almost smooth, and of a bluish-grey colour; pectoral fins rounded; caudal fin divided into two lobes, of which the upper is the longest. It is found at great depths on the Southern coast of France.

S. Borealis, Scoresby; *Squalus Carcharias*, Gunn.; *Greenland Shark*, Flemm. From twelve to fourteen feet in length; mouth wide; teeth in the upper jaw in three rows, suddenly becoming narrow and lanceolate, with the cutting edges rough, in the lower jaw in two rows, with cutting edges, and rather convex on the fore edge; general colour grey; eyes blue with emerald-green pupils. It is found in the North Seas, and has twice been taken on the Scottish coast. It lives principally at the bottom of the sea, and rarely comes to the surface, but sometimes approaches the shore when in pursuit of its prey, or escaping from its enemies. It feeds on living marine animals as well as on dead carcasses, especially on Cod, Dorse, Halibut, and dead Whales; and Gunner mentions instances of a whole Rein-deer, without its horns, having been found in the stomach of one; and one of the largest Seals, the size of an Ox, in that of another. It is much dreaded on the Greenland coast, and Fabricius, in his *Fauna Groenlandica*, mentions that it will snap in two the small boats to which it is attracted by the Seal skin covering them. Large quantities of oil are obtained from its liver. Fabricius says it is viviparous. Scoresby speaks of this species as being one of the most inveterate enemies of the Whale, biting and annoying it whilst alive, and feeding on it when dead. It scoops out large hemispherical pieces nearly as big as a man's head, and continues gorging lump after lump till it has completely filled itself. Its gluttonous disposition overcomes the pain it suffers from being stabbed through the body with a knife, as Scoresby has seen it after such a wound return after a time to banquet again on the Whale at the very spot where it had been wounded. He states also that though the Whale fishers frequently slip into the water where that species abounds, he has never known an instance of their having been attacked by this Shark. It is probably the same fish as Bloch's *Lamie*, which, however, is depicted with an anal fin.

S. Brevipinnis, Cuv.; *Somniosus Brevipinnis*, Lesuer. Nearly six feet and a half in length; muzzle short and obtuse; body elongated with a slight elevation, narrower at the tail, and covered with a rough skin beset with triangular, curved, striated, and pointed asperities; its colour pale leaden-grey, rather darker on the back; lateral line black and marked with small transverse lines; all the fins very small, the pectorals the largest, measuring four inches at their base, and five in length; tail wide and emarginate. It has been caught at Marblehead, Massachusetts, and, from its inactive and sluggish habits, is called by the American fishermen the *Nurse*

or *Sleeper*. Cuvier thinks it probably belongs to this genus, though the form of its teeth are not mentioned by Lesuer, who forms it into a new subgenus, to which, from its habits, he gives the name *Somniosus*.

S. Bispinatus, Cuv.; *la Leiche Laborde*, Quoy and Gaim. The specimen described by Messrs. Quoy and Gaimard was only seven inches and a half long, and they supposed it to be a young one. The body long, and almost cylindrical; head and muzzle rounded; the nostrils deeply pierced in the sides of the latter, and divided by a small membrane into two parts; the temporal apertures in shape resembling a reversed D, situated just behind the eyes, and divided by a vertical membrane; lower jaw furnished with a single row of sharp cutting teeth, inclining some to the right and others to the left; the upper jaw armed with several rows of very small straight teeth; pectoral fins large and rounded, commencing at the fifth branchial aperture; first dorsal very small and far back, the second longer and rather higher; ventrals not far back, very small, and each terminating in a little spine; caudal fin composed of two lobes and rounded; its colour is deep brown, nearly black; pectoral fins white, except their base, which is black. From the coast of the Isle of France.

S. Brasiliensis, Cuv. Nearly of the same form as the last species, but distinguished by the very great size of its lower jaw, by the gape being nearer the tip of the muzzle, by the greater size of its dorsal fins, by its ventrals having no spines, and by the lobes of its caudal fin being more deeply cleft; its colour is lighter brown, and the throat is crossed by a broad deep brown band. From the Brazilian coast.

S. Squamosus, Lacep.; *l'Ecailleux*, Brouss. Three feet in length; muzzle long and flattened; teeth nearly square, and angular at their edges, those of the lower jaw very large; nostrils large and partially covered by membrane; pectoral fins of moderate size, and narrowed at their base; dorsal fins occupying a large portion of the back, and each armed with a pointed bone in its middle, the first the largest, its hinder part long and narrow; ventral fins semielliptical, and near the caudal, which at first has a rounded form, and afterwards dilates towards the tip; the whole body covered with oval scales marked with a middle longitudinal ridge and resembling small leaves.

Some have the first dorsal fin above the ventrals, and the second further back; such is

S. Spinus, Cuv.; *le Squal Bouclé*, Lacep. Four feet in length; the skin of this species is beset with tubercles of unequal size, broad and round at their base, surmounted with one or two spines curved backwards like those of the Thornback, *Raja Clavata*. It is caught in the Atlantic and in the Mediterranean.

See Cuvier, *Règne Animal*; Risso, *Histoire Naturelle de l'Europe Méridionale*; Broussonet, *Mémoires sur les Chiens de Mer*.

SCYMNUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* very short, rather slender at the base, the apex abruptly clavate, obtuse; *palpi* four, maxillary with the terminal joint large, securiform; head small, deflexed; eyes oblong; *thorax* transverse, scarcely narrower than the elytra, the posterior margin as broad as, and closely applied to, the base of the elytra, these last generally very convex, large, rarely spotted; body generally more or less hemispheric and pubescent;

SCYM-
NUS.

SCYM- legs short, simple; femora slightly incrassated; tarsi
NUS. trimerous.

SCYRIS. Type of the genus, *S. ater*, Kugellan; Stephens, *Britt. Ent. (Mandibulata)*, vol. iv. p. 392. A genus composed of numerous minute species, sixteen of which are indigenous; frequenting hedges in grassy places during the Summer.

SCYPHIPHORA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Rubiaceæ*. Generic character: calyx ovate, border nearly entire; corolla funnel-shaped, interior of the tube hirsute, border four-cleft, spreading; filaments short; stigma two-cleft; drupe one-seeded.

One species, *S. hydrophylacea*, native of the Moluccas.

SCYRIS, Cuv. In *Zoology*, a genus of animals belonging to the family *Scomberoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Profile nearly vertical; lower jaw projecting rather beyond the upper, and the edge of each armed with a very narrow band of fine teeth; in front of the vomer a slight roughness instead of teeth, but the tongue, which is oblong, obtuse, and free, entirely covered with rough processes; spines of the first dorsal fin few and concealed in the edge of the second, which, with the anal, has part of its spines elongated into simple filaments, but the others branched and elongated by only one filament; ventral fins not elongated.

Of this genus, placed by Cuvier between *Otolistes* and *Blepharis*, there are two species described,—

S. Indica, Cuv. Length from fifteen inches to five feet; its greatest depth between the origin of the dorsal and anal fins; mouth at the base of the muzzle, and nearly horizontal, profile nearly vertical; limb of the preopercule broad; opercule twice as high as its length, and slightly hollowed at its upper third; subopercule and interopercule long and narrow; branchial opening very wide, its membrane narrow, hidden by the opercular pieces, and supported by seven rays; six small, short, slender, spiny rays belong to the first dorsal, but lie close against the interspinous processes which support them, and so enclosed in a narrow, deep, cuticular groove that they cannot be seen; second dorsal commencing with a short spine, to which is articulated a simple ray elongated into a thread about half the length of the body; the following three diminish gradually, and are simple; the fifth and sixth are branched, and one of their branches elongates into a thread; eleven branched spines without threads follow, forming a low fin, and after these nineteen blunt spines; the anal fin nearly corresponds, preceded by a little spine, but its first blunt ray only is elongated, the others gradually diminish to the fourth, after which the remaining twelve are about equal height with the dorsal; pectorals sithe-like, and nearly a third of the length of the body; ventrals, attached close together, are rather in front of the pectorals, their rays are all compressed and cutting; between the anal and ventral fins a sharp bony space with two small rudimental spines; the scales are hardly visible except towards the tail; caudal fin forked, its lobes rough and pointed, the number of its rays sixteen. The colour of this species is silvery tinged with grey on the back, and marked at the notch of the opercule with a small black spot. It is found off the Coromandel coast, where it is called by the natives *Outel-paré*; also at Java and in the Red Sea, and is said to be good for food.

S. Alexandri, Cuv. *le Gal d'Alexandrie*. Ten inches in length; two or three very small spines only are found hidden in the back; the second dorsal has but six rays elongated into threads, whilst the last species has nine, but the whole number of spines is greater in this species by three to the dorsal, and four to the anal, and their filaments are more slender, and ultimately are no thicker than hairs; its general colour silvery, and the tips of the ventrals pointed with black. Native of the Mediterranean near Alexandria.

See Cuvier and Valenciennes, *Histoire des Poissons*.

SCYTHROPS, Lath. *Channel-bill*. In *Zoology*, a genus of animals belonging to the family *Zygodactyli*, order *Scansores*, class *Aves*.

Generic character. Beak long, strong, conically convex, much curved at the tip, much deeper than broad, depressed on the forehead, dilated on the sides, and grooved above and laterally; edges of the mandibles not toothed; nostrils basal lateral behind the horny part of the beak, and opening upon the cheeks, partially closed above with a naked membrane; wings long, the first two quills graduated, the third the longest; tail very long and round; legs short and strong; the tarsus shorter than the middle toe; the two anterior toes connected at their base.

The bird on which this genus was formed by Latham was first discovered and described by Governor Phillip, in his *Voyage to Botany Bay*, by the name of *Psittaceous Horn-bill*. White, who also wrote an account of this expedition, has mentioned it as the *Anomalous Horn-bill*. No other species has yet been found.

S. Nova Hollandiæ, Lath.; *le Scythrops Présageur*, Tem.; *Australian Channel-bill*. Length from twenty to twenty-five inches; bill more or less deeply grooved or channelled according to the age of the bird; head, neck, and under parts light grey; back, wings, and tail bluish-grey, and all the feathers and quills tipped with black; tail very cuneiform, all its quill-feathers banded with black near the tips, which are white, and, excepting the middle two, all streaked with white in their inner web; beak greyish-horn; legs blackish-blue. It is found in New Holland, where it is called *Goe-re-arang* by the aborigines, which has, perhaps, the same meaning as *Amearo*, or bird which indicates rain, by which it is known at Celebes, to the Malays of the Southern archipelago, where it is also found. They first make their appearance at Port Jackson about October, in flocks of six or eight, but more commonly only in pairs, and leave in the following January. It is presumed to be a bird of passage, and to breed in the Northern part of New Holland, but nothing certain is known on this point except that it is found at Celebes. Both when perched and flying the tail is expanded like a fan, giving the bird a very noble appearance. They are very shy, and do not make their appearance in fine weather, but on the approach of storms or hurricanes they make a loud screaming noise like that of fowls when a bird of prey is in sight. Their food is believed to consist principally of the seed of the red gum and peppermint tree, which have been found in their gizzards, and occasionally also the exuviae of beetles.

See Phillip, *Voyage to Botany Bay*; White, *Voyage of Governor Phillip to Botany Bay*; Latham, *General History of Birds*; Temminck, *Planches Coloriées*.

SCYTODES, in *Zoology*, a genus of *Arachnoïda*.

Generic character. *Maxillæ* oblique and longitudinal, covering the sides of the lip, thickened at the base, and

From his sweet face, she fals dead in a swoone,
Fals as a floure halfe cut, that bending lies.
Fairefax. Godfrey of Bulloigne, book xx. st. 128.

SEA, Goth. *saiw*; A. S. *sæ*; D. *see*; Ger. *see*; Sw. *siö*; from the Gr. *ζε-ειν*, *fervere*, *bullire*, (to seethe,) (*ζε δ' υδωρ*, *bulliebat aqua*, Hom. *Il.* 21. v. 365.) say the Etymologists; but the Gr. has no name for the Sea derived from that verb.

Sea is opposed, geographically, to land, to rivers, lakes, &c.; it is applied to the great mass of salt waters or different portions of it,—to any larger quantity, liquid or fluid; to any thing stormy or distinguished by other qualities of the Sea.

Sea is very much used prefixed.

Now is Robert Cristen, he dightes his nauie,
& ferde ouer þe *see*, & conquerd Normundie.
R. Brunne, p. 25.

Thanne he roos and commaundide to the wyndis and the *see*;
and a greet pesiblenesse was maad.
Wiclif. Matthew, ch. viii.

Then he arose, and rebuked the wyndes and the *sea*, and there
folowed a great calme.
Bible, Anno 1551.

He mote be ded, the king as shall a page;
Som in his bed, som in the depe *see*.
Chaucer. The Knightes Tale, v. 3032.

And God called the dry land the erth, and the gatheryng togy-
ther of waters called he the *sea*.
Bible, Anno 1551. Gen. ch. i.

This Moruidus walkynge or rydynge vpon the *seestronde* espyed
a wonderfull monstre, the whiche of his corage and knyghthod he
thought to sle.
Fabyan. Chronycle, ch. xxxvii.

And the Erle of Arundell, with xxvii vesselles with hym, whe-
ther they wolde or nat, were fayne to caste ancre in a lytell hauen
called the Palyce, a two small leages fro Rochell, and y^e wynde
was so streynable on *seeborde*, that they coude nat departe thence.
Lord Berners. Froissart. Cronycle, vol. ii. ch. 150.

Suddenly attempting their purpose (the rocks being very dan-
gerous for the boat, and the *sea-gate* exceeding great) by shooting
their arrows hurt and wounded every one of our men.
Drake. Voyages. Anno 1578.

Ne did it then deserve a name to have,
Till that the venturous mariner that way
Learning his ship from those white rocks to save,
Which all along the Southerne *sea-coast* lay
Threatning unheedy wrecke and rash decay,
For safety that same his *sea-marke* made,
And nam'd it Albion.
Spenser. Faerie Queene, book ii. can. 10.

SEA.
—
SEAL.

She could sell winds to any one that would
Buy them for money, forcing them to hold
What time she listed, tie them in a thread,
Which ever as the *seafarer* undid,
They rose or scanted, as his sails would drive
To the same port whereas he would arrive.
Drayton. The Moon-Calf, p. 132.

How should I joy of thy arrive to hear!
But as a poor *sea-faring* passenger,
After long travel, tempest-torn and wrack'd,
By some unpitt'ing pirate that is sack'd.
Id. Charles Brandon to Mary the French Queen, p. 94.

Such measures fill'd
Th' assembly, as when hollow rocks retain
The sound of blustering winds, which all night long
Had rous'd the *sea*,—now with hoarse cadence lull
Sea-faring men orewatcht, whose bark by chance
Or pinnace anchors in a craggy bay
After the tempest.

Milton. Paradise Lost, book ii.

The *sea* is a collection of waters in the deep vallies of the earth;
if the earth were all plain, and had not those deep hollows, the
earth would be all covered with water; because the water being
lighter than the earth, would be above the earth, as the air is above
the water.

Locke. Elements of Natural Philosophy, ch. vii.

If we should offer to make a rude estimate, we should find that
all the rivers in the world, flowing into the bed of the *sea*, with a
continuance of their present stores, would take up at least eight
hundred years to fill it to its present height.

Goldsmith. Animated Nature, part i. ch. xv.

SEAFORD, a parish in Sussex, near the sea, made
a member of the Cinque Port of Hastings in the reign
of Charles I. It was formerly a considerable town with
five churches, but was burned by the French in a de-
scent on the coast of Sussex. The present Church is
an ancient structure, much deformed by repair and
alteration, but retaining some traces of its Saxon or
early Norman origin. Seaford returned Members to
Parliament, with some few interruptions, from the reign
of Edward I. until the Reform Bill of 1832, when it
was disfranchised. Population, in 1831, 1098. Distant
from London 63 miles.

SEAL, A. S. *sele*, *seol*, a sea calf; Sw. *sjal*; D. *zee-
hond*. See the Quotation from Goldsmith.

These *seals* be hardly killed, unlesse a man dash out their
braines. In their sleepe, they seeme to low or blea, and thereupon
they be called *sea-calves*.

Holland. Plinie, book ix. ch. xiii.

Proteus, thy song to heare,
Seas list'ning stand, and windes to whistle fear;
The lively dolphins dance, and bristly *seals* give eare.

Fletcher. The Prize. Eclogue 7.

He told us that at first he was forced to eat *seal*, which is very
ordinary meat, before he had made hooks; but afterward he never
killed any *seals* but to make lines, cutting their skins into thongs.

Dampier. Voyages. Anno 1683.

The price of raw hides is a good deal lower at present than it
was a few years ago, owing probably to the taking off the duty
upon *seal* skins, and to the allowing, for a limited time, the im-
portation of raw hides from Ireland and from the plantations, dufy
free, which was done in 1769.

Smith. Wealth of Nations, vol. i. book i. ch. xi. p. 324.

The *seal*, in general, resembles a quadruped in some respects,
and a fish in others. The head is round, like that of a man; the
nose broad, like that of the otter; the teeth like those of a dog; the
eyes large and sparkling; no external ears, but holes that serve for
that purpose.

Goldsmith. Animated Nature, book v. ch. v.

SEAL, n. } Fr. *seel*, *seau*; It. *sigillo*; Sp. *sigilo*;
SEAL, v. } Lat. *sigillum*; D. *seghele*; Ger. *siegel*;
Sw. *sigill*; A. S. *sigel*, *sigel-an*; Goth. *siglyan*, *ga-sig-
lyan*, *signare*, to sign, to set or make a sign or mark.
And see SEEL.

SEAL.
SEAM.

To set a sign or mark, *sc.* in token of assent, affirmance, assurance; to affirm or confirm, to assure, to secure; and also (from the effect of sealing) to fasten, to fix, to fasten together, closely, to close, to shut.

Of him haf þei chartre *seled* with his *seale*.

R. Brunne, p. 29.

For he had grantid þer to þe chartre forto *sele*,
& after þat *seljng* alle suld þei come
þe barons & þe kyng, & tak of þam hard dome.

Id. p. 300.

And I saigh in the righthond of the sitter on the trone, a book writun withynne and without, and *seelid* with seuene *seelis*.

Wiclif. Apocalips, ch. v.

He that it wrought, [the steed,] he coude many a gin;
He waited many a constellation,
Or he had don this operation,
And knew ful many a *sele* and many a bond.

Chaucer. The Squieres Tale, v. 10429.

And therevpon
With letters, and with *seales* out
Thei send in euery londe about
The yonge children for to seche.

Gower. Conf. Am. book ii. p. 70.

And yet the more, if he strake handes, if he geue his hād writing, and *seale* it; so is the promise more and more beleued.

Tyndall. Workes, p. 142.

Now she brought them to see a *seeled* dove, who, the blinder she was, the higher she strove.

Sidney. Arcadia, vol. i. book i. p. 99.

If from this houre
Within these hallow'd limits thou appeer,
Back to th' infernal pit I drag thee chain'd,
And *seale* thee so, as henceforth not to scorne
The facil gates of hell too slightly barr'd.

Milton. Paradise Lost, book iv. l. 963.

KING. Clarence and Gloster, loue my louely queene,
And kiss your princely nephew, brothers both.

CLA. The duty that I owe vnto your maiesty,
I *seale* vpon the lips of this sweet babe.

Shakspeare. Henry VI. Third Part, act v. sc. 7. fol. 172.

YOR. What *seale* is that that hangs without thy bosom?
Yea, look'st thou pale? Let me see the writing.

Id. Richard II. act ii. sc. 4. fol. 42.

Now pleasing sleep had *seal'd* each mortal eye.

Pope. Homer. Iliad, book ii. p. 19.

Volkeliu, more complaisant with respect to the name, turns all his resentment upon the thing, flatly denying that the Eucharist is a sacrament; his reason is, it neither exhibits nor *seals* any spiritual grace.

Waterland. Works, vol. vii. p. 35. *Ancient Names of the Holy Communion*.

The passion which fires the competitors in any honourable contest is a laudable ambition to excel; and the prize is no otherwise valued than as the mark and *seat* of victory.

Horsley. Sermon 27. vol. ii. p. 345.

The use of *seals*, as a mark of authenticity to letters and other instruments in writing, is extremely ancient. We read of it among the Jews and Persians in the earliest and most sacred records of history.

Blackstone. Commentaries, vol. ii. book ii. ch. xx. p. 305.

SE'MSTER, } to sow; or from Lat. *sumen*.
SE'MSTRESS, } The line formed by sewing or
SE'AMY. } sowing, the continued suture; a
suture, a puncture; a mark resembling a lineal suture.

SEAM.

And the coote was without *seem*, and woun al aboute, therfor thei seiden togidre, kitte we not it, but caste we lotte whos it is.

Wiclif. John, ch. xix.

The coote was without *seme*, wroughte vpon thorowe oute. And they sayd one to another, Let vs not deuyd it, but cast lottes who shal haue it.

Bible. Anno 1551.

Let us than speke of chiding and repreving, which ben ful grete woundes in mannes herte, for they unsow the *seames* of frendship in mannes herte.

Chaucer. The Persones Tale.

O sheare that shreadst the *seeme-rent* sheete of shame.

Gascoigne. Dan Bartholmew of Bathe, p. 507.

And every *seam* the nymphs shall sew

With th' smallest of the spinner's clue.

Drayton. The Muses' Elysium. Nymphal 8.

The remainders of thy sacred person are not yet free; the soul-diers have parted thy garments, and cast lots upon thy *seamelesse* coat.

Hall. Contemplations, vol. ii. p. 273. *The Crucifix*.

The righteousness evangelical must, like Christ's *seamless* coat, be all of a piece from the top to the bottom.

Taylor. Sermon 1. vol. iii. p. 17.

In these, heav'n's holy fire does vainly burn;
Nor warms, nor lights, but is in sparkles spent;
Where froward authors, with disputes, have torn
The garment *seamles* as the firmament.

Davenant. Gondibert, book ii. can. 5.

His [Aristippus] delight was to paint shops of barbers, shoemakers, coblers, taylers, and *semsters*.

Holland. Plinie, book xxxv. ch. x.

Lo! what is it that makes goose wings so scant,
That the distressed *sempster* did them want.

Hall. Satires, book ii. p. 267.

ISMEN. Of fidlers: thou a company?

No, no, keep thy company at home, and cause cuckolds.
The wars will hurt thy face, there's no *semsters*.

Beaumont and Fletcher. Cupid's Revenge, act i. sc. 1.

DELL. Why, sir?

FAST. That you can consort yourselves with such poor *seam-rent* fellows.

Ben Jonson. Every Man out of his Humour, act ii. sc. 2.

I am sorry I can follow the allegory so far, being informed that now it is not only *seam ript* but torn in the whole cloth.

Fuller. Worthies. Sussex.

The subject of his sermon was to prove, "That Christ's poverty was the pattern of humane perfection, and that men professing eminent sanctity should conform to his precedent, going on foot, feeding on barley bread, wearing *seamless-woven* coats, having no houses of their own," &c.

Id. Ib. Yorkshire.

ÆMIL. Oh fie vpon them; some such squire he was
That turn'd your wit, the *seamy-side* without,
And made you to suspect me with the Moore.

Shakspeare. Othello, fol. 332.

Say, has the small or greater pox
Sunk down her nose, or *seam'd* her face?

Swift. Cassinus and Peter, p. 501.

Who can forsake thy walls, and not admire
The proud cathedral, and the lofty spire?
What *sempstress* has not prov'd thy scissars good?

Gay. Epistle 2.

Though still his crimson *seamy* scars reveal
The sure-aim'd vengeance of the Lusian steel.

Mickle. The Lusiad, book iv. p. 668.

SEAM, *n.* See ENSEAM.

Thy crown does sear mine eye-balls.

Shakspeare. *Macbeth*, act iv. sc. 1.

All so my lustfull leafe is drie and sere,

My timely buds with wayling all are wasted.

Spenser. *Shepherd's Calendar*. January.

The scorning flame sore swinged all his face,

And through his armour all his body seard,

That he could not endure so cruell cace,

But thought his armes to leave, and helmet to unlace.

Id. *The Faerie Queene*, book i. can 11.

He o'threw down before him a dry sear piece of leather, and then put his foot upon one of the ends of it.

North. *Plutarch. Lives*, p. 586. *Alexander the Great*.

Take to your better judgement my declining,

My age hung full of impotence, and ills,

My body budding now no more; seer winter

Hath seal'd that sap up, at the best and happiest

I can but be your infant.

Beaumont and Fletcher. *Monsieur Thomas*, act ii. sc. 4.

He is deformed, crooked, old, and sere,

Ill-fac'd, worse body'd, shapeless every where.

Shakspeare. *Comedy of Errors*, act iv. sc. 2.

I have liv'd long enough; my way of life

Is fall'n into the sear, the yellow leaf;

And that which should accompany old age,

As honour, love, obedience, troops of friends,

I must not look to have. Id. *Macbeth*, act v. sc. 3.

Which bids us seek

Som better shroud, from better warmth to cherish

Our limbs benumm'd, ere this diurnal starr

Leave cold the night, how we his gather'd beams

Reflected, may with matter sere foment.

Milton. *Paradise Lost*, book x. l. 1067.

And first he wonders at my extreame prodigality of credit, and searednesse of conscience; in citing an epistle so convicted by Bel-larmine, Baronius, &c.

Hall. *Works*, vol. i. p. 738. *Honour of Married Clergie*.

There sate we, till we saw him feeding come,

And on his necke a burthen lugging home,

Most highly huge of sere-wood; which the pile,

That fed his fire, supplide all supper while.

Chapman. *Homer. Odyssey*, book ix. p. 134.

To think well of ourselves, if we deserve it, it is a lustre in us, and every good we have, strives to shew gracious,—what use is it else? old age like seer-trees, is seldom seen affected,—stirs sometimes at rehearsal of such acts as his daring youth endeavour'd.

Beaumont and Fletcher. *Wit without Money*, act iii. sc. 1.

If, indeed, we put epithets to conscience, and talk of a good conscience, or an evil conscience, a tender conscience, or a seared conscience, or the like; then it includes more, both in Scripture and in common language, than I have now mentioned.

Sharp. *Works*, vol. ii. *A Discourse of Conscience*.

VOL. XXVII.

And here it will be requisite to shew what this searedness of conscience means; which I shall endeavour to explain from that place of Scripture, in 1 Tim. iv. 2., Having their consciences seared with an hot iron.

South. *Sermon* 2. vol. ix. p. 54.

This once resolv'd, the peasants were enjoin'd

Sere-wood, and firs, and dodder'd oaks to find.

Dryden. *Palamon and Arcite*, book ii.

O cruell! will not pang of pity pierce

That heart, by lust of lucre sear'd to stone?

Beattie. *The Minstrel*, book i.

'Twere wiser far

For me, enamour'd of sequester'd scenes,

And charm'd with rural beauty, to repose,

Where chance may throw me, beneath elm or vine,

My languid limbs, when summer scars the plains.

Cowper. *The Task*, book iii.

SEAR,

See ante, CERE, CERECLOTH.

SE'ARCLOTH. } To close or fasten up, as with wax, (cera.)

Whan this Charlys was dede, his frēdys entēdyngē to have caryed y^e corps into Fraunce, and causyd it to be seryd and enoynted with ryche and precyous oyntmentis, and aromatykes.Fabyan. *Chronicle*, ch. 175. fol. 160.

Thus this duke dyed in Calais; his body was enbaumed and seared in leed and couered, and so sente by see into Englande.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 226.

Then perriwigs and searcloth gloves doth show,

To make their hands as white as swan or snow.

Drayton. *The Muses' Elysium. Nymphal* 7.

POB. I marked the man, if he be a man.

FOOL. Ha's much adoe to be so,

Searcloths and sirrups glew him close together,

He would fall a pieces else.

Beaumont and Fletcher. *A Wife for a Month*, act v. sc. 1.

But in hell God doth, as it were, wrap the whole man up in searcloth, and set it on fire round about them, so that they are tormented in every part, neither soul nor body escaping, nor any power or faculty of the one, nor any part or member of the other.

Hopkins. *Works*, p. 373. *Sermon* 5.

SEARCE, v.

Fr. sasser, to sift or searce, from

SEARCE, n.

squassare for excussare, to shake out,

SE'ARCER.

or from setacium, because made of

hair, (seta.) See in Menage, Caseneuve. Searce and search, q. v., have probably the same origin.

To sift, to bould.

That ellebore was like unto a valiant and hardy captaine; for when (quoth he) it hath stirred all the humore within the bodie, it selfe issueth forth first and maketh way before them. Moreover, there is a straunge and singular devise, to clip the root of ellebore with small sizzers or sheares into little peeces; then, to sift them through a sercer, that the bark or rind may remaine still.

Holland. *Plinie*, book xxv. ch. v.

A man would not thinke (who seeth the longe yarne in her web wrought serce-wise, smoothed and polished so cunningly, and the verie manner of the woofe so glewish and clammie as it is, of it selfe) that all were to any purpose.

Id. *Ib.* book xi. ch. xxiv.

I found that either exquisitely calcined hartshorn, or clean tobacco-pipes, or which is better than that, mutton bones, (taken between the knuckles, and) burnt to a perfect whiteness, being fully powdered and searsed, and well rubbed upon paper, would make it fit to be written upon with the point of a table book pin.

Boyle. *Works*, vol. iii. p. 418.

MAN. You are mistaken,
Prosperity does *search* a gentleman's temper,
More than his adverse fortune.

Beaumont and Fletcher. The Custom of the Country, act ii. sc. 1.

Yet you must see him, lest impatient love
Should urge his temper to too nice a *search*,
And ill-tim'd absence should disclose your crime.

Smith. Phædra and Hippolitus, act iii.

With *searching* wisdom, fatal to their ease,
They still find out why what may should not please.

Rochester. Artemisia to Chloe.

Th' inticing smile, the modest-seeming eye,
Beneath whose beauteous beams, belying heaven,
Lurk *searchless* cunning, cruelty, and death.

Thomson. Spring.

O! teach me to reveal the grateful charm
That *searchless* Nature o'er the sense of man
Diffuses, to behold, in lifeless things,
The inexpressive semblance of himself,
Of thought and passion.

Akenside. Pleasures of Imagination, book iii.

He told the people whom he met, as he was advancing along
the shore, that he was in *search* of plants, which indeed was also
true.

Cook. Voyages, vol. ii. book iii. ch. xiii.

And scorn of wickedness, and esteem of our duty, shewn in prac-
tice, will recommend us, not only to fallible beings, but to the un-
erring *searcher* of our hearts, and final rewarder of our deeds.

Secker. Sermon 13. vol. i.

SEARCH-WARRANT. in *Law*, is a Warrant
granted by a Justice of the Peace, by virtue of the Statute
7 and 8 George IV., cap. 29., to search not only for
goods that have been stolen, but also for goods upon or
with respect to which any of the other offences men-
tioned in that Act have been committed. It was once
a question, whether such Warrants were good at Com-
mon Law before they were sanctioned by any Statute.
Lord Coke, in his *Fourth Institute*, p. 176, considers
them to be illegal, and a violation of the provision of
Magna Charta, *nec super eum ibimus nec super eum*
mittemas nisi per legale iudicium parium suorum aut
per legem terræ. Lord Hale treated them as clearly
valid. They were formerly sanctioned by the Statute
22 George III. cap. 58., which is now repealed; and
their present authority is derived from the 63d section
of 7 and 8 George IV. cap. 29. The Warrant is granted
by the Justice, upon its being proved by some credible
witness upon oath that he has reasonable cause to suspect
that some person has the goods in his possession or on

his premises. If the witness lays the information ma-
liciously and without probable cause, he is liable to an
action for damages, at the suit of the person whose pre-
mises are searched. If the goods are found, and it appear
that the goods had not been stolen, they are to be restored
to the owner, but if they had been stolen, it is the prac-
tice to detain the goods, in order that the owner may
proceed to obtain restitution by indicting and convicting
the offender. The two most celebrated cases on the
subject of Search-Warrants are the cases of Money against
Leach, and Entick against Carrington, both reported in
the eleventh volume of the *State Trials*. In the former
of the two, it was held that a Warrant to search for the
person and papers of the publisher of a libel, without
specifying who the publisher is, is illegal, on the broad
ground applicable to all Warrants, that the Magistrate
who grants the Warrant must himself decide who the
party is against whom the Warrant is to issue, and can-
not delegate that authority to the officer who is to exe-
cute the Warrant. The second case decides that neither
the Secretary of State, nor any other Magistrate, has
power to issue a Warrant for the purpose of searching
after and seizing the papers of a person accused of a
libel. The case of Money against Leach, though the
point was not expressly decided, went a great way to-
wards establishing the illegality of what were called
General Warrants; and in accordance with that case, the
common Search-Warrant of the present day must not
presume to direct a search for all stolen goods, or in all
places, but must specify the goods which are to be
searched for, and the place where the search is to be made.

SE'ASON,

SE'ASONABLE,

SE'ASONABLENESS,

SE'ASONABLY,

SE'ASONAGE.

Fr. *saison*; It. *scagione*; Sp.
sazon, which some derive from
satio, the time for sowing, set-
ting, planting, and hence ex-
tended to the different periods

for the different labours of husbandry, the different times
of the year; others from *statio*, *q. d.* says Skinner, *tem-
poris statio*. See Menage, Skinner, and Junius. To
season, Fr. *assaisonner*, Skinner derives from Ger. *saltzen*,
salire, *sale condire*, to preserve with salt. Junius thinks
the latter merely a metaphorical use of the former; to
preserve or prepare meats for keeping at proper times.
Season is applied to

The four divisions of the year; to a fit or proper,
convenient or suitable time; a portion of time.

To *season*; to do any thing at a fit or proper time;
to prepare for fit or proper use; to prepare by time; to
mature; to give a taste or savour; to savour, to qua-
lify, to temper.

In a somē *seyson*. whan softe was þe sonne
ȝ shop into shrobbis.

Piers Plouhman. Vision, p. 1.

In somer *seson* thider wold he go,
And May his wif, and no wight but they two.

Chaucer. The Marchantes Tale, v. 9924.

The *seson* priketh every gentil herte,
And maketh him out of his slepe to sterte,
And sayth, Arise, and do thin observance.

Id. The Knightes Tale, v. 1046.

Some *season*, the Englisshemen folowed them so nere, that all
day they skrymysshed toguyther; and in a skrymysshe, this said
Lorde Wylliam Motague lost one of his yen.

Lord Berners. Froissart. Cronycle, vol. i. ch. xxvi.

That I might be found faithfull to my Father and Lord, in dis-
tributyng vnto my brethren and felowes of one faith, their due and
necessary fode; so dressing it and *seasonyng* it, that the weake
stomackes may receiue it also, and be the better for it.

Tyndall. Workes. On St. Matthew, p. 33.

WAR-
RANT.
—
SEASON.

SEASON. A stele must be well *seasoned* for castinge, and it must be made as the graine lyeth, and as it groweth, or els it will never flye cleane.
SEAT. *Ascham. Works, book ii. p. 142. Toxophilus.*

O she is false
 Into a pit of inke, that the wide sea
 Hath drops too few to wash her cleane againe,
 And salt too little, which may *season* giue
 To her foule tainted flesh.

Shakspeare. Much Ado about Nothing, act iv. sc. 1. fol. 115.

SICIN. We charge you, that you haue contriu'd to take
 From Rome all *season'd* office, and to winde
 Your selfe into a power tyrannicall.

Id. Coriolanus, act ii. sc. 3. fol. 19.

Then came faire May, the fayrest mayd on ground,
 Deckt all with dainties of her *seasons* pryde,
 And throwing floures out of her lap around.

Spenser. Faerie Queene, can. 7. Of Mutabilitie.

There be so many ill-favoured quick-sands and rocks in the way
 (as I have it from a good hand) that one may easily take a prospect
 of your shipwrack if you go on; therefore desist, as you regard
 your own safety, and the *seasonable* advise of your I. H.

Howell. Letter 15. book ii. p. 325.

Seasonableness is the best in all these things which have their
 ripenesse and decay. We can never hope too much of the timely
 blossomes of grace, whose spring is perpetuall, and whose harvest
 begins with our end.

Hall. Works, vol. i. p. 127. Holy Observances.

Thus *seasonably* did this grave and learned man instruct this
 young and towardly prince.

Strype. Eccles. Memorials, vol. ii. book i. ch. xxx. p. 413.

In burthen'd vessels first, with speedy care,
 His plenteous stores do *season'd* timber send;
 Thither the brawny carpenters repair,
 And as the surgeons of maim'd ships attend.

Dryden. Annus Mirabilis.

Still sing the God of *seasons*, as they roll.
 For me, when I forget the darling theme,
 Whether the blossoms blow, the summer ray
 Russets the plain, inspiring autumn gleams;
 Or winter rises in the blackening East;
 Be my tongue mute, my fancy paint no more,
 And, dead to joy, forget my heart to beat.

Thomson. A Hymn.

And when they expire, the trade-wind (which constantly blows
 on that coast at W. S. W. and S. W.) returns with the customary
seasonableness of weather.

Dampier. Voyages, vol. ii. part iii. ch. v.

I doubt not but they were very glad to have so great an authority
 as they thought him [Socinus] to be, to vouch for an interpretation
 which was so *seasonably* devis'd for the relief of their cause, in so
 much danger to be overthrown by a text that was so plain and full
 against them.

Tillotson. Works, p. 539. Sermon 44.

Of all the creatures that have issued from the workmanship of Omnipotence,
 there is none so pleasing, so refreshing, or rather so enlivening as the light;
 which is that, that gives a *seasonage* to all other fruitions, that lays open the bosom of the universe, and shows the
 treasures of nature; and, in a word, gives opportunity to the enjoyment
 of all the other senses.

South. Sermon 14. vol. viii. p. 408.

Charity is the grand *seasonage* of every Christian duty; it gives
 it a gloss in the sight of God, and a value in the sense of men.

Id. Sermon 5. vol. ix. p. 152.

Sharp hunger was their *seasoning*, or they took
 Such salt as issued from the native rock.

King. Art of Cookery.

This, besides giving us an opportunity to make the preceding
 observations, was very serviceable to us on many other accounts, and
 came at a very *seasonable* time.

Cook. Voyages, vol. iii. book i. ch. ii. p. 37.

SEAT, v. } A. S. *setl, setol*; D. *sate*; Ger. *sessel*,
 SEAT, n. } *sidel*; Sw. *saete*. See SET, SIT.

That on which we set or sit, put or place any thing;
 in which we reside or dwell; place or position.

To *seat*; to put or place on a seat; to put or place;
 to reside; to fix.

Thanne Jhesus spak to the puple, and to hise disciplis, and
 seide, on the chaier of Moyses han *sete* Scribis and Farisees.

Wiclif. Matthew, ch. xxiii.

Then spake Jesus to y^e people, and to his disciples, saying: The
 Scribe and the Pharises *syte* in Moses' seate.

Bible, Anno 1551.

I woot where thou dwellest, where the *seate* of Satanas is.

Wiclif. Apocalyps, ch. ii.

I know thi workes and wher thou dwellest, euen wher Satanas
seat is.

Bible, Anno 1551.

The drie color, with his hete,
 By weie of kynde his propre *sete*
 Hath in the galle, where he dwelleth.

Gower. Conf. Am. book vii. p. 206.

Who climeth oft on hie, and trusts the rotten bowe:
 If that bow breake may catch a fall, such state stand I in now;
 Me thought I was a loft, and yet my *seate* full sure.

Gascoigne. Flowers.

He followed fast, and chaced him so nie,
 That to the folds, where sheepe at night doe *seat*,
 And to the litle cots, where shepherds lie
 In winter's wrathfull time, he forced him to flie.

Spenser. Faerie Queene, book vi. can. 9.

Before I see thee *seated* in that throne,
 Which now the House of Lancaster vsurpes,
 I vow by heauen, these eyes shall neuer close.

Shakspeare. Henry VI. Third Part, act i. sc. 1. fol. 147.

Not Babylon,
 Nor great Alcairo such magnificence
 Equal'd in all their glories, to inshrine
 Belus or Serapis thir Gods, or *seat*
 Thir kings, when Ægypt with Assyria strove
 In wealth and luxury.

Milton. Paradise Lost, book i. l. 722.

Light as the lightning glimps they ran, they flew,
 From their foundations loosning to and fro
 They pluckt the *seated* hills with all thir load,
 Rocks, waters, woods.

Id. Ib. book vi. l. 642.

Peace shall goe sleepe with Turkes and infidels,
 And in this *seat* of peace tumultuous warres
 Shall kinne with kinne, and kinde with kinde confound.

Shakspeare. Richard II. act iv. sc. 1. fol. 39.

Or whether that the body publique be
 A horse whereon the gouernor doth ride,
 Who newly in the *seate*, that it may know
 He can command, lets it strait feele the spur.

Id. Measure for Measure, act i. sc. 3. fol. 63.

Seest thou yon dreary plain, forlorn and wilde,
 The *seat* of desolation, voyd of light,
 Save what the glimmering of these livid flames
 Casts pale and dreadful.

Milton. Paradise Lost, book i. l. 180.

Rais'd of grassie terf
 Thir table was, and mossie *seats* had round.

Id. Ib. book v. l. 391.

The gates of heaven unfold; Jove summons all
 The gods to council in the common hall.
 Sublimely *seated*, he surveys from far
 The fields, the camp, the fortune of the war.

Dryden. Virgil. Æneid, book x.

And o'er the *seat*, with plenteous wadding stuff'd,
 Induc'd a splendid cover, green and blue,
 Yellow and red, of tap'stry richly wrought
 And woven close, or needle-workly sublime.

Couper. The Task, book i.

SEBASTES, from the Gr. *σεβαστος*, *august*, Cuv.
 In Zoology, a genus of animals belonging to the family
 Triglides, order Acanthopterygii, class Pisces.

Generic character. Head slightly tubercular, but
 entirely covered with scales, as is also the whole body;
 fine teeth in the jaws and palatine bones; branchial
 rays seven; dorsal fin single.

The name applied to this genus is that of *Imperial*,

SE-
BASTES.

used by the inhabitants of Iviça to designate one of the species found in the Mediterranean. They have great resemblance to the *Scorpenæ*, except that the head is less armed with tubercles, whilst, on the contrary, it is completely covered with scales.

S. Norvegicus, Cuv.; *Perca Marina*, Linn.; *Perc. Norvegica*, Mull. It rather exceeds two feet in length, and in shape nearly resembles the Perch, its body being oblong and compressed, with the upper and lower edges convex; length of the head about a third of the total length; mouth oblique, and lower jaw rather projecting, and having three pores on each of its branches; upper jaw slightly projectile; the anterior suborbital bone has a small spine which scarcely reaches to the maxillary, and the posterior has one extending towards the preopercule; on the anterior edge of the orbit is one, and behind it three small spines, from which a slightly elevated ridge passes on either side of the skull, and terminates in a small spine; the suprascapular and scapular bones have each one, and the opercule two spines; the preopercule has five pointed spines, the subopercule and interopercule one each; the branchial rays are five; the external combs of the first branchial circle are rather long, the inner row and the two rows of the following circles are reduced to tubercles, covered with fine teeth, similar to those covering the pharyngeal bones; the dorsal fin has fifteen strong spiny rays, its soft part has also fifteen branching rays; the anal corresponds to the anterior two-thirds of the soft part of the dorsal, it has three strong spiny rays, of which the first is only half the length of the following two, and eight branching rays twice as long as the latter; caudal fin slightly crescentic, and supported by fourteen rays; pectorals rounded, and having nineteen rays, of which the ten first are branching, and the rest simple, though articulated, all project rather beyond the fin membrane; the ventral fins have one spine and five branching rays. The whole body is covered with rough scales, except the lips, the branchial membrane, the posterior edge of the branchial aperture, and the junction of the pectorals with the body. General colour bright carmine, tinged with brown towards the back, and becoming lighter on the belly, with a blackish spot at the angle of the opercule. It inhabits the North and Icy Seas in the deepest gulfs of the Southern part of Greenland, and never approaches the shore unless thrown up by storms, at which time its stomach is projected from its mouth and it soon perishes. It feeds on the *Pleuronectes Cynoglossus*, and is caught with lines like the Halibut. Its spines are often used by the Greenlanders as needles.

S. Imperialis, Cuv.; *Scorpena Dactyloptera*, Laroche. About eighteen inches in length; it has the dorsal spines proportionally higher than in the last species, and only twelve in number, followed by thirteen soft rays; between the eyes are two prominent lines, the spines on the edge of the orbit are more distinct, and the second preopercular spine longer than the others; the simple rays of the pectoral fins are larger in proportion, and not above half their length is enveloped in the fin membrane. The colour, as in the former species, is bright red or carmine, becoming paler and almost white on the belly; five broad brown or deep red bands stripe the back from its ridge to below the lateral line; the palate of this species is black. It is common in the Mediterranean, but at great depth. At Nice it is called *Cardouniero*, and at Iviça *Serran Imperial*, probably on account of its colour.

S. Capensis, Cuv.; *Scorp. Cap.* Gmel. About the same size as the last species, and has as great breadth between the eyes as *S. Norvegicus*, but rather more concave; it is of a reddish colour, with numerous whitish spots on the head and back; the opercule tinged with black. It is found off the Cape of Good Hope.

S. Maculatus, Cuv. About seven inches long; resembles *S. Imperialis* in the size of its dorsal spines, and the projections of the rays of the pectoral fins beyond their membranes, but the interocular space is more narrow and concave, and entirely bare of scales; general colour reddish; between the dorsal spines a large brown spot and a brown band running along their base. Is caught off the Cape.

S. Albofasciatus, Cuv.; *Holocentrus Albofasc.* Lacep. Three feet in length; has the postocular spines in four rows, and only eleven spines to the dorsal fin; colour bright vermilion on the upper parts and whitish on the belly, on the edge of the preopercule, and opercule; root of the caudal fin marked with a white band. Is very common on the coast of Japan.

S. Marmoratus, Cuv. The head shorter than in the last species, but the spines nearly the same; the red back and sides are marked with brown or blackish, in such way that the intermediate red assumes the appearance of large round spots; the fins are also varied with red and brown, the latter colour, on the pectorals, anal, and soft part of the dorsal, is disposed in points, but on the caudal in meshes. Found off the coast of Japan.

S. Inermis, Cuv. In this species the interocular space is not concave, and the spines on the upper part of the orbits and skull either entirely absent, or reduced to mere lines, one above each orbit and two behind the skull, terminating each in a small point; the opercular, preopercular, and suborbital spines as in the other species. Found at Japan.

S. Variabilis, Cuv.; *Perca Var.* Pallas; *Epinephelus Ciliatus*, Tilesius. About two feet long; the head is still less armed than in the preceding, there not being a crest either on the skull or orbit, nor any teeth on the suborbital bone; the preopercule has five short and obtuse spines, and the opercule two pointed; the colour varies according to age and sex, sometimes brown inclining to bluish, with the belly white and the fins brown, sometimes reddish-purple or silvery-brown; the female has the belly reddish. It is caught in the Northern part of the Atlantic which separates Kamtschatka from America; the natives of the Unalaska coast call it *Kakutshik* or *Kathtschikug*, and those of the American *Tockugh*.

S. Minutus, Cuv. Of very small size; the spines of the head, especially those of the suborbital, are more marked than in the large species, and are nearly as distinct as in the *Scorpena*, with which it might be easily confounded, if the small scales extending even to the muzzle were overlooked; the general colour is deep reddish-brown, marbled with deeper shade. It is taken off the Moluccas, Marianas, and Society Isles.

S. Bougainvillii, Cuv. Is remarkable for the shortness of its muzzle, the strength of the spines on the head, the size of the eyes, and the depth of the spiny rays of the dorsal fin; in the pectoral fins there is but one simple ray, all the others are rather forked. It is caught in the Indian Seas.

See Linnæi *Systema Naturæ* a Gmelin; Lacépède, *Histoire des Poissons*; Cuvier et Valenciennes, *Histoire Naturelle des Poissons*.

SE-
BASTES

SEBI-
FERA.
—
SECERN.

SEBIFERA, in *Botany*, a genus of the class *Dioecia*, order *Polyadelphia*. Generic character: male flower, calyx four-leaved, pilose; corolla none; stamens about one hundred, in ten bundles: female flower, calyx and corolla as the male; pistils ten; berries ten; one-seeded.

Two species, natives of China, trees, producing excellent wood for building, and giving out a wax-like substance, of which the natives make candles.

SECACUL, properly *Shakákul*, *Shashkákil*, or *Ashkákil*, is the Arabic name of a species of parsnip, the *Pastinaca Sekakul* of systematic Botanists. Its root, which is eatable, and much esteemed by the Asiatics as an aphrodisiac, is a native of Syria and Egypt, but does not appear to be known in India except as an article of the *Materia Medica*. It has been placed among the *Tordyliums* and *Heracleums* by some writers. A figure of it is given by Ventenat, in the *Jardin de Cels*, tab. 78, under the name of *Pastinaca dissecta*. Its Arabian name is either derived from its supposed virtues, or the verb *ashkala* was formed from *shakákul*.

See Avicenna, i. 257.; Don, *Gardener's Dictionary*, iii. 340.

SECALE, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx two-valved, or many flowered, solitary; glumes linear-lanceolate, smooth, or channelled on both sides.

Seven species of grasses, natives of the East.

SECAMONE, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Asclepiadææ*. Generic character: masses of pollen twenty, smooth; filaments connected, hanging outwards; corolla rotate.

One species, *S. Ægyptica*, native of Egypt.

SECANT, Lat. *secans*, cutting;

A line so called because it *cuts* another line,—called the tangent.

Upon the whole I observe that the same line cannot be both tangent and secant.

Berkley. *Works*, vol. ii. p. 177. *The Analyst*.

SECE'DE, v. } Lat. *secedere*, (se, and *cedere*, to
SECE'DER, } go,) to go away from.
SECE'SS, } To go away, depart, or separate
SECE'SSION. } from.

Silent *secess*, waste solitude.

More. *Song of the Soul*. Preface, book iv.

Under the times of the gospel, what need we any other witness than the cels and cloysters of retired votaries, whose very *secession* proclaims their contempt of sinfull seculars; and doth as good as say, This people which knoweth not the law is accursed.

Hall. *Works*, vol. iii. p. 563. *Peace-maker*, sec. 8.

The brave with tyrant ministers contests;
Instead of speeches now I'll write protests;
Call back the thunderstruck *seceding* crew,
Instead of going out, I'll turn out you.

Cambridge. *Parody on Death and the Lady*.

Agreeably to the intimation previously given, a grand *secession* of the members in opposition took place during the remainder of this session.

Belsham. *History of Great Britain*. George II. Anno 1739.

SECERN, v. Lat. *secernere*, (se, and *cernere*, to separate, to disjoin.) See SECRETE.

To separate; to strain out.

Birds are better meat than beasts, because their flesh doth assimilate more finely, and *secerneth* more subtilly. Bacon.

The pituite or mucus, *secerned* in the nose, mouth, palate, stomach, intestines, and wind-pipes, is not an excrementitious but a laudable humour. Arbuthnot. *On Aliments*, ch. vi.

SECHIUM, in *Botany*, a genus of the class *Monocia*, order *Monadelphia*. Generic character: male flower, calyx five-cleft; nectary composed of ten cells; filaments five, connected: female flower, style five-cleft; seed-vessel a gourd, one-seeded, muricate.

One species, *S. edule*, native of South America; the fruit is used by the natives as a culinary vegetable: they call it *Choco*.

SECLE, Lat. *seculum*; Fr. *siècle*; It. *secolo*.

A century, a hundred years.

Of a man's age, part he lives in his father's lifetime, and part after his son's birth; and thereupon it is wont to be said that three generations make one *secle*, or hundred years in the genealogies.

Hammond. *Practical Catechism*.

SECLU'DE, v. } Sp. *secluso*; Fr. *seclus*, kept or
SECLU'SION. } shut up from, deprived of. Cotgrave. Lat. *secludere*, (se, and *claudere*, to shut in, to confine.)

To shut, keep, or confine, away from; to keep private or apart, in close retirement or solitude.

But you have bene of long continuance *secluded* from the Scriptures, whiche is cause of such grosse errors as ye are now fallen in, so that ye could neither search them, nor yet once looke on them. Frith. *Workes*, p. 3. *To the Reader*.

For how can we think of him without dread and reverence, when we consider how he is *secluded* by the infinite sacredness of his own majesty from all immediate converse and intercourse with us.

Scott. *Christian Life*, part ii. ch. vii. p. 404.

If they have any vices, he will now be in much greater danger of moral infection, and will suffer worse consequences from it, than if he had not been *secluded* from boys at a boyish age.

Knox. *Works*, vol. iii. p. 397. *Liberal Education*.

The invincible mansion of departed spirits, though certainly not a place of penal confinement to the good, is nevertheless in some respects a prison. It is a place of *seclusion* from the external world.

Horsley. *Sermon* 20. vol. ii. p. 164.

SE'COND, adj. } Fr. *seconde*, *second*; It. *se-*
SE'COND, n. } *condo*, *secondar*; Sp. *segundo*,

SECOND.

SECOND. SOUL. There is one desperate fellow has broke into us,
 And here he bangs ye two or three before him,
SECRET. There five or six; ventures upon whole companies.
 PROT. And is not seconded?
 SOUL. Not a man follows.
Beaumont and Fletcher. The Humorous Lieutenant, act iii. sc. 6.

If Europe herself hath so many mother languages, quite discrepant one from the other, besides *secondary* tongues and dialects, which exceed the number of their mothers, what shall we think of the other three huge continents in point of different languages.
Howell. Letter 60. book ii. p. 381.

But here you exclaim [p. 83] of the "strange abuse made of quotations and *second-hand* representations."
Waterland. Works, vol. iii. p. 111.

Nor was the fact foretold by him alone;
 Nature herself stood forth, and *seconded* the sun.
Dryden. Virgil. Georgics, book i.

First of al on my part I should abstain from al commercement with that party, either by word, writing, or deed; *secundarily*, procure by al honest wayes, if I would not by dishonest, to repair this malignity.
Strype. Eccles. Memorials, vol. vi. p. 78.

The occasion, on which we are now assembled, requires that we view him as the world's great luminary in another sense; a sense most highly interesting to man, though, in comparison, but *secondary* and subordinate.
Knox. Works, vol. vi. p. 417. Sermon 28.

He sometimes has a stroke of humour; as in the following stanza, where he wishes to take on board the eight *secondaries*, or minor canons, of his college.
Warton. History of the English Poets, vol. ii. p. 242.

I do not tell the respectable mover and *seconder*, by a perversion of their sense and expressions, but their proposition halts between the ridiculous and the dangerous.
Burke. On the Duration of Parliaments.

SE'CRET, adj. Fr. *secret*; It. *segretto*; Sp. *secreto*; Lat. *secretus*; past participle of *secernere*; to put away from, asunder, or apart; to keep away, in private. *Secret, adj.*, Separated or set apart, removed, withdrawn; *sc.* out of sight or view; hidden, concealed, private.
SE'CRET, n.
SE'CRET, v.
SE'CRECY,
SE'CRETLY,
SE'CRETNESS,
SE'CRETARY,

SE'CRETE, v.
SECRE'TION,
SECRETI'TIOUS,
SE'CRETORY.
 The Lat. *secretorium* is a secret or private place; Fr. *secretaire*; It. *secretario, segretario*;
 Sp. *secretario*; Low Lat. *secretarius*; one intrusted with the secrets of his office; of his employer.

This juge unto this cherl his tale hath told
 In *secret* wise, and made him to ensure,
 He shulde tell it to no creature,
 And if he did, he shulde lese his hede.
Chaucer. The Doctoures Tale, v. 12076.

O messenger, fulfilled of dronkenesse,
 Strong is thy breth, thy limmes faltren ay,
 And thou bewreiest alle *secrenesse*.
Id. The Man of Lawes Tale, v. 5192.

But this is counsaile, keepe it *secretly*,
 (Quod she) I nold for all the world about,
 The queene of loue it wist.
Id. The Court of Loue, p. 372.

For wythyn is yhyd the strength and the vigoure of men in the *secretour* of hir hertes.
Id. Boecius. De Consolatione, book iv. p. 438.

Uoid backe the prease (quod she) vp to the wall,
 Make large roome, but looke ye do not tary,
 And take these billets to the *secretary*.
Id. The Assembly of Ladies, p. 530.

He seith in open, phy, to sinne,
 And in *secrete* there is no vice,
 Of whiche that he nys a novice.
Gower. Conf. Am. book iv. p. 21.

Was neuer yet so wise a clerke,
 Whiche might knowe all Goddes werke,
 Ne the *secrete*, which God hath sette
 Ayene a man, maie not be lette.
Gower. Conf. Am. book vi. p. 196.

Our maister Crist saith in an other place, that I haue shewed you in *secretnes*, preach it on the tope of the house.
Barnes. Workes, p. 291.

Whenne he [Constantyne] awoke he called this vicyon to mynde, and tolde vnto his *secretres*, by whose counsayll he commaunded the sygne of the crosse to be peynted, and sette in his baners and penons, and of all his knyghtes.
Fabyan. Chronycle, ch. lxviii.

He had alwayes goying with hym vp and downe in Gaunt lx or fourscore variettes armed, and amonge them there were thre or foure that knewe y^e *secretnes* of his mynde; he had commaunded his *secret* variettes, that whanne soeuer he mette any persone, and made suche a sygne to theym, that incotynent they shulde sleepe hym.
Lord Berners. Froissart. Cronycle, vol. i. ch. xxix.

There came to the duke of Berrey a clerke, *secretorie* to sir Peter of Craon, and sayde to hym in *secrete* maner:—Sir, I wyll shewe you a thyng in *secretnesse*, whiche is lykely to come to a poore cōclusyon.
Id. Ib. vol. ii. ch. 186.

Mr. Wotton gave up his *secretaryship*, and Mr. Cecil got it of him.
Burnet. Records, vol. ii. part ii. book ii. p. 27.

A loathly, wrinkled hag, ill-favoured, old,
 Whose *secret* filth good manners biddeth not be told.
Spenser. Faerie Queene, book i. can. 9.

And he doth soonest rise
 That best can handle his deceitfull wit
 In subtil shifts, and finest sleights devise,
 Either by slaundring his well deemed name,
 Through leasings lewd, and fained forgerie;
 Or else by breeding him some blot of blame,
 By creeping close into his *secrecie*.
Id. Colin Clout.

They beene ybrought into a comely boure,
 And servd of all things that mote needfull bee;
 Yet *secretly* their hoste did on them lowre,
 And welcomde more for feare then charitee.
Id. Faerie Queene, book iii. can. 9.

None alive did better ken the *secretary-craft* to get counsels out of others, and keep them in himself.
Fuller. Worthies. Kent.

For I could muster up, as well as you,
 My giants and my witches too,
 Which are vast constancy, and *secretness*,
 But these I neither look for nor profess.

And about this seasō reygned, or began to reygne, y^e cursyd *secte* of y^t detestable and false prophete Mahomet.

Fabyan. *Chronycle*, ch. 133.

But we haue reason to coole our raging motions, our carnall stings, or vnbitted lusts; wherefore I take this, that you call loue to be a *sect* or seyen, (scion.)

Shakspeare. *Othello*, act i. sc. 3. fol. 315.

The *sectaries* of my celestial skill,

That wont to be the world's chief ornament,

They under keep.

Spenser.

Wherevpon the queene regent did send Noualle, the king of France's orator in that realme, to request the queene of England that she would call hir ships home againe, and that she would not send aiding souldiers to the lords of the religion (whom Lesleus neuer tearmeth by anie other name than *sectaries* and seditious persons,) whereby the peace might be broken with the French, and so occasion of warre giuen.

Holinshed. *Historie of Scotland*. Anno 1560.

The best learned of the philosophers were not ignorant, as Cicero witnesseth for them, gathering the opinion of Aristotle and his

sectators, with those of Plato and the Academicks, to this effect, that the same power which they called *animam mundi*, the soul of the world, was no other than that incomprehensible wisdom, which we express by the name of God, governing every being as well in heaven as in earth.

Raleigh. *History of the World*, book i. ch. i.

In one place, he adviseth his *sectatours* in disputations to be ambiguous; and in another, to bring forth any thing that occurs, rather than give way to their adversary; counsel very well becoming an enquirer after verity.

Glanvil. *The Vanity of Dogmatizing*, ch. xvii.

These six branches will, as I conceive, embrace the whole business; through which I shall run in as many several chapters or *sections*.

Reliquiæ Wottonianæ, p. 74.

In the *section* of bodies, we find man, of all sensible creatures, to have the fullest brain to his proportion, and that it was so provided by the supreme wisdom, for the lodging of the intellectual faculties.

Id. p. 80.

GARD. My lord, my lord, you are a *sectary*,

That's the plaine truth; your painted glosse discoverers

To men that vnderstand you, words and weaknesse.

Shakspeare. *Henry VIII.* act v. sc. 2. fol. 229.

Who, I beseech you, is it in this case that makes the sect? Is it not those who contract the church of Christ within limits of their own contrivance, who by articles and ceremonies of their own forming, separate from their communion all that have not persuasions which just jump with their model?

Locke. *Third Letter for Toleration*.

But that unfaithful test unsound will pass,

The dross of atheists, and *sectarian* brass.

Dryden. *The Hind and the Panther*.

This done, he sent a journeyman *sectary*

He'ad brought up to retrieve, and fetch, and carry.

Butler. *Upon Nye's Beard*.

Segment-leaves are leaves of plants divided into or cut into many shreds.

Miller. *Gardener's Dictionary*.

The paths of error are various and infinite; the Gnostics were imperceptibly divided into more than fifty particular *sects*, of whom the most celebrated appear to have been the Basilidians, the Valentinians, the Marcionites, and, in a still later period, the Manichæans.

Gibbon. *History of the Roman Empire*, vol. ii. ch. xv. p. 286.

The *segment* is any part of a circle bounded by an arc and its chord.

Hutton. *Mensuration. Definitions*.

SECTS. The professors of Mohammedanism and Asiatic. Brahmanism, the two religions most widely diffused throughout Asia, are no less subdivided into a variety of *Sects* than Christians have been for many ages, and Pagans were of old. When it is considered that religious belief embraces whatever fills the soul with awe, elevates its hopes, and gives power to its apprehensions, it is manifest that, if raised above the lowest

Moham-
medan.

SECTS. stages of civilization, by far the greater number of human beings will eagerly embrace and be deeply affected by religious feelings; particularly if the faith in which they have been nurtured, be believed to have come from heaven. But the love of novelty, singularity, domination, fame, and admiration; a perception of what is improbable, incongruous, or ludicrous; every characteristic, and almost every distemper, of a superior mind will continually operate in prompting some who have the will and the ability to quit the beaten road, to strike out a new path; to become, as restorers and purifiers, the founders of Sects differing in opinion and doctrine from the community whence they spring. The degree and tendency of these deviations will, of course, vary in proportion as their authors are guided by piety, ambition, or fanaticism. To the latter principle, indeed, may be traced the origin not only of new Sects, but of new forms of faith; for when once imagination has obtained the dominion over a powerful mind, it is not far removed from that state in which its own delusions may be mistaken for a commission from heaven; and then the doctrine taught will be as likely to be entirely new, as a restoration of what was supposed to have become corrupt. But religious Sects and divisions do not always spring from bad motives. Upright men may differ in their interpretation of the law, human or divine, by which they are guided; hence there are *orthodox* and *heterodox* Sects in all religions: the adherents of the former agreeing in the essentials of their common faith, and therefore mutually allowing each other to "believe rightly" in the main; those of the latter denying or distorting doctrines clearly delivered by the lawgiver and embraced by all except themselves; these are therefore said to hold an "erroneous belief," because they reject what has been positively ordained, and is generally received.

To no form of doctrine does this distinction more immediately apply than to the faith of the Muselmáns. They have been, almost from the days of their founder, split into two leading divisions, the Sunnís and the Shí'ís, the *orthodox* and *heterodox*; the former being followers of the four first Khalífs, Mohammed, Abú Bekr, 'Omar, and Othmán; the latter of 'Alí, son-in-law of Mohammed, and, according to them, his only legitimate successor. The first of these great divisions of Mohammedanism derives its name from the *sunnah*,* *i. e.* the "form," "way," "rule of life," given by the Prophet in word and deed, independently of the Korán, and preserved by his immediate followers, who handed it down traditionally to posterity. The Sunnís, as orthodox, agree with respect to the roots or fundamental principles†

* This word corresponds in use and signification, but not in origin, with the Hebrew Mishnah, *i. e.* (the secondary law;) just as Korán corresponds with Mikrá, (*i. e.* that which is read, the written law.) These terms, if not borrowed from the Jews, were no doubt adopted in allusion to those used by them. The Sunnah is derived from oral traditions (Ahádíth, plural of Hadíth) of the Prophet's words and deeds, the reporters of which are named in succession, and were either companions (As-háb or Sahábeh) of Mohammed, or their immediate successors, (tábi'in.) The most esteemed collection of these Hadíths is the Sahíh of Al-Bokhári, who lived in the first half of the IIIrd Century of the Hijrah, (the IXth Century.) The discordance respecting the substance of some of these traditions, and the names of those who handed them down, affords strong evidence as to the real value of history preserved only by word of mouth.

† These roots (*usúl*) relate, 1. to the unity and attributes of God; 2. to his absolute decrees; 3. to his threats and promises; and, 4. to the mission of his prophets and ministers.

(*usúl*) of the faith, but differ as to the branches, (*furú'*) *i. e.* the practical doctrines derived from them. They are subdivided into four Sects, named from the four great leaders (Imáms) or orthodox doctors of the law; (*fík-h*;) 1. the Hanefís or Hanefites, founded by Abú Hánífah ibn Thábit, (A. H. 80—150, A. D. 699—767,) a native of Kúfah in Arabian 'Irák, who was guided principally by *reason* in his interpretation of the law; his disciples are therefore styled "the followers of reason," (*as-hábu-r-rá'í*), to distinguish them from the other orthodox Sects, who are all (*as-hábu-l-hadíth*) "followers of the tradition." (Pococke, *Spec.* 298. D'Ohsson, *Emp. Ottom.* i. *Introd.* sec. 2.) Though a strenuous partisan of the Khalif 'Alí, his doctrine has prevailed more than any other among the Sunnís, first in 'Irák, and subsequently throughout the 'Othmán Empire, the Turks being almost universally followers of the Imám 'Ázem, or Great Doctor, as he is styled by them. 2. The Malekites or Málikís, named from the Imám Málik ibn 'Ans or 'Anas, who was born and died at Medínah (A. H. 95—178, A. D. 713—794.) He was very unwilling to trust to his own judgment in any difficult case, and therefore extremely diligent in collecting the traditions as to the Prophet's own determinations. (Pococke, p. 294.) His great work, entitled *El-Muwettá* or *Mautá*, (the smooth bed,) is, in fact, a collection of traditions, but is placed in a lower rank than the six standard compilations* of the "sayings and doings" of Mohammed, probably as being less comprehensive. The doctrine of Ibn Málik is almost universally followed in Africa. 3. The Sect of the Sháfi'ís or Shafeítes, is named from Mohammed ibn Idrís Al Sháfi'í, born either at Ghazzah or 'Askalán, (A. H. 150, A. D. 767,) on the day of Abú Hanífah's death. He died in Egypt A. H. 204, (A. D. 820,) and his learning was such that he was said by Ibn Hanbal to be "as the sun to the world and health to the body." (Ibn Khallikán, *apud* Pococke, *Spec.* p. 295.) He was the first who discoursed on the principles of jurisprudence, (*el-fík-h*), but was very hostile to the "scholastic theology," (*'ilmu-l kelám*), then beginning to prevail among his countrymen; and said that every one who studied it deserved to be fixed to a stake, and carried round through all the Arab Tribes, accompanied by a crier proclaiming, "Behold the recompense of him who deserts the Book (Korán) and the Sunnah, and takes up the study of Alkalám.† The Shafeíte doctrine was formerly much followed in the countries to the North-East of Persia, but has since been confined chiefly to Arabia, and, from its rigorous adherence to the letter of the Korán, its prevalence there may be considered as one of the remote causes of the success of the Wahhábis. 4. Ahmed ibn Hanbal, the fourth Imám, was born A. H. 164, (A. D. 781,) either at Merv in Khorásán, or at Baghdád, where he died A. H. 241, (A. D. 855,) and was followed to the grave by 800,000 men and

* Called by the Turks *Kutub sittéhi mó'tebereh*, (the six standard books.) They are, 1. the *Sahíh* of Al Bokhári, and the *Sunen*, (*i. e.* Sunnahs;) of 2. *Abú Dáwud*; 3. *Termidhí*; 4. *Nisá'yí*; 5. *Ibn Máje'h el Kazwíní*; and, 6. the *Sahíh of Muslim*, (D'Ohsson, i. p. 8.) M. von Hammer (*Encykl. Uebersicht*, S. 628.) puts the *Muwettá* of Málik in the place of Ibn Máje'h, perhaps by an oversight; Hájí Khalífeh (D'Herbelot, *Bibl. Or. v. Sonan*) agrees with Mourádjah D'Ohsson.

† Literally "speech" or "language," and therefore nearly synonymous with *al-mántik*. (*i. e.* logic.) The '*ilmu-l kelám*' signifies properly the application of grammar, logic, physics and metaphysics to divinity, that is, the interpretation of the Korán and the doctrines derived from it. As the source of heresies, it is severely condemned by rigid Muselmáns. (Pococke, *Spec.* p. 195.)

SECTS. 60,000 women; 20,000 Infidels, Christians, Jews, and Magians having embraced the Muselmán faith on that day.* (Ibn Khallíkán, *ap. Sale, Koran, Prelim. Disc.* p. 157.) In latter ages, this Sect, like the last, has prevailed little beyond the bounds of the Arabian peninsula. Of these four Sects, that of Abú Hanífah is now almost universally predominant. Though imbued with a profound reverence for the prophetic authority of Mohammed, that Imám was less possessed by the spirit of asceticism and contemplative devotion than the others; his doctrines, therefore, were more practical, and his followers more tractable, than theirs, especially those of the two last, who zealously propagated the fanaticism of their masters, and were often betrayed by it into dangerous extravagancies.

Heterodox. The heterodox Sects or heresies, which have sprung from the doctrine of Mohammed, are far more numerous than its orthodox offspring. They are all ascribed by the most accurate Arab writers to the cultivation of the ilmu-l kelám, that sort of scholastic theology which was first cultivated when the Empire of the Khalífahs, *i. e.* Mohammed's successors, was firmly established, and wealth and power had afforded leisure for the exercise of those talents which subtle and metaphysical disquisitions require: not but that the ascetic and fanatical tendency of the original doctrine had its part in promoting these extravagancies; and though the defect charged upon the heterodox sectarians is, that they maintain erroneous opinions as to the roots or *fundamental* doctrines of the faith, it must not be supposed that they are unbelievers in the Korán; the difference between them and the orthodox is rarely, if ever, more than a difference of interpretation derived from philosophical opinions, for which the heresiarchs who propagated them were indebted to Magians, Jews, and Christians. The first great schism among the Muselmáns may be dated from the death of 'Othmán, (A. H. 35, A. D. 656,) only two hundred and ten years after the decease of Mohammed, when the rivalry of Mo'awiyah and 'Alí led the partisans of the latter to separate from the other believers, and form a distinct association or Sect, (*Shi'ah*), as they are denominated by their opponents, though by themselves that name is deemed a term of reproach. At first the principal, if not the only difference was a disagreement as to the succession of the Imám (leader) of the Moslims, the Khalífah (substitute or successor) of the Prophet. In process of time a greater discordance in doctrine and practice ensued, and the schism became irremediable. Their distinguishing tenets are now, 1. the illegality of the election of Abú Bekr, 'Omar, and 'Othmán, the three first Khalífahs; 2. the peculiar claims of 'Alí by his relationship to Mohammed, and that prophet's express appointment; 3. that the Imám ought to be free from even slight sins; 4. that every man should declare openly whom he follows. The Shiya'is or Shi'is are divided into four principal Sects, who differ respecting the legitimate succession to the Khalifate, and the precise definition of some of the above points; and they are subdivided into so many branches, that they alone may

* These extravagant numbers may serve to show the extraordinary veneration in which Ibn Hanbal was held, but they put the reader on his guard against relying too much on the accuracy of the writers who report them as true. However, fanaticism, so prevalent in Asia, will often baffle all sober calculation, and the violence and insubordination of the Hanbalites at Baghdád, less than a century after the death of their founder, almost rivalled the excesses of the Wahhábis in modern times.

SECTS. be considered as verifying Mohammed's prophecy, that "his people should be divided into seventy-three divisions." (Pococke, *Spec.* 210.)

Their principal divisions are, I. the Kaísánis; II. the Zeídís; III. the Ghuláh or Ghulát; and IV. the Imámís; I. the *Kaísánis*, named from Kaísán, one of 'Alí's freed-men, maintained that Mohammed, whose mother Al Hanífah* was of the Tribe bearing that name, was the legitimate heir of 'Alí, in preference to Hasan and Husein, venerated as true Imáms and martyrs by other Shi'is; from this Sect sprang the i. *Wákifis*, (Perseverers,) who affirm that Mohammed, son of Hanífah, is still living under some other name: ii. the *Háshimis*, who say that Mohammed's son, Abú Háshim, succeeded him, and appointed Mohammed of the House of 'Abbás his heir. On this affirmation the pretensions of the 'Abbásí Khalífes principally rest.

II. The *Zeídís* consider Zeid, son of 'Alí, surnamed Zaydees. Zeinu-l-'ábidín, son of Hosein, and therefore great grandson of 'Alí, as the fourth Khalíf, the true Imám,† while most other Shi'is believe Mohammed Bákir to have succeeded his father Zeinu-l-'ábidín; the Zeídís also required military and legislative talents as well as piety in an Imám; and they acknowledged Abú Bekr, 'Omar, and 'Othmán as legitimate successors of Mohammed, for which reason they are branded by the other Shi'is with the name of Ráfízis, (or Rawáfiz, *i. e.* deserters.) Idrís, founder of the Idrísí dynasty in Morocco, laid claim to the throne, as descended from this Zeid, and other Zeídís asserted their pretensions also in the East with similar success.

III. The *Ghulát*, (or Ghuláh, plural of Ghálí,) *i. e.* Goolaut. "dear and precious," or "they who go every length, pass all bounds," well deserved their name, as their doctrines were in the highest degree extravagant and impious. According to most of them, 'Alí is an incarnation of the divinity; others believe the soul of 'Alí to pass into the body of each of his successors; others that it continues in that of Bákir, mentioned above, who is still living on earth in concealment. They are termed mulhid (impious infidels) by most other Shi'is, as well as by the Sunnis, and their doctrines were condemned by the very Imáms whom they deified.

IV. The *Imámís* appear to have derived from the Emam-Ghulát the doctrine of a present but invisible Imám, the successor of the seventh or the twelfth of the visible Imáms. From these numbers their two principal branches are denominated Seb'is (Seveners) or Ithná-'asharis, (Twelvers.) The latter believe Mohammed ibn Hasan 'Askerí, the twelfth visible Imám, to have disappeared in a cavern near Hillah, where he will continue invisible till he appears again as Al Mehdí (the Leader) at the end of the world. The former acknowledge only seven visible Imáms, *viz.* 1. 'Alí, 2. Hasan, 3. Hosein, 4. 'Alí Zeinu-l-'ábidín, (the Ornament of Worshippers,) 5. Mohammed Bákir, 6. J'afer Sádik, (the Righteous,) and his son, 7. Ismá'il. From the latter, who died before his father, this Sect is called Ismá'ilí. The other Imámís consider Músa Kásim, younger brother of Ismá'il, as the successor of Ja'fer Sádik, and his successors, 7. 'Alí Rizá, 8. Mohammed Takí, 9. Hádí, 10. Hasan, and 11. 'Askerí, as

* M. de Hammer (*Assass.* p. 25, 26.) has Hanfíyeh, but the MSS. of the *Tárikh Lari*, consulted for this work, has invariably Hanífah.

† Imám refers rather to the spiritual, Khalífah to the secular functions of the Commander of the Faithful, (Amíru-l-múminín,) but in common use they are nearly synonymous; the latter being generally used by the Sunnis, the former by the Shi'is.

SECTS. who seemed to be inspired with the austere and genuine spirit of the earliest followers of Mohammed, and who for a long time threatened to destroy every monument of Mohammedan learning except the Korán itself, deserve a fuller notice than could here be given. Something has been already said of them in the accounts of HIJA'Z and 'O'MAN. (*Encycl. Metrop.* xxiii. 185.)

Hindú. The Indian Sects, like those of Western Asia, may be divided into the orthodox and heterodox, on the supposition that the doctrine of the Védas is the source of all Hindú theology. The former are distinguished by an almost exclusive devotion to one of the last two members of the Sacred Triad, for as there are no temples, so there are no votaries of Brahma the First and Supreme; hence the Hindús are almost always either 1. Vaishnavas, (vulgarly Baishnau or Baishnab,) devoted to Vishnu; 2. Saivas, (Shaiv or Shaib,) servants of Sivá; or 3. Sáktas, whose favourite deity being Durgá or B'haváni, called Saktí, they may be almost considered as a branch of the Saivas, for Durgá is the consort of Mahá-déva, (Siva.) The heterodox Sects among the Hindús are, 1. the Baud-d'has, or followers of Budd'h; 2. the Jainas, or disciples of Jina; 3. those of Chaítanya, who are rather schismatics than heretics; and 4. the Sik'hs, or followers of Nánek. Of these none but the Baud-d'has have been noticed in this work, expectation of larger and more authentic materials respecting the Hindú mythology having caused that subject to be reserved for a later portion of it. Under the head of SIVA, therefore, will be given a summary of the Indian theology, and an account of the Sects to which the Brahmanical system has given birth.

pan is tyme to *bikere* with *pe kyng* of France.

R. Brunne, p. 256.

So well were *pei* chastised, alle com *tille* his grith,
pat *pe* pes of *pe land* *pe siked* him alle with.

Id. p. 34.

Unto *pe terme* fer told, of Saynt Andrewmesse,
pe pape did him hold, with gode *sikernesse*.

Id. p. 316.

And certainly a man hath most honour
To dien in his excellence and flour,
When he is *siker* of his goode name.

Chaucer. *The Knightes Tale*, v. 3050.

And sothly suster mine, (quod she,)
Now be we duchesses both I and ye,
And *sikerde* to the regals of Athenes,
And both hereafter likely to be queenes.

Id. *The Legend of Good Women*, p. 314.

For at an hole in shone the mone bright,
And by that light she saw hem bothe two,
But *sikerly* she n'iste who was who.

Id. *The Reves Tale*, v. 4226.

And I pray you let me speke with your adversaries in privee place, for they shuln not knowe that it be of youre will or youre assent; and than, whan I knowe hir will and hir entente, I may conseille you the more *seurely*.

Id. *The Tale of Melibeus*, p. 118.

And trewely it sit wel to be so,
That bachelers have often peine and wo:
On brotel ground they bilde, and brotelnesse
They finden, whan they wenen *sikernes*:
They live but as a bird or as a beste.

Id. *The Marchantes Tale*, v. 9153.

He shuld beare a *siker eie*,
That he to lowe, ne to hie
His cart driue, at any throwe,
Wherof that he might ouerthrowe.

Gower. *Conf. Am.* book iv. p. 102.

SECURE.
—
SECURIDACA.

But well is hym, that God woll helpe.
For he stant on the *siker* side,
Whiche elles shulde go beside.
Gower. Conf. Am. book v. p. 141.

Nay, (saide Florent,) that maie not bee,
Ride than fourth thy wey, quod shee:
And if thou go forth without reade,
Thou shalt be *sikerly* deade.
Id. Ib. book i. p. 29.

This lorde, whiche herde of this tempest,
That he tofore his gate blewe,
Tho wist he by the lawe, and knewe
That he was *sekerly* deade.
Id. Ib. p. 33.

For he doth all his thyng by gesse,
And voideth all *sikernes*.
Id. Ib. p. 31.

For your *security* from any treachery (having no hostage worthy
to countervail you) take my word, which I esteem above all
respects.
Sidney. Arcadia, book iii.

He forced was to turne from him and fly;
Yet ere he fled, he with his tooth impure
Him heedlesse bit, the whiles he was thereof *secure*.
Spenser. Faerie Queene, book vi. can. 5.

But ah! who can deceive his destiny,
Or weene by warning to avoyd his fate?
That, when he sleepes in most *security*
And safest seemes, him soonest doth amate.
Id. Ib. book iii. can. 4.

Lightly she leaped, as a wight forlore,
From her dull horse, in desperate distresse,
And to her feet betooke her doubtfull *sickernes*.
Id. Ib. can. 7.

And unto Worc'ster he himself did move
A reconcilment to be made of all;
But Worc'ster, knowing't could not be *secur'd*,
His nephew's onset yet for all procur'd.
Daniel. History of Civil Wars, book iv.

But now he was exil'd, he thought him sure;
And, free from farther doubting, liv'd *secure*.
Id. Ib. book i.

But you at home blest with *securest* ease,
Sitt'st and belee'vst that there are seas,
And watrye dangers.
Corbet. The Country Life.

And how his limbs, resolv'd through idle leisour,
Unto sweete sleepe he may *securely* lend.
Spenser. Virgil's Gnat.

AGA. 'Tis done like Hector, but *securely* done,
A little proudly, and great deale disprising
The knight oppos'd.
Shakspeare. Troilus and Cressida, act iv. sc. 5. fol. 98.

They, like Judas, desire death; Cain, on the contrary, grew
afraid thereof, and obtained a *securement* from it.
Sir Thomas Brown. Vulgar Errours.

SOP. Alas, my son, nor fate, nor heaven it selfe,
Can or would wrest my whole care of your good
To any least *secureness* in your ill.
Beaumont and Fletcher. The Bloody Brother, act ii. sc. 1.

The sacred cradle to your charge receive,
Ye seraphs, and by turns the guard relieve;
Thy father's angel, and thy father join,
To keep possession, and *secure* the line.
Dryden. Britannia Rediviva.

The winds, my friend, inspire a pleasing gale;
The ships, without thy care, *securely* sail.
Now steal an hour of sweet repose; and I
Will take the rudder, and thy room supply.
Id. Virgil. Aeneis, book v.

In this district, however, the people seemed to live in a state of
conscious *security*, and to avail themselves of their advantage.
Cook. Voyages, vol. ii. book ii. ch. x. p. 54.

SECURIDACA, in *Botany*, a genus of the class
Diadelphia, order *Octandria*, natural order *Polygaleæ*.
Generic character: calyx three-leaved; corolla pea-

flowered, standard two-leaved, between the wings; pod
ovate, one-celled, one-seeded.

Four species, natives of South America.

SECURINEGA, in *Botany*, a genus of the class
Dioecia, order *Pentandria*. Generic character: Male
flower, calyx five-parted; corolla none; stamens five,
inserted under the rudiments of the pistils: female
flower, capsule three-celled.

One species, *S. nitida*, a tree with very hard wood,
native of the Mauritius.

SEDA'B, or rather SEDHA'B, corresponds in Arabic
with the Peganum (Πήγανον, i. e. rue) of Dioscorides;
(iii. 52, 53.) after whom Avicenna (Ibn Síná, *Kánûn*,
i. 224.) enumerates three species, the garden, wild, and
mountain *rue*; but in the Greek writer the mountain
and wild *rue* are evidently the same species, the *Ruta*
montana of modern botanists; his garden and cultivated
plant being our *Ruta graveolens*, which, together with the
other species in Greece, still retain their ancient name,
(*Flora Græca*, i. 272.) and the broad-leaved variety is
called Yabán Sedáb* (wild *rue*) by the Turks. But the
Arabs gave this name to other plants; Avicenna (i. 188.)
seems to imply that the Thapsia of Dioscorides (*Th.*
asclepium) was called Sedhábu-l jebellí, (mountain
rue;) the gum resin of which he names Yantón,†
(*Yavθov*?) Sedáb is likewise the name of the tree
which produces the purgative seeds called Máhú-dáneh
or Habbu-l mulúk, (king's seeds.) Its fruits three and
three, with three black seeds in each. (Avic. i. 210.‡)

See Avicennæ *Opera*, fol. Rom. 1593; Smith, (Sib-
thorpe,) *Floræ Græcæ Prodromus*, Lond. 2 vols. 8vo.
1806. Dioscorides, ed. Saracenii.

SEDAN, Florio calls *seggietta*, "a kind of chaire
used in Italy to carrie men and women up and down;"
and Skinner derives *sedan*, q. d. *sedana*, *sediana*, from
the Lat. *sed-ere*, to set.

A seat; an inclosed seat used for the same purposes
as the It. *seggietta*.

— Nay, some have learn'd the trick
To beg for absent persons; feign them sick,
Close mew'd in their *sedans*, for fear of air:
And for their wives produce an empty chair.

Dryden. Juvenal. Satire 2.

Possess ye, therefore, ye who, borne about
In chariots and *sedans*, know no fatigue
But that of idleness, and taste no scenes
But such as art contrives, possess ye still
Your element; there only can ye shine.

Cowper. The Task, book i.

SEDA'TE, } It. *sedato*; Lat. *sedatus*; past
SEDA'TELY, } participle of *sed-are*, *facere ut aliquid*
SEDA'TENESS, } *resideat*; to cause any thing to settle,
SE'DATIVE. } or become still.

Still, quiet, composed, calm, tranquil, serious. Fr.
sedatif; quieting, assuaging, mitigating, easing, ap-
peasing, stinting. Cotgrave.

His silence here, with blushes, Paris breaks:
'Tis just, my brother, what your anger speaks;
But who like thee can boast a soul *sedate*,
So firmly proof to all the shocks of fate?

Pope. Homer. Iliad, book iii.

Go! fair example of untainted youth,
Of modest wisdom, and pacific truth;
Compos'd in sufferings, and in joy *sedate*,
Good without noise, without pretension great.

Id. Epitaph on Robert Digby.

* "Sedef," in the *Flora Græca*, is a Romaic corruption of Sedáb,
pronounced by the modern Greeks Sedáv and Sedáf.

† Not Yanbon, as in the Medicean Edition of Avicenna.

‡ Qu. *Ricinus*?

SECURI-
DACA.

—
SEDATE.

SEDATE. If we did heartily believe, and seriously consider, what the present life is, and what will come after: if we did *sedately* weigh the infinite disproportion between a moment and eternity.

Sharp. *Works*, vol. ii. p. 96. Sermon 5.

They might have afforded us more light, if they had had less heat, and had been careful to preserve the coolness and *sedateness* proper to religious or learned inquiries.

Waterland. *Works*, vol. v. p. 499. *Supplement to the Nature of Christian Sacrament*.

I shall not trouble you with those common-place ideas which may be found in every good book of morality, but shall proceed to remind you of the substantial pleasures which belong to the *sedate*, the serious, the thoughtful.

Knox. *Works*, vol. vi. p. 87. Sermon 6.

Thus while she spoke, her eye, *sedately* meek,
Look'd the pure fervour of maternal love.

Beattie. *The Judgment of Paris*.

His deep and piercing eye
Look'd wisdom, and mature *sedateness* weigh'd
To doubtful counsels.

Hamilton. *Episode of the Thistle*, book i.

SE'DENTARY, } Fr. *sédentaire*; It. *sedentario*;
SE'DENTARINESS. } Sp. *sedentario*; Lat. *sedentarius*,
from *sedere*, to set, or sit.

Remaining or continuing sitting or at rest; motionless, inactive.

Lastly, the great expence it will require, being not to remain *sedentary* in one place as other agents, but to be often in itinerary motion.

Howell. *Letter* 25. book i. sec. 4. p. 193.

And on thir orbs impose
Such restless revolution day by day
Repeated, while the *sedentarie* earth,
That better might with farr less compass move,
Serv'd by more noble than herself, attaines
Her end without least motion.

Milton. *Paradise Lost*, book viii. l. 30.

Length of years
And *sedentary* numness craze my limbs
To a contemptible old age obscure.

Id. *Samson Agonistes*, l. 571.

Real scruples of conscience, as to this particular, remain but with a few, and those the most *sedentary* and least enterprising of any.

Waterland. *Works*, vol. viii. p. 462. *Thanksgiving Sermon*.

Those that live in great towns, together with the wealthier sort in the country, are inclined to paleness, which may be imputed to their *sedentariness*, or want of motion; for they seldom stir abroad.

Addison. *West Barbary*, (1671,) p. 113.

But of all the barbarians, this humour would be least seen in the Egyptians; whose sages were not *sedentary* scholastic sophists, like the Grecian; but men employed and busied in the public affairs of religion and government.

Warburton. *The Divine Legation*, vol. iii. book iii. sec. 4. p. 175.

SEDGE, } A. S. *secg*; D. *seek*, *carex*, from *se-*
SE'DGED, } *cando*, because easily cut; or rather from
SE'DGY. } the sharp edges of the leaves which cut the hand.

The *gladiolus*, Skinner adds, has its name for the same reason.

Say. But why all this haste, sir?

Woo. I'll tell you quickly. As I late was angling
In the great lake that lies behind the palace,
From the far shore, thick set with reeds and *sedges*.

Beaumont and Fletcher. *The Two Noble Kinsmen*, act iv. sc. 1.

Their horse at chariots fed
On greatest parsly, and on *sedge*, that in the fens is bred.

Chapman. *Homer. Iliad*, book ii. p. 31.

IRIS. You nimphs cald Nayades of y^e windring brooks,
With your *sedg'd* crownes, and euer-harmeslesse lookes,
Leave your criske channels, and on this greene-land
Answer me your summons.

Shakspeare. *The Tempest*, act iv. sc. 1. fol. 15.

HOR. Reuolted Mortimer!

He neuer did fall off, my soueraigne liege,
But by the chance of warre; to proue that true,
Needs no more but one tongue for all those wounds,
Those mouthed wounds, which valiantly he tooke,
When on the gentle Seuerne's *siedgie* banke,
In single opposition hand to hand,
He did confound the best part of an houre
In changing hardiment with great Glendower.

Shakspeare. *Henry IV. First Part*, act i. sc. 3. fol. 51.

JAQ. Let's go discharge ourselves, and he that serves her
Or speaks a good word of her from this hour,
A *sedgly* curse light on him, which is, Pedro,
The fiend ride through him booted and spurr'd, with a
sythe at's back.

Beaumont and Fletcher. *The Woman's Prize*, act v. sc. 2.

Old father Thames rais'd up his reverend head,
But fear'd the fate of Simois would return:
Deep in his coze he sought his *sedgy* bed,
And shrunk his waters back into his urn.

Dryden. *Annus Mirabilis*.

Nor bind thy brows with humble *sedges* round.

Philips. *To James Craggs, Esq.*

SEDIMENT, Fr. *sédiment*; It. *sedimento*; Lat. *sedimentum*; for *sedere*, to set or settle.

That which sets, settles, or sinks; which *subsides*.

The spirits in the ventricles of the brain, playing about and hitting against the sides of the caverns they are in, will in process of time abate of their agitation, the grosser parts especially; and so necessarily come to a more coarse consistency, and settle into some such like moist *sediment* as is found at the bottome of the ventricles, which nature dischargeth through fit passages whereby the spirits are left more pure.

More. *Immortality of the Soul*, book ii. ch. ix.

There is also a sort of water, of which there is only one small pond upon the island, as far distant as the lake, and, to appearance, very good, with a yellow *sediment* at the bottom.

Cook. *Voyages*, vol. vi. book iii. ch. viii. p. 133.

SEDITION, } Fr. *sédition*; It. *sedizione*; Lat. *se-*
SEDITIONOUS, } *ditio*, from *se*, i. e. *seorsim*, et *itum*,
SEDITIONOUSLY, } Vossius. (See AMBITION.) *Seorsim*
SEDITIONARY. } *ire*, to go separate or apart; and thus
—to make—discord, separation, departure, or dissension (among citizens.)

Departure, dissension, (*sc.* from union or peace, from submission, from obedience;) dissension, resistance, contention, (against established authority.)

And oon there was that was seid Barabas that was bounden with men of discencioun that hadden doon manslaughter and *sedicioun*.

Wiclif. *Mark*, ch. xv.

One said, of a sermon he preached before King Edward, when one asked him how he liked Latimer's sermon before King Edward; "Even as I liked him always. A *seditious* fellow."

Strype. *Eccles. Memor.* vol. i. book i. ch. xxiv. p. 271. *Hen. VIII.*

And now thorowe your *seditious* mganes, thinges that were afore quiet and in good order, lawes feared and obeyed, subiectes ruled and kept in duetie, be all nowe in a great disorder, and like if it be not holpen, to growe to wildenesse.

Checke. *The Hurt of Sedition*.

For wee see such miseries hange ouer the whole state of common wealth, through the great misorder of your *sedicion*, that it maketh vs much to reioyce, that we haue bene neither parteners of your doings, nor conspirers of your counsayles.

Id. *Ib.*

Albe it he layeth great default vnto Kynge Richarde, saying i *seducious* and vyle wordis, y^t Kyng Richard falsly brake his ap-
poyntmētes, and kept no promesse y^t by hym was made.

Fabyan. *Chronycle*, Anno 1192.

If any speake vnreuerently or *seditionously* against the prince or the priuie counsell, I haue seene them not onely interrupted, but it hath bene mooued after to the house, and they haue sent them to the Tower.

Smith. *Commonwealth*, p. 52.

What majesty of princes can

A tempest awe;

When the distracted ocean

Swells to *sedition*, and obeys no law?

Habington. *Castara*, part iii.

SEDUCE.

A *seditionary* in a state, or a schismatick in the church, is like a sulphureous fiery vapour in the bowels of the earth, able to make that stable element reel again. *Hall. Remains*, p. 71.

In vain *sedition* scribes with libel strive
To inflame the crowd; while he with watchful eye
Observes, and shoots their treasons as they fly;
Their weekly frauds his keen replies detect;
He undeceives more fast than they infect.
Dryden. Absalom and Achitophel.

If any thing pass in a religious meeting *seditionously*, and contrary to the publick peace, it is to be punished in the same manner, and no otherwise, than as if it had happened in a fair or market.
Locke. Works, vol. ii. p. 253. *A Letter concerning Toleration.*

I shall now move, "That it is the opinion of this Committee that a Bill be brought in to renew and amend the Bill passed in the thirty-eighth year of his present Majesty for securing and detaining persons accused of treason and *sedition*: and that a Bill be brought in to suppress *sedition* societies and *sedition* practices."
Pitt. Speech, April 19, 1799.

SEDR, or SADR, signifies in Arabic the most "prominent or projecting" part of a thing; thence, in the human body, "the breast," and, metaphorically, the "chief part, soul or essence;" thus, in Bengál, the supreme court of justice is called the Sadr díwání 'adálet, i. e. the Most Prominent Council of Justice. In Persia the Sadr 'ázem or Sadri Sudúr (Chief Judge or Judge of Judges) has a rank and functions somewhat similar to those of our "Lord High Chancellor," and superior to those of the Muftí at Constantinople. His office is also spiritual as well as temporal, as, in Mohammedan States, law and divinity are nearly identical.

Chardin. Voyages, vi. 46.

SEDUCE, v.	Fr. séduire; It. sedurre; Sp. seducir; Lat. seducere, (se, and ducere,) to draw or lead apart or away from.
SEDUCEMENT,	
SEDUCER,	
SEDUCING, n.	
SEDUCIBLE,	
SEDUCTION,	
SEDUCTIVE.	To draw or lead apart or away, out of the way or path; to withdraw, to allure, to mislead.

And such for drede or gayne as shall thy name refuse,
Shall perishe with their golden godds that did their harts seduce.
Surrey. Psalm 73.

Now will I endeauour my selfe to ouerthrow and vtterly put out the second error whiche hath long raigned and seduced many.
Frith. Workes, p. 95. *A Declaration of Baptisme.*

I will explaine, that which being before misticallie couered, and commonly misconstrued, might be perillous in *seducing* you.
Gascoigne. To the Youth of England.

For as for these my [Boner's] accusers, as they be euil, infamed, notorious, and criminous persons, so are they manifest and notable heretickes, and *seducers* of the people, especially touching the sacrament of the aultar.
Fox. Edward VI. p. 1195.

But if the Scripture allow them, that you can not deny but it is so, then resist not y^e doctrine of God, but knowledge your ignorance and *seduction*, and returne gladly into the right way.
Frith. Workes, p. 3. *To the Reader.*

Who so hateth the intolerable outrage of your abuses, and pitieth the miserable *seducing* and mocking of the people.
Jewell. Works, part i. p. 646. *Answer to M. Hardinge's Concl.*

And after her did Paridell produce
His false Duessa, that she might be seene;
Who with her forged beautie did seduce
The hearts of some that fairest her did weene.
Spenser. Faerie Queene, book iv. can. 5.

What *seducing* charmes
Could on your clouded minds such darknesse bring,
To serue an outlaw, and neglect the king?
Beaumont. Bonworth Field.

'Tis true, 'twas a weak part in Eve to yield to the *seducement* of Satan; but it was a weaker thing in Adam to suffer himself to be tempted by Eve, being the weaker vessel.
Howell. Letter 24. book ii. p. 333.

PAREZ. No, indeed,
There was no wisdom in't, to bid an artist,
An old *seducer*, to a female banquet;
I can cut up my pye without your instructions.
Beaumont and Fletcher. Rule a Wife and have a Wife, act ii. sc. 1.

The vicious examples of ages past poyson the curiosity of these present, affording a hint of sin unto *seduceable* spirits, and soliciting those unto the imitation of them whose heads were never so perversely principled as to invent them.

Sir Thomas Brown. Vulgar Errours, book vii. ch. xix. p. 468.

The true sense, which is only known by the tradition and consent of the Catholic church; so that the one without the other is not a direction, but a *seduction*, to a simple man.

Strype. Eccles. Memor. vol. iv. ch. viii. p. 120. *Mary I.*

They are not so much afraid of puzzling and perplexing the vulgar by doing it, as they are of betraying and exposing them to the attempts of *seducers*, should they not do it.

Waterland. Works, vol. iv. p. 313. *History of the Athanasian Creed.*

An ingenuous young man takes up the book, from the laudable motive of improving his mind with historical knowledge, but, as he reads, he finds himself *seduced*, and cheated into irreligion and libertinism.
Knox. Works, vol. i. p. 129. *Essay*, No. 13.

Our thoughts too, as well as our passions and appetites, are great *seducers*.
Gilpin. Sermon 21. vol. i. p. 259.

Go, splendid sycophant! no more
Display thy soft *seductive* arts!
The flattering clime of courts explore,
Nor spoil the convent's simple hearts.

Langhorne. The Sunflower and the Ivy.

SEDUCTION, in *Law*, is only regarded as a civil injury, for which the party injured may maintain an action and recover damages, but the offender cannot be indicted or otherwise proceeded against as a criminal. The person who, in one sense of the word, sustains the greatest injury, namely, the individual who has been seduced, can bring no action at all; because the injury which she sustains is not an injury in the legal sense of the word. *Volenti non fit injuria* is the principle which excludes her from all remedy. The only persons who can maintain an action are the husband and the master; the former of whom sustains an injury of which the law will take cognizance, in the loss of the affections and fellowship of his wife, the latter in the loss of the services of his servant. The parent cannot sue for the seduction of his child, otherwise than in the character of master; and in order to sustain that character he must prove upon the trial that some services were actually performed. It is not necessary that there should be a regular hiring; it is sufficient if the daughter resides with her father's family, and executes any office, however trifling, in the domestic arrangements. When the relation of master has been so established, the jury may take into consideration the feelings of the parent as an aggravation to the case, and a ground for giving substantial damages; but unless the relation of master is established the action will not lie, however distressing the circumstances of the case may be. If the daughter has quitted her father's family, and engaged in the service of another, the real master may sue, but the father cannot. The amount of damages will depend upon the previous character of the female, the respectability of the family, the degree of care and vigilance on the part of the parent, the means by which the Seduction was effected, and the pecuniary circumstances of the defendant.

SEDULOUS,	Fr. séduite; Lat. sedulitas, sedulus, from sedes, as assiduous, from assid-ere, to sit to; sitting to, keeping close to, closely employed upon.
SEDULOUSLY,	
SEDULOUSNESS,	
SEDULITY.	

Keeping closely, earnestly employed; studiously, actively, diligent, industrious; taking much pains or labour.

And therefore all things are in some measure obscure and intricate, that the *sedulity* of that divine spark, the soul of man, may have matter of conquest and triumph when he has done bravely by a superadvenient assistance of his God.

More. Antidote against Atheism, book ii. ch. vi.

When the very having of the bookes of God was a matter of no small charge and difficultie, in as much as they could not be had otherwise then only in written copies, it was the necessitie not of preaching things agreeable with the word, but of reading the word it selfe at large to the people, which caused churches throughout the world to haue publique care that the sacred oracles of God being procured by common charge, might with great *sedulitie* be kept both intire and sincere.

Hooker. Ecclesiasticall Politie, book v. sec. 22.

Be *sedulous* to discharge thy trust, to perform thy charge; be zealous for souls, and careless of money.

Taylor. Sermon 4. vol. iii. p. 115.

But for the imputation of rashness, in making it my businesse to divulge those secrets or misteries that Moses had so *sedulously* covered in his obscure text; I say, it is the privilege of Christianity, the times now more than ever requiring it, to pull off the veil from Moses his face.

More. Writings, ch. xii. p. 3. *Appendix to Defence of Cabbala*.

Hence the precepts importing the general tenor of Christian practice are usually couched in terms implying great *sedulity* and contention of soul.

Barrow. Sermon 14. vol. i.

— The Britons squeeze the works
Of *sedulous* bees, and mixing odorous herbs
Prepare balsamic cups, to wheezing lungs
Medicinal, and short-breath'd ancient sires.

Philips. Cider, book ii.

— Then *sedulously* think

To meliorate thy stock.

Id. Ib. book i.

That matchless Lady Jane [Grey] was a conspicuous studier of the inspired books, wherein her prospered *sedulousness* gave her an understanding much above her age and sex, though not above her virtue.

Boyle. Works, vol. ii p. 316. *Style of Holy Scriptures*.

Practice is justly called purblind, for practice, that is tolerable in its way, is not totally blind; an imperceptible theory, which grows out of, accompanies, and directs it, is never wholly wanting to a *sedulous* practice.

Reynolds. Mason. On the Art of Painting. Note 8.

I next endeavour to prove, that even those of them (namely, the several sects of Grecian philosophers) who did not believe this future state, yet, for the sake of society, *sedulously* taught and propagated it.

Warburton. Works, vol. xi. part i. sec. 5. p. 282. *Remarks on Occasional Reflections*.

SEDUM, in *Botany*, a genus of the class *Decandria*, order *Pentagynia*, natural order *Crassulaceæ*. Generic character: calyx five-cleft; corolla, petals five; five nectariferous scales at the base of the germen; capsules five.

A genus of more than forty species, containing the plants called Stonecrop; they are all natives of the colder parts of the Northern hemisphere; eleven species are natives of England.

SEE, *n.* Fr. *siège*; It. *sede*, *sedia*; Sp. *sede*; Lat. *sedes*, a seat. (See SIEGE.)

A seat, *sc.* of power; of episcopal power or jurisdiction.

His holiness shewed me that he perceived by your grace's letters that I had certain credence to shew unto him of great moment and importance, concerning him and the *see* apostolick.

Burnet. Records, vol. ii. part ii. book ii. p. 127.

Nor that, which that wise king of Jurie framed

With endlesse cost to be th' Almightyes *see*.

Spenser. Faerie Queene, book iv. can. 10.

— You, Lord Archbishop,

Whose *sea* is by a ciuill peace maintain'd.

Shakspeare. Henry IV. Second Part, act vi. sc. 1. fol. 89.

SEE, *v.* } Goth. *saihwān*; A. S. *seon*; D. *sien*;

SEER. } Ger. *sehen*; Sw. *se*. Junius and Skinner derive from the Gr. *Seoipai*, by the change of *θ* into *ς*. Wachter from *aug, och*, the eye, by prefixing the sibi-

ant *s*, *quia verba sensuum derivari solent ab organis*. *Se*, in A. S., was the article, equivalent to *the*, by which it has been supplanted. To *see* is

To take; to receive—sensations or feelings—by the eye; to keep or hold before the eye; to look at, to behold; to observe; generally, to perceive, to conceive, to discern, to distinguish, to detect.

Seer, one who sees; sees into the future, foresees. See SEEK, SEEM.

But I seye to you that every man that *seeth* a womman to coveyte hir hath now do lecherie bi hir in his herte.

Wiclif. Matthew, ch. v.

And Nathanael seide to hym, Of Nazareth, may som good thing be? Filip seide to him, Come and *se*. Jhesus sigh Nathanael comynge to him, and seide to him, Lo verili, a man of Israel, in whom is no gile.

Id. John, ch. i.

And Nathanaell sayde vnto hym, Can there any good thyng come out of Nazareth? Philip sayde to him, Come and *see*.

Bible, Anno 1551.

This frere came, as he were in a rage,
Wher as this lord sat eting at his bord;
Unnethes might the frere speke o word,
Till atte laste he saide, God you *see*.

Chaucer. The Sompnoures Tale, v. 7678.

Quod Pandarus, Madame, God you *see*,
With your booke, and all the companie.

Id. Troilus and Creseide, p. 237.

She was wel more blisful on to *see*
Than is the newe perjenete tree;
And softer than the wolfe is of a wether.

Id. The Milleres Tale, v. 3248.

But netheles she herde his boone,
And said, in truste of Christes lawe,
Whiche done was on the crosse and slawe,
Thou blynde man beholde and *see*.

Gower. Conf. Am. book ii. p. 50.

And as they were goig vp into the citie, they met with damos-
seles yt came out to draw water, and sayd vnto them, Is there here
a *sear*? And the maydēs answered thē, Yea, behold he goeth
there before you.

Bible, Anno 1551. 1 *Samuel*, ch. ix.

IMO. I *see* before me (man) nor heere, nor heere;
Nor what ensues but haue a fog in them
That I cannot looke through.

Shakspeare. Cymbeline, act iii. sc. 2. fol. 381.

SPIR. Care, and utmost shifts

How to secure the lady from surprisal,
Brought to my mind a certain shepherd lad,
Of small regard to *see* to, yet well skill'd
In every virtuous plant, and healing herb,
That spreads her verdant leaf to th' morning ray.

Milton. Comus, v. 618.

Should kings and nations from thy mouth consult,
Thy counsel would be as the oracle
Urim and Thummim, those oraculous gems
Of Aaron's breast; or tongue of *seers* old
Infallible.

Id. Paradise Regained, book iii. l. 12.

In the beginning of 1583 he contracted with certaine spirits to act and converse with them, and appointing Edw. Kelly to be his *seer* or skryer, the first sight and discourse they had with them was at Lesden, on the 28th of May, the same year.

Wood. Athenæ Oxonienses, part ii. p. 143.

The organ of *seeing* is the eye, consisting of variety of parts wonderfully contrived for the admitting and refracting the rays of light; so that those that come from the same point of the object, and fall upon different parts of the pupil, are brought to meet again at the bottom of the eye, whereby the whole object is painted on the retina that is spread there.

Locke. Elements of Natural Philosophy, ch. xi.

It is not without reason, that the faculty of *seeing* is looked upon, not only as more noble than the other senses, but as having something in it of a nature superior to sensation. The evidence of reason is called *seeing*, not feeling, smelling, or tasting. Yea, we are wont to express the manner of the divine knowledge by *seeing*, as that kind of knowledge which is most perfect in us.

Reed. Inquiry, ch. vi. sec. 1.

SEE.

SEED.

SEED, *n.* } A. S. *sæd*; D. *sæd*; Ger. *sat, saat*; and Sw. *scæd*, which *Ihre* derives from
 SEED, *v.* } *sao, serere*. The A. S. *sæd* is also the
 SEE'DLING, } past participle of the A. S. verb *saw-an*,
 SEE'DNESS, } (saw-ed, sau-ed, seed,) that which is
 SEE'DY. }

sowed or sown. *Seed* is applied, generally, to—

The origin, first principle, source; as the cause; also, to the product, offspring, progeny, race; as the effect.

To *seed*; to bear or produce seed.

Sholde nevere wete were. bote wete fyrste deyde
 And op' *sedes* al so.

Piers Plouhman. Vision, p. 211.

And the servauntis of the husbonde man camen and seiden to him, Lord, wher thou hast not sowed good *seed* in the feeld?

Wiclif. Matthew, ch. xiii.

Then came the seruautes of the housholder, and sayde vnto hym, Syr, sowedst not thou good *seede* in thy closse?

Bible, Anno 1551.

And the thridde took hir also and alle sevene, and leften not *seed* but ben deed.

Wiclif. Luke, ch. xx.

The floure mill *seden* of my corne.

Chaucer. The Romant of the Rose, p. 203.

Wel wiste he by the drought, and by the rain,
 The yelding of his *seed*, and of his grain.

Id. Prologue to the Canterbury Tales, v. 597.

But all without

The barren ground was full of wicked weedes,
 Which she herselfe had sowed all about,
 Now growen great, at first of little *seedes*,
 The *seedes* of evill wordes and factious deedes.

Spenser. Faerie Queene, book iv. can. 1.

Nor creeps

That hardy worm with pointed tail,
 But if I be under sail,
 Flying faster than the wind,
 Leaving all the clouds behind,
 But doth hide her tender head,
 In some hollow tree or bed
 Of *seeded* nettles.

Beaumont and Fletcher. The Faithful Shepherdess, act iv. sc. 1.

Forthwith they reacht the tent

A shaggie rooffe of *seedy* reedes, mowne from the meades, a hall
 Of state they made their king in, and strengthened it withall,
 Thicke with firre rafters.

Chapman. Homer. Iliad. book xxiv.

Perseuer styll vnto the daye of Christes commynge, that you maye than appeare ryche, and aboundauntlye ful of goode workes, wherof in this world you make as it wer a *seedenesse*, and shal reape y^e frute therof at y^t day w^t moste plenteous encrease.

Udall. Philippians, ch. i.

As blossoming time

That from the *seednes*, the bare fallow brings
 The teeming foyson.

Shakspeare. Measure for Measure, act i. sc. 5. fol. 64.

Well, I say thrive, thrive brave artillerie yard,
 Thou *seed-plot* of the warre.

Ben Jonson. Execration upon Vulcan.

The *seed* of a plant consists of an embryo, with its coat or cover.

Miller. Dictionary. Introduction.

Prepare also matrasses, boxes, cases, pots, &c. for shelter to your tender plants and *seedlings* newly sown, if the weather prove very bitter.

Evelyn. Kalendar. November.

Till, vain of mortals' empty praise, he strove
 To match the *seed* of cloud-compelling Jove!
 Too daring bard! whose unsuccessful pride
 Th' immortal Muses in their art defy'd.

Pope. Homer. Iliad, book ii.

Ask we what makes one keep and one bestow,
 That Power who bids the ocean ebb and flow,
 Bids *seed-time*, harvest, equal course maintain,
 Through reconcil'd extremes of drought and rain,
 Builds life on death, on change duration founds,
 And gives th' eternal wheels to know their rounds.

Id. Moral Essays. Essay 3.

He therefore, who would see his flow'rs dispos'd
 Sightly and in just order, ere he gives
 The beds the trusted treasure of their *seeds*,
 Forecasts the future whole.

Cowper. The Task, book iii.

Whether you choose
 The vernal blades that rise with *seeded* stem
 Of hue purpureal.

Mason. English Garden, book ii.

SEEDY, an abbreviation of Sayyidî, "my Lord," is used principally in Barbary and Syria, where it is always pronounced Sidî. In Hindústân Sayyid or Sayyad is the title peculiarly given to the descendants of Mohammed, styled Sherif, *i. e.* "noble, illustrious," in Turkey and Western Asia. Sayyidah, the feminine of Sayyid, when it has the pronominal affix *i*, (my,) and is used as a term of address, is contracted into Sittî, "my Lady."

SEEK, *v.* } Goth. *soc-yan*; A. S. *sec-an*, (*i. e.* *se-*
 SEE'KER. } *ic-an*;) D. *soek-en*; Ger. *suchen*; Sw. *soeka*, from the verb to see, (Skinner,) because they who seek any thing, see or look for it.

To look for or after; to search, to inquire, to try or endeavour; to find or discover, to get or gain.

Brut wende forþ into Engolond, and aspiede vp and doun
 For to *seeke* an ese place, to make an heued toun.

R. Gloucester, p. 23.

For þe luper Maximiam westward hider sozte,
 And Cristenmen, þat he fond, to strong deþ he brozte.

Id. p. 81.

þe body son þei fonde, þe hade was in doute.
 Up & doune in þe felde þei souht it aboute.

R. Brunne, p. 22.

And thei helden the word at himsilf *seekinge* what this schulde be, whanne he had risun agen fro deeth.

Wiclif. Mark, ch. ix.

And he seide this lyknesse; A man hadde a fige tree plauntid in his vyneyerd, and he cam *sekinge* frujt in it and founnd noon.

Id. Luke, ch. xiii.

Thei that *soughten* the lyfe of the child ben deed.

Id. Matthew, ch. ii.

For they are deade which *sought* y^t childes life.

Bible, Anno 1551.

Brother, quod he, wher is now your dwelling,
 Another day if that I shule you *seche*?

Chaucer. The Freres Tale, v. 6992.

And wicked tongue is with these two,
 That suffreth no man thider goe,
 For er a thing be doe he shall,
 Where that he commeth over all,
 In fortie places, if it be *sought*,
 Saie thing that never was done ne wrought.

Id. The Romant of the Rose, p. 195.

And ouer that was saide them eke,
 That whan men wolde vertue *seke*,
 Men shulde it in the prestes fynde,
 Their order is of so highe a kynde,
 That thei be diuiseurs of the weie.

Gower. Conf. Am. book i. p. 24.

The golde hath made his wittes lame,
 So that *sechende* his owne shame,
 He rouneth in the kynges eare,
 And said hym, that he wist where
 A gentill and a lustie one
 Tho was, and thither wolde he gone,
 But he mote yeue yeftes great.

Id. Ib. book v. p. 144.

Men seyn how that thei [clerkes] were tho,
 Whiche of wisdom the vertue *soughten*,
 Unto the god firste thei besoughten,
 As to the substance of their schoole,
 That thei ne shulde not befoole
 Their witte vpon none erthly werkes,
 Whiche were ayenst the astate of clerkes.

Gower. Conf. Am. Prologue.

SEED.

SEEK.

SEEK.

SEEM.

MONTR. I required not

To be sought to this poor way; yet 'tis so far
A kind of satisfaction, that I will
Dispense a little with those serious oaths
You made me take.

Massinger. *The Unnatural Combat*, act v. sc. 2.

It was your delight
To seek to me with more obsequiousness
Than I desired. *Id.* *The Picture*, act i. sc. 2.

And Wisdom's self
Oft seeks to sweet retired solitude,
Where with her best nurse Contemplation
She plumes her feathers, and lets grow her wings.

Milton. *Comus*, v. 375.

Whereupon, [by the endeavours of those inclin'd that way, he [Erbury] was made a chaplain in the Earl of Essex his army; and therein he sometimes exercised himself in military concerns, but mostly in those relating to his function, whereby he corrupted the soldiers with strange opinions, Antinomian doctrines, and other dangerous errors; and by degrees fell to grosser opinions, holding (as a Presbyterian writer saith) universal redemption, &c., and afterwards became a *seeker*, and I know not what.

Wood. *Athenæ Oxonienses*, vol. ii.

SEEL, v. } To seel a ship; a nautical term, says
SEEL, n. } Skinner, when a ship leans, yields, gives
to one side, perhaps from *syllan*, to give. See to SELL.

When a ship *seels* or rolls in foul weather, the breaking loose of ordnance is a thing very dangerous. *Ralegh.*

At his command black tempests rise;
Then mount they to the troubled skies;
Thence sinking to the depths below,
The ship hulls as the billows flow;
And all aboard, at every *seel*,
Like drunkards on the hatches reele.

Sandys, *Ps.* i. p. 181. (Ed. 1636.)

SEEL seems to be the same word as *sæl*, or *sæl-d*.
See SELDOM. Ray says,

Seel or *seal*, time or season; it is a fair *seel* for you to come at; i. e. a fair time or season; spoken ironically to them that come late. Essex. *Ab A. S. sæl*, time. See also Moore's *Suffolk Words*.

SEEL, v. Fr. *siller les yeux*, to close the eyes of the dead, of a hawk; Fr. *seeler*, to seal, (*q. v.*) and, consequently, to fasten together, to close, to shut.

To close, to shut, to hoodwink; to sow up closely.

IAGO. Why goo to then;

Shee that so young could giue out such a seeming
To *seele* her father's eyes vp, close as oake.

Shakspeare. *Othello*, act iii. sc. 3. fol. 324.

Come, *seeling* night,
Skarfe vp the tender eye of pittifull day,
And with thy bloodie and inuisible hand
Cancell and teare to pieces that great bond
Which keepes me pale.

Id. *Macbeth*, act iii. sc. 2. fol. 141.

Ambition, like a *seeled* dove, mounts upward,
Higher and higher still, to perch on clouds,
But tumbles headlong down with heavier ruin.

Ford. *The Broken Heart*, act ii. sc. 2.

When he, tame crow, was winking at his farm,
Or, had he been here, and present, would have kept
Both eyes and beak *seel'd* up, for six sesterces.

Ben Jonson. *Catiline*, act ii. sc. 1.

SEELY. See SILLY.

SEEM, v.

SEE'MER,

SEE'MING, n.

SEE'MINGLY,

SEE'MINGNESS,

SEE'MLESS,

SEE'MLY,

SEE'MLINESS,

SEE'MLIHED.

VOL. XXVII.

See BESEEM.

Skinner says from Ger. *ziemen*,
decere, and this from Ger. *schen*;
D. *sien*; because pleasing to the eyes
or sight.

It *seemeth* appears to be an elliptical expression, *q. d.* it seemeth as it should or ought, to see or look or appear, i. e. fit, becoming, con-

venient, suitable, proper; it is good or well-looking, it looks well; is good or pleasing or agreeable to see or look at; it is specious; specious or plausible in appearance, at first sight; it appears or looks as if it were really so.

To *seem* is to look; to present to the sight; to appear or present the appearance.

And other seiden, he *semeth* to be a teller of newe feendis, for he teelde to hem Jhesu and the aghen risynge.

Wiclif. *The Dedis of Apostlis*, ch. xvii.

Other sayde: he *semeth* to be a tydynges bringer of new dyuels, because he preached vnto them Jesus and the resurrectyō.

Bible, Anno 1551.

Beware, I pray you, for by heven king
Ful many a man weneth to see a thing.
And it is all another than it *semeth*;
He which that misconceiveth oft misdemeth.

Chaucer. *The Marchantes Tale*, v. 10281.

Well could she sing and lustely
None halfe so well and *seemely*;
And cothe make in song such refraining,
It sate her wonder well to sing.

Id. *The Romant of the Rose*, p. 176.

The jay shall double without gesse
Whan thou thinkest on her *seemeliness*.

Id. *Ib.* p. 191.

Dame Richesse on her hond gan lede
A yong man full of *semelyhede*,
That she best loued of any thing
His lust was much in housholding.

Id. *Ib.* p. 179.

These olde clerkes tellen this;
That it is like a goat skipende;
And for that it is suche *semende*,
It is hote Capra saliens.

Gower. *Conf. Am.* book vii. p. 205.

It wer farre more *seeming* that they shoulde we the by good liuing begin to be men, then thou shouldest with them, by the leauing of thy good purpose, shamefully begin to bee a beast.

Sir Thomas More. *Workes*, p. 12. *Life of John Picus.*

And that close he would haue fortified and made somewhat *semely* with an other worde of Christ.

Id. *Dialogue*, book i. p. 164.

Therefore to drawe easely and uniformelye, that is for to say, not wagginge our hand, now upward, now downeward, but alwayes after one fashion, untill you come to the rigge or shouldringe of the heade, is best both for profite and *seemeliness*.

Ascham. *Works*, book i. p. 162. *Toxophilus.*

HAM. I, madam, it is common.

QUEEN. If it be,

Why *seemes* it so particular with thee?

HAM. *Seemes*, madam! Nay, it is: I know not *secmes*.

Shakspeare. *Hamlet*, act i. sc. 2. fol. 154.

Beyond this flood a frozen continent
Lies dark and wilde, beat with perpetual storms
Of whirlwind and dire hail, which on firm land
Thaws not, but gathers heap, and ruin *seems*
Of ancient pile.

Milton. *Paradise Lost*, book ii. l. 587.

Lord Angelo is precise,
Stands at a guard with enuie; scarce confesses
That his blood flowes, or that his appetite
Is more to bread then stone; hence shall we see
If power change purpose, what our *seemers* be.

Shakspeare. *Measure for Measure*, fol. 63.

QUEEN. My Lord, my Lord,

I am a simple woman, much too weake

To oppose your cunning. Y' are meek, and humble-

mouth'd,
You signe your place, and callinge, in full *seeming*,
With meekenesse and humilitie.

Id. *Henry VIII.* fol. 218.

SEEM.
—
SEETHE.

In her ears the sound
Yet wrung of his perswasive words, impregn'd
With reason, to her *seeming*, and with truth.
Milton. Paradise Lost, book ix. l. 756.

You must learn to rhyme too
And riddle neatly; studie the hardest language,
And 'tis no matter whether it be sense or no,
So it go *seemlie* off.
Beaumont and Fletcher. The Loyal Subject, act iii. sc. 6.

He [John Terer] erected a *seemly* water-work, built steeple-wise,
at the bridge gate, by his own ingenious industry and charge.
Fuller. Worthies. Chester.

Of face faire and manlike, eies bright and shining, and in age
bald, but so as it was rather a *seemliness* to those his ancient
yeares than any disfiguring to his visage.

Holinshed. Historie of England. Edward III. Anno 1377.

Thence he her drewe
By the faire lockes, and fowly did array
Withouten pitty of her goodly hew,
That Artegall himselfe her *seemelesse* plight did rew.
Spenser. Faerie Queene, book v. can. 2.

What is this vain and idle reputation
Which to the show you *seemingly* respect?
Drayton. Matilda the Fair.

Yet nathemore his meaning she ared,
But wondred much at his so selcouth case;
And by his person's secret *seemlyhed*
Well weend that he had beene some man of place,
Before misfortune did his hew deface.
Spenser. Faerie Queene, book iv. can. 8.

Strip thou their meretricious *seemliness*,
And tinfold glitt'ring, bare to ev'ry sight,
That we may loth their inward ugliness.
Fletcher. The Purple Island, can. 8.

It is not that I am ignorant how many several texts of Scripture
seemingly support that cause; but neither am I ignorant how all
those texts may receive a kinder and more mollified interpretation.

Dryden. Religio Laici. Preface.

The authority of Aristotle and his learned followers presses us
on the one side, and the *seemingness* of those reasons we have
already mention'd perswades us on the other side.

Digby. Of Bodies, ch. vii. p. 56.

The Characteristics and the Fable of the Bees are two *seemingly*
inconsistent systems; the extravagance of the first is in giving a
scheme of virtue without religion, and, of the latter, a scheme of
religion without virtue.

Warburton. Works, vol. xi. p. 34.

I cannot understand that any man's bare perception of the nat-
ural *seemliness* of one action and unseemliness of another should
bring him under an obligation upon all occasions to do the one and
avoid the other, at the hazard of his life, to the detriment of his
fortune, or even to the diminution of his own ease.

Horsley. Sermon 21. vol. ii. p. 189.

SEE'SAW, *n.* } Perhaps *saw-saw*, a reduplication
SEE'SAW, *v.* } of saw, and intended to express the
motion to and fro, backwards and forwards, in the act of
sawing.

His wit all *seesaw*, between that and this,
Now high, now low, now master up, now miss,
And he himself one vile antithesis.

Pope. Prologue to the Satires.

When desperate heroins grieve with tedious moan,
And whine their sorrows in a *see-saw* tone,
The same soft sounds of unimpassion'd woes
Can only make the yawning hearers doze.

Lloyd. The Actor.

SEETHE, *v.* } A. S. *seothan*; D. *seid-en*; Ger.
SEETHER. } *sied-en*; Sw. *suida*, *bullire*, *ebullire*,
fervere, *aqua fervida coquere*; (Gr. ζε-ειν.) Piers Plouh-
man writes the past tense *soth*, *seethed*, *seeth'd*, *see'd*, *sod*.
To boil; to be boiling hot.

Peter fyshed for his foode, and hys fellowe Andrewe,
Some they sold, and some they *soth*, and so they liued both.
Piers Plouhman. Vision, p. 2.

He coute roste, and *sethe*, and broile, and frie.

Chaucer. Prologue to the Canterbury Tales, v. 384.

Certes, right so thise shrewes ne hold hem not apaied of rosted
flesh and *sodden*, with which the peple feden hem in gret reverence.
Id. The Persones Tale, p. 166.

Vapour, a dewie miste, as the smoke of a *seething* pot.
Tyndall. Workes, p. 7. *Prologue vpon the fyue Bookes of Moses.*

But the women of every family by course have the office and
charge of cookery for *seething* and dressing the meat, and ordering
all things thereto belonging.

Sir Thomas More. Utopia, vol. ii. book ii. ch. v. p. 54.

And many times [their drink is] meath made of honey, or
liquorice *sodden* in water; for thereof they have great store.
Id. Ib. vol. ii. book ii. ch. i. p. 14.

Jacob *sod* potage, and Esau came fro the felde and was faynty,
and sayde to Jacob, Let me suppe of y^t redde potage, for I am
faynty.
Bible, Anno 1551. Genesis, ch. xxv.

Of all creatures, this [lobster] onely hath a tender and short
kind of flesh, which in the *seething* will not hang together, unlesse
it be *sodden* alive in scalding water, and then it will be stiffe and
callous as brawne.
Holland. Plinie, book ix. ch. xxx.

The Kynge of Englande and the great men of his oost had euer
with theym in their cariages, tentes, paulions, mylles, ouyns, and
forges, to *syeth* and to bake, and to forge shoos for horses.

Lord Berners. Froissart. Cronycle, ch. 210.

Nor must we be so grosse to imagine that Homer made Achilles
or Diomed blubber, or sob, &c., but in the very point and sting of
their unvented anger shed a few violent and *seething-over* teares.

Chapman. Homer. Iliad, book i. *Comment.*

The fire thus form'd, she sets the kettle on,
(Like burnish'd gold the little *seether* shone.)

Dryden. Ovid. Metamorphoses, book viii.

This operation they repeat till they think the contents are suffi-
ciently stewed or *seethed*.

Cook. Voyages, vol. vi. book iv. ch. iii. p. 295.

SEGESTRIA, in Zoology, a genus of *Arachnida*.

Generic character. Eyes six, disposed in a transverse
line; *maxillæ* straight, with the base thickened and
dilated exteriorly; lip elongate-quadrate, longer than
broad, the middle slightly carinated; legs eight, the
first pair longest, the others decreasing in length, the
fourth pair being shortest.

Type of the genus, *S. sexoculata*; Latreille, *Gen.
Crust. et Ins.* vol. i. p. 89. One species, found occa-
sionally in old walls, &c. in England.

SEGETIA, in Zoology, a genus of *Lepidopterous*
insects.

Generic character. *Antennæ* moderate, stout, and
ciliated in the males, slender and simple in the females;
palpi slightly ascending, densely clothed with squamose
hair, the terminal joint exposed, triarticulate, the basal
joint kidney-shaped, stouter than the following, the se-
cond as long again as the first, a little attenuated towards
the apex, terminal minute, ovate, obtuse; *maxillæ* about
the length of the *antennæ*; head small; eyes naked;
thorax stout, woolly, not crested; wings slightly de-
flexed, short, anterior obtuse and rounded posteriorly,
with distinct stigmata; body rather short, of the male
with a tuft at the apex, of the female with the tip acute;
legs with the femora very hairy. *Larva* naked; *pupa*
subterranean.

Type of the genus, *Noctua xanthographa*, *Wien.
Verzeich.*; Stephens, *Illust. Britt. Ent. (Haust.)* vol. ii.
p. 153. Two species, both of them natives of England,
the typical one being extremely abundant and variable.

SEGMENT. See SECT.

SEGMENTINA, in Zoology, a genus of *Mollusca*.

Generic character. Shell discoid, divided internally
by transverse partitions into several chambers, which

SEETHE.
—
SEGMENTINA.

SEGMENT. communicate with each other by triradiated apertures;
TINA. animal with filiform tentacula.

SEINE. Type of the genus, *Nautilus lacustris*; Montagu,
Test. Brit. vol. ii. p. 191. pl. vi. fig. 3. Not uncommon
on aquatic plants in ditches in England, especially near
London, in Battersea fields.

SE'GREGATE, v. } Fr. *ségrégér*; It. *segregare*;

SE'GREGATE, adj. } Sp. *segregar*; Lat. *segregare*,

SEGREGA'TION. } a grege separare, to separate
from a flock or herd, and thus opposed to *aggregate*,
q. v.; generally,

To separate, to sever, to select.

He translateth those wordes in those places into the Englishe
tong by other wordes then suche as in the Englishe tong doe sig-
nifye those holye consecrate companies, the tone *segregate* from
Paynims by the sacrament of baptysme, the tother *segregate* frō
the laye peple by the sacrament of order.

Sir Thomas More. *Workes*, p. 428. *Agaynst Tyndall*.

These gallants of the time had some years before, besides their
near alliance by marriage of Pompey to Julius Cæsar's daughter,
(a lady of imperious allurements,) been likewise united together in
a triumphal knot with Marcus Crassus, the wealthiest of the whole
nobility, which consortship was in effect a kind of *segregate* or
cabinet-senate.

Reliquiæ Wottonianæ, p. 240.

What shall we heare of this?

A segregation of the Turkish fleet.

Shakspeare. *Othello*, fol. 316.

To decline offences, to be careful and conscionable in our se-
verall actions, is a purity that every man ought to labour for,
which we may well doe without a sullen segregation from all society.

Feltham. *Resolve* 5. part i.

SEGUIERIA, in *Botany*, a genus of the class *Po-
lyandria*, order *Digynia*, natural order *Petiveriaceæ*.
Generic character: calyx five-leaved; corolla none;
capsule one-seeded, terminated by a large wing, with
small wings on the side.

One species, *S. Americana*, native of central America.

SEIAPTERA, in *Zoology*, a genus of *Dipterous*
insects.

Generic character. *Antennæ* deflexed, oblique, three-
jointed, the terminal joint oblong, compressed, with a
naked dorsal seta at the base; *hypostome* naked, arched
in the middle; forehead hairy; eyes oblong; wings
two, very much elongated, nearly erect, and vibratory
while the insect is resting on its legs; *abdomen* five-
jointed.

Type of the genus, *Musca vibrans*; Linnæus, *Faun.*
Suec. No. 1867. Two species only, both found, not
uncommonly, in the vicinity of London; the second spe-
cies, *Musca pulchella* of Fabricius, is a very handsome
insect.

SEIGNORY, in *Law*, a term now almost obsolete,
imports the dominion or supremacy which the Lord, of
whom lands are holden, has over the tenant who holds
the lands, in respect of the lands so holden. Before the
reign of Edward I. any owner of lands, who granted
those lands to another in fee simple, was the Lord or
Seignor of the grantee in respect of those lands, and in

the event of the grantee's death without heirs the lands
would have escheated to such Lord. Besides this pos-
sibility of an escheat, there were various other profits
accruing to the Lord, the great bulk of which were only
incident to the military tenures, and were finally abo-
lished, with such tenures, upon the restoration of
Charles II. By the Statute, 18 Edward I., subjects
were prevented from granting lands in fee simple to be
held of themselves, and the grantees were made to hold
of the Lords of whom the grantors held. The tenure of
lands granted previously to the Statute was not affected
by it. The consequence of the operation of this law,
and of the natural neglect into which Seignories pro-
ductive of no profit have fallen, is, that, at the present
day, the great bulk of the lands in the kingdom are held
immediately of the Crown. For, by a well-known rule
of law, all lands are held mediately or immediately
of the Crown, and, if no one can establish an in-
termediate right between the Crown and the tenant
who holds the land, the result is that the Crown must be
declared to be the immediate Lord. There are, how-
ever, still freehold lands in various manors, which are
held of the Lords of such manors, and the tenure is kept
in remembrance by the payment of a quit-rent. These
tenures must have been in existence from a time prior
to the 18th year of Edward I., as they could not have
been created subsequently, and the lands so holden will,
in the event of an escheat, revert to the Lord of the
manor.

A Seignory *in gross* is where the lands are holden
simply of the Lord, and the dominion is merely annexed
to his person, without reference to any manor or other
territorial privilege. Except in the case of the Crown,
such a Seignory may now be considered as entirely ob-
solete. A Seignory *not in gross* is where the lands
are holden of the Lord as of some manor or other Lord-
ship, in which case the tenure is not annexed to the
person of the Lord, but is a kind of appurtenance to the
manor.

SEINE, } Fr. *sacune*, *seine*; It. *sagena*; Lat.
SEINER. } *sagena*; Gr. *σαγηνη*; which Cotgrave
calls

A very great and long fishing net.

Seyners complain with open mouth, that these drouers worke
much prejudice to the commonwealth of fishermen, and reape
thereby small gaine to themselves.

Carew. *Survey of Cornwall*, fol. 32.

In fair weather you shall have eight or ten great boats, with a
sain or haling net.

Dampier. *Voyages*, Anno 1688.

We caught fish here in tolerable quantities, especially when the
smoothness of the water permitted us to hale the *seyne*.

Anson. *Voyages*, ch. xii. p. 361.

They make also a kind of *seine*, of a coarse broad grass, the
blades of which are like flags; these they twist and tie together in
a loose manner, till the net, which is about as wide as a large sack,
is from sixty to eighty fathoms long.

Cook. *Voyages*, vol. i. book i. ch. xviii. p. 203.

For two or three days, great quantities of mackerel had been
caught by the natives, within the reef, in *seines*.

Id. *Ib.* vol. vi. book iii. ch. iii. p. 47

S E I N E.

SEINE, (Department of the,) one of the smallest of the
French Departments, is formed out of a portion of the
former Province of the Isle of France, and derives its
name, like most of these divisions of the Kingdom, from

its principal river, which traverses it from South-East to
North-West. It forms a section of the Department of
the Seine et Oise, being embedded in the latter; and is
divided into three Arrondissemens, which are subdivided

SEINE. into 20 Cantons, and these again into 81 Communes. Its superficial area is estimated at 22 French square leagues, and its population, according to the census of 1831, is 935,108 souls.

Surface
and soil.

The surface of this Department is mostly level; the highest points being those of Montmartre and Chaumont, which are respectively 429 feet and 397 feet above the level of the sea. The soil, although unequal in quality, is rendered exceedingly productive by diligent manuring, every facility for which is afforded by the neighbourhood of the capital, and by skilful cultivation. Vegetables and fruit are chiefly raised in the light, sandy lands near Paris; but there is much fine pasturage and meadow along the fertilizing courses of the Seine and Marne, and their affluents. It is computed that out of about 40,000 acres in cultivation, 16,400 are laid down in wheat and rye, 11,000 in oats, and 3000 in potatoes. The remainder is devoted to other objects of rural industry; and in the immediate vicinity of the capital, about 1200 acres are laid out in garden grounds. These are cultivated skilfully, with a view to a quick succession of crops. Wheat and rye return about six for one; and oats, seven.

The soil of this Department, the scene of the celebrated labours of Cuvier and Brogniart, is entirely tertiary. It supplies inexhaustible quarries of excellent freestone, limestone, various clays, chalk, sand, and turf, &c.

The chief woods are those well-known resorts, the woods of Boulogne, Vincennes, Meurdon, and Fleury; roads, mostly bordered by trees, traverse the Department in every direction, and from all parts of France; and it is thickly studded with delightful country-seats and magnificent villas.

Climate.

The climate is healthy and temperate; the mean annual height of the thermometer is from +9 to 10 degrees, Reaumur; the mean Summer temperature is +18°, and the mean Winter -3°. However, this temperature is subject to great variations; in the Summer of 1793, the thermometer rose to +30°; it stood at +28°, in the eventful days of July, and fell to -18° in the Winter, 1795. After a few days' continuous frost, from about 6°, the Seine freezes. The prevailing winds are from the South, the West, and the North; the two former generally accompanied by rain. The weather is usually fine when the wind sets in from the North-East, East, and South-East; but these winds do not prevail for more than a quarter of the year.

The extent of the manufacturing industry of the Department may be inferred from the number of workmen and mechanics of various descriptions employed, being estimated at 350,000; and the annual value of the products created, at £18,750,000. To enumerate the different manufactures carried on, would be to give a list of nearly every object of human industry and traffic.

The following are the principal towns of the Department, after Paris, which has been already given in its alphabetical order, and which of itself constitutes an Arrondissement.

Chief
towns.

St. Denys, the seat of a Sub-prefecture, and which, like Paris, gives its name to an Arrondissement, lies near the right bank of the Seine, about five miles North of Paris. It was formerly celebrated for its Benedictine Abbey; the church of which, a graceful Gothic building, is the burial place of the Kings of France. In common with other religious edifices, it sustained serious dilapidations during the period of the revolutionary mania,

but has since been restored to its ancient beauty though not to its wealth. The abbey itself has been converted into a seminary, for the education, at the national expense, of the orphan daughters of the officers of the Legion of Honour. There are large barracks here; and several manufacturing establishments, fed by the small streams, the Croud and the Rouillon. Twelve corn-mills, of considerable size, and remarkable for their ingenious mechanism, contribute to the supply of the capital. *St. Denys* is likewise famed for its orchards.

The trade of *St. Denys* is chiefly kept up by means of its four annual fairs; the average total amount of the sales effected at which is computed to be—cloths, 1,500,000 francs; linens and cottons, 300,000 francs; woollens, 200,000 francs; and *Rouenneries*, (printed goods from Rouen,) 800,000 francs. At the fair of Landit, which is held on the 11th of June, upwards of 90,000 sheep are yearly disposed of. Population, 9,686.

The only other places deserving specification in this Arrondissement are *St. Ouen*, where Louis XVIII. signed the *Charte*, May 2d, 1814; *Neuilly*, celebrated for its bridge and royal château; *Auteuil*, where the houses of Molière and of Boileau are still shown, and in whose church are the tombs of Helvetius and D'Aguesseau; and *Passy*, noted for its Ranelagh, and its mineral waters.

Sceaux, which gives its name to the third Arrondissement, is a pretty little town, lying on the Bièvre. It is now chiefly known by its cattle market, held every Monday, and by the *bals champêtres* given here, which are the delight of the Parisians; but it will ever flourish in literary history as being the chosen resort of the greatest authors of France, whilst its magnificent château (demolished in the Revolution) was successively owned by the great Colbert, and by the Dukes of Maine and Penthièvre. Population, 1439.

The remaining places of note in this Arrondissement are *Arcueil*, famous for its beautiful aqueduct, built on the remains of that erected by the Emperor Julian; the village of *Gentilly*, in which is the noted gaol—the *Bicêtre*; *Alfort*, a hamlet celebrated for the Royal Veterinary School established there; *Charenton St. Maurice*, an object of interest to the medical man for its vast and well-conducted asylum for the insane; *Vincennes*, celebrated for its gloomy castle, so long the state prison, and the scene of royal deaths and of state murder; and *Bercy*, the chief dépôt of wine, brandy, and oil for the consumption of the capital.

Population of the Department, according to the census of 1831:—

Chief Towns.	Communes.	Arrondissemens.
Paris	774,338	774,338
St. Denys	9,686	87,282
Sceaux	1,439	73,488
		935,108

We borrow the following results from a valuable table, drawn up by the Baron De Prony, of the superficies of each of the French Departments, its specific population, and the proportion borne by the latter to the specific population of all France: "Estimated in round numbers, Paris contains 22,455 individuals to each square *kilomètre*, or 224 to the *hectare*, which gives a specific population equal to 372 times that of France; the remainder of the Department contains only 357 individuals to the square *kilomètre*, and yet this is

SEINE.

SEINE. a specific population six times that of the whole Kingdom."

SEINE INFÉRIEURE, (Department of the,) one of the richest and most populous Departments of France, is formed out of the most important part of the former Province of Upper Normandy. The origin of its name speaks for itself. It is bounded on the North and West by the English Channel; on the East by the Departments of the Somme and the Oise; and on the South by that of Eure, and part of Calvados.

Climate. Bounded as the Department is, for the greater part of its extent, by the ocean, covered by woods on its Eastern and Southern sides, traversed in every direction by valleys, and watered by a large river and numerous streams, its climate is of course very variable. Near the sea it is in general cold and moist; and the air is also humid in the large valleys, both from their low situation and their vicinity to the forests. The Winters are usually long and rainy; but the cold is not so intense as might be expected from the exposure of the Department to the North, and its subadjacency to the sea. The North, North-East, and North-West are the prevailing winds; and the sudden setting in of the first early in Spring, will often bring back Winter, and prolong its duration to the end of May. Frequent rains accompany the North-West wind, but they do not last for any length of time. The West wind, the most humid of all, is the harbinger of rains, which will sometimes continue for six weeks without interruption, and it renders the channel navigation peculiarly dangerous. The South-West wind is likewise accompanied by storms; but it is the healthiest of all, and usually brings with it the longest continuance of fine weather.

Surface. The surface of the Department is separated into two large and nearly equal plains, by an inconsiderable elevation running from West to East, and rising from about 300 feet to, in some parts, nearly 500 feet above the level of the sea. Its coast line, likewise, consists of a series of downs, (*falaises*), rising almost perpendicularly from the sea, to a height varying from 150 feet to 700 feet, and only interrupted from the Bresle to Havre by the intersection of the bays. The rest of the surface is occupied by large and fertile plains, woodland, some heaths and other wastes, and by numerous and extensive pastures on which horned cattle and horses are raised in considerable quantity.

General aspect. The villages throughout the greater part of the Department may be said to be planned after the same model, so much do they resemble each other in their peculiarities. A few houses are found, clustered round the church, and inhabited by the *curé*, the innkeeper, the tradesmen, the blacksmith, &c.; but scarcely any farmer's or peasant's house is included in the hamlet. From Rouen to Havre, and from the banks of the Seine to the borders of the district of Brai, each gentleman's seat, each country-house, is surrounded with thick hedges, and every farm is enclosed by wide ditches, with mounds of earth, on which are planted three or four rows of oaks, elms, ashes, &c.; and thus each building is nestled in a lofty grove, which screens it from the inclemency of the winds, shelters the gardens, and protects the corn-fields. The immense number of these isolated clumps of wood, as it were, forms a highly characteristic and picturesque feature of the scenery. The farmers throughout the Department pique themselves on the neatness and furniture of their houses, on the quantity of their silver plate, on the plantations which embosom their

farm, and above all on their gardens, in which, according to their national saying, are always to be found "quelques roses pour la beauté, quelques pommiers pour la boisson, quelques poiriers pour les amis."

Geology. None of the primary rocks are met with in the Department. The prevalent formation is chalk, resting on marl, often mingled with calcareous deposits, and surrounded by blended layers of freestone, clay, and ferruginous sand. A rich alluvium covers a large portion of the soil. There are quarries of marble and freestone; turf abounds; and iron and manganese sometimes occur in sufficient quantity to pay for working.

Soil and agriculture. Although one of the most fertile Departments of the Kingdom, yet its soil is far from being everywhere equally productive. Its central and Eastern portions are those in which agriculture reaps the greatest returns. The first supply the larger part of the wheat, barley, rye, and oats grown in the Department; the latter is noted for its meadows and rich pasture-grounds. The land along the sea-coast, although inferior to the two others, is well suited to the raising of flax, artichokes, and colza. The districts bordering the Seine are the least productive of all, either on account of the sandy nature of the soil, or that the manufactures carried on there divert the bulk of the population from rural occupations.

The system of fallows is almost gone into disuse, and a rotation of crops has become general. Marl, lime, and, coastwise, marine plants, are used as manure; and some of the more scientific farmers have lately introduced the *urate* and *stercorate* of the French chemical school of agriculture. The farming implements, however, are, for the most part, sadly in arrear of modern improvements.

The entire superficies of the Department is about 613,800 *hectares*, of which it is estimated that about 400,000 *hectares* are arable. The average annual produce and consumption of the Department are shown in the following Table:—

	Produce. hectol.	Consumption.	Excess.	Deficit.
Wheat	1,630,720	2,063,570		432,850
Meslin	158,340	155,860	2,480	
Rye	285,000	228,350	56,650	
Oats	1,512,000	1,496,000	16,000	
Barley	211,250	229,170	—	17,920
Legumes and smaller grain	234,000	234,000		
Potatoes	350,000	350,000		

The average annual return, per hectare, has been estimated at—arable, 100 *francs*; vineyard, 112 *francs*; meadow, 84 *francs*; wood, 108 *francs*.

Cattle. The number of horses in the Department, in 1826, was returned at 75,130; and the horned cattle are probably about the same. The best breeds of the former are those of draught and burden, and the choicest of these go to the Paris market. Great part of the butter and cheese made in the Department likewise finds its way to the capital. The Cantons of Forges, Argueil, Gournay, and Neufchâtel are the most celebrated for these products. The breeding of sheep has of late years fallen into neglect. Dupin estimates the quantity of wool yearly furnished at 639,084 *kil*.

Manufactures. But its manufactures constitute the chief wealth of the Department. These embrace every description of cotton, woollens, and linens; as well as most other objects of manufacturing industry. Elbeuf is the chief seat of the woollen, and Rouen of the cotton manufacture. The

SEINE. yearly value of the cotton thread alone spun in the Department is about 35 millions of francs; and that of the piece goods, termed *Rouenneries*, is estimated at 70 millions.

Fisheries. The fisheries connected with the seaports of the Department, and especially with that of Dieppe, are highly productive, although of late years they have fallen off. The mean annual value of the cod, herring, and mackerel fisheries is estimated at 3,386,900 francs.

Chief towns. *Rouen*, the seat of the Prefecture of the Department, and capital of the ancient Province of Normandy, is seated at one end of a beautiful, open valley, environed by a chain of hills on the right bank of the Seine, about 30 miles from the sea. At the time of the Roman conquest, it was known by the name of Rothomagus, and was even then a considerable town. Its modern name was given it by the Normans; the Dukes of which warlike race made it their abode up to the time of the Conquest. In the wars between France and England it sustained several sieges, and was at one period thirty years in possession of the English, who, during the time, disgraced themselves here by their cold-blooded butchery of the intrepid Joan of Arc.

The town is badly built; the streets are narrow and inconvenient, and the houses chiefly of wood. But some quarters, and more particularly the quay, are well-constructed and handsome. The tide rises to a considerable height here, and vessels of two hundred tons burden can come up to the town. Rouen is about four miles in length from East to West; and about three-quarters of a mile broad from North to South. Its situation is altogether highly picturesque. The hills rising amphitheatrically around it, the islands of the Seine, and the meadows which border its banks, the walks which have replaced the walls and ramparts, and the beauty of the river, crowded with vessels of all nations, impart variety and animation to the scene. "The Roman works of this city," says Mr. Britton, "and most of its early Norman buildings, are nearly all erased; but in the enriched and even florid specimens of the pointed style, and in the picturesque houses of the streets, this city is pre-eminent. The churches of Notre Dame and St. Ouen abound in architectural beauties; almost every street offers highly picturesque features, in its irregular houses, ornamented gables, halls, stone-crosses, churches, &c.; but it must also be admitted that these very features demonstrate the absence of the modern comforts and luxuries of domestic residence." The principal buildings of Rouen are as follows:

The Metropolitan Church, begun about the year 1100, and not completed till the XVIth Century, is a beautiful specimen of the florid Gothic. Its façade is about 170 feet wide, and, at its highest point, about 233 feet high. The length from the grand entrance to the extremity of the Chapel of the Virgin is 408 feet; the distance from one wall to another is 97 feet; the height of the nave is 84 feet; that of the side aisles 42 feet; the cross (*croisée*) is 164 feet long, by 26 feet wide; and in the centre is the lantern, surmounted externally by a square tower which served as the base of the pyramidal steeple, destroyed by lightning in 1822, but since replaced by a loftier and more elegant *flèche*, built of cast iron, and weighing 1,081,480 pounds. (The foregoing measurements are in French feet.) A hundred and thirty windows, mostly adorned with stained glass of the XIIIth Century, admit their "dim, religious light" into this fine pile. The *Abbey of St. Ouen*, a symmetrical

and beautiful basilica, commenced in 1318, and built at four different intervals, courts admiration from the perfect harmony which reigns throughout its graceful and noble proportions. Here was buried the younger Talbot, January 4, 1438. Adjoining this basilica is the *Hôtel de Ville*, which contains the offices of the mayoralty, the library of 28,000 volumes, and a picture gallery. There is a botanical garden attached to the building. The remaining ecclesiastical edifices of most note are the churches of *St. Patrick*, *St. Romain*, *St. Godard*, and *St. Gervais*; in the latter were buried the two first Archbishops of Rouen. The church of *St. Paul* must not be passed without mention; it is a perfect specimen of the true Norman architecture. The other principal edifices are the Archbishop's Palace, the Mint, the *Hôtel Dieu*, the Royal College, and the *Hôtel Bourgtheroude*, a magnificent relic of the time of Francis I.

There are thirty-eight public fountains in Rouen; some of them of very elegant designs. The *halles*, or market-places, built in the latter half of the XIIIth Century, are amongst the finest and most convenient in France. There are two bridges over the Seine; one of boats, built in 1626 by an Augustine friar; the other of stone, which was begun in 1811, and not thrown open to the public till 1829.

Rouen is the chief manufacturing town of the Department, and besides the cotton, which is its staple manufacture, embraces all the various objects of industry incidental to a large town. It is most advantageously situated for all commercial purposes, and it is a real dépôt for colonial produce.

Rouen has had the honour of giving birth to many eminent men in every department, and, amongst the rest, to Pierre Corneille and Fontenelle, whose houses are still shown with feelings of pride to the stranger.

Population 88,086. North latitude 49° 26'; East longitude 1° 2'.

Dieppe has been noticed in alphabetical order.

Elbeuf is agreeably seated four leagues South of Rouen, on the left bank of the Seine, but is for the most part indifferently built, and has little claim to architectural beauty: its environs, however, present many attractions. The inhabitants are so entirely occupied in the cloth manufactures for which this town is famous that, out of a population of 10,258 souls, upwards of 8000 are engaged in its manufactories.

Havre is a fine commercial town lying at the mouth of the Seine, and on its right bank. It is regularly built, and its chief street, *La Rue de Paris*, is one of the finest in France, traversing the town in its entire length from North to South, and terminating in the quays, which are nine in number. The buildings of the town present few claims to attention; its chief ornaments are its docks and dockyards, and the shipping which fills both these and its roadstead. The foundation of the commercial prosperity of Havre was laid in the reign of Francis I.; and in that of Louis XIV. it became the chief seat of the French East India trade. It is a fortified town, and is surrounded by a triple fosse and ramparts.

Havre has a very considerable trade, both of its own, and as being the principal seaport of Paris, whence most foreign products entering into the consumption of that capital are imported into it. Its principal exports are silk and woollen stuffs, lace, gloves, trinkets, perfumery, wines, brandy, books, &c.; and its chief imports, colonial

SEINE. produce and spices, cotton, indigo, tobacco, hides, dye woods, iron, tin, dried fish, &c. "It is estimated," says Mr. M'Culloch, "that the entire value of the different articles imported into Havre in 1829 amounted to 250,000,000 *francs*, or about £10,000,000 sterling. Of this sum, the cotton imported was estimated at 26,000,000 *francs*; the sugars of the French colonies at 44,000,000 *francs*; those of foreign countries at 8,000,000 *francs*; coffee 14,000,000 *francs*; indigo 2,000,000 *francs*; tobacco 4,000,000 *francs*, &c. In 1831, the customs' duties amounted to 22,410,689 *francs*; but in 1832 they were considerably increased." "One year with another," says Malte-Brun, "there enter more than 3000 ships into the port of Havre." Population 23,816; North latitude 49° 29' 14"; East longitude 0° 6' 38".

Fécamp is a commercial town, and has also cotton manufactures. Near it are the ruins of the castle, overhanging the sea, the taking of which forms one of the most interesting episodes of the war of the League, and which is so graphically described by Sully. Population 9123. *Neufchâtel* is a small town lying North-East of Rouen, of celebrity for its cheeses. Population 3430.

SEINE ET MARNE (Department of the) consists of part of La Brie and the Gatinais, which belonged to the former Provinces of Champagne and the Isle of France. It is bounded on the North by the Departments of the Oise and the Aisne; on the East by those of the Marne and the Aube; by those of the Yonne and the Loiret on the South; and, on the West, by those of the Loiret and the Seine and Oise. The superficial area of the Department is 595,980 *hectares*, and its total population 318,209.

Surface.

The surface of this Department is composed of very extensive and fertile plains, rising here and there into low hills, which mark the course of the rivers. The greatest inequalities of the soil are observable in the Arrondissement of Fontainebleau; the strata in which are singularly broken and confused. This Department abounds in large and beautiful forests; and yet furnishes corn more than sufficient for the consumption of its inhabitants, together with wines, and other agricultural produce. The cattle reared in the Department are numerous and of fine quality, and the sheep in particular are of the purest Merino breed. Preserves for fish are common here; especially in the Arrondissement of Coulommiers.

The superficial area of the Department is estimated at 595,980 *hectares*; of which 84,100 are occupied by wood, 17,000 are laid out in vineyards, and the average produce of land per *hectare* is valued at 67 *francs* 85 *cents*. It produces corn beyond the consumption, and large quantities of hemp and oleaginous grains. Grazing is carried on to a considerable extent, from the excellence of the pasture land. Game of all kinds, and fresh-water fish are abundant in the Department.

There is abundance of freestone in the Department, and numerous quarries, the millstones supplied from which are in great request. The Department likewise furnishes limestone, potters' and other clays, white sand, turf, &c. There are mineral springs at Provins.

Trade, &c.

The chief manufactures are calicoes, muslins, steel, files, axle-trees, candles, china, pottery, paper, glass, &c. There are likewise cotton-mills, and numerous tanneries. A considerable trade is carried on in grain, flour, fruit, cheese, eggs, wool, cattle, leather, wood, and charcoal, &c., for the consumption of Paris.

The population of the Department is 323,893 souls. **SEINE.** It is divided into five Arrondissemens, which are subdivided into 555 Communes. The following Table gives the number of the inhabitants in each of the large divisions:—

Chief Towns.	Communes.	Arrondissemens.
Melun	6,622	57,697
Fontainebleau ...	8,122	69,593
Meaux	8,537	93,417
Coulommiers	3,335	53,363
Provins	5,665	40,463
		323,893

The territorial revenue of the Department is estimated at 44,523,000 *francs*. The taxes amount to 279,046 *francs*, (*personelle*;) and 397,964 *francs*, (*mobilier*.)

Melun (the *Melodunum* of Cæsar) is the capital of the Chief Department. It is a well-built town, agreeably seated at the foot of a hill, and traversed by the Seine, which divides it into three parts. There is no building here to call for particular remark, except the church of St. Aspaïs, which is celebrated for the beauty of its windows of stained glass. Various manufactures are carried on in this town; and Melun has a public library containing 8000 volumes, as well as a theatre. Amyot, the translator of Plutarch, was born here. North latitude 48° 30'; East longitude 2° 35'.

Fontainebleau, celebrated for its regal château, and for the extensive and beautiful forest, in the midst of which it lies, is a clean, well-built town, with large and spacious streets. The château, associated with so many historical recollections, dates from beyond the XIIth Century. It is a confused mass of buildings, erected at various times and in different styles, but is altogether an imposing edifice. From the earliest period the favourite abode of the French monarchs, immense sums have been lavished on it. Henry IV. laid out on the additions he made to it the extravagant amount for that time of 2,440,850 *livres*; and the improvements, made in later times by Napoleon, cost upwards of six millions of *francs*. It was here that the modern Attila signed his abdication in 1814; that Pope Pius VII. lived for eighteen months, when the star of the latter was in the ascendant; and that Christina of Sweden had her favourite Monaldeschi murdered. Here, too, Henry III. was born; and there is hardly a room but what is connected with some traditionary remembrance. The forest covers an extent of 32,877 acres; is divided into 176 sections; (*triaux*;) and is traversed by numerous roads. It presents every variety of aspect, rocky gorges, dry, sandy plains, and fertile valleys, and is stocked with deer and wild boars for the royal chase.

There are fine cavalry barracks at Fontainebleau; a college; a public library of 28,000 volumes; and public baths. The manufactures consist chiefly of china and earthenware; and the quarries in the forest supply Paris with stone for its streets. The grapes of Fontainebleau are in high esteem. It lies 35 miles South South-East of the capital.

Meaux is a small, episcopal town, of high antiquity, bathed by the Marne and the Canal de l'Ourcq. Its cathedral, dedicated to St. Stephen, is a beautiful Gothic edifice, which owes, however, its chief celebrity to the eloquent voice of Bossuet. There are here a public library, containing 14,000 volumes, a college, hospital, theatre, and barracks for cavalry. Meaux is the centre

SEINE. of a busy trade in corn and flour with Paris; to which city, likewise, it yearly sends *fromage de Brie*, to the weight of more than three millions of *kilogrammes*. This town contains many corn-mills, moved by water power. It lies 25 miles East North-East of Paris.

Coulommiers is of consequence from its tanneries; and *Provins* presents some fine monuments of Gothic architecture; particularly the building, vulgarly called Cæsar's Tower, and the church of St. Quiriace, both in the upper town. There are a series of subterraneous galleries in this town, of elegant and solid architecture, the use and origin of which are still enigmas to the antiquary. The mineral waters here are much frequented.

SEINE ET OISE, (Department of the,) derives its name from the two rivers so called, and is bounded by the Department of the Oise on the North; by those of the Eure, and of the Eure and Loir on the West; on the South by that of the Loiret; and by that of the Seine and Marne on the South and the East. The temperature is in general mild, but variable and humid; and the air brisk and healthy, with the exception of those parts which abound in water. The prevailing winds are from the South-West, West, and North-West, and from the North and North-East.

General aspect.

This Department is comprised within the basin of the Seine, which is separated for a considerable space from that of the Loire by the extensive plateau of the Beauce. Its surface is very hilly, and diversified by continual undulations and rising grounds; yet there is no elevation deserving the name of mountain. The eye meets everywhere cultivated plains, beautiful forests, parks with their châteaux, smiling villages, and innumerable country-houses. The corn lands are extensive and fertile; and its two principal rivers are bordered by rich meadows and pasturage. Its vicinity to the capital, and the consequent occupation of numerous villas by the wealthiest Parisians, cause a large extent of the surface to be thrown into the unproductive form of parks. The following Table, however, shows a large excess of produce over the consumption:—

Annual Produce.	Excess.
Cereal grains...2,700,000 <i>hectolitres</i> ...	1,200,000 <i>hec.</i>
Oats.....2,000,000 „	1,100,000
Wines..... 450,000 „	300,000
Wood felled... 300,000 <i>stères</i> .	

Independently of the grain raised, there is a great demand for the produce of the orchards, which form a considerable item in the rural industry of the Department. Swine and poultry are reared in considerable numbers; and the breeding of sheep, of which there are large flocks, (*merinos*), is carefully attended to.

The superficial area of the Department is estimated at 575,042 *hectares*; of which 112,000 are occupied by woods, and 18,000 by vineyards. The average annual produce of land is valued at 40 *francs* 27 *cents* the *hectare*.

The Department is divided into six *Arrondissemens*, and 688 *Communes*.

Chief Towns.	Communes.	Population of the Arrondissemens.
Versailles	28,477	130,741
Mantes	4,148	60,785
Rambouillet	3,147	66,116
Corbeil	3,708	56,753
Pontoise.....	5,458	92,577
Etampes	8,109	41,208
		448,180

The territorial revenue of the Department is computed at 25,421,000 *francs*. The taxes amount to 471,593 *francs*, (*personnelle*), and 423,625 *francs*, (*mobilière*).

The mineral products consist of some mines of oxydized iron, found lying horizontally in the midst of sands; quarries of fine limestone; mill-stones; chalk, marl, and porcelain clay. There are mineral springs at Enghien, Mont Lignon, and Orgeval.

The manufactures embrace most objects of necessity and of luxury. There are altogether 30 forges and furnaces, 140 factories of various kinds, above 700 corn-mills, and more than 1000 other manufacturing establishments. The trade is chiefly in corn, wines, brandy, and cattle.

Versailles, the capital of the Department, was a sorry village when Louis XIII. fixed upon it as the site of a hunting lodge, in 1627. This was metamorphosed by his successor into the splendid palace which, from 1672 to 1790, was the usual residence of the Kings of France. Although shorn of its ancient *éclat*, Versailles is still one of the finest towns of the Kingdom. In addition to its château, it contains many fine edifices; the chief of which are the churches of Notre Dame and St. Symphorien, the Hôtel de Ville, the Hôtel de la Préfecture, and the Royal College. *La Salle du jeu de paume*, or the court for what may be termed the cricket of France, has acquired historical celebrity from being the spot in which the National Assembly, June 17, 1789, took the famous oath, "never to separate until the constitution was fixed on a firm foundation;" an inscription commemorates the circumstance. There are several literary and scientific societies established in the town; and the public library comprises a collection of 48,000 volumes. The streets of Versailles are spacious, regular, and adorned by numerous fountains.

It would require a volume to describe the far-famed palace of Versailles, its rich saloons, its paintings, statues, chapel, opera, park, lakes, fountains, and the monthly delight of the sight-seeking Parisians, its *jets d'eau*. The immensity of this pile, the unity which prevails throughout, and the magnificence of its architectural ornaments, put it on a level with the finest erections in Europe. The adjoining palaces of the Great and Little Trianon are small but elegant buildings, more dear to the student of the romance of history, than the colossal edifice by whose side they dwindle into dwarfish proportions.

The population of Versailles, in 1790, is said to have amounted to 80,000 inhabitants. Its present population is given in the preceding Table. North latitude 48° 40'; East longitude 2° 7'.

Mantes is an ancient town, prettily seated on the left bank of the Seine; the village of Limay lying on the opposite side, with which it is connected by two handsome bridges. It is commonly called *La Jolie*, from its picturesque site; and boasts of two very interesting remains of Gothic architecture, the church of Notre Dame, erected by the joint munificence of the mother and wife of St. Louis, and the elegant tower of the church of St. Maclou, which is all that is left of this once beautiful fane. The former church has been lately thoroughly restored: 31 miles West North-West of Paris.

Rambouillet lies in a beautiful valley, near the large forest of the same name. Francis I. died in the ancient castle which commands the town; the gardens adjoining which edifice were laid out by the celebrated Le

SEINE.

Mineral-ogy.

Trade, &c.

Chief towns.

SEINE. Notre. But Rambouillet derives its chief claim to notice from the *ferme modèle* established in its park by Louis XVI., to encourage the naturalization of the breed of merinos in France. The dairy here, the interior of which is fitted up with marble, and watered by *jets d'eau*, is a pleasing object to the stranger: 27 miles South-West of Paris.

Corbeil, seated near the confluence of the Essonne with the Seine, is a busy trading town, with manufactures of calicoes, a cotton-mill, a sugar refinery, and above 40 corn-mills on the Essonne. It has a public library, a theatre, and a corn-market, where a large traffic is carried on for the supply of Paris: 17 miles South of Paris.

Pontoise rises amphitheatrically at the junction of the Viosne with the Oise. There is a bridge over the latter, and the former small stream turns 22 mills. It was formerly a fortified place, and part of the ancient walls is still remaining. The streets are narrow and steep; but viewed from a distance the appearance of the town is highly picturesque. It is the *Pontæsia* of the Middle Ages. North latitude $49^{\circ} 3'$, East longitude $2^{\circ} 6'$.

Etampes and its faubourgs form a street of about a mile in length, on the high road from Paris to Orleans. The fertile vale in which it lies is watered by a small stream, which never freezes, and which supplies numerous mills. "To give an idea," says M. Huot, "of the traffic on this line of road, it is sufficient to say that there pass daily through the barrier of St. Michel, 3,600,000 kilogrammes of articles for the Paris market, conveyed by 1780 carts or waggons—930 with one horse, 140 with two, 160 with three, 380 with four,

and 170 with five horses:" 30 miles South South-West of Paris.

Seine, (River of the) which gives its name to the above Departments, rises between Chanceaux and St. Seine, at the foot of a hill which forms part of the plateau of Langres, almost in the centre of the Department of the Côte d'Or. It traverses the Departments of the Aube, Seine et Marne, Seine et Oise, Eure, Seine Inférieure, and falls into the English Channel below Havre-de-Grace. In this long course it bathes the towns of Chatillon-sur-Seine, Troyes, Melun, Paris, Mantes, Elbeuf, Rouen, Honfleur, and Havre. Its principal affluents on the right are the Aube, after receiving which it becomes navigable at the village of Marcilly, the Marne, and the Oise; on the left, the Yonne and the Eure. Its fall is not rapid; being about 1400 feet in a length of 470 miles, from its source to its mouth. The basin of the Seine is bounded by the heights of Beauce and those of Langres, with their connecting range, and by the hills which branch off from the heights of Langres towards the Channel; its surface, according to Lichtenstein, covers an area of about 27,192 square miles.

SEJO'IN, v. } Lat. *sejungere*, (se, and *jungere*;) }
SEJU'NCTION, } to separate things joined.
SEJU'NGIBLE. } To separate, to sever.

I would be the first that would cast this stone at Rome; but now, that we share with them these sinnes, there is no reason wee should be *sejoyned* in the censure. *Hall. The Hypocrite.*

The constitution of that people was made by a *sejunction* and separation of them from all other nations on the earth.

Pearson. On the Creed. Article 2.

The spawn and egg are *sejungible* from the fish and fowl, and yet still retain the prolific power of generation.

Id. Ib. Article 1.

SEITAN, **SETAN**, **SITEN**, **SETAH**, or **SETIM**, are names said to be given by Avicenna to a species of prickly tree, the wood of which is remarkably durable. The three first are corruptions of the Arabic Sant or Sont; and the others are the Hebrew words Shittah and Shittim. This tree was rightly supposed to be the *Spina Nigra* of Pliny, (*Nat. Hist.* xiii. 19. xxiv. 65—67.) but, on account of that epithet, erroneously taken for our common shrub, the Black-thorn. Notwithstanding the confusion arising from such a variety of names, a reference to Avicenna's *Canon Medicinæ* shows that this could be no other than "the gum arabic tree." (*Chambers's Dict. v. Seitan.*) None of the names given by Avicenna bear any resemblance to this word; however, in the interpretation of Arabic names by Andrea Alpigi of Belluno, we find that "*alcharad* (al-karadh) *vel alchard, est fructus arboris magnæ spinosæ, quæ oritur in Ægypto... et talis arbor ab Ægyptiis appellatur Setan.*" Now karadh is expressly mentioned by Avicenna as the pod or legumen of the *Acacia Nilotica*.

VOL. XXVII.

In the Arabic text, therefore, of Dioscorides, whence the above account is probably taken, the translator found Sant as the name of that tree, and the two last letters of that word having been transposed by careless transcribers, Satn was easily changed into Saten or Setan. Castell, in his *Lexicon Heptaglottum*, (v. Sant,) has marked this as identical with the Hebrew Shittim; (*Exod.* xxv. 5, 13.) and in the margin of his copy of Plempius's* version of Avicenna, (ii. 32. a.) has written Akakiyá, Sant, Shittah, with a reference to karadh in another part of that work. Hence, therefore, Setah and Setim in our old medical books; the former could scarcely be a mere mistranscription of Seitan, and the identity of the Arabic and Hebrew words (Shittah and Sant) had long been noticed by Orientalists.

Plinius, *Naturalis Historia*; Avicennæ *Opera*, Rom. 1593; Andrea Bellunensis *Interpretatio*, &c., subjoined to some very early editions of Avicenna; Serapion.

SEIZE, v. } See DISSEIZE.

SE'IZIN, } Fr. *saisir*; Low Lat. *saisire*, which

SE'IZURE. } signifies *vel occupare, manum injicere, invadere; vel alteri possidendum tradere*. Vossius, *De Vit.* lib. ii. c. 23. From *sescone*, or the Gr. σακκίζειν, *saccum expilare*. See Menage, Skinner, Du Cange. It is perhaps merely the verb, to *cheese*, A. S. *ceos-an*, *cis-an*, to take.

To take hold or possession of; to take or keep hold, fast hold; to fasten.

* Now in the British Museum. Castell's name does not appear in the book, but his handwriting cannot be mistaken by any one who has seen his interleaved copy of Schindler's *Lexicon* in the library of Sidney College, Cambridge.

And (the same dean and chapter) shall be adjudged and deemed
in actual possession and *seizin* of, and in the same premises, to all
intents and purposes, according to their old corporation.

Burnet. Records, vol. i. part ii. book iii. p. 295.

Thus the kyng of England had the possession and *sesenyng* of
the duchie of Aquitayne, and of the countie of Ponthieu, of Guynes,
and of all the landes that he ought to haue on that syde of the
see. *Lord Berners. Froissart. Cronycle*, vol. i. ch. 214.

We will, consent, and grant, that he, as superiour lord to per-
forme the premisses, may haue the *seizine* of all the land and cas-
tels of the same, till they that pretend title to the crowne be satis-
fied in their suit.

Holinshed. Historie of England, Anno 1291.

And the other course, that of *seizure*, he judged to be repugnant
to his majesty's laws.

Strype. Eccles. Memorials, vol. i. book i. ch. xxxiii. p. 389.
Henry VIII.

When that disdainfull beast,
Encountring fierce, him sudden doth surprize;
And, *seizing* cruell clawes on trembling brest,
Under his lordly foot him proudly hath suppress.
Spenser. Faerie Queene, book i. can. 3.

As when a beare hath *seiz'd* her cruell clawes
Uppon the carkasse of some beast too weake,
Proudly stands over, and awhile doth pause
To heare the piteous beast pleading her plaintiffe cause.
Id. Ib. book v. can. 4.

Admiration *seiz'd*
All heav'n, what this might mean, or whither tend.
Milton. Paradise Lost, book iii. l. 271.

Adam, heav'n's high behest no preface needs;
Sufficient that thy prayers are heard, and death,
Then due by sentence when thou didst transgress,
Defeated of his *seisure* many dayes
Giv'n thee of grace. *Id. Ib.* book xi. l. 251.

The Indians having perceived, by our *seizure* of the bark the
night before, that we were enemies, they immediately fled into the
woody parts of the island.

Anson. Voyages, book iii. ch. ii. p. 413.

This livery of *seisin* is no other than the pure feudal investiture,
or delivery of corporeal possession of the land or tenement; which
was held absolutely necessary to complete the donation.

Blackstone. Commentaries, vol. ii. book ii. ch. xx. p. 311.

In this sense the apostle speaks of Christ's laying hold on him,
to conduct him into the path of life, and to support him in it; at
the same time, not without some oblique allusion to the miracu-
lous manner of his first conversion, under the image of a sudden
and violent *seizure*. *Horsley. Sermon 27.* vol. ii. p. 334.

SEISIN is a term in *Law*, which imports the having SEISIN.
possession of an estate of freehold or inheritance in SE-
lands or tenements. The possession of an estate less LACHE.
than freehold is not called Seisin, but merely pos-
session. Seisin is either in fact or in law. An instance
of Seisin in fact, is where there is actual possession of
lands or rent, by entry on the lands or receipt of the
rent. An instance of Seisin in law, is where an estate
descends to an heir upon the death of his ancestor, and
he has not yet acquired the actual possession. Many
important questions used formerly to arise upon the
question of Seisin, but the operation of the Statute of
Uses, by the aid of which actual possession can now be
given without actual entry, the abolition of real actions
which required a Seisin in fact to support them, the suffi-
ciency of a Seisin in law to support a distress, and the
almost universal practice of land being leased out to
tenants for years, by which actual entry is rendered un-
necessary, the possession of the tenant for years being
in the eye of the law a sufficient possession to constitute
a Seisin in him of whom the land is holden, the prac-
tice of land being settled, and not left to descend in its
ordinary course, and perhaps other causes, conspire to
render the old law of Seisin and Disseisin nearly obso-
lete. Still, however, the law continues that no person
can claim land by descent as heir, unless the ancestor,
whose heir he claims to be, was actually seised; there-
fore if A die leaving B his heir, and B die without ob-
taining actual Seisin, the person entitled by descent is
the heir of A and not the heir of B. Questions of this
sort are most likely to arise in the case of an advowson,
because actual Seisin of an advowson cannot be obtained
by an heir until a vacancy occurs; presentation being in
such case necessary to constitute Seisin in fact.

SELACHE, from the Gr. *σέλαχος*, a cartilaginous
kind of fish, Cuv.; *Basking Shark*, Penn. In *Zoology*,
a genus of animals belonging to the family *Pla-
giostomati*, order *Chondropterygii branchiis fixis*, class
Pisces.

Generic character. Body spindle-shaped; teeth nu-
merous, small, conical, and their edges not serrated;
temporal orifices; branchial apertures five on each side,
and nearly joining above and below; an anal fin.

This is one of the genera into which the Linnæan
Squali have been divided by Cuvier. They have the
spindle-shaped body and anal fin of the true Sharks,
Squali, the inspiracles or temporal orifices of the Topes,
Galei, but neither edge of the teeth serrated. They are
also still further distinguished by the large size of their
branchial apertures, which nearly reach each other, so as
almost to surround the neck, the upper and lower extre-
mities of the first pair being only four inches apart, and
this separation gradually increases from before back-
wards, though the fifth pair are only ten inches dis-
tant from each other, and at a part where the circumfe-
rence of the animal is nearly sixteen feet. The tail is
falciform, and the upper lobe much longer than the
lower. They are natives of the North Sea, but occa-
sionally find their way into the British Channel.

S. Maximus, Cuv.; *Squalus Max.* Linn.; *le Squal*
Pélerin, Blainv.; *Basking Shark*, Penn. From twenty-
nine to thirty-six feet in length; head, anterior to the
branchial apertures, short and conical; the muzzle very
short, rather obtuse, and turned up at the tip, very
smooth, and studded with numerous round pores about
half a line in diameter, from which exudes a sanious
fluid; beneath a band of very delicate prickles extends

SE-
LACHE. as far back as to the throat; apertures of the eyes very near the muzzle, very small and oval; the irides blackish-brown, and the opaque cornea brownish; inspiracles immediately above the corner of the gape very small, and hardly a quarter of an inch in diameter; branchial apertures five on a side, very long as before mentioned, nearly resembling the form of an Italic *E* with the points of the curves directed backwards; nostrils small, oval, rather lateral, and opening on the upper edge of the lip; pectoral fins of moderate size, triangular, and close to the last branchial openings; ventrals of moderate size, and of an equilateral triangular shape, placed rather behind the centre of the body; first dorsal fin much larger than the second, of a scalene triangular shape, the front edge vertical, the hinder concave; second dorsal fin much lower than the former, its tip rounded, and its posterior edge hollowed; anal fin of the same form and size as the second dorsal; caudal fin having at its base, both above and below, a similar groove, with its convexity passing forwards, and the skin lining them rugose; the fin itself consisting of two lobes, of which the upper is a third the longer, and terminating at its tip in a kind of notch. The gape three feet wide, and forming a parabolic curve; both jaws armed with very numerous small teeth about two and a half lines long, slightly compressed, much curved at their middle, backwards and outwards, and exhibiting for the most part, on either side, a slight indication of the serrated edge observed in most of the Shark tribe. The whole animal covered with skin about three-quarters of an inch thick, of a blackish-brown colour, through which, on the lateral parts of the tail, a bluish tinge is observed in the slight clefts, which, taking a vertical direction, are spread over the body, and deepest upon the middle and lateral parts of the trunk, giving it the appearance of the Elephant's skin; the whole surface of the skin, except the muzzle and the inner surface of the genital appendages, covered with small points disposed irregularly, so that in passing the hand over them its skin is scratched; along the whole dorsal line a shallow groove extends more distinct on the front half of the body; and upon each side of the tail a ridge extending from opposite the root of the anal to some little distance on the caudal fin. They are natives of the North Sea, but during Summer appear in large shoals upon the Welsh coast. In the Frith of Forth and in the Hebrides they are observed in June, in small numbers, and more commonly in pairs. They have been also taken in the British Channel; that described by Sir Everard Home was caught at Hastings, and that by Blainville off Dieppe. It has also been seen on the Northern and Western coasts of Ireland. Blainville considers that their migration Southward is in search of the female; and mentions that those who have observed them, noticed that they appeared agitated by a kind of fury, swimming backwards and forwards, and alternately sinking and rising, without appearing to follow any definite course. Commonly it swims along at a slow rate, with the dorsal fin and sometimes part of the back above water, and hence in the North it has acquired the name of *Sail-fish*; but if struck deeply with a harpoon it dashes off with great rapidity, and is very dangerous to contend with. It is said to be tame and inoffensive, allowing the approach and even contact of boats, whilst "lying as if to sun itself on the surface of the water," according to Pennant, and hence its British name, the *Basking Shark*. In the Orkneys it is called *Hoe-mother* or *Homer*, from its being considered the

parent of the Piked Dog-fish, (*Spinax*), there called the *Hoe*. It is not believed to be a predaceous animal, at least no remains of fish have yet been observed in its stomach; Linnæus says it feeds on Medusæ, but Pennant upon marine plants. Mr. Low found in it a red mass like bruised Crabs, or the roe of Echini.

See Linnæi *Systema Naturæ* a Gmelin; Blainville in *Annales du Muséum*, vol. xviii.; Cuvier, *Règne Animal*; Pennant, *British Zoology*.

SELADERMA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* thirteen-jointed, slightly clavate and pubescent; basal joint slender, filiform, second moderate, third and fourth smallest, fifth and following to the tenth gradually shorter and broader, the remaining joints forming an ovate club; *prothorax* very short, transverse; *thorax* ovate; its *parapsides* convex, distinct; wings four, anterior ample, the costal nervure nearly touching the apex of the wing; *stigma* minute; *ovipositor* concealed.

Type of the genus, *S. latum*, Walker, *Entom. Mag.* vol. ii. p. 189. Four species; all taken in the neighbourhood of London.

SELAGO, in *Botany*, a genus of the class *Didymamia*, order *Angiospermia*, natural order *Selagineæ*. *Generic character*: calyx five-cleft; corolla, tube slender, border slightly unequal; seeds one or two, naked, inverted.

Thirty species, mostly natives of the South of Africa.

SELANDRIA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* short, nine-jointed; two basal joints distinct, somewhat globose, remainder less distinct; the third as long as the fourth and fifth united, the rest gradually diminishing in length and thickness to the apex, the terminal joint being short, and somewhat conic; mandibles bidentate; *labrum* emarginate; head broad; *ocelli* three; wings ample, anterior thin, with two marginal areolets divided by a straight nervure, placed a little obliquely, and with four submarginal ones, the first small, rounded, second and third of equal size, the former receiving one and the latter two recurvent nervures, the fourth larger, extending to the apex of the wings; body broad, scarcely longer than the thorax; somewhat depressed and ovate in the females; legs simple, with a pair of short, unequal spurs at the apex of the tibiæ alone.

Type of the genus, *Hylotoma serra*, Fabricius; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. vi. p. 45, &c. A very extensive genus, of which no less than forty-four species are found in Britain.

SELATOSOMUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, rather short, simple, the basal joint stoutish, elongate, second very short, subglobose, third elongate, the remainder short, obconic; the fourth and the terminal joints being longest, and about of equal length, the latter with the apex conical; *palpi* four, rather elongate; mandibles porrect; head small; *thorax* broad, subquadrate-elongate, margined; the lateral margins rounded, the posterior angles carinated, the disc gibbous; body broad, nearly glabrous, of brilliant colour, slightly convex; *elytra* a little dilated beyond the middle, the apex attenuated; legs rather slender; *tarsi* pentamerous, simple, not very slender, basal joint moderate.

Type of the genus, *Elater æneus*, Linnæus; *El. im-*

————— There is game none
That fro my bookes maketh me to gone
But it be *seldome* on the holy daie,
Save certainly, whan that the month of May
Is comen.

Id. The Legend of Good Women, p. 299.

I saw how Stedfastnes did flee with wings of often change,
A flyeing bird, but *seldome* sene, her nature is so strange.
Of the Mutability of the World, p. 400.

She, like one of Vesta's nuns, entertained her self for a few
days in all shew of straightness, yet once a day coming to her duty
to the king and queen, in whom the *seldomness* of the sight in-
creased the more unquiet longing.

Sidney. Arcadia, book iii.

Upon the earth the Spring was *seldom* seen,
'Twas Winter there, when each place else was green;
When Summer did her most abundance yield,
There lay still brown as any fallow field.

Drayton. The Moon-Calf.

So am I as the rich, whose blessed key
Can bring him to his sweet up-locked treasure,
The which he will not every hour survey,
For blunting the fine point of *seldom* pleasure.

Shakspeare. Sonnet 42.

In poets as true genius is but rare,
True taste as *seldom* is the critic's share.

Pope. Essay on Criticism.

It *seldom* happens, however, that great fortunes are made, even
in great towns, by any one regular, established, and well-known
branch of business, but in consequence of a long life of industry,
frugality, and attention.

Smith. Wealth of Nations, vol. i. book i. ch. x. p. 155.

SELE'CT, v. } It. *sægliere*; Lat. *seligere*, *selec-*
SELE'CT, adj. } *tum*, (*se*, and *legere*, Gr. *λεγειν*;) }
SELE'CTION, } to choose, to take out or apart from }
SELE'CTOR. } others.

To choose out of; to take in preference, or because
preferred, to others.

To whom th' aggrieved son, (as if disgrac'd,)
Ah! father, have you then *selected* me
To be the man, whom you would have displac'd
Out of the roll of immortality?

Daniel. History of Civil Wars, book vi.

Him for to seeke, she left her heavenly hous,
The house of goodly formes and faire aspect,
Whence all the world derives the glorious
Features of beautie, and all shapes *select*,
With which high God his workmanship hath deckt.

Spenser. Faerie Queene, book iii. can. 6.

And Richard, duke of York, still struggling for the crown,
Whom Salisbury assists, the man with whose renown
The mouth of fame seem'd fill'd, there having with them then
Some few *selected* Welsh and Southern gentlemen.

Drayton. Poly-olbion, song 22.

While we single out several dishes, and reject others, the *selec-*
tion seems but arbitrary, or upon opinion.

Sir Thomas Brown. Vulgar Errors, book iii. ch. xxv. p. 211.

As guided by a god; secure he goes,
Arm'd with my fellowship, amid the foes:
And sure no little merit I may boast,
Whom such a man *selects* from such a host.

Dryden. Ovid. Metamorphoses, book xiii.

There breathes not scarce a man on British ground
(An isle for love and arms of old renown'd)
But would have sold his life to purchase fame,
To Palamon or Arcite sent his name:
And had the land *selected* of the best,
Half had come hence, and let the world provide the rest.

Id. Palamon and Arcite, book iii.

Men, in their ill-advised zeal to defend the scripture doctrine of
the Son's divinity, were not always sufficiently careful in *selecting*
their arguments.

Warburton. Works, vol. xii. p. 166. *View of Lord Bolingbroke's
Philosophy. Letter 2.*

Let the boy's judgement then be exercised and strengthened, by
being early habituated to the work of *selection*.

Knox. Works, vol. iv. p. 75. *Liberal Education. Note.*

Like all inventors and *selectors* of their own systems, they have
been hurried to excess, and have disgraced the rational parts of
their philosophy by far-fetch'd refinements or by foolish tenets,
which could originate only in the madness of enthusiasm.

SE'LFISHLY,

SE'LFISHNESS,

SE'LFNESS.

Goth. *silba* or *silbo*; A. S. *sylf* or *sylfa*; D. *self*; Ger. *selb*. Ben Jonson calls *self* a pronoun, signifying a reciprocation. Wallis declares it to be a noun substantive, to which the Lat. has scarcely any substan-

tive that corresponds; the word *persona* or *propria persona* approaches nearest: thus, *my self*, *thy self*, *our selves*, *your selves*, (*ego ipse*, &c.) are *mea persona*, *tua persona*, *nostræ personæ*, &c. *Himself*, *itself*, *themselves*, he says, are used for *his-self*, *its-self*, *their-selves*; and (by introducing *own*) *his own self*, *its own self*, *their own selves*, are *ipsius propria persona*, *illorum propriæ personæ*. Mr. Tyrwhitt has shown (from Hickes) that *sylf*, in A. S., was declined like other adjectives, and joined in construction with pronouns personal and substantives just as *ipse* in Latin; and he thinks that a custom was gradually introduced of annexing *self* to pronouns in the singular number only, and *selves* to those in the plural; and this, he imagines, was one cause of the mistake Grammarians have committed in considering *self* to be a substantive. *Self* is undoubtedly prefixed to nouns substantive, adjectively, and annexed to pronouns, substantively. Could the original meaning of the word be discovered, the various usages, and their progress, might be accounted for; it may sometimes be supplied by *same*, as in Chaucer and North, *self* place, *same* place; by *own*, as by any *self* industry, in Sidney, any industry of *its own*.

The force of the word seems always to be to confirm or strengthen the sameness, identity, or individuality of some person or thing.

Selfish; pertaining to *self*; partial to, subservient to *self*; the interests or pleasures of *self*.

And in þis manner was Engolond brougt first in seruage,
And þorg treson of þis selue lond first ȝef truage.

Wholly her's, all selfness he forbears.

Id. Astrophel and Stella.

The whiles that mighty man did her demean
With all the evil termes and cruell meane

That he could make; and eeke that angry foole

Which follow'd her, with cursed hands uncleane

Whipping her horse, did with his smarting tooke

Oft whip her dainty selfe, and much augment her lode.

Spenser. Faerie Queene, book vi. can. 7.

Albeit this love was a thing even incorporated into them, that
the most honest and vertuosest women loved the young maids
thus also; yet was there no jealousy nor suspicion that grew
hereof, but rather to the contrary, there grew a marvellous mutual
love and kindness between them, which lived in one self-place.

North. Plutarch. Lives, p. 43. Lycurgus.

By reason whereof, having to deal with another captain alike
venturous and valiant as himself, in all service and execution, he
shewed the self boldness and courage that Hannibal did.

Id. Ib. p. 159.

He at the length was slaine and layd on ground,

Yet holding fast twixt both his armes extended

Fayre Pastorell, who with the selfe same wound

Launcht through the arme fell down with him in drerie swoond.

Spenser. Faerie Queene, book vi. can. 11.

The selfe-same authors doe affirme.

Holland. Plinie, book xxii. ch. xiv.

O false and wicked colours of desire!

Eternal bondage unto him that seeks

To be posset of all things that he likes!

Shall I, a son and subject, seem to dare,

For any selfness, to set realms on fire?

Lord Brooke. Mustapha.

Love did us both with one self-arrow strike.

Our wounds both one, our cure should be the like.

Drayton. Henry Howard to Lady Geraldine.

Do you feel

What follows a self-bloud, whether you venture,

And to what punishment?

Beaumont and Fletcher. Thierry and Theodoret, act iv. sc. 1.

In the story I dare follow none of the modern erroneously transcribing relators or seeming correctors, but have, as I might, took it from the best self-fountains.

Drayton. Poly-olbion, song 8. note.

SELF.
—
SEL-
KIRK-
SHIRE.

Thou *self-idea* of all joys to come,
Whose love is such, would make the rudest speak,
Whose love is such would make the wisest dumb;
O when wilt thou thy too long silence break,
And overcome the strong to save the weak?

Fletcher. *Christ's Victory and Triumph.*

Moreover I have observ'd that he is too much given to his study and *self-society*, especially to converse with dead men, I mean books.

Howell. *Letter 51.* book ii. p. 357.

But whatsoever to some men makes a man, and consequently the same individual man, wherein perhaps few are agreed, personal identity can by us be placed in nothing but consciousness (which is that alone which makes what we call *self*) without involving us in great absurdities.

Locke. *Works*, vol. i. book ii. ch. xxvii. p. 150. *Of Identity and Diversity.*

They judge of things according to their own private appetites and *selfish* passions, and not with a free uncaptivated universality of mind, and an impartial regard to the good of the whole.

Cudworth. *Intellectual System*, book i. ch. v. p. 670.

To save, where you have power to kill,
Argues your power above your will;
And that your will and power have less
Than both might have of *selfishness*.

Butler. *Hudibras*, part i. can. 2.

While nought save narrow *selfishness* succeeds,
And low design, the sneaking passions all
Let loose, and reigning in the rankled breast.

Thomson. *Britannia.*

Whatever contradiction may vulgarly be supposed between the *selfish* and social sentiments or dispositions, they are really no more opposite than *selfish* and ambitious, *selfish* and revengeful, *selfish* and vain.

Hume. *On the Understanding*, sec. 9.

But men are led into this mistake by laying too much stress upon etymology, for *selfishness* being derived from *self*, they learnedly infer that whatever is done to please one's own inclination must fall under that appellation, not considering that derivatives do not always retain the full latitude of their roots.

Search. *Light of Nature*, vol. i. part ii. ch. xxxiv. p. 314.

SELINUM, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferae*. Generic character: involucre reflexed; calyx entire; petals heart-shaped, equal; fruit oval-oblong, compressed, flat, striated in the middle.

Fourteen species, natives of the Northern hemisphere; *S. palustre* is a native of England.

SELKIRK, the county town of Selkirkshire, North Britain, was formerly a royal burgh, and a place of considerable importance. It is frequently mentioned in Scottish history, and it is an ancient and received tradition of the town, that eighty citizens of Selkirk, headed by their town clerk, were slain almost to a man, fighting desperately to the last in the fatal battle of Flodden. William of Brydone, their leader, was knighted on the field. His sword is still preserved by his descendants, and a standard, taken from the English by one of the gallant band, is carried in the annual procession of the craft to which he belonged. The memory of the fallen is immortalized among

The flowers whom plaintive lay
In Scotland mourns as "wede awae."

Selkirk is situated on a rising ground on the banks of the Ettrick, and has latterly revived much from the state of desertion and neglect into which it fell after the disastrous battle which robbed it of its best citizens. It has an inkle manufactory, and carries on a brisk trade in stocking-weaving and wool-spinning. Population, in 1831, 2883. Distant from Edinburgh 36 miles.

SELKIRKSHIRE, the most inland of the Scotch Counties, is bounded by Peebles-shire and Mid-Lothian on the North; by Roxburghshire on the East; by the latter shire and that of Dumfries on the South;

and by Peebles on the West. From the irregularity of its figure its area is small compared with its greatest length and breadth; the former of which stretches from the source of the Ettrick to that of the Caddon, a distance of about 30 miles; and the latter, from the Borthwick Water to the foot of Glensax, is nearly 20. Its surface comprehends about 264½ square miles, or 169,280 English statute acres, of which 960 acres are covered by lakes. Selkirkshire contains seven parishes, and returns one Member to Parliament. Its population, according to the census of 1831, was only 6833 inhabitants; and the towns, consequently, are very small. The annual value of real property, assessed in 1815, was £43,584; its valued rent £80,308 Scotch.

"Viewed from a commanding height," writes the Surface: Rev. N. Paterson, Minister of Galashiels, "the whole County seems crowded with hills, among which neither a house nor any mark of human life appears. In the lower parts of the district, where the country is more open, and the surface undulating, cultivation occupies a considerable breadth, covering the minor hills, and skirting the base of the mountains; but in the higher parts it is confined to narrow strips along the streams, and so deeply seated as to be invisible to the eye from any of the adjacent summits. The valleys are too narrow to be called dales, and are simply named from their rivers. That of Tweed, being more important, has obtained the name of Tweedside; but, in the common language of the country, as if the smaller rivers had not a side on which a habitation might be placed, it is said of the people, as if they lived in waters, 'He lives in Caddon, he comes from Ale, or he belongs to Ettrick, or to Yarrow.'" The appearance of the County, generally speaking, is monotonous and uninteresting; the hills presenting much sameness of character, and the wide tract of country between Borthwick Water and the Ettrick being a cold, plain, black heath.

The hills vary from 200 to upwards of 2000 feet above the level of the sea. Ettrick-pen, according to the County Map, is 2200 feet high; Blackhouse Heights 2370 feet; Minchmoor 2280; the Three Brethren Cairn 1978 feet, &c. The rocks belong to the transition series, being greywacke, greywacke-slate, clay-slate; in short, are chiefly schistose. The strata for the most part answer to each other, whether the valley be wide or narrow; although there are occasional exceptions to this uniformity, as may be observed in the banks of the Ettrick at Newhouse Lynns, seven miles above Selkirk, and in those of the Yarrow at Newark, where the strata are strangely incurvated. However, "the whole County, from its great multitude of hills and streams, affords the best illustrations of the coincidence of valleys, and of the exact proportion that subsists (the rocky substances being so much the same) between the descending torrents and their respective grooves."

Though the arable land of the County lies at an elevation of from 280 to 800 feet, and is therefore unfavourably situated as regards climate, yet its agriculture is not inferior to that of any County in Great Britain. In the lower lands wheat is abundant; it has been raised, even at a height of 700 feet, to what would be considered a good crop in the Lothians; and oats, turnips, barley, and clover hay thrive, at a considerably greater height, in regular rotation.

The general state of the County, and the improvement that has taken place since the last Statistical Account, cannot be better evidenced than by extracts from

SEL-
KIRK-
SHIRE.

SEL-
KIRK-
SHIRE.

the "Miscellaneous Observations" appended to the description of each parish by the writers of the New Statistical Account.

Parish of Selkirk.—"The general appearance of the parish has been much improved since the early account rendered of it; farms are better managed, every acre of land, that can with profit be so treated, has been brought under cultivation; stocks are more healthy and productive, and the comforts of farmers and tenants themselves have in like ratio increased. Education is more widely disseminated, and the people are in general more moral and industrious."

Parish of Galashiels.—"Besides the greater use of water-power, there are now four steam-engines at work,—one for grinding tanners' bark, and the other for the manufacture of machinery; and this power has been rendered available in consequence of the improved state of the roads which has lowered the price of coal. The want of capital obliged the clothiers at the former period to sell their goods, at whatever price, as soon as manufactured; now they are wont to lay in a stock of the raw material at the fittest season, and to make half-yearly or quarterly visits to all parts of the country, when they take in fresh orders, and receive payment of cloths delivered at former periods."

Parish of Yarrow.—"The Cheviot have superseded the black-faced sheep, and, with the breed, the management has been materially altered. There is no ewe-milking as formerly, and no hog hirsle kept, but the different parts of the stock roam promiscuously and at large. In very severe snow-storms the flocks on the higher grounds used to be removed to the low country of Annandale in quest of food; but now a store of hay is cut from the bogs, and forms ample winter provision for the sheep during any storm; while *stells*, or enclosures for sheep, at the same time, are more numerous and accessible. Within the last forty years, too, the country has been thoroughly drained. Equally great have been the improvements in the agriculture of the parish. The system of having outfield and infield was long practised; the milk ewes and cattle being folded at night, and the ground thus manured for cultivation. Cropping, too, went on till the particular spot was exhausted. But now a better system prevails; the arable and meadow land being enclosed and subdivided; the two-horse plough used; turnip husbandry introduced; a regular rotation of cropping followed; and wheat, so long deemed unsuited to our soil and climate, frequently raised with success.

"The new houses of the tenants have for the most part been built in better style and situation than the old. The roads also have been greatly improved, and are far more frequented. Besides, all classes are better fed and clad. The dress is no longer of home produce or manufacture. What used to be luxuries have become the necessities of life; so that, instead of a single carrier on foot as formerly, a number of carts supply the Yarrow vale with wheaten bread. A solitary newspaper formerly made its passage up the water by slow stages and through many hands, contrasting forcibly with the regular and rapid circulation of periodicals at present. Withal, there has been a striking change in the habits of the peasantry. Local attachments have given way to general knowledge. The legends of superstition are in a great measure forgotten, and its rites forsaken. There is no longer heard a lilting at our 'ewe's milking,' or 'the tales at the farmer's ingle.'

The minstrel's strains, however, had lingered long after the deeds which they commemorated were over. In this pastoral district it was that Sir Walter Scott found many of the old ballads which had been handed down for ages as a patrimony from sire to son. But, on the publication of his *Minstrelsy*, the spell that bound them was broken, and these relics of Border song, thus laid bare to the light of day, have, like the friendly and familiar spirits of Border superstition, on being noticed with peculiar kindness, entirely disappeared, and that, too, in consequence of the very effort made to preserve them. In this district, too, there existed almost a feudal relation between master and servant; there being instances in which the domestic has grown up and grown grey beneath the same roof; but now the half-yearly term is too often one of change, and the stipulated service performed with mechanical unconcern."

Parish of Ettrick.—"I remember," says an old man of eighty, "when there was not a cart in the parish, nor above Singlee, (ten miles below Ettrick kirk,) and but one little enclosed park below Thirlestane; they carried the manure to the fields, and the peat from the hills in *creels* on horses' backs." Now there are about thirty-six carts and twenty ploughs, and on every farm one or more enclosures. Formerly there was a village at Ettrick House containing thirty-two families; now there is but one house, inhabited by a shepherd, built on the ruins of an old tower, which, perhaps, gave rise to the name. Two elders generally resided here, and out of a list of sixteen poor, seven had their residence in Ettrick use. Of the 'ten proprietors of the parish,' says the writer of the last Statistical Account, 'none reside in it.' At present Lord Napier, the patron of the church and parish, lives amongst us, and from his seat, as a centre, life and cultivation are spreading and diffusing their happy influence all around us.

"The Scotch fir," says Dr. Russell, "is almost the only species of wood to be seen here, and that in very small quantities." Now there is almost every forest tree of every name, mixing with waving pines and firs, in all the varieties of their shades and colouring. 'The lochs,' says the same writer, formerly lay 'like two dark dreary pools, shut round with an insuperable barrier,' and, though abounding in fish of various kinds, were rarely visited. Now, St. Mary's and the Lowes, surrounded by verdant hills, and associated with many romantic legends, form a scene alike interesting to the angler and the literary pilgrim."

The above extracts present a very lively and graphic picture of the changes consequent on a progressing civilization during the last forty years, applicable indeed in its general features to the whole country, but localized by its details.

In the parish of Galashiels are traces of two Roman Antiquities. camps, and also the line of a considerable portion of a Roman road is distinctly visible. In that of Yarrow, Westward of Altrive Lake, are fine large tumuli, conjectured to be the work of the ancient Britons. Remains of the old towers or peel-houses are scattered over the County; and each burn and cleugh has its legend. Few spots in it but what have been immortalized by ancient rhyme or modern verse. The names of Scott and of the Ettrick shepherd are now closely blended with all its associations; and were they not, the sweet name of Yarrow alone would hallow the land to the lover of song.

The Tweed gives ten miles of its beautiful course to lakes.

SEL-
KIRK-
SHIRE.

Rivers and

SEL-
KIRK-
SHIRE.
—
SELL.

adorn this County, and the Gala four miles along the North-Eastern boundary. However, its rivers proper are the Yarrow and Ettrick; the former of which rises in St. Mary's Loch, and falls, after a course of about sixteen miles, into the latter, which, increased by its tribute, joins the Tweed, after a career of about thirty. It has its source among a few rushes between Loch-fell and Capel-fell, on the South side of a range of hills called "the backbone of the country," and is fed by many a little raging mountain torrent. "When small, and viewed from the top of the hills in a fine sunny day, it is like a thread of silver, but when raised by the storms and the rain, it bids defiance to all its banks and sweeps over the adjoining haughs with the raging fury of a mountain sea." St. Mary's Loch is about three miles long, half a mile broad, and from twenty-eight to thirty fathoms deep. The Loch of the Lowes, which is only separated from it by a very narrow neck of land, is only one mile long, a quarter of a mile broad, and about twelve fathoms in depth. Trout, perch, and pike are the natural and permanent inhabitants of these waters. The salmon fisheries of the Tweed are well known; and when the rivers are flooded during the Winter season, sea trout and salmon often make an excursion up the Ettrick and the smaller streams.

The name Selkirk, according to its most probable etymology, is derived from two Celtic words—*schelch* and *grech*—signifying *the Kirk in the wood or forest*. Of the forest, there are now few remains; and the finishing stroke to its destruction seems to have been given by James V., who, we are told, "showed a disposition to change the forest into what it now is,—a sheep-walk, by stocking a part of it with extensive flocks."

Manufac-
tures.

These are chiefly confined to Galashiels, and consist of yarns, flannels, blankets, shawls, plaids, and narrow cloths. The annual consumption of wool in that town and neighbourhood amounts to 21,500 stones, at 24 lbs. imperial to the stone; of which only 500 are foreign, chiefly from Van Diemen's Land. The total number of spindles are 5336, of which 4352 are driven by water, and the remaining 984 by hand. There are 132 looms.

Occupations of the
people.

The following Table is extracted from the Population Returns of 1831:

Occupiers of land, employing labourers	86
" not employing labourers	36
Labourers employed in agriculture	499
" manufacture	154
" retail trade or handicraft	455
Capitalists, bankers, &c.	79
Labourers, not agricultural	229
Other males, twenty years of age	97
Male servants	60
Female servants	454

The County of Selkirk contains about 150 weavers, most of them at Galashiels; a few at Selkirk and other places.

New Statistical Account; Quarterly Journal of Agriculture, No. 18; Napier, *A Treatise on Practical Store Farming*, &c. 1822.

SELL, n. Fr. *selle*; It. *sella*, a seat, a saddle; Lat. *sella*, A seat; a seat on horseback, a saddle.

And, passing by
With his bright blade did smite at him so fell,
That the sharpe steele, arriving forcibly
On his broad shield, bitt not, but glancing fell
On his horse necke before the quilted *sell*,
And from the head the body sundred quight.
Spenser. Faerie Queene, book ii. can. 5.

Yet was the force so furious and so fell,
That horse and man it made to reele asyde;
Nath'lesse the prince would not forsake his *sell*,
(For well of yore he learned had to ryde.)
Spenser. Faerie Queene, book ii. can. 8.

The tyrant proud frown'd from his lofty *cell*,
And with his lookes made all his monsters tremble.

SELL, v. } A. S. *syllan*; D. *sellen*; Ger. *selen*;
SE'LLER, n. } Sw. *sälja*, *dare*, *tradere*, to give, to de-
SALE, n. } liver; to give or deliver, for or in ex-
change for; hence *vendere*. Verstegan says, *sytle* or *seale*,
to pay or to give; *siling*, paying or giving. We now
use the word *selling* for ought that is given or delivered
for the value thereof.

It is used where something is given or delivered in exchange for money or security for money; and thus (as *buy* also is) distinguished from bartering or exchanging goods for goods, wares for wares. As opposed to buy,—

To give or deliver; part with or dispose of, for something paid and received as equivalent.

þise sent þis men & said, þat þer conseile so ches,
þei wild tille vs be laid, in gode lufe & pes,
þat our merchantz mot go forto bie & *selle*.
R. Brunne, p. 287.

Jhesus seith to him, if thou wolt be parfit, go and *sille* alle thingis that thou hast, and gyve to pore men, and thou schalt have tresour in heven, and come and sue me.
Wiclif. Matthew, ch. xix.

And Jhesus sayde vnto hym, yf thou wylt be perfecte, goo and *sel* that thou hast, and geue it to the poore, and y^u shalt haue treasure in heauen, and come and folow me.
Bible, Anno 1551.

And Jhesus entride into the temple of God, and castide out of the temple alle that boughten and *solden*.
Wiclif. Matthew, ch. xxi.

And Jhesus wēt into y^e tēple of God, and cast out al thē y^t *solde* and boughte in y^e tēple.
Bible, Anno 1551.

Therefore he seide to hem, but now he that hath a sachel, take also and a scrippe, and he that hath noon *selle* his coote and bye a swerd.
Wiclif. Luke, ch. xxii.

And he said to them, but now he that hath a wallet let him take it vp, and lykewyse hys scribbe; and he that hath no swearde, let hym *sell* hys cote and bye one.
Bible, Anno 1551.

For hou manye euer weren possessioneris of feeldis either of housis thei *seelden* and broughten the prisys of tho thingis that thei *seelden* and leiden before the feet of apostlis.
Wiclif. Dedis of Apostlis, ch. iv.

But thei that use 'hem in misse manere,
Or set 'hem up to any *sale*,
I trowe thei shall abie 'hem dere.
The Plowman's Tale, part iii. p. 632.

His highness, by the advice of his council, hath ordained and taxed, that the *sellers* thereof shall not take for any of the said Bibles unbound above the price of ten-shillings.
Burnet. Records, part ii. book iii. No. 24.

As for your eloquence and furniture of woordes, as it serueth wel, to make the mater more *salehable* in the sight of the simple, so it addeth but smal weight vnto the trueth.
Jewell. Replie to Hardinge, p. 645.

If in my flower of youth and strength, when all men
Lov'd, honour'd, fear'd me, thou alone couldst hate me
Thy husband, slight me, *sell* me and forego me.
Milton. Samson Agonistes, l. 939.

This is that then which makes land, as well as other things, dear; plenty of buyers and but few *sellers*; and so by the rule of contraries, plenty of *sellers* and few buyers makes land cheap.
Locke. Works, vol. ii. p. 20. *Of the lowering of Interest.*

By diminishing the number of *sellers*, therefore, we necessarily diminish that of buyers, and are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade.

Smith. Wealth of Nations, vol. ii. book iv. ch. ii. p. 255.

SELL.

SELL.
—
SEM-
BLANT.

Those crowds of books which are obtruded upon us under this form, by those whose only intention is to make a *salable* commodity, might certainly, as far as the interests of literature are concerned, be spared.

Knox. *Winter Evenings*. Evening 52.

SELVEDGE, in D. *self-egghe*, *self-end*, *self-kant*; *ora panni vel telæ*; *extremities panni aut lintei*;—Kilian,—who says that in Sax. *self*, *sulf*, is *extremitas* and *extremus*; but this does not account for closing the edge. Skinner thinks *selvage* to be *quasi* salvage, *quia* *sc. vestem conservat, roborat, efficitque ut diutius duret*. Mr. Thomson conjectures that the D. (where it is also written *zelf-weg*) is formed of *zeel*, a cord, and *voege*, a joining; (*zeel*, in A. S. *sæl*, is from the A. S. verb *sæl-an*, D. *seel-en*, *ligare*, *vincire*, to bind, to fasten; *zeel* or *sæl* will not give *zelf* or *self*, otherwise *selv-edge* might be the fastened edge, the closed edge.) From the D. it is plain that *selv-edge* is a compound word, the latter portion of which is *edge*. May it not be the *self* or *selve-edge*; emphatically, its own proper *edge*; the final *edge* of the piece; that which finishes or confines it.

Then shalt thou make loupes of jacynete coloure alonge by the edge of y^e one curtayne euen in the *seluege* of the couplinge courtaine.

Bible, Anno 1551. Exodus ch. xxvi.

And they made fyfte loupes of jacinete alonge by the edge of the vttermost curtayne, euen in the *seluege* of the coupling curtayne.

Id. Ib. ch. xxxvi.

SE'MBLANT, *adj.* } Fr. *sembler*, *semblant*; It. *sembiare*, *sembiante*, *simigliare*, *simigliante*; Sp. *semblante*; Lat. *simulare*, from *similis*, like. See **SIMILAR**.
SE'MBLANT, *n.* }
SE'MBLANCE, }
SE'MBLABLE, }
SE'MBLABLY, }
SE'MBLATIVE. } Like; having, bearing, presenting, showing, a like or similar appearance. The noun,—likeness; like appearance; generally, appearance, form or figure, representation.

For the fourth and last way of secret *semination*, wherein we had been hitherto wholly deficient and asleep; this I said was the particular scope of my present charge.

Reliquiæ Wottonianæ, p. 494.

We are made to believe, that in the fourteenth year males are *seminifical* and pubescent; but he that shall inquire into the generality, will rather adhere unto the cautelous assertion of Aristotle.

Sir Thomas Brown. Vulgar Errours, book vi. ch. viii.

A *seminary* is a seed-plot, which is adapted or set apart for the growing of seeds.

Seminal leaves are two plain, soft, and undivided leaves, that first shoot forth from the greatest part of all sown seeds.

Seminiferous, bearing or producing seed.

Miller. Gardener's Dictionary.

It [Mr. Locke's book] is said, very unjustly, to contain the seminal principles of Mr. Paine's matured and expanded tree.

Knox. Works, vol. v. p. 316. The Spirit of Despotism.

Those pious benefactors to mankind did not mean to establish *seminaries* to prepare men for the world, but to teach them to despise it.

Id. Ib. vol. ii. p. 49. Essay, No. 128.

SEMIOPHORA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* bipectinated in the males, serrated in the females, each joint producing a bristle on both sides; *palpi* short, very hairy at the base; the terminal joint exposed and scaly, triarticulate, the basal joint slightly bent, stout, not half so long as the second, which is elongate and slightly attenuated, the terminal one minute, ovate, subtruncate; head small, pilose; *thorax* stout, woolly, not crested; body not very stout, short; wings entire, slightly deflexed, anterior elongate, narrowed at the base, rather acute at the tip, posterior abbreviated, somewhat trigonate; legs short; *femora* woolly. Caterpillar naked; *pupa* subterranean.

Type of the genus, *Phalæna* (*Noctua*) *gothica*, Linnaeus; Stephens, *Illust. Britt. Ent. (Haustel.)* vol. ii. p. 138. One species only, found, not very rarely, in England; the *larva* subsisting upon oak, honeysuckle, &c.

SEMIOSCOPIIS, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* shortish, slender, pubescent nearly to the apex in the males, simple in the females; *palpi* two, elongate, slender, recurved, subulated, nearly parallel, the base densely clothed with rather long scales, having the terminal joint exposed, the latter very slender and acute; *maxillæ* short; head small, with a tuft between the antennæ; eyes moderate, globose; *thorax* slender, not crested; wings decumbent during repose, anterior elongate-lanceolate, pale, with dark flexuous or twisted longitudinal streaks; posterior ample, ovate-triangular, entire; *cilia* all short; body rather short, attenuated at the apex, and with a small tuft in the males, somewhat robust and obtuse in the females; legs rather short and slender.

Type of the genus, *Tinea avallanella*; Hübner, *Schmet. (Tin.)* pl. iv. fig. 27. Three species, two of which inhabit England, both of which, especially the type, are scarce.

SEMNOPIITHECUS, from the Gr. *σεμνος*, venerable, and *πῆθος*, a monkey, F. Cuv. In Zoology, a genus of animals belonging to the family *Simiada*, order *Quadrumana*, class *Mammalia*.

Generic character. Incisive teeth four in each jaw, the two middle ones of the upper jaw broader than the others; cuspid teeth long, pointed, slightly inclining outwards; in the upper jaw the second bicuspid rather longer than the first, both divided by a deep longitudinal groove, and the outer larger than the inner point; in the lower jaw the first so-called bicuspid pyramidal, single-pointed, and tall, the second similar to the second upper bicuspid, but with a small additional ridge near the base of the crown; molar teeth three on a side in either jaw, and on the crown of each four points, except the third, which has five points; head long from before backwards, compressed laterally, and rounded

SEMI-
NAL.
—
SEMNO-
PITHE-
CUS.

SEMNO-
PITHE-
CUS.

behind; face naked, flat above, and rather prominent below; nose depressed at its base, nostrils lateral, oblong, and semilunar; ears margined; body slender, limbs very long, especially the posterior; thumbs minute and near to the fingers; tail very long; rump furnished with callosities; cheek-pouches rudimental.

This genus of animals was named by Fred. Cuvier from the gravity of its manners. It occupies a place between the *Hylobates* of Illiger, which it resembles in the length of its limbs, and the *Cercopithecus*, like which it has the tail of great length. The form of the skull approximates it to the former genus, as do also the callosities on the rump. But the most striking character of the *Semnopithecus* is observed in the length of the limbs; the fore limbs are very slender, but the hinder are longer and stouter, which enable them to make astonishing leaps, and distinguishes them from all the other Monkeys of India. The thumbs are strong, and placed near the fingers, so that the motions of the hand are more perfect; the nails of all the fingers rounded, but of the thumbs flat. The form of the teeth has been already noticed. The fur is long and silky. They are all natives of India or China; are generally mild and placid whilst young, but as they advance in age become dull and morose. Three species, *S. Entellus*, *Melalophos*, and *Maurus*, have, according to Fred. Cuvier, an air-pouch communicating with the top of the windpipe, which increases the loudness of their cry. The cheek-pouches in all are very small, and only to be considered as rudimental.

S. Nemæus, F. Cuv.; *Sim. Nem.* Lin.; *Lasiopyga Nem.* Illig.; *le Douc*, Buff.; *Cochinchina Monkey*, Penn. About four feet from the muzzle to the base of the tail, the latter not quite so long. On account of the variety of colours in which it is clad it is one of the most remarkable of the whole class of Mammalia; the general colour of the head, body, and fore limbs as low as the elbows, is grey; the fore arms, rump, and tail white, as are also the sides of the face; thighs black; hind legs and upper surface of the instep ferruginous; face yellow; hands and feet black. No difference is observed between the sexes, nor between the young and adult animal. It is a native of Cochinchina, and there called *Duk*; it is rare, and of its habits nothing is known.

S. Entellus, F. Cuv.; *Sim. Entell.* Dufresne. Length from the tip of the nose to the root of the tail from fourteen to thirty inches, and of the tail from fifteen to thirty-six inches; muzzle prominent; the fur surrounding the face disposed so as to form a projecting tuft above the eyebrows and a beard about the lower jaw. General colour greyish-flaxen, interspersed with numerous black hairs on the body and limbs, and with tawny, almost approaching to orange, on the sides of the chest; tail almost entirely black; skin of the face, ears, hands, and feet black. The young animal differs remarkably in the whitish colour of its fur, tinged along the back, and especially on the loins, with reddish, becoming paler on the sides, and almost white on the belly and insides of the limbs; tail reddish-grey. A further difference is also to be observed in the slight projection of the muzzle, the broad forehead rising in the same line as the other parts of the face, the large rounded skull, and the graceful shape presented by the young animal, whilst in the old one the muzzle becomes very prominent, the forehead disappears, the skull becomes flattened, and the figure of heavier proportions, corresponding with the alteration from activity and cunning to moroseness,

and the display of force rather than address, which are generally observed in the varying ages of the whole family of Monkeys. It is a native of the East Indies, and called by the natives *Houlman*. They pay to it religious honours, and it occupies a very prominent station among the Hindu divinities. It makes its appearance in Lower Bengal about the end of the Winter; and Duvaucel states that he had great difficulty in procuring a specimen, as the Bengalese feared to destroy one, from a popular notion that the slayer of a Houlman would die in the course of a year; and so careful were they of these animals, that during his stay at Chander-nagor a guard of Brahmins were constantly employed beating tom-toms to scare away the sacred animals which were tempted to his garden for the sake of the fruit. In the Hindu mythology the Houlman is considered as a hero, alike renowned for his power, courage, and agility; he is said to have brought to Bengal the Mango, one of their most highly prized fruits, which he had stolen from the gardens of a famous giant in Ceylon; for this robbery he was condemned to the flames, and in smothering the fire he burnt his hands and face, which have since remained black.

S. Melalophos, F. Cuv.; *Sim. Melal.* Raffl. Eighteen inches in length from the muzzle to the tail, which measures thirty-two inches; its limbs of great length in proportion to the size of its trunk; face remarkably flat, and cheek-bones high; fur long and silky, of a bright fawn colour mingled with black on the head, back, and shoulders; belly and insides of the limbs nearly white; a tuft of black hairs ornaments the head from ear to ear, below which the forehead is fawn-coloured, as is also a tuft of hair, graduating into white, on each cheek; beard scanty; the face slightly wrinkled, and of a bluish colour, as are also the ears; belly nearly bare, and insides of the limbs thinly furred; soles of the hands and feet and the large callosities blackish; eyes brown. It is found in the woods of Sumatra, and called by the natives *Simpai*.

S. Maurus, Horsf.; *Sim. Maur.* Schreb. Length of the head and body two feet three inches, and of the tail two feet four inches; when standing on all fours about twelve or thirteen inches high; the fur is very long, delicate, soft, and silky, directed backwards and slightly outwards on the sides of the head so as to conceal the ears; upon the forehead it rises with a gradual slope, but towards the crown is suddenly inclined backwards so as to form a kind of crest; on the back and limbs it is close and smooth, but on the sides of the body between the shoulders is very long; on the breast and belly it is short and straggling; the general colour of the fur is black, but on the top of the head, on the arms and legs, tipped with grey; insides of the thighs and lower part of the belly white, and from thence a white line extends to the throat; arm-pits and breast light grey; face, ears, hands, and feet black; upon the lips are some short whitish hairs mingled with a few longer black ones; upon the cheeks are a few black hairs; the beard scanty and black. When first born, this species is of a reddish-brown colour, which gradually changes in age; a greyish tinge first appearing on the forehead, hands, and tip of the tail, thence extends to the neck, shoulders, and sides, gradually become darker till it acquires the black coat of the adult. This species is found both at Sumatra and Java; in the former island it is called by the natives *Lotong*, and in the latter *Budeng* or *Lutung Itam*. They are found in the forests living

SEMNO-
PITHE-
CUS.

SEMNO-
PITHE-
CUS.

in large troops of more than fifty individuals, feeding on wild fruits of every description, and when approached utter loud screams. They are very morose, and when confined are rarely if ever tamed. They are often hunted for their fur, which is used for horse equipage and military ornament.

S. Pyrrhus, Horsf.; *Cercopithecus Auratus*, Geoffr. In size and general form closely resembling the last species, but distinguished from it by colour, which is of a reddish-brown glossed with golden on the head, back, extremities, and tail, varying in intensity on the sides and forehead; under parts and insides of limbs pale golden-yellow. It is found in Java, and called by the natives *Lutung* or *Lutung Mera*, who take great care of it when caught, on account of its beauty.

S. Cristatus, Cuv.; *S. Cristata*, Raffl. About two feet long, with the tail two feet and a half; the general colour is dark grey, the hairs being generally black with white points or iron-grey; all the upper parts are deeper, and the under paler coloured; the hair diverges around the face, is long, and upon the top of the head forms a kind of tuft; ears large and rounded, naked and black; tail very slender. This species is found in the forests near Bencoolen, and known to the natives as the *Chingkau*. Fred. Cuvier thinks it the same as the *S. Maurus*.

S. Comatus, Desm.; *Sim. Fascicularis*, Raffl. Length from the tip of the nose to the root of the tail twenty inches, and of the tail rather more; upper part of the head and the back reddish-brown; sides of the body and tail grey, becoming lighter on the lower part of the face and body, and on the insides of the limbs; face brown, covered with short light grey hairs, and the cheeks furnished with similar coloured tufts, but shorter than the beard; eyelids, especially the upper, white; cheeks pouched. It is found in the forests of Sumatra and of the Malay Islands, and called by the Malays *Kra*, from its cry; it is not easily tamed.

S. Leucoprymnus, Desm.; *Cercopithecus? Leucopr.* Otho. Length from the tip of the nose to the root of the tail twenty inches, and of the incomplete tail, as described by Otho, eighteen inches and a half; the head measures three inches and a quarter long; the fore limbs, including the hand, eleven and a half inches; the lower limbs, including the feet, sixteen inches and three-quarters; fur very fine, close, and long; the naked face is blackish, and only about the eyes allows a tinge of reddish to show through; upon the upper lip are a few light grey hairs; from the nose a narrow streak of short black hair passes up between the eyes to the forehead; eyebrows connected, and forming a straight transverse pitch-black line, which separates the face from the forehead; the whole of the head as low as the ears, the neck, and to the top of the shoulders dusky brown, forming a definite line, and separating it from the back, which together with the sides and legs are black, whilst the breast, belly, and insides of the limbs are blackish-brown; under lip, throat, and back part of the cheeks greyish-white, which, extending on the sides of the neck and towards the chest, is gradually lost in the darker colour. The principal character of this species, however, consists in a large, triangular, well-defined patch of greyish-white, which spreads over the loins and rump, commencing in a point about four inches above the root of the tail, and passing on to the hips, is gradually lost upon the thighs, the black fur of which has a tinge of grey as low as the knees; the tail is also of the same

light colour tinged with yellow; the palms and soles black. This species Otho considers as probably belonging to the *Semnopithecus*; the specimen he described was a female not of full age, of which unfortunately part of the tail was deficient; he gives no account of its manners, and is ignorant of what country it is a native, but presumes the East Indies.

S. Larvata, Cuv.; *Sim. Nasica*, Daub.; *Proboscis Monkey*, Penn. Length from the tip of the nose to the root of the tail twenty-three and a half inches, of the tail two feet and two inches; of the fore limbs twenty, and of the hind twenty-two inches. This species is remarkably characterised by the great size of its nose, which is four inches in length, and has the nostrils opening on the under surface of its tip. Geoffroy has placed it, on account of this peculiarity, in a distinct genus, which he calls *Nasalis*, but Cuvier still retains it among the *Semnopithecus*. The forehead and top of the head are covered with deep ferruginous fur, which becomes lighter on the sides of the face, and forms in front a kind of peaked beard; the whole body is also ferruginous, but varying in shade, the back being of a deeper hue and spotted with yellow, the chest and belly tinged with grey, and the former marked across the nipples with a lighter streak; an oblique whitish line crosses the shoulders, and below it the appearance is bright ferruginous; lower part of the arms and the legs greyish-yellow; the loins and tail whitish. Wurmb, who first noticed this species, says that they live in large troops among the forests of Borneo, that they assemble morning and evening by the side of streams, and dart with great agility from tree to tree at a distance of fifteen or twenty feet. Their cry is very deep and distinct, and resembles the word *Kahau*, hence they are called by the colonists *Kabau*, but the native name is *Bantanjan*.

See F. Cuvier and Geoffroy, *Histoire Naturelle des Mammifères*; Horsfield, *Zoological Illustrations of Java*; Audebert, *Histoire Naturelle des Singes*; Otho, in *Nova Acta Physico Medica Acad. Cæs. Leop. Car. Naturæ Curiosorum*, vol. xii.; Raffles, in *Linnean Transactions*, vol. xiii.

SEMIOTUS, in Zoology, a genus of Hymenopterous insects.

Generic character. Antennæ twelve-jointed, of the male nearly filiform, and half the length of the body; of the female more or less clavate, the basal joint slender, second short, fifth and following to the ninth linear and decreasing in length; the club in the male somewhat linear, of the female elongate-ovate; *prothorax* extremely short; *thorax* ovate, deeply punctured; *scutellum* with its apex acuminate; body somewhat pubescent; wings four, moderate; *stigma* small or nearly obsolete; legs slender; *tibiæ* simple.

Type of the genus, *S. mundus*; Walker, *Ent. Mag.* vol. ii. p. 291. Nine indigenous species.

SEMPERVIVUM, in Botany, a genus of the class *Dodecandria*, order *Dodecagynia*, natural order *Crasulaceæ*. *Generic character*: calyx nine to twelve-parted; corolla, petals eight to twelve; stamens twice the number of the petals; capsules usually twelve, many-seeded.

There are thirty-one species of this genus. *S. tectorum* is a native of England; it grows on the tiles of old buildings, and is well known by the name *Houseleek*. It is very remarkable that twenty species are confined exclusively to the Canary Islands and Madeira, none of which have yet been observed in the parts of Africa

PITHE-
CUSSEMPER-
VIVUM.

SEMPER-VIVUM. adjacent; it is difficult to comprehend how they become thus located, as these islands are volcanic, and consequently of comparatively recent formation.

SENATE.

SEMPITERNE, } Fr. *sempiternel*; It. *sempiternale*, *sempiterno*; Sp. *sempiterno*; Lat. *sempiternus*, *semper*, and *æternus*. See **ETERNAL**.

Eternal, or without either beginning or end; everlasting.

That is the god, whose magestee
All other thynges shall governe,
And his beinge is *sempiternus*.

Gower. *Conf. Am.* book vii. p. 203.

This silent night, when all things lie in lap of sweet repose,
Ye only wake, the pourses of sleepe your eyes do neuer close,
To shew the *sempiternitie* to which their names ye raise
On wings of your immortal verse, that truly merit praise.

Mirroure for Magistrates, p. 557.

To the end that they may carry the communication of the divine goodness and benignity as far as is possible [they] are contented to suppose the world to be *sempiternal* or eternal, *à parte post*, or to be as ancient as the sacred Scriptures inform us, but will carry up the creation of the world to an immense antiquity, long before six thousand years.

Hale. *Origination of Mankind*, fol. 91.

If it [the world] had been created a million of years sooner, yet the future eternity or *sempiternity* of the world being of all hands admitted, though the eternity *à parte ante* be denied, there will be a future infinity for the emanation of the divine goodness and beneficence to his creatures.

Id. *Ib.* ch. iii. sec. 1. p. 94.

Upon a supposition of a future *sempiternity* this would produce the same difficulty, without such interposition of the divine wisdom and providence.

Id. *Ib.* ch. x. sec. 2. p. 227.

If that one man was *sempiternal*, why
Did he, since independent, ever die?

Blackmore. *Creation*.

SEMSTER. See **SEAM**.

SENACIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Pittosporææ*. Generic character: calyx small, five-toothed; corolla, petals five; capsule spherical, pedunculate, two-valved, four-seeded; seeds angular.

One species, *S. undulata*, native of the Island of Bourbon.

SENARY, Lat. *senarius*, six. See the Quotation.

The *senary* or the number six has a double reference, the one to this particular day's work, the other to the whole creation.

More. *Defence of Cabbala*, ch. i. p. 84.

SENATE, } Fr. *senat*; It. *senato*; Sp. *senado*; Lat. *senatus*, so called, *quia a senioribus constabat*, because it consisted of the senior or older men, and thus constituted a council of the ancients. See the Quotation from North.

Fram þe *cenatour* of Rome hii come, and þys seýde;
Lucie, þe *cenatour* of Rome, to Arture þe kyng.

R. Gloucester, p. 193.

For which this emperour hath sent anon
His *senatour*, with real ordinance,
And other lordes, God wote, many on,
On Surriens to taken high vengeance.

Chaucer. *The Man of Lawes Tale*, v. 5380.

And netheles in this mattere
It hapned that ilke tyme so,
This lorde, with whome she shulde go,
Of Rome was the *senatour*.

Gower. *Conf. Am.* book ii. p. 54.

After this he made a hundred counsellors of the best and honestest men of the city, which he called patricians; and the whole company of them together he called *senatus*, as one would say, the council of the ancients.

North. *Plutarch. Lives. Romulus*, p. 21.

You are my second, sweet, to every cup,
I add unto the *senate* a new honour,
And to the sons of Mars a donative.

Beaumont and Fletcher. *The Tragedy of Valentinian*, act v. sc. 7.

And so he created a hundred *senatours*; either because that number seemed great ynough, or for that there were no more but one hundred that were of worth to bee elected counsellors or (wise) fathers.

Holland. *Livie*, book i. p. 7.

From which step his courage and wisdom raised him by degrees to the sovereignty of Lucca, the *senatorship* of Rome, the special favour of the emperor, and a neere hope (only by death prevented) of subduing Florence.

Carew. *Survey of Cornwall*, fol. 120.

The right of naming *senators* belonged at first to the kings; afterwards the consuls chose, and referred them to the people for their approbation; but, at last, the censors engrossed the whole privilege of conferring this honour.

Kennett. *Romæ Antiquæ Notitia*, part ii. book iii. ch. ii. p. 101.

The mother was cheerful, the father *senatorially* grave.

Drummond. *Travels*, p. 17. (Letter dated 1744.)

I remember, in a conversation I once had with my ever dear friend Garrick, who was the first of actors, because he was the most acute observer of nature I ever knew, I asked him, how it happened that, whenever a senate appeared on the stage, the audience seemed always disposed to laughter? He said the reason was plain; the audience was well acquainted with the faces of most of the *senators*.

Burke. *On a Regicide Peace*. Letter 4.

If the most unbounded libertinism of sentiment and practice be a qualification for a *senator*, then let him be educated in an English university, as it is now constituted.

Knox. *Works*, vol. iv. p. 165. *Liberal Education*, sec. 43.

Though his [Titian] style is not so pure as that of many other of the Italian schools, yet there is a sort of *senatorial* dignity about him, which, however awkward in his imitators, seems to become him exceedingly.

Reynolds. *Works*, vol. i. p. 100. Discourse 4.

This year therefore was particularly fortunate to him, as it brought an increase, not only of issue, but of dignity into his family, by raising it from the equestrian to the *senatorian* rank.

Middleton. *Life of Cicero*, vol. i. sec. 1. p. 68.

SEND, } D. *seynden*, *senden*; Ger. *senden*—*sive*,
SE'NDER. } *sænda*; A. S. *sendan*; *jacere*, *jaculari*, *emittere*, *mittere*, *facere ut eat*, to cast or throw. In Luke xxi. 1. They *castiden* her gifts, is in A. S. *sendan*. In Mark xii. 44. Alle *kesten* of that thing, is in A. S. *senden*. And in the old English version quoted by Mr. Tooke, Mark xii. 41. the word is *cast*, (to cast money,) and in the three remaining verses it is *sent*; she *sente* twey minutis; this pore widewe *sente*; all *senten*: *send* and *cast* being thus used as equivalent terms. And so *send* continues in vulgar speech to be still used. And see the Quotation from Spenser.

To throw or cast, to shoot; to cause to go or move; to convey by agency of another; to confer.

It is used with correspondent English prepositions as equivalent to the compounds of the Latin *mittere*; to emit or send forth, to immit, to dismiss, to transmit, &c.

þis erl bi grete lordes to þis kyng ofte *sende*,
þat he schulde for Gode's loue ys wylle som del amende.

R. Gloucester, p. 54.

Oure lord, among oþer þinges, hym *sende* a fair *sonde*,
þat he hadde an holy dogter at Colchestre in þis londe.

Id. p. 82.

Kyng Malcolm hurde telle her of in Scotlonde,
To hym to Gloucestre sone he *sende* hys *sonde*.

Id. p. 391.

He *sent* for alle þe kynges, fro Berwik vnto Kent,
& þei with fulle gode wille alle vnto him went.

R. Brunne, p. 19.

After þan þow *seyndest* hem somer, þat is hem sovereyn joye
And blisse to alle been. boþe wilde and tame,

Piers Plouhman. *Vision*, p. 258.

Piers Plouhman. *Vision*, p. 128.

In sanguin and in perse he clad was alle
Lined with taffata, and with *sendalle*.

Chaucer. *Prologue to the Canterbury Tales*, v. 441.

The curteins were of *sendall* thyn.

Gower. *Conf. Am.* book i.

SENEBIERA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferae*, Generic character: seed-vessel a kidney-shaped pouch, compressed, corrugated, cells valveless, one-seeded.

Four species, natives of both hemispheres.

SENECIO, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*, natural order *Compositae*. Generic character: calyx cylindrical, cup-shaped, scaly at the base; receptacle naked; down simple.

An extensive genus, containing more than one hundred and fifty species, natives of both hemispheres; ten are natives of England; the most remarkable is *Senecio vulgaris*, the common Groundsel. In the axillæ of the leaves there are fine downy hairs; these, when examined by a powerful microscope, are found to be articulated, and in the articulations a circulation of sap, similar to that in the Chara, has been discovered.

S E N E G A M B I A.

Name.

French
claims.

SENEGAMBIA, a convenient, though hardly legitimate compound, was invented probably by the French as a name for the tract of country comprehended between the Sahra, or Great Desert North of the Senegal, and the Tooth Coast, in the parallel of 5° S., or, more definitively, from Cabo Branco, (White Cape,) in 20° 5' N. and 17° 6' 36" W., and Cabo das Palmas, Cape Palms,) in 4° 23' N. and 7° 46' 12" W., to the whole of which, the French lay a sort of claim, on the ground of prior occupation; for they affirm that traders from Dieppe and Rouen had formed establishments all along the coast from Gorée to Cormantin (Kormanti) between A. D. 1365* and 1392, at which latter period

* "Avant l'an 1364 les Normands ... découvrirent la Guinée," says Golberry; (i. 36.) but, if so, how came all knowledge of their discoveries to have been lost before the commencement of the following century? Neither of the above authors produces any vouchers; M. Malte-Brun says not one word of the Dieppe-men's discoveries on the coast of Africa: "Les Portugais ouvrirent aux nations d'Europe la carrière des découvertes," says M. Walcknaer, (*Recherches*, p. 30,) and the names Bojador, Blanco, and Sierra Leone show to what nation we are indebted for a knowledge of that coast. M. Estancelin (*Voyages et Découvertes des Normands*, p. 7, et seq.) has lately revived these dormant claims, but without

that branch of commerce was entirely abandoned. (Labat, i. 6—11. Durand, *Voy. au Sénégal*, i. p. 7. Golberry, i. 36.) The term Senegambia may, however, be with more propriety restricted within narrower limits; and as "the Guinea Coast" has, in a former volume of this Work, (*Ency. Met.* xxiii. p. 16.) been supposed to begin at Cape Mount, (Cabo do Monte,) in 6° 44' 12" N.,

producing any evidence except that of Villault de Bellefond, which is in effect the source whence Labat (*Relation*, i. 7.) derived almost all that he says on the subject; and subsequent writers have done nothing more than copy Labat. The original documents relative to the company of merchants who made these discoveries, were destroyed in the bombardment of Dieppe in 1694, (Labat, i. 8. Estancelin, p. 3.) and by a singular fatality the MSS. containing extracts from them, have also disappeared; but the archives of Rouen have never been searched: some of the early voyagers indeed, as Braun, (*De Bry, Navigationes*, &c. i. App. p. 40.) believed the French to have visited La Mina at a very early period. A writer in the *Bulletin de la Société de Géographie*, (xviii. 176, 226.) has lately endeavoured to justify their claims by a reference to an ancient Map on wood in the Royal Library at Paris, and to the manuscript Charts of Uso di mare at Genoa, both which record a voyage to the Rio do Oro in 1346; but these Charts only refer to voyages made by the Catalans, and say nothing respecting the Normans and Bretons.

SENE-
GAMBIA.

Climate.

River
Gambia.

for it is nearly in the direction of the main stream; and the long and narrow neck of sand which now separates the river from the sea may very possibly have been thrown up by the opposite agencies of the heavy surf from the ocean and the current of the river which constantly brings down* a vast quantity of alluvial matter during its inundations. The rise of the stream occasioned by the tropical rains begins with them about or soon after the Summer solstice; and such is the body of water then brought from the interior, that it is fresh even to the bar of the river's mouth. By the middle of August the inundation has reached its greatest height, (Adanson, p. 101.) and the whole country near its banks is at that time under water. By the end of September, about the time of the Autumnal equinox, the dry, cool, and healthy season commences; and the river begins to fall early in October, (Adanson, p. 123.) being lowest about the Winter solstice. Its depth for the first 25 miles varies from six to eight fathoms, and its width from one mile to 600 yards. The rate of the current in the season of the flood, from June to December, is three or four miles an hour; in the dry season, during the other half year, it is only about a mile and a half. From January to April winds from the North-East or East North-East prevail; in the other months they are generally from the North-West. Hurricanes are scarcely known, and storms rare. The entrance of the Senegal, like that of almost every African river, is obstructed by a very dangerous bar, which is continually changing its position in an interval measuring about nine miles from North to South. The North point of the entrance is in $15^{\circ} 55' 18''$ N. and $16^{\circ} 32' 42''$ W. Vessels drawing only 10 or 11 feet of water can pass it. In the dry season its depth is reduced to 12 or 13 feet of water. (Golberry, i. 143.) The opposite actions of the rapid current one way, and of the tide wave from the ocean the other, occasion so tremendous a surf as can never be passed without hazard except when there is a perfect calm, a very rare occurrence. From January to June, before the river begins to rise, is the best season for crossing the bar; on which, however, ships occasionally, and boats continually, are lost. The surf, as elsewhere, comes in three successive waves, the last of which rises to a perpendicular height of 11 or 12 feet and then breaks, so that, without very skilful management, the boat must either be sunk or swept away by the retreating wave. (Adanson, p. 98.)

"The land," says De Barros, (Asia, i. iii. 8. tom. i. p. 213.) "which is called by the natives by the common name of Jalof, lies between two notable rivers, the Çanagà and Gambea." "The latter," he adds, (p. 215.) "as far as the gold-mart to which our ships go, which may be from the bar, by reason of its windings, 180 leagues, and in a straight line, 80, is called by the negroes of the land Gambu, and by us Gámbea;† the

Hence M. Dard (*Grammaire Wolofe*) expresses by *dhy* the English *j*, and by *thy* our *ch*. This system has been followed in some modern Maps. When the guttural is strongly sounded, as is sometimes the case, these letters, *j* and *ch*, are expressed by *gh* or *ghi*, as is generally done by M. Jomard; but when the guttural is scarcely heard, *di* or *ti* become their representatives; hence we have Dially-bá for Jallibá or D'hyalliba.

* M. Golberry, however, (*Voy. i. 190.*) condemns this supposition as groundless, but the reasons he alleges are of small weight.

† Had Mr. Green, the judicious compiler of Astley's *Collection of Voyages*, been acquainted with De Barros's work, which he quotes at secondhand, he would probably have preferred Gambea to Gamba, which he took from Jobson (ii. 181.) and Ca da Mosto.

greater part of which runs in a winding course, with many turns, principally from the mart downwards, till it enters the sea in $13\frac{1}{2}^{\circ}$ to the South-East of the Cape which we call Green. (Verde.) It bears a greater body of water than the Çanagà, and much deeper, because some very capital, strange (*barbaros*) rivers which take their rise in the interior of the country called Madinga enter into it, and its principal fountains are those of the river which Ptolemy calls Niguer, and the Lybian lake, (a Lagoa Libya.)" As the position given by Ptolemy (*Geogr. iv. 6. p. 109.*) to the mouths of the Daras, (15° N. 10° E.) the Arsinarian Promontory, (13° N. 8° E.) and the mouths of the Trachir, (11° N. $9^{\circ} 30'$ E.) agreed so nearly with their own observations respecting the Sanagá, (in $15^{\circ} 30'$ N.) Gámbea, (in $13^{\circ} 30'$ N.) and Cape Verde,* (in $14^{\circ} 20'$ N.) the Portuguese discoverers had no reason to doubt of the identity of those places: and as that geographer says the Nigir (*ó Niyep*) forms the Lake Nigrites, (or the lake of the Nigir,) in 18° N. and 15° E., and sends out a branch to the South to the river Daras in two positions, viz. 17° N. 26° E. and 17° N. 24° E. (or according to the Latin version, 17° N. 21° E. and $13^{\circ} 30'$ N. 21° E.) the Portuguese naturally supposed that the Sangà and Gámbea were the two branches of the Nigir mentioned by him: though he does not name the Stachir as one of them. Hence arose the error respecting the course of the Nigir, and its identity with the Senegal and Gambia, which, till the middle of the last century, prevailed almost universally, though Delisle, and after him D'Anville, had more correct notions on those points. The head of the Gambia, according to M. Mollien,† (ii. 70. 302.) is at a very small distance from that of the Rio Grande. Its course is at first Easterly, but it soon makes a sweep to the North and West, and passes with many wide curves in nearly a North-Western line to the sea, which it enters by Bathurst Island, in $13^{\circ} 28'$ N. and $16^{\circ} 35' 18''$ W. (Owen, *Coast of Africa*, No. 4.) Descending from the same chain of mountains as the Senegal, the upper part of its course is, in like manner, obstructed by falls and rapids, and it is not navigable higher than Barrakunda, in $13^{\circ} 28'$ N. and $13^{\circ} 47'$ W., where the first ledge of rock occurs. (Astley, *Voy. ii. 163—165.*) Below that point it descends by a more gentle declivity into the alluvial plain, and brings down a larger body of water than the Senegal. Its mouth is not obstructed by any considerable bar; its width diminishes more gradually, and its depth is generally greater than that of its sister stream, varying from nine to three fathoms at Fata-tenda, the highest English factory, a few miles West of Barrakunda, where the tide rises there three or four feet, and the river is as wide as the Thames at London-bridge. (Astley, ii. 170.)

If De Barros was rightly informed, (*loc. cit.* and I. iii. 12, tom. i. p. 255.) the whole of Senegambia was in his time "the land of the *Jalofs*," to the East of which was

Native
nations.

* "O Cabo Verde, the Green Cape, Ptolemy's *Promontorium Asinarium*, is placed by him," says De Barros, (i. 217.) "in $10^{\circ} 40'$ of latitude, and has been verified by us as being in $14^{\circ} 20'$;" he therefore places the mouth of the Gambia $50'$ S. E. of Cape Verde. That Cape is by Captain Owen's *Observations* (No. 4.) in $14^{\circ} 44' 30''$ N., and the entrance of the Gambia in $13^{\circ} 28'$, so that the early navigators were only $26'$ in error.

† It is worthy of remark that M. Jomard, in his sketch of the course of these rivers, dated 1828, (*Bulletin de la Soc. de Géogr. x. 144.*) carries the Gambia no further than $13^{\circ} 30'$ W., and adds, "*Cours inconnu.*" Is there reason, then, to question the accuracy of Mollien's statements?

SENE-
GAMBIA.

"the land called Mandingá;" (*Ibid.* i. 216.) but in the latter half of the XVIIIth Century the territory between the two rivers was already subdivided into at least three separate States, and the *Fúlas* were established in the Eastern part of it, as well as among the *Mandingás* beyond the *Falémé*, which has a Northerly course, and joins the Senegal in 14° 45' N. and 12° 10' W. Of these three powerful nations, the *Jalofs* or *Wolofs*, *Fúlas* and *Mandingás*, who were all known to the earliest navigators on these coasts, the two latter seem to have encroached on the former subsequently to their first intercourse with Europeans; and it is by no means improbable that the slave-trade, so soon encouraged by the latter, accelerated that wide subdivision into petty States, mutually jealous of each other, which has now for upwards of two centuries been the bane of this highly favoured and productive country. Almost all these minor States, however, are portions of the three distinct and widely-extended nations mentioned above: 1. the *Fúlas*; 2. *Mandingás*; and 3. *Wolofs*.

oulah,
Pouls, or
Peuls.

The *Fúlas*, the most Eastern and widely extended of the three, were least known to the Portuguese, and are therefore only incidentally mentioned by De Barros (i. p. 221—257) as the *Fullos*, whose King "was then a fire-brand in those parts,* and a scourge of that Pagan people, rising up from the South in a territory called *Futa* (*em huma comarca chamada Futa*) with so great a number of people as dried up a river when they came to it." (*Asia*, I. iii. 12. tom. i. p. 258.) By the Arabs they are called *Fellátah*, *Fellátíyah*, *Fulán*, or *Fulání*.† The proper country of those near the Western coast seems to be *Fuladú*, or rather *Fúla-dughú*,‡ a tract to the East of the *Bá-fing*, (Senegal,) and lying between it and the *Bá-lí*. They are called *Peule* by the French, but that term, according to M. Dard, (*Gram. Wolofe*, 148.) is properly the name of the first of their three castes, the warriors, or *Púls*; the second is that of the husbandmen or *Fulláhs*; and the third consists of the missionaries or *Tukírér*. It may, however, be remarked that the two last words are the Arabic *Felláh*, "a labourer," and a slight alteration of *Takárír*,§ the plural of *Tekrúrí*, "a negro pilgrim." (*Burckhardt*, *Nubia*, p. 44, *Idrisí par Jaubert*, p. 10, 11.) They are also divided into the *black* and *red*; the former, nearly resembling the *Wolofs*, are doubtless a mixed race, (*Mollien*, i. 275.) the latter, copper-coloured, apparently allied to the *Berbers* or *Arabs*. The *red Pullos* (now nearly extinct) are zealous *Muselmáns*, and less robust and courageous than their negro brethren. The features of even the latter have not the genuine negro cast, and their hair is less curly and woolly. They occupy, as masters, if not as sole possessors, a large extent of country between 9° and 15° N., and from 9° to 12° W.,

comprehending the greater part of the highlands, which give birth to all the great rivers of Western Africa. *Tímbó*, in 10° N. and 11° W., the Capital of *Futa Jallo*, is their principal town. *Gadu*, South of *Fula-dughú*; *Bambúk*, (*Bambughu*), a conquered territory; *Konkodú*, (*Kongodughu*), *Wáradá*, and *Sátadú*, (*Sata-dughu*), South of *Bambúk*, and lying between the *Bá-fing* and the *Falémé*; *Bundú* on the West side of that river; *Bruko* or *Birikó*, South-East of *Bundú*; *Wásulo*, where they are Pagans; *Sangará*, whence the *Jálibá* rises; and *Fúta Toro*, a colony on the South side of the Senegal, between 12° and 15° W. longitude, are the principal tracts of country inhabited by this warlike and fanatical race. Within the last century, if not earlier, they extended their conquests into the very heart of the African Peninsula; and *Bello*,* the Sultán of *Sákatú*, Chief of the *Fellátahs* in *Hausá*, was known and acknowledged as a brother by the *Fúlas* of *Fúta Toro* and *Bundu*. They are for the most part a pastoral people, less civilized than the *Mandingás*. Those of *Toro*, called *Tórodó*, are of mixed blood, having expelled their red brethren; they have just the same simplicity, kind-heartedness, and uprightness as the genuine *Pullos* in *Bundu*. Their secret society, called *Al-muserí*, resembles the *Paráh* of the *Susús*. (*Mollien*, i. 281.)

SENE-
GAMBIA.

The *Mandingás* (*Geogr. Journal*, vi. 112.) seem to *Mundingo* have been anciently the most widely extended of any of or *Man-*
the negro nations; at present they are dispersed over a vast *ding*. tract of country to the South of the *Fúlahs* or *Fellátahs*. Like the latter, they seem to be rather the descendants of a mixed race than genuine negroes. A complexion somewhat lighter, more regular features, a more oval face, and a taller, slenderer figure distinguish them from the other negro races. (*Golberry*, *Voy.* ii. 167.) They are an agricultural and commercial rather than a pastoral people; simple, open, good-humoured, cheerful, obliging, and hospitable. Though strict *Muselmáns*, they are not intolerant. Docile and fond of learning, they establish schools, and are successful propagators of their faith wherever they settle. Their Chiefs are generally distinguished by their personal appearance and knowledge; and the tenderness with which *Mungo Park*, when a friendless wanderer, was fostered by *Karfa Taura*, bears honourable testimony to the benevolence and generosity of the *Mandingo* character. (*Rennell*; *Park*, *Trav.* p. xcii.) It may also be added that the knowledge and intelligence of *Abú Bekr* of *Tombuktú*, (*Geogr. Journal*, vi. 100.) who was carried away in slavery while yet a child, afford a no less striking evidence of their mental powers and the care with which the children of their Chiefs are educated. Their original country seems to have been the mountainous region which gives birth to the Senegal, Gambia, and Niger,

* *Temalá*, the *Fúla* King, thus described by the Portuguese historian, is strangely mistaken by Professor Charles Ritter (*Erdkunde*, i. p. 348.) as the victim, not the cause of the barbarities exercised by his armies.

† *Fulání* is a derivative from the Arabic *Fulán*, "such a one," "somebody." *Fellátah* or *Fellátí* is their proper Arabic denomination. They call themselves *Pullo* or *Pulla*. (*Geograph. Journal*, vi. 111.)

‡ *Fúla-land* in the *Mandingá* tongue.

§ *Tekáyirneh*, the plural of *Tekrúrí*, (*i. e.* a native of *Tekrúr*), according to *Burckhardt*, (*loc. cit.*) seems to have been irregularly formed from *Tekrúriyín*, the regular plural of *Tekrúrí*. *Fúla* is not derived from the Arabic word *felláh*, and is sometimes written *Fálf* or *Fólf*.

* The historical memoranda given by *Bello* to Captain Clapperton, (*Travels*, p. 158.) though not, perhaps, entirely to be trusted, afford some data which may serve to connect the accounts of the old Arabian geographers with the reports of modern travellers. Thus we find that *Tekrúr* comprehends the country between *Nubia* and *Bornú*. To the West of *Bornú* is *Hausá*, the Western division of which is *Ghúrumá*, mentioned by Mr. Bowdich and *Abú Bekr* as bordering on *Hausá*. Next to it is *Móshí*, (*Moo-sheer* in the printed text, *y* having been written like *r*), the *Móse* of De Barros, (*Asia*, i. p. 259.) *Móse* or *Mónsí* of *Abú Bekr*. (*Geogr. Journal*, vi. 110.) To the North-West of which is *Málf*, (the *Melli* of *Leo Africanus*), comprehending, among other Provinces, *Bambarah*. *Sanghí*, lying on the North of *Mósf*, is probably *Songo*, "one of the most populous of the *Mandinga* cities" in the time of De Barros.

SENE-
GAMBIA.

now in possession of the Fúlas; and it is probably the great territory called by the Arabs Málí.* Mandi Mansa (the King of Mandí?) mentioned by De Barros, (*Asia*, i. 257.) may have taken his title from Mandí, whence the Mandingás derive their name. The highlands between the Bá-bíli and Bá-li called Mandingá or Manding, to the South-West of Bámbara, may be considered as a part of the original country of this race, (Ritter, *Erdkunde*, i. 353.) where they are occupied as herdsmen and cultivators of the soil; but different branches of the nation extend to the borders of Ashantí one way, and to the mouth of the Gambia the other; Bámbara itself being a Mandingá State, its language approaching much more nearly to the true Mandingá than Mungo Park supposed, and the Súsús, to the East of Sierra Leone, are probably a branch from the same stock. Their language seems to have a remote resemblance to the Mándingá. (H. Kilham, *Mandingo Lessons*. Winterbottom, *Sierra Leone*, i. 352.) The Mandingás are the greatest traders in all Negroland; individually, or in caravans, they are continually traversing the whole of central Africa from the Western Ocean to the Red Sea; and as they are very devout,† many find their way to Mecca. Their Government is, for the most part, patriarchal, a form to which the doctrine of the Korán easily adapts itself; and, as in the Peninsula of Arabia, their Sovereigns content themselves with the humble title of Imám‡ or "Leader," their principal officers being styled Alkáid, "Commander," or Alkáidí, "Judge," which offices seem to be hereditary. The heads of families are consulted on all weighty matters, and meet upon a stage called Bentang, from the tree (*bombax*) under the shade of which it is placed. All causes are determined by the customs of their forefathers, or by Al-shar'ah,§ i.e. the Law of the Prophet. Domestic slaves (i.e. those born in their house, and therefore Muselmáns) can neither be sold nor put to death by their masters. A rigid abstinence from the use of intoxicating liquors, as well as an abhorrence of the idolatry and savage rites by which it is generally accompanied in Africa, and their knowledge, for many of the

* This name, pronounced Málí by the Barbaresque Arabs, is the Melli of Leo Africanus. It is placed on the West of Sanghi (Songo?) by the Sultán Belló, (Denham, p. 166.) who says, that "it embraces the Province of Bambarah, contains a gold mine, (Bambúk,) and has a harbour for ships sent by Christian Sovereigns." In a fragment appended to a copy of Makrizí's *Khitat wa-l-áthár*, in the Public Library at Leyden, (Hamaker, *Catal.* p. 196, 203.) it is said that Tekrúr was midway between Kásem, of which Bornú is the Capital, and Málí, so that Málí is thrown far to the Westward. Ghánah, says the same writer, (who lived in the XVth Century) was first conquered by the muffled (*mulath-themín*) Berbers, then by the Súsú people, and lastly by the people of Málí, whose history he had written in the book entitled *Dureru-l-ukúdi-lfaridah*. Hausá, and Mandí, the city whence the Mandingás receive their name, both belong to Málí, according to Abú Bekr of Tombuktú, (*Geogr. Journ.* vi. 112.) the inhabitants of which are called Málawá or Málbá, and thence *Malays*, by Des Marchais, Snelgrave, and Smith. (Astley, *Voy.* ii. 498. iii. 54.) Mr. Bowdich mistook the name of the people for that of the country, (*Ashantee*, p. 196.) but Mr. Hutchinson, who, had he lived, would have added much to our knowledge of Africa, understood that Malla" (Málé) is "Mallowa."

† Several instances have lately come to light of Mandingá slaves in the West Indies who had written from memory large portions of the Korán, and Abú Bekr, mentioned above, could find out at once almost the place of any text in it.

‡ Corrupted into Alimámí or Almámí by the negroes.

§ Al-shar'ah or Shar'ah, "the path," is the technical term for the Law, not "a commentary," as Mr. Park (*Trav.* p. 21.) supposed.

Mandingás have a considerable acquaintance with Arabic literature, give them such a superiority over most of their neighbours, as has greatly assisted them in the propagation of their faith; but the austerity of some parts of Mohammed's doctrine, its exclusiveness, and law of retaliation, have, in too many instances, engrafted a want of charity as well as hypocrisy and fanaticism on the original simplicity and benevolence of the negro. If this, as appears to be the case, is more frequently found among the Fullas than the Mandingás, and the latter prove on further inquiry to have a less admixture of foreign blood than the former, the result will give some degree of probability to the traditions recorded by Mollien, (i. 273.) which bring the Fullas from the Land of Dates, (Biládu-l-jeríd,) to the South of Atlas. The Mandingá States appear to be as follows: Kasón and Kárta to the North of the Senegal; Bambúk, between that river and the Gambia; Ulli or Wulli, N'Yáni, Badibú, Gikadú, and Barra, on the North side; Kombo, Fonyi, Jéréja, Kyan or Kén, Jagra, N'Yámina, Erópina, Jemaró, Tumaní, and Kantór on the South side of that river. In the interior, the Mandingás occupy the Bámbaraná or county of the Bámbaras,* Másiná between Bambará and Tumbuktú, North of the Jálíbá; Sata-dughú and Kongo or Konko-dughú, (Hill-land,) South of Bambúk; Dentíliya, Wáradá, and Gadu between those countries, and Jallónké-dughú, comprehending Baliyá, Firiya, Sangará, Sulimá, Kúrankó, and Limbá, a wide tract of country, the name of which signifies in the Mandingá tongue "strong-drink-man's land." (Laing, *Trav.* p. 402.) Kong, the inhabitants of which are called Kong-olu, i.e. mountain-people, (H. Kilham's *African Lessons*, p. 17, 32.) about eighteen days' journey nearly North-West of Kumási, capital of Ashantí, and Ghónah, only ten days distant from that place, are Mandingá States. These seem to be the South-Eastern limits of this people; for in Ghambaghah, (or Ghambarah,) nine or ten days East of Ghónah, another language is spoken. The people of Ghambaghah are called Dabambah, Dagwombah, or Dagombah, and their language is nearly identical with that of the inhabitants of Sallaghá and the Mósí or Móngsí on the West;† a people who lie midway between Jenneh or Jenní, on the Jálíbá and Kong, and are probably the Moses to whose King, John III., King of Portugal, sent a letter by Luke the Abyssinian, who had found his way thither from Jerusalem, and represented that King as half, if not wholly, a Christian. (De Barros, *Asia*, i. 259.)

3. The Wolofs, Yolofs, or Jalofs, according to their own traditions, originally inhabited Walo, at the North-Western extremity of Senegambia, but increasing in power expelled from the neighbouring territories the Serrérs, previously established there, and reduced them to their present limits between Cape Verde and Barra or Bowal, at the mouth of the Gambia; Walo, Kayor, Wolof Proper, Baol, Sín, and Sálom are the

* "Bumbrongs" of Moore, (*Trav.* p. 41;) the nasal termination is frequently added or dropped in different dialects of the same language; thus we have Futa Jallon and Futa Jallo, Fulla and Fullan, Libán and Limbá, Sín and Sí, Sangara and Sangaran; hence Bámbaran and Bámbara. The instability of the nasal is strongly exemplified in most of the Indian dialects.

† This appears from the vocabularies collected by Mr. Bowdich. (*Trav.* p. 505.) His "Kumsallahoo" was probably Kúm-Sallaghú, the people of Sallaghah. *Yahndo* is apparently a misprint of *Yahmbo*, and identical with *Yimbo* and *Yumbo*. These Sállagháhs are also called Intá or n-Tá. (*Geogr. Journ.* vi. 111.)

principal, if not the only, territories now in the hands of the Wolofs. These States are often distinguished by the title of their Kings; thus Wálo is called Brak Wolof, Búr-bá Wolof; * Kayór, Damel; Baol, Tin; Sín and Sálom, Búrba Sín and Búrba Salum. Wolof seems to signify negro in that language, (Dard, *Dict. Wolof*, p. 92. 292.) and the people so called are of the deepest hue as well as the handsomest of all the negro nations; being well-made, having noses less flat, and thinner lips than any of their neighbours. Their government is much like that of the Mandingás, and they seem all to pay allegiance in some degree to the Búrba Yolof or King of the Yolofs. Their language is copious and expressive; and they are more warlike, impassioned, and energetic than the Fullas or Mandingoes. (Park, *Trav.* p. 16.) The small territory of Galam or Kajághah, to the North of Bundú, and Bambúk is inhabited by another race, speaking a different language from any of those hitherto mentioned; viz., the Sarákhulís,† who, though described as fraudulent, cruel, and treacherous by Labat, are favourably spoken of by Mungo Park. They seem to form a sort of confederation of petty monarchies under the King of Kajághah as their liege-lord. They are great traders, and dispersed, as travelling merchants, through all the neighbouring countries. A few more Tribes, perhaps relics of extinct nations, are mentioned as living apart, in unfrequented parts of Senegambia, and speaking languages unintelligible to most of their neighbours.

The French Government having obtained the cession of a considerable territory in Wálo, a free agricultural colony was established there several years ago; its condition, in 1827, will be seen in the following abstract of a statistical Report published at that period. The Capital of the French establishment on the Senegal is the fort and town of St. Louis, in 16° 0' 48" N. and 16° 32' 42" W., on an island in the main stream of the river, about one mile and a quarter long, by three-quarters of a furlong in breadth, containing 217 houses and 177 negro huts; its streets are broad and at right angles; and the Governor's house, barracks, and hospital are handsome edifices. It is the place of residence of the Apostolic Préfet of the colony, and has two Courts of Justice, a Primary Court and a Court of Appeal. The island having been entirely cleared of mangroves, is now healthy, but it has no fresh water except from the river, and that only in the rainy season; by filtration the water from the wells becomes palatable. The little islands of Baba-ghí, Safal, and Gheber near St. Louis, and factories, with a small surrounding territory at Bakel; Makaná, (St. Joseph, now St. Charles,) about 60 miles from Bakel and 30 from the confluence of the Senegal and Falémé; and the three trading places (*escales*) of the Moors, the Darmankús, Trarzás, (Teghazzá?) and Braknás, (Ba-

rakenah,) are the only places held by France in or near the river itself. The population of St. Louis consists of 2337 freemen and 7968 slaves. The Isle of Gorée, in 14° 40' N. and 17° 25' W., a mile and a half from Cape Verde, about half a mile in length by one furlong in breadth, nearly two-fifths of which is covered by the town, in 14° 39' 48" N. and 17° 25' 6" W., and a strong fort on the Southern side. There the isle rises perpendicularly about 500 feet from the sea on a base of basaltic columns, which extend into the sea Westwards, and are evidently of volcanic origin. The town is clean and healthy. The water is generally good, but not sufficient for the wants of the inhabitants; they are supplied from Khan on the continent, about two miles distant. The island has a Court of Justice and a Chapel. The port has a good anchorage. The rocks called the Magdalen Islands, and the factory at Albréda on the Gambia, are dependencies on Gorée, the population of which amounts to 1496 freemen and 4349 slaves; the number of Europeans being only 40. Wálo, as before mentioned, the newly acquired territory, is on the left side of (here the Eastern) the Senegal, near its mouth. It terminates at Daganá, 120 miles above St. Louis, on the borders of Fúta Toro, where it is bounded to the East by sand-hills; to the South its soil is very fertile, being alluvial and well watered by the many branches of the river, which there forms a great number of islands. Many plantations were made in this tract in 1821, under the direction of the French Government, and the whole was divided into four districts: 1. Daganá, with a fortified barrack as a protection to the frontier; 2. Richard-Tol, extending 12 miles along the river, and comprehending the large creek (*marigot*) of Tawéi, which passes from the Senegal into the Lake of N-jeir (N-gher) or Panié-Fúl. This district contains six plantations. 3. Taf, including the Gorom channel of the river, extending more than 21 miles Westwards, and having ten plantations. 4. M-sar, traversed by the Khasáh and Ghós branches, having 17 establishments, some of them considerable. There are also eight plantations in the smaller islands. Free* negroes come from the distance of 300 or 400 miles in the interior to work as labourers in Wálo, and on their return carry back to their own countrymen the knowledge and habits of industry they have acquired. The Lake N-gher lies from North North-East to South South-West about 20 miles, with a breadth of about one mile and a half, and a depth of seven or eight feet. Its Northern extremity is in 16° 17' N. and 13° 36' 20" W. It affords an abundant supply of fish; and its sandy banks are tolerably fertile, and very healthy. The salt-lakes at Ganjól, (Gandyól,) separated by sand-hills from the sea, nearly a mile distant, produce much salt, which is not very palatable, but might be rendered so by better management. In the rainy season, from June to October, sudden squalls occur, and sometimes tornadoes, but they rarely do much damage. The prevalent winds, from January to April, are from North-East, but from North-West in other seasons. When they come from East North-East or due East the heat is suffocating, and the air filled with sand; but the drought, though distressing, is not unhealthy. Earthquakes are unknown. The mean temperature is 88° Fahrenheit. The soil near the sea is flinty sand; to the East of the Lake

ture.

* Wolof, Walof, Waluf, Yalof, Jalof, and Gyalof are the various ways in which this name may be spelt. The sound usually rendered by the English *j* is, in the mouth of this people, a guttural compound, properly represented by *dhyá*, which letters when rapidly uttered approximate closely to *ja*; if the guttural aspirate is dropped the syllable becomes *dya*; when the guttural prevails, the *d* is dropped, and *gya* is the sound expressed: hence the various ways in which the proper names of places in this part of Africa are sometimes spelt even by the same writers.

† The Caragoles of De Barros, (i. p. 213, 215.) Saracolets of Labat, (iii. 308.) Serrawallis of Golberry, (i. 371.) and Serrawullies of Mungo Park, (*Trav.* p. 53.) The true orthography, Sarákhulé or Sarákhwalí, is given by M. Dard in his *Grammar of the Wolof Language*, (p. 149.)

* It is understood that Wálo is a free colony; but unless great vigilance be exercised, it will be difficult to maintain free labour in a country so circumstanced.

SENE-
GAMBIA.

SENE-
SCHAL.

N-ger there is a bed of ferruginous stone, more than three miles in breadth, which crosses the river six miles above Daganá. There are no stones; but large beds of oyster-shells near St. Louis furnish excellent lime. Calcareous rock is abundant beyond Bakel; basalt and shingles are found at Gorée, and grey flint on the neighbouring coast. Natron is formed, after rain, in hollows near the beach. Timber is scarce, but the palm, pandanus, mimosa, (the Verak or *Mimosa Senegalensis*, and *M. discolor*, ghelembal (dylamban) or Senegal ebony,) khawar, a plum, the kernel of which is a poison to domestic animals, and the hinnà, (*Lawsonia inermis*), are common in the interior of Wáló. All tropical fruits and vegetables can be easily cultivated; and the trials made in the botanical garden at Richard-Tol have been very successful. Cotton and indigo have become articles of staple produce. The domestic animals are oxen, mules, and horses; the latter do not appear to thrive. The fisheries are in an infant state, as nothing but canoes have yet been used. At Argí (Arguim) the French Government has made an establishment which is likely to answer well. Bricks and lime are the only manufactured articles; masons and carpenters are almost the only handicraftsmen in the colony. Woollen and cotton cloths, five or six inches wide, are woven by natives from the interior; four or five of these sewed together form what is called a pagne (*panho* in Portuguese) or cloth, which is the principal article of clothing required by the negroes. A pair of ordinary pañes sells for about five shillings; when ornamented with coloured patterns they are worth from twelve to thirteen shillings. A few vessels, the largest carrying 100 tons, and 80 or 90 sloops from five to fifty tons burthen, and about 30 schooners, form the mercantile navy of the colony. Their traffic is merely a coasting-trade. St. Louis has two small docks for ship-building. The gonata, iron-wood, khos, and cailcédra, found in the colony, furnish good ship timber, and a species of hibiscus excellent hemp.

The gum of the *Mimosa Senegalensis* is the principal article of export. It is collected by the Moors (Berbers?) principally in three Oases, Sáhil, (the Shore,) Al-ebyár, (the Wells,) and Al-fatak, (the open ground,) near to each other, and about 100 miles North of the river. Hides, ivory, gold, grain, and wax are brought

from the factories higher up the Senegal. The value of the imports, in 1825, was 2,837,543 francs; (£113,502;) the exports amounted to 1,804,258 francs, (£72,170.) Besides the hospital there are two gratuitous schools for boys and girls, the latter under the care of one of the sisters of the congregation of St. Joseph. There are also schools at Gorée, but they are not gratuitous. A society formed for the promotion of agriculture has existed at St. Louis for some years.

SENIOR.

SENIOR, or
SEIGNIOR, *adj.* and *n.*
SIGNIOR,
SIGNIORY,
SENIORITY,
SENIORIZE, *v.*
SEIGNEURIAL,
SENESCENCE,
SE'NILE,
SENI'LITY.

Fr. *seigneur*; It. *signore*;
Sp. *senor*; Lat. *senior*, from
seni; so called a *sensus di-*
minutione, or *quasi semine-*
i. e. semimortuus; or, by me-
tathesis, from the Heb. or
the Arabic. See Vossius. In
the Goth. version of the Gos-
pels, *sineig*, *senex*, *sinista*,
maxime senex, are of ordi-

nary occurrence, and Wachter thinks *sen* may mean
senior, *e. g.* *Senones*, the most ancient of the Suevi.
(Tac. *Ger. c.* 39.) *Sin*, in A. S., Lye interprets, *semper*,
perpetuo. Further the Etymologists do not carry us: a
conjecture may be allowed that the verb *see* is the radical
origin, and that *sen* or *sin* means *seen*. A *senior*, one
who has *seen* many years, much time pass away.

Aged or elderly, more aged or elderly, having *seen*,
passed, lived, many, more, years.

Senior, or *signior*; a title bestowed on elders or supe-
riors, or those having or exercising authority or power,
rule or dominion, lordship, sovereignty.

Signiory; the rule, lordship, &c., and used by Shak-
speare as equivalent to *seniority*.

— And hym sulf he wolde wende
Vor to wynne *sejnorje* aboute in oþer ende.
R. Glouce.

Rollo was his name, a knyght fulle douhty,
þat Alfride wend wele, haf lorn þe *seignory*.
R. Brunne, p. 24.

And (God) yaf her (Reason) sith such aduantage,
That she hath might and *seignory*
To keepe men from all folly.
Chaucer. The Romant of the Rose, p. 194.

His faire mother behight him not to vs
Such one to be; ne therefore twyse him saued
From Grekish armes; but such a one
As mete might seme great Italie to rule,
Dreadful in arms, charged with *seignorie*,
Shewing in profe his worthy Teucrian race;
And vnder lawes, the whole world to subdue.
Surrey. Virgil. Æneis, book iv.

And yf he meane to take the Latin woorde *seniour*, that word in
the Latin tongue neuer signified a priest, but onely an elder man.
Sir T. More. Workes, p. 221. *Dialogue*, book iii. ch. viii.

No man in heauen, nor in earth, neither vnder the earth, was
able to open the booke, or to looke on y^e booke, till the lambe
came, vnto whom the *seniours* spake, on this maner.
Barnes. Workes, p. 227. *Faith onely iustified before God*.

And than they came to the isle of Chyfolignie, and there landed,
and founde a great nombre of ladyes and damosels, who had the
sygniorite of that isle.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 224.

And, as in well growne woods, on trees, cold spinie grasshoppers
Sit chirping, and send voyces out, that scarce can pierce our eares
For softnesse, and their weake faint sounds; so (talking on the
toure)
These *seniors* of the people sate.

Chapman. Homer. Iliad, book iii.

SHY. *Signior* Antonio, many a time and oft
In the Ryalto you have rated me
About my monies and my vsances.
Shakspeare. Merchant of Venice, fol. 166.

A third *seignorie* or shire there is that goeth to Apamia, which
in old times was called Celænæ.

Holland. Plinie, book v. ch. xxix.

MAR. If ancient sorrow be most reuerent,
Giue mine the benefit of *seigneurie*,
And let my greefes frowne on the vpper hand
If sorrow can admit society.
Shakspeare. Richard III. fol. 195.

As faire he was, as Cithereas make,
As proud as he, as *signoriseth* hell,
In fashions way-ward, and in loue vnkinde,
For Cupid deignes not wound a currish minde.

Fairfax. Godfrey of Bulloigne, book iv. st. 46.

Rome thou art tam'd, and th' earth dew'd with thy bloode
Doth laugh to see how thou art *signioriz'd*.

Cornelia, 1594. E 2.

Think'st thou to *signorize*, or be the king
Of such a number, nobler than thy selfe.

Id. E 3.

The names of lord, *signior*, *seigneur*, *sennor*, in the Italian,
French, and Spanish languages, seem to have at first imported
only elder men, who thereby were grown into authority among the
several governments and nations which seated themselves into
those countries upon the fall of the Roman empire.

Sir William Temple. Works, vol. i. p. 14. *Essay upon the Origin
and Nature of Government*.

As in insurrections the ringleader is looked on with a peculiar
severity, so, in this case, the first provoker has, by his *seniority* and
primogeniture, a double portion of the guilt.

Government of the Tongue.

The earth and all things will continue in the state wherein they
now are, without the least *senescence* or decay, without jarring,
disorder, or invasion of one another.

Woodward.

My green youth made me very unripe for a task of that nature,
whose difficulty requires that it should be handled by a person in
whom nature, education, and time have happily matched a *senile*
maturity of judgement with youthful vigour of fancy.

Boyle. On Colours.

The Cadis maintained that the *Grand Signor* was not obliged
to keep his word or oath when he limited thereby his authority.

Montesquieu. Spirit of Laws, book iii. ch. x.

Mr. Edwards, when going away, again recurred to his conscious-
ness of *senility*; and, looking full in Johnson's face, said to him,
"You'll find in Dr. Young, 'O my coevals! remnants of your-
selves.'" Johnson did not relish this at all, but shook his head with
impatience.

Boswell. Life of Johnson. Anno 1778.

In consequence of this idea, the pleasures of the table, and of
horses and dogs, are commonly the chief objects of pursuit, even
among those whose *seniority* ought to render them patterns of
industry, frugality, and decency, to the junior members.

Knox. Works, vol. iv. p. 177. *Liberal Education*, sec. 46.

They [the clergy] were the statesmen, they were the lawyers;
from them were often taken the bailiffs of the *seigneurial* courts.

Burke. An Abridgement of English History, book iii. ch. iv.

This chief was styled *senior*, lord, and the like terms, which
marked out a superiority in age and merit.

Id. Ib. book ii. ch. vii.

SENNA, properly *Sená* or *Suná*, is the name giver
by the Arabs to several different sorts of cassia. It was,
perhaps, borrowed from the language of the Africans to
the South of Egypt, where, as well as in Arabia, these
plants are indigenous. There are three kinds of *Sená*
sold by the druggists in Egypt: 1. *Sa'idí*, or *jebelí*; 2.
Beledí, or *Bahráwí*; and 3. *Mekkí*, or *Hijází*. The
first is the sharp-leaved; (*Cassia acutifolia*, Delille, in
Mém. sur l'Egypte, iii. 316.) the second the obtuse-
leaved; (*C. senna*, Linn.) and the third the lanceolate-
leaved. (*C. lanceolata* of *Færskaël, Flora Ægypt. Arab.*
p. 85.) The two first are found in Upper Egypt, (*es
sa'id*.) the former in the mountains, (*jebel*.) the latter
in the plain (*beled*) and near the river, (*bahr*.) In
commerce, the acute-leaved is called *Senna* of *Sa'id* or of
the *Apalto* or *Farm*, because it is farmed out by the
Government; and the obtuse-leaved, *Senna* of *Tripoly*,
or *Barbary*, from whence it is probably exported as well
as from Alexandria. The lanceolate *Senna*, called *lisán
el'osfúr* (sparrow's tongue) at Cairo, is preferred to the
other kinds. A much larger quantity, however, is
brought from *Oswán* (Syene) than from *Jiddah* in *Hijáz*.
The different sorts are mixed by the Arabs who gather

SENIOR.

SENNA.

SENNA.
SENS.

them, and it is not easy to separate the acute leaves and flat, almost straight, pods of the first from the obtuse leaves and sickle-shaped pods of the second. The Meccan Senna (*C. lanceolata*) has narrower and smoother leaflets than the acute-leaved, which it most resembles; it is likewise unadulterated with a poisonous plant commonly found in the Alexandrine Senna, viz. arjel, (*Cynanchum argel*), which has smooth lanceolate leaves, and flowers in clusters, succeeded by small pointed oval seed-vessels. The pods of the Senna are thrown aside by the native merchants as useless, but are more esteemed in Europe than the leaves. A mixture of the leaves of Senna and Hinná (*Lawsonia inermis*) is called by the Arabs Senawáni, the two Sennas, and is used to dye the hair black, just as Hinná alone is used to dye the nails scarlet.

SENOCLAR, having six eyes, *senos oculos*.

So that as most animals are binocular, spiders for the most part octonocular, and some (as Mr. Willoughby thought) *senocular*; so flies, &c. are multocular, having as many eyes as there are perforations in their corneæ.

Derham. *Physico-Theology*, book viii. ch. iii. p. 372. note.

SENOGASTER, in Zoology, a genus of Dipterous insects.

Generic character. *Antennæ* triarticulate, the third joint ovoid; face concave; *epistome* prominent; wings two, the first hinder areolet with its base oblique; *abdomen* with its third segment considerably narrowed, cylindric; posterior *femora* swollen, armed with a bifid tooth; hinder *tibiæ* curved, with a small tubercle near the extremity.

Type of the genus, *S. cærulescens*; Macquart, *Diptères*, vol. i. p. 529. One exotic species only is known.

SENOMETOPIA, in Zoology, a genus of Dipterous insects.

Generic character. *Antennæ* moderately long, triarticulate, the second joint short, or a little elongate, the third thrice as long as the second, with a seta at its base; face vertical or a little oblique, in general naked; *epistome* flat; forehead mostly narrow in the males; eyes sometimes downy; *thorax* robust; *abdomen* stout, oval, with the edges of the segments alone bristly; wings two, the first posterior areolet generally extending to the apex of the wings.

Type of the genus, *S. atropivora*; Macquart, *Dipt.* vol. ii. p. 105. A very numerous genus, consisting of nearly forty species, the majority of which are found in Britain: their *larvæ* are parasitic, upon the pupæ of *Lepidoptera*; the perfect insects frequent flowers.

SENOPTERIA, in Zoology, a genus of Dipterous insects.

Generic character. *Antennæ* extending to the *epistome*, triarticulate; the third joint long, furnished at the base with a naked bristle; wings two, very narrow; *abdomen* also very slender; legs generally short.

Type of the genus, *S. brevipes*; Fabricius, *Syst. Anthia*, p. 272. Inhabits South America. It is the true type of the genus *Dacus* of Fabricius.

SENRA, in Botany, a genus of the class *Monadelphica*, order *Decandria*, natural order *Malvaceæ*. Generic character: calyx double, exterior three-leaved, interior five-toothed; corolla, petals five; anthers about ten, stipitate at the apex and on the superficies of the tube; a four-lobed membrane under the germen; style five-cleft; fruit five-celled, ten-seeded.

One species, *S. incana*, native of Arabia.

SENS, a city of France. See YONNE.

cold, and of any *sensible* change in the weather.

Sensation; feeling, idea.

Sensual; relating to, acting upon the senses, or bodily feelings.

A *sensual* person, or *sensualist*, one whose thoughts, feelings are confined to his bodily feelings or sensations; who is addicted, devoted to their gratification.

Sensuous is used by Milton as equivalent to *senseful*; full of sense or feeling, (bodily or corporeal;) and he converts *sensible* into a noun substantive.

Thou shalt vnderstand therefore that the Scripture hath but one *sence*, which is the littoral *sence*. And that littoral *sence* is the roote and ground of all, and the ancre that neuer fayleth, whereunto if thou cleaue thou canst neuer erre or go out of the way.

Tyndall. *Workes*, p. 166. *The Obedience of a Christian Man*.

Popilius flieth therwhile, and leauing there
The *senseless* stock, a griezely sight doth beare,
Unto Atonius boord, with mischief fed.

Uncertain Auctors. *Cicero's Death*, p. 444.

Then he was lying down *senselessly* on his *senseless* friend, as in all estates striving to be still like him.

Sidney. *Works*, vol. ii. p. 599. *Arcadia*, book iii.

And from thys eternall dampnacion of *sensyble* paine in the fyre of hel, thei thought that neuer any of the kynde of man shoulde be preserued, but by the merytes of the passion of Christe, and faythe in him comen or to come.

Sir T. More. *Workes*, p. 1281. *Upon the Passion of Chryste*.

Palms do rejoyce to be joyned by the match of a male to a female, And shall *sensitive* things be so *senseless* as to resist *sense*?

Sidney. *Works*, vol. i. p. 146. *Arcadia*, book i.

If thou wilt mighty be, flee from the rage
Of cruell will, and see thou kepe the free
From the foul yoke of *sensual* bondage.

Wyat. *He ruleth not*, &c.

Can it be
That modesty may more betray our *sence*,
Then woman's lightnesse?

Shakspeare. *Measure for Measure*, act ii. sc. 2.

Sense of pleasure we may well
Spare out of life perhaps, and not repine,
But live content, which is the calmest life.

Milton. *Paradise Lost*, book vi. l. 459.

Fr. *sens*, *sensible*, *sensitif*, *sentir*; SENSE.

It. *senso*, *sensato*, *sensibile*, *sensitivo*, *sensivo*, *sensuale*, *sentire*; Sp. *senso*, *sentato*, *sensacion*, *sensible*, *sensitivo*, *sensual*, *sentir*, Lat. *sensus*, *sentire*, to *ken*, to feel, to think; which (Vossius) may perhaps be (by transposition of letters) from the Gr. *αἰσθάνεσθαι*.

The bodily *senses* are—seeing, hearing, smelling, tasting, feeling.

Sense is then applied to—perception, apprehension, conception, by the mind; to the perceptions, apprehensions, conceptions of the mind; to the mind, thought, to what the mind thinks, or receives, or comprehends, by thought; the meaning or signification.

Tooke remarks our improper use of the adjective *sensible* (in common with many other adjectives in *bilis*.) We have *senseful*, full of sense; *sensitive*, that can feel; and *sensible*, that may be felt: and yet we talk of a *sensible* man, who is very *sensible* of the

SENSE.

God, to remove his wayes from human *sense*,
Plac'd heaven from earth so farr, that earthly sight,
If it presume, might erre in things too high,
And no advantage gaine.

Milton. *Paradise Lost*, book viii. l. 119.

On a green shadie bank profuse of flours,
Pensive I sate me down; there gentle sleep
First found me, and with soft oppression seis'd
My droused *sense*.

Id. *Ib.* book viii. l. 286.

Those that make motion and *sensation* thus really the same, they must of necessity acknowledge, that no longer motion, no longer *sensation*, (as Mr. Hobbs has ingenuously confessed in his *Elements of Philosophy*;) and that every motion or reaction must be a new *sensation*, as well as every ceasing of reaction a ceasing of *sensation*.

More. *Immortality of the Soul*, book i. ch. xii.

Now let the sciolist tell me, why things must needs be so, as his individual senses represent them? Is he sure, that objects are not otherwise *sensed* by others, than they are by him? and why must his *sense* be the infallible criterion? It may be, what is white to us, is black to negroes, and our angels to them are fiends.

Glanvil. *The Vanity of Dogmatizing*, ch. xxii. p. 218.

The ladie, hearkning to his *sensefull* speech,
Found nothing that he said unmeet nor geason,
Having oft seene it tryde as he did teach.

Spenser. *Faerie Queene*, book vi. can. 4.

Where when confusedly they came, they fownd
Their lady lying on the *sencelesse* ground.

Id. *Ib.* book iii. can. 1.

Then up he tooke the slombred *sencelesse* corse;
And, ere he could out of his swone awake,
Him to his castle brought with hastie forse,
And in a dongeon deepe him threw without remorse.

Id. *Ib.* book i. can. 7.

And if a man have his wits about him, and be not drunk with *sensuality* and *sencelessnes*, he need not much to dispute before he pass the sentence.

Taylor. *Sermon* 18. vol. ii. p. 320.

First she them led up to the castle wall,
That was so high as foe might not it clime,
And all so faire and *sensible* withall.

Spenser. *Faerie Queene*, book ii. can. 9.

Our torments also may in length of time
Become our elements, these piercing fires
As soft as now severe, our temper chang'd
Into their temper; which must needs remove
The *sensible* of pain.

Milton. *Paradise Lost*, book ii. l. 277.

Heraclides writeth of a woman, that for a seven night lay for dead, and fetch'd not out her breath *sensibly*, who in the end was rais'd againe to life.

Holland. *Plinie*, book vii. ch. lii.

Then I spied a great stone, and sitting awhile upon't, I fell to weigh in my thoughts that that stone was in a happier condition, in some respects, than either those *sensitive* creatures or vegetables I saw before.

Howell. *Letter* 50. book ii. p. 356.

I say in general, that *sensation* is made by the arrival of motion from the object to the organ; where it is received in all the circumstances we perceive it in, and conveyed by virtue of the soul's presence there, assisted by her immediate instrument the spirits, by virtue of whose continuity to those in the common *sensorium*, the image or impress of every object is faithfully transmitted thither.

More. *Immortality of the Soul*, book ii. ch. xi.

And this brave knight, that for this vertue fightes,
Now comes to point of that same perilous sted,
Where pleasure dwelles in *sensuall* delighes,
Mongst thousand dangers and ten thousand magick mightes.

Spenser. *Faerie Queene*, book ii. can. 12.

And they, so perfect is their misery,
Not once perceive their foul disfigurement,
But boast themselves more comely than before;
And all their friends and native home forget,
To roll with pleasure in a *sensual* sty.

Milton. *Comus*, v. 73.

But negligent security and ease,
Unbridled *sensuality* begat,
That only sought his appetite to please,
As it in midst of much abundance sat.

Drayton. *Thomas Cromwell*.

For there is a sanctity even of body and complexion, which the *sensually*-minded do not so much as dream of.

More. *Philosophical Writings*, p. viii. Preface.

And [the soul, finding the ease she had from her visible and *sensuous* colleague the body, in performance of religious duties, her pinions now broken and flagging, shifted off from herself the labour of high soaring any more, forgot her heavenly flight, and left the dull and droyling carcase to plod on in the old road, and drudging trade of outward conformity.

Milton. *Works*, vol. i. p. 1. *Of Reform in England*, book i.

To which poetry would be made subsequent, or indeed rather precedent, as being less subtle and fine, but more simple, *sensuous*, and passionate.

Id. *Ib.* vol. i. p. 139. *Of Education*.

Laertius tells us, that Boethius, an eminent and famous stoical doctor, did plainly deny the world to be an animal, that is, to have any *sentient*, conscious, or intellectual nature presiding over it.

Cudworth. *Intellectual System*, book i. ch. iii. p. 133.

If the *sentient* be carry'd passibus æquis with the body, whose motion it would observe, (supposing the former condition, that it be regular and steddily,) in this case especially the remove is insensible.

Glanvil. *The Vanity of Dogmatizing*, ch. ix. p. 82.

Oft did I wish those dreadful pois'ned lees,
Which clos'd the ever-waking dragon's eyes;
Or I had had those *sense-bercaving* stalks,
That grow in shady Proserpine's dark walks.

Drayton. *Queen Isabel to Mortimer*.

The first thing to be considered in common to all the *sensitive* creatures, is their faculty of seeing, hearing, smelling, tasting, and feeling; and the organs ministering to these five *senses*, together with the exact accommodation of those *senses* and their organs to the state and make of every tribe of animals.

Derham. *Physico-Theology*, book iv. ch. i. p. 86.

Which when I say the *senses* convey into the mind, I mean they from external objects convey into the mind what produces there those perceptions. This great source of most of the ideas we have, depending wholly upon our *senses*, and deriv'd by them to the understanding, I call *sensation*.

Locke. *Of Human Understanding*, book ii. ch. i.

But 'tis in vain; the wretch is drench'd too deep;
His soul is stupid, and his heart asleep;
Fatten'd in vice; so callous, and so gross,
He sins, and sees not; *senseless* of his loss.

Dryden. *Persius. Satire* 3. p. 520.

For of all Nature's works we most should scorn
The thing who thinks himself a poet born,
Unbred, untaught, he rhymes, yet hardly spells,
And *senselessly*, as squirrels jangle bells.

Otway. *Upon Mr. Creech's Translation of Lucretius*.

Thus, from their profane neglect of God's worship, men naturally slide into an habitual *senselessness* and incogitancy of him, and from thence to not believing; and from thence to disbelieving him in an easy and almost necessary transition.

Scott. *Christian Life*, part ii. ch. iii. p. 222.

Our *senses*, conversant about particular *sensible* objects, do convey into the mind several distinct perception of things, according to those various ways wherein those objects do effect them. And thus we come by those ideas we have, of yellow, white, heat, cold, soft, hard, bitter, sweet, and all those which we call *sensible* qualities.

Locke. *Of Human Understanding*, book ii. ch. i.

For as in the collation, it is not the gold or the silver, the food or the apparel, in which the benefit consists, but the will and benevolent intention of him that bestows them; so reciprocally it is the good acceptance, the *sensibleness* of, and acquiescence in, the benefactor's goodness, that constitutes the gratitude.

Barrow. *Sermon* 16. vol. ii. p. 379.

This works the natural effect of choler, and turns his rage against him by whom he was last affronted, and most *sensibly*.

Dryden. *Dedication to the Æneid*.

SENSE.

SENSE. Sensitive knowledge reaching no farther than the existence of things actually present to our senses, is yet much narrower than either of the former.

Locke. *Of Human Understanding*, vol. ii. book iv. ch. iii. p. 79.

And the reason is clear, because the seat of the one is in the intellectual reasonable nature; the seat of the other is in the sensitive.

Sharp. *Sermon* 8. vol. iv.

The same idea, when it again recurs without the operation of the like object on the external sensory, is remembrance.

Locke. *Of Human Understanding*, vol. ii. book ii. ch. xix. p. 213.

For these heavenly graces are the palate by which the immortal mind tastes and relishes its heaven, the blessed organs and sensories by which it feels and perceives the joys of the world to come, and without which it can no more relish and enjoy them, than the senseless hive can the sweetness of the honey that is in it.

Scott. *Christian Life*, part i. ch. iv.

Now the sensual man is, of all men living, the most improper for enquiries after truth, and the least at leisure for it.

Atterbury. *Sermon* 5. vol. i. p. 190.

If ever we mean to conquer our bad inclinations, we must not only abstain from the sins we are inclined to, but also from the occasions of them. If it be sensuality, we must starve it out by prudent fasting and abstinence.

Scott. *Christian Life*, part ii. ch. i.

A sensualized soul would carry such appetites with her thither, for which she could find no suitable objects.

Norris. *On the Beatitudes*, p. 165.

Nor is he singular in referring them all to the senses; and in beginning an account of language in that manner.

Tooke. *Diversions of Purley*, vol. i. p. 35.

The very notion of death is, that all sensation, and activity, and power of motion, is in that state of the man extinguished.

Horsley. *Sermon* 20. vol. ii. p. 149.

When he brings the same affair before the people, he talks of it as only the wild and senseless escape of a few desperate wretches.

Warburton. *Works*, vol. iii. p. 113. *The Divine Legation*, book iii. sec. 3.

The Hylozoists, indeed, by Cudworth's account of them, held a mean between perceptivity and senselessness, between motion and rest.

Search. *Light of Nature*, vol. ii. part i. ch. v. p. 93.

The discovery of the mines of America, it is to be observed, does not seem to have had any very sensible effect upon the prices of things in England till after 1570.

Smith. *Wealth of Nations*, vol. i. book i. ch. xi. p. 266.

Yet it is certain that these admonitions of nature, however forcible, however importunate, are too often vain; and that many who mark with such accuracy the course of time, appear to have little sensibility of the decline of life.

The Idler, No. 43.

The sudden loss of the employment, even of the ships which import the eighty-two thousand hogsheads of tobacco, which are over and above the consumption of Great Britain, might alone be felt very sensibly.

Smith. *Wealth of Nations*, vol. ii. book iv. ch. vii. p. 460.

This spiritual sword of God's awful word penetrates the inmost recesses of the human mind, pierces to the very line of separation, as it were, of the sensitive and the intelligent principle.

Horsley. *Sermon* 7. vol. i. p. 127.

But the apostle, having represented these extraordinary gifts to be as defective in themselves as they are contemptible in their abuse, thought fit to add, that this defect did not proceed from any penurious influx of the Holy Spirit, but from the narrowness of the human recipient; the passages to the soul being so clogged up with corporeal obstructions, as to be unable to convey to the sensory any more than an oblique glimpse of the sovereign good.

Warburton. *Works*, vol. viii. p. 312. *Doctrine of Grace*, book ii. ch. ii.

Vibrations in the sensory nerves, excited by the impression of external objects and propagated to the brain, communicate vibrations to the corresponding motory nerves, and produce muscular motions.

Belsham. *Elements of the Philosophy of the Human Mind*, ch. iii. sec. 5.

The wide-stretch'd realm of intellectual woe,
Surpassing sensual far, is all our own.

Young. *The Complaint*. Night 7.

The beggar who, behind the hedge, divides his offals with his dog, has often more of the real sensualist than he who dines at an elegant table.

Mickle. *Lusiad*. Introduction.

Now during the performance of these actions the virtuous man must be happy, or else he would have gaps in his happiness which it would be wofull heresy to allow; but during such performance he receives no benefit from his virtue, her influence being suspended, for he does the same and feels the same as the sensualist.

Search. *Light of Nature*, vol. i. part ii. ch. xxix. p. 232.

Sobriety is sometimes opposed in Scripture to pride, and other disorders of the mind. And sometimes it is opposed to sensuality.

Gilpin. *Hints for Sermons*, vol. i. p. 378.

From hence we may gather that the providence of God is over all his works, and that in the formation of sentient as well as unsentient natures, he had in view that series of changes and events they would produce, and ordered his whole multitude of second causes, so as to execute that plan of providence he had in his intention.

Search. *Light of Nature*, vol. ii. part iii. ch. xxv. p. 84

SENTENCE, n.

SE'NTENCE, v.

SENTE'NTIAL,

SENTE'NTIOUS,

SENTE'NTIOUSLY,

SENTE'NTIOUSNESS,

SENTENTIO'SITY.

Fr. sentence; It. sentenza; Sp. sententia; Lat. sententia, (from sentiens, present participle of sentire, to think;) what the mind kens; thinks, judges.

By us applied to

The expression of a judgment; a judgment or adjudication, determination or decision.

A saying, a maxim; an axiom, any thing expressed in brief sentences.

For sentence, in grammar, see the Quotation from Lowth.

And which of you that bereth him best of alle,

That is to sayn, that telleth in this cas

Tales of best sentence and most solas,

Shal have a souper at youre aller cost

Here in this place sitting by this post.

Chaucer. *Prologue to the Canterbury Tales*, v. 798.

Herken what is the sentence of the wise,

Bet is to dien than have indigence.

Id. *The Man of Lawes Tale*, v. 4469.

That daie maie no counsaile auaile,

The pledour and the plee shall faile,

The sentence of that ylke daie

Maie none appele sette in delaie.

Gower. *Conf. Am.* book ii. p. 71.

If it be so, that they wyll so contynue, they do yuell and ronne in the maledyction and sentence of the holy fater the pope.

Lord Berners. *Froissart*. *Cronycle*, vol. i. ch. 364.

— Poetes olde, whiche full craftely

Vnder as couerte termes as coulde be,

Can touche a trouth, and cloke subtylly

With fresshe vtteraunce full sentencyously.

Skelton. *The Bouge of Courte*. Prologue.

Who, though he tryed by his peeres

Of treason was acquitted,

Yeat also of a statute new

He being then indighted,

Was hardly found a felon, and

Too strickly sentenc'ed so.

Warner. *Albion's England*, book viii. ch. xl.

— He from wrauth more coole,

Came the mild judge and intersessor both

To sentence man: the voice of God they heard

Now walking in the garden.

Milton. *Paradise Lost*, book x. l. 95.

My sentence is for open war: of whiles,

More unexpert, I boast not; them let those

Contrive who need, or when they need, not now.

Id. *Ib.* book ii. l. 51.

SENSE.

SEN-

TENCE.

SEN-
TENCE.
—
SENTI-
MENT.

I laugh, when those who at the spear are bold
And vent rous, if that fail them, shrink and fear
What yet they know must follow, to endure
Exile, or ignominy, or bonds, or pain,
The sentence of thir conquerour.

Milton. *Paradise Lost*, book ii. l. 204.

Learne a rule out of this oracle or *sententious* riddle, which
goeth in this forme; *malis bonis*, (i. cheapest, best.)

Holland. *Plinie*, book xviii. ch. vi.

Thence what the lofty grave tragædians taught
In chorus or iambic, teachers best
Of moral prudence, with delight receiv'd
In brief *sententious* precepts while they treat
Of fate, and chance, and change in human life.

Milton. *Paradise Regained*, book iv. l. 258.

Nosce teipsum of Thales; *nosce tempus* of Pittacus; *nihil nimis*
of Cleobulus; which notwithstanding, to speak indifferently, are
but vulgar precepts in morality, carrying with them nothing
above the line, or beyond the extemporary *sententiousity* of common
conceits with us.

Sir Thomas Brown. *Vulgar Errours*, book i. ch. vi. p. 25.

They describe her [Fame] in part finely and elegantly, and in
part gravely and *sententiously*; they say, look how many feathers
she hath, so many eyes she hath underneath, so many tongues,
so many voices, she pricks up so many ears.

Bacon. *Fragment of an Essay on Fame*.

Can any thing be said in excuse for such a wretch, as being
convicted of grievous crimes, and thereupon justly *sentenced* to
suffer death for them; yet through the powerful intercession of the
prince with his father, hath not only a pardon offered him, but
preferment and honour, and the favour of his sovereign; doth yet,
nevertheless, stand out against these overtures, and despiseth
these undeserved bounties, and chuseth rather to die miserably,
than to live happily?

Sharp. *Works*, vol. ii. p. 94. *Sermon 5.*

The style is clear and strong, short and *sententious*, abounding
with antitheses, elegant turns, and manly strokes of wit.

Waterland. *Works*, vol. iv. p. 263. *The Athanasian Creed*.

I am confident the Medea is none of his. For tho' I esteem it
for the gravity and *sententiousness* of it, which he himself con-
cludes to be suitable to a tragedy.

Dryden. *Works*, vol. i. p. 10. *Of Dramatic Poesie*.

When *sentence* of death, the most terrible and highest judg-
ment in the laws of England, is pronounced, the immediate inse-
parable consequence from the common law is attainder.

Blackstone. *Commentaries*, vol. iv. book iv. ch. xxix. p. 381.

Yet concise maxims of *sententious* wisdom have always been
esteemed in all nations extremely useful, notwithstanding that
somewhat remained to be supplied in them by the common sense
of the hearers or readers.

Secker. *Works*, vol. iii. p. 328. *Sermon 21.*

A *sentence* is an assemblage of words expressed in proper form
and ranged in proper order, and concurring to make a complete
sense.

Lowth. *Introduction to English Grammar*.

SENTIMENT, } Fr. *sentement*; It. *sentimento*;
SENTIMENTAL, } Sp. *sentimiento*. Skinner calls
SENTIMENTALITY. } it a word lately introduced by
translators from the French, and others familiar with
that language; from *sentir*, to feel.

Feeling, thought; referring more immediately to the
feeling, than opinion, maxim, &c.; the sense or meaning.

Chaucer seems to use it emphatically:—

"I this endite of no *sentement*; not as my own
thoughts, not my own invention, but from the Latin—
as I heard."

Ye lovers that can make of *sentement*,
In this case ought ye be diligent,
To forthren me somewhat in my labour.

Chaucer. *Legend of Good Women*, p. 299.

For why, to every lover I me excuse,
That of no *sentement* I this endite,
But out of Latine in my tongue it write.

Id. *Troilus and Creseide*, book ii.

SENTI-
MENT.
—
SENTI-
NEL.

Right so fare I, that of no *sentement*,

Say right naught in conclusion,

But as I herde whan I was present,

This man complaine, with a pitous soun.

Chaucer. *The Complaint of the Black Knight*, p. 340.

Synesius, though a Christian, yet having been educated in this
philosophy, could not be induced by the hopes of a bishoprick
to stifle or dissemble this *sentiment* of his mind,—I shall never be
persuaded to think my soul to be younger than my body.

Cudworth. *Intellectual System*, book i. ch. i. p. 39.

O what passions then,
What melting *sentiments* of kindly care,
On the new parents seize!

Thomson. *Spring*.

These arguments on each side are so plausible, that I am apt to
suspect they may, the one as well as the other, be solid and satis-
factory, and that reason and *sentiment* concur in almost all moral
determinations and conclusions.

Hume. *Principles of Morals*, sec. 1.

Every thing indelicate will of course be excluded; but, perhaps,
there is no less danger in works called *sentimental*. They attack
the heart more successfully, because more cautiously.

Knox. *Works*, vol. ii. p. 248. *Essay*, No. 171.

She has even the false pity and *sentimentality* of many modern
ladies.

Warton. *History of English Poetry*, vol. i. p. 436.

Nay ev'en each moral *sentimental* stroke,
Where not the character, but poet spoke,
He lopp'd, as foreign to his chaste design,
Nor spar'd an useless, though a golden line.

Whitehead. *Prologue to the Roman Father*.

SENTINEL, } Also written centinel, centry.
SE'NTRY. } Fr. *sentinelle*; It. *sentinella*; Sp.
sentinela. From the Lat. *sentire*, to *ken*, to perceive,
to see, to look, and hence also *sentry*, (Skinner,)
One who looks, watches, keeps watch or guard.
To *sentinel*, (Ford,) to watch, to guard.

And having plac'd their *sentinels* at last,
They fall to prayer.

Drayton. *The Battle of Agincourt*, p. 15.

Go to her and tell
That you will walke the guardian *sentinell*,
My soule's safe genii, that she need not feare
A mutinous thought, or one close rebell there.

F. Beaumont. *Elegy*.

What strength, what art can them
Suffice, or what evasion bear him safe
Through the strict *senteries* and stations thick
Of angels watching round?

Milton. *Paradise Lost*, book ii. l. 410.

Wee see the *senses* of such eminent use for our well being si-
tuate in the head, as *sentinels* in a watch-tower, to receive and con-
vey to the soul the impressions of external objects.

Ray. *On the Creation*, part ii. p. 265.

Here toils, and death, and death's half-brother, sleep,
Forms terrible to view, their *centry* keep.

Dryden. *Virgil. Æneid*.

Nothing worthy of note happened till the night between the
12th and 13th, when John Harrison, a marine, who was *sentinel*
at the observatory, deserted, carrying with him his musket and
accoutrements.

Cook. *Voyages*, book iii. ch. vii. p. 104.

Upon inquiry, it appeared that not only the *sentry* placed over
the prisoner, but the whole watch upon the quarter-deck where he
was confined, had laid themselves down to sleep.

Id. *Ib.* vol. vi. book vi. ch. vi. p. 94.

PAR. All the powers
That *sentinel* just thrones double their guards.
About your sacred excellence!

Ford. *The Lover's Melancholy*, act ii. sc. 1

SEPA-
RATE.SEPARATE, *adj.*SEPARATE, *v.*

SEPARATELY,

SEPARATENESS,

SEPARATION,

SEPARATIVE,

SEPARATIST,

SEPARATORY,

SEPARABLE,

SEPARABLY,

SEPARABLENESS,

SEPARABILITY.

Fr. *séparer*; It. *separare*;Sp. *separar*; Lat. *separare*;and that from *se-par*, i. e. *sine**par*, without match, or mate,

or fellow, consequently alone;

unjoined with any thing else.

See Vossius, in *v. Sperno*.

To be or cause to be alone;

to disunite, to disjoin, to dis-

part, to divide, to distinguish.

Thys man sent his commaundement vnto Otto byshop of Constantinople, commaunding to forbydde priestes that had not yet maryed for to marry. And those y^t had married, to bee separated from their wyues.

Barnes. *Workes*, p. 331. *Priestes that hath not the Gifte of Chastitie to marry Wyues.*

They haue driuen peace out of all landes, and withdrawn them selues from all obediēce to princes, and haue separated them selues from the lay men, countyng the viler the dogges.

Tyndall. *Workes*, p. 116. *The Obedience of a Christian Man.*

And surelie the distance betwixt London and Lysbon should not stoppe any kinde of frendlie dewtie, that I could eyther shew to him, or do to his, if the greatest matter of all did not in certeyne pointes separate our myndes.

Ascham. *Workes*, p. 292. *The Schoolmaster*, book ii.

Else the ambition of one of them meeting of an undermining politick, did occasion this causeless separation.

Burnet. *Records*, vol. ii. part ii. book i. p. 169. No. 18.

I answer: though they [fayth, loue, and hope] be inseperable, yet they haue *seperable* and sundry offices, as it is aboue sayd of the lawe and fayth.

Tyndall. *Workes*, p. 188. *Matthew*, ch. v. *Prol.*

O cry for mercy, leave your wicked ways,
And God from time shall separate those days
Of vengeance coming, and he shall disperse
Those clouds now threat'ning the whole universe,
And save the world, which else he will destroy.

Drayton. *Noah's Flood*.

But if any shall abuse our courtesie of endeavouring to help his imagination (or at least to gratifie it) in this symbolical representation we have made, by conceiving of this center of the soul but as some dull divisible point in matter, and of no great efficacy, and of the vital or arbitrary extension of it, as grossely as if it would necessarily argue as real a divisibility and *seperability* of the parts as in a body.

More. *Writings*, part i. ch. x. p. 173. *Appendix to Antidote against Atheism*.

But pardon too, if zealous for the right,
A strict observer of each noble flight,
From the fine gold I separate the allay,
And shew how hasty writers sometimes stray.

Dryden. *The Art of Poetry*.

Sacred things, which continue their state of *separateness* and sanctity.

Mede. *Rev. of God's House*, p. 5. (1638.)

He who made the separation is not exempt from sharing the misfortune which he brought upon his party.

Pope. *View of the Epic Poem*, (from Bossu.)

As separating into parties upon little differences in religion exposes the *separatists* themselves to great temptations to atheism, so it doth those also who are indifferent on both sides, and stand engaged on neither part of the separation.

Scott. *Christian Life*, part ii. ch. iii. p. 220.

Let them then first condemn Dr. Clark for leading me into it; and when they have done, I will defend the doctor, so far, by the concurring verdict of the whole Christian world, by the maxims of common sense, and by the prevailing custom of speech, which never gives the name of substances to any thing, but where the substance is separate or *seperable*.

Waterland. *Workes*, vol. iv. p. 53. *Of Christ's Divinity*.

Which may appear, partly by the *separableness* of such substances from some gems, (as we see exemplified in granates.)

Boyle. *Workes*, vol. iii. p. 542. *Of Gems*.

The most conspicuous gland of an animal is the system of the guts, where the lacteals are the emissary vessels or *separatory* ducts.

Cheyne. *Phil. Prin.*

I shall not insist on this experiment, because of that much more full and eminent experiment of the *separative* virtue of extreme cold, that was made against their wills, by the forementioned Dutchmen that wintered in Nova Zembla.

Boyle. *Workes*, vol. i. p. 491. *Sceptical Chymistry*.

A few private traders, whose subscriptions amounted only to seven thousand two hundred pounds, insisted upon the privilege of trading *separately* upon their own stocks, and at their own risks.

Smith. *Wealth of Nations*, vol. iii. book v. ch. i. p. 149.

The Latin word (*colonia*) signifies simply a plantation. The Greek word, (*αποικια*), on the contrary, signifies a *separation* of dwelling, a departure from home, a going out of the house.

Id. *Ib.* vol. ii. book iv. ch. vii. p. 389.

Now, if such a one happens to be a *separatist*, he takes the advantage of the test law, which, under great penalties, forbids his entrance on this office, till he has given certain marks of his conformity to the established worship; to give which he makes matter of conscience, and from which he is at liberty to dissent by the Act of Toleration.

Warburton. *Alliance between Church and State*, vol. vii. p. 257.

SEPEDON, in Zoology, a genus of Dipterous insects.

Generic character. *Antennæ* porrect, longer than the head, triarticulate, the second joint elongate, compressed, setose, third acute, emarginate above, its base furnished above with a naked bristle; *hypostome* perpendicular, descending, naked; forehead broad, prominent; eyes rounded, projecting; wings two, incumbent, long; *abdomen* elongate, five-jointed, naked; legs dissimilar; posterior *femora* elongate, thickened and spiny beneath.

Type of the genus, *Syrphus sphegeus*; Fabricius, *Entom. Syst.* vol. iv. p. 298. Four species, of which two occur in Britain, in damp and marshy places.

SEPIA, in Zoology, a genus of *Cephalopodous Mollusca*.

Generic character. Head surrounded with eight arms and two legs or feelers; body fleshy, depressed, contained in a bag, which is obtuse behind, and furnished with a narrow fin on each side throughout its whole length; mouth terminal, its mandibles resembling those of a parrot, very large and powerful; arms furnished with sessile suckers, legs with pedunculated ones; within, near the back, is a spongy, calcareous, opaque bone, varying slightly in form in the different species; and in the abdomen is a bag which contains an inky fluid.

Type of the genus, *S. officinalis*; Linnæus, *Syst. Nat.* vol. i. p. 1095. Abundant in the Atlantic and Mediterranean sea; found, but somewhat rarely, in the British and Irish Channels; the dorsal plate is known by the name of Cuttle-fish bone, and was formerly employed in medicine as an absorbent; the inky fluid of some of the species is supposed to be the pigment employed by the Chinese in the composition of Indian Ink.

SEPIDIUM, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* eleven-jointed, filiform, the third joint elongate, the tenth obconic, the terminal one short, ovoid; *palpi* filiform; *mentum* small; *thorax* truncated before and behind; the sides rounded and prominent; *scutellum* indistinct; *abdomen* ovate, the base and apex truncated; legs moderate; *tarsi* heteromorous.

Type of the genus, *S. tricuspidatum*; Fabricius, *Syst. Eleut.* vol. i. p. 126. Inhabits Southern Europe and Africa.

SEPA-
RATE.SEPI-
DIUM.

SEPOSE. SEPO'SE, v. } Lat. *seponere*, *sepos-illum*, (*se*, and
SEPS. SEPOS'I-TION. } *posit-um*,) to set apart.
To set apart or aside.

Yet God *seposed* a seventh of our time for his exterior worship.
Donne. Letters, p. 270. To Sir H. G.

To this we must contend with prayer, with actual dereliction and *seposition* of all our other affairs, though innocent and good in other kinds, by a present spirit.

Taylor. Holy Life. Of Prayer, part ii. sec. 17.

SEPS, from the Greek *σηπω*, *I putrefy*, Daud. In *Zoology*, a genus of animals belonging to the family *Scincoidia*, order *Sauria*, class *Reptilia*.

Generic character. Head small, rather obtuse, and covered with scuta; tympanal membrane more or less distinct, and behind the maxillary joint; tongue rather thick, short, and slightly cleft at its tip; neck, body, and tail very long, slender, and cylindrical, covered with round imbricated scales; front and hind limbs very far apart, very slender and short, and terminating each in one, three, four, or five very small toes; viviparous.

This genus is very similar to the Skinks, but distinguished by the long slender form of the body, in which, as well as in some other respects, it resembles the Blind-worms, *Anguis*, but separated from them by the existence of limbs, and by the tympanal membrane being visible. The variation in the number of the toes is very remarkable.

S. Pentadactylus, Daud.; *Anguis Quadrupes*, Lin.; *Lacerta Serpens*, Bl. Seven inches long; it has the head small, oval, rather pointed in front, depressed and covered with polygonal scuta; jaws of equal length, and mouth at the extremity of the head; eyes above the cheeks; body long, straight, cylindrical, and smooth; tail longer than the body, but of equal thickness, cylindrical, and covered with imbricated scales; legs far apart, the anterior being close to the head, the posterior, which are rather shorter, close to the vent, and nearer the head than the tail, all furnished with five toes, armed with curved and pointed claws; the upper surface is muddy or ash-coloured, with several dusky bands, and the belly whitish. Daudin says it is a native of Africa, but Cuvier, of the East Indies.

S. Scincoides, Cuv. This species is briefly mentioned by Cuvier, as having four toes, and the hind ones of unequal length; also another similarly circumstanced.

S. Decresiensis, Cuv.; *Tetradactylus Decres.* Peron.

S. Tridactylus, Cuv.; *Tridactylus Decresiensis*, Peron. In which there are but three toes to each foot. Both the last species are from Decres's Island in Australia.

S. Chalcidicus, Cuv.; *Seps Tridactylus*, Daud.; *Chamaesaura Chalcis*, Schneid. Varies in size according to the country in which it is found; in France it does not exceed five or six inches, but in Sardinia is more than twelve; its colour is muddy or ashy above, with two longitudinal coppery bands on either side; the belly is paler; legs so short that they do not exceed the sixth of an inch, and furnished each with three toes armed with hooked claws; the legs are so short that they scarcely appear to touch the ground. According to Imperati this species is found in the marshy districts of Campania, and moves with great speed, although the legs are so short; it does not leave its hole before sunrise. It dreads the cold, and at the approach of Winter, in Sardinia, buries itself about October, and does not reappear till Spring. It is a very old and vulgar error

that this animal is venomous, and hence the name *Seps*, which was indiscriminately applied by the ancients to this genus and to *Chalcides*. Cetti states that in Sardinia its bite is generally considered harmless, but the peasants think that if an Ox or a Horse swallow one whilst feeding the belly swells, and the animal is likely to die, unless a drink of oil, vinegar, and sulphur be administered. Sauvage, however, in a Paper *Sur la Nature des Animaux Venimeux*, read before the Academy of Rouen in 1754, disproves this by having observed a fowl to eat one of these animals without inconvenience; he further mentions that it passed from the vent as Earthworms do from Geese; that the fowl swallowed it a second time with the same result; but before taking it a third time the bird broke it in two with its beak. In the South of France it is called *Aguglion de prat*, and in Sardinia *Cicigna*. It lives in the fields, feeding on Spiders and small Snails, moves with great activity, and coils itself up like a Snake.

Cuvier mentions another species found in the South of France.

S. Striatus, Cuv.; *Zygnis Striata*, Fitzing. Very similar to the last species, but distinguished by eight or nine longitudinal brown bands.

S. Monodactylus, Cuv.; *Lacerta Anguina*, Lin.; *Lac. Monodact.* Lacep. Total length seventeen inches and three-quarters, of which the head is rather more than half an inch, the body three and a half, and the tail rather more than thirteen and a half; the top of the head covered with scuta of various shapes and sizes, the largest two being placed one before the other, and surrounded by ten others; muzzle delicate and obtuse; both upper and under surface of the body covered with oblong scales, carinated and pointed; upon the sides they encroach on each other, forming transverse rows placed one above the other, and resembling festoons; their limbs, very small and delicate, are each furnished with a single toe, and covered with small scales similar to those on the back. Its colour is yellowish-ash, tinged with brown on the back, greyish-brown on the sides, and very light on the belly. It is found commonly at the Cape of Good Hope.

See Daudin, *Histoire Naturelle Générale et Particulière des Reptiles*; Lacepede, *Histoire Naturelle des Quadrupèdes Ovipares*; Cuvier, *Règne Animal*.

SEPSIS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* short, incumbent, three-jointed; the terminal joint oblong, obtuse, compressed; its base furnished with a naked dorsal bristle; head globose; *hypostome* flat and bearded; eyes rounded, distant; wings two, erect and vibrating; *abdomen* four-jointed, petiolated, somewhat cylindrical, naked, and globose; legs rather long and slender.

Type of the genus, *Musca cynipsea*, Linnæus; Meig. *Zweif. Insect. Europ.* vol. v. p. 287. pl. xlv. fig. 1—5. Rather an extensive genus, the species of which are extremely active and nimble, and are remarkable for always vibrating their wings: about a dozen species are found in England.

SEPT, Fr. *cep*, the stock of a tree or plant. Cotgrave. It. *ceppo*; Sp. *sepa*, from *cippus*, a sharp stake, or *caput*, the head; met. the source, origin.

A stock, a race, a generation, nation, tribe or family.

And this judge being, as hee is called, the Lord's brehon, adjudgeth, for the most part, a better share unto his Lord, that is the Lord of the soyle, the head of that sept.

Spenser. Works, vol. viii, p. 304. *View of the State of Ireland*.

SEPS.

SEPT.

SEPT.
—
SEPTE-
NARY.

For the Irish man standeth so much vpon his gentilitie, that he termeth anie one of the English *sept*, and planted in Ireland, Bobdeagh Galteagh, that is, English churle.
Holinshed. Description of Ireland, ch. viii.

Because the inferiour sort of the Irish were poor, and not amenable by law, he provided that five of the best persons of every *sept* should bring in all the persons of their surname, to be justified by the law.
Fuller. Worthies. Kent.

But he seemed to suspect, that the true and ancient Russians, a *sept* of whom he told me he had met with in one of the provinces of that empire, were rather white like the Danes than any thing near so brown as the present Muscovites, whom he guesses to be descended of the Tartars, and to have inherited their colour from them.
Boyle. Works, vol. i. p. 715. Of Colours, part ii.

Their officers had little power over their soldiers, who, being all of the old Irish *septs* of Ulster, were entirely govern'd by the fryars.
Clarendon. History of the Rebellion, vol. iii. book xiii. p. 430.

SEPTARIA, in Zoology, a genus of *Acephalous Mollusca*.

Generic character. Shell bivalve, continued in a very long testaceous tube, which is gradually attenuated anteriorly, and seemingly divided interiorly by vaulted incomplete partitions; the anterior extremity of the tube terminated by two other slender, undivided tubes.

Type of the genus, *Serpula polythalmia*, Linnæus; *S. arenaria*, Lamarck; Rumphius, *Mus. pl. lxi. fig. e.* Inhabits the Indian Seas.

SEPTAS, in Botany, a genus of the class *Heptandria*, order *Heptagynia*. *Generic character*: calyx seven-parted; corolla, petals seven; germens seven; capsules seven; many-seeded.

One species, *S. capensis*, native of the Cape of Good Hope; it is remarkable as being the only plant yet discovered in the order, and for the very unusual botanical number seven.

SEPTEMBER, Fr. *Septembre*; It. *Settembre*; Sp. *Septembre*; Lat. *September*; the seventh month from March, with which month the Roman year commenced; Vossius and others say from Imber. See OCTOBER.

His [Libra's] propre month is sayd *Septembre*,
Which yeueth men cause to remembre,
If any sore be left behynde
Of thyng, which greue maie to kynde.

Gower. Conf. Am. book vii.

And the 26 of *Sept.* (1580) (which was Munday in the just and ordinary reckoning of those that had stayed at home in one place or country, but in our computation was the Lord's day or Sunday) we safely, with joyfull minds and thankful hearts to God, arived at Plimouth.

Sir F. Drake. The World Encompassed, &c. p. 108.

SEPTENARY, *adj.* } Fr. *septennaire*; It. *set-*
SEPTENARY, *n.* } *tenario*; Sp. *septenario*;
SEPTE'NNIAL. } Lat. *septenarius*, seven.

Septenary, consisting of seven.

Septennial, at every seventh year; or during seven years.

But among all the ancients I haue met with Macrobius in his first booke of Scipio's dreame, extolling (as Philo doth) the rare and singular effects of the *septenary* number, most cleerely and learnedly expresth the remarkeable pawses and changes of nature every seventh year in the course of man's age.

Hakewell. Apologie, book iii. ch. ii. p. 174.

A moneth of peragratiō is the time of the moon's revolution from any part of the zodiack unto the same again; and this containeth but 27 dayes and about 8 hours, which cometh short to compleat the *septenary* account.

Sir Thomas Brown. Vulgar Errours, book iv. ch. xii. p. 264.

The time of the pentarchie indured likewise 49 yeares, or seauen *septenaries*.
Holinshed. Description of Britaine, ch. ix.

And the number declares the nature. The hebdomad or *septenary* is a fit symbole of God, as he is considered having finished these six days' creation.

More. Writings, part iii. ch. ii. p. 86. Cabbala.

But the subject which of all others employed the eloquence and abilities on both sides to the most vigorous exertion was a motion made by Mr. Bromley, who proposed that a bill should be brought in for repealing the *Septennial* Act, and for the more frequent meeting and calling of parliaments.

Smollett. History of England, vol. ii. book ii. ch. v. p. 536. George II.

SEPTE'NTRION, } Fr. *septentrion*; It. *setten-*
SEPTE'NTRIONAL, } *trione*; Sp. *septentrion*; Lat.
SEPTE'NTRIONALLY, } *septentrio*, (*septem triones*, Fes-
SEPTE'NTRIONATE, *v.* } tus; but Vossius is doubtful.)

The seven stars forming the constellation Arctos, the Bear; and which, from its position in the North, gives name to the North generally.

And eke this Nero gouerned all the peoples that be vnder the colde sterres, that highten the *septentrions*, that is to sain, he gouerned all the peoples that be vnder the partie of the north.

Chaucer. Boecius. De Consolatione, book ii.

Although that Nero were as vicious,
As any fend, that lith ful low adoun,
Yet he, as telleth us Suetonius,
This wide world had in subjection,
Both est and west, south and *septentrioun*.

Id. The Monkes Tale, v. 14381.

Than sawe I well that the bodie of Uenus in her latitude of degrees *septentrionals*, ascendeth in the ende of degree fro the hed of Capricorne.

Id. Astrolabie, p. 464.

Thou art as opposite to euery good
As the antipodes are vnto vs,
Or as the south to the *septentrion*.

Shakspeare. Henry VI. Third Part, fol. 151.

————— And on the north
To equal length back'd with a ridge of hills
That screen'd the fruits of th' earth and seats of men
From cold *septentrion* blasts.

Milton. Paradise Regained, book iv. l. 28.

For in the *Æthyopians* the juice of bloud is drawne upward again by the nature of heat, but among the nations *septentrional* the same is driven to the inferior parts by reason of moisture apt to fall downward.

Holland. Plinie, book ii. ch. lxxviii.

When Waueny in her way, on this *septentrial* side,
That these two eastern shires doth equally divide,
From Laphamford leads on her stream into the east.

Drayton. Poly-olbion, song 20.

It is, and confirmable by every experiment, that steel and good iron never excited by the loadstone, discover in themselves a verticity, that is, a directive or polary facultie, whereby, conveniently placed, they do *septentrionate* at one extream and australize.

Sir Thomas Brown. Vulgar Errours, book ii. ch. ii. p. 63.

For if they be powerfully excited and equally let fall, they commonly sink down and break the water at that extream whereat they were *septentrionally* excited.

Id. Ib. p. 67.

————— But if the spring
Preceding should be destitute of rain,
Or blast *septentrional* with brushing wings
Sweep up the smoky mists and vapours damp,
Then woe to mortals!

Philips. Cider, book i.

SEPTICK, } Fr. *septique*; Lat. *septicus*; Gr.
SEPTICAL. } *σηπτικός*, from *σηπ-ειν*, to rot, to putrefy.
Putrefactive.

There was no absurdity in Galen, when as a *septic* medicine he commended the ashes of a salamander.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xiv. p. 174.

Ceda, after the nature of *septic* and escharotick medicines, corrodes and consumes the flesh in a very short time, if applied to a living body, but, on the contrary, is a sovereign preservative for the same body the very moment it is deprived of life.

Greenhill. Art of Embalming, p. 272.

SEPTE-
NARY.
—
SEPTICK.

SEPTILATERAL. **SEPTILATERAL**, having seven sides, (*septem latera*.)

SEPULCHRE. If we begin with Saturn, and successively draw lines from angle to angle, until seven equicrural triangles be described, whose bases are the seven sides of the *septilateral* figure.

Sir Thomas Brown. Vulgar Errours, book v. ch. xx.

SEPTUAGENARY. *Fr. septuagenaire; It. settuagesimal.* *tuagenario, settuagesima; Sp. septuagenario, septuagesima; Lat. septuagenarius, seventy; septuagesimus, seventieth.*

Nor can the three hundred years of John of times, or Nestor, overthrow the assertion of Moses, or afford a reasonable encouragement beyond his *septuagenary* determination.

Sir Thomas Brown. Vulgar Errours, book iii. ch. ix. p. 158.

Whereas in our abridged and *septuagesimal* ages it is very rare, and deserves a distick to behold the fourth generation.

Id. Ib. book vi. ch. vi. p. 373.

SEPULCHRE, n. *Fr. sepulchre, sepulture; It. sepolcro, sepoltora; Sp. sepulchro, sepultura; Lat. sepulchrum, sepultura, from sepul-tum, past participle of sepilire, to bury, and this from seps, sepes, a hedge, a fence, a defence. See BURY.*

Sepulture; a burial or burying, an interment or entombment. *Sepulchre*; that in which, the place where, a burial or entombment is made; a tomb, a grave.

Wel agte þat he be wurpe stude, þat such *sepulture* ys.
R. Gloucester, p. 166.

And Joseph broughte linnen cloth and took him down and wrappide in the linnen cloth and leyde him in a *sepulcre* that was hewen of a stoon and walewide a stoon to the dore of the *sepulcre*.
Wichf. Mark, ch. xv.

And he broughte a lynnē clothe, and toke him doune, and wrapped hym in the linnen clothe, and layde him in a tombe y^t was hewen out of y^e rocke, and rolled a stone vnto y^e dore of the *sepulcre*.
Bible, Anno 1551.

He hath nede of charitable conseilling and visiting in prison and in maladie, and *sepulture* of his ded body.

Chaucer. The Persones Tale, p. 169.

And than out of his *sepulture*
There spronge anone perauenture
Of floures suche a wonder sight,
That men ensample take might
Upon the dedes which he dede.

Gower. Conf. Am. book i. p. 35.

Than at last came in there
His masons, for thei shulde craue,
Where that he wolde be begraue,
And of what stone his *sepulture*
Thei shulden make, and what sculpture.

Id. Ib. book vii.

Sir John Conweie being president of Vlster, in viewing the *sepulture*, testified to haue seene three principall iewels.

Holinshed. Description of Ireland, vol. vi. p. 85.

LEAR. Regan, I thinke you are; I know what reason
I haue to thinke so, if thou should'st not be glad,
I would diuorce me from thy mother tombe,
Sepulchring an adultresse.

Shakspeare. Lear, act ii. sc. 4. fol. 294.

Then thou our fancy of itself bereaving,
Dost make us marble with too much conceiving;
And so *sepulcher'd* in such pomp dost lie,
That kings for such a tomb would wish to die.

Milton. Epitaph on Shakspeare, l. 13.

As in the land of darkness yet in light,
To live a life half dead, a living death,
And buried; but O yet more miserable!
My self my *sepulcher*, a moving grave.

Id. Samson Agonistes, l. 100.

Such are those thick and gloomy shadows damp
Oft seen in charnel vaults and *sepulchres*,
Ling'ring and sitting by a new made grave,
As loath to leave the body that it lov'd.

Id. Comus, l. 470.

Thus hauing slaine him; a *sepulchrall* feast
He made the Argiues, for his lustfull guest,
And for his mother, whom he did detest.

Chapman. Homer. Odyssey, book iii.

Disparted streams shall from their channels fly,
And, deep surcharg'd, by sandy mountains lie,
Obscurely *sepulcher'd*.
Prior. Solomon, book i.

Christopher Seintgerman, called by some Senyarmayn or Seyn-german, son of Sir Hen. Seintgerman, Knt., by Anne his wife, daughter of Tho. Tindale, Esq., was born, as I conceive, in Warwickshire, particularly at Shelton near to the city of Coventry, in the chapel or church of which place his father and mother received *sepulture*.
Wood. Athenæ Oxonienses, vol. i. p. 54.

The common rites of *sepulture* bestow,
To soothe a father's and a mother's woe;
Let their large gifts procure an urn at least,
And Hector's ashes in his country rest.
Pope. Homer. Iliad, book xxii.

I would separate it from those varnished qualities, which, like whited *sepulchres*, are but a disguise for internal deformity.
Knox. Works, p. 472. Essay, No. 96.

Mr. Monkhouse happening one day to pull a flower from a tree which grew in one of their *sepulchral* inclosures, an Indian, whose jealousy had probably been upon the watch, came suddenly behind him and struck him.

Cook. First Voyage, vol. i. book i. ch. xiv. p. 143.

SEQUACIOUS. *Fr. sequele, sequent; It. sequela, sequela, sequente, sequente; Sp. sequela; Lat. sequel, sequela, sequens, from sequi, to follow, (sequor, from Gr. εἰ-ομαι, conversa consonante priori, et spiritu aspero. Vossius.)*

Sequacious and *sequent* are used alike; following, attending, accompanying, succeeding, continuing in the same course or order; coming after, *sc.* a force used to draw, ductile.

If vertue yet no voided unthankfull time,
Failed of some to blast her endles fame
A goodly meane both to deterre from crime,
And to her steppes our *sequele* to enflame.

Surrey. Of the Death of Sir T. W.

For oftentimes it hath been seen, that to a new enterprise there followeth a new maner and strange *sequel*.
Strype. Eccles. Memorials, vol. i. book i. ch. iii. p. 78. Henry VIII.

Wherefore, after punysshment done vpon some of his enemyes, he ferynge y^e *sequell* and reuengement of the same, laft that countree and retourned vnto Rome.

Fabyan. Chronycle, ch. lxiii.

The two dukes hereupon returned to court, bringing the next day the king's letters to the cardinal, who having read them, delivered immediately the great seal; in *sequence* thereof, also submitting himself to the king.

State Trials, 20 Henry VIII. 1529. Cardinal Wolsey.

This [Robert] was cōynge in many scyences, and a man of good maner and vertue; he made dyuers impnes, *sequenses*, and responds, as O Tuda.

Fabyan. Chronycle, ch. 203.

Of such our patrone here, the Viscont Mountacute,
Hath many comely *sequences*, well sorted all in sute.
Gascoigne. Deuise for Maske for Viscont Mountacute.

All matter whereof creatures are produced by putrefaction, haue evermore a closeness, lentour, and *sequacite*.

Bacon. Natural History. Cent. 9. sec. 900.

In the greater bodies the forge was easie, the matter being ductile and *sequacious*, obedient to the hand and stroke of the artificer, apt to be drawn, formed, or moulded into such shapes and machines, even by clumsy fingers.

Ray. On the Creation, part ii. p. 374.

Yet many of these have continued in a certain channel, and carried a constant stream, as will plainly appear in the *sequel* of our Worthies.

Fuller. General Worthies of England.

SEPULCHRE.

SEQUACIOUS.

The servility and *sequaciousness* of conscience.

Taylor. Artif. Handsom. p. 181.

SEQUESTER.

Although Almighty God be not bound or straitned in his operation to the *sequaciousness* of the matter, yet it is not improper for us to suppose that he may peruse the laws of his own making, where it consists with his design and intention.

Hale. Origination of Mankind, fol. 304.

I have seene the fearfull *sequele* of that experiment in a man, who, upon the taking of that medicine, threw himselfe headlong from an high loft and brake his necke.

Holland. Plinie, book xxii. ch. xxiii.

Like as the waves make towards the pebbled shore,
So do our minutes hasten to their end;
Each changing place with that which goes before,
In *sequent* toil all forwards do contend.

Shakspeare. Sonnet 60.

————— A *sequent* king, who seeks
To stop thir overgrowth, as inmate guests
Too numerous.

Milton. Paradise Lost, book xii. l. 165.

PER. Sir Holofernes, this Berowne is one of the votaries with the king, and here he hath framed a letter to a *sequent* of the stranger queenes, which accidentally, or by the way of progression, hath miscarried.

Shakspeare. Love's Labour Lost, fol. 132.

What should I instance in that whereof no Scripture, not books, but the whole world is full; the inevitable *sequences* of sin and punishment?

Hall. Works, vol. iii. p. 199.

————— Tell my friends,
Tell Athens, in the *sequence* of degree,
From high to low throughout.

Shakspeare. Timon of Athens, fol. 97.

Orpheus could lead the savage race,
And trees uprooted left their place,
Sequacious of the lyre;
But bright Cecilia rais'd the wonder higher.

Dryden. For St. Cecilia's Day, p. 607.

As to the violence which those gentlemen are forced to use with our church's forms, it will appear more fully in the *sequet*.

Waterland. Works, vol. ii. p. 305. Arian Subscr.

————— Now extract
From the *sequacious* earth the pole, and now
Unmarry from the closely clinging vine.

Smart. The Hop-Garden.

The *sequel* of the psalm, from the end of the seventh verse, exhibits the remarriage, that is, the restoration of the converted Jews to the religious prerogative of their nation.

Horsley. Sermon 6. vol. i. p. 109.

SEQUESTER, v.

SEQUESTRATE, v.

SEQUESTRA'TION,

SE'QUESTRATOR,

SEQUESTRABLE.

Fr. *sequestrer*; It. *sequestrare*; Sp. *secrestar*; Lat. *sequester*, an arbitrator, a mediator, so called, because each party follows (*sequitur*) his judgment; or rather from *sequo*, *h. e. dico*, *επω*, because he pronounces (*dicat*) judgment; from *sequester*, Vossius adds, is *sequestrare*, to act as *sequester* or arbitrator, also *separare*, to separate. Cotgrave explains the Fr. *sequestrer*, "to lay aside, to put into an indifferent person's hands;" and *sequestration*, "the separating of it from the possession of those who contend for it." See the Quotation from Blackstone. To *sequester*, generally, is,

To separate or part from, to withdraw, to recede, to retire, to seclude; to go, to put, aside;—to sever, to disjoin.

For hym hathe God the Father sealed. This is to sai, that him hath God the Father specially *sequestred*, and seuered, and set aside out of the number of al creatures, and hath sent him in to world, the anointed, sygned, and marked with y^e very prynt of his own seale.

Sir Thomas More. Workes, book i. p. 1046. Dialogue.

That it appeareth very strange unto us, and a great wonder unto all true subjects, that you will either assist or suffer his Majesty's most royal person to remain in the guard of the Duke of Somerset's men, *sequestred* from his own old sworn servants.

Burnet. Records, vol. ii. part ii. book i. p. 262. Letters from the Lords.

Which I charge and command you by the same authority to observe and keep upon pain of deprivation, *sequestration* of your fruits, or such other coercion as to the king's highness, or his vicegerent for the time being, shall seem convenient.

Id. Ib. vol. i. part ii. book iii. p. 279.

Next I desire them to reflect upon aged *sequestred* ministers, whom, with their charge, the (generally ill paid) fifth part will not maintain.

Fuller. General Worthies.

And these must be *sequester'd* with all speed,
Or else they vow'd their swords should do the deed.

Daniel. History of Civil Wars, book i.

But first a pardon begg'd, if that my cause
So much constrain'd me as to breake the lawes
Of her wish'd *sequestration*.

Browne. Britannia's Pastorals, book i. song 5.

Yet by their *sequestrators* and subcommittees abroad, men for the most part of insatiable hands and noted disloyalty, those orders were commonly disobeyed.

Milton. Works, vol. ii. p. 40. History of England, book iii.

O, piteous of my fate, vouchsafe to shew
(For what's *sequester'd* from celestial view?)
What power becalms th' innavigable seas!
What guilt provokes him, and what vows appease!

Pope. Homer. Odyssey, book iv.

A Christian, in all acts of duty, ought to *sequester* his mind from all respect to an ensuing reward, and to commence his obedience wholly and entirely upon the love of duty itself, abstracted from all regard to any following advantages whatsoever.

South. Sermon 5. vol. iv.

Hartshorn, and divers other bodies belonging to the animal kingdom, abound with a not uneasily *sequestrable* salt.

Boyle.

In general contagions more perish for want of necessaries than by the malignity of the disease, they being *sequestered* from mankind.

Arbuthnot. On Air.

The infallible effect of the long absence of a master, whose return is quite despaired of, viz. the insolence of his servants and neighbours, the danger of his son and wife, and the *sequestration* of his estate.

Pope. Homer. View of the Epic Poem, (from Bossu.)

Have the periodical criticisms, in which the nation at large is deeply interested, I mean the journals of literature, those important publications which must have great influence on the principles and learning of the times; have these been in the hands of men who enjoy leisure and a competency in the *sequestered* shades of Oxford and Cambridge.

Knox. Works, vol. iv. p. 263. Liberal Education.

A *sequestration* issues to seize all his personal estate, and the profits of his real, and to detain them subject to the order of the Court. *Sequestrations* were first introduced by Sir Nicholas Bacon, Lord Keeper in the reign of Queen Elizabeth; before which the Court found some difficulty in enforcing its process and decrees.

Blackstone. Commentaries, vol. iii. book iii. ch. xxvii. p. 444.

SEQUESTRATION, in Law, is of various kinds, most of which have this common point of resemblance, namely, that each is a legal process, under which property of an individual is seized and made applicable to some purpose required by law without the concurrence of the owner.

Sequestration, issuing out of the Courts of Common Law, is the most common of these proceedings. When a judgment has been obtained against a beneficed clergyman, and that judgment remains unsatisfied, the party entitled to the fruits of the judgment is obliged to levy the sum recovered by an execution. In the first instance he issues the ordinary writ of execution, called a *fieri*

SEQUESTER.
—
SEQUESTRA-TION.

SEQUESTRATION.
—
SEQUIN.

facias, to which all persons are subject, directing the Sheriff to levy the amount upon the goods and chattels of the defaulter. If the Sheriff is able to do so, the amount is levied, and there is an end of the matter; if, on the other hand, he cannot find goods and chattels sufficient, he returns the writ to the Court, stating his disability, and certifying that the individual has a rectory or other ecclesiastical benefice, as the case may be, in the County. Upon this return a writ of Sequestration, called either a *levari facias de bonis ecclesiasticis*, or a *sequestrari facias*, according to the mode in which it is drawn up, issues to the Bishop of the Diocese, requiring him to levy the amount upon the ecclesiastical goods of the clergyman. Upon this writ the Bishop or his officer makes out a Sequestration, directed to the Churchwardens or persons named by the Bishop, or, upon proper security, to persons named by the party who issues the writ, requiring them to sequester the tithes and other profits of the benefice; which Sequestration should be forthwith published, not by reading it in church during divine service, a ceremony which is, in our opinion, abolished by the second section of 7 William IV. and 1 Victoria, c. 45, but by affixing a notice of its contents at or near the church door before the commencement of the service, as required by that Statute. The Sequestration is a continuing charge upon the benefice, and the Bishop may be called upon from time to time to return to the Court an account of what has been levied under it. The Court has the same power over the Bishop that it has over a Sheriff in respect of ordinary writs of execution; and if the Bishop is negligent in the performance of his duty, or returns an untrue account of the proceedings under the writ, he is liable, in the same way as the Sheriff is liable, to an action at the suit of the party damnified thereby.

When a beneficed clergyman is discharged under the Insolvent Debtors' Act, a Sequestration may be granted by the Bishop to the assignees, and the order of adjudication in the matter of the insolvency is a sufficient warrant to the Bishop for so doing. See 7 George IV. c. 57. sec. 28.

Sequestration is also a process in the Courts of Equity, and in those Courts is not confined to ecclesiastical persons, but is of a more general application. When a bill has been filed in a Court of Equity, and the defendant does not put in his answer, and he cannot be found, so that the process against his person is inoperative, a Sequestration issues, under which his property is seized and retained, subject to the order of the Court. The bill is then taken *pro confesso*, and the Sequestration continues as the mode of enforcing performance of the decree.

Sequestration is also a process of the Ecclesiastical Courts. When a benefice is full, the profits may be sequestered if the incumbent neglects his cure; and if there be a vacancy, the profits are to be sequestered, and to be applied so far as necessary in providing for the service of the cure during the vacancy, the successor being entitled to the surplus.

SEQUIN, a French word formed from the Italian *zecchino*, is doubtless formed from *zecca*, "the mint," a term borrowed probably from the Egyptian Arabs, with whom the Italians, and particularly the Venetians, whose sequins have the most general currency, had such large dealings in the Middle Ages. Sikkah (pronounced by the Syrians sekkah,) signifies in Arabic "the striking of a coin," and thence the mint where coins are struck.

Chequeen, sometimes used for the Turkish coin called *fundukli*, (*i. e.* stamped piece,) is a corruption introduced by English traders, perhaps from some confusion between the pound-weight called *cheke*, and the old word *zequin* or *sequin*. The Venetian *zecchino* worth 22 lire, (from *libre*,) as before observed the sequin most in use, is a gold coin weighing 2 dwts. 6 gr., and containing 53·6 grains of pure gold. Its value in our money is 9s. 6d. The other Italian States in which sequins are coined are as follows:—

SEQUIN
—
SE-
RAGLIO.

		s.	d.
Tuscany	1 zecchino	9	5·83
Genoa	1 ditto	9	5·41
Milan	1 ditto	9	4·98
Piedmont	1 ditto	9	4·34
Rome	1 ditto (new)	9	2·86
	1 ditto (old)	9	1·16
Naples	1 ditto	6	7·42

The Venetian *zecchino* has on the obverse the figure of the Doge kneeling before Christ (?) holding a cross. Above the kneeling figure are the initials of the Doge's name, as ALOY. MOC. (Aloysius Mocenigo,) with D. V. X. (Dux) over his head, and near the edge, placed one above the other, the letters S. M. V. E. N. E. T. *i. e.* Sanctus Marcus Venetus. On the reverse is a full length figure of St. Mark with a glory of stars, and round the edge this legend, SIT. T. XTE. DAT. Q. TV. REGIS ISTE DVCAT., supposed by Muratori (*Antiq. Ital.* ii. 649.) to signify SIT TIBI, CHRISTE, DATVM QVOD TV REGIS: ISTE DVCATVM.

The Turkish sequin, as it is erroneously called, is the *fundukli*,* which has the cipher (*tughrá*) containing the name of the reigning Sultán on one side, and Struck at Islámbúl in the year (with the date) on the other. The *zer-mahbúb* (beloved gold) or double *fundukli* has on one side,

Sultan . . . son of . . . struck at Islámbúl (for Istanbul, *i. e.* Constantinople) in the year . . .

Sultán of both lands (Europe and Asia) and Khákán of both Seas (White and Black;) the Sultán, son of a Sultan, on the other side.

Nearly of the same value is the *yirmí-besh-lik*, (a piece of 25 piastres.) The *misr lí* (Egyptian) or *misir*, as it is commonly called, is a sequin struck at Caíro, and the *rub'-lyeh* (or fourth) is a quarter-misir.

Their values are as follows:—

	s.	d.
Double <i>zeri-mahbub</i> of 1187 (A.D. 1773)	12	11·26
Single " 1204 (A.D. 1789)	5	1·37
<i>Fundukli</i> , 1187 (A.D. 1773)	7	7·94
" 1204 (A.D. 1789)	7	7·11
<i>Misr lí</i> , 1187 (A.D. 1773)	5	5·83
" 1204 (A.D. 1789)	4	9·13
<i>Rub'-lyeh</i>	1	9

From the excessive alloy of the silver coin in Turkey, the relative value of the piastre and the gold coins is in a constant state of deterioration. Kelly, *Cambist*.

SERAGLIO, Fr. *serrail*; It. *serraglio*; Sp. *serallo*. Menage calls it "a Turkish word, that signifies palace." Skinner thinks it from the It. *serrara*, to serr, (*q. v.*) to shut up.

We've here no gaudy feminines to show,
As you have had in that great *seraglio*.

Brome. To Mr. J. B.

* Perhaps from a mint in the Sultán's palace at *Fundukli*, (Filbert-town,) a village on the canal of Constantinople.

SERAPH.
—
SERE-
NADE.

SE'RAPH,
SERA'PHICK,
SERA'PHICAL.

Fr. *seraphin*, which Cotgrave calls "a burning or flame-coloured angel." It. *serafino*; Sp. *seraphin*, from the Hebrew *seraphim*; from *seraph*, to burn. *Seraphic*; angelic, heavenly, purified from earthly dross. See the Quotation from Boyle.

From above flakred the *seraphins*, wherof euery one had syxe wynges. Bible, Anno 1551. *Isaiah*, ch. vi. v. 2.

Yet farre more faire be those bright cherubins,
Which all with golden wings are overdight,
And those eternall burning *seraphins*,
Which from their faces dart out fierie light.
Spenser. *Hymne* 4. *On Heavenly Beauty*.

Brightest *seraph* tell
In which of all these shining orbes hath man
His fixed seat, or fixed seat hath none,
But all these shining orbes his choice to dwell;
That I may find him.
Milton. *Paradise Lost*, book iii. l. 667.

The thrones, the cherube, and *seraphick* bowers,
That, planted round, there sing before the lamb,
A new song to his praise, and great I am.
Ben Jonson. *Under-Woods*. *An Elegie to my Muse*.

The first Being, it is certain, is infinitely more remote, in the real excellency of his nature, from the highest and perfectest of all created beings, than the greatest man, nay purest *seraph*, is from the most contemptible part of matter.

Locke. *Of Human Understanding*, vol. i. book iii. ch. vi. p. 482.

This love I have taken the freedom to style *seraphic* love, (not out of any affectation of tumid words or titles, but) borrowing the name from (if the Romish divines be good marshals of the heavenly host) those nobler spirits of the celestial hierarchy, whose name, in the language to which it belongs, expresses them to be of a *flaming* nature; and whose employment (mentioned in the evangelical prophet's mysterious vision) sufficiently points at the divine object, to which the *flames* that warm them aspire and tend.
Boyle. *Works*, vol. i. p. 249. *Seraphic Love*.

The same *seraphim*, in Hebrew, springs from the root *seraph*, which signifies to burn or *flame*.
Id. *Ib.* vol. i. p. 250. note.

Thus some very *seraphical* men do talk. But it is a very hard doctrine, and yet withal very hard to be disputed against.
Sharp. *Works*, vol. iii. p. 219. *Sermon* 12.

He [William Cartwright] became the most florid and *seraphical* preacher in the university.
Wood. *Athenæ Oxonienses*, vol. ii.

SERAPIAS, in *Botany*, a genus of the class *Gynandria*, order *Diandria*, natural order *Orchideæ*. Generic character: calyx erect, spreading, lip entire, concave at the base; pollen granular.

Thirteen species, natives of both hemispheres; there are five natives of England.

SERENA'DE, n. } Fr. *serenade*; It. *serenata*; Sp. *serenada*; from *serein*, *sereno*.
SERENA'DE, v. }

Applied to
The fresh and cool air of evening; to the evening. (Cotgrave.)

Evening music: "played (adds Cotgrave) at the door, or under the window of a lovely or beloved object."

Nor in court amours,
Mixt dance, or wanton mask, or midnight bal,
Or *serenate*, which the starv'd lover sings
To his proud fair, best quitted with disdain.
Milton. *Paradise Lost*, book iv. l. 767.

These midnight alarms, under the name of *serenades*, do greatly annoy many well disposed persons, not only in the place above-mentioned, but also in most of the polite towns of this island.
Tatler, No. 222.

A man might as well *serenade* in Greenland as in our region.
Id. *Ib.*

When I go a *serenading* again with 'em, I'll give 'em leave to make fiddle-strings of my small guts.
Dryden. *An Evening's Love*, act ii. sc. 1.

To dance, dress, sing, and *serenade* the fair,
Conduct a finger, or reclaim a hair.

P. Whitehead. *State Dunces*.

SERE'NE, v.

SERE'NE, adj.

SERE'NE, n.

SERE'NELY,

SERE'NENESS,

SERE'NITUDE,

SERE'NITY.

Fr. *serein*, *sereigner*; It. *sereno*, *serenare*; Sp. *sereno*, *serenar*; Lat. *serenus*. Vossius thinks *serenus* opposed to *pluvius*, rainy, and to be derived from the Gr. ξερος, dry; and thus applied to such weather as we should call

Fair: generally, calm, still, tranquil, quiet, clear.
To *serene*,

To clear, to still, to compose. *Serene*, n.

Serain, Fr., the mildew, the harmful dew of some summer evenings. See SERENADE.

She, where she passes, makes the wind to lye
With gentle motion, and *serenes* the skye.

Fanshaw. *Lusiad*, (1655,) p. 178.

If the sky continue still, *serene*, and clear, not one egg in an hundred will miscarry.

Howell. *Letter* 28. book i. sec. 1. p. 55.

But thou
Revisit'st not these eyes, that rowle in vain
To find thy piercing ray, and find no dawn;
So thick a drop *serene* hath quencht thir orbes,
Or dim suffusion veild.

Milton. *Paradise Lost*, book ii. l. 22.

Which shewes, where ever death doth please t' appeare,
Seas, *serenes*, swords, shot, sicknesse, all are there.

Ben Jonson. *On Sir John Roe*.

CEL. Some *serene* blast me, or dire lightning strike
This my offending face.

Id. *The Fox*, act iii. sc. 5.

The fogs and the *serene* offend us more,
Or we may think so, than they did before.

Queen. *Arcadia*, act i. sc. 1.

A man that submits to reverent order, that sometimes unbends himself in a moderate relaxation; and in all, labours to approve himself in the *sereneness* of a healthfull conscience; such a puritane I will love immutably.

Felton. *Resolves*, p. 7.

From which equal distribution of the phlegmatick humour, which is the proper allay of fervent blood, I am wont to hope (where I see it) will flow a future quietude and *serenitude* in the affections, and a discreet sweetness and moderation in the manners.

Reliquiæ Wottonianæ, p. 79.

The place is sickly to them, because they come out of a country which never hath any rains or fogs, but enjoys a constant *serenity*.

Dampier. *Voyages*, vol. i. ch. vii. p. 186.

Pure *serenity* apace
Induces thought, and contemplation still.

Thomson. *Spring*.

Take sin and wickedness out of hell, and all its blackness and darkness will vanish, and it will presently clear up into light and *serenity*, and shine out into a glorious heaven.

Scott. *Christian Life*, part iii. ch. vi. p. 695.

The sky, all beauteous to behold,
Was streak'd with azure, green, and gold;
But tho' *serenely* soft and fair,
Fever hung brooding in the air.

Cotton. *Death*.

Wherefore the preferableness of virtue does not arise so much from the transports she occasions as from the calm *serenity* and steady complacence of mind she ensures.

Search. *Light of Nature*, vol. i. part ii. ch. xxxvi. p. 375.

Though in no proud temples you were prais'd,
Nor foreign incense on your altar blaz'd;
Yet white rob'd faith conducted every swain;
Yet meek-ey'd piety *seren'd* the plain.

Grainger. *Tibullus*, book i. *Elegy* 11.

SERES, Fr. *serre*, a hawk's talon; *serrer*, to close, to serr or serrry, q. v.

The talons, the claws.

SERE-
NADE.
—
SERES

SERES.

So though we thus farre prease
Vpon the Grecians, and perhaps may overturne their wall,
Our high minds ayming at their fleet; and that we much appall
Their trussed spirits; yet are they so serpent-like dispos'd
That they will fight, though in our *seres*.
Chapman. Homer. Iliad, book xii.

An eagle rose; and in her *seres* did trusse
A goose, all white, and huge.

Id. Ib. Odyssey, book xv.

SERF, Fr. *serf*, (*servus*), a servant, a serving man;
a slave, a bondman.

A great part of them were *serfs*, and lived in a state of absolute
slavery or villainage.

Hume. History of England, vol. ii. p. 111. Appendix 2.

SERGE, Fr. *sarge*; It. *sargia*; Sp. *serja*, *sarja*.
Skinner derives from Ger. *serge*, *teges*, *tegmen*, in D.
sargie, a coverlet; but whence the Ger. *serge*?

Through Dart and sullen Exe, whose murmuring wave
Envies the Dune and Rother, who have won
The *serge* and kersie to their blanching streams.

Dyer. Fleece, book iii.

Take the same wool, for instance, one man felts it into a hat,
another weaves it into cloth, another weaves it into kersey or *serge*,
another weaves it into arras; and possibly these variously subdi-
versified according to the phantasy of the artificer.

Hale. Origination of Mankind, fol. 157.

Now, shepherds, clip your fleecy care;
Ye maids, your spinning-wheels prepare;
Ye weavers, all your shuttles throw,
And bid broad-cloths and *serges* grow.

Gay. The Shepherd's Week. Pastoral 1.

SE'RGENT, or } Fr. *sergeant*, *sergent*; It. *ser-*
SE'RJEANT, } *gente*; Sp. *sargento*; all, says
SE'RGEANTRY. } Skinner, from the Lat. *serviens*,
in which Junius and Spelman concur.

A Sergeant at Law, says the latter, *quia serviens ad*
legem; and Grand Sergeantry, *grande servitium*. See
the Quotations from Blackstone and Gibbon. Cotgrave
says, *sergent*, in old Fr., was a footman, or souldier that
serves on foot.

In his auhtend gere þat William was regnand,
Extendours he sette forto extend þe land,
Erlidam & baronie how mykelle felle to þe schelde,
Knýght & *sergeancie* als how mykelle þei helde.

R. Brunne, p. 83.

A maner *sergeant* was this prive man.

Chaucer. The Clerkes Tale, v. 8396.

A *sergeant* of the lawe ware and wise,
That often hadde yben at the paruis,
Ther was also, ful riche of excellence.

Id. Prologue to the Canterbury Tales, v. 292.

CAR. He is turn'd wilde upon the question; he looks as he had
been a *serjeant*.

Ben Jonson. Every Man out of his Humour, act iii. sc. 1.

To avoid the vague expressions of the followers, &c. I use,
after Villehardouin, the word *serjeants*, for all horsemen who were
not knights. There were *serjeants* at arms, and *serjeants* at law;
and, if we visit the parade and Westminster-hall, we may observe
the strange result of the distinction.

Gibbon. History of the Roman Empire, vol. xi. ch. lx. p. 211. note.

Such was the tenure by *grand serjeanty per magnam servitium*,
whereby the tenant was bound, instead of serving the king gene-
rally in his wars, to do some special honorary service to the king
in person; as to carry his banner, his sword, or the like; or to be
his butler, champion, or other officer, at his coronation.

Blackstone. Commentaries, vol. ii. book ii. ch. v. p. 73.

The degrees were those of barristers (first styled apprentices,
from *apprendre*, to learn,) who answered to our bachelors; as the
state and degree of a *serjeant*, *servientis ad legem*, did to that of
doctor.

Id. Ib. Introduction, sec. 1.

SERJEANTY, in Law, is the name of one of the
VOL. XXVII.

tenures by which lands are holden of the Crown. It is
derived from *servitium*, as Serjeant is from *serviens*.

SER-
GEANT.

Grand Serjeanty was a species of Knight-service,
and subject to many of its incidents. Its distinguishing
feature was that, instead of serving the King generally in
the wars, the tenant was bound to do some special ho-
norary service to the King in person; as to carry his
banner, his sword, or the like, or to be his butler, cham-
pion, or other officer at the coronation. On the abolition
of military tenures after the restoration of Charles II.,
all the slavish incidents of *Grand Serjeanty* were abo-
lished, but these honorary services were preserved, and
still exist.

Petit Serjeanty consists in holding lands of the
King, by the service of rendering to him annually some
small implement of war, as a bow, a sword, or the like.
This tenure still exists. It is not a military tenure, as it
obliges no personal service, but it is rather of the nature
of free and common soccage, because the services are
strictly defined in amount, and the periods for rendering
them certain. The tenure by which the Duke of Marl-
borough and the Duke of Wellington hold the lands
granted to them by the public is of this description, as
each of them annually renders to the Crown a small flag
which is deposited in Windsor Castle.

SERIAL, i. e. CERRIAL, q. v.

I sie come first all in their clokes white,
A company that ware for their delite
Chapelets fresh of okes *seriall*,
Newly sprong.

Chaucer. The Flower and the Leaf, p. 396.

SERIALARIA, in Zoology, a genus of *Polypiferous*
Zoophytes.

Generic character. Polypiferous mass branched,
horny, with slender fistulous stems, furnished with cylin-
drical, parallel, adjacent, projecting cells, in linear
masses, sometimes separate and sometimes continuous.

Type of the genus, *Sert. lendigera*, Lamarck;
Ellis, *Corall.* 27. pl. xv. fig. 24. Several species; one
of which is found in the English seas, on fuci, below
high-water mark.

SERIANA, in Botany, a genus of the class *Octandria*,
order *Trigynia*, natural order *Sapindaceæ*. *Generic*
character: calyx five-leaved; corolla petals four; nectary
four-leaved; capsules three, connate longitudinally, glo-
bular, dilated at the base into a membranaceous wing.

Ten species, natives of South America and the West
India Islands.

SERIATOPORA, in Zoology, a genus of *Polypi-*
ferous Zoophytes.

Generic character. Polypiferous mass fixed, stony,
branching; branches slender, somewhat cylindrical;
cells perforated, lamellar, as if ciliated on the margin,
and disposed laterally in transverse or longitudinal
veins.

Type of the genus, *S. subulata*, Lamarck; Ellis,
Zoophytes, pl. xxxi. fig. 1, 2. Inhabits the ocean.

SERICA, in Zoology, a genus of *Coleopterous* in-
sects.

Generic character. *Antennæ* clubbed, ten-jointed, the
basal joint thick, clavate, pilose, the second globose,
third and fourth subcylindric, short, fifth conic, sixth
and seventh cup-shaped, the remainder forming a tri-
laminated club, which in the male is very long and
narrow; *palpi* four; maxillary pilose, with the terminal
joint naked, shorter than the others, united, cylindric,
with the apex rather acute; labial with the terminal

SERICA. joint very acute; *labrum* emarginate; head broad; *clypeus* slightly notched; eyes large, globose; *thorax* very short, transverse; body short, ovate, convex; *elytra* elongate, soft; legs slender; *tarsi* pentamerous, very long; claws equal, bifid at the apex.

**SERICO
DERUS.**

Type of the genus, *Scarabæus brunneus*, Linnæus; Stephens, *Illust. Britt. Entom. (Mandibulata,)* vol. iii. p. 219. Not a very extensive genus, of which the type alone is found in England; it frequents sandy districts towards the end of Summer, and is far from uncommon.

SERICARIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* setaceous, curved at the apex, bipectinated in both sexes, the pectinations longest in the males and ciliated; *palpi* four; labial small, three-jointed, compressed, with the apex obtuse; maxillary minute, attenuated at the tip; *maxillæ* short, flat, not spiral; head moderate; *thorax* stout, not crested; *abdomen* moderate, robust in the females, with the apex obtuse, and slightly tufted in the males; wings entire, somewhat diaphanous; anterior elongate, neuuration various; legs and *abdomen* woolly beneath; anterior *tibiæ* with an elongate, compressed, spine-like lobe, posterior simple. Caterpillar robust, fleshy, truncate anteriorly, with an elevation on the third segment; the anal feet produced into two long retractile filaments, with two short spines between; *pupa* inclosed in a hard case, generally formed of pieces of woody matter united by a glutinous substance.

Type of the genus, *Phalæna (bombyx) vinula*, Linnæus; Stephens, *Illust. Britt. Entom. (Haustellata,)* vol. ii. p. 15, &c. Twelve species or upwards, of which nine at least inhabit Britain: this genus is generally called *Cerura*.

SERICH, (Pococke's *Description of the East*, iv. v. 41.) or *Sírîj*, properly *Zîrej*, is the Persian word *Zîreh*, spelt in the Arabian and perhaps the ancient Persian manner. It signifies a small seed, such as cummin or anise; and in Egypt is peculiarly used for the seed of simsim, (*Sesamum Indicum*, Delille, *Flora Ægyptiaca*,) which, when pulverized and immersed in oil, is used as a seasoning to thin cakes of bread or biscuits newly baked, slices of which are steeped in it. The final *j* of *zîrej*, which has been softened down to an inaudible aspirate, was anciently a guttural or harsh aspirate; thus *nîzâg*, "a lance," as the word is written in the ancient Armenian, is reduced to *nîzâh* in modern Persian, though *nîzâg* or *nîzâk* is sometimes used. The Arabian *jîm*, still pronounced *gîm* by the peasants in Egypt, had, no doubt, anciently the sound of a hard or guttural *g*.

SERICOCERA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* long, triarticulate, reaching to the epistome, second joint stout, third cylindrical, and furnished with a slightly downy bristle at its base above; face vertical; *epistome* mostly prominent; eyes generally naked; body slender; wings two, the posterior areolet frequently open; *abdomen* cylindrical or compressed; the middle of the segments generally armed with bristles; legs slightly elongate.

Type of the genus, *Microptera nitida*, Robineau Desvoidy; Macquart, *Diptères*, vol. ii. p. 166, &c. Ten species, most of which are British; they are parasitical on other insects.

SERICODERUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* rather elongate, slender, the three last joints forming a longish capitulum; *trophix* minute; head small, concealed beneath the anterior margin of the thorax, which is slightly produced; *thorax* silky, broad, somewhat triangular, the hinder angles rather acute; *elytra* also silky, slightly gibbous anteriorly, a little depressed behind, the apex distinctly truncate; legs slender; *tarsi* pentamerous, obscurely articulated.

Type of the genus, *S. thoracicus*; Stephens, *Illust. Britt. Entom. (Mandibulata,)* vol. ii. p. 188. One species only, which is sometimes found in damp banks near London.

SERICOMYIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, nutant, triarticulate, the third joint orbicular, with a plumose dorsal seta at its base; *hypostome* descending, tuberculated; body robust, silky; wings two, parallel, incumbent, downy.

Type of the genus, *Syrphus bombylifformis*, Fallen; Macquart, *Diptères*, vol. i. p. 496. pl. xi. fig. 11. Four species, of which three are occasionally found in England, in June and July, on flowers.

SERICORIS, in *Zoology*, a genus of *Hemipterous* insects.

Generic character. *Antennæ* moderate, rather stout, pubescent within of the males, simple of the females; *palpi* stout, slightly ascending, densely clothed with elongate scales, having the terminal joint exposed, slender, and acute; *maxillæ* short; head small, with a short tuft between the antennæ; eyes small; *thorax* rather slender, not crested; wings deflexed during repose; anterior broad, slightly rounded on the hinder margin, the disc more or less marked with straight bands, sometimes darker, at others lighter than the ground above, and the costa with short, oblique streaks towards the apex, which has usually a ring-like spot; posterior also ample, faintly emarginate on the hinder margin; *abdomen* rather long, with a largish tuft at the apex of the males, short and obtuse in the females; legs short and rather stout: females smaller than the males.

Type of the genus, *Phalæna (Tortrix striana,)* Dennis; Stephens, *Illust. Britt. Entom. (Haustellata,)* vol. iv. p. 131, &c. Rather a numerous European genus; of which nineteen species inhabit Britain.

SERICOSOMUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, the basal joint robust, second and third small, subglobose, fourth and following joints elongate-conic, slightly produced on the outer edge, the terminal one simple; mouth deflexed; *palpi* four; head small, retracted; eyes small; *thorax* stout, convex anteriorly; body slightly depressed, linear-elongate, cylindric, densely clothed with a fine short silken pile; legs short; *tarsi* pentamerous, simple.

Type of the genus, *Elater fugax*, Fabricius; Stephens, *Illust. Britt. Entom. (Mandibulata,)* vol. iii. p. 251. Five species; three of which are British, but scarce.

SERICOSTOMA, in *Zoology*, a genus of *Trichopterous* insects.

Generic character. *Antennæ* not so long as the wings, very stout, especially at the base, the basal joint robust, slightly pilose; maxillary *palpi* in the males recurved, densely hairy, the two together forming an obtuse rounded mask, concave within and convex without, and furnished with a silky pile within; in the females elon-

**SERICO-
DERUS.**

**SERICOS-
TOMA.**

SERICA. gated, five-jointed, the terminal joint short and slender; head small, with a tuft between the antennæ; eyes large; *thorax* robust; wings narrow, anterior without transverse nervures, somewhat obtusely rounded at the apex; posterior smaller, elliptic-ovate, slightly folded on the inner margin; *abdomen* somewhat robust, obtuse; legs shortish, slender; *tibiæ* all armed with a pair of spurs at the apex, the intermediate without a second pair below the middle, but the hinder with a pair near the apex.

Type of the genus, *S. Spencii*, Kirby; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. vi. p. 184. pl. xxxiii. fig. 2. Inhabits torrents in the Western and Northern districts of England; only one species known.

SERICOTHRIPS, in *Zoology*, a genus of *Homopterous* insects.

Generic character. *Antennæ* nine-jointed, the style short and biarticulate; *palpi* straight, rounded, triarticulate; head immersed to the eyes; *elytra* narrow, parallel; wings abbreviated; body smooth, coriaceous; *abdomen* tomentose, its apex in both sexes conic, and in the female furnished with a quadri-valved, acute, compressed ovipositor.

Type of the genus, *S. Staphylinus*; Haliday, *Ent. Mag.* vol. iii. p. 444. One species only; found abundantly in the common furze (*Ilex Europæa*) in this country.

SERIES, *Fr. serie*; *It. serie*; *Sp. serie*; *Lat. series*; from *serere*, to knit or join.

A conjoined or connected, succession, or course, or order.

What may I conclude of this longe *serie*,
But after sorwe I rede us to be merie,
And thanken Jupiter of all his grace.

Chaucer. *The Knightes Tale*, v. 3069.

Such divine fatalists make fate to be an implexed *series* or concatenation of causes, all in themselves necessary, whereof God is the chief.

Cudworth. *Intellectual System*, book i. ch. i. p. 3.

Jove and ethereal thrones! with heaven to friend,
If the long *series* of my woes shall end,
Of human race now rising from repose
Let one a blissful omen here disclose.

Pope. *Homer. Odyssey*, book xx.

These subjects being thus dispatched, I shall now return to the *series* of our own proceedings.

Anson. *Voyages*, book i. ch. v. p. 73.

SERINGIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Byttneriaceæ*. *Generic character*: calyx five-parted; corolla none; filaments ten, alternately sterile; capsule five, two-valved, two to three-seeded.

One species, *S. platyphylla*, native of New Holland.

SERIOLOA, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. *Generic character*: calyx simple, composed of linear scales; receptacle chaffy; down stipitate, slightly pilose, feathered at the apex.

Three species, natives of Barbary and Sicily.

SERIOLOA, Cuv. In *Zoology*, a genus of animals belonging to the family *Scomberoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head rounded; jaws, vomer, and palatine bones armed with delicate card-like teeth; body compressed and lateral line unarmed, or the arming almost imperceptible; very short pectoral fins; spines of the first dorsal connected by membrane.

This genus nearly resembles *Caranx*, from which, however, it is distinguished by the lateral line being un-

armed and not carinated, at least the scales covering it are scarcely more prominent than the others. It differs also from *Lichia*, in having the dorsal spines included in the membrane of the fin. They live in deep water, which they only quit at certain seasons of the year, probably for the purpose of spawning. The colours of the young are not so vivid as those of the adult fish.

S. Dumerili, Riss.; *Trachurus Aliciolus*, Rafin. Sometimes becomes so large as to weigh a hundred and sixty pounds; it is of a silvery-grey colour, tinged with azure and amethyst on the back; a golden band runs along each side, and the belly is silvery-white tinged with golden; fins generally transparent blue tinged with yellow; ventrals tinged with blue above and white beneath; caudal fin forked, and edged with blackish. The very young fish are marked with five or six broad vertical black bands. It is a native of the Mediterranean, and on the Sicilian coast known as the *Alicciola*, *Aricciola*, or *Arricinola*. Its flesh is reddish, firm, and of high flavour.

S. Rivoliana, Cuv. Nine inches long, is shorter in proportion than the last; its gape less wide; the bands of the palatine teeth narrower and the vomer longer; the first is shorter than the second dorsal fin and the scales longer. It is more marked than the preceding, and has the temporal band broader. From the Greek Archipelago.

S. Rafinesquii, Riss.; *Trachurus Aguilus*, Rafin. Smaller than the first species; its body rather more full and marked with blue, tawny, and yellow on a silvery-brown ground; eyes silvery, encircled with brown; ventral fins inclining to brown; anal shorter; caudal semilunar. Is a native of the Mediterranean.

S. Lalandi, Cuv. Three and a half feet long; body lengthy; opercular striæ in a broader band; scales on the sides of the tail forming a distinct ridge; colour silvery tinged with blue, and more or less brownish on the back. Is taken off the Brazilian coast.

S. Boscii, Cuv. Five and a half inches long; body broader and thicker than the first species; opercular striæ less distinct; lateral line more curved; spines of the first dorsal large and shorter; second dorsal more forward; lobes of caudal fin broader; colour silvery, with an indication of a brown stripe on the temple. From the coast of Carolina.

S. Falcata, Cuv. Twenty-eight inches long; very similar to *S. Dumerili*, but distinguished from it by the second dorsal and anal being elevated into a sharp point, and the former nearly as high as the body; silvery, tinged on the back with blue. It is caught in the Gulf of Mexico, and called at Porto Rico *el Mereal*.

S. Bonariensis, Cuv. Three and a half inches long; like *S. Rivoliana* it has the brownish temporal band, but is more compressed, and has the lateral line more curved toward the back; colour silvery, tinged with brownish above. From Buenos Ayres.

S. Fasciata, Cuv.; *Scomber Fasc.*, Bl. From six to nine inches long; has the head rather shorter and the profile more convex than either of the preceding; lateral line much raised on the tail; neither dorsal nor anal pointed, but the spines of the former tolerably distinct; is distinguished by sixteen narrow irregular brown bands disposed in pairs, which, reaching the second dorsal, form also spots, five to the dorsal and three to the anal fin; the ground colour of these fins bright green; a black band passes from one eye to the other; pectorals grey, with green spots; upper surface of ventrals black,

SE-
RIOLA.

under black, streaked with green; back golden-brown, tinged with green; sides below the lateral line bright golden. Is caught in the Atlantic, and known to the French sailors as the *Poisson de gouvernail*.

S. Leiarchus, Cuv. Nine inches in length, has the two free spines in front of the anal buried in the flesh, so that they cannot be seen without dissection; colour silvery, tinged with leaden on the back; upon the dorsal two, and on the anal three large blackish spots, the latter edged with white; tip of the second dorsal and of the caudal lobes white; membranes of the ventrals black and their rays white. From Philadelphia.

S. Zonata, Cuv.; *Scomber Zon.*, Mitch. From seven to nine inches long; very similar to the preceding, but distinguished by a crescent passing from eye to eye, and seven vertical blackish bands which extend along the upper part of the body. It is caught during the hot season in the bay of New York.

S. Binotata, Cuv. Two inches in length, and has the general appearance of a *Coryphæna*, excepting its dorsal fin; body covered with very delicate scales; general colour silvery, marked with six or seven vertical black bands; a brown streak passes from eye to eye; the dorsal fin has three bands, but the anal none; base of the caudal marked with one band, and an indistinct black patch on each of its lobes; second dorsal and anal edged with blackish; membrane of ventrals black, their rays white. From Pondicherry.

S. Ruppelii, Cuv.; *Nomeus Nigrofasciatus*, Rupp. Seven inches in length; five black bands pass from the back obliquely downwards and forwards, between the middle ones are some blackish spots and a single one on the top of the tail; first dorsal, caudal, and ventral fins blackish, the latter very long and narrow; second dorsal reddish, tinged with black near the tip, which is yellowish; anal also reddish, with a black spot; pectorals yellowish. The tongue and palate are smooth, and each jaw is armed with a row of little hooked teeth; from these circumstances Ruppel has thought right to place it with the *Nomei*. It is caught at Massuah, on the Red Sea, and there known as the *Gaz*.

S. Dussumieri, Cuv. Two inches long; its form as much resembles *Naucratus* as *Seriola*, but there is no keel on the sides of the tail, and although its first dorsal is small, the spines are connected by membrane, and it has two free spines in front of the anal; its colour is silvery, inclining to steel-blue on the back, and it is entirely girt with seven vertical black bands, and a black spot on each lobe of the tail fin; ventrals black above and grey beneath; the lateral line is very obtusely bent above the pectoral fins. From the Bay of Bengal.

S. Succincta, Cuv. Two inches long; it also has five dorsal spines, but the body is lengthy and narrow, and the lateral line less curved above the pectorals; the bands are the same upon a silvery-blue ground. From the sea between the Cape of Good Hope and St. Helena. Cuvier thinks it may perhaps be the young of some unknown species of Mackerel.

S. Cosmopolita, Cuv.; *Scomber Chloris*, Bl. Ten inches in length; it has the ventral fins very small, and the long pectorals falciform; the body is very deep and much compressed, the lower jaw protractile, in which respects it resembles the genus *Equula*; the jaws, palatine bones, and vomer have only a narrow row of fine teeth; the spine in front of the first dorsal fin is scarcely visible, the fin itself is small and can be depressed into a groove; the two spines in front of the anal fin very

strong; the ridges of the back and belly exhibit some denticles, but not so distinct as in *Equula*; the scales are very small; general colour greenish, tinged with greenish-leaden or violet; at the upper part of the tail near the root of the caudal fin a deep leaden or blackish spot, another on the membranous edge of the opercule, and sometimes one at the root of the pectoral; fins yellowish, and the front of the second dorsal dotted with blackish. This species is taken in the Atlantic, Pacific, and Indian seas; at St. Domingo it is called *Pot-pot*; at Mexico *Cazave*; at the Havanah *Cazavillo*; and at St. Jago in Cuba *Carangue-plate*. Agassiz has called it *Micropterix Cosmopolitana*, from the small size of its ventral fins.

See Cuvier and Valenciennes, *Histoire des Poissons*; Risso, *Histoire Naturelle des principales Productions de l'Europe Méridionale*.

SE'RIOUS, } Fr. sérieux; It. serio, serio;
SE'RIOUSLY, } Sp. serio; Lat. serius; from se, i. e.
SE'RIOUSNESS. } sine, and risus; an origin to which Vossius does not refuse his assent, because he finds in Cicero and Horace *serius* opposed to *jocosus*.

Averse from merriment or levity; sedate, grave; weighty, momentous, important.

Saint Paule would not have made so *serious* and earnest remembrance of the putting upon of the hands, (which he rehearseth as earnestly as baptism,) if it were but such a customable manner that men may do and leave undone as they list.

Sir Thomas More. *Workes*, p. 480. *The Second Parte of the Confutation against Tyndall*.

The archbishop of Yorke, according to the king's desire, shewyd unto them *seriously* the voluntary renouncing of the kyng.

Fabyan. *Chronycle*. Anno 1399.

Shee that taught
The Graces grace, and made the virtues thought
More vertuous than before, is pleased here
To slacke her *serious* flight, and feed your eare
With love's delightsome toys.

Spenser. *Brittain's Ida*.

Strong Fastolph with this man compare we justly may,
By Salisbury who oft being *seriously* employ'd
In many a brave attempt, the general foe annoy'd.

Drayton. *Poly-olbion*, song 18.

Row. She made a puppy of me.

Bya. Be that granted:

She must do so sometimes, and oftentimes;
Love were too *serious* else.

Beaumont and Fletcher. *The Woman's Prize*, act iii. sc. 4.

How conformable Socrates was to the Pagan religion and worship, may appear from those last dying words of his (when he should be most *serious*;) after he had drank the poison, wherein he required his friends to offer a votive cock for him to Æsculapius.

Cudworth. *Intellectual System*, book i. ch. iv. p. 400.

Do but *seriously* set yourselves to be good, do but get your hearts deeply affected with religion as well as your heads, and then there is no fear but you will all be the sons of peace.

Sharp. *Works*, vol. i. p. 22. *Sermon 1*.

Socrates seemed not to express *seriousness* enough, at least, when he bid one of his friends, when he was dying, offer up a cock to Æsculapius for his deliverance.

Stillingsfleet. *Sermon 6*. vol. i. p. 242.

Mark well my shade, and *seriously* attend
The silent lesson of a common friend.

Cotton. *Lines under a Sun-Dial*.

The slightest apprehension, that there only must be a just ruler and judge of the world, will give every well-disposed person great *seriousness* of heart in thinking upon these subjects, and great decency in speaking of them.

Secker. *Works*, vol. i. p. 24. *Sermon 2*.

SERIPHUM, in *Botany*, a genus of the class *Syngenesia*, order *Segregata*. Generic character: calyx one-flowered; corolla tubular; receptacle naked; down plumose; seeds solitary.

Prechours of Godes wordes
Saven þorgh here *sermons* mannes soule fro helle.

Piers Plouhman. *Vision*, p. 114.

Right thus while false Semblant *sermoneth*.

Chaucer. *The Romant of the Rose*.

Then sayd he thus to Palamon the knight;

I trow ther needeth litel *sermoning*

To maken you assenten to this thing.

Id. *The Knightes Tale*, v. 3092.

Withouten words mo, right than

False Semblaunt his *sermon* began,

And saied hem thus in audience.

Id. *The Romant of the Rose*.

I suppose hee [Jonas] did it not in one day; but went faire and easily, preaching here a *sermon*, and there another, and rebuked the sinne of the people, for which they must perish.

Tyndall. *Workes*, p. 29. *Prologue vpon Jonas*.

You *sermon* to vs of a dungeon appointed for offenders and miscreants.

Holinshed. *Description of Ireland*, ch. iv.

So worthy a part of diuine seruice we should greatly wrong, if we did not esteeme preaching as the blessed ordinance of God; *sermons* as keyes to the kingdome of heauen, as wings to the soule, as spurres to the good affections of men, vnto the sound and healthy as foode, as physicke vnto diseased mindes.

Hooker. *Ecclesiasticall Politie*, book v. sec. 22.

Is it a small benefit, that I am placed there, where no oaths, no blasphemies beat my ears? where my eyes are in no peril of wounding objects? where I hear no invectives, no false doctrines, no *sermocinations* of iron-mongers, felt-makers, cobblers, broom-men, grooms, or any other of those inspired ignorants.

Hall. *Workes*, vol. vii. p. 518. *Free Prisoner*, sec. 2.

These obstreperous *sermocinators* make easy impression upon the minds of the vulgar.

Howell.

The wits will leave you, if they once perceive

You cling to lords; and lords, if them you leave

For *sermoners*.

Ben Jonson. *Epigram on the Court-Pucell*.

Their *sermons* are commonly made up of feigned stories and miracles of saints, and exhortations to the worship of them, (and especially of the blessed virgin,) and of their images and relicks. And for the truth of this I appeal to the innumerable volumes of their *sermons* and postils in print.

Tillotson. *Workes*, p. 349. *Sermon 30*.

Under a pretence of *sermonizing*, they have cast off God's solemn worship on this day; the primitive church never thought preaching the sole work of the Lord's day.

Nicholson. *On the Catechism*, (1662,) p. 108.

First then of the first, (forgive my *sermonical* style,) namely, of the fine man.

Knox. *Workes*, vol. ii. p. 195. *On true Patience*, No. 159.

It really gives no improper idea of the method which the old *sermonizers* pursued to eke out their *sermons* to their ordinary and most grievous dimensions.

Knox. *Workes*, p. 474. *On old Sermon Writers*.

SEROLIS, in *Zoology*, a genus of *Isopodous Crustacea*.

Generic character. *Antennæ* four, the superior four-jointed, inferior five-jointed; legs ten, second pair with the last joint expanded and armed with an elongated claw; the sixth pair spinous behind; *abdomen* with rounded foliaceous appendages at the apex, furnished with hair at the base; eyes granulated; head distinct; mandibles horny.

Type of the genus, *Cymothoa paradoxus*, Fabricius; Desmarest, *Crustacea*, vol. i. p. 293. A native of the African coast.

SE'ROSE,

SE'ROUS,

SERO'SITY,

Wheyey; waterish.

Fr. *séveux*, *sérosité*; It. *sierosa*; Sp.

Milton. *Paradise Lost*, book vii. l. 301.

— This moon, that sun,
Those lesser fires about this round which run,
Be but the same which under Saturn's reign
Did the *serpentine* seasons interchain.

Drummond. *Song* 18.

— So though we thus farre prease
Vpon the Grecians, and, perhaps, may overturne their wall,
Our high minds ayming at their fleet; and that we much appall
Their trussed spirits; yet are they so *serpent-like* dispos'd
That they will fight, though in our seres.

Chapman. *Homer. Iliad*, book xii.

When, dreadful to behold, from sea we spy'd
Two *serpents* rank'd abreast, the seas divide,
And smoothly sweep along the swelling tide,
Their flaming crests above the waves they show,
Their bellies seem to burn the seas below;
Their speckled tails advance to steer their course.

Dryden. *Virgil. Æneid*, book ii.

What now can simplicity and innocency, and meekness, and
patience, signifie against all this *serpentine* subtilty?

Stillingfleet. *Sermon* 5. vol. ii. p. 244.

In those fair vales by Nature form'd to please,
Where Guadalquivir *serpentine*s with ease,
(The richest tract the Andalusians know,
Fertile in herbage, grateful to the plow,)
A lovely villa stood.

Harte. *The Vision of Death*.

Old age or leanness produces strait lines; corpulency round
lines; but in a state of health accompanying youth, the outlines
are waving, flowing, and *serpentine*.

Reynolds. *Works*, vol. iii. p. 183. *Art of Painting*.

Between them [two sloping hills,] in the most fertile of vallies,
the Lüne *serpentizes* for many a mile, and comes forth ample and
clear, thro' a well-wooded and richly-pastured foreground.

Mason. *Note on Gray. Letter* 4.

SERPENT WORSHIP, *Ophiolatrea*, a primitive
idolatry, either actually or symbolically celebrated in the
religious systems of almost every nation of the ancient
world. From Babylonia we may trace it East and
West through Persia, Hindûstan, China, Mexico and
Peru, Britain and Gaul, Scandinavia, Italy, Illyricum and
Thrace, Greece, Asia Minor and Phœnicia; and North
and South through Scythia on the one hand, and Africa
on the other; or, to use the comprehensive words of
Bishop Stillingfleet, "wherever the devil reigned the
Serpent was held in some peculiar veneration."

1. *The origin of Ophiolatrea*.—The origin of this
Worship has been referred to the temptation and fall of
man, as detailed in the book of Genesis; and its very
general prevalence gives countenance to the conjecture;
for on no other principle can we satisfactorily account
for an idolatry so singularly replete with mythic allusions
to the events in Paradise. At Babylon,* in Egypt,† in
various parts of Greece,‡ in Hindûstan,§ in Italy,|| in
Africa,¶ in Lithuania,** the Serpent Deity was repre-
sented by a living reptile to whom sanctuaries were
erected, sacrifices offered, and victims slain. In other
countries, where the naked *Ophiolatrea* had been super-
seded by a more recent and successful idolatry, the sym-
bolical preserved the memory of the actual worship.
Thus, in the mythology of Egypt, Greece, and Italy,
the mystic Serpent consecrated†† almost every temple,

* Bel the Dragon.

† Metele.

‡ Delphi,—cave of Trophonius, &c.

§ Rajahstan.

¶ Lanuvium.

¶ Whidah.

** Vilna.

†† *Pinge duos angues—sacer est locus.*—Persius, *Sat.* i. 113.

attended upon almost every deity;* was imaged in the
heavens,† was stamped upon the earth,‡ and charac-
teristically appeared in every thing that belonged to
Tartarus.§ There is scarcely a god or a hero in heathen
mythology whose history is not, in some degree, con-
nected with the sacred Serpent; insomuch that Justin
Martyr calls him the *σύμβολον μέγα καὶ μυστήριον*, "of
all the gods." As a symbol of consecration, the Ophite
hierogram usually assumed the figure of a snake passing
through a globe or circle. Sometimes, however, were
depicted two snakes issuing from opposite sides of the
same circle. The talismanic caduceus was a variation of the
Ophite hierogram; as also was the Gorgon or Medusa's
head, which is the caduceus without its staff, the central
area being filled up with a human face.

Sanconiathon derives *Ophiolatrea* from Thoth or
Tautus, the Mercury Trismegistus of Phœnicia and
Egypt. Cadmus, Orpheus, and Cecrops are also sup-
posed to have been leaders of Ophite colonies.|| All
writers, however, agree in assigning an Eastern origin
to this idolatry, which accords with the conjecture that it
may be ultimately traced to Paradise. Egypt and Greece
received it from Phœnicia; Phœnicia from the plains of
Shinar.

2. *Rites and Temples*.—A religion once so preva-
lent as *Ophiolatrea* may be reasonably expected to have
left some traces of its rites and temples. Classical his-
tory affords a few notices of the former in the Dionusan,
Isiac, Cabiric, and Eleusinian mysteries; while the
nature of the latter is incidentally recorded in those
remarkable lines of Ovid, which, describing the flight
of Medea from Attica to Colchis, inform us,

Æoliam Pitane¶ *lævâ de parte reliquit,*
Factaque de saxo longi simulachra Draconis.

Metam. vii. 357.

But the most curious relic of the Ophite rites, as well
as the most interesting examples of Ophite temples are
to be found in the West of Europe; in Britain and in
Brittany; in the Bardic Poems, and in the majestic
ruins of Abury and Carnac.

A poem, called the *Elegy of Uther Pendragon*, has
the following description of a sacrifice:—

With solemn festivity round the two lakes;
With the lake next my side;
With my side moving round the sanctuary,
While the sanctuary is earnestly invoking
The *gliding king*, before whom the fair one
Retreats upon the veil that covers the huge stones;
Whilst the *Dragon moves round over*
The places which contain the vessels
Of drink offerings;
Whilst the drink offering is in the golden horns,
Whilst the golden horns are in the hand;
Whilst the knife is upon the chief victim;
Sincerely I implore thee, O victorious BEL!

The Bel of this invocation recalls the Bel of the
Babylonians, to whom the Serpent was sacred, and in
whose temple a dragon (*i. e. a large Serpent*) was kept.
The moving of this Dragon "round the vessels which

* Saturn, Jupiter, Apollo, Bacchus, Mars, Æsculapius, Rhea,
Juno, Minerva, Ceres, Proserpine, Diana.

† The constellation Draco.

contain the drink offerings," reminds us of the use of the sacred asp of Isis in the mysteries of that goddess:—

Pigraque labatur circa donaria Serpens!

Ovid. *Amor.* ii. *El.* 13.

SERRA-
NUS.

And the two, in connection, bear singularly upon the idolatrous practice of the Syrian Christians, who consecrated the sacramental elements by the gliding of a live snake about the bread upon the altar!*

The "victim" mentioned in the Bardic Poem was *human*; for homicide was an essential feature in the idolatry of the Serpent.

The temples dedicated to this worship were avenues of single upright stones, arranged in an undulatory course to represent a Serpent moving along the ground. Carnac in Brittany is a remarkable illustration of this idea. The stones of this temple are in alternate sections, high and low, expressive of the muscular action of a snake in motion. The Ophite temples which have remained to our day are invariably connected with a circle, to which the avenues are an approach. This is conjectured to have arisen from an early union of Serpent-worship with that of the Sun. History and mythology are full of the conflicts between the votaries of these two superstitions. And in every case the children of the Sun are represented as victorious over those of the Serpent. The fable of Apollo and Python contending for the Temple of Delphi is an instance of this hostility. The victorious sun-worshippers appropriated the Ophite sanctuaries; and retaining the *περὶ ἡέσαν ὀφιδέα μορφὴν*,† made it an *avenue* to the great circle, the proper Temple of the Sun. These were the true *Dracontia*, or "Dragon Temples," if the derivation of *dracon* from *דֶּרֶךְ-אֶן* (*Derech-on—via solis*) be allowed. Hence originated the mythological legends of dragons covering acres of territory; the Pythons and the Tityuses of antiquity.

The Temple of Abury in Wiltshire consisted of two avenues, each a mile in length, leading to a circle of twenty-eight acres. One of these was terminated by an oval which rested upon a hill, thence called "the Serpent's Head."‡

Carnac was much more extensive, having *eleven* instead of *two* parallel rows of stones, as at Abury, and covering nearly eight miles of ground.§

Serpent worship is still in existence in parts of Abyssinia and Africa; but the subjects of the poetical apostrophe of Lucan,

*Vos quoque qui cunctis innoxia Numina terris
Serpitis aurato nitidi fulgore Dracones!*

are fast receding before the Cross or the Koran, and in a few years more the superstition will be extinct. It has, however, existed long enough to afford an important evidence of Christianity.

SERPICULA, in *Botany*, a genus of the class *Mo-*

noecia, order *Tetrandria*. Generic character: male flower, calyx four-toothed; corolla, petals four: female flower, calyx four-parted; nut tomentose.

Three species, natives of the East Indies and Africa.

SERPIGINOUS, Fr. *serpigne*; It. *serpigne*; Bar. Lat. *serpigo*, from *serp-ere*, to creep.

A creeping, spreading tetter or inflammation.

It began with a *serpigo*, making many round spots, such as are generally called ring-worms, with extream itching, which by frequent scratching heated and mattered, and afterwards scabb'd, and in progress overspread her limbs with a dry white scurf, under which the *serpiginous* circles lay covered.

Wiseman. *Surgery*, vol. i. book i. ch. xxv. p. 229.

SERPULA, in *Zoology*, a genus of *Sedentarial Annelidæ*.

Generic character. Animal inhabiting a solid, calcareous tube, more or less irregularly twisted and fixed upon some extraneous substance; its body elongated, slightly depressed, and attenuated behind, composed of numerous narrow segments, armed on each side with a row of subulate and hooked bristles; *branchiæ* terminal, fan-shaped, divided into numerous plumose digitations; mouth terminal, situated between the *branchiæ*, and surrounded by a pedicellate funnel or club-shaped operculum.

Type of the genus, *S. vermicularis*, Linnæus; Brown, *Illust.* pl. ii. fig. 2, 3. Several species occur, both recent and fossil; of the former five or six are found on the coast of Britain.

SERR, v. } Fr. *serrer*; It. *serrare*, to close,
SE'RRING, n. } compact, which Skinner thinks is from the Lat. *sera*, q. d. *obserare*, to bolt or bar. And see the writers in Menage. See *ante*, SERE.

To close, to compress, to compact, to constrain, to force or press close together.

For the heat doth attenuate; and by attenuation doth send forth the spirit and moister part of a body; and, upon that, the more gross of the tangible parts do contract and *serve* [*serr*] themselves together. Bacon. *Natural History*, sec. 82.

Grinding of the teeth is caused (likewise) by a gathering and *serring* of the spirits together to resist. Id. *Ib.* sec. 714.

The frowning and knitting of the browses is a gathering or *serring* of the spirits to resist in some measure. Id. *Ib.* sec. 716.

But now
Foule dissipation follow'd, and forc't rout;
Nor serv'd it to relax thir *serried* files.

Milton. *Paradise Lost*, book vi. l. 597.

Impatient thus the Theban chief survey'd
The close-compacted ranks on ev'ry side;
To find where least the *serred* orb could bear
The strong impression of a pointed war.

Wilkie. *The Epigoniad*, book ii.

Malignant art no engine hath devis'd,
To man destructive, like his own fell hand
In *serried* fight. Glover. *The Athenaid*.

SERRANUS.

SERRANUS, from the Lat. *serra*, a saw, Cuv. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

* See Epiphanius, lib. i. tom. iii. p. 268, &c.

† Nonnus on the transformation of Cadmus and Harmonia. *Dionysiac*, lib. xlv.

§ *Archæol.* vol. xxv. contains a full account of Carnac. See also Deane, *On the Worship of the Serpent*.

SERPI-
CULA.SERRA-
NUS.

SERRA-
NUS.

teeth of a saw; opercle provided with two or three flat spines; skull and opercles scaly; muzzle and jaws sometimes naked, sometimes covered with more or less distinct scales; dorsal fin single and elongated.

This genus of Cuvier's has been confounded by Bloch with the *Holocentri*, a great number of which described by him are really *Serrani*; it is distinguished from *Perca* and *Labrax* by its single and lengthened dorsal fin, and is very remarkable for the saw-like edging of its preopercle, which, in many of the species, becomes so fine as to be almost imperceptible. In like manner also the scaly covering of the head varies considerably, and though not sufficient, as held by some zoologists, to range them in distinct genera, is sufficient to form them into sections of the same genus, as the scales on the muzzle and jaws are more or less distinct, or entirely deficient. Cuvier has therefore divided them into three sections, and of these the first exhibit a remarkable instance of hermaphroditism, a fact first pointed out by Cavolini.

Risso states that these fish swim with open mouth, and darting on their prey with the rapidity of an eagle, devour immense quantities of Herrings, Spari, and other fish which consort in shoals.

a. *True Serrani*, vulgo, *Sea Perch*.

In these the jaws are either naked, or the scales covering them almost imperceptible.

S. Scriba, Cuv.; *Perca Scriba*, Lin. About eight or ten inches in length, and rarely exceeding half a pound in weight; mouth extending obliquely as far as the front edge of the eye, and when closed the lower jaw projects beyond the upper; the lips, which are not very fleshy, become widened by membrane near their commissure; cheeks, back of the head, and opercular process scaly; preopercle rounded, and its edge finely and regularly denticulated; bony part of the opercle terminating in three flat, sharp points, but its membranous part in a blunted point; gills very wide, and their membrane supported by eight rays; jaws furnished with very fine teeth ranged in a simple band, which is wider in the middle, and narrows towards the commissure; in the upper jaw those of the outer row are very strong and much hooked, especially the two or three first; in the lower jaw there are also similar teeth, but those on the sides are the strongest; the dorsal fin commences above the base of the pectorals, is supported by ten strong and very sharp spines, of which the first two are the shortest; the soft portion of this fin is higher than the other; caudal fin square. The colours of this species vary considerably with age and season, most commonly, however, there are found numerous irregular narrow lines of a more or less bright silvery colour edged with black, and having the intervals filled up with red or scarlet, or reddish or blue-brown, marking the top of the head, the space between the eyes, the muzzle and cheeks; the ground colour of the body is reddish, and five broad dusky bands passing from the dorsal fin are lost on the belly; dorsal and anal fins greyish or lilac, with close-set round spots of a bright red colour; the ventrals and the rays of the caudal fin are also similarly spotted; rays of the pectorals jonquil-yellow, and their membrane transparent white. They are found throughout the Mediterranean, and are said to live on small Crabs, Woodlice, and small fish, and especially upon the *Sepia Octopodia*, for which it lies in ambush at the mouth of its hole, and seizes its tentacles as soon as projected.

S. Cabrilla, Cuv.; *Perca Cabrilla*, Lin. From nine to ten inches long, with the muzzle shorter, and the forehead more convex than in the last species; it has not the markings on the head, but only three or four oblique vermilion bands crossing the cheek to the opercle; the ground colour is yellowish-grey tinged with bluish; upon the sides extending from the head to the tail are some longitudinal vermilion bands, and nine or ten vertical deep reddish-brown bands, the lower ends of which become expanded into brown spots; lower part of the jaws rosy, and of the belly light orange; base of the dorsal fin of the same colour as the back, the upper half of its spiny part banded with deep orange and lilac, its soft part studded with round lilac or transparent spots on a bright orange ground; anal marked with three bands of orange and lilac; caudal sprinkled with orange spots and transparent points on a lilac ground; rays of pectoral orange, and sometimes yellow; ventrals paler and unspotted. It is found throughout the Mediterranean, also in the Atlantic, and extending even into the North Sea; at Brest it is called *Fougère*; it is known to the Neapolitans by the name of *Canna*, and is probably the *Chani* of the Turks, as supposed by Forskaël. Salviani described it as the *Xávn*, from the Greek verb *χαίρω*, I gape.

S. Hepatus, Cuv.; *Labius Hepat.* Lin. Scarcely exceeds four inches in length; lower jaw scarcely projecting beyond the upper, its branches naked beneath, and upon the surface numerous pores; maxillary bone not scaly; preopercle completely covered with scales, regularly and freely toothed, its angle much rounded; opercle scaly, armed with three spines, of which the middle one is very strong but not flat; all the ten spines of the dorsal fin of equal height, except the first, which is only half the length of the others, the soft higher than the spiny part; the general colour is grey mingled with red, and marked with five transverse black bands glossed with silver; belly marked with golden lines and light blue; dorsal fin grey marked with black points between the spiny rays, and having a round black spot upon the front of the soft portion; ventrals greenish-blue; pectorals yellow, and caudal marked with small red or yellow spots. It is largely found in the Mediterranean, and known at Venice as the *Sacchetto*. It is caught at Nice in May and September, and the female approaches the shore in August to deposit her spawn among the shingle.

The following foreign species resemble the preceding not only in the brightness of their colours, but also in their jaws not being covered with scales.

S. Vitta, Quoy and Gaym. From the Isles of Waigiou and Rawak North-West of New Guinea.

S. Lemniscatus, Cuv. From Ceylon, where it is called *Mundjün-kank*.

S. Argentinus, Cuv.; *Holocentrus Argent.* Bl.

S. Bivittatus, Cuv. From Martinique, and from the Havannah.

S. Radialis, Cuv.,

S. Irradians, Cuv.,

S. Fascicularis, Cuv. Are all three from the Brazils.

S. Conceptionis, Cuv.,

S. Humeralis, Cuv. Both from the coast of Chili.

S. Noulény, Cuv. From the Coromandel coast.

S. Gymnopareius, Cuv. This Cuvier thinks most probably the same as *Epinephelus Striatus* of Bloch, which is said to be caught at Jamaica.

SERRA-
NUS.

SERRA-
NUS.β. *Barberfish*, Cuv.; *Anthias*, (in part,) Bl.

In which both jaws and the tip of the muzzle are armed with larger or smaller scales.

Bloch has derived from this subdivision the type of his genus *Anthias*, the characters of which he thus describes: "whole head scaly, anterior opercles serrated, no spines to the posterior;" Lacepede and Cuvier, however, object to this division, from the fact of the gradation among the several species being so gradual from those which have the head covered with very strong scales to those in which they are very small, and again from the latter to such as have the scales scarcely visible, that it is impossible to fix any definite boundary, and therefore consider it best to leave them forming a section of the *Serrani*.

S. Anthias, Cuv.; *Labrus Anth.* Lin.; *Anthias Sacer*, Bl. From seven to eight inches long; muzzle short; lower jaw much longer than the upper; denticles of the preopercule fine, except two or three at the angle, which are rather stronger and very sharp; subopercule also denticulated; bony part of opercule armed with three spines, of which the lower two are very sharp; the teeth placed in narrow bands, and curving forwards instead of backwards; the whole head, muzzle, jaws, cheeks, and opercular pieces covered with rough ciliated scales; rays of the dorsal fin of moderate height and equal length, except the third, which is twice or thrice as long as the others; caudal fin forked, its lobes prolonged into points, and the lower twice as long as the upper lobe; general colour rose or even scarlet, with a metallic lustre, becoming golden on the sides, and silvery on the belly; head marked with three golden stripes passing back towards the gills, one from above the eye, one from below it, and the third from the muzzle extends as far as the root of the pectoral fin; the forehead has some irregular transverse bronze lines, and upon the back is a row of ten or a dozen similar coloured spots; fins clouded with red and yellow. It is found throughout the Mediterranean; at Nice is called *Sarpananso*, and at Montpellier *Barbier*.

S. Tonsor, Cuv. From the Brazils, and very closely resembling the last species.

S. Borbonius, Cuv. From the Isle of Bourbon.

The two following are distinguished by not having the third dorsal spine longer than the others, and by the upper lobe of the caudal fin being much the longest.

S. Furcifer, Cuv. From the Brazils.

S. Creolus, Cuv. From Martinique, where it is called the *Creole*; and from St. Domingo, where it is known as the *Batard-rond-grif*.

S. Dentatus, Cuv. From Martinique, where, from the large size of its eyes, it is called *Gros-yeux*, and it is distinguished by having the muzzle scaly and the jaws without scales.

γ. *Merous*.

In which the lower jaw only is covered with very small scales.

S. Gigas, Cuv.; *Perca Robusta*, Couch; *Perche Géant*, Brunn. From two to three feet in length, seven inches in depth, and occasionally weighing as much as sixty pounds; suborbital bone concealed by the skin, and consisting of two cavernous pieces of a lengthened rectangular form; preopercule slightly notched above its lower angle, which is very obtuse, denticulated

throughout its whole extent with small teeth, which increase in size towards the notch, and at the angle become wide and themselves divided into two or three teeth; lower edge straight, cavernous, and slightly festooned; membranous edge of opercule broad, very thin towards its fore part, where it is covered with scaleless skin; opercule itself nearly triangular, covered with scales as large as those of the trunk, and terminating in three flattened points, of which the middle is the largest, and in the fish of large size becomes spoon-shaped; subopercule and interopercule long and without denticles; nasal apertures above the anterior angle of the eye approximated, the anterior tube smaller than the posterior, which is rounded; lips fleshy; lower jaw much longer than the upper; intermaxillary shorter than the maxillary bones, furnished with one row of rather strong hooked teeth, of which the middle two are much the largest; behind them some others, close set and card-like teeth, in the lower jaw stronger and in a narrower row; near the corner of the gape there are but two rows of hooked teeth, and those in the second stronger than in the first row; card-like teeth *en chevron* are seen on the vomer, and a narrow row on each palatine bone; gills very open, their membrane wide and supported by eight rays. According to Couch, the head and body are covered with large scales, but Cuvier says those on the body are small, of an oblong square form, and finely marked with parallel striæ; dorsal fin commencing opposite the free end of the gill-flap; it has eleven spiny rays, of which the fourth is the longest, and fifteen or sixteen soft rays, and is covered with small scales on three-fourths of its height; anal commencing opposite the fifth soft dorsal ray; it has three spiny rays, of which the third is the longest, the soft part is higher than the whole length of the fin, is supported by eight rays rounded and covered with small scales like the dorsal; pectoral fins large and long, containing seventeen rays, of which the sixth is the longest, and its anterior half scaly; ventrals close to each other, below and smaller than the pectorals; caudal fin rounded and supported by fifteen rays, of which the upper and lower are simple, and the others branched, the membrane connecting them scaly; back reddish-brown, belly lighter; upon each gill-covert an oblique line. This species is common in the Mediterranean; it is also found in the Atlantic, and has been taken in the Gulf of Gascony and in the British Channel, though rarely. In the South of France it is called *Merou*, at Nice *Anfoussou*, and at Iviça *Nero Anfós*. It is caught in April and May off the coast of Nice, and at Iviça is taken in the Winter. It is highly valued for the table, and has a peculiar aromatic flavour.

S. Alexandrinus, Cuv. Ten inches in length; very similar to the last, but distinguished from it by the eye being larger, by the edge of its preopercule being more rounded and less notched towards the angle, by the denticles in its ascending edge being shallower, and those of the angle forming only two or three rather strong spines, simple and not flat; the maxillary bone broader, and its scales more distinct; the membranous margin of the opercule concave above; the soft part of the dorsal fin is shallower, and the spines of the anal fin rather longer; colour plain brown. Is caught off the Alexandrian coast.

S. Æneus, Geoffr. About the same size as *S. Gigas*, but of more slender make; opercular spines much stronger, flat, and not denticulated; caudal fin more

SERRA-
NUS.

SERRA-
NUS.

rounded; head marked on each side with three white lines passing obliquely from above downwards and parallel with the upper margin of the opercule; back and sides light green on a deep green ground; belly white; lips grass green; dorsal fin of same colour as the back, and spotted with light green; pectoral and caudal fins greenish; anal green edged with blue; base and outer edge of the ventrals white, their middle green, and extremity blue. Is taken at Damietta, where it is called *Dalouse*.

The following species with the form of *S. Gigas* have the body of uniform colour or marbled and clouded.

S. Morio, Cuv. Very similar to *S. Gigas*, and found from New York to St. Domingo, where it is called the *Nègre*. It is remarkable that though this fish is two and a half feet long, it has not been enumerated by Mitchill in his *Fishes of New York*.

S. Acutirostris, Cuv. From the Brazils.

S. Apua, Cuv. Also from the Brazils, and known as the *Piratiapia*; during the Summer it remains among the rocks, but in Winter ascends the rivers.

S. Striatus, Cuv. From the Gulf of Mexico, where it is known to the Hispano-Americans by the name of *Cherna*, the larger individuals being called *C. de lo alto*, and the smaller *C. Chica*. At Martinique it is called *Vieille*, and at Porto Rico *Cabrilla*.

S. Mentzelii, Cuv. A very large species, measuring thirty inches in length, and taken off the Brazilian coast.

S. Dichropterus, Cuv.; *Holocentrus Ongus*, Bl. From the American sea, and not from Japan, as supposed by Bloch.

S. Undulosus, Cuv. From Brazil.

S. Pachycentron, Cuv. Remarkable for the large size of its three flattened opercular spines.

Of those species which are found in the Indian seas the greater number have the opercular denticles so little developed as to have induced Bloch to place them among the *Bodiani*.

S. Flavocæruleus, Cuv.; *Holocentrus Flavocæ.* Lacep. From the Isle of France, where it is called *Dosjaune*: it feeds on Crabs and small fish, which it swallows whole.

S. Sonnerati, Cuv. From Pondicherry, where it is called *Sin panni*: it is also taken off Ceylon.

S. Marginalis, Cuv.; *Epinephelus Marg.* Bl.; *Holocentrus Rosmarus*, Lacep. From the Isle of France and from the Sechelles.

S. Oceanicus, Cuv.; *Holoc. Ocean.* Lacep.; *Perca Fasciata*, Forsk. From the Isle of France and from the Red Sea.

S. Zananella, Cuv. From Madagascar.

S. Aurantius, Cuv. From the Sechelles.

S. Urodelus, Cuv.; *Perca Urod.* Forsk. From Otaheite.

S. Roseus, Cuv. Also from Otaheite.

S. Analis, Cuv. From New Ireland.

S. Limbatus, Cuv. From the Isle de Guam.

S. Boelang, Cuv. Is distinguished by having a single row of fine teeth on each palatine bone. Is found in the Indian seas.

S. Phaeton, Cuv. This species is distinguished from all other known fishes by the form of its tail, which is forked, and the middle two rays extending into filaments, equalling the body in length, and connected by a membrane which forms a kind of sheath for them.

In the Indian seas are also found some species, the bodies of which are marked with longitudinal or transverse

bands and stripes, but the greater number have, like *S. Gigas*, pretty strong opercular spines.

S. Formosus, Cuv. From the Coromandel coast, and often four feet long; it is called *Panne-mine* or *Swine-fish* at Pondicherry, but at Madras *Rahtee Bontoo*.

S. Lineatus, Cuv. Is very common among the rocks at Pondicherry, and there known by the same name as the last species.

S. Nebulosus, Cuv.

S. Tigrinus, Cuv.; *Holocentrus Tigr.* Bl. Probably from the Indian Seas, and, according to Valentyn, is called *Mar-ke'koe*.

S. Lanceolatus, Cuv.; *Holocentr. Lanceol.* Lacep. From Pondicherry, where it bears the name of *Sugga-lahtoo Bontoo*.

S. Orientalis, Cuv.; *Anthias Orient.* Bl.; *Lutjanus Aurantius*, Lacep. From Japan.

S. Diacanthus, Cuv. From the Malabar coast.

S. Erythrurus, Cuv. From the same place.

S. Oxyrhyncus, Cuv. Remarkable for the sharpness of its muzzle.

S. Horridus, Kuhl and Van Hass. From Java.

S. Geographicus, Kuhl and Van Hass. Also from Java.

S. Reticulatus, Kuhl and Van Hass. From Java.

Of the Indian species which have the body marked with large and close-set spots, some have the dorsal and anal fins very deep, and the palatine bones furnished only with a single row of very fine teeth; such are

S. Altiavelis, Cuv. From Java.

S. Merra, Cuv.; *Epineph. Merra*, Bl. Found throughout the Indian Ocean.

S. Parkinsonii, Cuv.

S. Faveatus, Cuv. From the Indian Ocean; at Ceylon it is called *Pouli-kalava*.

S. Hexagonatus, Cuv.; *Perca Hexagonata*, Forsk. From the South Seas; at Otaheite it is called *Terao*.

S. Trimaculatus, Cuv.

S. Ura, Cuv. From the coast of Japan, where it is called *Ura*.

S. Maculosus, Cuv.

S. Pantherinus, Cuv.; *Holocentrus Panth.* Lacep. From the coast of Madagascar.

S. Bontoo, Cuv. Occasionally caught at Vizagapatam, and there called *Mandinawa-bontoo*.

S. Suillus, Cuv. Caught on the Coromandel coast, where the fishermen apply to it and many other species the name of *Panne-mine* or *Pigfish*; at Vizagapatam it is called *Bontoo*.

S. Corallicola, Kuhl and Van Hass.

S. Leopardus, Cuv.; *Labrus Leop.* Lacep.

S. Spiloparæus, Cuv.

S. Nigripennis, Cuv.

S. Zanana, Cuv.

S. Semipunctatus, Cuv. From Pondicherry, and confounded by the fishermen with others under the name of *Panne-mine*.

S. Salmonoides, Cuv.; *Holocentrus Salm.* Lacep. From the Isle of France, from the Sechelles, and from the Red Sea.

S. Summana, Cuv.; *Perca Summ.* Forsk. From Massuah, and called by the Arabs *Summan* or *Symman*.

S. Leucostigma, Ehrenb. From Massuah, and called by the natives *Gurumgie*.

S. Tumilabris, Cuv. From the Sechelles.

S. Leucogrammicus, Reinw. From the Moluccas. It is called *Ikan kipaskening*.

SERRA-
NUS.

SERRA-
NUS.SERRA-
SALMO.

S. Rogaa, Cuv.; *Perca Rog.* Forsk. Is common on the rocky and madreporic shores of the Red Sea, and called by the natives *Rogaa*, or chequered.

S. Areolatus, Cuv.; *Perca Areol.* Forsk. It is called by the Arabs of Djedda *Daba*.

S. Melanurus, Cuv.; *Bodianus Melan.* Geoffr. Is caught in the Red Sea at Suez.

S. Chlorostigma, Cuv. From the Sechelles.

S. Angularis, Cuv. From Ceylon.

S. Variolosus, Cuv. From Otaheite.

The remaining species, from having the spots extremely small, may be called *Speckled Merous*; the greater number of them have the preopercule rounded, and so finely toothed as to appear almost smooth. Those which are found in the Indian seas are commonly known to the Dutch by the name of *Jacob Evertsens*, from a Dutch Admiral who commanded one of their earliest expeditions to the East Indies, and having a swarthy complexion well covered with spots, the sailors gave his name to a fish caught at the Isle of St. Maurice, and which was similarly marked. The natives of Amboina and Java call these fishes *Okara*.

S. Guttatus, Cuv.; *Bodianus Gutt.* Bl. From Tranquebar, where it is called *Ganimin*, and also at the Isle of Waigiou. It ascends the rivers to deposit its spawn in rocky places.

S. Cyanostigma, Kuhl and Van Hass. From Java, and called *Okara-mera*.

S. Sexfasciatus, Kuhl and Van Hass. From Java.

S. Argus, Cuv.; *Cephalopholis Arg.* Bl.

S. Benach, Cuv.; *Holocentrus Ben.* Bl. From the Moluccas and from the seas of Japan; it is called by the Malays *Ikan benack*.

S. Luti, Cuv.; *Perca Luti*, Forsk. From the Red Sea; the Arabs of Djedda call it *Louti*, and those of Lohaga *Schan*.

S. Auratus, Cuv.; *Holoc. Aur.* Bl.

S. Myriaster, Cuv. From the Sandwich Islands and from Borabora.

S. Alboguttatus, Cuv. From the Indian Ocean.

S. Cæruleo-punctatus, Cuv.; *Holoc. Cærul.* Bl.

S. Punctulatus, Cuv.; *Labrus Punct.* Lacep. From the Moluccas, from Ceylon, and from the South Seas.

In the Atlantic are found other Speckled Merous, which differ little except in the head being more slender; such are

S. Tæniops, Cuv. From the Cape de Verd Islands.

S. Coronatus, Cuv.; *Perca Guttata*, Bl. From Martinique, where it is called *Poisson Couronné*.

S. Catus, Cuv.; *Perca Maculata*, Bl. From Martinique, where it is called *Chat*.

S. Nigriculus, Cuv. From Martinique, where it is known as the *Petite Nègre*, *Grande Gueule* or *Vieille*. At certain seasons of the year the flesh of this species is poisonous.

S. Itaiara, Lichtenst. From the Brazils, where it is called *Itaiara*; it lives among the rocks, is good eating, but improved by salting.

S. Arara, Cuv. From the Havannah, where it is called *Bonaci arara*; it is eaten, but with some hazard, as being among the number of such fish as cause the illness called *Signaterra*.

S. Cardinalis, Cuv.; *Johnius Guttatus*, Schneid.

S. Lunulatus, Cuv.; *Lutjanus Lunul.* Schneid. It is caught at the Havannah, and called *Cabrilla*.

S. Niveatus, Cuv. From the coast of Brazil.

S. Ouatalibi, Cuv. At the Havannah this fish is called *Guativere*, at Martinique *Ouatalibi*, at Porto Rico *Pejerrey* or *Royalfish*, and *Colli rubio*, and at St. Thomas's the *Butterfish*; its flesh is soft, and soon putrefies, but by slight boiling is very agreeable food.

S. Guativere, Cuv. From the Havannah.

S. Pixanga, Cuv.; *Holoc. Punctatus*, Bl. Is found at the Brazils, and called by Marcgrave *Pyra-pixanga*.

S. Carauna, Cuv.; *Gymnocephalus Ruber*, Bl. From the Brazils, where it is called *Carauna*.

See Linnæi *Systema Naturæ* a Gmelin; Bloch, *Ichthyologia* a Schneider; Russell, *Fishes of the Comandiel Coast*; Cuvier and Valenciennes, *Histoire des Poissons*.

SERRA-
NUS.SERRA-
SALMO.

SERRASALMO, from the Latin *serra*, a saw; and *salmo*, a salmon, Lacep. In *Zoology*, a genus of animals belonging to the family *Salmonides*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Teeth cutting, triangular, serrated, and disposed in a single row on each jaw; those of the upper only in the intermaxillary, and not in the maxillary bones; pharyngeal bones armed with fine teeth; body compressed, and very deep in comparison with its breadth; belly sharp and serrated; often in front of the dorsal fin an inclined spine; second dorsal fin adipose.

This genus was formed by Lacepede on account of the row of curved spines or denticles running along either side of the sharp keel-like belly, and resembling the teeth of a saw. It holds an intermediate situation between the Herrings, which have the carinated and serrated belly, and the Salmon, which are furnished with a fatty fin besides the true dorsal. They are all natives of South America, and are extremely voracious.

S. Rhomboides, Lacep.; *Salmo Rhomb.* Lin. Often acquires great size; forehead slightly concave; body compressed; middle of the back most elevated; dorsal

fin near the middle, tall, and pointed in front, and having sixteen rays; at the root of the first a strong spine, inclining forwards, and notched behind; anal pointed, and having thirty-four rays, of which the first two are spiny and smaller than the rest, the third, though simple, is articulated throughout its whole length; in front of this fin projects through the skin a little bone armed with four points; the denticles of the belly very distinct and pointed; back reddish, with some deeper spots; sides and belly silvery; edge of the caudal fin black. Is caught at Surinam, and snaps off the feet of Geese whilst swimming.

S. Piraya, Cuv. Seventeen inches and a half in length; is less deep in proportion than the last species, and its greatest depth is above the gills; forehead short, rather full, and descending rapidly; upper jaw shorter; first dorsal fin on the hinder half of the body not pointed, but its anterior spines very short, so that the rounded back part is the highest, neither has it any spine in front, but a simple blunt tubercle embedded partially in the flesh; it has eighteen rays; anal fin not pointed, but of equal height throughout, its third ray very strong, and only articulated just at the tip; it has thirty rays; abdomi-

SERRA-
SALMO.
—
SER-
RATE.

nal denticles obtuse, and very indistinct; no pointed bone at the base of the anal fin; its colour silvery-grey, with a large black spot behind the gills, and the tip of the tail black. It is found in the Brazilian rivers living among the mud; its flesh is white, rather dry, but of good flavour.

S. Mento, Cuv. Four inches in length; has the lower jaw projecting upwards like a sort of chin; the body is deeper and more compressed than in the first species; dorsal fin placed on the middle of the body, with its second, third, and fourth rays stretching into filaments, the first of which reaches the tip of the tail; it has a little spiny bone in front of the dorsal and anal fins; the first dorsal has sixteen and the anal thirty-four rays; the adipose fin is broader than in either of the preceding species, and the caudal fin forked, with the lobes rounded at their tips.

S. Aureus, Spix. Seven inches in length; head obtuse, and rounded in front; nape arched; body compressed and very deep, its greatest depth opposite the beginning of the dorsal fin, in front of which is a straight short spine, and before the anal a bone with two points; abdominal denticles very sharp, of a somewhat conical form, increasing in size and further apart behind; dorsal fin on middle of back, and having sixteen rays; anal fin narrow, but very long, and supported by thirty-eight rays, which are covered with scales to half their depth; ventral fins small, and nearer the vent than in any other species; caudal fin slightly concave, and its lobes rounded; general colour olive, tinged with golden; head and fins blackish. Is found in the lakes and rivers of Brazil.

S. Nigricans, Spix. Four and a half inches long; head obtuse, lower jaw very prominent, nape nearly straight and continuous with the head; back nearly straight in front of the dorsal fin, opposite which the body is deepest; abdominal denticles very sharp, compressed, and close set, the hinder ones larger and more distant; a sharp inclining spine in front of the dorsal fin, which has seventeen rays; a bicuspid tubercle in front of the anal fin, which is supported by thirty-one rays, and is broadly scaled; general colour olive-black, glistening with golden; fins dusky. Is found in the Brazilian rivers, and very voracious, attacking all aquatic animals. It is used for food. Spix states that it nearly approaches *S. Rhombeus*.

See Lacepede, *Histoire Naturelle des Poissons*; Spix, *Genera et Species Piscium Brasiliensium*; Cuvier, in *Mémoires du Muséum*, vol. v.

SERRATE, } Fr. *sier*; It. *seg-are*; from Lat.
SERRATED, } *sec-are*, to cut; Sp. *serrar*; Lat.
SERRATURE, } *serra*, quasi *secerra*, also from *sec-*
SERROUS. } *are*. Vossius.

Resembling, formed or fashioned like a saw or the edge of a saw.

The common heron hath its most remarkable parts adapted to this service; long legs for wading, and a long neck answerable thereto to reach prey, a wide extensive throat to pouch it; long toes, with strong hooked talons, one of which is remarkably serrate on the edge, the better to hold their prey.

Derham. *Physico-Theology*, book iv. ch. xv. p. 257.

In the figure they are represented too stiff and too much serrated. Dampier. *Voyages*, vol. iii. *Plants in New Holland*.

These are serrated on the edges; but the serratures are deeper and grosser than in any of the rest. Woodward.

If while they [bees] hum we lay our finger on the back or other parts, for thereupon will be felt a serrous or jarring motion, like

that which happeneth while we blow on the teeth of a comb through paper.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xxvii. p. 222.

The serrated border in the petal of a flower, and the fringe on the wing of a fly, display an accuracy of delineation which no pencil ever yet could rival.

Knox. *Works*, vol. i. p. 359. *Essay*, No. 115.

SERRATULA, in Botany, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic character: calyx imbricated; scales broad, awnless; receptacle chaffy or villose; down toothed, sometimes plumose.

Twenty-four species, natives of the Northern hemisphere. *S. tinctoria* and *alpina* are natives of England.

SERROCERUS, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, inserted before the eyes, serrated in both sexes, composed of triangular articulations, the second and third excepted, which are short and subglobose; *palpi* four, the terminal joint somewhat fusiform; head rather broad; eyes subglobose; *thorax* transverse, waved behind, and sometimes expanded laterally; *elytra* free, sinuated at the sides; body short, ovate, robust; legs rather long; *tarsi* pentamerous.

Type of the genus, *S. striatus*, Kugellan; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iii. p. 330. Four species, of which two are sometimes found in Britain, inhabiting old posts and trees.

SERROMYIA, in Zoology, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, composed of about thirteen joints, the eight basal ones globose and externally plumose in the males, the remainder elongate-cylindric; *palpi* porrect, incurved, quadriarticulate; *ocelli* wanting; wings two, incumbent, parallel; legs dissimilar, anterior and intermediate *femora* slender, posterior, elongate and thickened.

Type of the genus, *Chironomus femoratus*; Fabricius, *Syst. Antl.* p. 45. Seven species, all of which are occasionally found in Britain.

SERROPALPUS, in Zoology, a genus of *Celeopterous* insects.

Generic character. *Antennæ* eleven-jointed, filiform, slender, longer than the thorax, joints cylindrical, the terminal one with a deep incision, giving the appearance of a twelfth joint; *palpi* four, maxillary deflexed, deeply notched beneath, the terminal joint patelliform; labial minute, with the apical joint a little thickened, truncate; *labium* membranous, rounded at the apex, and deeply notched; head inserted; body elongate, a little narrowed behind; legs elongate, slender; *tarsi* heteromerous.

Type of the genus, *Dircæa barbata*; Fabricius, *Syst. Eleut.* vol. ii. p. 88. A native of Europe, but not yet discovered in Britain. There are three other species, neither of them indigenous.

SERTULARIA, in Zoology, a genus of *Vaginated Polypi*.

Generic character. Polypiferous mass horny, with slender fistulous stems, single or branched, and furnished with separate lateral, tooth-shaped cells, the latter projecting, alternate, usually with a joint above and below each; vesicles larger than the cells.

Type of the genus, *Serpula polygonias*; Linnæus, *Syst. Nat.* vol. i. p. 1312; Ellis, *Coral.* p. 5. pl. ii. fig. 3. Eight or ten species; five of which are found in the British seas, on dead shells and the roots of fuci

Seruauntis obeie ghe to fleischli lordis with drede and trem-
blyng in symplenesse of ghoure herte as to Crist, not *seruyng* at
theighe as plesynge to men, but as *seruauntis* of Crist, doynge the
wille of God bi discrecioun with good wille *seruyng* as to the
Lord and not as to men, witynge that ech man whateuere good
thing he schal do he schal resseyue this of the Lord, whether
seruaunt whether free man.
Wiclif. Effesies, ch. vi.

Seruautes be obedyent vnto youre carnall masters, with feare
and tremblyng in singlenes of youre heartes, as vnto Chryst;
not with *seruyce* in y^e eye syght, as men pleasers; but as the
seruautes of Chryst, doyn the wyll of God from the heart with
good wyl, *seruyng* the Lord, and not men. And remeber that
what soueuer good thing anye man doeth, that shal he receaue a
gayne of the Lorde, whether he be bound or fre.
Bible, Anno 1551.

For thilk creature schal be delyuerid fro *seruage* of corrup-
cioun into liberte of the glorie of the sones of God.
Wiclif. Romayns, ch. viii.

But Martha bisiede aboute the ofte *seruyce*, and sche stood and
seyde, Lord takist thou no kepe; that my sister hath lefte me
aloone to *serue*?
Id. Luke, ch. x.

And Martha was cobred about much *seruyng*, and stode and
sayde: Mayster, doest thou not care, that my syster hath lefte me
to minister alone?
Bible, Anno 1551.

Cassibulan hauynge indygnacion, wrote vnto hym sharpe and
short answeres shewynge that he and euery noble man was
bounde specially to kepe his countre from *seruage*, and to kepe his
subgettes that they myght enioy lybertie and franchyse.
Fabyan. Chronycle, ch. xlvi.

Ther was an vsage in England, and yet is in diuerse countreys,
that the noble men hath great fraunches ouer the comons, and
kepeth them in *seruage*.
Lord Berners. Froissart. Cronycle, ch. 381.

SERVE.

Not only, lord, that I am glad (quoth she)

To don your lust, but I desire also

You for to *serve* and plesse in my degree,

Withouten fainting, and shal evermo.

Chaucer. The Clerkes Tale, v. 8843.

Here may men seen an humble wise accord:

Thus hath she take hire *servant* and hire lord,*Servant* in love, and lord in mariage,Than was he both in lordship and *servage*?

Id. The Frankleines Tale, v. 11103.

And after that came woful Emelie,

With fire in hond, as was that time the gise,

To don the office of funeral *service*.

Id. The Knightes Tale, v. 2842.

He is as wise, discret, and as secree,

As man I wote of his degree,

And therto manly and eke *servisable*,

And for to ben a thrifty man right able.

Id. The Marchantes Tale, v. 9784

But now know I in very sothfastnesse,

That in gret lordship, if I me wel avise,

Ther is gret *servitude* in sondry wise.

Id. The Clerkes Tale, v. 8672.

And netheles yet or he dyde

He shope his reigne to deuide

To knightes, whiche him had *serued*And after that thei haue *deserued*

Yafe the conquestes.

Gower. Conf. Am. Prologue, p. 13.

And for to strength hym in that cas

Of all his londe the sikereest

Of *seruautes* and the worthiest

To kepen hym within warde,

He set his body for to warde.

Id. Ib. book vi.

The kyng vpon this wrongfull plite,

To kepe his reigne from *seruage*,

Counsailed was of his baronage,

That might with might shal be with stonde.

Id. Ib. book i.

In highe estate it is a vice

To go to lowe, and in *seruice*

It greueth, for to go to hie.

Id. Ib. book iv.

For the elementes ben *seruisable*

To man.

Id. Ib. book v.

Whiche cause and such like taken away, I cannot but put trust
in the place as micromancers do in their circles, and am an image
seruer and walke after myne own imagination, and not after God's
word.

Tyndall. Workes, ch. iii. p. 282. Answer to Sir T. More's Dialogue.

He came vnto the kynges grace, and wayted vpon hym, and
was no man so obsequious and *seruiceable*.

Id. Ib. p. 368. Practice of Popishe Prelates.

To tame his youth, his lofty crest downe go'th,

His threats he feareth, and obeyes the raine

Of thraldome base, and *seruiceage*, though loth.

Fairfax. Godfrey of Bulloigne, book viii.

They holde that it is not lawfull to loue and *serue* God neither
for auoiding of pain, nor for obtainig of reward, calling this maner
of loue and *seruice seruile* bonde and mercenary.

Sir T. More. Workes, p. 362. Answer to Tyndall's Preface.

It foloweth: true Christian religion (which the mercy of God
would haue free, onely with the celebratio of a few and manifest
sacramentes) they oppresse with *seruile* burdens.

Barnes. Workes, p. 374. Epitome.

When Tyndall hath proued by thys vnprobable case, that women
may consecrate the body of Chryst: then he lameteth the misera-
ble *seruitude* of the symple soules the poore sely women, because
men will not suffer them to say masse.

Sir Thomas More. Workes, p. 429. Agaynst Tyndall.

But O! th' exceeding grace

Of highest God that loves his creatures so,

And all his workes with mercy doth embrace,

That blessed angels he sends to and fro,

To *serve* to wicked man, to *serve* his wicked foe!

Spenser. Faerie Queene, book ii. can. 8.

SERVE.

CORIO. Wife, mother, child, I know not. My affaires
Are *servanted* to others.
Shakspeare. Coriolanus, fol. 26.

Witness th' irreverent son
Of him who built the ark, who for the shame
Done to his father, heard this heavie curse,
Servant of servants, on his vitious race.
Milton. Paradise Lost, book xii. l. 101.

That gentle lady whom I love and *serve*,
After long suit and wearie *servicis*,
Did aske me how I could her love *deserve*,
And how she might be sure that I would never swerve.
Spenser. Faerie Queene, book iii. can. 7.

But all the liquour, which was fowle and waste,
Not good nor *serviceable* elles for ought,
They in another great rownd vessell plaste,
Till by a conduit pipe it thence were brought.
Id. Ib. book ii. can. 9.

BRI. I embrace their love.
EGR. Which we'll repay with *servulating*.
Beaumont and Fletcher. The Elder Brother, act i. sc. 2.

Those long and subordinate concatenations of instrumental
serviceableness of such things, say they, is but our fancy, no
designe of any first cause.
More. Writings, part i. ch. xi. p. 174. Appendix to Antidote against
Atheism.

My soul is from me fled away,
Nor has of late inform'd my body here,
But in another's breast does lie,
That neither is, nor will be, I,
As a form *servient* and assisting there.
Cowley. The Soul.

What! have we hands; and shall we *servile* be?
Why were swords made; but to preserve men free?
Daniel. History of Civil Wars, book iv.

How like a jade he stood, tied to a tree,
Servilely master'd with a leathern rein!
Shakspeare. Venus and Adonis.

At first I thought that libertie and heav'n
To heav'nly soules had bin all one; but now
I see that most through sloth had rather serve,
Ministring spirits, train'd up in feast and song;
Such hast thou arm'd, the minstrelsie of heav'n,
Servilitie with freedom to contend.
Milton. Paradise Lost, book vi. l. 164.

For the rounge was of that capacitie, that it would receive not
only so many to sit with ease at the table, but also the gentlemen
and *servitors* that waited and ministred unto them.
Holland. Plinie, vol. i. book xii. ch. i.

When such a man would speak, his words, like so many nimble
and airy *servitors*, trip about him at command, and in well-ordered
files, as he would wish, fall aptly into their own places.
Milton. Apology for Smectymnus.

What rage, what madness, England, do we see?
That this brave people, in such multitude
Run to confound themselves! and all to be
Thus mad for lords, and for mere *servitude*!
Daniel. History of Civil Wars, book viii.

She has nine spur-royals, and the servants say she hoards old
gold; and she herself pronounces angrily, that the farmer's eldest
son, or her mistres husband's clerk shall be, that marries her, shall
make her a joyniture of fourscore pounds a year; she tells tales of
the *serving-man*.
Beaumont and Fletcher. The Scornful Lady, act i. sc. 1.

And were some ambush for the foes design'd
Ev'n there, thy courage would not lag behind.
In that sharp *service*, singled from the rest,
The fear of each, or valour, stands confest.
Pope. Homer. Iliad, book xiii.

In the South Seas the Spaniards do make oakum to chalk their
ships, with the husk of the coco-nut, which is more *serviceable*
than that made of hemp, and they said it will never rot.
Dampier. Voyages, Anno 1686.

It will be needful to pitch upon some general heads, such as, if
they do not comprehend all, may yet take in most of those things,

to which the labours and endeavours of men are directed, and in
the acquisition of which they have compassed their designs; and
to show the *serviceableness* of religion, above all other means, for
the attaining of them.
Sharp. Works, vol. i. p. 30. Sermon 2.

This celebrated Father is full and express, in his famous creed,
against any thing created, or *servient*, in the Trinity; asserting one
undivided glory and dominion of all the three persons.

Waterland. Works, vol. iv. p. 106. Of Christ's Divinity.

There is, therefore, nothing created or *servile* in this Trinity,
nothing adventitious, that once was not, and came in after.
Id. Ib. vol. v. ch. vi. p. 166. Judgment of the Primitive Church.

The menaces affectedly and insolently thrown out on one side,
and the flattery, *servilely* offered on the other, are equally objects
of our contempt.

Bolingbroke. Works, vol. ii. p. 237. Remarks on the History of
England. Letter 12.

But it [the mechanical or corpuscular philosophy] principally
owes its re-establishment and lustre to Mr. Boyle, that honour-
able person of ever blessed memory, who hath not only shown its
usefulness in phisiology above the vulgar doctrines of real
qualities and substantial forms, but likewise its great *serviceable-*
ness to religion itself.

Bentley. A Confutation of Atheism. Sermon 4.

While we, O shame! a base degen'rate host,
Look tamely on, and see our country lost!
Stretch our vile hands to *servitude* abhorr'd,
And court the bondage of a foreign lord.

Pitt. Virgil. Aeneid, book xii.

By the 5th of Elizabeth, commonly called the Statute of
Apprenticeship, it was enacted, that no person should for the
future exercise any trade, craft, or mystery, at that time exercised
in England, unless he had previously *served* to it an apprentice-
ship of seven years at least.

Smith. Wealth of Nations, vol. i. book i. ch. x. p. 165.

A *servant* is not bound to obey the unlawful commands of his
master; to minister, for instance, to his unlawful pleasures; or to
assist him by unlawful practices in his profession; as in smug-
gling or adulterating the articles in which he deals.

Paley. Moral Philosophy, ch. xi.

Service in this country is, as it ought to be, voluntary, and by
contract; and the master's authority extends no further than the
terms or equitable construction of the contract will justify.

Id. Ib.

He will leave the meaner artist *servilely* to suppose that those
are the best pictures which are most likely to deceive the spectator.
Reynolds. Discourse 3.

Servility with supple knees,
Whose trade it is to smile, to crouch, to please.

Cowper. Table Talk.

The order of *servitors* (an order which disgraced the common
sense and humanity of those who instituted it) is nearly extinct.

Knox. Works, vol. iv. p. 160. Liberal Education.

Dr. Johnson, by his interest with Dr. Adams, master of Pem-
broke College, Oxford, where he was educated for some time,
obtained a *servitorship* for young M'Aulay.

Boswell. Tour to the Hebrides.

Beauty of every kind is formed to allure; and there is this
peculiar advantage in contemplating the beauties of vegetable
nature, that we may permit our hearts to be captivated by them,
without apprehension of any dangerous or dishonourable *servitude*.

Knox. Works, vol. i. p. 557. Essay, No. 135.

SERVANTS, in *Law*, is a term which cannot be
rendered more intelligible by any definition. The rights
and liabilities both of master and Servant, as against
one another, depend upon the contract of hiring between
them. The master is entitled to the services, and the
Servant to the remuneration, for which they respectively
stipulate, during the full period agreed upon, where
there is an agreement as to the period, or until the ex-
piration of a reasonable notice, where there is no agree-
ment as to the mode of dissolving the contract. In
many parts of the Kingdom there is a custom that me-
nial Servants may be dismissed upon giving a month's

SERVE.
—
SER-
VANTS.

SER-
VANTS.

warning, or upon paying them in lieu of such warning a month's wages. Wherever this custom prevails, it is considered as being embodied in every contract of hiring when nothing is said to the contrary. This custom only applies to menial Servants; clerks, shopmen, and the like are not within it. In such cases, if there is no custom in the particular trade or place, the notice must be reasonable. The longest notice, probably, that can in any such case be required is a six months' notice, determining with the current year of service. When the Servant grossly misconducts himself, he may be dismissed without any notice at all; and in this case, if his wages are only payable at stated periods, he is not entitled to a rateable part of his wages for the current period, calculated down to the time of his misconduct, but he forfeits the whole. Probably in the case of menial Servants it would be held that the wages accrue from day to day, and, if they do, the Servant can claim wages to the time of actual dismissal; but clearly, when the right to a month's warning is forfeited, the right to the month's wages, which are only substituted for the warning, is forfeited also.

The master is not under any legal obligation to give a character to a Servant who has ceased to be in his service, unless it be part of the contract between them that such a character should be given. The Law, in the absence of contract, imposes no such duty. If the master does give a character, he must act in good faith towards his servant and towards the applicant for the character. If he maliciously says what is untrue to the Servant's prejudice, he is liable to an action at the suit of the Servant; and if he represents the Servant to be honest or the like, knowing the contrary to be the fact, he may be sued by the applicant, in case any injury is sustained by reason of the misrepresentation. The representation, however, must, by the late Act of 9 Geo. IV. c. 14., be in writing, otherwise it will confer no right of action on the applicant. If the master gives without malice what he in good faith believes to be the true character, he is not liable to either party, however much he may be mistaken. The words which he utters, though under other circumstances they would be considered slanderous, are privileged by the occasion, a rule the justice and policy of which are sufficiently apparent.

The master is responsible to third persons for all injuries to third persons committed by the Servant when acting in execution of his service; thus, if a coachman negligently drive so as to damage the carriage of another, the master must answer for it. In these cases the master may have an action against the Servant, but such an action would be generally fruitless, owing to the Servant's want of means. The master is also bound by all contracts made by his Servant, not only when acting within the scope of the authority in fact given him by the master, but also when the Servant has once had authority to bind his master under similar circumstances, and the party with whom the contract is made has no means of knowing that such authority has been revoked. Thus, if the master allows the Servant to procure goods at shops upon the master's credit, the master will be liable for the price of goods so purchased, though he has on the particular occasion actually provided the Servant with the means of paying with ready money. The master is not liable for the wrongful acts of the Servant committed wilfully and not adopted as a mode of performing his service. Thus, if a coachman wrongfully whip the horses in another carriage, the question

will be whether the act was committed wilfully, or whether it was an unskilful measure, either altogether unintentional or adopted with the view of facilitating the progress of his master's carriage. In the first case the coachman alone is liable to an action; in the latter the action may be brought against the master.

SERVIA, (*Serf-Vilajeti*), a Principality and Province of European Turkey, lies between 42° 21' and 45° North latitude, and 19° 10' 23" and 23° 10' 23" East longitude, and extends about 190 miles in length by about 100 in breadth; its superficial area being computed at 19,000 square miles. It is bounded on the North by the Danube and the Saave, which separate it from the Austrian dominions; by Bulgaria on the East; on the South by the Turkish territory of Nissa, the Sangiak of Sophia, and Albania; and on the West by Bosnia.

Generally speaking, Servia is a mountainous country; on the West it is covered by ramifications of the Dinaric Alps, and on the South and East by an extension of the range of the Balkan, that on the East forming a chain known by the name of the Haiduka mountains; but, on the North, inclining towards the Saave and Danube, are some large plains; and the Morava, which traverses the country from South to North, runs through a wide and open valley. The variety of its mountains, hills, and valleys, and the wild nature of its forest scenery and desert heaths render it a highly picturesque country. The soil is very fertile, but there is little of it under cultivation. Yet it produces abundantly all the cereal grains, flax, hemp, tobacco; and cotton thrives in the warmer valleys. Many situations, too, are very favourable to the culture of the vine.

The chief resources of Servia for export are wool, Trade, &c. skins, a spirit made of prunes, of which a great deal is sent to Hungary; and swine, which are bred in the forests with very little care, and left to feed on acorns. They are a diminutive species, covered with hair rather than bristles, but amazingly numerous, and so easy to rear that they constitute a main portion of the Servians' wealth. The manufactures of the country are confined to inferior cottons and woollens, and coarse hardware. British goods are little known here as yet, having been limited to small supplies from Trieste through the Austrian territories; but Servia is now beginning to experience the advantage of the opening of the steam navigation on the Danube.

The climate of Servia is accounted healthy, but is not Climate. so mild as might be expected from the lowness of its latitude, a circumstance attributable to the mountains and extensive forests which cover its surface. The Winters are long. In June heavy rains are brought on by the South-West winds; the greatest heats prevail in the two succeeding months; September is often a rainy month, but October and November usually bring very agreeable weather.

The Danube drains all the rivers of the country, Rivers. receiving, as it bathes the northern frontier, its fine tributary the Saave, with its affluents the Drin and the Kolubara, and then in succession the Jessava, Morava, Mava, and Bek.

Servia was included in the *Mæsia Superior* of the History ancients, and seems to have first acquired its present name towards the year 630, from that of the Slavonic Tribe which, about that time, took possession of it; the *Σερβοί* of Ptolemy, and *Serbi* or *Servi* of succeeding geographers. From this period to 1365 it formed an

SER-
VANTS.

SERVIA.

Face of the
country.

SERVIA. independent State, but in that year it finally succumbed to the Turks. The Ottoman yoke, however, was never patiently borne by the Servians, and they frequently revolted. Their greatest champion was Czerni George, known in Servia by his Turkish name of Carra Jorghi, (Black George,) who gained possession of Belgrade in 1806, and drove the Turks out of the country. This state of independence did not last long; but after various changes the Servians rose anew and successfully under Milosch Obrenovitch, originally a boy who looked after pigs in the forest, then one of the *capitani* or leaders of his countrymen, and who, in 1830, was acknowledged as Sovereign of the Principality of Servia by the Porte.

Present
state, &c.

We have little positive information as to the government, finances, and capabilities of Servia. If the life of Milosch be spared some years longer, he will most probably consolidate on a firm basis the improvements he has so happily begun. Though upwards of sixty years of age he is hale and vigorous, of a bold and decided character, and he thoroughly understands the people he has to govern. The outline of the constitution which, in a speech addressed to the General Assembly of the Servians in 1835, he professed his desire to give to the nation, speaks highly for his understanding, being a judicious grafting of modern legislation on the ancient usages of the people. His object, he stated, was first to promulgate a Statute for Servia, accurately defining the rights and duties of the Prince of Servia, the rights and duties of the Servian magistrates, and those of every Servian. Secondly, to form a Council of State, consisting of six Ministers for different departments, and various Privy-councillors; all to be responsible to Prince and people. Thirdly, a revision of the civil and criminal code, so as to place every Servian under the ægis, not of the judge, but of the law; the internal administration to be managed by placing the people under their elders, captains, and judges; these again under superior functionaries by a regular gradation up to the Prince, and the Prince himself under the law. He then proceeded to consider the expenditure of the nation, and the means of meeting it, in general terms, but in the same liberal and enlightened spirit. By the Treaty of 1830, Servia is still tributary to the Porte, which, however, not only guaranteed the integrity of its dominions proper, but the succession in the family of Prince Milosch. The annual tribute is hardly more than a nominal one, being only 40,000 ducats; in consideration of which, too, the Porte yielded the right of collecting the customs of the port of Belgrade, which is still garrisoned by the Turks, being the only place in their possession. Under the Turkish sway, Servia was divided into the two Sandjaks of Semendri and Krukhovatz.

Character. The Servians are a brave and hardy race, inferior at present to the European Turks in intelligence, manners, and general humanity, but far superior in activity and industry, and offering in the very independence of their character the finest material for the silent operation of peace and civilization. They profess the Greek faith.

Literature. The Servian language, generally called the Illyrian, is one of the most prevailing of the Southern Slavonic idioms, being spoken by five millions of people from the Culpa to the Timek. It has more affinity with the Russian than the Polish or Bohemian dialects of the Slavonic; its sound, we are told, may be compared to that of the violin. The merit of its poetry may be estimated from the translations of popular songs by

Goëthe, Grimin, Talvi, Bowring, and others, who acknowledge its excellence, as uniting the rude energy of the Slavonic character with an Oriental warmth. The Servian prose has been chiefly confined to religious works; in fact, the Servian scholars are not agreed whether the artificial book-language, formed after the ecclesiastical Servian, and which has been in use for almost four centuries, or the common dialect of the country shall become the language of literature. Of recent years the language has been more cultivated. A Servian Grammar, by Wuk Stephanowitsch, was published at Vienna in 1814; and, in 1819, he published his Dictionary of the Servian language, with definitions in Latin and German, which contains upwards of 30,000 words in common use.

For the towns of Servia, see **BELGRADE**, and **ROMELIA**.

Raitsch, *History of Various Slavonic Tribes*, Vienna, 1792; Von Zedlitz, *Brief Survey of Bosnia, Rascia, the Herzegovina, and Servia*, in 1829; Quin, *Steam Voyage down the Danube*, 1835.

SESAMUM, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Pedaliaceæ*. Generic character: calyx five-parted; corolla bell-shaped, five-cleft, the lower lobe large; the rudiments of five filaments; capsule four-celled; seeds affixed to a central slender receptacle.

Four species, natives of the East Indies. From *S. Orientale* a useful oil is expressed.

SESBANIA, in *Botany*, a genus of the class *Diadelphica*, order *Decandria*, natural order *Leguminosæ*. Generic character: flowers in a raceme; calyx, teeth equal; pod long, nearly cylindrical, smooth, two-valved.

A fine genus of trees and shrubs, natives of the East Indies and Carolina.

SESELI, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferae*. Generic character: umbels globose; calyx large, fine-toothed; petals obovate; fruit oval or oblong; style reflexed.

Twenty-seven species, natives of Europe and North America.

SESERINUS, Cuv. In *Zoology*, a genus of animals belonging to the family *Scomberoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head rather longer than it is deep; mouth narrow; nostrils midway between the muzzle and near each other; opercule terminating in a concavity between two projecting points; pectoral fins oval; ventral fins arising at the base of the pectoral, and so small as to be scarcely visible; the dorsal fin commencing about opposite the middle of the pectoral; anal commencing rather behind; both dorsal and anal adipose; caudal fin forked.

The single specimen of which this genus is formed, viz.

S. Microchirus, Cuv. Closely resembles *Stromateus*, except in the exceeding smallness of its ventral fins; its colour is leaden, with eight or nine vertical blackish bands which are dissipated on the sides; the dorsal and anal fins are closely dotted with black; tip of the tail and caudal fin yellow.

Cuvier and Valenciennes, *Histoire des Poissons*.

SESIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* thickening from the base nearly to the apex, and from thence to the tip becoming slender, and terminated with an oblique bristle; *palpi* contiguous, above the maxillæ, very short, concealed by being densely clothed with hairy scales; *max-*

SERVIA.
—
SESIA.

SESIA. *illæ* very long; body somewhat ovate, thickly clothed with hair, the apex in both sexes with a tuft; wings with the disc entirely transparent, the margins, and sometimes the transverse nervure, clothed with scales and opaque. Caterpillar elongate, rather attenuated in part, with a curved horn on the anal segment; *pupa* slightly elongate.

Type of the genus, *Sphinx fuciformis*, Linnæus; Stephens, *Illust. Britt. Ent. (Haustellata)*, vol. i. p. 134. An interesting group of insects, but not very numerous in species, two alone being found in Britain.

SESLERIA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Gramineæ*. Generic character: calyx two to five-flowered; corolla two-valved, toothed at the apex; stigma glandular; flowers in a spike.

Four species, natives of the South of Europe.

SESQUIALTER, } Fr. *sesquialtre*, "one and a
SESQUIALTERAL. } half, or half as much again, as
three in respect of two." Cotgrave. Sp. *sesquialtera*; Lat. *sesquialter*, *sesqui*, i. e. *semis*, *que*; Gr. *ἡμισυ*, half. Vossius.

In all the revolutions of the planets about the sun, and of the secondary planets about the primary ones, the periodical times are in a *sesquialter* proportion to the mean distance.

Cheyne.

For as the six primary planets revolve about him, so the secondary ones are moved about them, the moon about the Earth, the satellites about Jupiter, and others about Saturn, the one as regularly as the other, in the same *sesquialteral* proportion of the times of their periodical revolutions to the semidiameters of their orbs.

Bentley. *Sermon* 8. p. 302.

SESS, *v. i. e.* assess, *q. v.* See also **CESS**.

When the hostages were brought in by the day limited, he appointed dayesman betwene the cities to consider of the matter in variance, and to *sesse* the penalty.

Arthur Goldyng. *Cæsar. Commentaries*, fol. 108.

But after that their seigniority and rule was taken from them, the Grecians were contented a tax should be levied, and that every city should be reasonably *sessed* according to their wealth and ability; because every city might know what they should pay. And for this purpose they prayed the Athenians they would appoint Aristides to take order for it, unto whom they gave full power and authority to tax and *sess* every city indifferently, considering the greatness of the territory and the revenues of the same, as every one was reasonably able to bear it.

North. *Plutarch. Lives. Aristides*, p. 285.

He [Sir Henry Sidney] established the composition of the pale, in lieu of purveyance and *sesse* of souldiers.

Fuller. *Worthies. Kent*.

SESSEA, in *Botany*, a genus so called in honour of Martin Sesse, formerly director of the botanical garden at Mexico; it belongs to the class *Pentandria*, order *Monogynia*, and natural order *Solanaceæ*. Generic character: calyx tubular, pentagonal, five-toothed; corolla funnel-shaped, with a globose orifice and plicate limb; segments ovate, with convolute margins; stamens five, curved, villous; stigma two-lobed; capsule cylindrical, two-celled, two-valved; valves bifid; seeds numerous, imbricate, compressed, with membranous edges.

There are two species of this genus, branched, fetid shrubs, both natives of Peru; leaves alternate, entire; racemes axillary and terminal; flowers yellow.

SESSION, Fr. *session*; It. *sessione*; Sp. *sessio*; Lat. *sessio*, from *sessum*, past participle of *sed-ere*, to sit. See **ASSIZE**.

A sitting; the time or duration of sitting or meeting to sit; the meeting or assembly so sitting.

But the last day of that parliament or *session* the prince commeth in person in his parliament robes, and sitteth in his state; all the

upper house sitteth about the prince in their states and order in their robes.

Smith. *Common Wealth*, ch. iii. p. 54.

The said Lord President and Council shall keep four general sittings or *sessions* in the year, every of them to continue by the space of one whole month.

Burnet. *Records*, part ii. book i. No. 56.

Then of thir *session* ended they bid cry
With trumpets regal sound the great result.

Milton. *Paradise Lost*, book ii. l. 514.

Who call'd to council all the Achaian state,
But call'd untimely (not the sacred rite
Observ'd, nor heedful of the setting light,
Nor herald sworn the *session* to proclaim),
Sour with debauch a reeling tribe they came.

Pope. *Homer. Odyssey*, book iii.

SESTERCE, Fr. *sesterce*; It. *sesterzeo*; Sp. *sestercio*; Lat. *sestertius*, i. e. *senis tertius*, a piece of money equalling

Two asses, and half, (*sc.* of a third.)

So many *sesterces* were swallow'd down,
To stuff one scarlet-coated court buffoon,
Whom Rome of all her knights now chiefest greets,
From crying stinking fish about her streets.

Duke. *Imitation of Juvenal*.

In reckoning by *sesterces* the Romans had an art, which may be understood by these three rules; the first is, if a numeral noun agree in case, gender, and number with *sestertius*, then it denotes precisely so many *sestertii*, as *decem sestertii*, just so many; the second is this, if a numeral noun of another case be joined with the genitive plural of *sestertius*, it denotes so many thousand, as *decem sestertium* signifies ten thousand *sestertii*.

Kennet. *Roman Antiquities*, part ii. book v. ch. xiii. p. 375.

SESTERCE, the name of a Roman coin. The word *sestertius* is an abbreviation of *semistertius*; literally, *half a third*. This, by a Greek* as well as Roman mode of speaking, would imply that there were already two, so that *semistertius* would mean two and a half. Gronovius says, that the word is always an adjective, and that *As, a pound*, is understood. The *Sesterce* then was two and a half pounds, the fourth part of the denarius. As *libra* was also put for *pound*, it would seem that *LLS* (or contractedly *HS*) was put for *Sesterce*.

1. Up to a thousand, the Romans used *sestertii* or *nummi*, jointly or separately with a numeral adjective masculine, as *duo* or *bini*, *viginti* or *bis deni*, *mille Sestertii*, or *nummi*, or *Sestertii nummi*, i. e. two, twenty, one thousand *Sesterces*.

For one thousand *Sesterces* you might also say *mille sestertiūm* or *mille nummūm*, *mille* then being used as a substantive.

2. From a thousand to a million, sums were expressed by *Sestertia*, in the number plural, without *mille* or *millia*. If *millia* was added, *Sestertia* was omitted, and *Sestertiūm* added or understood, *millia* being always a substantive. Martial (iii. 62.) has *millia quinque rapit*, i. e. five thousand *Sesterces*, which might be expressed also by *quinque* or *quina Sestertia*, or *quinque millia Sestertiūm*, or *nummūm*, or *Sestertiūm nummūm*.

3. Above a million. The Roman way of expressing a million and sums above it was by the use of adverbs like *decies*, *vicies*. Thus a million *Sesterces* is *decies centena millia*, or *decies centena* alone, (as Juv. x. 335.) which, fully expressed, is *decies centena millia Sestertiūm nummūm*. To avoid this long phrase, they used simply *decies Sestertium*.

Many disputes have arisen as to this last word, whether it is a neuter singular (inasmuch as the phrases

* Thus Πένπτεν ἡμίταλάντων is four talents and a half.

SES-
TERCE.
—
SET.

decies Sestertium, &c. are always found with a singular verb and a singular neuter adjective, and we find oblique cases of the word, as *Sestertio*, &c., see Cæs. B. C. 1. 23. Plin. Ep. vii. 29. Tac. Ann. vi. 17.) or not. Gronovius contends that it is, and to his work, *De Sestertiis*, the reader should refer.

See Clarke, *Connexion of Saxon and Roman Coins*, p. 521—523, in which work the changes of the Roman As, and, consequently, of the Sesterce, are explained. It seems on the whole that one thousand Sesterces were equal to eight English pounds. See Smith, *De Re Nummaria*, p. 273; and *Philosophical Transactions*, vol. lxi. part ii. art. 48.

SESUVIUM, in *Botany*, a genus belonging to the class *Icosandria*, order *Trigynia*, natural order *Ficoideæ*. Generic character: calyx five-parted, coloured; petals none; stamens fifteen to thirty, inserted in the calyx; style none; stigmas three or five; capsule three, rarely four or five-celled; many-seeded.

This genus consists of about six species, all smooth, fleshy herbs, inhabiting the seashore in tropical America; the leaves are opposite and entire, and the flowers axillary, solitary; *S. portulacastrum* is the Sea Purslane.

SET, v.	Goth. <i>sat-jan</i> , A. S. <i>settan</i> ; D. <i>setten</i> ; Ger. <i>setzen</i> ; Sw. <i>settia</i> , <i>ponere</i> , <i>locare</i> , <i>statuere</i> , to put or place. See SETTLE.
SET, n.	
SET, adj.	
SE'TTER,	
SE'TTING, n.	To put or place, in any state, condition, position.
SETTE'E.	

To set firmly; to fix, to establish.

To set in order or according to rule, to dispose, to arrange, to adjust, to adapt, to regulate.

To be hard set; to be set, put, or placed in a hard or difficult state or condition. To put or place or plant; to place, to station, to appoint to a place, station, or office.

To set, at a rental, to put or place (in the occupation of another.)

Set (with prepositions) is used as equivalent to some of the compounds of the Lat. *ponere*,—

To set against, to oppose; to set together, to compose; to set upon, to impose; to set across, to transpose.

To set (with prepositions) is also frequently used in phrases or expressions elliptical; the ellipsis must be supplied from the context.

To set, as the sun, to cease or desist from motion, and, consequentially, to go down; as the setting is opposed to the rising or apparent ascent of the sun.

A set; a fixed, regular, usual number or quantity, a combination, disposition, or arrangement; that which, anything which, is set, planted, staked.

Brut ordeynede ys ost, and sette hem wyslyche,
And with god herte ageyn þe folc wende baldeliche.

The tyme sette of kinde is come,
This lady hath hir chambre nome;
And of a sonne borne full.

Gower. Conf. Am. book ii.

Not many yeares agoe, whole Saxony was chiefly under two princes; the one Duke John Fredericke, borne Elector, who yet liueth, defender of Luther, a noble setter out, and as true a follower of Chryst and hys Gospell.

Ascham. Works, p. 32. *Of the Affaires of Germany.*

Therefore gaue hee them his eternall sprite, that there might bee nothing desired, to the declaration and setting out of his worde.
Barnes. Workes, p. 293. *That Men's Constitutions bynde not the Conscience.*

Than began he sūwhat plainly to confesse and declare, not only what he had done for the settinge forth of that secte, but also partly what oppiniōs he and other his felowes had holden and were of.

Sir Thomas More. Workes, book iv. p. 262. *Dialogue.*

Anone after, the Frenche kyng was lodged thus at the bridge of Bounes, a company of Heynous, by the setting on of Sir Wyllyam Bayllule and y^e Lorde Vanflart de la Croyse, who sayd howe they knewe all the countrey, and that they wolde bring them into such a place on the Frenche hoost, y^t they shulde haue some wynnyng.

Lord Berners. Froissart. Cronycle, vol. i. ch. lviii.

He pulleth downe, he setteth up on hy,
He gives to this, from that he takes away.

Spenser. Faerie Queene, book v. can. 2.

Of one and the same vine braunch, a man may in this sort make many kinds of sions or sets.

Holland. Plinie, book xvii. ch. xxi.

Iago. Oh, you are well tun'd now; but Ile set downe the peggs that make this musicke, as honest as I am.

Shakspeare. Othello, fol. 317.

When I was yet a child, no childish play
To me was pleasing, all my mind was set
Serious to learn and know, and thence to do
What might be publick good.

Milton. Paradise Regained, book i. l. 201

I met a foole,
Who laid him downe, and bask'd him in the sun,
And rail'd on Lady Fortune in good termes,
In good set termes, and yet a motley foole.
Shakspeare. As You Like It, act ii. sc. 7. fol. 193.

When we haue matcht our rackets to these balles,
We will in France (by God's grace) play a set
Shall strike his father's crowne into the hazard.

Id. *Henry V.* fol. 72.

SET.

SETA-
CEOUS.

Nor aged Dolius, nor his sons, were there,
Nor servants, absent on another care;
To search the woods for *sets* of flowery thorn,
Their orchard bounds to strengthen and adorn.
Pope. Homer. Odyssey, book xxiv.

St. Paul was therefore said by some of the vulgar Athenians to have been a *setter* forth of strange gods, when he preached to them Jesus and the resurrection, because they supposed him not only to have made Jesus a God, but also Anastasis or resurrection, a goddess too.

Cudworth. Intellectual System, book i. ch. iv. p. 519.

Sebastian Cabota, born in Bristol, of Genoese parents, who was the chief *setter* forth of the first voyage into those parts, was constituted the first governor thereof, during his life.
Strype. Ecclesiastical Memorials, vol. v. ch. xl. p. 48. Queen Mary I.

Ingenious Fancy, never better pleas'd
Than when employ'd t' accommodate the fair,
Heard the sweet moan with pity, and devis'd
The soft *settee*; one elbow at each end,
And in the midst an elbow it received,
United yet divided, twain at once.

Cowper. The Task, book i.

To this head may also be referred the practice of what is called a *set-off*, whereby the defendant acknowledges the justice of the plaintiff's demand on the one hand, but on the other *sets* up a demand of his own to counterbalance that of the plaintiff, either in the whole or in part.

Blackstone. Commentaries, vol. iii. book iii. ch. xx. p. 303.

I reckon the times of Cæsar [Julius] free, because the commotions left every body a side to take, and the parties were pretty equal at the *set out*.
Byron. Diary, February 18, 1821.

SET-OFF, in *Law*, takes place where there are two parties, each owing money to the other, and the two debts are allowed one against the other so as to operate as a satisfaction of both. This was a process which, before the passing of the Statutes of *Sett-off*, one of the parties could not compel the other to adopt; and therefore, if one of the two vexatiously brought an action for the debt due to him, the debt which he owed was no defence to the action, but the party sued was obliged to commence a cross action; the consequence of which was, that disputed accounts could scarcely be settled without two actions. This inconvenience was remedied by the Statutes 2 George II. c. 22, and 8 George II. c. 24, which directs that one debt may be set off against another; and therefore, at the present day, if one of the parties sues when he himself owes money to the defendant, the latter may plead the debt which is due to him, which, to the extent of that debt, is a bar to the plaintiff's action. This right of *Set-off* only exists when the cross debts are due to and from precisely the same parties, both with reference to their number and to the character in which they owe and claim the money. Thus, a debt due from A to B cannot be set off against a debt due from B to A and C jointly; and thus, also, a debt due to D, as executor, or as the assignee of a bankrupt, cannot be set off against a debt which he has contracted in his own individual character, and for which he is personally liable. The right also only exists when the cross demands are strictly debts; and therefore a sum of money, which is claimed, not specifically as a debt, but as damages for the non-performance of some agreement, or for the commission of some wrongful act, cannot be set off under the Statutes. If a man die, those debts only can be set off which were due to and from him in his lifetime; and if either of the demands accrued after his death, the Statutes do not apply.

SETACEOUS, Lat. *seta*, a hair;—Hairy, bushy.

The parent insect, with its stiff *setaceous* tail, terebrates the rib

of the leaf, when tender, and makes way for its egg into the very pith or heart thereof.

Derham. Physico-Theology, book viii. ch. vi. p. 398.

SETARIA, in *Botany*, a genus so called from *seta*, a bristle, in allusion to the locusta being involucreated by two or more bristles; it belongs to the class *Triandria*, order *Digynia*, and natural family of *Gramineæ*. Generic character: locusta somewhat involucreated by two or more bristles; lower glume very small; lower floret neuter or male; palea hard and coriaceous; scales very blunt, rather falcate; ovarium emarginate; stigmas plumose; seed free, enclosed in the persistent palea; panicles simple, spike-formed.

A genus divided from *Panicum*, consisting of above thirty species, all annual, erect plants; *S. viridis* and *S. verticillata* are natives of England.

SETELLIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* long, three-jointed, the two first joints short, the third four times the length of the others, and furnished at its base above with a velvety bristle; face quadrate; forehead longer than broad; body linear.

Type of the genus, *S. afra*, Robineau Desvoidy; Macquart, *Diptères*, vol. ii. p. 494. Two species, both natives of Brazil.

SETH, *i. e.* *asseth*. See **ASSETS**.

Wherefore it may wele appere to all that rede this story, that what, lyuyng, this man was demed of, that he purged hym in suche wyse, by penaunce, that he made a *seth* and amends to Goddes pleasure.
Lord Berners. Froissart. Cronycle, ch. 195.

SETHIA, in *Botany*, a genus so named from S. Sethi, author of a work on culinary vegetables; it belongs to the class *Monadelphica*, order *Decandria*, and natural order *Erythroxyloæ*. Generic character: calyx five-lobed and five-parted; petals five; stamens ten, monadelphous; styles three, connected, but with the stigmas distinct.

Nearly related to *Erythroxyton*. There are three species, one a native of India, and two of Brazil; all shrubs, with simple leaves and small axillary flowers.

SETINA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* simple in both sexes, ciliated in the males; *palpi* short, ascending, slightly divaricating, hairy beneath, triarticulated, the basal joints of equal length, the first stoutest, the next somewhat linear, the terminal one very minute, subovate; *maxillæ* elongate; head small, pilose in part; *thorax* slightly hairy; body rather slender, somewhat linear, stoutest in the females, and a little pointed at the apex, the latter with a small tuft in the males; wings short, anterior elongate-trigonal, posterior broad, slightly waved on the hinder margin; legs not very stout; *tibiæ* moderate, rather slender, the posterior with two pair of spurs; females smaller than the males. Caterpillar hairy; *pupa* folliculate.

Type of the genus, *Phalæna (Tinea) irrorella*, Linnaeus; Stephens, *Illust. Britt. Ent. (Haustellata)*, vol. ii. p. 99. Not an extensive genus; three species, however, are found, locally abundant, in England.

SETON, Fr. *seton*, from Lat. *seta*, a hair, of which the *seton* was made.

Then passed a *seton*-needle through the other sinus, and made way beneath for discharge of the matter.

Wiseman. Surgery, vol. i. book i. ch. xviii. p. 148.

SE'TTLE, n.

SE'TTLEDNESS,

SE'TTLEMENT,

SE'TTLER,

SE'TTLING, n.

The A. S. *saht-lian*, *sahtlian*, are found (see Lye) used met.—*componere*, to compose, *i. e.* to set or put together, at one, in peace, in concord; they are from the verb *sættan*, *sittan*, to set, to sit.

To place, fix or, establish; to confirm; to cease from motion or commotion, to subside, to sink, to deposit; to fix, a residence, abiding or dwelling place; met. to compose, to repose.

Till that your sight *ysateled* be a while,
Ther may ful many a sighte you begile.

Chaucer. *The Marchantes Tale*, v. 10279.

Where stedfastnesse as chiefe in thee doth raigne,
Pacience thy *settled* mind doth guide and stene.

Uncertain Auctors. *Of One vnjustly defamed*.

Than everye one of them *setteth* his shiftes abroache, some with false dyse, some with *settling* of dyse.

Ascham. *Works*, p. 85. *Toxophilus*.

Now ginnes that goodly frame of temperaunce
Fayrely to rise, and her adorned hed
To pricke of highest prayse forth to advaunce,
Formerly grounded and fast *settled*
On firme foundation of true bountyhed.

Spenser. *Faerie Queene*, book ii. can. 12.

Tis true, that a weighty *settled* sorrow is of that force that, besides the contraction of the spirits, it will work upon the radical moisture and dry it up, so that the hair can have no moisture at the root.

Howell. *Letter* 28. book i. sec. 4. p. 195.

COUNT. You are your self, my lord, I like your *settledness*.

Beaumont and Fletcher. *The Woman Hater*, act v. sc. 1.

Every third year (after the full *settlement* of the foundation) the college shall give an account in print, in proper and ancient Latin, of the fruits of their triennial industry.

Cowley. *The College*.

They come up many times of their owne accord, in some low grounds where there is a *settling* or stay of raine water fallen from higher places.

Holland. *Plinie*, book xxxi. ch. iii.

It chanc'd a cloud of bees in gathering swarms
Swept through the skies, with murmuring hoarse alarms,
Pour'd in, and (*settling* on the topmost bough)
Stretch'd down, dependent deep in air below.

Pitt. *Virgil. Æneid*, book vii.

The man (their hearty welcome first express'd)
A common *settle* drew for either guest,
Inviting each his weary limbs to rest.

Dryden. *Ovid. Metamorphoses*, book viii.

Our design was, to search for canoas in some river where the Spaniards have neither *settlement* nor trade with the native Indians.

Dampier. *Voyages*, vol. i. ch. vii. p. 163.

On her [Princess Sophia] therefore, and the heirs of her body, being Protestants, the remainder of the crown, on the death of King William and Queen Anne without issue, was *settled* by Statute 12 and 13 W. III.

Blackstone. *Commentaries*, vol. i. book i. ch. iii.

These liberties were again asserted at the commencement of the present century, in the Act of *Settlement*, whereby the crown was limited to his present Majesty's illustrious house; and some new provisions were added, at the same fortunate æra, for better securing our religion, laws, and liberties, which the Statute declares to be "the birthright of the people of England," according to the ancient doctrine of the common law.

Id. *Ib.* vol. i. book i. ch. i.

This question, (Who were to be considered as the poor of each parish?) after some variation, was at last determined by the 13th and 14th of Charles II., when it was enacted that forty days' undisturbed residence should gain any person a *settlement* in any parish.

Smith. *Wealth of Nations*, vol. i. book i. ch. viii.

All these colonies had established themselves in countries inhabited by savage and barbarous nations, who easily gave place to the new *settlers*.

Id. *Ib.* vol. ii. book iv. ch. vii.

SETTLE, a Market Town in the West Riding of Yorkshire, situated on the Pribble, in the hilly district which

connects that County with Lancashire. It is built at the base of a rock which rises abruptly above it; and the parish Church is at Giggleswick on the opposite bank of the river, over which there is a stone bridge. In the neighbourhood are several vestiges of Roman fortifications; and about a mile from the town is a singular spring, which, issuing out at the foot of an almost perpendicular rock, falls into a stone cistern, and ebbs and flows several times in an hour, rising and falling about a foot and a half at each influx and reflux. Population, in 1831, 1627. Distant from York 60 miles, from London 233 miles.

SE'VEN,

SEVE'RE, } Fr. *severe*; It. *severo*; Sp. *severo*;

SEVE'RELY, } Lat. *severus*, from the Gr. *σεβειναι*, *i. e.*

SEVE'RITY. } *venerari*, and equivalent to *σεμνος*, *ve-*

nerabilis; such, adds Vossius, are they who regulate
their lives *severe*, (so as to deserve reverence.) Rigid
or rigorous; exact, austere, coerced, strict, straitened,
constrained; distressing; confined to strict rules, to
method or order, within bounds; strict, methodical,
concise.

O fearful, frowning Nemesis,

Daughter of justice most *severe*,

That art the world's great arbitress,

And queen of causes reigning here.

Daniel. Cleopatra. Chorus.

No, no, quoth she, sweet Death, I did but jest;

Yet, pardon me, I felt a kind of fear,

When as I met the boar, that bloody beast,

Which knows no pity, but is still *severe*.

Shakspeare. Venus and Adonis.

These two examples do prove, that amonges the Romaynes, the
obedience of the souldiours was wonderfull greates, and the *seve-*
ritie of the captaines, to see the same kept, wonderfull straye.

Ascham. Works, p. 93. Toxophilus.

Men may censure thine

The gentler, if *severely* thou exact not

More strength from me, than in thy self was found.

Milton. Samson Agonistes, l. 789.

Strict age, and sour *severity*,

With their grave saws in slumber lie.

Id. Comus, l. 109.

Yet Anaxagoras was *severely* taxed also, by Aristotle and Plato,
as one not thorough-paced in theism, and who did not so fully as
he ought adhere to his own principles.

Cudworth. Intellectual System, book i. ch. iv. p. 382.

Pass we on now to the Council of Ariminum, in the year 359,
when the Arians had the secular power on their side, and made
use of it with all imaginable *severity*.

Waterland. Works, vol. i. p. 332. Second Defence of some Queries.
Query 29.

I am very apt to think that great *severity* of punishment does
but very little good; nay, great harm in education; and I believe

SEVERE. it will be found that, *cæteris paribus*, those children who have been most chastised seldom make the best men.
SEVILLE. Locke. *On Education*, sec. 43.

Nor must the masters of the different trades be suffered so severely to exact the children's labour as to defraud them of the hours that should be daily allotted to devotion, nor in some time in every week, which, besides the leisure of the Sundays, should be set apart for religious instruction.

Horsley. *Sermon* 40. vol. iii. p. 229.

The lives of children and servants are no longer at the disposal of the father of the family; nor is domestic authority maintained, as formerly, by severities which the mild spirit of modern laws rarely inflicts on the worst public malefactors.

Id. *Ib.* vol. i. p. 214.

SEVILLE, the Capital of the Intendancy named from it, (see ANDALUSIA,) one of the wealthiest and most important towns of Spain, is seated in a large and beautiful plain watered by the Guadalquivir, which almost encircles the town and then divides it into two unequal parts. Its situation alone would merit the encomium of its well known Spanish proverb, *Que non a visto Sevilla, non a visto maravilla*. Embosomed by groves of the orange and olive, its wide horizon only limited by the ranges of the Sierra Nîa de Ronda and the Sierra Nevada, this "Queen of Andalusia" has been truly described as "swaying her sceptre over a dominion of luxuriance and beauty." It is mentioned by Strabo as ancient even in his time, and though its origin is hidden by dark antiquity, its Roman name of *Hispalis*, whence Seville is undoubtedly derived from its Phœnician appellation. After the fall of the Empire it became the residence of the Gothic Kings previously to their removing their Court to Toledo. Under the Moors it was included in the Khalifate of Cordova; on the dismemberment of which it rose to be the Capital of an independent sovereignty extending over the Western half of Andalusia. On the subjugation of Cordova and of Jaen by Ferdinand II. in 1236, it erected itself into a republic; but this monarch collecting his forces before it in 1247, it surrendered after sustaining a year's siege, (one of the most remarkable in the annals of Spain,) and from this epoch it has continued to form part of the States of the Kings of Castile.

The circumference of the city of Seville itself is still the same as it was in the time of the Romans, and is marked by lofty walls, which are flanked by 166 small square towers, and pierced by 12 gates. Its streets are narrow, tortuous, and badly paved, but clean; and its houses, in general, well built. Altogether the city and its faubourgs are computed to contain 564 streets, 12,055 houses, 62 places or squares, and 32 churches. "The first stroll which a stranger takes through the streets of Seville," says Mr. Inglis, "shows him a new order of things; he at once perceives the results of a hot climate, and the traces of Moorish dominion and Moorish customs. These are first remarked in the construction of the houses, which differ entirely from anything that he has ever seen before. In place of the wide dark entry to a Castilian house, a passage, scrupulously clean, leads through the building to the interior square or *patio*, which is separated from the passage by a handsome, ornamented, and often gilded, cast-iron door, through which every one who passes along the street may see into the patio. The patio is the luxury of a hot climate; it is open to the sky, but the sun scarcely reaches it; and there is always a contrivance by which an awning may be drawn over it. The floor is of marble or of painted Venetian tiles; sometimes a foun-

tain plays in the centre, and a choice assortment of flowers, sweet-smelling and beautiful, is disposed around in ornamented vases; here the inmates escape from the noon-day heats; and here in the evening every family assembles to converse, see their friends, play the guitar, and sip lemonade." The houses are whitewashed, each has its range of balconies, and every third or fourth house has its garden and orangery.

One of the chief buildings in Seville is the Cathedral, Chief a large and sumptuous Gothic pile, which surpasses buildings every other church in the Peninsula in its collection of pictures, and contains the most perfect organ in the world, that of Haarlem not excepted. Its tower, of Moorish architecture, one of the boasts of Seville, is 350 feet high. "From its top," says the writer just quoted, "I counted no fewer than 120 spires and towers belonging to the city and the neighbouring villages and convents." The Alcazar or Palace of the Moorish Kings is an interesting remain, but far inferior to the Alhambra of Granada; its principal point of attraction is its lovely garden, perfumed with the myrtle, geranium, and orange, and ever fresh with its cool and sparkling fountains. The Town-hall, Cannon-foundry, Mint, Hospital, and the Medina Palace are all edifices worthy of note. The snuff-manufactory, the most celebrated in Spain, is an immense building, in which upwards of 3000 individuals used to be employed a century ago; a number now reduced to about 400. The fact of the manufacture being still a Government monopoly, kept up at a high price, and so holding out a bounty to the smuggler, is sufficient to account for this falling off.

There are many delightful public walks in Seville. Public The new Paseo, a broad paved walk, parallel with the walks. river, is one of the pleasantest and most frequented; but a still more attractive resort is the *Delicias*, situated about a mile down the river, a perfect grove of flowering trees and aromatic plants.

Seville is the seat of the *Audiencia real* of Andalusia, Literary and is an Archbishop's See. Its University is the best societies attended of any in Spain, and, in addition to other public means of education, it possesses several literary and scientific societies; two of which, the *Economical* and the *Medical*, publish their transactions.

According to a Government Return made in 1601, Trade. this city was estimated to contain above 300,000 inhabitants, and had 16,000 silk-looms, giving employment to 130,000 persons. It has still 2500 silk-looms, but French silks are worn here to a great extent. The chief exports from Seville are wool, goat-skins, licorice, oil, and oranges. About 40 vessels are yearly freighted with the latter; and as each cargo consists of 400 chests, and as each chest contains 800 oranges, the average number exported is 12,800,000 oranges, of which about one-tenth part are the bitter orange. The price paid by the London merchant to the Seville exporter is about 4½d. per dozen; and the cargo of each vessel is generally consigned to about ten persons. San Lucar, at the mouth of the Guadalquivir, about 38 miles South South-West of the city, is the port of Seville; but the river is navigable for vessels of some burden to within eight or ten miles of the town. Three steam-boats now ply on the Guadalquivir.

There are numerous remains of the Roman as well Antiqui- as of the Moorish dominion within or near Seville. ties. Among those belonging to the former, the ruins of the city of *Italica*, which gave birth to Trajan, Adrian, and

SEVILLE. Theodosius, are the most interesting; and of the latter, besides those already mentioned, the beautiful aqueduct **SEVRES, DEUX.** which conveys water to the city from a distance of six miles.

Population. The population is upwards of 90,000 souls, exclusive of the religious orders, whose numbers amount to 4040, being 2800 friars and 1240 nuns; but this computation includes the convents beyond the walls. North latitude $37^{\circ} 14'$, West longitude $5^{\circ} 59'$.

Laborde, *Itinéraire Descriptif de l'Espagne*; Inglis, *Spain in 1830*.

SEVRES, DEUX, a Department of France, formerly included in the Province of Upper Poitou, derives its name from two of the rivers which water it, the Sèvre-Niortaise and the Sèvre-Nantaise. It lies between $45^{\circ} 56'$ and $47^{\circ} 7'$ North latitude, and $4^{\circ} 30' 23''$ and $5^{\circ} 35' 23''$ East longitude; being bounded on the North by the Department of Maine et Loire; on the East by that of Vienne; on the South-East by that of Charente; on the South-West by the Lower Charente; and on the West by La Vendée. Its greatest length from North-West to South-East is $26\frac{1}{2}$ French leagues, and its greatest breadth from East to West $14\frac{1}{2}$ leagues. Its superficial area is 320 French square leagues.

Surface. This Department is traversed by a chain of hills entering it from that of Vienne, and running from South-East to North-West. They are a prolongation of the mountains of the Limousin, and form part of the watershed between the Dordogne and the Loire; their medium height is about 460 feet. The secondary basins determined by its ramifications are those of the Thoué and of the Sèvre-Nantaise to the North, and of the Boutonne and Sèvre-Niortaise to the South. Beginning at the source of the last-named river, this chain of hills forms a plateau or table-land, called the *Gatine*, which occupies nearly a third of the superficies of the Department, and which contains almost all the small lakes (*étangs*) found in it, to the number of 196. These cover an extent of about 500 acres, and give rise to various rivulets and rivers. The water-courses of the Department are, however, of limited extent; the most considerable being the two rivers already mentioned as giving its name to the Department, and which take theirs from the circumstance of the one passing through the town of Nantes, and the other through that of Niort; there follow the Thoué, Boutonne, Argenton, Lambon, Antise, Mignon, &c., some of which are partially navigable. Numerous marshes occur in the Southern and North-Eastern parts of the Department; and it is estimated that about 20,000 acres of land are thus lost to agriculture, though it appears that there would be little difficulty in draining them. Altogether the surface of the Department is sufficiently varied, presenting extensive plains, numerous valleys, and steep hills.

Soil and agriculture. The soil is in general argilo-calcareous in the basin inclining to the South-West; argilo-siliceous and granitic in that to the North-East, which is chiefly cut up by hills and ravines. Agriculture is still very backward in this Department, though some improvements have been introduced of late years into the plain, or Southern districts. The produce of the soil is mainly diminished by the custom of leaving full a third of the best land yearly in fallow, which, indeed, is carried in some Communes to so ruinous an extent that the land does not return to cultivation till the fourth or even the fifth year. All the cereal grains are raised here, with flax and hemp;

and the South-Western districts furnish considerable growths of red wine of medium quality, and of a white wine which makes excellent brandy. Fruit trees succeed well, except in the *Gatine*, and the walnut is cultivated for the sake of an oil that is expressed from it.

This Department carries on a large export trade in Cattle, cattle, supplying Paris with oxen of a very fine breed, and Spain with the choicest mules, both sumpter and baggage. Sheep enter largely into the list of exports, but the wool is of inferior quality; and swine and poultry form important articles of rural economy. Game is abundant, from the stag and wild boar down to the hare and partridge; and the rivers and preserve ponds swarm with fish. The Department, however, is infested with wolves; a circumstance that calls for stricter measures on the part of the local authorities.

Climate. The Plain, as it is called, enjoys a milder temperature than the *Gatine*, or Northern portion of the Department, not only from its lying more Southerly, but from the greater quantity of wood and water in the *Gatine*, which, indeed, consists of little else. Hence the Summer is shorter in the latter, and the heat is lessened by thick and frequent fogs. But in the Plain, the month of February ushers in gentle winds from the West, which bring with them a soft and mild temperature; and, even in the depth of Winter, the medium fall of the thermometer is seldom more than three or four degrees below zero. (Reaumur.) Generally speaking, the air is healthy in the South-Eastern districts only; for the inhabitants of the Northern are subject to fevers and chest complaints; and in the Southern, they who live near the marshes are almost all affected with a scorbutic complaint that occasions rheumatism, erysipelas, cancer of the legs, &c.

There are numerous quarries of marble and of free-stone in the Department, which also yields iron, various clays, and saltpetre, but no salt. There is a mine of antimony, and chalcedony is found near Niort and elsewhere. The most celebrated of its mineral springs is that of Bilazay, in the Canton of Thouars.

The chief manufactures are those of chamois skins and gloves. Serges, flannels, some cloth, chiefly of the inferior kind, and various stuffs, are likewise manufactured for home consumption. The principal exports are grain, flour, horned cattle, horses, mules to Spain, sheep, wool, leather, dressed and undressed, iron, saltpetre, and gloves. The imports are mostly salt, tobacco, colonial goods, hardware, and articles of fashion.

This Department is divided into the four Arrondissements of Niort, Bressuire, Melle, and Parthenay, which are subdivided into 31 Cantons, containing 359 Communes, and 294,850 inhabitants. It returns three Members to the Chamber of Deputies, and is comprised in the twelfth military division, and the tenth Department of forests. Together with the Department of Vienne, it constitutes the Diocese of Poitiers, coming within the jurisdiction of the *Cour Royale* of that city, and being included within the rule of its University.

Towns. Niort, the Capital of the Department, is an ancient town, whose former mean and squalid appearance has at length given way before the progress of modern improvement. Among its public buildings its Gothic Church, built by the English, and the *Hôtel de Ville*, the former Palace of Eleonora of Aquitaine, deserve notice; and among its useful establishments, two Hospitals, an Asylum for the destitute, a Public Library containing 15,000 volumes, a School for design, in which instruction

SEVRES, is given gratuitously, a Botanical Garden, and a Communal College, with a Museum attached to it. Niort is celebrated for its dry sweetmeats, which form an important item in its trade. There are large tanneries in the town, with cotton-mills, and manufactures of gloves and of woollens. Madame de Maintenon was born in one of the prisons of this town; and among its celebrated men may be cited Beausobre and Louis de Fontanes. The town is pleasantly seated on the banks of the Sèvre, and its vicinity embraces numerous charming walks and drives. Population about 17,000.

The remaining towns are of inconsiderable size, and present nothing worthy of notice.

Dictionnaire Géographique Universel; Malte-Brun; Balbi.

SEW, *n.* } Spelman describes the office of *sewer*
SEW, *v.* } to be to taste, and place in order the
SE'WER. } dishes at a feast; and he adopts the opinion of Cowel that the word is derived from the Fr. *asseoir*, *disponere*, *collocare*, to put or place in order. Cowel asserts that he had seen the word written *asseour*: and in the Law Lat. of Fleta, this officer is called *assessor*, i. e. *ordinator*, *collocator*, *dispositor*. In Leland's *Collectanea* we have accounts of the feasts given at the respective inthronizations of Archbishop Nevelle and Archbishop Warham. Among the different officers employed, the *sewer* stands conspicuous: it appears that he, at certain different times, was to go to the dresser, and there take *say* or *assay* of every dish; the manner of so doing is described, and it appears to have been a very important business; and clearly his (the *sewer's*) principal duty, namely, to *say* or *assay* the meats, (not only at the dresser, but also, in presence, at the table,) as it was that of the cup-bearer to taste or *assay* the drinks. At the feast given by Warham to Henry VIII. and Charles V., on their way through Canterbury from Dover, the Duke of Buckingham, as *sewer*, (we are told,) rode upon a white hobby before the banqueting dishes, and after some ceremonies he rode to the table, when he delivered his hobby, and *sewed*, kneeling at the table where the Emperor was. All this seems at variance with the common Etymology. What can *sewed* here mean? probably, *sayed*, *assayed*, or tasted. The Fr. *essayeur* is one that tastes, or takes an *assay*; *essayeur* is to take a taste, make a trial of; *essay* is the taste or *essay* taken of a Prince's meat or drink, and also the *vessel* whereout, or piece whereof, it is taken. See Cotgrave. *Sewer* then may be from *essayeur*, *sayeur*.

To *sew*, from the verb *essayer*, *sayer*; and the noun from the Fr. noun, applied as we now use *gout*, or *haut-gout*, for dishes or viands of high taste or flavour.

The Fr. have also their *escuyer trenchant*, a carver, or squire of the mouth; also, a *taster*; (for he that carves to a prince, ever *tastes* of what he carves, before his master touch it.) Cotgrave. And from this *escuyer* our *sewer* is by some thought to have sprung; but the carver or carving esquire has his share in the tasting. Mr Tyrrwhitt says, *sewes* are dishes, from the same verb *asseoir*. May it not be dishes, viands, *sayed* or *tasted*?

I wol not tellen of hir strange *sewes*,
Ne of hir swannes, ne hir heronsewes.

Chaucer. *The Squires Tale*, v. 10381.

And after with divers spieses
The fleshe, when it was so to hewe,
She taketh, and maketh thereof a *sewe*.

Gower. *Conf. Am.* book v.

I want cunning by order to describe
Of every course the diversities,
The strange *sewes*, and the subtleties,
That were that day served in that place.
Lydgate. *Siege of Troy*.

At ewle we wonten gambole, daunce,
To carrole, and to sing,
To haue gud spiced *sewe*, and roste,
And plum-pies for a king.
Warner. *Albion's England*, book v. ch. xxiv.

No man *seweth* a pacche of newe cloth to an olde cloth, else he taketh away the newe pacche fro the olde, and a more brekyng is maad.

Wiclif. *Mark*, ch. ii.

Also no man *soweth* a pece of newe clothe vnto an olde garmente, for then taketh he away the newe pece from the olde, and so is the rent worse.

Tyndal. *Bible*, Anno 1551.

Than they *sowed* fygge leues together and made them apurnes.

Id. *Genesis*, ch. iii.

Boethius shewed the art of *sowing*, as well for tailors, as corviers and shoemakers.

Holland. *Plinie*, book vii. ch. lvi.

At every twisted thrid my rock let flie
Unto the *sew'ster*, who did sit me nigh.
Ben Jonson. *The Sad Shepherd*, act ii. sc. 3.

What! means *Æacides* to spin and *sew*?
With spear and sword in field thy valour shew;
And, leaving this, the nobler Pallas know.
Dryden. *Ovid. Art of Love*, book i.

SEW. See SUE.

SEW, *v.* } Fr. *suiure*, to follow; *issir*, to issue, to
SEWER. } go or depart out, to flow forth. Cotgrave.

To *sew* a pond, is to flow, or cause the waters to flow forth; and, consequently, to drain the pond.

Sewers (called *shores*) are courses, canals, through which water, &c. *issues*, runs off.

And [they] slewe and hurte many of the abbottes tenautes, and spoyled and brake his closures and warynes, and *sewyd* their pondes and waters, and dyd vnto them many displeasures, to the vtter ruyn of that monastery.

Fabyan. *Chronycle*, Anno 1376.

Sew ponds, amend dams, and sell webster thy wool.
Tusser. *September's Husbandry*, p. 18.

Under whose floor the common *sewer* pass'd,
Up to the same a loathsome stench that cast.
Drayton. *The Barons' Wars*, book v.

As one who long in populous city pent,
Where houses thick and *sewers* annoy the aire,
Forth issuing on a Summer's morne to breathe
Among the pleasant villages and farmes
Adjoynd.
Milton. *Paradise Lost*, book ix. l. 445.

Thither flow,
As to a common and most noisome *sewer*,
The dregs and feculence of ev'ry land.
Couper. *The Task*, book i.

SEWERS. **SEWERS**, in *Law*, are placed under the jurisdiction of Commissioners, who derive their authority from a Commission under the Great Seal, granted in pursuance of the Statute 23 Henry VIII., c. 5, to such persons as are named by the Lord Chancellor, Lord Treasurer, and the two Chief Justices, or by three of them, whereof the Lord Chancellor must be one. Separate Commissions appointing distinct sets of Commissioners are granted for different districts, according to convenience. The jurisdiction of the Commissioners is to superintend the repairs of sea-banks and sea-walls, and the cleansing of rivers, public streams, ditches, and other conduits whereby any waters are carried off. The Commissioners may proceed to make such orders as lie within their power, *e. g.* for the repair of a sea-wall, or for the removal of some impediment to the current of a stream, either upon their own view or upon the presentment or inquisition of a jury. They may impose such rates as they think necessary upon the owners of lands within their jurisdiction, and in case of refusal they may levy the same by distress of the goods of the recusant, or sale of his lands. They are a court of record, but are subject to the control of the Court of Queen's Bench, if they exceed or abuse their powers. The Sewer's rate is one which is primarily payable by the landlord, and not by the tenant; the latter, however, may by agreement, either relating to this rate, or generally for the payment of all rates, render himself liable. No person is liable to be rated who does not and cannot derive any benefit from the works for which the rate is designed. If, therefore, the lands of A are so high above the level of the Sewer that no stoppage of the Sewer can affect him, a rate upon him is illegal, and he may bring an action of trespass against the parties who levy the rate upon his lands or goods. The Statute 3 and 4 Will. IV. c. 22, introduces many regulations for facilitating and better ordering the proceedings of the Commissioners.

SEX. } Fr. *sexe*; It. *sezzo*; Sp. *sexo*; Lat. *se'xual*, } *se'xus* or *secus*, from the old supine *sexum* *se'xed*. } for *sextum*, because (per *sexum*) animal is cut (*secatur*) or divided into male and female. Vos-sius.

The division or distribution into male and female kind; as distinguished into male or female.

I speake against my *sex*,
So haue I done before,
But truth is truth, and muste be tolde,
Though daunger keepe the dore.

Gascoigne. The Complaint of Phylomene.

The *sex* of womankind of all other is most bound to have regardful eye to men's judgments.

Sidney. Arcadia, book ii. p. 179.

Her eyes at all points arm'd with those deceits,
That to her *sex* are natural every way.

Drayton. The Miseries of Queen Margaret.

DOR. Stay Sophocles, with this tie up my sight,
Let not soft nature so transform'd be
(And lose her gentle *sex'd* humanitie)
To make me see my Lord bleed.

Beaumont and Fletcher. Moral Representations, vol. ii. p. 538.

Till Theseus in his arms convey'd with care,
Far from so sad a sight, the swooning fair.
'Twere loss of time her sorrow to relate;
Ill bears the *sex* a youthful lover's fate,
When just approaching to the nuptial state.

Dryden. Palamon and Arcite, book iii.

A wife! ah, gentle deities, can he
That has a wife, e'er feel adversity?
Would men but follow what the *sex* advise,
All things would prosper, all the world grow wise.

Pope. January and May.

VOL. XXVII.

The poet Euripides happened to be coupled to two noisy vixens, who so plagued him with their jealousies and quarrels, that he became ever after a professed woman-hater; and is the only theatrical writer, perhaps the only poet, that ever entertained an aversion to the *sex*.
Hume. Essay 19.

SEXAGENARY, Fr. *sexagenaire*; It. *sessantino*; Sp. *sexagenario*; sixty, six tens, or threescore.

These are the *sexagenary* fair ones, and upwards, who, whether they were handsome or not in the last century, ought at least in this to reduce themselves to a decency and gravity of dress suitable to their years.
Chesterfield. Common Sense, No. 6.

SEXAGE'SIMAL, } Lat. *sexagesimus*, the six-
SEXENNIAL. } tieth; Lat. *sex annus*, at every sixth year, or lasting six years.

This evil was not so much the vice of their constitution itself; as it must now be in your contrivance of *sexennial* elective judicatories.
Burke.

SEXANGULAR, having six angles, (*sex angulos*.)

The grubs, from their *sexangular* abode,
Crawl out unfinished like the maggot's brood.

Dryden.

SEXTANT, } Fr. *sextant*, *sextile*; It. *sestante*,
SEXTILE. } *sextile*; Sp. *sextil*; Lat. *sextans*, *sextilis*, from *sex*, six. We have the words, but not their particular usage, from the Latin.

A *sextant* is an astronomical instrument measuring 60 degrees, or the sixth part of 360, the circle.

Sextile, in astrology, at the same sixth distant; or two signs, 30 degrees each.

————— To the blanc-moone
Her office they prescrib'd, to th' other five
Thir planetarie motions and aspects
In *sextile*, square, and trine, and opposite,
Of noxious efficacye.

Milton. Paradise Lost, book x. l. 656.

That the reflexion of the solar rays is terminated in the clouds, was the opinion of the Græcian sage: but lunar observations have convicted it of falshood; and that planet receives the dusky light we discern in its *sextile* aspect, from the earth's benignity.

Glanvil. The Vanity of Dogmatizing, ch. xviii. p. 176.

In one half hour I have learnt to cant, with an indifferent good grace; conjunction, opposition, trine, square, and *sextile*, are now no longer bug-bears to me, I thank my stars for't.

Dryden. An Evening's Love, act iii.

The intercourse of trade and friendly offices was carried on between us and the natives, without being disturbed by any one accident, till the evening of the 22d, when a man found means to get into Mr. Bayly's observatory, and to carry off a *sextant* unobserved.

Cook. Voyages, vol. vi. book iii. ch. vi. p. 91.

SEXTON, } Fr. *sacristain*; It. *sagrestano*; Sp. *SEXTONRY*. } *sacristan*, a sacro loco quem custodit; from the sacred place of which he has the care. Spelman says, he was called by our ancestors *segerstane*.

The same maister Johan Warëns for all his promociens he resigned the all, and retayned to hymselfe but a small iyueng, and that was the *sextentry* of our lady church in Renes, worthe by yere, if he be resydent, a C. frankes.

Lord Berners. Froissart. Cronycle, ch. 197.

————— Let the merry bells
(For unknown joys work unknown miracles)
Ring without help of *sexton*, and presage
A new-made holy-day for future age!

Cowley. On His Majesty's Return out of Scotland.

The *sexton* or keeper of this cell was apprehended, and the question demanded, What was become of the treasure aforesaid of 2000 pound which Jupiter had in custodie, and which now was cut of the way and be gone?

Holland. Plinie, book xxxiii. ch. i.

They may get a dispensation to hold the clerkship and *sextonship* of their own parish in commendam.

Swift.

————— Human earth
Ejected, to make room for—human earth;
The monarch's terrour! and the *sexton's* trade!

Young. The Complaint. Night 9.

SEX.

SEXTON.

SEXTON. Parish clerks and *sextons* are also regarded by the common law as persons who have freeholds in their offices; and therefore though they may be punished, yet they cannot be deprived, by ecclesiastical censures.

Blackstone. Commentaries, vol. i. book i. ch. ii. p. 395.

SEXTUPLE, six times, six-fold.

Which well agreeth unto the proportion of man; whose length, that is, a perpendicular from the vertex unto the sole of the foot, is *sextuple* unto his breadth, or a right line drawn from the ribs of one side to another; that is, a direct line between the breast-bone and the spine.

Sir Thomas Brown. Vulgar Errors, book iv. ch. v. p. 243.

SEYCHELLES (the) or **MAHE' ISLANDS**, sometimes called the Seychelles Archipelago, are a small group to the North-East of Madagascar, between 3° 38' and 4° 45' S., and 55° 15' and 56° 10' E., and, perhaps, the Seven Sisters and Three Brothers* (As sete Irmaões and Os tres Irmaões) of the early Portuguese navigators, but more probably their Ilhas do Almirante, the largest of which they placed in 3° 30' S. (Linschoten, ii. 126.) and the group between 3° 30' and 4° 30' S., and 50° and 51° E., a degree to the North of the Almirante (Admiral's) Islands in modern Charts. Their present name is derived from M. Moreau de Seychelles, a superior officer in the French East India service when they were first explored in 1743. The whole group consists of three larger, 12 smaller islands, and 15 islets or rocks. 1. Mahé, the largest isle, of which the Capital is in 4° 37' 30" S. and 55° 25' E.; 2. Praslin, in 4° 17' 24" S. 55° 39' E.; 3. Silhouette, (Profile,) in 4° 27' S. 55° 11' 30" E. The Island of Mahé (so named in honour of M. Mahé de la Bourdonnais, Governor of Mauritius in 1743) is a mass of rock irregularly oblong in form, stretching from North-West to South-East, and measuring about 17 nautical miles in length, and five or six nautical miles in breadth. It was originally covered with forests, which were imprudently burnt by the first colonists, so that the lower and most accessible tracts are now very bare of wood. Cotton was formerly cultivated advantageously, but sugar of an inferior quality has since been found more profitable; and many small vessels are built, most of the settlers being engaged in the coasting trade. Cattle, poultry, and other sea-stock is also reared in considerable quantities, so that the port of Mahé affords an abundant supply of refreshments for the India ships in their passage outwards. But the security of that harbour is not the only advantage which it possesses. A remarkably mild and healthy climate, (Rochon, ii. 136. Laplace, i. 149.) not liable to any sudden and violent changes of temperature, render it a most agreeable as well as convenient place of resort. The cool season, which begins in May when the South-East monsoon sets in, brings a few rainy squalls of short duration. The wind sometimes, though rarely, veers round to the South and South-West before the North-West monsoon commences in October. At that season gales from the same quarter commonly occur, but they are rarely severe. "Mahé," as M. Laplace justly observes, (i. 149.)

"doit cet heureux climat à sa position sur la limite des vents alizés de Sud-Est et de ceux d'Ouest, qui soufflent toute l'année sous l'équateur, rarement avec violence,

* In Linschoten's Chart, (A. D. 1596,) the centre of the large island of As sete Irmaas is placed in 3° 28' N. and 58° 25' E. about 9° 12' E. of Cabo do Natal, (Cape Christmas,) the North-West point of Madagascar. Os tres Irmaões are very small islands a little to the South of "the Seven Sisters," and about 3° further Eastwards. Abrolho, (the caltrop,) 2° 20' S. E. of the Great Sister, is probably Mahé.

mais toujours avec un ciel sombre et pluvieux." Hence the Seychelles never suffer either from long droughts or from excess of rain. The pretty little Island of St. Ann,* on the North-East side of Mahé, protects its harbour from the wind in that quarter, and is about three miles distant, in 4° 36' S. and 55° 28' 30" E. Praslin, which received its name from the party sent by the Duc de Praslin in 1768 to survey the rocks and shoals between the coast of India and the Isle of France, (Mauritius,) had been more appropriately named the Isle of Palms by M. de la Bourdonnais, by whose order these islands were surveyed by M. Lazare Picault in 1743. That navigator found this island almost entirely covered with a peculiar species of palm, rarely, if ever, seen elsewhere, of which the fruit alone had been previously known. It was called by the early Portuguese navigators Coco de Maldivia or Coco de Salomon, having been first gathered on the coasts of the Maldiv Islands, where it is thrown up by the surf; the tree producing it was therefore supposed to grow at the bottom of the sea, and as productions so wonderful could not fail to have astonishing virtues, the kernel of these coco-nuts was applied by the physicians of that age, both European and Asiatic, as a sovereign remedy for poison, palsy, epilepsy, and almost every disease deemed incurable by ordinary medicines. Like all other treasure-trove, these nuts belonged exclusively to the king; and a single one is said to have been sold for more than £300. (Owen, ii. 166.) The tree itself, though indigenous only in this island, flourishes in Mauritius, where it has been cultivated by the French. It was discovered in 1769 by Barré, a French officer of engineers employed in the survey of the Seychelles, and was called by his countrymen the Coco de mer. (Rochon, ii. 146.) It rises to the height of about 50 feet, and terminates in a crown of large fan-shaped leaves, whence Sonnerat (*Voy. à la Nouv. Guinée*, tab. 37.) took it for a Borassus. It was first described accurately by La Billardiére, who ascertained that it forms a distinct genus, which he named *Lodoicea*; and to particularize this species he added the term *Sechellarum*. (*Ann. du Musée*, tab. 13.) In one respect it differs from most other palms, as its flowers have many stamina, and it would be placed in the class *Icosandria* of the Linnæan system. 3. Silhouette is an irregular oval, about three nautical miles across each way, being one mountain, the sides of which are broken into fertile valleys. The Seychelles appear to have been uninhabited when first colonized from the Isle of France in 1768 or 1769. They have been virtually subject to Great Britain for nearly half a century, having capitulated in 1794, and observed a strict neutrality in the subsequent war till the capitulation was renewed in 1806. On the capture of Mauritius in 1810, these islands, as dependencies on it, were formally taken possession of, and finally ceded to Great Britain by the Treaty of Paris in 1814.

* M. De Laplace, who says, in his Preface, (p. 1.) that, in composing his work, he had not consulted any other, here takes occasion to criticise the Abbé Rochon, who, in 1741, gave, he adds, (i. 153.) 53° 17' E. as the longitude of this island, and is therefore 9' 15" in error; but that astronomer, who passed a month in the Seychelles in 1769, not in 1741, two years before they were explored, places this "*très-bon port*" in 4° 38' S. and 53° 15' E., (*Voyage*, i. 45.) so that the error is only 5' 12". The passage probably referred to by M. Laplace is in Rochon's *Voyage*, ii. 146; and 53° 7', not 17', is the longitude given from an emersion of Jupiter's first satellite; the real difference, therefore, between him and Captain Owen, whose determination 53° 7' 54", M. Laplace says he adopts, is 54" instead of 9' 15". A critic should be careful as to his own accuracy before he calls in question that of others.

The whole number of the Seychelles Islands amounts to 30: to the 13 mentioned above, the following islets may be added: Ile aux Cerfs, Anonyme, du Sud-Est, Ile Longue, Ile Ronde, Ile Moyenne, Thérèse, La Conception, l'Ile aux Roches Marines, les Cousin et Cousine, les Trois Sœurs, l'Ile Félicité, les Mamelles, and l'Ile Plate, reckoned above as one of the Almirante group. To the South-East of the Seychelles, in 8° 15' S. and 60° E., is the Northern end of the extensive bank called by the Portuguese Saya de Malha, *i. e.* Coat of Mail, the exact form of which is given to it in their early Charts.

See Rochon, *Voyage à Madagascar*; Sonnerat, *Voyage à la Nouvelle Guinée*; Jan Huyghen van Linschoten, *Itinerarium ofte Schip-vaert naer Oost ofte Portugaels Indien*, t'Amstelredam, 1644; *Bulletin des Sciences Géographiques*, xix. 320.; Captain W. F. W. Owen, *Tables of Latitudes and Longitudes*, Lond. 1827, 4to.; Captain W. F. W. Owen, *Narrative of Voyages on the Coast of Africa*, Lond. 1833, 2 vols. 8vo.

SEYMERIA, in *Botany*, a genus so called by Pursh, after Henry Seymer, an English naturalist. It belongs to the class *Didynamia*, order *Angiospermia*, and natural order *Scrophularineæ*. Generic character: calyx campanulate, with five linear segments; corolla with a short tube and oblong segments; stamens four, nearly equal; stigma slender; capsule globose at the base, and compressed at apex, many-seeded.

A genus separated from Gerardia, consisting of two species, natives of North America; they are annual herbs, with pinnate filiform leaves, racemose inflorescence, and small yellow flowers.

SHA'BBY, } Lye is inclined to think *shabby*,
SHA'BBILY, } *e. g.* (a fellow, *homo pannis obsitus*,
SHA'BBINESS. } a manne clothed in rags,) is formed from *scabby*.

To *shab* is in vulgar use, and seems to mean to *shove*, (*shuv, shub, shab?*) to shab or shove off, put off, evade; meanly, dirtily.

They were very *shabby* fellows, pitifully mounted, and worse armed.

Lord Clarendon. *Diary*, Dec. 7, 1688.

I wish she would lend you her pretty white hand,
In mending your cassoc, and smoothing your band.
(For the dean was so *shabby*, and look'd like a ninny,
That the captain suppos'd he was curate to Jinny.

Swift. *Hamilton's Baron*, Anno 1729.

He exchanged his gay *shabbiness* of clothes, fit for a much younger man, to warm ones that would be decent for a much older one.

Spectator.

— With the drap'ry she had got
Within her little *shabby* cot,
She might for all the town provide,
And break both York-street and Cheapside.

Lloyd. *The New-River Head*.

I sat down on one of the benches, at the other end of which was seated a man with very *shabby* clothes.

Goldsmith. *Essay* 6. vol. iv. p. 344.

These *shabby* evasions are themselves sufficient arguments against those who use them.

Tooke. *Diversions of Purley*, part ii. ch. vii.

SHACK, *n.* perhaps *Shake*; the grain *shaken* from

the ripe ear; and which hogs were turned out to find and feed upon:—applied, generally, to feed among stubble.

Covetous men now a daies plow up so nigh the common balkes, and walkes, which good men beforetime made the greater, and broader, partly for the commodious walke of his neyghbour, partly for the better *shack* in harvest time, to the more comfort of his poore neighbours' cattell.

Homilies. *Sermons for Rogation Weeke*, p. 237.

SHA'CKLE, *v.* } A. S. *sceacul, scacul*; D.
SHA'CKLES, *n.* } *schaechei*; Junius thinks may be
SHA'CK-LOCK. } from the A. S. *sceac-an*, to *shake*,

because a prisoner in *shackles* cannot move without *shaking* them. Skinner from the verb *shaeckelen*, to involve, to infold, and this from *shacken, rapere*, because robbers deserve a chain of the kind called shackles.

To *shackle*, is

To fetter, to manacle, to chain; to impede, embarrass, or restrain, free action or motion.

— And it is great
To do that thing that ends all other deedes,
Which *shackles* accedents, and bolts vp change.
Shakspeare. *Antony and Cleopatra*, fol. 365.

His artes he moves, and out of caytives' handes
Himselfe he frees by secret meanes unseene;
His *shackles* emptie left, himselfe escaped cleene.
Spenser. *Faerie Queene*, book ii. can. 1.

— For as gaylers with conuicts,
So popes deale with a faultier;
Their sin-salue like the setting loose
From *shackles* to the haulter.
Warner. *Albion's England*, book v. ch. xxiv.

The swarthy smith spits in his buckehorne fist,
And bids his men bring out the five-fold twist,
His *shackles, shacklockes*, hampers, gives, and chaines,
His linked bolts.
Browne. *Britannia's Pastorals*, book i. song 5.

— No trivial price
Should set him free, nor small should be my praise
To lead him *shackled*, and expos'd to scorn
Of gathering crowds, the Briton's boasted chief.
Philips. *Blenheim*.

He told me, that most of the men and women on the island were thus painted; and also that they had all ear-rings made of gold, and gold *shackles* about their legs and arms.

Dampier. *Voyages*, Anno 1690, vol. i. ch. xviii. p. 514.

He carried with him the *shackle* of the bilbo-bolt that was about his leg, which was taken from him, as soon as he got on shore, by one of the chiefs, and given to Omai.

Cook. *Voyages*, vol. vi. book iii. ch. vi. p. 93.

SHAD. Gesner says, the fish called by Pliny (9. 43.) *glanis* is the Ger. *schad*; so named from *schade*, (see *scathe*), a damno quod infert.

— With this staffe
Old Alvarez has led up men so close,
They could almost spit in the cannon's mouth,
Whilst I with that, and this well mounted, scour'd
A horse-troop through, and through, like swift desire,
And seen poor rogues retire, all gore, and gash'd
Like bleeding *shads*.

Beaumont and Fletcher. *Love's Cure*, act ii. sc. 2.

The last [Hasselquist] says that the *shad* is found in the Mediterranean near Smyrna, and on the coast of Egypt near Rosetto;

SHAD. and that in the months December and January it ascends the Nile as high as Cairo: that it is stuffed with pot jaram, and when dressed in that manner will very nearly intoxicate the eater.
SHADE. Pennant. *British Zoology*, vol. iii. p. 461. *The Shad Herring*.

SHA'DY,

SHA'DOW, n.

SHA'DOW, v.

SHA'DOWING, n.

SHA'DOWISH,

SHA'DOWY.

D. schæde, schæduwe, schæduwen; Ger. *schatten*; in Sw. *skugga, skygga*; A. S. *scade, sceadewan*; Goth. *scadus*, which, Junius thinks, has a manifest affinity with the Gr. *σκια, umbra*. Tooke says they are the past tense and participle of A. S. *sceadan*, Goth. *skaid-an*, (D. *scheyd-en*, Ger. *scheiden*,) *separare, segregare, dividere*, and mean (something, any thing) secluded, separated, retired; or something by which we are separated from the weather, sun, &c.

Shade, consequentially, is,

Obscureness, darkness; cloudiness, gloominess, coolness, shelter. A retired or sheltered place; that which shelters, obscures.

Shade or *shadow*, the representation of form or figure, separating or obstructing light.

To *shadow*,—to darken, obscure, protect, cover; also to represent obscurely, darkly, imperfectly: to sketch, delineate, or describe imperfectly, in an unfinished style.

And þe kyng nas bute a *schade*, & let hym worþe al out.
R. Gloucester, p. 107.

Godes blesside body. hit bar for oure bote
 And hit a fereþ þe feonde. for such is þe myghte
 May no grysliehe gost glyde þer hit *shadeweþ*.
Piers Plouhman. Vision, p. 365.

And the multitude of men and of wymmen bileeyunge in the Lord was more encreesid, so that thei brougten out syke men into stretis, and leiden in litil beddis and couchis, that whanne Petir cam nameli the *schadewe* of him schulde *schadewe* ech of hem, and thei schulen be delyuered fro their sikenessis.

Wiclif. The Dedis of Apostlis, ch. v.

They brought the sycke into y^e stretes, and laide them on beddes and palettes, y^t at the lest way y^e *shadowe* of Peter, whē he came by, might *shadow* some of the.
Bible, Anno 1551.

Certes a *shadowe* hath likenesse of the thing of which it is *shadowed*, but *shadowe* is not same thing of which it is *shadowed*.

Chaucer. The Persones Tale, p. 149.

Thou nowe knowest, that thilke very reuerence ne maye nat comen by these *shadowy* transitorye dignities.

Id. Boecius, book iii. *De Consolatione*.

For Narcissus shortly to tell,
 By aduenture came to that well,
 To rest him in the *shaddowing*
 A day, when he came from hunting.

Id. The Romant of the Rose, p. 182.

How is (quod I) that he is *shaded* thus
 With yonder cloth, I not of what colour?

Id. The Court of Love, p. 377.

Where he beholdes the worde that sholde confounde
 The worde of death, by humility to be
 In mortall mayde, in mortall habite made,
 Eternitye in mortal vayne to *shade*.

Wyat. The Auctor, p. 395.

And so vnder *shadowe* of that warre, a squyer of Brucels, called Water Ostraste, toke the stronge castell of Robeboyse, on the ryuer of Seyne.

Lord Berners. Froissart. Cronycle, ch. 208.

The wiles the prince, prickt with reprochful shame,
 As one awakte out of long slombring *shade*,
 Revivynge thought of glory and of fame,
 United all his poures to purge himsele from blame.
Spenser. Faerie Queene, book ii. can. 11.

The eastern Avon vaunts, and doth upon her take
 To be the only child of *shadeful* Savernake.
Drayton. Poly-olbion, song 3.

Enforst to seeke some covert nigh at hand,
 A *shadie* grove not farr away they spide,
 That promist ayde the tempest to withstand.

Spenser. Faerie Queene, book i. can. 1.

Although his [Tibald] *shadowy* tomb (being no more than an honorary cenotaph) be shown at Christchurch in Canturbury, yet his substantial monument, wherein his bones are deposited, is to be seen in St. Gregory's in Sudbury.

Fuller. Worthies, vol. ii. *Suffolk*.

They say that in the towne Syene, (which is above Alexandria 50 stadia,) at noon-tide in the middes of summer, there is no *shadow* at all; and for farther experiment therof, let a pit be sunke in the ground, and it will be light all over in every corner; whereby it appeareth, that the sunne then is just and directly over the place, as the very zenith thereof.

Holland. Plinie, book ii. ch. lxxiii.

The warlike elfe much wondred at this tree,
 So fayre and great, that *shadowed* all the ground.

Spenser. Faerie Queene, book ii. can. 7.

The line of distance, which makes the third, with all its adumbrations and *shadowings*.

Evelyn. Miscellaneous Writings, p. 371. *Architecture*.

Darkness now rose,
 As day-light sunk, and brought in luring night,
 Her *shadowy* offspring unsubstantial both,
 Privation meer of light and absent day.

Milton. Paradise Regained, book iv. l. 394.

The Jews' religion was of far less perfection and dignity than ours, ours being that truth whereof theirs was but a *shadowish* prefigurative resemblance.

Hooker. Ecclesiasticall Politie, book viii.

Rise, son of Tydeus! to the brave and strong
 Rest seems inglorious, and the night too long.
 But sleep'st thou now? when from yon hill the foe
 Hangs o'er the fleet, and *shades* our walls below.

Pope. Homer. Iliad, book x.

And, rivell'd up with heat, lay dying in their bed,
 The ladies gasp'd, and scarcely could respire;
 The breath they drew, no longer air, but fire;
 The fainty knights were scorch'd; and knew not where
 To run for shelter, for no *shade* was near.

Dryden. The Flower and the Leaf.

My locks (the plenteous harvest of my head)
 Hang o'er my manly face; and dangling down,
 As with a *shady* grove, my shoulders crown.

Id. Ovid. Metamorphoses, book xiii.

Nearchus assures us, that during his voyage along the coast of India (for no part of India extends beyond the Oritæ) the two *shadows* fall not the same way, as in other parts; for when they sailed far into the ocean, towards the South, there the *shadows* nigh noon-day declined Southward; and when the sun was upon the meridian they had no *shadows* at all.

Rooke. Arrian. History of Alexander's Expedition, vol. ii. book v. ch. xxv. p. 252.

But as Augustus is still *shadowed* of Æneas, I must prepare that subject, by showing how dextrously he managed both the prince and people, so as to displease neither, and to do good to both.

Dryden. Dedication to the Æneid.

By the visible place, he means about their monuments and sepulchres, where the *shadowy* phantasms of such souls have sometimes appeared.

Scott. Christian Life, part i. ch. iii. p. 28.

I found here a very snug cove sheltered from all winds, which we called Luncheon Cove, because here we dined on cray-fish, on the side of a pleasant brook, *shaded* by the trees from both wind and sun.

Cook. Voyages, vol. iii. book i. ch. v. p. 70.

The means by which the painter works, and on which the effect of his picture depends, are light and *shade*, warm and cold colours.

Reynolds. Works, vol. iii. p. 146. *Notes on the Art of Painting*.

One of the first rules, for instance, that I believe every master would give to a young pupil, respecting his conduct and management of light and *shadow*, would be what Leonardo da Vinci has actually given; that you must oppose a light ground to the *shadowed* side of your figure, and a dark ground to the light side.

—
SHAFTS-
BURY.

As they worship false gods, their blessings are of the kind which corresponds with the nature of their duties. They are *shadowy* and unsubstantial; dreams, bubbles, and meteors, which dance before their eyes, and often lead them to perdition.

Knox. Works, vol. ii. p. 169. *Essay*, No. 155.

SHAFT, } Ger. *schaft*, *sagitta*, et omne telum
SHAFTMENT. } missile; A. S. *sceaft*, *scaeft*, from Ger. *schaffen*, A. S. *sceof-an*, *scof-an*, *scuf-an*, to shove; in D. *schuiven*. The A. S. *scof-an*, *be-scof-an*, Somner interprets, to thrust, cast, hurt, throw, or shove. And Tooke concurs that *shaft* means that which is *shov'd*. Applied to

Any missive weapon, an arrow; (*sc.* cast, thrown, shot from a bow;) to that by which a cart or other carriage is *shoved* or *forced* along.

Shaft of a mine; the opening *shoved* or *shovelled* into it.

Shaft of a pillar: perhaps from the shape resembling the round arrow or missile weapon. Somner, in v., "*Sceafles-byrg*, *Shafles-bury*, so called happily," saith Mr. Camden, "from the churches spire-steeple, such as the Saxons called *shafts*: rather (I take it) from the fashion of the hill, being round and smooth, *shaft-like*, and giving name to the place before any church there erected."

His slepe, his mete, his drinke is him byraft,
That lene he wex, and drie as is a *shaft*.

Chaucer. The Knightes Tale, v. 1364.

So at the last the *shaft* of tree
I drough out, with the feathers three.

Id. The Romant of the Rose, p. 184.

The sailing firre, the cipres death to plaine,
The shooter ewe, the aspe for *shaftes* plaine.

Id. The Assembly of Fowls, p. 331.

I will speak of those *shaftes* which Englishmen, at this daye, most commonly do approve and allowe. A *shaft* hath three principall parts, the stele, the fethers, and the head; whereof every one must be severallye spoken of.

Ascham. Workes, book ii. p. 141. *Toxophilus*.

Therefore let your bow have good bigge bende, a *shaftment* and two fingers at the least, for these which I have spoken of.

Id. Ib. p. 132.

Upon a day,
As she the woodes with bow and *shaftes* did raunge,
The hartlesse hynd and roebucke to dismay,
Dan Faunus chaunst to meet her by the way.

Spenser. Faerie Queene, book ii. can. 2.

Called they are so, for that they are but a cubite or three *shaftments* (or spannes) high, that is to say, three times nine inches.

Holland. Plinie, book vii. ch. ii.

The great Achilles march'd not to the field,
Till Vulcan that impenetrable shield
And arms had wrought; yet there no bullets flew;
But *shafts* and darts, which the weak Phrygians threw.

Waller. Instructions to a Painter.

The racer stumbles in the *shaft*,
And shows he was not meant for draft.

Lloyd. The Cobbler of Cripplegate's Letter.

To the influence of unjust prepossession it must be attributed, that some kinds of literary pursuits, indisputably innocent at least, such as the study of antiquities, have been attacked with all the *shafts* of ridicule.

Knox. Works, vol. i. p. 357. *Essay*, No. 73.

SHAFTSBURY, a Borough and Market-Town in Dorsetshire, situated on a steep hill, apparently terminating in a point, from which *shaft*-like eminence both its former British name, *Caer Palladwr*, and its present Saxon appellation are said to be derived. The elevated situation of the town renders its air pure and healthy, and many of the houses in it command an extensive prospect; but from the same cause it is somewhat bleak, and not well supplied with water. It is irregularly built, and contains four churches, a handsome

modern guildhall, and several benevolent institutions. SHAFTS-
BURY.
—
SHAG.
The Borough of Shaftsbury is entered in *Domesday Book*; the antiquity of the town is proved by the many fabulous accounts given of its origin by the early annalists; some later writers, however, make Alfred its founder, but the numerous coins and other Roman remains from time to time discovered in its neighbourhood appear to indicate a much earlier date. It is probable that Alfred only improved and enlarged Shaftsbury, when he built its celebrated nunnery, of which his daughter Ethelgida (whose charter of appointment is still extant) was the first abbess, and which ranked high among the most wealthy and highly privileged monastic houses in England. Its site is well known, but the only vestige, even of its ruins, which remains, is a remnant of the lofty embattled wall, supported by massive buttresses. Shortly after the Conquest it is recorded that Shaftsbury contained eleven churches, exclusive of the magnificent abbey-church, originally dedicated to the Virgin, and afterwards, in consequence of the removal thither of his bones, to St. Edward the Martyr. Many miraculous cures and wonderful works were, according to common belief, wrought at his shrine, and to the resort thither of innumerable pilgrims the ancient prosperity of the town is in great measure to be attributed. Castle Green, the name of a commanding eminence west of Shaftsbury, would seem to indicate that it had once been the site of a fortress: no such building, however, is mentioned in history; there are some few evidences of entrenchments, probably Roman, in its neighbourhood.

Shaftsbury (with occasional exceptions of little moment) returned two Members to Parliament from the time of Henry III., until the Reform Bill in 1832 reduced the number to one. The chief manufacture of the town is shirt buttons, made principally by women and children. Population, in 1831, 3061. Distance from Dorchester 28 miles; from London 101 miles.

SHAG, *adj.*

SHAG, *n.*

SHAG, *v.*

SHA'GGED,

SHA'GGEDNESS,

SHA'GGY,

SHA'GGINESS.

A. S. *sceacga*, *coma*. A bush of hair; also the boughes, branches, and leaves of trees or hearbs; also flames like hairs. Hereof our *shagge* for clothe of an high nap; as also our *shock*, for a *shaggy* or *shagged* dogg. Somner. *Shock* is *shoke*, the past participle of *shake*; and *shag* may be *shaked*, *shak'd*, *shag*, written by Harrison *shacked*, *shack'd*, meaning any thing *shaked*,—in the bushy, rough, confused, state of hair, leaves, *shaked*.

Bushy, rough, rugged; uncombed, unsmoothed, unpolished.

Pope uses the verb almost literally, *i. e.* shaken, shattered, bruised.

PAND. 'Twill serve; your offers must be full of bounty, velvets to furnish a gown, silks for petticoats, and foreparts *shag* for lining.

Beaumont and Fletcher. The Woman Hater, act iv. sc. 2.

Full blacke and griesly did his face appeare,

Besmeard with smoke that nigh his eye-sight blent;

With rugged beard, and hoarie *shagged* heare,

The which he never wont to combe, or comely sheare.

Spenser. Faerie Queene, book iv. can. 5.

Of the same kind is the goat hart, and differing onely in the beard and long *shag* about the shoulders.

Holland. Plinie, book viii. ch. xxxiii.

When as those fallow deer, and huge-haunch'd stags that graz'd
Upon her *shaggy* heaths, the passengers amaz'd
To see their mighty herds, with high palm'd heads to threat
The woods of o'ergrown oaks.

Drayton. Poly-olbion, song 12.

SHAG.
—
SHA-
GREEN.

Round-roof'd, short-jointed, fet locks *shag* and long,
Broad breast, full eyes, small head, and nostril wide.
Shakspeare. Venus and Adonis.

The inhabitants could not inform him of the colour, *shaggedness*, and other qualities of the dog.

More. Mysteries of Godliness, (1660,) p. 121.

— And in front of him, Apollo, who had cast,
About his bright aspect, a cloud; and did before him beare
Jove's huge and each-where *shaggie* shield.

Chapman. Homer. Iliad, book xv.

Father of Gods, will any man, of all earth's grassie sphere,
Aske any of the gods' consents, to any actions there,
If thou wilt see the *shag-haired* Greeks, with headstrong
labours frame

So huge a worke, and not to us, due offerings first enflame?
Id. Ib. book vii.

There was an old usurer not far from London, who had trained
up a dog of his to bring his meat after him in a hand-basket, so
that in time the *shag-dog* was so well bred that his master used to
send him by himself to Smithfield shambles with a basket in his
mouth, and a note in the bottom thereof to his butcher.

Howell. Letter 33. book iv. p. 489.

Their haire is betweene the wooll of a sheepe and the haire of a
goat, resembling both, *shacked*, and yet absolutelie like unto
neither of both.

*Holinshead. Chronycles, vol. i. ch. x. fol. 72. The Description of
Britaine.*

In this wood were sometime white buls with *shackt* heares and
curled manes like fierce lions.

Id. Ib. vol. v. ch. vii. fol. 12. The Description of Scotland.

— Then proves if he his scent can foil,
And makes amongst the herds and flocks of *shag-woold* sheep,
Them fighting from the guard of those who had their keep.

Drayton. Poly-olbion, song 13.

— A bleak expanse,
Shagg'd o'er with wavy rocks, cheerless and void
Of every life, that from the dreary months
Flies conscious southward.

Thomson. A Hymn.

As when the polypus, from forth his cave
Torn with full force, reluctant beats the wave;
His ragged claws are stuck with stones and sands;
So the rough rock had *shagg'd* Ulysses' hands.

Pope. Homer. Odyssey, book v.

Westward, a sumptuous frontispiece appear'd,
On Doric pillars of white marble rear'd,
Crown'd with an architrave of antique mold,
And sculpture rising on the roughen'd gold.
In *shaggy* spoils here Theseus was beheld,
And Perseus dreadful with Minerva's shield.

Id. The Temple of Fame.

As if, like him of fabulous renown,
They had indeed ability to smooth
The *shag* of savage nature, and were each
An Orpheus, and omnipotent in song.

Cowper. The Task, book v.

Though from the colour and *shagginess* of the hair, and its un-
likeness to any land animal, we judged it might probably be that
of the large male ursine seal, or sea-bear.

Cook. Voyages, vol. vi. book iii. ch. v. p. 347.

SHAGREEN, Fr. *chagrin*; It. *zigrino*. See
the two last Quotations from Goldsmith.

"I have laid it all out in a bargain, and here it is," pulling out
a bundle from his breast; "here they are; a gross of green
spectacles, with silver rims and *shagreen* cases."
Goldsmith. Works, vol. i. ch. xii. p. 61. The Vicar of Wakefield.

The men of Mataia also wear their hair very long; and, when
they fight, cover their arms with a substance which is beset with
shark's teeth, and their bodies with a sort of *shagreen*, being skin
of fishes.

Cook. Voyages, vol. vi. book iii. ch. ix. p. 159.

The natives take (the wild ass) for their skins, of which that
kind of leather is made which is called *shagreen*.

Goldsmith. Animated Nature. The Ass.

Its skin [the shark's] is by great labour polished into that
substance called *shagreen*.

Id. Ib. The Shark Kind.

SHAGREEN, from the French *chagrin*, is properly
the name of a kind of leather peculiarly prepared, and
when hardened, much used for the outer coverings of
sheaths, cases, and small boxes. The word is a corrup-
tion of the Persian and Turkish *sághrí* or *saghrí*, which
signifies the rump of a quadruped, and the leather pre-
pared from that part of its skin. It was originally
brought from Constantinople, and a great deal is manu-
factured at Astrakhán, (Azhder-khán,) and throughout
Persia. An inferior sort was formerly manufactured
from the Squatina (Mork or angel-fish, *Squalus squatina*)
and the Dogfish, (*Squalus canicularis*.) At Astrakhán
Shagreen is prepared by a nice and tedious process.
From the hinder part (*sághrí*) of the hide of horses and
asses, immediately above the tail, a semicircular piece is
cut off measuring an arshín and a half (3 feet 6 inches)
across, and rather less than an arshín (2 feet 4 inches)
along the back. These pieces are then soaked for
several days in water, the hair is carefully scraped off,
the skin softened, and the whole reduced to the consis-
tency of thick parchment. It is next stretched on a
semicircular frame and moistened so as to give it an
uniform tension. In this state it is thickly sprinkled
with the hard seeds of a species of goose-foot, (*Chenopo-
dium album*,) called Alabuta by the Tatars; a felt is
laid over the whole and well trodden down to press the
seeds into the softened skin, which is afterwards gradu-
ally dried out of doors in the shade. The skin is then
beaten to knock off the seeds, which leave the impression
that forms the graining of Shagreen. To polish it, the
roughnesses are scraped off with iron scrapers, the skin
having been laid on a bench covered with thick felts or
fleeces. This is the most delicate part of the operation,
as much of the beauty of the Shagreen depends upon
the nicety with which these rugosities are removed.
Subsequently the skin is again softened in water for
forty-eight hours, and then immersed in a hot ley formed
by an alkaline earth called shchora. From it, the skins are
taken warm and laid over each other in a heap for several
hours. They are finally steeped in a brine of common
salt for twenty-four hours, which renders them perfectly
white and fit to receive the dye, which is applied imme-
diately. Sea-green is the most common colour; blue,
red, black, and even white Shagreens are prepared by
skilful workmen. The true Shagreen may be distin-
guished from the counterfeit made of morocco, by the
peeling off of the latter, to which the genuine prepara-
tion is not liable.

See Pallas, *Reisen*, iii. th. 4to. St. Petersburg, 1771—
1776.

SHA'H, a Pársí or modern Persian word, terminated Shaw.
by a silent *h*, having a long vowel pronounced by the Scha.
Persians and Hindús of the lower classes like the *a* in
call, and thence often spelt *Shaw* by English writers,
signifies "Sovereign or Supreme Ruler." It has
been erroneously mistaken for a synonyme of the Tatar
term Khán, "Lord or Governor," the title of inferior
Chiefs, holding their Lordships under the Sháh or Pá-
disháh, "King or Emperor," styled for that reason
Khán Khánuán, "Lord of Lords." The Pársí or dialect of
Persis, is, as Sir William Jones long ago remarked, (*As.
Res. ii. 54.*) derived from the Zend (living or sacred
tongue) of the Gabrs or ancient Persians adulterated
with a large admixture of Chaldee. But the Pahlaví
or Western Persian is probably the channel through
which the Pársí was formed from the Zend. To those
languages, therefore, we must look for the etymology of

SHA-
GREEN.
—
SHAH.

SHAH.
—
SHAH-
NAMA.

modern Persian words. The Zend, as that distinguished scholar supposed, is little more than a Prākṛit or colloquial dialect of the Sanskrit; (*Ibid.*) and that supposition, proposed with some hesitation by Sir William Jones, was positively affirmed by Dr. Leyden, (*As. Res.* x. 283.) and has at length been fully confirmed by the labours of M. Burnouf, whose discovery of a Sanskrit version of one of the Zend books in Anquetil du Peron's collection has enabled him to develop the structure of that ancient sister of the Sanskrit, and to prove that the followers of Zoroaster had something more deserving of attention in their Scriptures than the unreadable and unintelligible farrago published by Anquetil. If then we recur to the Zend for the origin of the word Sháh, we find that Khshaya signifies "King;" and there is reason to believe* that Khsháhyóh, having the same meaning, was another derivative from the same root kshi. Both appear to be idiomatic alterations of the Sanskrit kshatra, in Zend khshat'hra, "a warrior, a man of the warrior or royal tribe," whence comes Sháh, by the suppression of the beginning and end, the omission of the *t* and lengthening of the vowel. Xerxes appears to be written khsh'hárshá in the Persipolitan inscriptions, and if so, may be rendered "Warrior King," closely corresponding with the Greek word ἀπῆιος, given by Herodotus (vi. 98.) as the signification of Xerxes. Artak'hshat'hra, "the Great King," is in like manner the equivalent of Artaxerxes, on the same monuments. (Burnouf, *Mém.* p. 123, 124. Lassen, p. 35, 78.)

See *Asiatic Researches*, Lond. v. y. 12 vols. 8vo.; Burnouf, *Mémoire sur deux Inscriptions Cunéiformes*, Paris, 1836, 4to.; Lassen, *Die Altpersischen Keil-Inschriften*, Bonn, 1836, 8vo.

SHAHNAMA, or rather Sháh-námah, *i. e.* The Book of Kings, is the name of the most ancient and celebrated poem in the Pársi or modern Persian language. It is a metrical chronicle of the ancient Persian Kings, containing a very remarkable episode, which occupies nearly one half of the work, and is, according to no incompetent judge, Sir William Jones, (*Poes. Asiat. Comm.* p. 294,) "truly epic, approaching more nearly to the dignity and spirit of Homer than any European poem." Its author, Hasan ibn Sharf, or Sharfsháh, a peasant of Tús, in Khorásán, is said by Jámí (in his *Biháristán*) to have recommended himself to some of the courtiers of Mahmúd, Sultán of Ghaznah, by giving a happy and extemporaneous conclusion to a tetrastich, the preceding verses of which they had proposed in order to baffle him, and find a pretext for telling him to go about his business. The Sultán was so delighted with the wit and genius of this rustic poet, that he one day said to him, "Thou hast made our court a Paradise; (Firdaus;) and the epithet Firdausí thenceforth became his distinctive appellation. He was afterwards ordered by Mahmúd to compose the *Sháh-námah*; and the Sultán was so charmed with the first thousand couplets (*bešt*) of it, that he immediately rewarded the poet with one thousand golden dínárs, (denarii,) (£100.) When the poem, consisting of sixty thousand couplets, and a work of thirty years' application, was completed, the Sultan's ministers, having a greater regard for economy than genius, advised him to give the poet only sixty thousand dirhems (drachmæ) of silver, (£4200.) Firdausí, in

contempt of so penurious a recompense, immediately distributed the whole of it to the people about him, and revenged himself by writing a lampoon on Mahmúd. Having succeeded in escaping from the Sultán's vengeance, he passed several years in retirement; but afterwards, Mahmúd, having heard some lines of the *Sháh-námah* recited, repented of his illiberality to so great a poet, and sent off messengers with an ample recompense and splendid robes of honour for Firdausí, who then resided at his birthplace Tús. "His fortunate star," says Jámí, "was not in the ascendent; for while these gifts were carried in at one gate of the city, Firdausí's bier was borne out at another." He adds another circumstance not less remarkable, *viz.* that the poet's only daughter and heir refused to accept the Sultan's proffered munificence, saying, "I, who have inherited a competency for my support, have no need of so much wealth and bounty;" so that Mahmúd's messengers expended the sums placed in their hands in building an almshouse and a caravanseraí.

Whatever may be the thought of the probability of this story, there can be no doubt that Mahmúd, who reigned from A. D. 999 to 1030, was the patron of Firdausí, who flourished in the IVth Century of the Mohammedan Era. His poem is no less remarkable on account of its antiquity and of the simplicity and purity of its diction than as being almost the only vernacular record of ancient Persian history. The episode so highly extolled by Sir W. Jones gives an account of the war waged by Afrásiyáb, Sovereign of Túrán, (Trans-Oxiana,) against three Princes of the Kaianian dynasty, Kaí-Kobád, Kaí Kávus, and Kaí Khosrau, the latter supposed to be the Cyrus of the Greeks, who killed Afrásiyáb with his own hand. Various passages from this poem have been translated into English, and printed either separately or in periodical miscellanies at different periods; but the most complete account of its contents and a fair estimate of its poetic merit is afforded by the abstract of it published by Mr. Atkinson, of the East India Company's medical service, who has introduced a metrical version of many of the most striking passages; and subjoins the *Tale of Sohráb*, which he had printed some years ago in India. A complete edition of the original, in 4 vols. 8vo., was published by Captain Turner Macan at Calcutta in 1829; the first volume of a critical edition by Mr. Lumsden having already appeared there in 1811.

See Jones, *Poesios Asiaticæ Commentarii*, Lond., 1774, 8vo.; *Anthologia Persica Viennæ*, 1778, 4to.; Atkinson, *Shah Nameh of Firdausí*, Lond. 1832, 8vo.; D'Herbelot, *Bibliothèque Orientale*, La Haye, 1778, 4 tom. 4to.

SHAKE, *v.* } D. *shocken*; Ger. *schocken*; Sw.
SHAKE, *n.* } *shaka*; Fr. *chocquer*; A. S. *sceac-an*,
SHA'KER, } *quatere, concutere, agitare.*

SHA'KING, *n.* } To move or cause any thing to move, to and from, (quickly,) backwards and forwards; to cause it to quake, or tremble, or totter; to agitate or act upon with sudden and repeated motion; to move from, and, consequently, to weaken or disturb the steadiness or steadfastness, the firmness or fixedness.

Shakes, noun,—in Byron, is a vulgarism, which may be traced to the custom of *shaking* hands: the *shake* being estimated according to the value set upon the person giving it, and hence applied to the person.

He bi gan to *shake* ys axe, for to smyte anon,
Ac knyghtes criede, & gede bi twene hem mony on.

R. Gloucester, p. 25.

* This supposition depends on the accuracy of Mr. Burnouf's mode of reading the Persepolitan inscriptions; the language of which, is probably a dialect of the Zend, not exactly coinciding with that of the books held sacred by the Pársis.

Frowning his eyen gan to make,

And hidous chere, as man in rage,

For ire he brent in his visage.

Chaucer. The Romant of the Rose, p. 201.

But full great pittie, that so faire a mould

Did on so weake foundation ever sitt ;

For on a sandie hill, that still did flitt

And fall away, it mounted was full hie ;

That every breath of heaven *shaked* itt.*Spenser. Faerie Queene*, book i. can. 4.

When soon the troubled ground,

On her black bosom felt the thunder, which awoke

Her genius, with the *shock* that violently *shook*

Her entrails.

Drayton. Poly-olbion, song 22.Jove was extremely mou'd with him, and said, What words are these Thou mightie *shaker* of the earth, thou Lord of all the seas ?*Chapman. Homer. Iliad*, book vii.Thou makest us a by-word among the heathin ; a *shaking* of the head among the people.*Psalms*, ch. xlv. v. 14.But when aloft he *shakes* it in the skies,

Shouts in their ears, and lightens in their eyes,

Deep horror seizes every Grecian breast,

Their force is humbled, and their fear confest.

Pope. Homer. Iliad, book xv.

It seems highly probable that the *shake* that is given to one part of the earth by the firing and explosion of subterranean exhalations (if that be the true and only cause of earthquakes) is not capable of reaching near so far as divers earthquakes have done, but that the fire passes through some little subterranean clefts, or channels, or hidden conveyances, from one great cavity or mine to another.

Boyle. Works, vol. v. ch. v. p. 14. *Of the Effects of Local Motion*.

PUFF. Why, by that *shake* of the head, he gave you to understand that even though they had more justice in their cause, and wisdom in their measures, yet, if there was not a greater spirit shown on the part of the people the country would at last fall a sacrifice to the hostile ambition of the Spanish monarchy.

Sheridan. The Critic, act iii. sc. 1.

I believe they would cordially agree with me, that a truly excellent comedy is that which causes them to *shake* their sides most frequently with the drollery of its scenes, and the wit and humour of its conversation.

Knox. Works, vol. iii. p. 337. *Evening* 54.

For the hand of the heart is the index, declaring

If well or if ill, how its master will stand ;

I heed not the tongue, of its friendship that swearing,

I judge of a friend by the *shake* of his hand.*Ritson. Miscellaneous*, song 80.

I had my hands full and my head too, just then, (when he wrote Marino Faliero,) so it can be no great *shakes*.

Byron to Murray, Sept. 23, 1820.

SHALDER, perhaps to shale, or separate ; fall or slide into the channel.

Leland heard that an arme ran some time from the head of Darwent also to Scarborough, till such time as two hills betwixt which it ran did *shalder* and so choke vp his course.

Holinshed. Description of Britaine, ch. xv.SHALE, *i. e.* shell, *q. v.*, *sheeling* ; a shelter.

There saw I Coll Tragetour

Upon a table of sicamour

Play an vncouth thing to tell,

Under a walnote *shale*.*Chaucer. The House of Fame*, book iii.

But if thou examine their doctrine, thou shalt finde that this fayth is away in all their frutes, and therefore are they worme eaten and *shales* without kernelles.

Tyndall. Workes, p. 244. *Matthew*, ch. vii.

And master philosopher, if he drinke his part,

Will not trifle his name in the huske or the *shale*,

But go to the kernell by the depth of his art,

To be found in the bottome of a pot of good ale.

F. Beaumont. The Ex-ale-tation of Ale.

CONST. To horse, you gallant princes, straight to horse,

Doe but behold yond poore and starued band,

And your faire shew shall suck away their soules,

Leauing them but the *shales* and huskes of men.*Shakspeare. Henry V.* act iv. sc. 2. fol. 86.

It had much of glamour might

Could make a ladye seem a knight,

A nut shell seem a gilded barge,

A *sheeling* seem a palace large.*Scott. Lay of the Last Minstrel*, can. 3.SHALL, } A. S. *sceal*, *shall*, (says Junius,) *debere*,SHOULD. } to owe. By the faith I *shall* to God, *per**fidem, quam debeo Deo*, Chaucer (*infra*.) A. S. *scyl-an*;Ger. *scol-en, sollen*; Sw. *skola, debere*; D. *schuld,**debitum, schuldigh, debens*. In A. S. it is also written*sceal-an*. *Sceal*, says Lye, joined to an infinitive, hasthe force of the future : as *Hwæt sceal ic singan* ; what*shall* I sing ; or what *shall* or *owe* I to sing. *Thu**sceall* *hatan* : thou *shall* call ; or thou *shall* or *owest*to call. *Nu sceal* he *syf* *farare* : now he himself *shall*go ; or now he himself *shall* or *owes* to go (ought to go.)Wachter says that the Ger. *sollen, debere*, embraces

within itself not only those duties which we owe to our-

selves and others, but also pecuniary debts, and even

those penalties which we owe to the laws ; and, in fine, all

those future circumstances (*futuros casus*) which oughtto be, or become, or be done, (*fieri*.) And he adds,

that no one has discovered the origin of the word.

Lye thinks the application to future time is to be

deduced from the meaning *owe*, since that which anyone *owes* to do, is still to be done ; is still a duty, a debt

to be performed. But this does not reach the difficulty

felt by Wachter : whence *scyl-an, scolen, de-b-ere*, to*owe*. It is at least worth a conjecture. The A. S.*scyl-an*, in D. *scheel-en*, Ger. *schelen*, (see SKILL,) means, to divide, to distinguish ; met. to discern, to see

distinctly, the separate and distinct qualities of things ;

to see, to view, or survey, to perceive what is ; to see, to

ken, to know ; and hence its application to right and

duty. In Chaucer, the duty I *shall* to God, is I *know*to be God's, I *acknowledge* to God.The distinction between *shall* and *will* in their appli-

cation to future time is founded upon their meaning :

shall, upon foresight ; *will*, upon the wish or desire, the

willingness to do what is to be done ; though in usage

now transferred to instances where no wish or willingness

can be supposed.

Should, or *shulde*, is contracted from *shulled*, and*woulde*, or *wold*, from *woolde*.þer þou *schalt* fynden a place God in to byleue.*R. Gloucester*, p. 14.Dede him toke & he died, als it *salle* do vs.*R. Brunne*, p. 5.Alas þat riche *shal* reve. and robbe mannes sbul

For þe love of oure Lorde.

and famishment and troubles. These are the begynnynges of
sorowes. But take hede to your selues. For they *shal* brynge you
vp to y^e counceles and into the sinagoges, and ye *shal* be beeten; yea,
and *shal* be broughte before rulers and kinges for my sake for a tes-
timonyall vnto them.

Bible, Anno 1550.

Jhesus answerde and seide to hem, Undo this temple, and in
three days I *shal* reise it. Therfor the Jewis seiden to him, in
fourtye and sixe yeer this was bildid, and schalt thou in three
dayes reise it?

Wiclif. John, ch. ii.

And he was there to the deth of Eroude that it *schulde* be ful-
fillid that was seid of the Lord bi the prophete seiyinge fro Egypt
I have clepid my sone.

Id. Matthew, ch. ii.

And thou Cafernaum whether thou *schalt* be arerid up to hevenen?
thou *schalt* go down into helle, for if the vertues that ben don in
thee, hadden be don in Sodome: peraventure thei *schulden* hane
dwellid in to this dai.

Id. Ib. ch. xi.

For by the faith, I *shall* to God, I wene,
Was neuer straunger none in her degree
Than was the quene in casting of her eye.

Chaucer. The Court of Love, v. 131.

Eche of you to shorten with youre way
In this viage *shal* tellen tales twey.

Id. The Knightes Tales, v. 745.

As I best might, I hid fro him my sorwe,
And toke him by the hond, Seint John to borwe,
And said him thus; Lo, I am youre all,
Beth swiche as I have ben to you and *shall*.

Id. The Squieres Tale, v. 10839.

Tiburce answered, and saide; Brother dere,
First tell me whither I *shal*, and to what man.

Id. The Second Nonnes Tale, v. 15708.

And ye *shul* bothe anon unto me swere,
That never mo ye *shal* my contree dere,
Ne maken werre upon me night ne day,
But ben my frendes in all that ye may.

Id. The Knightes Tale, v. 1753.

And therefore of his wise purveyance
He hath so wel beset his ordinance,
That spes of thinges and progressions
Shullen endure by successions,
And not eterne, withouten any lie.

Id. Ib. v. 3013.

And swore his oth, as he was trewe knight,
He wolde don so ferforthly his might
Upon the tyrant Creon hem to wreke,
That all the peple of Grece *shulde* speke,
How Creon was of Theseus yserved,
As he that hath is deth ful wel deserved.

Id. Ib. v. 891.

Also I praie you to forgive it me,
All have I not sette folk in hir degree,
Here in this tale, as that they *shulden* stonde.

Id. Ib. v. 745.

Men *shulden* wedden after hir estate,
For youthe and elde is often at debate.

Id. The Milleres Tale, v. 3230.

What *shall* befall here afterwarde
God wote, for nowe vpon this tide
Men see the worlde on euery side
In sondrie wise so diuersed
That it well nigh stant all reuersed.

Gower. Conf. Am. Prologue.

For all reason wolde this,
That vnto him, whiche the head is,
The membres buxom *shall* bowe.

Gower. Conf. Am. p. 8.

Thei sein, that God is mighty there,
And *shall* ordeine, what he wyll,
There make thei none other skyll.

Id. Ib. p. 10.

For here in erthe amonge vs
If no man write howe it stode.
The pris of them that were good
Shulde (as who saiyth a great partia)
Be loste.

Id. Ib. p. 7. Prologue.

For certes suche a maladie
As I now haue, and longe haue hadde,
It might make a wise man madde
If that it *shulde* longe endure.

Id. Ib. book i.

SICIN. It is a minde that *shall* remain a poison
Where it is: not poyson any further.

CORIO. *Shall* remaine?

Heare you this triton of the minnoues? Marke you
His absolute *shall*?

Shakspeare. Coriolanus, act iii. sc. 1. fol. 15.

Remember what I warne thee, shun to taste,
And shun the bitter consequence: for know
The day thou eat'st thereof, my sole command
Transgrest, inevitably thou *shall* dye;
From that day mortal, and this happie state
Shalt loose, expell'd from hence into a world
Of woe and sorrow.

Milton. Paradise Lost, book viii. l. 327.

SHALLOP, Fr. *chaloupe*; which Duchat derives
from the Ger. *schale*. See SCALLOP, *ante*. The Fr.
coquille, a shell, is also a boat or any open vessel
fashioned like a basin or *scallop* shell. Cotgrave.

In the same shee lept, and with the ore
Did thrust the *shallop* from the floting strand:
So safely fownd at sea, which she fownd not at land.

Spenser. Faerie Queene, book iii. can. 7.

And goats he brought, the pride of all their race,
Imported in a *shallop* not his own;
The dome re-echoed to their mingled moan.

Pope. Homer. Odyssey, book xx.

Yet there might be little harbours or coves for *shallops*, or the
like, to anchor in, which we did not see or search after.

Dampier. Voyages, vol. i. ch. xv. p. 424.

SHA'LLOW, *adj.* } Shallow, shelve, or shelf, and
SHA'LLOW, *n.* } shoal seem to be the same word,
SHA'LLOW, *v.* } differently written. Shoals, (*bre-*
SHA'LLOWLY, } *vibus vadis*.) in the Quotation
SHA'LLOWNESS. } from Dryden's *Virgil*, is in Gaw.

Douglas *skellies* and *undeipis*, (*i. e.* undeeep.) The
Glossarist says that *skellies* are fine blue slates, (see
SLATE, anciently written Sclate,) and he thinks the word
may be from the A. S. *sceala*, whence the English scale
and shell; and perhaps, he adds, the English shelf,
shelves, and *shallow*. To skelve (Scotch, see Jamieson)
is to separate in laminæ. Shelve rocks; those which
appear in a variety of laminæ; also those which form the
bed of a *shallow* river.

Shallow or undeeep seems consequential, and to be
only applicable to the shoals or shelves, or separate and
distinct ridges, banks, or masses rising from the main
bed near to the surface. Met.

A *shallow* fellow, is one whose depth or bottom is
soon fathomed, reached, found; superficial; opposed to
profound or deep; short-sighted, simple.

Eftsoones her *shallow* ship away did slide,
More swift then swallow sheres the liquid skye,
Withouten oare or pilot it to guide,
Or winged canvas with the wind to fly.

Spenser. Faerie Queene, book ii. can. 6.

SHALL.
—
SHAL-
LOW.

SHAL-
LOW.
—
SHALM.

But out, alas! no sea, I find,
Is troubled like a lover's mind.
Within it rocks and shallows be,
Despair, and fond credulity.

Suckling. Love's World.

But for you [rebels] looke to taste the due
Meet for rebellion, and such acts as yours.
Most shallowly did you these armes commence,
Fondly brought here, and foolishly sent hence.

Shakspeare. Henry IV. fol. 91.

In long process of time the silt and sands shall choak and shallow the sea in and about it.

Sir Thomas Brown. Miscellanies, p. 190.

A good reply or second speech, without a good settled speech, sheweth shallownes and weakenesse.

Bacon. Essay 32. Of Discourse.

Then haste the safer shallows to regain,
Nor dare the stormy dangers of the main.

Fenton. The Dream.

It then evidently will appear, that upright simplicity is the deepest wisdom, and perverse craft the meekest shallowness.

Barrow. Sermon 103. vol. ii. p. 329.

Nature, that found that shallowness (in the cavity of the scapula) necessary to the variety of motions which is intended for the joint, found other ways of securing it from running out.

Wiseman. Surgery, book vii. ch. v.

— That thought alone thy state impairs,
Thy lofty sinks, and shallows thy profound,
And straitens thy diffusive.

Young. The Complaint. Night 9.

We found the water shallower here than at the same distance from any other part of the coast.

Cook. Voyages, vol. ii. book ii. ch. vii. p. 22.

We have less than a mariner's line in sounding the depths of eternity; we can only reach the shallows that lie around us; the grandeur of eternity we must look at with the eye of faith.

Gilpin. Sermon 21. vol. iii. p. 338.

The surf, which breaks on the coast round the bays, extends to the distance of about one hundred and fifty yards from the shore, within which space the surges of the sea, accumulating from the shallowness of the water, are dashed against the beach with prodigious violence.

Cook. Voyages, book v. ch. vii. p. 130.

SHALM, or } Fr. *chalemie, chalemelle*, a little
SHAWM. } pipe made of reed, or of a wheaten or
oaten straw. Menage says *chalumeau*, from *calamellus*,
diminutive of *calamus*, a straw, a reed, a pipe. Gower
writes *shalmele*.

A musical pipe.

Tho saw I standen hem behind,
A farre from hem, all by hemselue,
Many a thousand times twelue,
That made loud minstralcies
In cornmuse and shalmies,
And many another pipe.

Chaucer. The House of Fame, book iii.

Of Pan, and all that was likynge,
As in pipynge of melodie,
Was herde in thilke companie,
So loude that on euery side
It thought that all the heuen cride
In suche accorde, and suche a sowne
Of bumbarde and of clariowne,
With cornemuse, and shalmele.

Gower. Conf. Am. book viii.

As shawme or pipe lettes out the sounde impreste,
By muskytes arte forget to-fore and fyled.

Wyat. The Auctor.

CIT. What stately musick have you?

You have shawnes.

PRO. Shawnes? no.

Beaumont and Fletcher. The Knight of the Burning Pestle.

Wherefore Lysander, when the Athenians had submitted themselves altogether to his will, caused all the women-players of pipes or shalmes to come out of the city.

North. Plutarch. Lives, p. 378. Lysander.

The next morning, by break of day, Agesilaus, desirous to see if the Thebans had any courage to come down to fight again, commanded his souldiers to put garlands upon their heads, and his musitians to sound their shalms or pipes, whilst he did set up a token of triumph as victorious.

North. Plutarch. Lives, p. 516. Agesilaus.

A reverend dome there stands, where twice each day
Assembling prophets their devotions pay,
In prayers and hymns to heaven's eternal king,
The cornet, flute, and shawme, assisting as they sing.

Otway. Windsor Castle, p. 284.

SHAM, *adj.* } Junius and Skinner do not notice
SHAM, *n.* } this word. Lye derives it from the
SHAM, *v.* } Welsh *skommi*, and explains it—*fal-
lere, decipere, ludificari*, to play false, to deceive, to make sport of.

I am willing to hope the best, and that it is a meer dissatisfaction in them as to our revealed religion; and that this pretended zeal for natural religion is more than a meer sham and disguise to avoid a more odious imputation.

Stillington. Sermon 9. vol. iv. p. 344.

I had this account from the surgeon, Mr. Coppinger, who seemed a little concerned at it; because when he told me this, he could not tell whether they should proceed thither or no; but they did go thither, and found all this a sham.

Dampier. Voyages, vol. ii. part i. ch. viii. p. 164.

The discipline of the college, at the same time, may enable him to force all his pupils to the most regular attendance upon his sham lecture, and to maintain the most decent and respectful behaviour during the whole time of the performance.

Smith. Wealth of Nations, vol. iii. book v. ch. i. p. 172.

Then all you wits that fear and sham,
Down from Don Quixote to Tom Tram,
From whom I jests and puns purloin,
And sliely put them off for mine,
Fond to be thought a country wit:
The rest—when fate and you think fit.

Prior. To F. Shephard, Esq.

SHAMBLES, A. S. *scamol*, a bench, a form, a footstool. Hence our modern word of *shambles*, used as for the formes, stalles, or benches whereon butchers expose their meat. Somner. In Scotch, *skamyll*.

And streightwaies the king compassed the commons about, as they had beene a flocke of sheepe that shuld haue beene closed within some fold till it pleased the sheeheard to appoint forth which should be thrust into pasture, and which taken to go to the shambels.

Holinshed. History of England. Richard II. Anno 1381.

DORIA. I care not if my throat were next; for to live still, and live here, were but to grow fat for the shambles.

Beaumont and Fletcher. Cupid's Revenge, act iv. sc. 1.

As for horseflesh, I know not whether they kill any purposely for the shambles, or whether they only do it when they are not likely to live.

Dampier. Voyages, vol. ii. part i. ch. ii. p. 31.

SHA'MBLING, *adj.* } See ante, SCAMBLE.
SHA'MBLING, *n.* }

So when nurse Nokes, to act young Ammon tries,
With shambling legs, long chin, and foolish eyes.

Smith. To the Memory of Mr. John Philips.

By that shambling in his walk, it should be my rich old banker, Gomez, whom I knew at Barcelona: as I live 'tis he!

Dryden. The Spanish Fryar, act i.

SHAME, *n.* } See ante, ASHAME. Goth.
SHAME, *v.* } *skamer mic, pudet me, eru-
besco*; A. S. *scam-an, scam-
ian*; D. *schaemer*; Ger. *schae-
men*; Sw. *skamm, skamma*; what we now write *shamefaced*
SHA'MEFACED, } is in A. S. *scamfæst, scamfæst-
SHA'MEFACEDNESS, } nesse*, which Somner interprets
SHA'MEFUL, } shame-fast, shame-fastnesse, as
SHA'MEFULLY, } sted-fast, sted-fastness. It is also
SHA'MELESS, } found so written in old authors;
SHA'MELESSLY, }
SHA'MELESSNESS. }

SHAME. the source of the change is obviously from the effect of *shame* in many cases upon the face.

In the Latin Vulgate, the passage quoted from Wiclif below is, *Qui enim erubuerit me et meos sermones, hunc filius hominis erubescet*. To *shame*, in Wiclif, is in the Bible, 1551, and our present version—to be ashamed.

To *shame*, literally, may mean,

To blush, to redden; to blush at; to feel disgraced by; to cause the feeling or sensation of shame. See the Quotations from Bacon, Locke, and Cogan. The truth is shameless; (Chaucer;) *i. e.* free from shame; has no cause for shame; a *shameless* man we now call one who has no shame or sense of shame.

Shamefull; full of shame or cause of shame, indecent or unbecoming; disgraceful, degrading, ignominious, infamous.

A duk þer was of þis lond, Fulgence was ys name,
He stood ageyn hym mid ys ost, & dude hym gret *schame*.
R. Gloucester, p. 75.

Grete pite it was, þat þe hede of Cristendame
Suld for any trespas take so foule a *scham*.
R. Brunne, p. 323.

Alle was þorgh Edrik, þat mykelle was to blame,
He was þe kynge's conseiloure, & did him mykelle *schame*.
Id. p. 42.

For whoso *schameth* me and my wordis, mannes sone schal
schame him whanne he cometh in his majiste, and of the fadris
and of the holy aungels. *Wiclif. Luke*, ch. ix.

For whosoeuer is *ashamed* of me, and of my sayinges, of hym
shal the sonne of man be *ashamed* when he cometh in his owne
glory, and in the glorye of his father, and of the holye angels.
Bible, Anno 1551.

And seide there was a juge in a citee that dredde not God, nei-
ther *schamede* of men. *Wiclif. Luke*, ch. xviii.

Schalt bigynne with *schame* to hold the loweste place.
Id. Ib. ch. xiv.

And thou the begynne with *shame* to take the lowest roume.
Bible, Anno 1551.

Thus wicked tong, God yeve him *shame*,
Can put hem euerichone in blame,
Without desert and causelesse.
Chaucer. The Romant of the Rose, p. 202.

She [Eunice] is full glad in hir courage,
If she see any great linage
Be brought to nought in *shamefull* wise.
Id. Ib. p. 173.

Shamefast she was in maiden's *shamefastnesse*,
Constant in herte, and ever in besinesse
To drive hire out of idel slogardie.
Id. The Doctoures Tale, v. 11989.

Cometh nere, (quod he,) my lady prioress,
And ye, sire clerk, let be your *shamefastnesse*,
Ne studieth nought, lay hand to, every man.
Id. The Knights Tale, v. 41.

And with that worde she wer all milde,
And sommdele redde became for *shame*.
Gower. Conf. Am. book vi.

For how so that the cause wende,
The trouth is *shameles* at ende,
But what thyng that is trouthles,
It maie not well be *shameles*. *Id. Ib.* book vii.

For again, ther was nothing y^t he more hated and abhorred,
cōsidering that thei serued of nought but to the *shaming* of such
other folke as wer in very science much better lerned, and in those
trifles ignorant.

Sir Thomas More. Workes, p. 5. *Life of John Picus*.

Whan Nicholas Clifford sawe himselfe so sone aposed, he was
shamefast, by cause of the that were there present and herde the mater.
Lord Berners. Froissart. Cronycle, vol. i. ch. 374.

Go not *shamefully* a begging from house to house, as friers do.
Tyndall. Workes, p. 59. *S. James. Prologue*.

Then began decrees, ordinances, depocytions, disposycions, *SHAME*.
reservations, prouysions with like *shamefulness* for to spring, and
there is no remedy, but they must contynue.

Barnes. Workes, p. 204. *A Supplication unto Henry VIII.*

He [Bonner] alleged, or rather *shamelessly* and slanderously
cavilled, that those his denouncers were vile, infamed, and noto-
rious criminous persons, and also open and manifest heretics.

State Trials, p. 669. 3 Edward VI.

And how much that love might move us, so much, and more
that faultiness of her mind removed us, her beauty being ballanced
by her *shamelessness*. *Sidney. Arcadia*, book ii. p. 321.

But conscience made her come to her self, and leave Philoclea,
who blushing, and withal smiling, making *shamefacedness* plea-
sant, and pleasure *shamefaced*, tenderly moved her feet.

Id. Ib. book ii. p. 247.

Most ugly shapes and horrible aspects,
Such as dame Nature selfe mote feare to see,
Or *chame*, that ever should so fowle defects
From her most cunning hand escaped bee.
Spenser. Faerie Queene, book ii. can. 12.

For, whiles his lord pursewd that noble mayd,
After that foster fowle he fiercely ridd
To bene avenged of the *shame* he did
To that faire damzell. *Id. Ib.* book iii. can. 5.

Shame causeth blushing, and casting down of the eyes. Blush-
ing is the resort of bloud to the face, which, in the passion of
shame, is the part that laboureth most.

Bacon. Natural History. Cent. viii. sec. 718.

PETRU. My means and my conditions are no *shamers*
Of him that owes 'em, all the world knows that,
And my friends no reliers on my fortunes.
Beaumont and Fletcher. The Woman's Prize, act i. sc. 2.

— Him he chaced long
Through the thicke woods wherein he would have hid
His *shamefull* head from his avengement strong,
And oft him threatned death for his outrageous wrong.
Spenser. Faerie Queene, book iii. can. 5.

Griefe, and Despight, and Gealosy, and Scorne,
Did all the way him follow hard behynd;
And he himselfe himselfe loath'd so forlorne,
So *shamefully* forlorne of womankynd;
That, as a snake, still lurked in his wounded mynd.
Id. Ib. book iii. can. 10.

— Thou art a *shameless* villain,
A thing out of the overchange of nature;
Sent like a thick cloud to disperse a plague
Upon weak catching women.
Beaumont and Fletcher. The Maid's Tragedy, act v.

THEO. Pray stay there, lady;
And when the night came, came he, kept he touch with ye?
Be not so *shamefac'd*.
Id. Love's Pilgrimage, act iii. sc. 2.

And next to her sate goodly *Shamefastnesse*,
Ne ever durst her eyes from ground upreare,
Ne ever once did looke up from her desse,
As if some blame of evill she did feare,
That in her cheekes made roses oft appeare.
Spenser. Faerie Queene, book iv. can. 10.

For *shame*, which is an uneasiness of the mind upon the thought
of having done something which is indecent, or will lessen the
valu'd esteem which others have for us, has not always blushing
accompanying it.

Locke. Of Human Understanding, book ii. ch. xx.

'Tis yours, O warriors, all our hopes to raise;
Oh, recollect your ancient worth and praise;
'Tis yours to save us, if you cease to fear;
Flight, more than *shameful*, is destructive here.
Pope. Homer. Iliad, book xiii.

Shame is a painful sensation, occasioned by the quick appre-
hension that reputation and character are in danger; or by the
perception that they are lost. It may arise from the immediate
detection, or the fear of detection, or something ignominious. It
may also arise from native diffidence in young ingenious minds,
when surprised into situations where they attract the peculiar at-
tention of their superiors.

Cogan. On the Passions, vol. i. p. 110.

SHAME. From that period at which the mind begins to think, Sophron was remarkable for a quality which, in children, is called *shame-facedness*. He could never enter a room full of company without shewing his distress by a violent suffusion of blushes.

Knox. Works, vol. ii. p. 190. *Essays*, No. 159

SHANK, A. S. *scanca*, *sceanca*; Ger. *schink*; D. *schenele*; Sw. *skank*, the shank or leg, *earm scanca*, the arm-bone. Somner. See **SKIN**. Applied to the leg, from knee to ankle; the leg; the support, as the leg to the body; the leg or arm, the long limb or member.

pei brak in-tuo his *schankes*, to mak þe tounge mete,
þe blode was boþe warme and fresh, þat of þe *schankes* lete.
R. Brunne, p. 36.

He stombled at a chance, & felle on his kne,
þorgh þe toþer *shank* he ros, & serued in his degre.
Id. p. 55.

And here and there were pleasant arbors pight,
And shadie seates, and sundry flouring bankes,
To sit and rest the walkers' wearie *shankes*.
Spenser. Faerie Queene, book iv. can. 10.

————— And as you haue seene
A ship-wright bore a nauall beame; he oft
Thrusts at the argurs froofe; works still aloft;
And at the *shanke* helpe others, with a cord
Wound round about, to make it sooner bo'd;
All plying the round still.

Chapman. Homer. Odyssey, book ix.

CRA. His legs were ever villanous since I knewe him,
ERA. Faith his uucle's *shanks* are somewhat the better.
Beaumont and Fletcher. The Queen of Corinth, act iii. sc. 1.

The deuice confound, he cries, these drum-stick *shanks*,
They neither have my gratitude nor thanks;
They're perfectly disgraceful!
Goldsmith. Epilogue in the Character of Harlequin.

SHANTY, *i. e.* jaunty, *q. v.*

'Tis thine for sleeves to teach the *shantiest* cuts,
Give empty coxcombs more important struts,
Prescribe new rules for knots, hoops, manteaus, wigs.
Warton. Fashion, a Satire.

SHAPE, *v.* } D. *schaep-en*, *schep-en*; Ger. *schaff-*
SHAPE, *n.* } *en*; Sw. *skapa*; A. S. *sceappian*,
SHA'PELESS, } *scippan*, *scyppan*, *formare*, *fingere*, to
SHA'PELY. } form or frame.

To form or frame, to make, to bring or reduce, to a form or figure, an image or representation; to fashion; to prepare, to adapt; to make suitable, or becoming, or proportioned to.

His praier did him bryng out of his hard cas,
þanked God & him so wele for him had *schaped*,
þat of his anguys grim so lightly was escaped.
R. Brunne, p. 201.

And bad *shappe* hym a *shup*. of shides of bordes.
Piers Plouhman. Vision, p. 177.

And ich wene hit worth of menye. as was in Noes tyme
Tho þat he *shop* þe *shup*. of shides and of bordes.
Id. *Ib.* p. 196.

Lyke a *shappesters* sheres. *Id.* *Ib.* p. 91.

By feith Noe dredde thorough answer takun of these thingis that
ghit weren not seen, and *schapide* a *schip* into the heelte of his
hous bi which he dampnyde the world and is ordeyned eir of
righwisnesse which is bi feith.

Wiclif. Ebrewis, ch. xi.

A, quod this sompnour, *benedicite*, what say ye?
I wend ye were a yeman trewely.
Ye have a mannes *shape* as wel as I.
Have ye than a figure determinat
In helle, ther ye ben in your estat.

Chaucer. The Freres Tale, v. 7038.

His felaw was ywalked into toun
Forth with his knave, into that hostellerie,
Wher as he *shope* him thilke night to lie.
Id. *The Sompnoures Tale*, v. 7360.

Nay, certainly, quod he, ther have we non,
But whan us liketh we can take us on,
Or elles make you wene that we ben *shape*
Sometime like a man, or like an ape;
Or like an angel can I ride or go.

Chaucer. The Freres Tale, v. 7043.

And if so be our destinee be *shape*
By eterne word to dien in prison,
Of our lignage have som compassion,
That is so low ybrought by tyrannie.

Id. *The Knightes Tale*, v. 1210.

————— Alas the day that I was borne!
Now is my prison werse than beforne;
Now is me *shape* eternally to dwelle
Not only in purgatorie, but in helle.

Id. *Ib.* v. 1155.

Wel semed ech of hem a fayre burgeis,
To sitten in a gild halle, on the deis.
Everich, for the wisdom that he can
Was *shapelich* for to ben an alderman.

Id. *Prologue to the Canterbury Tales*, v. 371.

And she began him to bemene,
And saide; Florent, by thy name,
Thou haste on honde suche a game,
That if thou be not better aduised,
Thy deth *shapen* is, and deuised.

Gower. Conf. Am. book i.

Enuie if that I shall descriue,
He is not *shapely* for to wiue
In erth amonge the women here.

Id. *Ib.* book ii.

Fortune, which maie euery threde
To breke and knitte of man's spede
Shope, as this knight rode in a pase
That he by strength taken was.

Id. *Ib.* book i.

A valiant corps, where force and beauty met,
Happy, alas! to happy, but for foes;
Liued, and ran the race, that nature set;
Of manhodes *shape*, where she the mold did lose.

Surrey. Of the Death of Sir T. W.

And eke his garment, to be thereto meet,
He wilfully did cut and *shape* anew.
Spenser. Faerie Queene, book iv. can. 7

Which speaches she applying to the scope
Of her intent, this further purpose to him *shope*.
Id. *Ib.* book v. can. 5

————— So taken
She is with Paris, the tragedian's *shape*,
That is to act a lover, I thought once
She would have courted him.

Massinger. The Roman Actor, act iii. sc. 1.

I see thou know'st what is of use to know,
What best to say canst say, to do canst do;
Thy actions to thy words accord, thy words
To thy large heart give utterance due, thy heart
Contains of good, wise, just, the perfect *shape*.

Milton. Paradise Regained, book iii. l. 7.

And ere those vowes I make do vnperform'd escape,
This world shal once againe renuerst resume her *shapelesse shape*.
Stirling. Aurora. Elegy 2.

I rather would entreat thy company,
To see the wonders of the world abroad;
Then (liuing dully sluggardiz'd at home)
Weare out thy youth with *shapelesse* idlenesse.

Shakspeare. Two Gentlemen of Verona, fol. 20.

How many, even amongst us, will be found, upon enquiry, to
fancy him in the *shape* of a man sitting in heaven, and to have
many other absurd and unfit conceptions of him?

Locke. Of Human Understanding, vol. i. book i. ch. iv. p. 67.

Waste sandy valleys, once perplex'd with thorn,
The spiry fir and *shapely* box adorn.

Pope. Messiah.

In prospects thus, some objects please our eyes,
Which out of Nature's common order rise,
The *shapeless* rock, or hanging precipice.

Id. *Essay on Criticism*.

Alas for Sicily! rude fragments now
Lie scatter'd, where the *shapely* column stood.
Cowper. The Task, book ii.

SHAPE.

SHAPE. It has been the fashion of the last half century to depreciate his work [Grotius, *De Jure*] as a *shapeless* compilation, in which reason lies buried under a mass of authorities and quotations.
Mackintosh. On the Study of the Law of Nature, p. 17.

Sunk are thy bow'rs in *shapeless* ruin all,
 And the long grass o'ertops the mould'ring wall.
Goldsmith. The Deserted Village, p. 494.

SHARD, } Shared, shar'd, shard, (see **SHARE**,
SHA'RDED. } *infra*,) any thing separated or divided; a part or partition, a fragment or division; a scale or shell. See **SCALE**, and **SHELL**.

Sharded, covered with, encased, enclosed in, protected by *shards*, or scales, or shells.

Shard-borne beetle, is the beetle borne along the air by its *shards* or *scaly wings*. Steevens.

For longe tyme it so befelle,
 That with his swerd, and with his spere,
 He might not the serpent dere;
 He was so *sherded* all aboute,
 It held all edge toole withoute.

Gower. Conf. Am. book v.

And as she loketh to and fro,
 She sigh, hir thought, a dragon tho,
 Whose *scherdes* shynen as the sonne.

Id. Ib. book vi.

What is it that art and the wit of man hath not devised? for there is means found to make a strong kind of mortar or cement by the broken *sheards* of potters' vessels.

Holland. Plinie, book xxxv. ch. xii.

Upon that shore he spyed Atin stand,
 There by his maister left, when late he far'd
 In Phædria's flitt bark over that perlous *shard*.
Spenser. Faerie Queene, book ii. can. 6.

————— To apprehend thus,
 Drawes vs a profit from all things we see;
 And often, to our comfort, shall we finde
 The *sharded* beetle in a safer hold
 Then is the full-wing'd eagle.
Shakspeare. Cymbeline, fol. 381.

Her obsequies haue bin as farre inlarg'd
 As we haue warrantis, her death was doubtfull,
 And by that great command, o're-swaies the order,
 She should in ground vnsanctified haue lodg'd,
 Till the last trumpet. For charitable praier,
Shardes, flints, and pebbles, should be throwne on her.
Id. Hamlet, fol. 278.

————— Ere the bat bath flowne
 His cloyster'd flight, ere to black Heccats summons
 The *shard-borne* beetle, with his drowsie hums,
 Hath rung night's yawning peale,
 There shall be done a deed of dreadfull note.
Id. Macbeth, fol. 141.

Not heathpout, or the rarer bird,
 Which Phasis or Ionia yields,
 More pleasing morsels would afford
 Than the fat olives of my fields;
 Than *shards* or mallows for the pot,
 That keep the loosen'd body sound.
Dryden. Horace. Epode 2.

SHARE, v. } To share or shear (see **SHEAR**) is
SHARE, n. } from the A. S. *scear-an*, *scyr-an*, *scyr-*
SHA'RER, } *ian*, to cut. To cut, to clip, to sepa-
SHA'RING, n. } rate, to divide; to part, to portion,
 to partake.

Share or *sheerer*, that which cuts or divides, as the ploughshare or sheerer, (contracted, Tooke thinks, to avoid the repetition of *er, en*.)

Share-bone, where the body is separated or divided.

He schal be demed to þe deþ. bote yf he do it smýthie
 In to sýkel op into sithe. to *shar* oþer to culter.
Piers Plouhman. Vision, p. 61.

Of dreames a thousand such
 eche night I haue a *share*.
 To bannish sleepe from pining corse
 and nurse my canckred care.

Gascoigne. To his Loue long Absence.

And therefore must all Israel go downe to y^e Philistines, to mende euerye man his *share*, his mattock, his axe, or his cycle.
Tyndall. 1 Samuel, fol. 36.

But there no substance was so firme and hard,
 But it would pierce or cleave whereso it came,
 Ne any armour could his dint out-ward;
 But wheresoeuer it did light, it throughly *sheard*.
Spenser. Faerie Queene, book v. can. 1.

And every day, for guerdon of her song,
 He part of his small feast to her would *share*;
 That, at the last, of all his woe and wrong
 Companion she became, and so continued long.
Id. Ib. book iv. can. 8.

But who are your assistants? though I am
 So covetous of your glory, that I could wish
 You had no *sharer* in it.

Beaumont and Fletcher. The Double Marriage, act i. sc. 1.

DUTCH. You are *sharer* in this happiness,
 Myself will wait upon this marriage,
 And do the old woman all the honor possible.
Id. Women Pleased, act v. sc. 1.

Sharings doe greatly enrich, if the hands be well chosen that are trusted.
Bacon. On Riches.

They spread their gems the genial warmth to *share*,
 And boldly trust the buds in open air.
Dryden. Virgil. Georgics, book ii.

A field deep furrow'd next, the god design'd,
 The third time labour'd by the sweating hind;
 The shining *shares* full many ploughmen guide,
 And turne their crooked yokes on every side.
Pope. Homer. Iliad, book xviii.

They are the sons of God, and the brethren of Christ, and consequently they shall be *sharers* of his inheritance, and be glorified ith him.
Sharp. Works, vol. v. p. 12. Discourse 1.

When they trade upon a joint stock, each member *sharing* in the common profit or loss, in proportion to his share in this stock, they are called joint-stock companies.

Smith. Wealth of Nations, vol. iii. book v. ch. i. p. 129.

It redresses the old Manichean impiety, so derogatory to it, [God's glory,] which makes an evil principle a *sharer* with him in the direction of the universe.

Warburton. Works, vol. x. p. 8. Sermon 18.

SHARK, n. } Skinner says, perhaps from the
SHARK, v. } A. S. *scear-an*, to sheer, to cut; ap-
SHA'RKER. } plied to the fish, from its voracity;
 and to the person from his similar qualities; seizing and devouring eagerly, greedily.

Steevens says, I believe, to *shark* up, means to pick up without distinction, as the shark-fish collects his prey. To *shark*, generally, is

To prey upon another—by fraud or rapine; to cheat, to trick; to rob, to plunder.

FAC. 'Slid, prove to day, who shall *sharke* best.
SUB. Agreed.

Ben Jonson. The Alchemist, act i. sc. 1.

————— Now, sir, young Fortinbras,
 Of vnimproued mettle, hot and full,
 Hath in the skirts of Norway, heere and there,
Shark'd vp a list of landlesse resolute,
 For foode and diet, to some enterprize
 That hath a stomacke in't.

Shakspeare. Hamlet, fol. 153.

A hungry renegade, a dirty *sharker* about the Romish court, who only scribbles that he may dine.

Sir H. Wotton. Letter to M. Velsesus, (1612.)

Alguazeir, a *sharking* panderly constable.

Beaumont and Fletcher. Love's Cure.

Edmund Gayton, Bach. of Phys., actually created by virtue of a dispensation from the delegates, 1647, turn'd out of his beadle-

SHARE.
SHARK.

SHARK. ship in the year following by the parliamentary visitors, lived afterward in London in a *sharking* condition, and wrote trite things meerly to get bread to sustain him and his wife.

Wood. *Athenæ Oxonienses*, part ii. p. 388.

While we lay in the calms we caught several great *sharks*, sometimes two or three in a day, and eat them all, boyling and squeezing them dry, and then stewing them with vinegar, pepper, &c., for we had but little flesh aboard.

Dampier. *Voyages*, vol. i. ch. iv. p. 79.

Wretches who live upon the *shark*, and other men's sins, the common poysoners of youth, equally desperate in their fortunes, and their manners, and getting their very bread by the damnation of souls.

South. *Sermons*, vol. ii. p. 213. *Romans*, i. 32.

And thus David's messengers are sent back to him like so many *sharks* and runnagates, only for endeavouring to complement an ill nature out of itself, and seeking that by petition which they might have commanded by their sword.

Id. *Ib.* 1 Samuel, xxv. 32, 33.

SHARP, *adj.* } D. *scherp*, *schaerp*, *scherp-en*;
SHARP, *n.* } Ger. *scharf*, *schærfen*; Sw. *skärpa*;
SHARP, *v.* } A. S. *scearp-an*, *scyrpan*, *scindere*,
SHA'RPEN, *v.* } *secare*, *acuere*, *acuminare*, to cut,
SHA'RPER, } to bring to an edge or point that
SHA'RPLY, } will cut or pierce, *sc.* quickly, easily,
SHA'RPNESS. } keenly. Skinner refers to the A. S.

scyr-an, to sheer or share.

Sharp, the *adj.*, cutting or piercing, *sc.* quickly, easily; having an edge or point, that will cut or pierce, quickly, easily. Met. acute, quick, of apprehension or invention; piercing, penetrating, keen; eager; pungent or poignant, painful, causing or afflicting pain; biting, bitter, acrid; also, biting, sour, acid, tart.

A *sharper*, met., one who practises sharpness, *sc.* in cheating, defrauding, gaining any advantages.

Whan þe kyng herd say, þat Dauid werred on him,
To Wales he went his way fulle *sharply* & fulle brim.

R. Brunne, p. 244.

And thei dredden lest we schulden have fallun in to *scharpe* places.

Wiclif. *The Dedis of Apostlis*, ch. xxvii.

And thei schulen falle by the *sharpnesse* of swerd.

Id. *Luke*, ch. xxi.

Wo was his coke, but if his sauce were
Poinant and *sharpe*, and ready all his gere.

Chaucer. *Prologue to the Canterbury Tales*, v. 353.

And after that, with *sharpe* speres strong
They foineden eche at other wonder long.

Id. *The Knightes Tale*, v. 1656.

He tooke an arrow full *sharpely* whet,
And in his bowe when it was set,
He streight up to his eare drough
The strong bowe, that was so tough.

Id. *The Romant of the Rose*, p. 183.

For their passing study han fresshed our wittes, and oure vnderstandynge han excited in consideration of trouth by *sharpenes* of their reasons.

Id. *The Testament of Louc*, book i.

Fro wordes vnto strokes thus
Thei felle, and so Telegonus
Was sore hurte, and well nigh dede
Cut with his *sharpe* speares hede.

Gower. *Conf. Am.* book vi.

But whan the *sharpnes* of the spore
The hors side smiteth to sore
It greueth ofte.

Id. *Ib.* *Prologue*, p. 16.

But wherein he *sharpened* his wits to the piercingest point, was touching his men.

Sidney. *Arcadia*, book iii. p. 424.

But whether it were right or wrong, it was with so cruel and mortal war revenged, the countries round about joining their help and power to the puissance and malice of both parties, that most flourishing and wealthy people, being some of them shrewdly shaken and some of them *sharply* beaten, the mischiefs were not finished or ended until the Alaopolitans at the last were yielded up as bondmen into the jurisdiction of the Nephelogeates.

More. *Utopia*, vol. ii. book ii. ch. x. p. 166.

And were the riche wanteth, what can the poore find, who in a common scarsitie lyueth most scarcely, and feeleth quickliest the *sharpnesse* of staruing, when eurye man for lack is hungerbitten.

Cheke. *The Hurt of Sedition*, p. 49.

O Lord, said Musidorus, how *sharp-witted* you are to hurt yourself; No, answered he, [Pyrocles,] but it is the hurt you speak of which makes me so *sharp-witted*.

Sidney. *Arcadia*, book i. p. 85.

Not that great champion of the antique world,
Whom famous poets' verse so much doth vaunt,
And hath for twelve huge labours high extold,
So many furies and *sharpe* fits did haunt,
When him the poysoned garment did enchannt,
With centaures blood and bloody verses charmd.

Spenser. *Faerie Queene*, book i. can. 11.

JULI. It is, it is, hie hence, be gone, away;
It is the larke that sings so out of tune,
Straining harsh discords, and vnpleasing *sharpes*.

Shakspeare. *Romeo and Juliet*, fol. 68.

The sling, the stiff bow, and the *sharpen'd* lance,
Floating confus'dly on the waters rude,
They which these weapons lately did advance,
Perish in sight of them they had pursu'd.

Drayton. *Moses His Birth and Miracles*, book iii.

The rugged forehead, that with grave foresight
Welds kingdoms causes and affaires of state,
My looser rimes, I wote, doth *sharply* wite
For praysing love as I have done of late.

Id. *Ib.* book v.

And yet (for nerves) there will be found, a strength of powre in mine

To drive a lance home at thy life; my lance as well as thine
Hath point and *sharpnesse*.

Chapman. *Homer. Iliad*, book xx.

On t'other side there stood Destruction bare,
Unpunish'd Rapine, and a waste of war.
Contest, with *sharpen'd* knives, in cloisters drawn,
And all with blood bespread the holy lawn.

Dryden. *Palamon and Arcite*, book ii.

Spare then the person, and expose the vice.

P. How, sir! not damn the *sharper*, but the dice!

Pope. *Epilogue to Satires. Dialogue 2.*

To this the Panther *sharply* had reply'd;
But, having gain'd a verdict on her side,
She wisely gave the loser leave to chide.

Dryden. *The Hind and the Panther*.

The *sharp-set* squire resolves at last,
Whate'er befel him not to fast.

Somerville. *The Officious Messenger*.

Then he that *sharp'd*,
And pocketted a prize by fraud obtain'd,
Was mark'd and shunn'd as odious.

Cowper. *Tusk*, book iii

Perhaps you'll think I act the same,
As a sly *sharper* plays his game.

Cotton. *Life. Vision 8.*

The *sharpness* of the air, and gloominess of the weather for two or three days past, seemed to indicate some sudden change.

Cook. *Voyages*, vol. vi. book iv. ch. ix. p. 417.

SHAT'TER, *v.* } *i. e.* to scatter, *q. v.*, to divide or
SHA'TTER, } cause to divide or separate.
SHA'TTERY. } To separate, to disperse, to dis-

sipate; to sever (by breaking) into parts or pieces.
Shatter-brained, one whose brains or thoughts are dispersed.

Windows are shiver'd to forgotten dust,
The slates fall *shatter'd* from the roof above.

Drayton. *Moses His Birth and Miracles*, book ii.

Of bodies some are fragile, and some are tough and not fragile;
and in the breaking, some fragile bodies break but where the force is; some *shatter* and flie in many pieces.

Bacon. *Natural History*, Cent. ix. sec. 841.

The winds
Blow moist and keen, *shattering* the graceful locks
Of these fair spreading trees.

Milton. *Paradise Lost*, book x. l. 1065.

SHARP.
—
SHAT-
TER.

SHAT-
TER.

SHAW.

The weary Trojans ply their *shatter'd* oars
To nearest land, and make the Libyan shores.
Dryden. Virgil. Æneid, book i.

Meantime his busy mariners he hastes
His *shatter'd* sails with rigging to restore;
And willing pines ascend his broken masts,
Whose lofty heads rise higher than before.
Id. Annus Mirabilis.

You may likewise stick the candle so loose that it will fall upon
the glass of the scone and break it into *shatters*.
Swift. Works, vol. xii. p. 19. Directions to the Butler.

Rout and carnage sweep
That *shatter'd* wing before th' Oilean swords.
Glover. The Athenaid.

The quarries are of a coarse grit stone, often filled with shells,
but of too *shattery* a nature to be used, except in ordinary buildings.
Pennant. Journey from Chester, p. 272.

SHAVE, v. } D. *shave, shauen*; Ger. *schaben*;
SHA'VELING, } Sw. *shaf-wa*; A. S. *scaf-an, scæf-an*,
SHA'VE, } *tondere, radere, polire*; to shave, to
SHA'VING, n. } polish, to make smooth or fine. Som-
ner.

To cut; *sc.* from the surface, superficially, in thin
portions; to cut closely, smoothly; to plain, to move
or keep in motion, close to the surface. *Shaveling*; a
shaven priest or other person.

No berd hadde he, ne never non shulde have,
As smothe it was as it were newe *shave*.
Chaucer. Prologue to the Canterbury Tales, v. 623.

The clergy wyth their false and subtil wyles had beguiled and
mocked the people, and brought them into the ignorance of the
word, making the vnderstand by this worde churchen nothing but
the *shauen* flocke of them that shone the whole worlde.

Tyndall. Workes, p. 250. Of the worde Congregation.
*Shavelynge*s of prodigious beastlinesse.
Bale. On the Revelations, part ii. k. 7.

Som times
He scours the right-hand coast, som times the left,
Now *shaves* with level wings the deep, then soars
Up to the fiery concave turning high.
Milton. Paradise Lost, book ii. v. 632.

We call the *shavings* of fish (which are little worth) gubbings;
and sure it is they are sensible that the word importeth shame and
digrace.
Fuller. Worthies. Devonshire.

I am a barber, and I'd have you know
A *shaver* too sometimes, no mad one tho'.
Suckling. A Barber, p. 506.

Nor by electrick bodies do I conceive such onely as take up
shavings, straws, and light bodies, in which number the ancients
onely placed jet and amber; but such as conveniently placed unto
their objects attract all bodies palpable whatsoever.
Sir T. Brown. Vulgar Errours, book ii. ch. iv. p. 86.

And all the stock of learning they pretend to is a few *shavings*
of wit, gathered out of plays and romances, and these they pin
upon religion, as you have seen unhappy boys do rags at men's
backs, to expose it to scorn and derision.

Scott. Christian Life, part ii. ch. iii. p. 216.

The Egyptians from a very early age *shave* their heads, which,
being constantly exposed to the action of the sun, become firm
and hard.

Beloe. History of Herodotus, vol. ii. book iii. ch. i. p. 13.

The juice, thus diluted, is strained through some fibrous stuff
like fine *shavings*; after which it is fit for drinking.
Cook. Voyages, vol. iii. book i. ch. xiv. p. 170.

SHAW, A. S. *sceca*, a shadow; D. *schawe*.
A shade, a shady place; natural or artificial.

Welcome, quod he, and every good felaw;
Whider ridest thou under this grene *shaw*?
Chaucer. The Freres Tale.

For love of him thou lovedst in the *shawe*,
I mean Adon, that with the bore was slawe.
Id. Troilus and Crescide, book iii.

SHAVE.
—
SHEAF.

And saide here
I woll abide vnder the *shawe*
And bad hir women to withdrawe.
Gower. Conf. Am. book iv.

I rede that ye drawe
Into the wode *schawe*,
Your heddes for to hyde.
Ritson. Metrical Romances, vol. ii. Lybeaus Disconus, v. 1111.

Tymely as the day can dawe,
He led her thorow a feyre *schawe*
In wodes waste and wyld.
Id. Ib. vol. iii. Le bone Florence of Rome, v. 1503.

SHAWIA, in *Botany*, a genus so called in honour
of Mr. Shaw, a traveller in Barbary. It belongs to the
class *Syngenesia*, order *Æqualis*, and natural order *Com-
positæ-Eupatoriaceæ*. Generic character: heads one
flowered; pappus in two series, setaceous, scabrous; achen-
ia terete; involucre turbinata, imbricate.

This genus consists only of one species, *S. paniculata*,
a native of New Zealand. It is a shrub with alternate,
entire, coriaceous leaves, clothed with white wool be-
neath, and having the heads of flowers racemose.

SHAWL, (in Persian and Hindî Shál, from the
Sanskrit Sála,) originally signified a soft woollen cloth,
and was applied to the tunic or 'abá of the Bedowins
and Dervishes. The word Shál is no doubt derived from
the custom of spreading out such clothes on the ground
as carpets, or over the shoulders as a covering; hence it
signifies in Persian a carpet as well as a mantle or
tunic.

Castle, *Lexicon Heptaglottum*; Sir G. C. Haughton,
Sanskrit and Bengálí Dictionary; Rosen, *Radices
Sanskritæ*.

SHE, D. *sii*; Ger. *sie*; A. S. *sheo, heo*; Goth. *si*,
illa ipsa. Verstegan, ch. vii., says, "*Heo, shee*, in some
places of England, they yet say, *heo* or *hoo*, instead of
she." See HE, and IT.

Heo, in R. Gloucester, is *Regan*.

Sire, quod *heo*, bi hye Godes, Lordes of all þyng,
Y loue more þi leue lyf þan al þat worlde ys.
R. Gloucester, p. 30.

Scho purueid þat poýson þorgh hatered of old.
R. Brunne, p. 11.

A voice was herd, an high weepyng, & myche weilyng,
Rachel by weepyng her sonnes and *sche* wolde not be comfortid
for thei ben not.
Wiclif. Matthew, ch. ii.

She gathereth floures, partie white and red.
To make a sotel gerlond for here hed,
And as an angel hevenliche she song.
Chaucer. The Knightes Tale, v. 1054.

But *she*, whiche kepeth the blynde whele,
Venus, when thei be moste aboue
In all the hottest of her loue,
Hir whele *she* torneth, and thei fell
In the maner as I shall tell.
Gower. Conf. Am. book i.

For contemplation he and valour form'd,
For softness *she* and sweet attractive grace;
He for God only, *she* for God in him.
Milton. Paradise Lost, book iv. l. 298.

SHEAF, } D. *schoof, schoove*; A. S. *sceaf*, the
SHE'AFY, } past participle, *sceaf*, or *sceaf-od*, from
SHE'AVED. } the verb *scuf-ian*, to shove; that which
is *shoved* together.

Any number or quantity *shoved* together, pushed, put
together; applied to stalks of corn, reeds, arrows; put
together, collected.

Half a *shef* of arwes.
Piers Plouhman. Vision, p. 62.

SHEAF.
—
SHEAR.

The which child of her nativite,
To all good thewes borne was she,
As liked to the goddes or she was borne,
That of the *shefe* she should be the corne.

Chaucer. *The Legende of Hypermestre*, p. 310.

Certaine I am full like indeed
To him that cast in earth his seed,
And hath joy of the new springing,
Whan it greeneth in the ginning,
And is also faire and fresh of flour,
Lustie to seene, swote of odour,
But ere he it in his *sheues* shere,
May fall a weather that shall it dere,
And make it to fade and fall,
The stalke, the greine, and floures all.

Id. *The Romant of the Rose*, p. 203.

I woulde wyshe that the heade makers of Englande should
make theyr *sheafe* arrow heades more harder pointed than they be.

Ascham. *Workes*, book ii. *Toxophilus*.

As for our steele, it is not so good for edge-tooles as that of
Colaine, and yet the one is often sold for the other, and like tale
vsed in both, that is to saie, thirtie gads to the *sheffe*, and twelue
sheffes to the burden.

Holinshead. *Description of England*, ch. xi.

They that reap must *sheafe* and binde.

Shakspeare. *As You Like It*, act iii. sc. 2. fol. 195.

Her hair, not loose, nor ty'd in formal plat,
Proclaim'd in her a careless hand of pride;
For some, untuck'd, descended her *sheav'd* hat,
Hanging her pale and pined cheek beside.

Id. *A Lover's Complaint*.

They will looke at his verie bow, and *sheive* of arrowes, as at
straunge and wonderous things.

Holland. *Plime*, book viii. ch. xxxii.

In some places the fashion is to cut with a hooke or syccle the
straw in the midst; and betweene every two *sheaves* they sit
downe, and then crop off the eares just at the straw.

Id. *Ib.* book xviii. ch. xxx.

The bow-man (which no country hath the like)
With his *sheaf*-arrow proveth by his might,
How many score off he is foe can strike,
Yet not to draw above his bosom's height.

Drayton. *The Battle of Agincourt*.

Be not too narrow, husbandmen; but fling
From the full *sheaf*. with charitable stealth,
The liberal handful.

Thomson. *Autumn*.

Ceres, kind mother of the bounteous year,
Whose golden locks a *sheafy* garland bear.

Gay. *Ovid. Metamorphoses*, book vi.

How strongly also did the *sheaf* of the first fruits, consecrated,
and lifted up to God, represent Christ the first fruits, raised from
the dead!

Gilpin. *Sermon* 14. vol. iii. p. 156.

SHEAR, v. or	} See ante, SHARE, and SHARD. D. scheeren; Ger. <i>scha-ren</i> , <i>scheren</i> ; A. S. <i>scear-an</i> , <i>scir-an</i> , to cut. To cut, to divide, to separate or sever. Shear, sheer, or (as Beau- mont and Fletcher write it, <i>shaer</i> ,) means separated or severed. <i>Sheer</i> ignorance, (says Tooke,) ignorance separated from any the smallest
SHEER,	
SHEAR, adj.	
SHEAR,	
SHE'ARER,	
SHE'ARING,	
SHE'ARLY,	
SHEARD, or	
SHERD.	mixture of information.

Shot *sheer* away; so separated as to leave not the
smallest particle behind.

Fountaine *shere* in Spenser; separated from all inter-
mixture or pollution; unmingled, and consequently pure.

To *shear* off; part or separate from; move off or
away.

His berd he lette *schere* first, and a brod crowne al so.

R. Gloucester, p. 150.

Lyke a shappesters *sheres*.

Piers Ploughman, p. 91.

VOL. XXVII.

As a scheep he was led to sleynge, and as a lombe bifore a man SHEAR.
that *scherith* him is doumbe withoute voice, so he openyde not his
mouth.

Wiclif. *The Dedis of Apostlis*, ch. viii.

He was ledde as a *shepe* to be slayne; and like a lambe domme
before his *sherer*, so opened he not his mouth.

Bible, Anno 1551.

How high that euer his head he *shere*,
With rasour whetter neuer so kene.

Chaucer. *The Romant of the Rose*, p. 216.

— The wheele of kind cometh about,
And naturally hath his cours ironne,
By circuite as doeth the *shere* sonne.

Lydgate. *The Story of Thebes*, part i. p. 576.

God yeve me sorwe, but, and I were pope,
Not only thou but every mighty man,
Though he were *shore* ful high upon his pan,
Should have a wif.

Chaucer. *The Monkes Prologue*, v. 13935.

My berd, my here that hangeth long adoun,
That never yet felt non offensoun
Of rasour ne of *shere*, I wol thee yeve,
And ben thy trewe servant while I live.

Id. *The Knightes Tale*, v. 2417.

This abhorring of coueteousnes is signified as I suppose by
shauyng and *sheryng* of the heare, that the haue no superfluitie.

Tyndall. *Workes*, p. 135. *The Obedience of a Christian Man*.

He annointeth them after the maner of y^e Jewes, and shaueth
them and *shoreth* them after the maner of heathen priestes,
whiche serue the idoles.

Id. *Ib.* p. 134.

Whiche feaste beganne in the euenyng before, that is to wytte
on *Sherethursday* whan the eatyng of the paschall lambe was.

Sir T. More. *Workes*, p. 1308. *Vpon the Passion of Chryste*.

Her teme at her commaundement quiet stands,
Whiles they the corse into her wagon reare,
And strowe with floures the lamentable beare:

Then all the rest into their coches dim,
And through the brackish waves their passage *sheare*.

Spenser. *Faerie Queene*, book iii. can. 4.

Yet goldsmithes cunning could not understand
To frame such subtile wire, so shinie cleare;
For it did glister like the golden sand,
The which Pactolus with his waters *shere*
Throwes forth upon the rivage round about him nere.

Id. *Ib.* book iv. can. 6.

I, fonder then Cephisus foolish chyld,
Who, having viewed in a fountaine *shere*
His face, was with the love thereof beguyl'd;
I, fonder, love a shade, the body far exyl'd.

Id. *Ib.* book iii. can. 2.

Thou saw'st great burden'd ships through these thy vallies pass,
Where now the sharp-edg'd scythe *shears* up the spiring grass.

Drayton. *Poly-olbion*, song 16.

When *sheering* time is come I to the river drive
My goodly well fleec'd flocks. (by pleasure thus I thrive,)
Which being wash'd at will, upon the *sheering* day,
My wool I forth in locks, fit for the winter lay.

Id. *The Muses' Elysium. Nymphal* 6.

And y^e breaking thereof is like the breaking of a potter's pot,
which is broken without pitie, and in the breaking thereof is not
found a *shearde* to take the fire out of the hearth, or to take water
out of the pit.

Bible, Anno 1583. *Isaiah*, ch. xxx. v. 14.

CIT. Let him look narrowly to his service, I shall take him else,
I was there myself a pikeman once, in the hottest of the day,
wench, had my feather shot *shaer* away, the fringe of my pike
burnt off with powder, my pate broken with a scouring-stick, and
yet I thank God I am here.

Beaumont and Fletcher. *The Knight of the Burning Pestle*, act v. sc. 1.

It met

The sword of Satan with steep force to smite
Descending, and in half cut *sheere*, nor staid,
But with swift wheele reverse, deep entring *shar'd*
All his right side.

Milton. *Paradise Lost*, book vi. l. 323.

Of other care they little reckoning make,
Than how to scramble at the *shearers'* feast,
And shove away the worthy bidden guest.

Id. *Lycidas*, l. 116.

3 Y

SHEAR.
—
SHEATH.

Turn all the stories over in the world yet,
And search through all the memories of mankind,
And find me such a friend; h'as outdone all,
Outstript 'em *sheerly*, all, all, thou hast Polydor,
To die for me.

Beaumont and Fletcher. The Mad Lover, act v. sc. 1.

The swain, whom acts of piety delight,
Observant of the gods, begins the rite;
First *shears* the forehead of the bristly boar,
And suppliant stands, invoking every power
To speed Ulysses to his native shore.

Pope. Homer. Odyssey, book xiv.

The sister-lock now sits uncouth, alone,
And in its fellow's fate foresees its own;
Uncurl'd it hangs, the fatal *sheers* demands,
And tempts, once more, thy sacrilegious hands.

Id. The Rape of the Lock, can. 4.

That silly thing men call *sheer-wit* avoid,
With which our age so nauseously is cloy'd:
Humour is all; wit should be only brought
To turn agreeably some proper thought.

Buckinghamshire. Essay on Poetry.

At a sheep-shearing, a countryman standing by, the sheep
kicked the shears out of the *shearer's* hand, and it struck the in-
side of his leg, and cut the great artery in his leg.

Boyle. Works, vol. vi. p. 473. Letters from several Persons.

Could I recall those notes, which once the Muse
Heard at a *shearing*, near the woody sides
Of blue-topp'd Wreakin!

Dyer. The Fleece, book i.

At *shearing-time*, along the lively vales,
Rural festivities are often heard:
Beneath each blooming arbour all is joy
And lusty merriment.

Id. Ib.

SHEATH, v. } D. *scheyde*, *scheede*; Ger. *scheide*;
SHEATH, n. } A. S. *scæthe*, *sceathe*, from D.
SHE'ATHY, } *scheyd-en*, Ger. *scheiden*, A. S. *scead-*
SHE'ATHLESS. } *ian*; to separate, *non quia a gladio*
facile separatur, sed quia gladium condit et separem
facit. Wachter. And Tooke pronounces *sceathe* to be
the third person of *scead-an*, to separate, to seclude.

Sheath; that which shades, secludes, and conse-
quently covers, protects, encloses.

To *sheath*; to enclose, to encase, to cover, to protect.

þat ick in ys inneward my swerd ne make a *scheþe*.

R. Gloucester, p. 135.

Therefore Jesus seide to Petir, Putte thou thi swerd into thy
schethe.

Wiclif. John, ch. xviii.

Then sayde Jesus vnto Peter: Put vp thy swerde into the
sheath.

Bible, Anno 1551.

It would have done a man good at his heart to have seen how
proudly they displayed their peacock feathers, how much they
made of their painted *sheaths*, and how loftily they set forth and
advanced themselves.

Sir Thomas More. Utopia, vol. ii. book ii. ch. vi. p. 81.

Within his side he *sheath'd* his weapon keene,
Downe fell the worthie on the dustie plaine.

Fairfax. Godfrey of Bulloigne, book iii. st. 45.

There has the purple vengeance a proud seat,
Whose ever-brandisht sword is *sheath'd* in blood.

Crashaw. Steps to the Temple.

It is generally conceived an earwig hath no wings, and is
reckoned amongst impenous insects by many; but he that shall
narrowly observe them, or shall with a needle put aside the short
and *sheathie* cases on their back, may extend and draw forth two
wings of a proportionable length for flight, and larger then in
many flies.

Sir T. Brown. Vulgar Errors, book iii. ch. xxvii. p. 221.

Some insects fly with four wings, as all vaginipennous, or
sheath-winged insects, as beetles and dorrs.

Id. Ib.

He who hath drawn his sword against his prince ought to throw
away the scabbard, never to think of *sheathing* it again.

Clarendon. History of the Rebellion, book x.

After this, Captain Swan bought timber trees of the general, **SHEATH**
and set some of our men to saw them into planks, to *sheath* the
ship's bottom. *Dampier. Voyages, vol. i. ch. xiii. p. 361.* **—**
SHED.

But when his foe lies prostrate on the plain,
He *sheaths* his paws, uncurls his angry mane,
And, pleas'd with bloodless honours of the day,
Walks over and disdains th' inglorious prey.

Dryden. The Hind and the Panther.

Your shining swords within the *sheath* restrain,
And pitch your lances in the yielding plain.

Pope. Homer. Iliad, book iii.

The fatal cause was now at last explor'd,
Her veil she knew, and saw his *sheathless* sword.

Eusden. Ovid. Metamorphoses, book v.

The next day (having by this time compleated the new *sheath*
ing of the first course) they righted her again, to set up anew the
careening gear, which had stretched much.

Anson. Voyages, book ii. ch. viii. p. 487.

The sword was not likely to be *sheathed* till tyranny on the one
hand, or anarchy on the other, had introduced a new species of
slaughter in the place of the old; and judicial murders had suc-
ceeded to the military.

Warburton. Works, vol. x. p. 29. Sermon 19.

They found the *sheathing* gone about the floor-heads, abreast of
the mainmast, and part of a plank a little damaged.

Cook. Voyages, vol. ii. book iii. ch. iv. p. 139.

And to complete the scene of distress, we saw by the light of
the moon the *sheathing* boards from the bottom of the vessel float-
ing away all round her.

Id. Ib. vol. ii. book iii. ch. iii. p. 125.

SHED, v.

SHED, n.

SHE'DDER,

SHE'DDING, n.

A. S. *sced-an*, *scead-an*; to sepa-
rate or sever; to disperse, to dissi-
pate. See *ante*, to SCATTER, and
SHADE.

To disperse, to throw, to cast, dispersedly; generally,
to spill, to drop.

A *shed*; a place for seclusion, retirement, retreat.

No *shed*; no difference between things; to shead,
Lancashire, to distinguish; from A. S. *scead-an*, to dis-
tinguish, disjoin, divide, or sever. Ray.

Fro þe maistry nys not a kynge's ne be he neuer so god,
Ac knyghtes, þat vnder hym fyȝteþ, & *schedeþ* here blod.
R. Gloucester, p. 57.

Hys broþer gadered hys poer, & agen hym vaste stode,
So þat þe worre was strong, & gret *ssedjng* of blod.
Id. p. 388.

þoru *ssedjnge* of þy broþer blod, þat þus ys broȝt of dawe.
Id. p. 291.

He salle *sched* vs o sonder, fro Acres salle we go.
R. Brunne, p. 174.

þat somme sewe þe sak. for *shedjnge* of þe wete.
Piers Plouhman, p. 128.

He took also the cuppe after that he hadde soupid, and seide,
This cuppe is the Newe Testament in my blood that schal be *sched*
for you. *Wiclif. Luke, ch. xxii.*

He toke the cup sayinge: This cup is the New Testament in my
bloude, whiche shall for you be *shedde*.

Bible, Anno 1551.

Sheding of blood, ne manfull hardinesse,
Ne oft wounding at sautes by distresse,
Nor in parting of life nor death also,
All is for nought, loue taketh no heed thereto.
Chaucer. The Complaint of the Black Knight, p. 342.

But swiche a rain down from the welken *shadde*
That slow the fire, and made to him escape.

Id. The Monkes Tale, v. 14649.

For thei [Contecke and Homicide] accompten their wrath nought,
But if their be *shedynge* of blood.

Gower. Conf. Am. book iii.

My bloud of this New Testamēt, that is to say my bloud for
whose *shedding* sake this New Testament and couenaunt is made
to you, for the forgeuenes of sinne.

Tyndall. Workes, p. 443. Vpon Signes and Sacramentes.

SHED.

SHEEN.

But all the grownd with sculs was scattered,
And dead men's bones, which round about were flong;
Whose lives, it seemed, whilome there were shed,
And their vile carcasses now left unburied.
Spenser. Faerie Queene, book ii. can. 7.

Ed. I have such means t' employ it as your wish
Can think no better, easier, or securer;
And such as but th' honours I intend
To your partakings, I alone could end:
But your parts in all dues to crying blood
For vengeance in the shedder, are much greater.
Beaumont and Fletcher. The Bloody Brother, act iv. sc. 3.

Entring his den; each thing beheld, did yeeld
Our admiration; shelues with cheeses heapt;
Sheds stuff with lambs and goates, distinctly kept.
Chapman. Homer. Odyssey, book ix.

As vapours blown by Auster's sultry breath,
Pregnant with plagues, and shedding seeds of death,
Beneath the rage of burning Sirius rise,
Choke the parch'd earth, and blacken all the skies.
Pope. Homer. Iliad, book v.

The shedding trees began the ground to strow
With yellow leaves, and bitter blasts to blow.
Dryden. The Hind and the Panther.

About twenty yards from the tower are little sheds, built like
stalls, to lay the provisions on, both of meats and fruits of all
sorts, and that in great plenty.

Dampier. Voyages, vol. ii. part i. ch. iii. p. 52.

They met with many houses in the vallies that seemed to be
wholly deserted, the people living on the ridges of the hills in a
kind of sheds very slightly built.

Cook. Voyages, vol. i. book ii. ch. ii. p. 292.

SHEEN, *adj.* } A. S. *scen, scene, clarus, fulgidus,*
SHEEN, *n.* } *lucidus, clear, bright, brilliant,*
SHEE'NY. } *splendid. See SHINE.*

After sharpest shoures quap Pees. most sheene is þe sonne.
Piers Plouhman. Vision, p. 364.

Your blisful suster, Lucina the shene,
That of the see is chief goddess and quene,
Though Neptunus have deitee in the see,
Yet emperice aboven him is she.
Chaucer. The Franklines Tale, v. 11357.

Her garment was so bright and wondrous sheene,
That my fraile wit cannot devize to what
It to compare, nor finde like stufte to that.
Spenser. Faerie Queene, can. 7.

Then when he was all dight he tooke his way
Into the forest, that he might be seene
Of the wilde beasts, in his new glory sheene.
Id. Mother Hubbard's Tale, p. 365.

Yet he her follow'd still with corage keene
So long, that now the golden Hesperus
Was mounted high in top of heaven sheene.
Id. Faerie Queene, book iii. can. 4.

And now they neuer meete in groue, or greene,
By fountaine cleere, or spangled star-light sheene,
But they do square, that all their elues for feare
Creepe into acorne-cups and hide them there.
Shakspeare. A Midsummer Night's Dream, fol. 148.

But far above in spangled sheen
Celestial Cupid her fam'd son advanc'd,
Holds his dear Psyche sweet intranc'd,
After her wand'ring labours long.
Milton. Comus, l. 1003.

Or did of late earth's sons besiege the wall
Of sheeny heav'n, and thou some goddess fled,
Amongst us here below to hide thy nectar'd head?
Id. Ode 7. l. 47.

Meantime unnumber'd glittering streamlets play'd,
And hurled every where their waters sheen.
Thomson. Castle of Indolence, can. 1.

————— To her succeeds
The sheeny form of Epicaste.
Fenton. Homer Imitated.

SHEE'PBITER,

SHE'PHERD,

SHE'PHERDESS,

SHE'PHERDISH.

A. S. *sceap, sceop*; D. *schaep*; SHEEP.

Ger. *schaff*. The Etymologists
resort to the Gr. *σκεπ-ειν, tegere*,
because it is itself covered with
much wool, and also covers us with
its wool: but the Greek has no
name for this animal from this
verb; and if our Northern ances-
tors wished to call it from the qua-

lities above described, they had words of their own for
the purpose. The Gr. *προβατον, pecus*, is said to be
so called, *παρα το προβαλιν-ειν τη βοσκη*, because driven
or forced to go before by the shepherd. The English
sheep, Ger. *schaff*, may have a similar origin. The
Ger. *schaff-en*, also written *shieben, is agere, pellere*;
(A. S. *sceof-an, scof-an, to shove*;) to drive: *schaff*,
sceap, or sceop, sheep, may have been merely a *drove*,
as sheep driven on the way (*sc. to market*) are still
called. They were the earliest objects of care to man-
kind, and for pasture were driven from place to place in
numbers by their owners, and from this circumstance,
perhaps, their names.

Sheepish (met.)—from the timid, simple disposition of
the animal—is timid to excess, excessively, needlessly,
timorous or bashful; simple, silly, innocent.

At Herford *schep* & orf, & fruyt at Wircestre.

Sope a boutte Couyntr, yrn at Gloucestre.

R. Gloucester, p. 6.

þe ssepurdes and þe ssep al so ssulle to pyne of helle.

Id. p. 351.

Dede and fire salle fede þe *schepurdes* & þare *schepe*.

R. Brunne, p. 66.

I am a good *scheparde*, and I know my *scheep*, and my *scheep*
knownen me. *Wiclif. John, ch. x.*

I am that good *shepherd*, and know myne, and am knownen of
myne. *Bible, Anno 1551.*

The *shepen* brenning with the blake smoke.

Chaucer. The Knightes Tale, v. 2002.

Square was the wall, and high somdele
Enclosed, and ibarred wele,
In stead of hedge, was that gardin,
Come neuer *shepherde* therein.

Id. The Romant of the Rose, p. 174.

For if the wolfe come in the waie
Their gostly staffe is then awaie,
Wherof thei shuld their flocke defende.
But if the poure *shepe* offende
In any thyng, though it be lite,
Thei ben all ready for to smite.

Gower. Conf. Am. Prologue.

The hare in peace stode with the hounde,
And euery man vpon this grounde
Whiche Arion that time herde,
As well the lorde as the *shepherde*
He brought them all in good accorde.

Id. Ib.

Ye thought she were a *sheperdesse*,
Yet woll the lorde of *wantonnesse*
Assaie, all though she be vnmete,
For other men's good is swete.

Id. Ib. book v.

But while he sought for his knife, which under his armour he
could not well find out, and that Clinias lay with so *sheepish* a
quietness, as if he would have been glad to have his throat cut for
fear of more pain.

Sidney. Arcadia, book iii. p. 495.

When the rest, who as *sheep* had but followed their fellows, so
sheepishly had submitted themselves, these only admitted their
safety to the thickest part of those desert woods.

Id. Ib. book iv. p. 769.

He would also have drawn her eldest sister, esteemed her match
for beauty, in her *shepherdish* attire, but that rude clown her guar-
dian would not suffer it.

Id. Ib. book i. p. 16.

SHEEP.

The court could not be visited, prohibited to all men, but to certain *shepherdish* people.
Sidney. Arcadia, book i. p. 16.

For with such puissance and impetuous maine
Those champions broke on them, that forst them fly,
Like scattered *sheepe*, when as the shepherd's swaine
A lion and a tigre doth espye,
With greedy pace forth rushing from the forest nye.

Spenser. Faerie Queene, book ii. can. 9.

Show your *sheepe-biting* face, and be hang'd an houre.
Shakspeare. Measure for Measure, act v. sc. 1. fol. 82.

To. Wouldst thou not be glad to haue the niggardly, rascally
sheepe-biter come by some notable shame?

Id. Twelfth Night, act ii. sc. 5. fol. 263.

That *sheepcot*, which in yonder vale you see,
(Beset with groves, and those sweet springs hard by,)
I rather would my palace wish to be,
Than any roof of proudest majesty.

Daniel. History of Civil Wars, book viii.

But in the entry, on an oxes hide,
Neuer at tanners; his old limbes implide
In warme *sheep-fels*; yet ouer all we cast
A mantle, fitting, for a man more grac'st.

Chapman. Homer. Odyssey, book xx.

When I frown, they hang their most dejected heads,
Like fearful *sheep-hounds*; shew 'em a crust of bread,
They'll saint me presently, and skip like apes
For a sup of wine.

Beaumont and Fletcher. The Sea-Voyage, act iv. sc. 1.

Or where can there be found
So fair and fertile fields, or *sheep-walks* near so sound?
Drayton. Poly-olbion, song 25.

Thou *sheepeheard*, thou heardman whatsoever, when thou per-
ceivest in Summer-time by thy shaddow growing short, that
noonestead is at hand, drive thy *sheepe* and cattaille out of the
sunne, into some warme stall and place of shade.

Holland. Plinie, book xviii. ch. xxxiii.

Let each young *shepherdling*
Walke by, or stop his eare, the whilst I sing.
Browne. Britannia's Pastorals, book i. song 2.

Who, me recomforting all that he might,
Told me that that same was the regiment
Of a great *shepherdess*, that Cynthia hight,
His liege, his ladie, and his life's regent.

Spenser. Colin Clout's come home againe.

First, with assiduous care, from winter keep,
Well-fodder'd in the stalls, thy tender *sheep*;
Then spread with straw the bedding of thy fold,
With fern beneath, to fend the bitter cold.

Dryden. Virgil. Georgics, book iii.

But when my point was gain'd, then thus I spoke
Billy, my dear, how *sheepishly* you look!
Approach, my spouse, and let me kiss thy cheek;
Thou shouldst be always thus, resign'd and meek!

Pope. The Wife of Bath.

Sheepishness and ignorance of the world, the faults imputed to
a private education, are neither the necessary consequences of
being bred at home, nor if they were, are they incurable evils.

Locke. Works, vol. iii. p. 25. *On Education.*

Whether to flowery pastures ye repair,
And the lov'd name of *shepherdesses* bear.

Fawkes. Argonautics of Appollonius Rhodius, book iv.

For during his exile and flight before Saul, in which he was
frequently put to all the hardships which usually befall the weak
flying before the strong, there happening a great and solemn fes-
tivity, such as the *sheep-shearings* used to be in those Eastern
countries, he condescends, by an honourable and kind message, to
beg of a rich and great man some small repast and supply for
himself and his poor harassed companions, at that notable time of
joy and feasting.

South. Sermons, vol. ii. p. 359.

The number of *sheep* allowed to be kept in one flock was re-
strained to two thousand. Sometimes, says the statute, one pro-
prietor, or farmer, would keep a flock of twenty-four thousand.

Hume. History of England, ch. xxxiii. *Henry VIII.*

Sheep do not show the *shepherd* how much they have eaten,
by producing the grass itself; but after they have inwardly di-
gested the pasture, they produce outwardly wool and milk.

Knox. Liberal Education, sec. 10. (from *Evictetus*.)

SHEET, n.

SHEET, v.

SHEE'TING,

SHEE'TY.

See *infra*, SHOOT, which was an-
ciently also written *schete*; A. S. *sceat*,
scete, which Tooke considers to be the
past participle of the verb *scyt-an*,
scit-an, *projicere*, *dejacere*, to throw, to cast forth, to
throw out.

The *sheet* of a bed; linen or other substance thrown
over a bed; a *sheet* of paper, as much as is thrown off
at once; *sheet* of lightning; lightning thrown out,
spread out; *sheet* of water, an expanse of water.

Sheet or *shote-anchor*, the anchor thrown out; *sc.* for
security or preservation, &c.

And he sigh the *scheetis* leid, and the sudarie that was on his
heed not leid with the *scheetis* but bi it silf wlapid into a place.
Wiclif. John, ch. xx.

And he sigh heuene opened, and a vessel comynge down as a
greet *schete* with foure corneris to be lete down fro heuene into
erthe.

Id. The Dedis of Apostlis, ch. x.

But whyle they made redy, he fel into a traunce, and sawe heauē
opened, and a certayne vessell come doune vnto him, as it had
bene a great *shete*, knit at the foure corners, and was let doune to
the earth.

Bible, Anno 1551.

And in his owen chambre hem mad a bedde,
With *shetes* and with chalons faire yspredde.

Chaucer. The Reves Tale, v. 4135.

Thy pallat thē did daine
The roughest berry on the rudest hedge,
Yea, like the stagge, when snow the pasture *sheets*,
The barks of trees thou brows'd.

Shakspeare. Antony and Cleopatra, fol. 344.

In the most high and palmy state of Rome,
A little here the mightiest Julius fell,
The graves stood tenantless, and the *sheeted* dead
Did squeak and gibber in the Roman streets.

Id. Hamlet, act i. sc. 1.

Ah, but in vain, their want we do deplore,
Long time since swaddled in their winding *sheet*;
And she, I think, is buried at their feet.

Drayton. Pastorals. Egl. 8.

HIG. I pour on thy pate a pot of good ale,
'And by the rogues o' th' a rogue thee instal:
To beg on the way, to rob all thou meets;
To steal from the hedge both the shirt and the *sheets*.
Beaumont and Fletcher. Beggar's Bush, act iii. sc. 3.

A *sheet* of blank paper that must have this new imprimatur
clapt upon it, before it is qualified to communicate any thing to
the public, will make its way in the world but very heavily.

Spectator, No. 445.

Whether it would not on many accounts be right, if we observed
the same course with respect to our linen manufacture; and that
diapers were made in one town or district, damasks in another,
sheeting in a third, fine wearing linen in a fourth, coarse in a fifth.
Berkeley. Works, vol. ii. p. 409. *The Querist*, sec. 522.

I'll seek some lonely church, or dreary hall,
Where fancy paints the glimm'ring taper blue,
Where damps hang mould'ring on the ivy'd wall.
And *sheeted* ghosts drink up the midnight dew.

Smollett. Love Elegy, p. 585.

Were the Niagara thus broken, at least if some considerable
parts of it were not left broad and *sheety*, it might be a grand
scene of confusion; but it could not be that vast, that uniform,
and simple object, which is most capable of expressing the idea of
greatness.

Gilpin. Tour to the Lakes, vol. i. sec. 8.

SHEFFIELD, a Market Town in the West Riding
of Yorkshire, finely situated on an eminence, surrounded
by high hills, close to the confluence of the rivers Sheaf
and Don: the former is spanned by a bridge of a single
arch; over the latter is an ancient stone bridge, con-
sisting of five arches, called the Lady's Bridge, from a
religious house dedicated to the Virgin which formerly
stood in its neighbourhood. The town is large and po-
pulous, and built with considerable regularity, but it

SHEET.

SHEF-
FIELD.

SHEF-
FIELD.

presents rather a sombre appearance, owing to its being constantly enveloped in an atmosphere surcharged with smoke. It is well lighted by gas, and has a modern Town Hall, handsomely built of stone, a Theatre, Assembly Rooms, and various public institutions for educational and other benevolent purposes. The three churches occupy conspicuous and commanding situations. Trinity church, anciently called St. Peter's, which is the parish church of Sheffield, is a Gothic structure built in the reign of Henry I.; St. Paul's is of elegant modern architecture in the Greek style, finished 1771; and St. James's is no wise remarkable. There is also a spacious chapel appended to the Hospital, founded 1670, by the Earl of Norwich, but which bears the name of the Duke of Norfolk, having exactly one century afterwards been greatly benefited by the nobleman who then bore that title. The greater part of the town formerly belonged to the Howard family, and the Dukes of Norfolk are still Lords of the Manor.

Sheffield possesses no early historical interest, and its origin is wholly unknown. It, had, however, on its North-Eastern side, near the confluence of the rivers, a strong fortress built in the reign of Henry III., which, being held for the King in the Civil Wars, surrendered, after a long investment, to the Parliamentary forces, and was subsequently destroyed by them. In the annals of commerce, and its inseparable companions industry and ingenuity, Sheffield will ever hold a distinguished station. So early as 1207 it was a staple for the manufacture of iron ware, consisting principally of falchion-blades, arrow-heads, and the knives noticed by Chaucer and Shakspeare, and called Sheffield whittles. The cutlery trade prospering both in the town and neighbouring villages, the manufacture of clasp knives with tortoise-shell and other ornamental handles commenced most successfully about the year 1638; and rather more than a century afterwards, the invention of the art of plating common metals with silver, together with the river Don being rendered navigable to within three miles of the town, greatly increased its general home trade and contributed to extend it to foreign countries. Since that period Sheffield has never ceased to advance in prosperity and opulence, and (with all the neighbouring villages in a circuit of seven or eight miles) has been notable for the excellence and variety of its manufactures in every department of hardware, cutlery, plated goods, &c. The convenience of river carriage, (the Don having long been rendered navigable to the town itself,) the near neighbourhood of plentiful coal, the dexterity and skill of the workmen, and the perfection of the machinery by which their labours are facilitated, unite to give the manufacturers of Sheffield so great advantages that they are said to be able to undersell their competitors in every mart in the world.

An ancient seat of the Earls of Shrewsbury, about a mile and a half from Sheffield, is interesting even in its ruins, from the recollections which it awakens. It was the halting place of Cardinal Wolsey in his melancholy journey from Cawood to London, at which, while sitting at dinner, he was seized by sudden and fatal illness, and which he quitted only, as he prophetically observed, to "lay his bones" at Leicester. Mary Queen of Scots also passed there a part of her long imprisonment. Sheffield affords yet another memorial of the instability of human greatness. At the entrance of the chancel door of St. Peter's church is the grave of one William Walker, upon whom several concurring circumstances

fix at least a strong suspicion that he was the masked executioner of Charles I.

Sheffield has returned two Members to Parliament since the enactment of the Reform Bill in 1832, prior to which it was not represented. Population, in 1831, 91,692. Distance from Leeds 36 miles; from London 162 miles.

SHEIK, properly SHEĪKH, or SHAĪKH as it is often pronounced in Hindústán, is an Arabic word signifying an "old man;" and as Senior and Presbyterus became titles in the Greek and Latin languages, so has Sheikh in the Arabic and Persian. Among the Bedowins (Bedawís) or migratory Arabs, whose government is patriarchal, the head of each tribe is styled Sheikh or Senior; and in most of the Mohammedan religious orders, the superior is termed Sheikh or Pír, a Persian word which has the same meaning.

SHELF, } See *ante*, SHALLOW, and *infra*,

SHELVE, v. } In Scotch *schald*. *Shelves*, in the
SHE'LVING, n. } Quotations from Dryden's *Virgil*, is
in Gaw. Douglas *schaldis*, bankes of sand, (*brevia et syrtes*.) The Glossarist, after noticing the Etymologies of Skinner and Junius, says, perhaps from the D. *schelle*, a shell, *q. v.*

A *shelf* in the sea; a separate or distinct ridge, bank, or mass, rising from the main bed, near, towards the surface.

A *shelf*, for books, &c.; a deal, or separated or divided piece of wood.

To *shelve*, to furnish with, place upon, *shelves*; consequentially, to dip down, decline, incline, slope; as *shelves* or shallows in the sea.

Ah me! (poor wench) on this unhappy *shelf*,
I grounded me, and cast away myself.
Daniel. The Complaint of Rosamond.

Entring his den; each thing beheld; did yeeld
Our admiration: *shelves* with cheeses heapt;
Sheds stuff with lambs and goates, distinctly kept.
Chapman. Homer. Odyssey, book ix.

God wisheth none should wreck on a strange *shelf*;
To him man's dearer, than t' himself,
And howsoever we may think things sweet,
He always gives what he knows meet.
Ben Jonson. The Forest. To Sir Robert Wroth.

Here he glanceth wittily at the delicacy of this scholar; from whence he descendeth to the too accurate disposing or *shelving* of his books.
Commentary on Chaucer, (1665,) p. 10.

I had been drown'd, but that the shore was *sheluy* and shallow;
a death that I abhorre; for the water swelles a man.
Shakspeare. The Merry Wives of Windsor, act iii. sc. 5. fol. 52.

His grave-stone was turned of one side, *shelving*, and there were several holes in the earth, about the bigness of mouse-holes, that went down to his verry coffin.

More. Antidote against Atheism, part i. book iii. ch. ix.

Three ships were hurry'd by the southern blast,
And on the secret *shelves* with fury cast!
Dryden. Virgil. Æneid, book i.

For elemental war, and wintry Jove,
From Malea's gusty cape his navy drove
To bright Lucina's fane; the *shelvy* coast,
Where loud Amnisus in the deep is lost.
Pope. Homer. Odyssey, book xix.

Methought I sat upon a *shelvy* steep,
And watch'd the fish that gambol'd in the deep.
Fawkes. Idylliums of Theocritus, idyl. 22.

He spoke, and, speaking, at his stern he saw
The bold Cloanthus near the *shelvings* draw.

Yet for no bidding, nor for being *shent*,
Would he restrained be from his attendement.

Spenser. *Faerie Queene*, book vi. can. 6.

Though bending from the blast of eastern storms,
Though *shent* their leaves, and shatter'd are their arms;
Yet heaven their various plants for use designs:
For houses cedars, and for shipping pines.

Dryden. *Virgil. Georgics*, book ii.

SHEPHERDIA, in *Botany*, a genus so called after the late Mr. John Shepherd, curator of the botanic garden at Liverpool. It belongs to the class *Dioecia*, order *Octandria*, and natural order *Eleagneæ*. Generic character: male flower with a four-cleft calyx, no corolla, and eight inclosed stamens, which alternate with as many glands: female flower with a four-cleft, campanulate, superior calyx; one style, and an oblique stigma; berry one-seeded.

This genus contains three species; two natives of North America, *S. argentea* and *S. Canadensis*, and one of Nepaul: they are small spinescent trees, with the habit of *Eleagnus*, with entire leaves covered with silvery scales, small lateral flowers, and diaphanous scarlet berries. The genus is separated from *Hippophae*.

SHERARDIA, in *Botany*, a genus so called by Dillenius, after his patron William Sherard, LL.D., then Consul at Smyrna. It belongs to the class *Tetrandria*, order *Monogynia*, and natural order *Rubiaceæ*. Generic character: calyx four or five-toothed; corolla funnel-shaped; limb four-lobed; stamens four; style one, two-lobed at apex. Fruit dry, crowned by the calyx, and divisible into two one-seeded parts.

This genus consists of but one species, *S. arvensis*, a native of corn-fields in Britain. It is an annual plant having the habit of a galium with whorled leaves, and terminal capitate red flowers.

SHERBET, from the It. *sorbetto*; a word of Arabian origin, says Skinner, who seems to suspect it to have some connection with syrup (or *sirrop*;) q. v.

The fragrant dairy from its cool recess
Its nectar acid or benign will pour
To drown your thirst; or let the mantling bowl
Of keen *sherbet* the fickle taste relieve.

Armstrong. *The Art of Preserving Health*, book i.

SHERBET, in Arabic, signifies "drink," or "draught;" and as a draught of coffee, orgeat, or lemonade is always presented to a visiter by Asiatics of rank, this word has been almost exclusively applied to such beverages by Europeans since the renewal of their intercourse with the East.

Was pink'd, and deck'd beyond compare;

Scarce a *shriue's* wife at an assize

Was dress'd so fine, so roll'd her eyes.

Somerville. *The Yeoman of Kent*.

Chaste were his cellars, and his *shrieval* board

The grossness of a city feast abhor'd:

His cooks with long disuse their trade forgot;

Cool was his kitchen, though his brains were hot.

Dryden. *Absalom and Achitophel*.

The word pronounc'd aloud by *shrieval* voice

Lætatur, which, in Polish, is rejoice.

Id. *The Medal*.

Not only writs or orders were sent to the nobility and clergy in the several *sheriffwicks* and *bailiwicks*, but to the commons, to assemble and take into consideration how to redress grievances, and support the publick expenses.

Bolingbroke. *Works*, vol. ii. p. 245. *Dissertation upon Parties*.

The *sheriff* is an officer of very great antiquity in this kingdom, his name being derived from two Saxon words, *scire*, *gerefa*, the reeve, bailiff, or officer of the shire.

Blackstone. *Commentaries*, vol. i. book i. ch. ix. p. 339.

This shire he [the Earl] usually exercised by his deputy, still called in Latin *vice-comes*, and in English the *sheriff*, *shriue*, or *shire-reve*, signifying the officer of the shire; upon whom, by process of time, the civil administration of it is now totally devolved.

Id. *Ib.* *Introduction*, sec. 4.

SHERIFF, in *Law*, is the name of a well-known officer, who is the Bailiff or Reeve of the County or Shire, of which two words, *shire* and *reeve*, the word *Sheriff* is compounded. He is styled in Latin *vice-comes*, because he executes the office formerly held by the Comes or Earl of the Shire, and was originally either the deputy of the Earl, or a new officer substituted for the Earl when the latter was relieved from the duties of the Shrievalty, a change that took place at some unknown but very early period of our history.

In Middlesex the office of Sheriff is executed by the Sheriffs of London. In Westmoreland it is hereditary in the family of the Earls of Thanet. In Durham the Bishop; and in London, and other cities and towns which are counties of themselves, the corporation nominates. With the above exceptions, the appointment of Sheriffs is now vested in the Crown, the ancient mode of election by the people having been abolished by the Statute 9 Edward II. The custom which has prevailed from the time of Henry VI. is, that all the Judges, together with the other great officers and Privy Counsellors, meet in the Exchequer on the morrow of St. Martin, when the Judges propose three persons to be reported, if approved of, to the King, and the King pricks or nominates one of them to the office. By the Statute of 3 and 4 William IV. c. 99. the appointment of the new, and the discharge of the old Sheriff, is much simplified. Instead of a patent of appointment under the Great

SHE-
RIFF.

SHERIFF. Seal, and a writ of discharge and other forms, a warrant signed by the clerk of the Privy Council is transmitted to the person nominated, and the old Sheriff delivers to him an account of all prisoners in his custody, and all writs and process in his hands unexecuted, and thereupon *turns over* (which is the technical expression applied to the transaction) to the new Sheriff all such prisoners and writs, and all other matters belonging to the office. So soon as this is done, and the new Sheriff has taken the oath of office, all the powers and privileges of the Shrievalty are vested in him, and the old Sheriff is discharged. If the person nominated refuse to act, he is liable to be punished.

The Sheriff is the keeper of the King's peace within the County, and as such is the first man therein, being superior even to a Peer of the realm. He may apprehend and commit to prison all persons who break, or attempt to break the peace. He may pursue and take all traitors, murderers, felons, and rioters. He has the custody and safe keeping of the County Gaol, and is to defend the same against rioters; for which purpose, as well as for taking rioters and others breaking the peace, and also for attending the King to the wars when enemies come, and for some other purposes, he may command all the people of his County to attend him, which is called raising the *posse comitatus* or power of the County; and this summons every male person above the age of fifteen and under the degree of a Peer is bound to obey, under pain of fine and imprisonment.

The Sheriff is the King's bailiff, and, as such, it is his duty to seize into the King's hands all lands devolved to the Crown by attainder or escheat; to levy all fines and forfeitures; to seize all waifs, estrays, wrecks, and the like, unless they be granted to some subject, and to collect the King's rents if commanded by process out of the Exchequer.

The Sheriff has a court, called the County Court, which has cognizance in civil actions to the value of forty shillings, if the plaintiff proceeds by plaint, and to any amount of any magnitude if the plaintiff sues out of Chancery a writ called a *justicies*, and commences his suit by this writ instead of by plaint. The *plaint* is made or *levied* in the County Court, and is merely a short statement of the nature of the grievance complained of, which being made, process issues to summon the defendant to appear and answer it. The *justicies* is a writ directed to the Sheriff, desiring him to do justice between the parties. The County Court has no jurisdiction in pleas of freehold, or over offences committed *vi et armis*.

The Sheriff has also ministerial duties of great importance. He is to execute all writs issuing out of the superior Courts. On *mesne* process, that is to say, the process in an action previous to judgment, he is to arrest debtors, and keep them till they give bail or deposit with him the amount for which the arrest is made, to abide the result of the action; and he summons all juries, both in civil and criminal proceedings. On *final* process, that is to say, the process by which, after a judgment has been obtained, it is enforced, he is, according to the nature of the writ, either to give possession of the lands which are the subject of the writ, or to levy the amount of the sum recovered upon the property of the person against whom the writ issues, or to arrest the person himself and detain him as a satisfaction to his creditor. He is subject to heavy liabilities, being civilly (though not criminally) responsible for the acts of all

his officers done by them in execution of the office; and, therefore, if the officer arrests the wrong person, or seizes the goods of the wrong person, or neglects to arrest the right one, or to seize his goods, or having arrested him suffers him to escape, or is guilty of extortion,—in all these and other cases the Sheriff is liable to an action. In many of such cases the plaintiff only recovers such damages as he can show that he has sustained; but when a prisoner is in custody for debt upon final process and escapes out of the Sheriff's custody, the latter is liable for the whole debt, although the prisoner may have been quite insolvent. He is subject to this risk, however, in common with all gaolers. To protect himself, he usually takes security from all his officers conditioned for the due performance of their several duties. And by way of some compensation he is allowed upon all final process a *poundage* upon the sum levied, after the rate of one shilling in the pound if the sum do not exceed £100, and, if it do, one shilling in the pound for the first £100, and sixpence for all above that amount.

Formerly the office was attended with much useless and improper expense, but at last, by the Statute 13 and 14 Charles II. c. 21, it was enacted that no Sheriff (except of London, Westmoreland, and towns which are Counties of themselves) should keep any table at the Assizes, except for his own family, or give any presents to the Judges or their servants, or have more than forty men in livery; yet for the sake of safety and decency he may not have less than twenty men in England, and twelve in Wales.

SHERIF, "exalted," and thence "noble," in Arabic, **Shereef** is peculiarly applied by Muselmáns to the descendants of Mohammed; but in Hindústán those persons are more commonly called Sayyad or Sayyid; (Lord;) while in Western Asia and Africa Síd, the abbreviation of Sayyid, is a title given to every person above the lowest rank.

SHERRY, a well-known wine (says Skinner) from the city Xeres, in Andalusia, whence it is imported into this country.

A good *sherris-sack* hath a twofold operation in it; it ascends me into the braine. *Shakspeare. Henry IV. fol. 92.*

The second propertie of your excellent *sherris* is, the warming of the blood. *Id. Ib.*

SHETLAND. The Shetland, or according to the more proper orthography, the Zetland Isles, are a group of islands, islets, and rocks, which form the Northern extreme of the United Kingdom. They lie in the Northern Ocean, about 15 leagues North-East of the Orkneys, and 44 leagues West of Bergen in Norway, the nearest point of continental Europe, and are contiguous to each other, with the exception of two of their number, Fair Isle and Foula. The former of these is about 24 miles South of the largest island of the cluster, which, from its superior size, is named the Mainland; and Foula is about 20 miles West of it. Edmonston computes their number at above 100, of which he states 34 to be inhabited. They lie between 59° 52' and 60° 15' North latitude, and 30' and 1° 40' West longitude.

The names of the other principal islands are Yell, Unst, and Bressay; but the Mainland, which is about 60 miles long, and varies from six to 18 in breadth, is considerably larger than these and the rest of the group put together. Their total area is estimated at 563,200 acres; of which there are only about 22,000 arable, and

SHERIFF
—
SHET-
LAND.

SHET-
LAND.Geology
and mine-
ralogy.

25,000 pasture. The population of the islands, according to the census of 1831, is 29,392 souls.

The rocks are mostly primary. Gneiss is the prevalent rock in Yell, Whalsey, and many other of the smaller islands, and is abundant, as are granite and primary trap in the Mainland. Primary limestone occurs in most of the group. Serpentine and diallage prevail in Unst and Fetlar. A bluish grey, and a red quartz abound in the parish of Walls in the Mainland; primary sandstone occurs both here and in Foula; and the rocks of Papa Stour consist of the old red sandstone and secondary porphyry. The rarer rocks are the talcose and chlorite schists, which mostly occur in Unst, Fetlar, the Northern arm of the Mainland, and wherever serpentine prevails. Mica slate and clay slate are found in the Southern arm of the Mainland, and elsewhere; and the rocks on the Eastern coast of this portion of the Mainland consist of secondary sandstone and conglomerate. The dip of the strata is chiefly to the West. Among the minerals furnished by these islands, the chromate of iron, discovered by Dr. Hibbert in 1817, has hitherto proved by far the most valuable. It is supplied in inexhaustible quantities by the hills of Unst and Fetlar, and is in great demand for its use in various processes of manufacture and art. Copper ore occurs at Sandlodge; a thick bed of iron pyrites, nine yards broad, is found at Garthness; there is a large vein of mica traversing the clay slate, near Fitfiel Head; and, among the more common minerals may be cited talc, cyanite, garnets, actylonite, amianthus, &c. Hydrate of magnesia was found by Dr. Hibbert at Swinanness in Unst.

Surface
of the
country.

The general aspect of the islands is that of bleakness and desolation, elevated to the majestic by the sublimity of their coast scenery, and occasionally relieved by scenes of tranquil and picturesque beauty. They are, in general, deeply intersected by tortuous bays, or *voes*, as they are vernacularly termed, which both facilitate internal communication, and afford excellent harbours. Lakes are numerous, but none of them are much above two miles in length, and they are usually joined to the sea by small streams which, in the Winter, at times become torrents. The smaller islands may be called hills rising out of the sea; and the larger are traversed in various directions by bold elevations, which often terminate in lofty headlands of the grandest and most imposing appearance. The currents which run between the islands are extremely rapid and dangerous. These are greatest at their Northern and Southern extremes; and, at the latter, the sea off Sumburgh Head, at the meeting of the tides, resembles, even on the calmest day, the agitation of that produced by a storm—a phenomenon connected with the great tidal wave propagated from the diurnal undulation of the Atlantic, and which is called in the islands a *roust*, a term of Scandinavian origin.

Agricul-
ture.

The agriculture of the islands is still in that primitive state which called forth the ire and objurgations of Mr. Triptolemus Yellowley; and whoever wishes to obtain an insight into the practice of the Shetland husbandmen has only to refer to the delightful pages of *The Pirate*. The plough is single-stilted, like that represented by Olaus Magnus to be common to all Northern nations; the arable land is divided into *infield* and *outfield*, a custom evidently derived from Scotland, and according to which the former is yearly dunged, and yearly produces its scanty crop of bear and oats; and the fields, ill secured by the imperfect dikes constructed of turf or stones, are a prey to the wild shelties, wild sheep, and

VOL. XXVII.

last, though not least in mischief, to the swine of the country, wild boars in miniature, being not much larger than terriers. However, improvements are beginning to gain ground, though slowly, through the exertions of the Shetland Agricultural Society.

SHET-
LAND.

The black cattle of Shetland are of a very diminutive Cattle. breed; the average weight of the cow being from two to three hundred weight, and that of the ox about a hundred weight more. The hardy race of small ponies, termed *shelties*, is well known; it is suffered to feed on the hills even during the utmost inclemency of Winter, and is frequently compelled to subsist on the drift ware left by the ebb of the tide. The sheep of the true native breed resemble the *argali* or wild Siberian sheep in form, nimbleness, and fleetness. They are never herded or housed; feed themselves as they best may, their want of food in Winter often impelling them to tear the wool from each other's backs; and are hunted down by dogs trained for the purpose. The carcass seldom weighs more than thirty pounds, but the flesh rivals the Welsh mutton in flavour. The wool, which is very short, is remarkably fine and soft, and is used for the knitting of the celebrated Shetland hose. The shearing or *rueing* (appropriate term!) is conducted without the intervention of shears, as the wool is torn from the struggling animal's back!

Fishing is the natural occupation of the Shetlander, Fisheries. whose home is truly on the sea. In the ease with which he can thus procure his food is to be found the reason of his neglect of agriculture; but still more is to be seen the alleviating dispensation of Providence in a climate too often fatal to the labours of husbandry. The most important fishery to the Shetlander is undoubtedly that of the coal-fish or *Gadus carbonarius*, which supplies him with food the year round, either as small fry, when it is termed the *sillock*, or when larger as the *pillock*, or when it has attained its full size as the *sethe*; being then about three feet in length. This fish swarms in myriads round the shores of the Northern Archipelago, and not only furnishes the Shetlander with an inexhaustible source of diet, but with light, since the livers are boiled down for oil. The ling fishery, however, is the chief commercial fishery of Shetland. During the year ending 5th of April, 1834, about 18,000 hundred weight of cod were cured here. The quality is stated to be such as to ensure it a preference in the markets over the Newfoundland. In the same year, the herring fishery supplied 36,855 barrels of herrings.

It does not appear that the mean temperature of Shet- Climate. land has yet been ascertained. The climate is similar to that of the Orkneys, but still more variable, and colder. In Summer the days are of such length that, to use the expression of a poet, morning and evening "seem to melt into each other." The sun, in Winter, is about five hours and a half above the horizon; but, in clear weather, the daylight is prolonged by refraction to about seven hours and a half. The *Aurora Borealis* is very vivid here during this season of the year, and the question, whether these meteors are heard as well as seen, is still hotly mooted.

At Sumburgh Head, the most Southerly promontory of the Shetland Isles, in latitude $59^{\circ} 52'$, the mean annual temperature is $48\frac{1}{2}^{\circ}$, that of the Winter quarter being 40° , Spring $43^{\circ} 29'$, Summer $50^{\circ} 63'$, and Autumn $47^{\circ} 48'$. The barometric range is fully three inches. We are not aware that any observations with the rain gauge have been made either here or in the Orkneys. The

3 z

SHET-
LAND.

Winter commences in October, and lasts till April; and in the island of Unst, the most Northerly of the group, the longest day is 18 hours 35 minutes, the shortest 5 hours 25 minutes. The climate is, in general, healthy, and many instances of longevity, some of extreme longevity, are on record. The more prevailing complaints are those allied with rheumatism and scurvy.

Trade.

There is no distinct trade or manufacture to be found throughout the islands, except at Lerwick. Each peasant is his own tailor, shoemaker, and carpenter. The materials Shetland requires for the use of her fisheries, clothing, &c., are supplied by England and Scotland. The exports consist chiefly of dired fish, a little kelp, and the chromate of iron, which used to be previously imported into the United Kingdom from America solely.

Chief
towns.

Lerwick, the Capital of the Shetland Islands, lies on the margin of a bay, on the West side of the spacious harbour of Bressay Sound. It is about half a mile in length, and is built in the form of a crescent. The houses have been erected without much attention to order or uniformity; many with their ends to the street, after the Norwegian fashion; and not a few on the seashore are so built as to allow their inmates to fish without employing a boat. There is a parish church, and there are besides two chapels belonging to the Independent and one to the Methodist persuasion. The town is usually very busy and animated during the Summer months, as Bressay Sound is the rendezvous for many of the Davis's Straits and Greenland whalers, and the Dutch herring-fishery busses. A regular trade is likewise carried on with Leith by means of well-appointed smacks. The vessels of all descriptions belonging to Shetland, and which clear from Lerwick, may amount to about ninety, the great majority of which are employed in the cod-fishery. The only manufacture in all the islands, one for straw-plaiting, is carried on at Lerwick. There is an agency here for the Royal Bank of Scotland; and the National Bank has also established a branch. There are two subscription libraries. No regular post has been established; the letters are carried by trading vessels. Population 2750.

Character,
&c.

Scalloway is a small fishing town, chiefly remarkable for the remains of the castle built there in 1600 by the tyrannical Patrick Stewart, Earl of Orkney.

The florid complexion, smooth skin, and light hair of the Shetlanders are adduced as proofs of their Scandinavian descent; and the description of the Northern Europeans, by the elder Linnæus, is perfectly applicable to them—*Gothi corpore proceriore, capillis albidis rectis oculorum iridibus cinereo-cærulescentibus*. Generally speaking, they are an orderly race, and their hospitality is proverbial; but, on the other hand, they deem imposition on the stranger in the way of boat-fare as justifiable, and as much of a "God-send" as they do a wreck. The pillage of the latter, or the pilfering of sheep from the *scathold*, seem as much a matter of course to them as piracy was to the ancient Greeks. They are very superstitious, and the influence of the wild legends of the Edda is still perceptible in many of their notions. The merman and merwoman still inhabit the oozy caves of ocean for them; the evil eye is yet dreaded; and witches still ride the storm. Though the Norse language has long been abandoned, they retain many Norwegian terms, and their own national accent, which assimilates to ours, whilst their pronunciation is rather allied to the impassioned modulation of the Irish.

Climate.

Political
state, &c.

Orkney and Shetland form one Stewartry or County, under the jurisdiction of one Sheriff-depute and two

Sheriff-substitutes; and since the submission of these islands to the authority of the Crown, in the XVIIth Century, Shetland has paid a third of the cess or land-tax imposed on them. Yet as there is no valued rent by which the right of individuals to vote can be ascertained, it is denied any share in the election of the member, nominally returned by the united islands. It appears from a Statistical Table of Scotland, that about twenty years since there were 21,888 acres of land cultivated, and 525,312 acres of hills, mosses, &c., or a proportion of four acres in the hundred under tillage. By returns from the Tax-office, the real rental of lands, in 1811, was £6741 sterling, or at the rate of three-pence an acre, and the rental of houses was £1408. And we learn from the same authority, that, in 1814, the number of sheep in Shetland amounted to 75,000. Wood is all but unknown; and the only attempt at a road is one which runs to no greater distance than five or six miles West of Lerwick.

LAND.

SHIELD.

SHIELD.

SHIFT.

Thus taketh the nightingale her leaue of me,
I pray to God alway with her be,
And joy of loue he send her euermore,
And shilde us fro the cuckow and his lore,
For there is not so false a bird as he.

Chaucer. *Of the Cuckow and the Nightingale*, p. 366.

Ther see men who can juste, and who can ride
Ther shiveren shaftes upon sheldes thicke.

Id. *The Knightes Tale*, v. 2607.

But Jupiter, whiche wolde shilde
The moder, and the sonne also,
Ordeineth for hem both two,
That thei for euer were saue.

Gower. *Conf. Am* book v.

But Perseus, that worthie knight,
Whom Pallas, of hir great might
Halpe, and toke him a shelde therto.

Id. *Æ.* book i.

Ye, madame, sayde the knytes than,
Ye faryth as well as any man,
And ellys god hyt schelde.

Ritson. *Metrical Romances. Launfal*, v. 160.

Thus sayd the aged man; and therewithall
Forcelesse he cast his weake vnweldy dart;
Which repulst from the brasse, where it gaue dint
Without sound, hong vainly in the shields bosse.

Surrey. *Virgil. Æneis*, book ii.

And first he forg'd a strong and spacious shield
Adorn'd with twenty severall hewes; about whose verge he beate
A ring, three-fold and radiant; and on the backe he set
A silver handle; five-fold were the equall lines he drew
About the whole circumference; in which, his hand did shew
(Directed with a knowing minde) a rare varietie.

Chapman. *Homer. Iliad*, book xviii.

Gold were the gods, their radiant garments gold,
And gold their armour; these the squadron led,
August, divine, superior by the head!
A place for ambush fit they found, and stood
Cover'd with shields, beside a silver flood.

Pope. *Homer. Iliad*, book xviii.

SHIFT,

SHIFT,

SHIFTER,

SHIFTING, n.

SHIFTFLESS.

A. S. *scyft-an*, *dividere*, *partiri*, to
divide, to *shift*; *land scyft-an*, to di-
vide or *shift* land, as among coheires.
Somner. And Mr. Tyrwhitt so ex-
plains it, *sc.* to divide.

To divide, to part, to put away or remove, *sc.* part
from part; to remove or change place; to change; to
change means or measures; to resort or have recourse
to other means, methods, or expedients; to get out of,
evade, or escape, (dangers, difficulties.)

Shifty is a common word in Nottinghamshire. A
shifty fellow is one quick, cunning at evasions, at expe-
dients, at shifting his ground.

Shift, an article of clothing; often shifted or changed.

A *make-shift*; a substitute made to serve in lieu of
something better.

Witnesse Tiburces and Ceciles shrift,
To which God of his bountee wolde *shift*
Corones two, of floures wel smelling,
And made his angel hem the coronas bring.

Chaucer. *The Second Nonnes Tale*, v. 15681.

God clepeth folk to him in sondry wise,
And everich hath of God a propre gift,
Som this, som that, as that him liketh *shift*.

Id. *The Wif of Bathes Prologue*, v. 5687.

Unto this mā hee made his complaint how that hee must needes
make *shifte* shortly for a great somme of money, desyring hym
both to helpe hym, and also of his counsell.

Barnes. *Workes*, p. 329. *Preestes that hath not the Gifte, &c.*

Hereby it is cleare, that the godly fathers and bishoppes in
olde times misliked muche this *shiftinge* of maters to Rome.

Jewell. *Works*, p. 166. *Of the Supremacie*, article 4.

And so to beate my simple *shiflesse* brayne,
For some device that might redeeme thy state,
Lo here the cause for why I take this payne.

Gascoigne. *Dan Bartholmew of Bathe*.

And whilst he this, and that, and each man's blow

Doth eye, defend, and *shift*, being laid to sore,
Backward he bears for more advantage now,

Thinking the wall would *safe-guard* him the more.

Daniel. *History of Civil Wars*, book iii.

Which when as none she fond, with easy *shifte*,
For fear least her unwares she should abrayd,
Th' embroider'd quilt she lightly up did lifte,
And by her side herselfe she softly layd.

Spenser. *Faerie Queene*, book iii. can. 1.

Pr. They have so little

As well may free them from the name of *shifters*.

Beaumont and Fletcher. *The Bloody Brother*, act iv. sc. 2.

The ding-thrift heire his *shift-got* summe mispent,
Comes drooping like a pennylesse penitent.

Hall. *Satire* 5. book iv.

The mysteries which Christians must believe,
Disdain such *shifting* pageants to receive.

Dryden. *The Art of Poetry*.

The truth is, he was a *shiftless* man as to worldly affairs.

Wood. *Fasti Oxonienses*, vol. i. p. 253.

Again nothing is more open to dangers (when it doth stray)
than this *shiftless* creature, which hath many enemies, and no de-
fence against them.

Comber. *Companion to the Temple*, vol. i. part i. sec. 3. p. 28.

Then came drum, trumpet, hautboy, fiddle, flute,
Next snuffer, sweeper, *shifter*, soldier, mute.

Churchill. *The Rosciad*.

Now left by all the world, as I believed,
I wonder'd much that I so little grieved;
Yet was I frighten'd at the painful view
Of *shiftless* want, and saw not what to do.

Crabbe. *Tales of the Hall*, book xi.

SHILL, *i. e.* shell, *q. v.*

SHILLING, D. *schelling*; Ger. *schilling*; A. S. *scill*, *scilling* or *scyling*, from the A. S. *scyl-an*; Ger. *schelen*, to divide, (*pars solidi majoris in plures minores divisi*. Wachter.)

A part or portion (of a weight or coin;) now the
twentieth part of a pound or sovereign.

He este, wat hii costenede? þre *ssylling*, þe oþer seýde.
R. Gloucester, p. 390.

ýf ený frere were founde þere. ich geve fyve shýllinges.

Piers Ploughman. *Vision*, p. 234.

Five of these pence made their *shilling*, which they called *scil-ling*, probably from *scilingus*, which the Romanes vsed for the fourth part of an ounce.

Camden. *Remaines. Money*, p. 200.

The dull fat captain, with a hound's deep throat,
Would bellow out a laugh in a base note;
And praise a hundred Zenos just as much
As a clipt sixpence, or a *schilling* Dutch.

Dryden. *Persius. Satire* 6.

The first currant *shilling* or silver peeces of twelue pence stamped
within memorie, were coined by K. Henrie the eight, in the twen-
tith yeare of his reigne.

Holinshed. *Description of England*, book ii. ch. xxv.

The *shilling*, too, seems originally to have been the denomination
of a weight. When wheat is at twelve *shillings* the quarter, says
an ancient Statute of Henry III., then wastel bread of a farthing
shall weigh eleven *shillings* and four pence.

Smith. *Wealth of Nations*, vol. i. book i. ch. iv. p. 35.

SHILL I SHALL I? *i. e.* Shall I? Shall I? an ex-
pression of indecision; of one who does not know his
own mind.

Well—all on fire away he stalk'd,
Till come to—where the eagle walk'd.
Bob did not *shill-I shall-I go*,
Nor said one word of friend or foe.

King. *The Eagle and the Robin*.

SHIMMERING, (shemering,) A. S. *scymrian*, to cast
forth rayes or beames, to cast a shadow; D. *schemeren*,
whereof our *shimring*, for an imperfect light, like unto
that of twilight; D. *schemeringhe*. Somner.

SHIFT.

MERING.

SHIM-
MERING.

SHINE.

And by the wall she toke a staf anon;
And saw a litel *shemering* of a light,
For at an hole in shone the mone bright,
And by that light she saw hem bothe two,
But sikerly she n'iste who was who.

Chaucer. *The Reves Tale*, v. 4224.

SHIN, D. *sheene*, *shene*, *scheen-been*; Ger. *shiene*, *schien-been*; Sw. *skeen*, *skeenbeen*; A. S. *scina*, *scen-ban*, probably the skin or skinned bone; the bone covered or protected by skin only, (*quia natura ea parte tibiam decarnavit*. Wachter; who derives from the D. *schumen*, *deglubere*, or Scandic. *skinna*, *abradere*.) Shin is used alone, bone being understood. See SHANK.

The pure fetters on his *shinnes* grete
Were of his bitter salte teres wete.

Chaucer. *The Knightes Tale*, v. 1280.

There came an olde rybibe
She halted of a kybe,
And had broken her *shyn*
At the threshold cummyng in.

Skelton. *Elinour Ryming*.

Dr. You say true, are your swords sharp? Well my dear country-men, what ye lack, if you continue and fall not back upon the first broken *shin*, I'll have you chronicled.

Beaumont and Fletcher. *Philaster*, act v. sc. 1.

3 OFFICER. Stay, brother, I may live, for surely I find I'm but hurt in the leg, a dangerous kick on the *shin-bone*.

Id. *The Honest Man's Fortune*, act ii. sc. 1.

SHINE, v.

SHINE, n.

SHININGNESS,

SHINY.

Goth. *skein-an*; A. S. *scin-an*; D. *schünen*; Ger. *scheinen*; Sw. *skinæ*.
The literal meaning seems to be—to stand or start forth; to show, to exhibit, to manifest; to show clearly, conspicuously; to emit or throw forth light; a bright light; to be light, to lighten; to be bright or brilliant, splendid, lucid, luminous; to glitter, to sparkle; met., to be conspicuous, splendid, illustrious; also to give light, warmth, (as the sun,) animation, encouragement; favour; to favour, to be propitious.

Of gold *schone* his coron.

R. Brunne, p. 148.

He was a lanterne brennyng & *schynyng*.

Wiclif. *John*, ch. v.

He was a burnyng and a *shinyng* light, and ye woulde for a season haue reioyced in his.

Bible, Anno 1551.

And [he] was turned into an other liknesse bfore hem, and his face *schoon* as the sunne.

Wiclif. *Matthew*, ch. xvii.

And [he] was transfigured before them; and his face dyd *shyne* as the sunne.

Bible, Anno 1551.

But all thing, which that *shineth* as the gold,
Ne is no gold, as I have herd it told.

Chaucer. *The Chanones Yemannes Tale*, v. 16429.

For at an hole in *shone* the mone bright,
And by that light she saw hem bothe two,
But sikerly she n'iste who was who.

Id. *The Reves Tale*, v. 4226.

Proud of such glory and advancement vayne,

While flashing beames do daze his feeble eyen,

He leaves the welkin way most beaten playne,

And, rapt with whirling wheelles, inflames the skyen

With fire not made to burne, but fayrely for to *shyne*.

Spenser. *Faerie Queene*, book i. can. 4.

This saide, adowne he looked to the grownd

To have returnd but dazed were his eyne,

Through passing brightnes, which did quite confound

His feeble sence, and too exceeding *shyne*,

So darke are earthly thinges compar'd to thinges divine!

Id. *Ib.* book i. can. 10.

And mooned Ashtaroth,

Heav'n's queen and mother both,

Now sits not girt with tapers holy *shine*.

Milton. *Ode* 22. l. 200.

It was upon a sommer's *shinie* day,
When Titan faire his beames did display,
In a fresh fountaine, far from all men's vew,
She bath'd her brest the boyling heat t' allay.

Spenser. *Faerie Queene*, book iii. can. 6.

Yet goldsmithes cunning could not understand

To frame such subtile wire, so *shinie* cleare;

For it did glister like the golden sand,

The which Pactolus with his waters shere

Throwes forth upon the rivage round about him nere.

Id. *Ib.* book iv. can. 6.

The epithets *marmoreus*, *eburneus*, and *candidus*, are all applied to beauty by the Roman poets, sometimes as to their shape, and sometimes as to the *shiningness* here spoken of.

Spence. *Crito*.

While, from afar, we heard the cannon play,

Like distant thunder on a *shiny* day.

Dryden. *To the Duchess of York*.

SHINGLE, }

Fr. *eschandole*; Ger. *schindel*, and

SHINGLED. }

Holland writes it *shindle*; so rendering the Lat. *scandulæ*, *scandulæ pro scendulæ*, from *scindere*, to split.

A division, a deal.

Except onliche. of eche kynde a peyre

That in þy *shyngled* shup. with the shal be savede.

Piers Plouhman. *Vision*, p. 178.

They *shingle* their houses with it.

Evelyn, book ii. ch. iv. sec. 1.

Treached St. Asaph, as bishop's see, where there is a very poor cathedral church, covered with *shingles* or tiles.

Ray. *Remains*, p. 123.

In the verie fall also it ioineth with Orwell hauen, so neere that of manie they are reputed as one, and parted but by a *shingle* that dooth run along betweene them.

Holinshed. *Chronicles*, vol. i. fol. 177. *Description of England*.

The bours or *shindles* of the wild oke, called robur, be of all others simply the best; and next to them, those which are made of other mast-trees, and especially of the beech. The *shindles* are more easily rent or cloven out of all those trees which yeeld rosin, but setting aside the pine-wood onely, none of them are lasting. Cornelius Nepos writeth, that the housen in Rome were no otherwise covered over head but with *shindles*, untill the warre with K. Pyrrhus.

Holland. *Plinie*, book xvi. ch. x.

SHINGLES, Holland (*Plinie*, l. xxx. c. 13.) calls the Gr. *ερπης*, (a disease so named, *quia serpit*,) the shingles; and Skinner says it is a kind of erysipelas, which, if it surrounds the whole body, causes death, and derives from the Lat. *cingulum*, a girdle. This disease was also called *zona*.

All these things are affected by emollient fomentations applied inwardly in clysters, and why not outwardly to the skin? Such are used successfully in other eruptions, as erysipelas, *shingles*.

of the see.
Wiclif. 2 Corynth, ch. xi.

I suffred thrise *shipwracke*. Nyght and day haue I bene in
parels in cytyes.
Bible, Anno 1551.

But aftirward that in the fourtenthe dai the nyght cam on us
seillynge in the stoonny see, aboute mydnyght the *schipmen* sup-
posiden sum cuntree to appere to hem.

Wiclif. The Dedis of Apostlis, ch. xxvii.

But whē y^e fourtenth night was come as we were caried in
Adria aboute midnight, y^e *shipmē* demed y^e there appeared some
cōtre vnto the.
Bible, Anno 1551.

Hast thou not herd (quod Nicholas) also
The sorwe of Noe with his felawship,
Or that he might get his wif to *ship*?
Him had he lever, I dare wel undertake,
At thilke time, than all his whethers blake,
That she had had *ship* hireself alone.

Chaucer. The Milleres Tale, v. 3534.

Than ere I was ware, I neighed to a sea banke, and for ferde of
the beastes, *shipcraft* I cride.

Id. The Testament of Loue, book i.

A *shipman* was ther, woned fer by west;
For ought I wote, he was of Dertemouth.

Id. Prologue to the Canterbury Tales, v. 390.

And ouer this of suche nature
Thei ben, that with so sweete a steuen
Like to the melodie of heuen
In women's voice thei singe,
With notes of so great likyng,
Of suche measure, of suche musike,
Wherof the *shippes* thei beswike,
That passen by the costes there.

Gower. Conf. Am. book i.

The sonne arist, the weder clereth,
The *shipman*, which behind stereth,
Whan that he saw the wyndes saught
Towards Tharse his cours he straught.

Id. lb. book viii.

We craued not onely freedome from our foes,
But *shippyng* eke with sayles and all full bent
To come againe from whence we first were went.

Gascoigne. The Fruites of Warre, p. 524.

As to y^e geauntes that Brute founde in this ile at his arryuayll,
they might be brought in to this lande by some meane of *shyppes*
or otherwyse, rather than to be borne of those women as there also
is imagyned.

Fabyan. Chronycle, ch. i.

Though thou hast a thousand holy candels about thee, a C. ton of
holy water, a *shipfull* of pardones, a clothe sacke full of friers
coates, and all the ceremonies in the world, and all the good workes,
deseruings, and merites of all the men in the worlde, bee they or

were they neuer so holy, God's worde onely lasteth for euer, and
that which he hath sworne doth abide whē all other thynges perish.
Tyndall. Workes, p. 62. *Of the Wicked Mammon.*

They go to the sea betwixt two hils, wherof that on the one
side lieth out like an arme or cape, and maketh the fashion of an
hauenet or peere, whither *shipelets* sometime doo resort for succour.

Holinshed. Description of Britaine, ch. xii.

Our father and mother, we were sure, first with the *shipwrack*,
and then with the other dangers we daily past, would have little
rest in their thoughts till they saw us.

Sidney. Arcadia, book ii. p. 334.

In shootinge, as in all other thinges, aptnesse is the first and
chiefe thinge, which if it be awaye, neyther cuninge nor use doth
any good at all, as the Scottes and Frenchmen, with knowledge
and use of shootinge, shall become good archers, when a cuninge
ship-wright shall make a strong *shippe* of a sallowe tree.

Ascham. Workes, p. 121. *Toxophilus.*

To see those northern climes, with great desire possess'd,
Himself he thither *shipp'd*, and skilful in the globe,
Took every several height with his true astrolobe.

Drayton. Poly-olbion, song 19.

And well I wot, that as *shipping* and navigation speeds well or
ill, as the merchant buyeth cheape or deare, the price may rise
and fall.

Holland. Plinie, book xxxiii. ch. xiii.

Danaus was the first that sailed with a *ship*, and so hee passed
the seas from Ægypt to Greece; for before that time they used
but *troughs* or *flat planks*, devised by King Erythra to crosse from
one iland to another in the Red Sea.

Id. lb. book vii. ch. lvi.

The king required a loan of money, and sent to London and the
port towns to furnish *ships* for guard of the seas. Noy his attor-
ney, a great antiquary, had much to do in this business of *ship-*
money.

Whitelock. Memorials, p. 7. *Charles I.*

In wanton ioyes and lustes intemperate,
Did afterwarde make *shipwrack* violent
Both of their life and fame for ever fowly blent.

Spenser. Faerie Queene, book ii. can. 12.

If we this star once cease to see,
No doubt our state will *shipwreck'd* be,
And torn and sunk for ever.

Davies. Hymns of Astrea. Hymn 22.

And as you haue seene
A *ship-wright* bore a nauall beame; he oft
Thrusts at the argurs froofe; works still aloft;
And at the shanke helpe others; with accord
Wound round about, to make it sooner bor'd;
All plying the round still.

Chapman. Homer. Odyssey, book ix.

The first *ships* were built without art or contrivance, and had
neither strength nor durableness, beauty nor ornament; but con-
sisted *only* of *planks* laid together, and just so compacted as to keep
out the water.

Potter. Grecian Antiquities, vol. ii. book iii. ch. xiv. p. 123.

By viewing Nature, Nature's handmaid, Art,
Makes mighty things from small beginnings grow;
Thus fishes first to *shipping* did impart,
Their tail the rudder, and their head the prow.

Dryden. Annus Mirabilis.

Of all forms of death the most terrible was that by *shipwreck*, as
wherein the body was swallowed up by the deep; whence Ovid,
though willing to resign his miserable life, yet prays against this
death.

Potter. Grecian Antiquities, vol. ii. book iv. ch. i. p. 165.

Fire wood is very convenient to be got at, and easy to be *shipped*
off.

Cook. Voyages, vol. iv. book iii. ch. ii. p. 20.

The coast is not like Hartlepool; there are no rocks, but only
chalky cliffs of no great height till you come to Dover; there in-
deed they are noble and picturesque, and the opposite coasts of
France begin to bound your view, which was left before to range
unlimited by any thing but the horizon; yet it is by no means a
shipless sea, but every where peopled with white sails, and vessels
of all sizes in motion.

Gray. Works, vol. ii. p. 220. *Letter 43.*

SHIRE, } A. S. *scir*, *scire*, from the verb
SHI'REMOTE, } *scyran*, to divide. Skinner. And see
SHI'REREEVE. } the Quotation from Holinshed
A portion, division, or partition of the kingdom.

SHIP.

SHIRE.

SHIRE.
—
SHIRT.

þe Saxones and þe Englische þo heo hadden al an honde.
Fyue and þritti *schiren* heo maden in Englonde.

R. Gloucester, p. 3.

The bisshop of Canterbire þerof payed was he.
For him and alle his *schire* þis gift gaf fulle fre.

R. Brunne, p. 299.

Men said þer were inowe in mores & in medis,
& if ge wille, we mowe of bestis do gode nedis.
þe cuntre herd it seie, þe folk of ilk a *schire*
Had þer bestis aweie þorgh mede & þorgh mire.

Id. p. 310.

Of any lord that is in Englelond,
To maken him live by his propre good,
In honour detteles, but if he were wood,
Or live as scarsly, as him list desire;
And able for to helpen all a *shire*.

Chaucer. Prologue to the Canterbury Tales, v. 586.

[Alfred] diuided the whole realme into certeine parts or sections,
which (of the Saxon word *schyran*, signifieng to cut) he termed
shires, or as we yet speake, *shares*, or portions, of which some one
hath fortie miles in length, (as Essex,) and almost so manie broad.

Holinshed, book iii. ch. iv. Description of Englande.

A third seignorie or *shire* there is that goeth to Apamia, which
in old time was called Celænæ.

Holland. Plinie, book v. ch. xxix.

Yes, Thirsis, I doe know thee and thy name,
Nor is my knowledge grounded all on fame;
Art not thou he, that but this other yeare,
Scard'st all the wolves and foxes in the *sheere*?

Browne. Thirsis and Alexis.

The borough law had been likewise anciently established among
the Saxons, whereby every *shire* was divided into so many hun-
dreds or boroughs, consisting at first of one hundred families
therein usually inhabiting; every hundred in so many tythings
consisting of ten families.

Sir William Temple. Works, vol. iii. p. 139. Introduction to the
History of England.

If the matter was of great importance it was put in the full
shiremote; and if the general voice acquitted, or condemned, de-
cided for one party or the other, this was final in the cause.

Burke. Works, vol. x. p. 360. Abridgment of English History,
book ii. ch. vii.

The thanes, in their private jurisdictions, had delegated their
power of judging to their *reeves* or stewards; and the earl, or
alderman, who was in the *shire* what the thane was in his manor,
for the same reasons officiated by his deputy, the *shire-reeve*.

Id. Ib. p. 346.

An indefinite number of these hundreds make up a county or
shire. *Shire* is a Saxon word signifying a division.

Blackstone. Commentaries, vol. i. p. 116. Introduction, sec. 4.

SHIRK, or } See ante, SHARK. Laud was accused
SHURK. } of fraud in contracting for licences to
sell tobacco. See the first Quotation.

To prey upon another, by fraud or rapine; to cheat,
to trick; to shift from or evade, trouble, danger, &c.

Certainly he [Laud] might have spent his time much better,
and more for his grace in the pulpit, than this *shirking* and raking
in the tobacco shops.

Harbottle Grimstone. State Trials. Charles I. Anno 1640.

Tell me, you that never heard the call of any vocation, that are
free of no other company than your idle companions, that *shirke*
living from others, but time from yourselves, tell me, may it not
be said of idleness, as of envy, that it is its own scourge?

Rainbow. Sermons, (1635,) p. 40.

My last letters will have taught you to expect an explosion here;
one of the cities *shirked* from the league.

Lord Byron to Murray. Ravenna, September 7, 1820.

SHIRT, n. } From the A. S. *scyric*, *scyrc*, *indu-*
SHIRT, v. } *sium*; Junius from Dan. *skiorte*, *in-*
SHIRTLESS. } *duisium*; Tooke from the A. S. *scyr-an*,
to shear, of which he considers it to be the past participle.
Scired, *scirt*, (i. e. shirt.) See ante, SARK, and SKIRT,
infra.

To cut off a *shirt*, i. e. a part or portion sufficient for
that article of clothing. And *shirt* is—

SHIRT
—
SHIVE.

A part or portion *sheared* or cut off.

For þei shoulde nat faste. ne forbere *sherte*
Bote feithfullich defende. & fygte for treuthe.

Piers Plouhman. Vision, p. 17

Glad poverté is an honest thing certain.

This wol Senex and other clerkes sain.

Who so that halt him paid of his poverté,
I hold him rich, al had he not a *sherte*.

Chaucer. The Wif of Bathes Water, v. 6765.

By God I hadde lever than my *sherte*

That ye had red his legend, as have I.

Id. The Nonnes Preestes Tale, v. 15126.

Save of a doughter that I left, alas,

Sleeping at home, when out of Troy I stert,

O sterne, O cruell father that I was,

How might I have in that so hard an herte?

Alas that I ne had brought her in my *shert*.

Id. Troilus and Creseide, book iv.

When Nessus wist he shulde die,

He toke to Deianyre his *sherte*,

Whiche with the bloud was of his hert

Through our disteined ouer all.

Gower. Conf. Am. book ii.

By whose orient light,

The nymph adorn'd me with attires as bright;

Her owne hands putting on both *shirt* and weede,

Robes fine and curious.

Chapman. Homer. Odyssey, book x.

BEND. Yet we may possibly hear farther news;

For while our Africans pursu'd the chace,

The captain of the rabble issued out

With a black *shirtless* train to spoil the dead,

And seize the living.

Dryden. Don Sebastian, act i. sc. 1.

Ah! for so many souls, as but this morn

Were cloath'd with flesh, and warm'd with vital blood,

But naked now, or *shirted* but with air.

Id. King Arthur, act ii.

Peel'd, patch'd, and pyebald, linsey-wolsey brothers,

Grave mummers! sleeveless some, and *shirtless* others.

Pope. The Dunciad, book iii.

In the present times, through the greater part of Europe, a cre-
ditable day-labourer would be ashamed to appear in public without
a linen *shirt*, the want of which would be supposed to denote that
disgracefull degree of poverty, which, it is presumed, nobody can
well fall into without extreme bad conduct.

Smith. Wealth of Nations, vol. iii. book v. ch. ii. p. 329.

SHUTTLE, } Skinner derives *shuttle* from A. S.
SHUTTLE, adj. } *sceot-an*, to shoot; and see Tooke.
SHUTTLENESS, } A *shuttle* or *shuttle-cork* (miscalled
SHUTTLECOCK. } cock) is a cork shot, i. e. thrown or
cast (backward and forward;) knocked about from one
to another; and hence, consequentially, *shuttle*,
Light, volatile, giddy.

But and it were well sought

I trow all will be nought,

Not worth a *shuttel* cocke.

Skelton. Why come ye not to Court.

In which lay throwne

Stone cups, stone vessels, *shuttles*, all of stone,

With which the nymphs their purple mantles wove.

Chapman. Homer. Odyssey, book xiii.

We passe not what the people say or thinke,

Their *shuttle* hate makes none but cowards shrinke.

Mirror for Magistrates, p. 456.

The vaine *shuttle*nesse of an vnconstant head.

Barret. Alvearie in v.

SHIVE, or } D. *schelffer*, *schelver*, *schelfferen*,
SHEIVE, } *sheveren*, *sheven*; Ger. *sheefer*, *schief-*
SHIVER, } *feren*, *segmentum*, *secare*, *findere*, *assu-*
SHIVER. } *latum frangere*, in *micas frangere*, to
cut, to split, to break into small parts. (See Kilian.)
Skinner derives from Ger. *scheden*, (A. S. *scead-an*),
which is to divide or separate by cutting, splitting,
breaking, or otherwise. (Wachter.) *Shive* or *sheeve* (also

SHIVE. written, as in Chaucer, *shiver*) seems to come more obviously from *sceaf-an*, *scaef-an*, to shave. *Sceaf-wa*, a shaving.

SHIVER.

Shive or shaving; a cut or cutting, a slice, a chip, a paring.

Shiver, a part or portion, usually a very small, minute, part, portion, or fragment; a mite, an atom.

Hammond, on *Matt.* vii. 3. explains *mote* to be a small, thin *shiver* of wood.

The noyse of foules for to be deliver'd,
So loude rang, Have don and let vs wend,
That well weend I, the wood had al to *shiverd*.

Chaucer. *The Assembly of Fowls*, p. 333.

Ther see men who can juste, and who can ride
Ther *shiveren* shaftes upon sheldes thicke.

Id. *The Knights Tale*, v. 2607.

Now dame, quod he, *jeo vous die sanz doute*,
Have I nat of a capon but the liver,
And of your white bred nat but a *shiver*,
And after that a rosted pigges hed
(But I ne wolde for me no beest were ded)
Then had I with you homly suffisance.

Id. *The Sompnoures Tale*, v. 7420.

A *sheeve* of bread as brown as nut.

Warner. *Albion's England*.

What man, more water glideth by the mill
Then wots the miller of, and easie it is
Of a cut loafe to steale a *shive* we know.

Shakspeare. *Titus Andronicus*, act ii. sc. 1. fol. 36.

Edg. Hadst thou beene ought
But gozemore, feathers, ayre,
So many fathome downe precipitating,
Thoud'st *shiver'd* like an egge; but thou do'st breath.

Id. *Lear*, act iv. sc. 6. fol. 303.

The same meale draweth forth spils of broken and *shiverca* bones.

Holland. *Plinie*, book xxii. ch. xxv.

But glauncing on the tempred metall, brast
In thousand *shivers*, and so forth beside her past.

Spenser. *Faerie Queene*, book iii. can. 7.

Or surging waves against a solid rock,
Though all to *shivers* dasht, the assault renew,
Vain battry, and in froth or bubbles end.

Milton. *Paradise Regained*, book iv. l. 18.

If there bee any spill or *shiver* of arrowes, if any peece of a dart or whatsoever else sticke within the flesh which would bee gotten forth.

Holland. *Plinie*, book xxx. ch. xiii.

Vpon the breaking and *shivering* of a great state and empire you may be sure to have warres.

Bacon. *Essay* 58. *Of Vicissitude of Things*.

And of this kind of parts itself there is also a variety, according to the difference of the tools employed to work on the wood; the *shavings* made by the plane being in some things differing from those *shives* or thin and flexible pieces of wood that are obtained by borers, and these from some others obtainable by other tools.

Boyle. *Works*, vol. i. p. 576. *Sceptical Chymist*.

The bullets which grazed upon it would have driven before them such *shivers* of brick and stone as would have prevented the garrison from forming behind it.

Anson. *Voyages*, book ii. ch. xiv. p. 387.

SHIVER, v. } Wachter says the Ger. *schaur*
SHIVER, n. } is a trembling; and *schauren*, to
SHIVERING, n. } tremble; but that he does not find
SHIVERY. } the word in other dialects: he has,

however, *schauder*, horror, but unfortunately thinking the *d* superfluous, he overlooked the D. *shudder*, *shudden*, to tremble, to shudder or shake. This D. *shudden* may be formed from *shocken*, to shake; (in A. S. *sceac-an*, the root, perhaps, of the whole :) the Sicambrian (as Kilian calls the dialect spoken in Gueldres) had the verb *schoeueren*, to shake. See *ante*, CHIVER.

To shake, to tremble, to quake, to quiver.

From hence forward if you see a poore man *shiueryng* for colde in the streete, you may byd him walke a knaue and beare hym in hand that he feeleth no harme.

Frith. *Workes*, p. 13. *Answers vnto Rastell's Dialogue*.

Tisiphone each where doth shake and *shiver*
Her flaming fier-brond, encountering me,
Whose lockes uncombed cruell adders be.

Spenser. *Virgil's Gnat*.

Streight bitter storms, and balefull countenance
That makes them all to *shiver* and to shake.

Id. *Faerie Queene*. *Of Mutabilitie*.

The now sad king
(Toss'd here and there, his quiet to confound)
Feels a strange weight of sorrows gathering
Upon his trembling heart, and sees no ground;
Feels sudden terroure bring cold *shivering*.

Daniel. *History of Civil Wars*, book iii.

A race of men there are, as Fame has told,
Who *shivering* suffer Hyperborean cold,
Till, nine times bathing in Minerva's lake,
Soft feathers to defend their naked sides they take.

Dryden. *Ovid. Metamorphoses*, book xiii.

A hollow wind comes whistling through that door;
And a cold *shiv'ring* seizes me all o'er.

Id. *The Conquest of Granada*, act iv. sc. 1.

Sad ocean's face
A curling undulation *shivery* swept
From wave to wave.

Mallet. *Amyntor and Theodora*, ch. i.

A genial day in April is among us the subject of general congratulation. And while the lilac blossoms, and the laburnum drops its gold clusters, the *shivering* possessor of them is constrained to seek warmth at the side of his chimney.

Knox. *Works*, vol. i. p. 451. *Essay*, No. 91.

SHOAL, n., or

SHOLE,

SHOAL, v.

SHOLE, adj.

SHOA'LY.

To *shole* (Chapman) is to move, to come, in shoals or divisions.

Shoals in the sea are shallows, shelves. See SHALLOW.

Shoaling, (Milton,) growing or becoming shallow.

Shole, adj. (Spenser, Dampier, Cook,) shallow or shoaly.

Shoaled our water; got into shallow water.

Thus pluckt he from the shore his lance, and left the waves to wash

The wave-sprung entrails, about which fausens and other fish
Did *shole*, to nibble of the fat which his sweet kidneys hid.

Chapman. *Homer. Iliad*, book xxi. fol. 291.

Whereupon the women especially, by way of revenge for that restraint, do flock to St. Maries in such troops, and so early, that the Masters of Art have no room to sit; so as the Vice-chancellor and Heads of Houses were in deliberation to repress their *shoaling* thither.

Reliquiae Wottonianae, p. 472.

PAL. Sicker this morrow, no lenger agoe,

I saw a *shole* of shepheardes outgoe,

With singing, and shouting, and jolly chere.

Spenser. *The Shepherd's Calendar*. May.

What they met

Solid or slimie, as in raging sea

Tost up and down, together crowded drove

From each side *shoaling* towards the mouth of hell.

Milton. *Paradise Lost*, book x. l. 285.

But this Molanna, were she not so *shole*,
Were no lesse faire and beautifull then shee:

Yet, as she is, a fairer flood may no man see.

Spenser. *Faerie Queene*, can. 6.

From thence there came a great *shole* of crows, making a marvellous noise, that came flying toward Cicero's ship, which rowed upon the shore,

North. *Plutarch. Lives*, fol. 729. Cicero.

SHIVER.

SHOAL.

SHOAL.
—
SHOCK.

When bright noone did flame
Forth from the sea, in *sholes* the sea-calves came,
And orderly, at last, lay downe and slept
Along the sands.
Chapman. Homer. Odyssey, book iv.

Beneath, a *shoal* of silver fishes glides,
And plays about the gilted barge's sides.
Waller. On St. James's Park.

The scaly herd, a numerous throng,
Beneath her silver bellows glide along,
Whose still-increasing *shoals* supply
The poor man's wants, the great one's luxury.
Somerville. The Two Springs.

Sergestus in the Centaur soon he pass'd
Wedg'd in the rocky *shoals*, and sticking fast.
Dryden. Virgil. Æneid, book v.

Yet all goods imported by sea for Pura are landed at Payta, for
the bay of Chirapee is full of dangerous *sholes*, and therefore not
frequented by shipping.

Dampier. Voyages, ch. vi. p. 144. Anno 1684.

There are good wide channels between these islands fit for ships
to pass, and in some places *shole* water, where there grows plenty
of turtle-grass.
Id. Ib. ch. v. p. 103. Anno 1684.

When the sunk sun no homeward sail befriends,
On the rock's brow the light-house kind ascends,
And from the *shoaly*, o'er the gulfy way,
Points to the pilot's eye the warning ray.
Savage. Public Spirit.

The watchful hero felt the knocks; and found
The tossing vessel sail'd on *shoaly* ground.
Dryden. Virgil. Æneid, book v.

Each finding some protection in being but one of many that are
equally liable to invasion, they are seen to separate into *shoals*, one
body of which moves to the west, and pours down along the coasts
of America, as far south as Carolina, and but seldom farther.

Goldsmith. History of the Earth, book iii. ch. ii. p. 411.

The *shoals*, he said, consisted of coral rocks, many of which were
dry at low water, and upon one of which he had been ashore.

Cook. Voyages, vol. ii. book iii. ch. iv. p. 143.

As we were steering close round its western extremity, with an
intention of fetching the west side of Mowee, we suddenly *shoaled*
our water, and observed the sea breaking on some detached rocks
almost right a-head.
Id. Ib. vol. vii. book v. ch. v. p. 75.

The depth of water in the mid-way between them was twenty-
nine and thirty fathoms, decreasing gradually as we approached
either continent, with the difference of being somewhat *shoaler* on
the American than on the Asiatic coast, at the same distance from
land.
Id. Ib. vol. vii. book v. ch. iv. p. 251.

SHOCK, *n.* } Shock, the past participle (shoken,
SHOCK, *v.* } shoke, shock) of the verb to shake,
q. v.

A concussion, a quaking, or trembling; a dashing or
striking, with a violence or force, that *shakes*. To
shock, *met.*,

To cause a trembling or shuddering; *sc.* of anguish,
horror, dislike.

A *shock* of corn; so much as is *shoke* or shaken into
a pile or heap. *D. schocke, concussus, jactatio*, (Kilian,) and,
consequently, *strues*.

Shock (dog.) See *ante*, SHAG.

Reap well, scatter not, gather clean that is shorn,
Bind fast, *shock* apace, have an eye to thy corn.
Tusser. August's Husbandry

Corn tithed, sir parson, together go get,
And cause it on *shocks*, to be by and by set.
Id. Ib.

The sheaves being yet in *shocks* in the field, they thought they
might not grind the wheat, nor make any commodity of the profit
thereof.
North. Plutarch, p. 85.

The day upon the host affrightedly doth look,
To see the dreadful *shock* their first encounter gave,
As though it with the roar the thunder would out-brave.
Drayton. Poly-olbion, song 22.

SHOCK.
—
SHOE.

When soon the troubled ground
On her black bosom felt the thunder, which awoke
Her genius, with the *shock* that violently *shook*
Her entrails.
Drayton. Poly-olbion, song 22.

While these by Juno's will the strife resign,
The warring gods in fierce contention join;
Re-kindling rage each heavenly breast alarms;
With horrid clangour *shock'd* th' etherial arms.
Pope. Homer. Iliad, book xxi.

So great was the love which the Jews had to their own country
and religion, such an opinion was generally received among them
of the peculiar favour of God towards them, that they who could
not be *shocked* by persecution, were in danger of being overcome
by flattery.
Stillingfleet. Sermon 3. vol. ii. p. 122.

Because the conclusion is too *shocking* to appear in broad terms,
and too weak to bear; therefore you keep it under cover; and lay
colours upon it, the better to deceive and draw in an unwary reader.
Waterland. Works, vol. i. p. 144. A Defence of some Queries.
Query 13.

I would fain know why a *shock* and a hound are not distinct spe-
cies, as a spaniel and an elephant.

Locke. Of Human Understanding, vol. i. book iii. ch. vi. p. 501.

Neglecting this, the master straight spur'd on;
But th' active Moor his horse's *shock* did shun;
And 'ere his rider from his reach could go,
Finish'd the combat with one deadly blow.

Dryden. The Conquest of Granada, act i. sc. 1.

To be sure he will rather have the primitive man to be pro-
duced by a long process in a kind of digesting balneum, where
all the heavier lees may have time to subside, and a due æquili-
brium be maintained, not disturbed by any such rude and violent
shocks, that would ruffle and break all the little stamina of the
embryon, if it were a making before.

Bentley. Sermon 4. p. 134.

At once they stoop and swell the lusty sheaves;
While through their cheerful band the rural talk,
The rural scandal, and the rural jest,
Fly harmless, to deceive the tedious time,
And steal unfelt the sultry hours away.
Behind the master walks, builds up the *shocks*,
And, conscious, glancing oft on every side
His sated eye, feels his heart heave with joy.

Thomson. Autumn.

In this dreadful manner was one, who had been till then of an
excellent character, hurried on, from a single, and seemingly
slight, indulgence, into the depth of the grossest and most *shocking*
villanies.
Secker. Works, vol. i. p. 392. Sermon 25.

The infidel principles which have been recently diffused with
uncommon industry and art, have an immediate tendency to pro-
duce, in a reading age, this *shocking* corruption.

Knox. Works, vol. i. p. 166. Winter Evening 39.

SHODE, a bush of hair, the head; Skinner, who
thinks it may be from A. S. *scade, lucus, q. d. nemus*
capillorum.

The naile ydriven in the *shode* on hight,
The colde deth, with mouth gaping upright,
Amiddes of the temple sate mischance,
With discomfort and sory countenance.

Chaucer. The Knightes Tale, v. 2009.

SHOE, *v.* } Goth. *ske*; A. S. *sco, sæo, scho*; D
SHOE, *n.* } *scho, schoen*; Ger. *schu, schuh*; Sw
SHOELESS. } *ske*. In A. S. *ge-scy, calcei, ge-scod,*
calceatus; sceog-ian, calceare. See Lye. Tooke de-
rives from A. S. *sky-an, ge-scyan, supponere*, to place
under; *sceod, suppositum*, under placed, *sc.* the foot;
the sole of the foot; *Diversions of Purley, Svo. Ed.*
vol. ii. p. 65, 145. In *Mark vi. shood* with sandals is
υποδεμενους σανδαλια, bound under with sandals; and
the shoe or sandal was itself called *υποδημα*, something
bound under.

The *shoe*, then, was something placed under the foot,
to save it from injury; the covering or upper leather
was a subsequent improvement.

SHOE.

SHOG.

And commaundide hem that thei schulden not take any thing in the weye but a yerde oneli, not a scrippe, ne breed, nether money in ther gerdil; but *shood* with sandalis, and that thei schulden not be clothid with tweie cootis.

Wiclif. *Mark*, ch. vi.

And comaunded them, that they shoulde take no thyng unto their iorney, saue a rodde onely, neyther scrippe, neyther bread, neyther monye in their pourses, but shoulde be *shood* with sandals.

Bible, Anno 1551.

So been Augustins, and Cordileers,
And Carmes, and eke sacked freers,
And all freers *shode* and bare.

Chaucer. *The Romant of the Rose*, p. 226.

Ful streight and even lay his joly shode;
His rode was red, his eyen grey as goos,
With poules windowes corven on his *shoos*.

Id. *The Milleres Tale*, v. 3317.

For though a widewe hadde but a *shoo*,
So plesant was his (in principio)
Yet wold he have a ferthing or he went.

Id. *Prologue to the Canterbury Tales*, v. 225.

He looketh with what hart thou workest, and not what thou workest, how thou acceptest the degree thou art, whether thou be an apostle, or a *shoemaker*.

Tyndall. *Workes*, p. 85. *Of the Wicked Mammon*.

The popes and byshops will keepe their feete ful cleane with *shoes* of gold and siluer.

Frith. *Workes*, p. 98. *Antithesis between Christ and the Pope*.

As the tale is told, it fell out upon a time, that a *shoemaker* when he went by seemed to controule his workmanship aboute the *shoe* or pantophle, that he had made to a picture, and namely, that there was one latchet fewer than there should bee: Apelles acknowledging that the man said true indeed, mended that fault by the next morning, and set forth his table as his manner was.

Holland. *Plinie*, book xxxv. ch. x.

A *shoeless* soldier there a man might meet
Leading his monsieur by the arms fast bound;
Another his had shackled on the ground.

Drayton. *The Battle of Agincourt*.

When he [the smith] had observed them, he told the host of the house, "that one of those horses had travelled far; and that he was sure that his four *shoes* had been made in four several counties;" which, whether his skill was able to discover or no, was very true.

Clarendon. *History of the Rebellion*, vol. iii. part ii. book xiii. p. 424.

He once desired to have a pair of *shoes* made after the English fashion, tho' he did very seldom wear any. So one of our men made him a pair, which the general liked very well.

Dampier. *Voyages*. Anno 1686.

The dresses for the feet and legs amongst the Greeks and Romans were nearly the same; they had both *shoes* and sandals, the former covered the whole foot, the last consisted of one or of more soles, and were fastened with thongs above the foot.

Beloe. *History of Herodotus*, vol. i. ch. i. p. 196. note.

SHOG, v. } See ante, to JOG.

SHO'GGING, n. } *Shog*, from shoke, shock, past participle of shake, q. v. See also SHAG, and SHOCK.

To *shake*, to cause to *shake* or tremble; to move at a *shaking* pace, as a *shog* trot; to move slowly away.

And the boot in the myddil of the see was *schoggid* with wawis, for the wynd was contrarie to hem.

Wiclif. *Matthew*, ch. xiv.

If he can by no meane be *shogged* oute of his deadde slepe, but wil nedes take hys dreame for a verye trouth.

Sir Thomas More. *Workes*, p. 1193. *Of Comfort*, book ii.

Then ever and anone they plied it with stirring and *shogging*, untill it had lost the cruditie and verdure thereof.

Holland. *Plinie*, book xix. ch. iii.

TINCK. Come, prethee let's *shogg* off, and browze an hour or two, there's ale will make a cat speak at the Harrow.

Beaumont and Fletcher. *The Coxcombe*, act ii. sc. 1.

These fained words agog
So set the goddesses, that they in anger gan to *shog*.

Arthur Hale. *Iliad*, book iv. (1581.)

VOL. XXVII.

Through the violence of such *shoggings* (they) are leapt out of the coach.

Harmer. *Tr. of Beza*, (1587,) p. 385.

Another's diving bow he did adore,

Which with a *shog* casts all the hair before.

Dryden. *Epilogue to the Man of Mode*.

SHOOT, v.

SHOOT, n.

SHOO'TER,

SHOO'TRESS,

SHOT.

To throw or cast; to throw, cast, or send out or forth, to emit, to eject, to project; to thrust or push forth, to expel.

A *shot* (*shot*, past participle of *shoot*) from a gun or bow, or other machine; something cast or thrown forth, emitted, ejected, expelled.

A *shoot* of a tree; cast forth, thrown, emitted from the tree.

A *shotten* herring; one that has *cast* or thrown forth its spawn.

A *shot-window*, a projected window, thrown out beyond the rest of the front; very common in our old houses; Mr. Tyrrwhitt supposes it a *shut* window.

Shote-anchor, or *sheet-anchor*. See SHEET.

Shot; cast down as share or sum to be paid. See SCOT. *Shot-free*, free from *shot*; from expense, damage, &c.

As he wolde *schete* an hert, al ageyn hys wille
To depe he *schet* ys owne fader, pat he lay per stille.

R. Gloucester, p. 11.

Oft tille our Inglis men was schewed a mervaille grete,
A darte was *schot* to hem, bot non wist who it *schete*.

R. Brunne, p. 178.

And *shetep* out *shot* ynowh.

Piers Plouhman. *Vision*, p. 355.

And *shotten* ageyns hym with *shot*. Id. *Ib.* p. 403.

Pipen he coude, and fishe, and nettes bete,
And turnen cuppes, and wrastlin wel, and *shete*.

Chaucer. *The Reves Tale*, v. 3926.

But who so *shooteth* right ywis,
May therewith doen great harme and wo.

Id. *The Romant of the Rose*, p. 178.

That Pandarus, for all his wise speach,
Felt eke his part of love's *shottes* keene,
That could he never so well of loving preach,
It made his hew a day full ofte grene.

Id. *Troilus and Creseide*, book ii.

The sailing firre, the cipres death to plaine,
The *shooter* ewe, the aspe for shaftes plaine.

Id. *The Assembly of Fowls*, p. 331.

And forth he goth, jolif and amorous,
Til he came to the carpenteres hous,
A litel after the cockes had ycrow,
And dressed him up by a *shot-window*.

Id. *The Milleres Tale*, v. 3356.

He hath so well his *shotte* tymed,
That he hym through the body smette,
And thus the fals wight he lette.

Gower. *Conf. Am.* book ii.

The same is blind, and wotteth not what he doth, and erreth and *shoteth* at a wrong marke.

Tyndall. *Workes*, p. 81. *Of the Wicked Mammon*.

This wise reason is their *shoteancre* and all their hold.

Id. *Ib.* p. 264. *Whether the Pope be the Church of God or no*.

But why I bringe in Textor was this: at last, when he hath rekened all *shooters* that he can, he sayth thus, Petrus Crinitus wryteth, that the Scottes, which dwell beyonde Englande, be very excellent *shooters*, and the best bowmen in warre.

Ascham. *Workes*, p. 109. *Toxophilus*.

And I promise you *shootinge*, by my iudgement, is the most honeste pastime of all, and suche one, I am sure, of all other, that

SHOOT. hindereth learninge litel or nothings at all, whatsoever you and some other saye. *Ascham. Workes, p. 64. Toxophilus.*

They stop their eares against the sound,
which is the surest shielde
Against the dreadful *shot* of wordes
that thousandes had beguilde,
Gascoigne. Of the Louer's Estate.

Herein make abode
So many learned impes, that *shoote* abroad,
And with their braunches spred all Britany,
No lesse then to her elder sister's broode.
Spenser. Faerie Queene, book iv. can. 11.

Atrides had for share
Faie-cheekt Chryseis; after which his priest, that *shoots* so farre,
Chryses, the faie Chryseis' sire, arriv'd at th' Achive fleete,
With infinite raasome, to redeeme the deare imprison'd feete
Of his faie daughter.

Chapman. Homer. Iliad, book i.

His magnetic beam, that gently warms
The univers, and to each inward part
With gentle penetration, though unseen,
Shoots invisible vertue even to the deep.
[Milton. Paradise Lost, book iii. l. 583.]

Therefore, when any favour'd of high Jove
Chances to pass through this advent'rous glade,
Swift as the sparkle of a glancing star
I *shoot* from heav'n, to give him safe convoy,
As now I do. *Id. Comus, l. 78.*

For all shafts that flie
Light not in vaine, some worke the *shooters* will,
And Joue's right hand with thunder cast from skie
Takes open vengeance oft for secret ill.
Fairefax. Godfrey of Bulloigne, book xvii. st. 47.

And from her brow no steeled shaft there flew,
But that some bloud the cursed engine got,
Bloud of some valiant knight or man of fame,
For that proud *shootresse* scorned weaker game.
Id. Ib. book xi. st. 41.

But come, the bow: now mercie goes to kill,
And *shooting* well, is then accounted ill;
Thus will I saue my credit in the *shoote*,
Not wounding, pitie would not let me do't;
If wounding, then it was to shew my skill,
That more for praise, then purpose meant to kill.
Shakspeare. Love's Labour Lost, act iv. sc. 1. fol. 180.

The Turkish bow giveth a very forcible *shoot*; insomuch that it
hath been known that the arrow hath pierced a steel target, or a
piece of brass of two inches thick; but that which is more strange,
the arrow, if it be headed with wood, hath been known to pierce
thorow a piece of wood of eight inches thick.

Bacon. Natural History. Cent. viii. sec. 704.

Just. An honest weaver, and as good a workman as e'er *shot*
shuttle, and as close.

Beaumont and Fletcher. The Coxcombe, act v. sc. 1.

If manhood, good manhood be not forgot vpon the face of the
earth, then am I a *shotten* herring.

Shakspeare. Henry IV. First Part, act ii. sc. 4. fol. 56.

FAL. Though I could scape *shot-free* at London, I fear the *shot*
heere; here's no scoring but vpon the pate.

Id. Ib. act v. sc. 3. fol. 71.

As they grow in years they become more dexterous and cou-
rageous, and then they will stand a fair mark to any one that will
shoot arrows at them; which they will put by with a very small
stick no bigger than the rod of a fowling-piece.

Dampier. Voyages, ch. i. p. 8. Anno 1681.

Some cut the *shoot*, and plant in furrow'd ground;
Some cover rooted stalks in deeper mould.
Dryden. Virgil. Georgics, book ii.

So spoke he, boastful; but the winged dart
Stopt short of life, and mock'd the *shooter's* art.
Pope. Homer. Iliad, book v.

The law of arms doth bar
The use of venom'd *shot* in war.
Butler. Hudibras, part ii. can. 2.

For if he feel no chagrin or remorse,
His forehead's *shot-free*, and he's ne'er the worse.

Butler. Upon Drunkenness.

In a third sort, the seed of the world takes deeper hold, and
makes very strong and promising *shoots*; but thorns and bad
weeds, the earlier possessors of the field, rise up and choak it.

Secker. Works, vol. i. p. 161. Sermon. 11.

While we were *shooting* this gulph, our soundings were from
thirty to seven fathoms, very irregular, and the ground at bottom
very foul.

Cook. Voyages, vol. ii. book iii. ch. v. p. 180.

Thus when Roger *shot* the hawk hovering over his master's
dovehouse, he only pulled the trigger, the action of the spring
drove down the flint, the action of the flint struck fire into the
pan, the action of the fire set the powder in a blaze, that of the
powder forced out the *shot*, that of the *shot* wounded the bird, and
that of gravity brought her to the ground.

Search. Light of Nature, vol. ii. part i. ch. ii. p. 45.

As we were crossing a little river that lay in our way we saw
some ducks, and Mr. Banks, as soon as he had got over, fired at
them, and happened to kill three at one *shot*.

Cook. Voyages, vol. i. book i. ch. ix. p. 87.

SHOP, n. } Fr. *eschoppe, echoppe.* Junius thinks
SHO'PPING. } *shop* may be from shape; *formare*:
because in it artists give form or shape (*formam*) to
their commodities. Tooke thinks *shop* (*shope*, past par-
ticipule of *shape*) to be—*aliquid formatum*.

Something *shope* or *shopen* (in contradistinction from
a *stall*) for the purpose of containing merchandise for
sale, protected from the weather. And see **SHIP**.

To go *shopping*, to go to different shops.

And as for yron and late to be so drawn in length ye shall se it
done in xx. *shoppis* almost in one strete.

Sir Thomas More. Workes, p. 127. Dialogues, book i.

Which tooles, I openlie confesse, be not of myne owne forging
but partlie left unto me by the cunningest master, and one of the
wortheist jentlemen, that ever Englande bred, Syr John Cheke;
partlie borrowed by me out of the *shoppe* of the dearest frende I have
out of Englande, Joh. Sturmius.

Ascham. Workes, p. 300. The Scholemaster, book ii.

Galen would have the liver, which is the *shop* and source of the
blood, and Aristotle the heart, to be the first fram'd, in regard 'tis
primum vivens, and *ultimum moriens*.

Howell. Letter 30. book i. sec. 3. p. 154.

In gospel-phrase their chapmen they betray;
Their *shops* are dens, the buyer is their prey.

Dryden. The Medal.

Like those women they call *shop-lifters*, who, when they are
challenged for their thefts, appear to be mighty angry and
affronted.

Swift. The Examiner, No. 28.

Garth, generous as his Muse, prescribes and gives;
The *shopman* sells; and by destruction lives.

Dryden. Epistle 13.

Nor deems he wiser him, who gives his noon
To miss, the mercer's plague, from *shop* to *shop*
Wand'ring and litt'ring with unfolded silks
The polish'd counter, and approving none,
Or promising with smiles to call again.

Cowper. The Task, book vi.

Books of account, or *shop-books*, are not allowed of themselves
to be given in evidence for the owner.

Blackstone. Commentaries, vol. iii. book iii. ch. xxiii. p. 368.

I asked him to come and sit an hour with me; he excused him-
self, and what do you think was his excuse? He was engaged with
his mother and some ladies to go *shopping*! And he knows I set
out to-morrow to be absent for years, perhaps never to return.

Lord Byron. Life by Moore, Anno 1809.

SHORE, n. } A. S. *score*; D. *schorre, schoore*,
SHORE, v. } *pars rupta aut scissa*; also, *schore*,
SHO'RELESS, } *ripa*, Kilian, who considers them to
SHO'RY. } be different words. *Shore* is the past
participule of the verb to shear, *q. v.* *Shore* (says Tooke)
as the sea-shore; shore of a river is the place where the
continuity of the land is interrupted, or *separated* by the
sea or the river.

SHOOT.
SHORE.

SHORE.

SHOREA.

Shore (the verb formed upon the noun) is to set, to place, to bring to, to go to the *shore* or to the land; to land: in the second Quotation from Chapman, *shored* is landed, firmly set as on land. In *Mirroure for Magistrates* it is merely the past participle of *shear*, and means separated.

At last they in an island did espy
A seemely maiden, sitting by the *shore*,
That with great sorrow and sad agony
Seemed some great misfortune to deplore,
And lowd to them for succour called evermore.
Spenser. Faerie Queene, book iii. can. 12.

To his amorous passe
He brought her first, *shor'd* from his ship to her.
Chapman. Homer. Odyssey, book xv.

But, being thy guest; Ile be his supply,
For all weeds, such as mere necessity
Shall more than furnish; fit him with a sword,
And set him where his heart would haue bene *shor'd*,
Id. Ib. book xvi.

A ground lying low is soone ouerflowen,
And *shored* houses cannot long continue;
Joints cannot knit where as is no sinew.
Mirroure for Magistrates, p. 353.

So that I beleeeve there are men which would be Puritans; but indeed not any that are. One will have him one that lives religiously, and will not reuell it in a *shorelesse* excesse.

Feltham. Resolve 5. p. 6.

Through all the navy doth like ardour reigne,
They quit the *shore*, and rush into the main;
Plac'd on their banks, the lusty Trojans sweep
Neptune's smooth face, and cleave the yielding deep.
Waller. Virgil. Aeneid, book iv.

There is commonly a declivity from the *shore* to the middle part of the channel, and those *shory* parts are generally but some fathoms deep.

Burnet. Theory.

Vice is the act of man, by passion tost,
And in the *shoreless* sea of folly lost;
But thou, what vice disorders, canst compose,
And profit by the malice of thy foes.
West. The Hymn of Cleanthes.

Can she unappall'd,
When all the flood-gates of the sky are ope,
The *shoreless* deluge stem?

Grainger. The Sugar-Cane, book ii.

SHORE, v. } D. *schore*; *fulcimen*, *schoren*, *shooren*,
SHO'RER. } *suffulcere*, to prop up, to support.

Piers Plouhman says, "It had three *shorers* to shove it up, three *shides* of one length;" (i. e. three sections, deals; cut or divided timber; see *SHIDE*;) whence it may be inferred that *shore* is

A piece of wood, separated, divided from the main bulk or trunk, and used as a prop or support; and hence to *shore*, consequentially,

To prop, to support. And see *SHORT*.

Bote þenne took ich hede
Hit hadde *shoriers* to shove it up. þre shides of o lengþye.
And of o kynne colour.

Piers Plouhman. Vision, p. 305.

Then setteth he to it another *shorer*, that all thinge is in the Newe Testament fulfilled that was promysed before, and also that there is no promise behynde of ought to be shewed more, saue the resurrection. Nowe thys *shorer* is sette, that it is shortlye blowen downe quite, if a man saye no more but what than.

Sir Thomas More. Workes, p. 473.

As touching props and *shores* to support vines, the best (as we have said) are those of the oke or olive tree.

Holland. Plinie, book xvii. ch. xxii.

SHOREA, in *Botany*, a genus so called in honour of the late Right Honourable Lord Teignmouth, Governor of Bengal. It belongs to the class *Polyandria*, order *Monogynia*, and natural order *Diptero-*

carpeæ. Generic character: calyx of five sepals, which enlarge into as many wings; petals five, twisted in the bud, silky; stamens twenty-five to thirty; anthers short; fruit one-celled, three-valved, one-seeded.

Large timber trees, natives of the East Indies, bearing broad leaves and panicles of yellow flowers. *S. robusta* yields the resin called *Dammer*, which is used as a substitute for pitch, and the best pieces instead of incense in the temples of the Hindoos. There are about ten species known.

SHOREHAM, a Seaport, Borough, and Market Town in Sussex. There are two places of the name within about half a mile of each other. Old Shoreham, formerly a town of considerable extent, is now only a small village of little importance or interest, except for the remains of a church of very early date, having circular arches, ornamented by zig-zag tracery, in good preservation. New Shoreham is situated on the East side of the mouth of the river Adur, about a mile within the haven, and contains no public building worthy notice but the church, which, having been built during the period of transition from the simple to the florid Gothic, is a curious specimen of the mixture of round and pointed arches, and of the earliest introduction of mullion-work in windows. The architectural ornaments of the interior are of great variety, richness, and beauty, and the whole structure is well preserved and kept in good repair.

Shoreham has a considerable trade in ship-building, and as the harbour, although inconvenient, is the best on that part of the coast, it is consequently frequented by ships of large burthen. From the year 1298 to 1771 Shoreham returned two Members to Parliament. It was then disfranchised for flagrant and notorious corruption, but was shortly after restored to its Parliamentary privileges which were untouched by the Reform Bill. The single link which connects Shoreham with history is, that it is built on or near the spot at which Ella the Saxon landed with his followers to reinforce Hengist and Horsa.

Population, in 1831, 1503; Old Shoreham 231.

Distance from Brighton six miles, from London 56 miles.

SHORT, adj.

SHORT, adv.

SHORT, v.

SHO'RTEN, v.

SHO'RTENING, n.

SHO'RTLY,

SHO'RTNESS.

scheren, to shear, to divide.

Shored or *shorn* is the past participle of *shear*, (A. S. *scyran*.) *Shored*, *shor'd*, *short*, means to cut off, and is opposed to *long*, which means extended. See *SHEAR*. To *short*, the verb, is formed upon the past participle; we now use *shorten*.

To cut off, to lop off, to curtail; *sc.* part: and, consequently, to lessen, to diminish, to abridge or abbreviate; be or cause to be brief; to take from the dimensions or extent, to reduce, to contract, to confine; to diminish or reduce, the distance, the duration or continuance; to bring near, to approximate; to take from the efficiency, to fail or cause to fail, to be or become deficient, or imperfect, inadequate or unequal to.

Bote to segge *ssortliche*, þer nas ver ne ner,
Of proweesse ne of cortesye, in þe world ys per.

R. Gloucester, p. 181.

SHORT.

porgh Edrike's conseile Knoute did him slo,
& tok quene Emme & wedded hir to wife,
porgh Edrike's conseile, scho scorted his life.

R. Brunne, p. 49.

Schortly forto say, to Snowdon has he tight.

Id. p. 263.

Therefore britheren, I seie this thing, the tyme is schort.

Wiclif. 1 Corynth. ch. vii.

This saye I brethren, the tyme is shorte.

Bible, Anno 1551.

Wherfore swiche sorwe shorteth the life of many a man, or that
his time is come by way of kinde.

Chaucer. The Persones Tale, p. 161.

But it was spoken in so short a wise,
In such awaite alway, and in such feare.

Id. Troilus and Creseide, book iii.

And shortly turned was all up so down,
Both habit and eke dispositioun
Of him, this woful lover Dan Arcite.

Id. The Knightes Tale, v. 1380.

Upon that other side, to speke of the horrible disordinat scant-
nesse of clothing, as ben thise cutted sloppes or hanselines, that
thurgh hir shortnesse cover not.

Id. The Persones Tale, p. 154.

The cause why he came, he telleth
Unto the kepars of the gate,
And wolde haue comen in there ate.
But shortely thei hym sayde naie.

Gower. Conf. Am. book vi.

And so they came toward Sir Robert Carroll, wher they thought
to fynde him; howbeit, their way was shorted, for at a place called
the passe of the Pount Volant, the frenchmen and they met
togyder sodenly.

Lord Berners. Froissart. Cronycle, ch. 285.

Vouchsafe yet then to go vnto my graue,
And there first write my byrth and then my name;
And how my life was shortned many yeares,
By women's wyles as to the world appeares.

Gascoigne. Hearbes.

A man, that was full earnest sett
To serve his prince at all assayes;
No sycknes could hym from yt lett;
Which was the shortnyng of his dayes.

Wyat. Epitaph on Sir Thomas Gravener.

There was a proclamation signed for shortning of the fall of the
mony to that day; in which it should be proclaimed and devised,
that it should be in all places of the realm within one day pro-
claimed.

Burnet. Records. King Edward. Journal, Anno 1550.

After short silence then
And summons read, the great consult began.

Milton. Paradise Lost, book i. l. 803.

Live while ye may
Yet happie pair, enjoy, till I return,
Short pleasures, for long woes are to succeed.

Id. Ib. book iv. l. 533.

O glorious trial of exceeding love,
Illustrious evidence, example high!
Ingaging me to emulate, but short
Of thy perfection, how shall I attaine.

Id. Ib. book ix. l. 961.

Nor love thy life, nor hate; but what thou livst
Live well, how long or short permit to heav'n;
And now prepare thee for another sight.

Id. Ib. book xi. l. 553.

Think not but that I know these things, or think
I know them not; not therefore am I short
Of knowing what I ought; he who receives
Light from above, from the fountain of light,
No other doctrine needs, though granted true.

Id. Paradise Regained, book i. l. 283.

Gentle lady, may thy grave
Peace and quiet ever have;
After this thy travel sore
Sweet rest seise thee evermore,
That to give the world increase,
Shortned hast thy own life's lease.

Id. Epitaph on the Marchioness of Winchester, l. 47.

But headlong joy is ever on the wing,
In wintry solstice like the shorten'd light
Soon swallow'd up in dark and long out-living night.

Milton. The Passion, l. 5.

Shortly therein so perfect he became,

That, from the first unto the last degree,
His mortall life he learned had to frame
In holy righteousness, without rebuke or blame.

Spenser. Faerie Queene, book i. can. 10.

Behold them weeping for their native shore!
What could their wives or helpless children more?
What heart but melts to leave the tender train,
And one short month, endure the wintry main?

Pope. Homer. Iliad, book ii.

Nor can they last beyond the time assign'd,
By that all-seeing and all-making mind;
Shorten their hours they may; for will is free;
But never pass th' appointed destiny.

Dryden. Palamon and Arcite, book iii.

Wherein, to check our over confidence and presumption, we
might by every day's experience be made sensible of our short-
sightedness and liableness to error.

Locke. Of Human Understanding, vol. ii. book iv. ch. xiv. p. 223.

Short-hand, an art, as I have been told, known only in England,
may perhaps be thought worth the learning, both for dispatch in
what men write for their own memory, and concealment of what
they would not have lie open to every eye.

Id. Works, vol. iii. p. 72. On Education.

Honour at best is but an expedient to supply the shortness of our
views, and lead us into those courses which we want discernment
to see the prudence of.

Search. Light of Nature, vol. ii. part i. ch. xix. p. 280.

We made the high land of Otaheite on the 21st, and at noon
were about thirteen leagues east of Point Venus, for which we
steered, and got pretty well in with it by sun-set, when we short-
ened sail.

Cook. Voyages, vol. iii. book ii. ch. xi. p. 292.

Were we but nearly so modest as we ought to be, we should be
very backward to question whether a Being of unsearchable wisdom
can do what there is any competent proof he hath done; and
should carry a strong sense of our own short-sightedness and inca-
pacity along with us, to check all petulance of arguing on such
points.

Secker. Works, vol. ii. p. 505. Sermon 34.

SHOT. See SHOOT.

SHOVE, v. D. schiiven; Ger. scheiben, schaf-
SHOVE, n. fen; Sw. skuf-wa; A. S. sceof-an,
SHO'VING, n. scof-an, scuf-an; D. schoefle, schovle;
SHO'VEL, n. Ger. schaufel; Sw. skif-wel; A. S.
SHO'VEL, v. scoft, to shove, to push. Shovel (di-
minutive of shove, i. e. shov-dæl) that which shoves or
pushes.

To push, to thrust; to press against.

To shovel; to work with a shovel; to push, thrust,
take up, throw up, (sc.) with, or as with a shovel.

Bote penne took ich hede
Hit hadde shoriers to shove it up. pre shides of o lengþye.
And of o kynne colour.

Piers Plouhman. Vision, p. 305.

Now sires, quod this Osewold the Reve,
I pray you alle, that ye not you greve,
Though I answer, and somdel set his howve.
For leful is with force force off to shouve.

Chaucer. The Reves Prologue, v. 3907.

Ther was gret shoving bothe to and fro
To lift him up, and mochel care and wo,
So unwelody was this sely palled gost.

Id. The Manciples Prologue, v. 17002.

Full longe I shofe, and knocked eke,
And stode full long all herkening,
If that I heard any wight comming.

Id. The Romant of the Rose, p. 175.

This geaunt with his rude might
Part of the bank he shofe downe right,
The whiche euen upon Acis fille.

Gower. Conf. Am. book ii.

SHORT.

SHOVE.

SHOVE.
—
SHOUL-
DER.

The high God ordeineth so,
That he within a tyme also,
When he was strengest in his yre,
Was shouen oute of his empyre.

Gower. *Conf. Am.* book vii.

And of this pore vassal
He made a kyng rayal
And gaue him a realme to rule
That occupied a showel,
A mattoke, and a spade
Before that he was made
A kyng.

Skelton. *Why come ye not to Court.*

— All the crowd was shov'd about the shore;
In sway, like rude and raging waves, rows'd with the fervent blore
Of th' east and south winds.

Chapman. *Homer. Iliad*, book ii.

You haue vndone a man of fourescore three,
That thought to fill his graue in quiet; yea,
To dye vpon the bed my father dyde,
To lye close by his honest bones; but now
Some hangman must put on my shrowd, and lay me
Where no priest shouels in dust.

Shakespeare. *The Winter's Tale*, fol. 295.

Then must you goe deeper and cast up the earth with a broad
spade or shovell.

Holland. *Plinie*, book xvii. ch. xxi.

On a night when the lieutenant and he for their disport were
plaieing at slidegrote or shoofleboord, suddenlie commeth from the
Cardinall [Woolseie] a mandatum to execute Kildare on the mor-
row.

Holinshed. *Chronicles of Ireland*, Anno 1528.

Well, Timantus, pray how have you sped here at home at shovel-
boord?

Beaumont and Fletcher. *Cupid's Revenge*, act i. sc. 1.

I was forced to swim behind, and push the boat forward with
one of my hands; and the tide favouring me, I advanced so far
that I could feel the ground; I rested two minutes, and then gave
the boat another shove, and so on.

Swift. *Gulliver's Travels*, ch. viii. Lilliput.

I have seen not only ducks shovel them up as they swim along
the waters, but divers insects also devour them.

Derham. *Physico-Theology*, book iv. ch. xi. p. 186. note.

He might have pass'd his time at nine-pins, or shovel-board, that
had been fit sport for such as he.

Dryden. *The Wild Gallant*, act iv.

Wee see bodies moved by other bodies striking or shoving against
them, but the mover gives no more motion than it had itself before,
and always loses so much as it has imparted to another.

Search. *Light of Nature*, vol. ii. part i. ch. vii. p. 129.

The form of the feet fixes the character of the animal, [mole.]
They are so many shovels; they determine its action to that of
rooting in the ground; and every thing about its body agrees with
this destination.

Paley. *Natural Theology*, ch. xv.

SHOUGH, *i. e.* shock or shag, *q. v.*

MACB. I, in the catalogue ye goe for men,
As hounds and greyhounds, mungrels, spaniels, cures,
Shoughes, water-rugs, and demy-wolues are clept
All by the name of dogges.

Shakespeare. *Macbeth*, fol. 140.

SHOUGH, *i. e.* shog, *q. v.*

— I'll make it sure, I
By to-morrow this time thy maiden-head
Shall not be worth a chicken, if it were
Knockt at an out-cry: go, I'll h'aye before me:
Shough, shough, up to your coop, pea-hen.

Beaumont and Fletcher. *The Maid in the Mill*, act v. sc. 1.

SHOULDER, *n.* } D. scholder, schouder; Ger.
SHOULDER, *v.* } schutter; Sw. skuldra; A. S.
SHOULDERING, *n.* } sculdor, scyldre. Wachter

thinks these words may have the same origin as shield,
(*quia clypeo simile.*) Tooke, that shoulde (for so he
asserts it should be written, and he produces the instance
quoted below) is the past participle of *scyldan*, to divide,
to separate.

The part where the arms separate from the body;
from the strength across from one to the other, shoulder

is used, met., for strength, a strong support; also a part
where the arm, the shank, terminates or is fixed.

Hys sseld, þat het Prydwen, was þanne y honge wast
Aboute ys ssoldren, and þeron y peynt was and ywort
þe ymage of our Lady, inwan in whom was al ys þogt.
R. Gloucester, p. 174.

And whanne he hath foundun it, he joyeth and leith it on his
schuldris, and he cometh hoom.

Wiclif. *Luke*, ch. xv.

And when he hath founde hym, he putteth hym on his shoulders
with ioye.

Bible, Anno 1551.

He was short shuldered, brode, a thikke gnarre,
Ther n'as no dore, that he n'olde heve of barre,
Or breke it at a renning with his hede.

Chaucer. *Prologue to the Canterbury Tales*, v. 5351.

The noblest of the Grekes that ther were
Upon his shuldres carrieden the bere,
With slacke pas, and eyen red and wete,
Thurghout the citee, by the maister strete.

Id. *The Knightes Tale*, v. 2831.

And this geant also gladde is,
And toke this ladie vp alofte,
And set hir on his shulder softe.

Gower. *Conf. Am.* book ii.

The due fashion of byrth is this; fyrste the head cometh for-
warde, then foloweth the necke and shoules.

Byrthe of Mankynde, fol. xiii. p. 2. (1540.)

They hytte so euyn bothe, that their sheldes fell in peces; and
in passyng by, Bernarde sholdred Sir Langurantes horse in such
wyse, that the lorde fell out of the sadell.

Lord Berners. *Froissart. Cronycle*, ch. 342.

I call that the shoulders in a heade whiche a man's finger shall
feele afore it come to the point.

Ascham. *Workes*, p. 153. *Toxophilus*.

It is not drawn certainly so farre one time as at another, be-
cause it lacketh shouderinge, wherewith, as with a sure token, a
man might be warned when to louse.

Id. *Ib.*

Her golden lockes, that late in tresses bright
Embreaded were for hindring of her haste,
Now loose about her shoulders hong undight,
And were with sweet ambrosia all besprinkled light.

Spenser. *Faerie Queene*, book iii. can. 6.

POLON. Yet heere Laertes? Aboord, aboard for shame,
The winde sits in the shoulder of your saile,
And you are staid for there.

Shakespeare. *Hamlet*, fol. 256.

His face defac'd with skarres of infamie,
His royall stock grafft with ignoble plants,
And almost shoudered in the swallowing gulfe
Of dark forgetfullnesse, and deepe obliuion.

Id. *Richard III.* fol. 192.

The mid-stream's his; I, creeping by the side,
Am shoulder'd off by his impetuous tide.

Dryden. *Tyrannick Love*, act ii. sc. 1.

Himself, among the foremost, deals his blows,
And, with his ax, repeated stroke bestows
On the strong doors; then all their shoulders ply,
Till from the posts the brazen hinges fly.

Id. *Virgil. Aeneid*, book ii.

The broken soldier, kindly bid to stay,
Sat by his fire, and talk'd the night away;
Wept o'er his wounds, or tales of sorrow done,
Shoulder'd his crutch, and show'd how fields were won.

Goldsmith. *The Deserted Village*.

The sail is pointed at the top, square at the bottom, and curved
at the side; somewhat resembling what we call a shoulder of mutton
sail, and used for boats belonging to men of war.

Cook. *Voyages*, vol. i. book i. ch. xviii. p. 207.

SHOUT, *n.*

SHOUT, *v.*

SHOUTER, *n.*

SHOUTING, *n.*

Skinner says either from the sound,
or from the D. *schote*, *scheute*, (our
shoot,) *jaculatio*, *q. d. vocis contentæ*
ejaculatio; it is (Tooke) the past
participle of the verb to shoot, meaning, "Sound thrown

SHOUL-
DER.

SHOUT.

SHOUT. forth from the mouth;" sound ejected or ejaculated; ejaculation, sc. of the voice exerted, raised; exalted.

SHOW.

Up goeth the trumpe, and for to shoute and shete.
Chaucer. The Legend of Good Women, p. 304.

And men cried in the strete, Se Troilus
Hath right now put to flight the Grekes rout.
With that gonne all her meine for to shout:
A, go we se, cast up the gates wide,
For through this strete he mote to paleis ride.

Id. Troilus and Creseide, book ii.

Ran cow and calf, and eke the very hogges,
So fered were for berking of the dogges,
And shouting of the men and women eke.
They ronnen so, hem thought hir hertes breke.

Id. The Nonnes Preestes Tale, v. 15401.

With this there was a great shout, crying, Kyng Richarde, Kyng Richarde.

Sir Thomas More. Workes, p. 66. History of Richard III.

Whom, when as all the people such did vew,
They shouted loud, and signes of gladnesse all did shew.
Spenser. Faerie Queene, book v. can. 3.

The cries, th' encouragements, the shouting shrill,
That all about the beaten air rebounds
Confused; thund'ring murmurs, horrible.

Daniel. History of Civil Wars, book iv.

The rest of the Grecians advanced with eager haste and fury,
and in the beginning of their onset gave a general shout, to encourage and animate themselves, and strike terror into their enemies.

Potter. Grecian Antiquities, vol. ii. book iii. p. 85.

No noise was heard; no voice, but of the cryer,
Proclaiming peace and liberty to Sparta;
At that a peal of loud applause rang out,
And thin'd the air, till even the birds fell down
Upon the shouters' heads.

Dryden. The Spartan Hero, act i. sc. 1.

When he was introduced into a new part of the ship, or when anything that he had not seen before caught his attention, he shouted with all his force for some minutes, without directing his voice to us or his companions.

Cook. Voyages, vol. i. book i. ch. iii. p. 46.

Another fall of snow now came on, and continued incessantly for two hours, so that all hopes of seeing them again, at least alive, were given up; but about twelve o'clock, to the great joy of those at the fire, a shouting was heard at some distance.

Id. Ib. vol. i. book i. ch. iii. p. 52.

SHOW, or	} D. <i>schowen</i> ; Ger. <i>schauwen</i> ; A. S. <i>sceawian</i> , <i>ostendere</i> , <i>monstrare</i> , to cause to see or perceive; to exhibit or hold forth, to offer, bear, or bring forth, to present, to the eye or view; to discover; to point out, direct, or guide to; to seem, to appear or cause to appear; to cause to perceive or apprehend, or understand; to teach; to convince.
SHEW, n.	
SHOW, or	
SHEW, v.	
SHO'WISH, or	
SHE'WISH,	
SHO'WY, or	
SHE'WY.	

A *show* is, emphatically, an exhibition, a spectacle, intended to please or amuse, by its gaiety or splendour.

Showy, ostentatious of appearance; conspicuous; splendid, gay or gaudy.

his kyng, þo he sey þen deþ, ys knyghtes he let of sende,
And schewede hem al þe wey wyder he schulde wende.

R. Gloucester, p. 122.

þat þe lond is þin, þi helm schewes it þe,
Forsuorn is Haraldyn, he salle no dure.

R. Brunne, p. 70.

Mený pverbis ich myghte have. of mený holý seýntes
To testefie for treuthe. þe tale þat ich shewe.

Piers Plouhman. Vision, p. 210.

But after these thingis whanne twayne of hem wanderin, he was schewid in another liknesse to hem goynge to a toun.

Wiclif. Mark, ch. xvi.

And the devel ladde him into an high hil, and schewide to him alle the rewmes of the world in a moment of tyme.

Id. Luke, ch. iv.

And the deuyll tooke hym into an hye mountayne, and shewed hym all the kyngdome of the world euen in the twyncklynge of an eye.

Bible, Anno 1551.

SHOW.

SHOWER.

Ye han yourselven shewed here to-day
So high sentence, so holily, and wel,
That I consent, and confirme every del
Your wordes all, and your opinioun.

Chaucer. The Marchantes Tale, v. 9379.

And that by wordes but a fewe
I shall by reason proue and shewe.

Gower. Conf. Am. book ii.

Shall I say, O Zelmane? alas, your words be against it. Shall I say, Prince Pryocles? Wretch that I am, your *shew* is manifest against it.

Sidney. Arcadia, book ii. p. 297.

Shewbread, because it was always in the sighte and presence of the Lorde.

Tyndall. Genesis, ch. ii. p. 11.

He tooke the charge of me, and of the crowne,
And with kinde shewes of loue so brought to passe,
That through Demascus great report was blowne
How good, how iust, how kinde mine vnkle was.

Faurefax. Godfrey of Bulloigne, book iv. st. 45.

And to the ground his eyes were lowly bent,
Simple in shew, and voide of malice bad;
And all the way he prayed, as he went,
And often knockt his brest, as one that did repent.

Spenser. Faerie Queene, book i. can. 1.

He said, and cloath'd himselfe in coarse array;
A labouring hind in show, then forth he went,
And to th' Athenian towers his journey bent.

Dryden. Palamon and Arcite, book i.

There is nothing which lies more within the province of a spectator than publick shows and diversions; and as among these there are none which can pretend to vie with those elegant entertainments that are exhibited in our theatres.

Spectator, No. 235.

When they had taken any spoils from the enemy, the men would make a present of every thing that was rich and showy to the women whom they most admired.

Id. No. 434.

My motive for singling out this man [the Man of Ross] was twofold; first, to distinguish real and solid worth from showish or plausible expense, and virtue from vanity.

Pope to Tonson, June 7, 1732.

In some disorders it is no more possible for men to hinder wicked thoughts from taking possession of their minds, or blasphemous words from coming out of their mouths, than to hinder any other distemper (for plainly this is one) which may attack any other part of them, from shewing itself by its common effects.

Secker. Works, vol. i. p. 141. Sermon 9.

It rendered the outside of this religion, pompous and showish; and this was enough to raise and to maintain a respect and veneration for it in the minds of the vulgar.

Bolingbroke. Works, vol. vi. p. 50. On Human Reason, sec. 6.

Countries which contribute neither revenue nor military force towards the support of the empire cannot be considered as provinces. They may, perhaps, be considered as appendages, as a sort of splendid and showy equipage of the empire.

Smith. Wealth of Nations, vol. iii. book v. ch. iii. p. 447.

The girl, after some entreaty, complied, and sat down on the other side of him; he loaded her with beads, and every showy trifle that would please her.

Cook. Voyages, vol. i. book i. ch. viii. p. 84.

But the outward act being a matter of great form and punctuality, and sometimes expense too, they easily persuaded themselves of what they had a great mind to believe, that a scrupulous performance of such troublesome and showish duties would certainly be sufficient, whatever their inward dispositions and common behaviour might be.

Secker. Works, vol. i. p. 229. Sermon 15.

He was conducted all over the ship, every part of which he viewed with great attention. On this occasion Otoo was the principal show-man.

Cook. Voyages, vol. iii. book ii. ch. xii. p. 299.

SHOWER, n.	} A. S. <i>scar</i> , <i>seyur</i> ; D. <i>scheure</i> ; Ger. <i>schur</i> ; Sw. <i>skur</i> . Junius, Skinner, and Wachter agree, that a shower consists of drops of water
SHO'WER, v.	
SHO'WERLESS,	
SHO'WERY.	

SHOWER. *broken* from the clouds. Tooke that it is the past participle of *scyr-an*, and means (clouds) "broken, divided, separated," and, consequently, falling in drops; met. any thing falling, like rain, or hail, or snow, from the clouds.

After sharpest *shoures* quap Pees. most sheene is þe sonne.
Piers Plouhman. Vision, p. 364.

Riche men routen þo. and in here rest were
þo hit shon to þe shephurdes. a *shewere* of blisse.
Id. Ib. p. 234.

And this was on the sixte morwe of May,
Which May had peinted with his softe *shoures*;
This gardin ful of leues and of floures.
Chaucer. The Frankelaines Tale, v. 11216.

His month assigned eke also
Is Aueril, whiche of *shoures*
Ministreth wey vnto the floures.
Gower. Conf. Am. book vii.

As when a windy tempest bloweth hye,
That nothing may withstand his stormy *shoure*,
The clowdes, as thinges affrayd, before him flye;
But, all so soone as his outrageous poure
Is layd, they fiercely then begin to *shoure*.
Spenser. Faerie Queene, book ii. can. 8.

Soone as the gates were open to them set,
They pressed forward, entraunce to have made:
But in the middle way they were ymet.
With a sharpe *shoure* of arrowes, which them staid,
And better bad advise.
Id. Ib. book v. can. 4.

He saw them in thir forms of battle rang'd,
How quick they wheel'd, and flying behind them shot
Sharp sleet of arrowy *shower* against the face
Of thir pursuers, and overcame by flight.
Milton. Paradise Regain'd, book iii. l. 321.

The *shoure-dissoluer* answerd; What a speech
Hath past thy pallate, O thou great in reach
Of wrackfull empire.
Chapman. Homer. Odyssey, book xiii.

It is reported, that if a hilly field, where the stubble is standing,
be set on fire in the *showry* season, it will put forth great store of
mushromes.

Bacon. Natural History. Cent. vi. sec. 548.

And long-attending Hymen, from above,
Shower'd on the bed the whole Idalian grove.
Dryden. Palamon and Arcite, book iii.

With joy they saw the growing empire rise,
And *showers* of wealth descending from the skies.
Pope. Homer. Iliad, book ii.

The convex glass, which in that opening glows,
Mid circling rays a pictur'd Saviour shows!
Bright it collects the beams, which trembling all,
Back from the God, a *showery* radiance fall.
Savage. The Wanderer, can. 2.

Scarce in a *showerless* day the heavens indulge
Our melting clime, except the baleful East
Withers the tender spring, and sourly checks
The fancy of the year.
Armstrong. Art of Preserving Health, book i.

SHRAG, the ends of sticks, of the birchen twigs in
a broom, or of whins or furze. "Yar brum owt ta ha'
fine *shrags*;" this was said to a man about to dress re-
cently thrashed barley for market. The clipping of live
fences. Moore, *Suffolk Words*. It is probably *scrag*;
any thing rough, sharp, craggy, prickly.

SHREAD, *n.* } A. S. *screade, scread-an*. Skinner
SHREAD, *v.* } suggests from the *v.* to shear; and
SHREDDING, *n.* } Tooke forms it from the past par-
ticiples of that verb. *Shred, shred*.

A cut, or piece cut, separated or severed, broken or
torn; a section or segment, a fragment.

Hewe downe this tree, and let it fall.
The leues lette defoule in hast,
And do the frute destroie and wast,
And let of *shreden* euery branche,
But at rote he let it stanche.

Gower. Conf. Am. book i.

Then since, quoth she, the terme of each man's life
For nought may lessened nor enlarged bee;
Graunt this; that when ye *shred* with fatall knife
His line, which is the eldest of the three,
Which is of them the shortest, as I see,
Eftsoones his life may passe into the next.
Spenser. Faerie Queene, book iv. can. 2.

MONC. He is very brave.

LIS. The *shreds* of what he steals from us, believe it
Makes him a mighty man.

Beaumont and Fletcher. The Maid in the Mill, act iii. sc. 1.

In lopping and *shredding* of trees, when the cut standeth open,
there should be no hollow places made like cups, for feare that
water should stand therein.

Holland. Plinie, book xvii. ch. xxiii.

It, [our Common Prayer,] they say, hath a number of short
cuts or *shreddings*, which may be better called wishes than prayers.

Hooker. Ecclesiasticall Politie, book v. sec. 27.

And yet [they] contentedly suffer their minds to appear abroad
in a pie-bald livery of coarse patches, and borrowed *shreds*, such as
it has pleased chance, or their country taylor, (I mean the common
opinion of those they have conversed with,) to clothe them in.

Locke. Of Human Understanding, vol. ii. book iv. ch. xx. p. 286.

In some of the richest and best endowed universities, the tutors
content themselves with teaching a few unconnected *shreds* and
parcels of this corrupted course.

Smith. Wealth of Nations, vol. iii. book i. ch. i. p. 182.

SHREW, or

SCHREW, *n.*

SCHREW, *adj.*

SCHREW, *v.*

SCHRE'WED, or

SHREWD,

SHRE'WDLY,

SHRE'WDNESS,

SHRE'WISH,

SHRE'WISHLI,

SHRE'WISHNESS.

Wachter and Skinner agree that
a *shrew* is *mulier clamosa*, from
Ger. *schreien*, to cry out; Skinner
adds, or rather from *beschreyen*, to
diffame, to calumniate. *Schrewd*,
the *adj.*, he derives either from
Ger. *beschreyen*, to fascinate, *q. d.*
bewitched, or from the Lat. *crudus*,
q. d. crudelis. A *shrew* (see the
instances quoted below from R.
Gloucester, Gower, &c.) was *male*
as well as *female*; and in Chaucer's translation from
Boethius, *pessimi, improbi*, are interpreted—shrews.
Tooke (who evidently considers A. S. *syr-wian, suri-*
gan, sorghean, to be the same word differently written
and applied) thinks *syrwe, syrewe*, the past participle
of *syrwan, syrewan*, to vex, to molest, to cause mischief
to, is our modern *shrewed* or *shrewd*; and that *syrwe*,
syrewe, is our modern *shrewe* or *shrew*, and means
"one who vexes or molests;" a vexatious, mischievous,
vicious, evil person, (and, according to modern usage,
a woman who vexes, or molests, annoys, aggrieves, with
her tongue or temper.)

Shrewed or *shrewd*; vexed, troubled, provoked, and,
consequently, angry, ill-tempered; bitter or biting,
cutting, keen, cunning, penetrating, sagacious. Mr.
Tyrwhitt explains the verb in Chaucer, to curse, *i. e.* to
imprecate upon—trouble, vexation, sorrow.

A sone he hadde y now, Maxencius to name,
Hym me made emperour, mony mon to schame.
He wes, as wel as ys fader, gret *schrewe* y now.

R. Gloucester, p. 84.

þe Saxones were þo enercome, ac heo ne leuede get noht
Heore *schrewe* dede.

Id. p. 164.

In Wales is a *schreward* to werre risen on,
For he wend Sir Edward ouer þe se wer gon.

R. Brunne, p. 262.

— And *shrewe*de mýn emcristýne
Agens þe consail of Crist.

Piers Plouhman, p. 91.

SHREAD

SHREW.

SHREW. Ech valley schal be fulfild, and every hil and litil hil shal be maad low; and *schrewid* (*prava*) thingis schulen be into dressid (*directa*) thingis; and scharpe thingis into pleyne weyes.
Wiclif. Luke, ch. iii.

Also with othire wordis ful manye he witnesside to hem and monestide him and seide, Be ghe saued fro this *schrewid* (*prava*) generacioun.
Id. The Dedis of Apostlis, ch. ii.

Nay then, quod she, I *shrewe* us bothe two.
For though that I be olde, foule, and pore,
I n'olde for all the metal ne the ore,
That under erthe is grave, or lith above,
But if thy wif I were and eke thy love.
Chaucer. The Wif of Bathes Tale, v. 6644.

O nice proude cheryl, I *shrewe* his face.
Id. The Sompnoures Tale, v. 7809.

And yet was he to me the moste *shrew*,
That fele I on my ribbes all by rew,
And ever shal, unto min ending day.
Id. The Wif of Bathes Prologue, v. 6717.

I have a wif, though that she poure be;
But of hire tonge a labbing *shrewe* is she.
Id. The Squieres Prologue, v. 10301.

And dignitees, that be yeuen to *shreude* (*improbis*) folke, not onely ne maketh hem not digne; but sheweth rather all openly, that thei been vnworthy and ingine.
Id. Boecius, book ii. De Consolatione.

And therefore sayth Senek, that a man shal never venge *shrewednesse* by *shrewednesse*.
Id. The Tale of Melibeus, p. 115.

And the prophete saith; "Flee *shrewednesse* and do goodnesse; seke pees and folwe it, in as muchel as in thee is."
Id. Ib. p. 117.

For it is certayne y^t spirits of the heyre may vse their *shrewdnes* in theym that be of mysbyleue and vse euyll dedys; for grace is withdrawn from such maner of men, wherfore the spirits haue the more power to hurte and greue them.

Fabyan. Chronycle, ch. xxxi.

He might his tyrannie shewe,
And toke to his counseile a *shrewe*,
Whom to his father forth he sent.
Gower. Conf. Am. book vii.

He was a *shrewed* chamberleyne,
So as to begyle a worthy quene,
And that on hym was after sene. *Id. Ib. book vi.*
If too wary, then she'll *shrew* the,
If too lavish, she'll undo thee.
Cotton. The Joys of Marriage.

LOREN. In such a night
Did pretty Jessica (like a little *shrow*)
Slander her loue, and he forgaue it her.
Shakspeare. The Merchant of Venice, fol. 182.

The fine furr'd ermin, martern, and the cat
That voideth civet, there together sat
By the *shrewd* monkey, babian, and the ape.
Drayton. Noah's Flood.

Her onely fault, and that is faults enough,
Is, that she is intollerable curst,
And *shrow'd*, and froward.
Shakspeare. The Taming of the Shrew, fol. 213.

Her elder sister is so curst and *shrew'd*,
That til the father rid his hands of her,
Master, your loue must liue a maide at home.
Id. Ib. fol. 211.

SHAT. Of all the plots the king hath laïd for me
This was the *shrewdest*, 'tis my life they seek
And they shall have it; if I should refuse
To accept the challenge in the king's behalfe,
They have some cause to take away my life,
And if I do accept it, who can tell
But I may fall by doubtful chance of war?
'Twas *shrew'd*, but I must take the least of evils.
Beaumont and Fletcher. The Noble Gentleman, act v. sc. 1.

But it is *shrewdly* probable, that fluid perceptive matter will not fail to find the colours tintured from one another in some measure in the whole object here also.

More. Immortality of the Soul, part iii, book ii. ch. ii. p. 64.

Her Garboiles (Cæsar)
Made out of her impatience, which not wanted
Shrodenesse of policie to; I greeuing grant,
Did you too much disquiet.
Shakspeare. Antony and Cleopatra, fol. 346.

E. ANTI. Good Signior Angelo, you must excuse vs all,
My wife is *shrewish* when I keepe not houres.
Id. The Comedy of Errors, fol. 90.

He is verie well favour'd, and he speakes verie *shrewishly*; one would thinke his mother's milke were scarce out of him.
Id. Twelfth Night, fol. 958.

HEL. I pray you, though you mocke me, gentlemen,
Let her not hurt me; I was neuer curst;
I haue no gift at all in *shrewishnesse*.
Id. A Midsummer Night's Dream, fol. 155.

Some of the observers on board the Centurion *shrewdly* suspected, from the appearance of his armour, that instead of steel, it was composed only of a particular kind of glittering paper.
Anson. Voyages, book iii. ch. x. p. 540.

The aforesaid author observes very *shrewdly*, that having no certain ideas of the terms of the proposition, it is to him a mystery.
Waterland. Works, vol. i. p. 219. A Defence of some Queries. Query 21.

Professing to despise the ill opinion of mankind creates a *shrewed* suspicion that we have deserved it.
Secker. Works, vol. ii. p. 220. Sermon 15.

SHREWSBURY, a Borough and Market Town, nearly in the centre of Shropshire, of which it is the Capital. It is situated on two eminences of considerable elevation, formed by the windings of the river Severn into a kind of circular peninsula. The soil is dry, the water plentiful and excellent, the air celebrated for its purity, and the neighbouring country rich and beautiful. The greater part of the town is ill built and inconvenient, but some of the principal streets are of a good width, well paved and lighted, and many of the modern houses are elegant and commodious. A tract of about twenty acres of sloping and unequal ground, lying between the town wall and the river, and called the Quarry, from the ruins of an ancient stone quarry which it includes, is laid out in public walks for the inhabitants, well planted with limes and chestnuts, and is considered by them the greatest ornament of their town.

Shrewsbury is divided into five parishes, and had as many churches, exclusive of that of Holy Cross, which formerly was part of the Abbey of St. Peter and St. Paul, built shortly after the Conquest by Earl Roger de Montgomery, who himself became one of its brotherhood. Of this once magnificent structure few relics remain, and scarcely, as we believe, any of the original building. Two circular towers and their connecting walls of the time of Edward I., now form part of a gentleman's mansion, in the garden belonging to which is a very interesting ruin of still later date. It is a small but beautiful specimen of richly ornamented Gothic, commonly called "the Stone Pulpit," and is conjectured to belong to the same era with Henry VII.'s Chapel. Both the Abbey and its Church suffered greatly at the Reformation, and the latter having, like too many ancient edifices, fared almost equally ill in the hands of repairers as of destroyers, presents but few traces of its early grandeur. Of the old Collegiate Church of St. Chad only a small part, called the chapel, remains, but a new church, dedicated to the same saint, stands near the Quarry. St. Giles's is a plain but extremely ancient building, chiefly used for sepulture, and in which service is performed only twice a year. St. Mary's Church is also of great antiquity, and having been altered and added to at different times, is built in various styles of

SHREW.
—
SHREWS-
BURY.

SHREWS-
BURY.

architecture. It has a beautiful window of stained glass, saved from the original Church of St. Chad. St. Alkmund's is a modern structure, on the site of an old Saxon Church of that name. St. Julian's, formerly a royal free chapel and rectory, is now only a stipendiary curacy. Of the splendid Collegiate Chapel of St. Michael, which belonged to the castle, and of other ecclesiastical buildings of the same class, little or no traces now remain.

Shrewsbury was the most important station on the Welsh Marches; its castle, built by Earl Montgomery, crowned a steep bank on the isthmus of the peninsula, a spot which had previously been selected as a strong position either by Britons or Saxons, and fortified by walls and ditches. The principal remains of the castle are the keep, flanked by two circular towers; the ancient walls, pierced with cruciform loopholes; of the inner court, which is now converted into a garden; and the great circular arch of an interior gateway which undoubtedly belonged to the original building of Montgomery. The town itself was surrounded by walls of great strength, connecting, at equal distances, square and embattled towers, one of which remains. Of the walls, only a part of the Southern rampart is standing, which is used as a public walk.

The three great gates of Shrewsbury, named respectively, Abbey, North, and Welsh, have long disappeared. The Welsh gate, and the bridge of the same name, which it defended, were formerly subjects of much antiquarian interest; but the ruinous state of the latter compelling its removal in 1791, a substantial stone bridge on five arches was erected in its place, and connected with the town, on the river side, by a quay. In a canopied niche over the old Welsh gate was the figure of a warrior fully armed, resting one hand on his breast, and pointing with the other to a carving in stone of three "roses moulded on one stem." Antiquaries differed much and long as to the personage thus represented. The seal of the celebrated champion of the White Rose, Richard of York, bears a device precisely similar, in allusion, it is said, to his three elder sons, Edward IV., George of Clarence, and Richard III.; and this circumstance, coupled with the historical fact, that he was very popular among the inhabitants of Shrewsbury, who strongly espoused the cause of the White Rose, renders it little doubtful that the statue is intended for that unfortunate Prince. When the erection of a new bridge became inevitable, this figure and two architectural shields, between which it was originally placed, were carefully removed and fixed in conspicuous situations on the Market-house, a building of the time of Elizabeth, deemed the handsomest of its kind in the Kingdom. The Eastern or English bridge and gate, also in ancient times well fortified, were taken down and a new stone bridge of great strength built by subscription, in the year 1769. The free Grammar School is a stately building of various and irregular architecture, resembling a college in appearance, and containing a good library and spacious chapel. Among the persons of eminence educated at this school were the famous Sir Philip Sidney and the infamous Judge Jeffries. Many charitable institutions exist in Shrewsbury; it has also public Assembly Rooms, and a Theatre, said to have originally formed part of the ancient Palace of the Princes of Powisland in the then capital of the district so called. By the London entrance to the town is a noble isolated column of the Doric order, called the largest in the world, and 133 feet in height. It is con-

VOL. XXVII.

structed of free stone, and is surmounted by a statue of General Lord Hill, a native of Shropshire, of whom the Salopians are justly proud, and in honour of whose military achievements they have erected this public monument.

The great Roman road called Watling Street, which extended from London to the further extremity of North Wales, ran near Shrewsbury, and is indeed supposed to have passed through the ancient town, the origin of which is doubtful. When the capital of Powisland, it was called Pengwerne, and also Ymwithig, or the Delight; and at the period of the Saxon invasion was a place of strength, and for some time a refuge to the Britons. Falling at length into the hands of the Saxons, they named it Scrobbs-byrig, the Hill of Shrubs, a name synonymous with Pengwerne, and Norman pronunciation afterwards converting it into Shrobsburie, its modern appellation requires no further comment. In *Domesday Book* Shrewsbury is entered as a city. As a strong hold it was long considered as an important possession, and although too secure both naturally and artificially to fear petty warfare, its near neighbourhood to the ever restless and excitable Welsh, caused its garrison and inhabitants to lead an anxious and a stirring life during several centuries.

The Battle of Shrewsbury, fought between Henry IV. and Harry Percy surnamed Hotspur, owes much of its great celebrity to the exquisite talent with which Shakespeare has adapted and adorned the accounts given of it by the ancient chroniclers. It took place on a plain about four miles from the town, still called Battle Field, and which—setting poetry apart—must ever excite a strong interest as the spot on which the future hero of Agincourt first broke through the cloud which had obscured his character, and gave earnest of his coming glory. In the great Civil War Shrewsbury faithfully adhered to the Royal cause, and on one occasion received Charles I. and his army with eager loyalty. It was taken by the Parliamentary forces in 1644. Boscobel House, celebrated in the romantic history of Charles II. when he was a proscribed fugitive, is situated in a wood about a mile from the town.

Shrewsbury long possessed almost a monopoly in the trade of fine flannels, baizes, &c., and the coarse woollen cloths called Welsh webs, which were taken thither to be dressed for exportation and home sale. It has still considerable traffic in the above articles, and is a common mart for all kinds of commodities from Wales. There are also large linen manufactories; and the town is particularly celebrated for its brawn, and the delicious sweet cakes which bear its name.

Shrewsbury was incorporated by Charles I., and has returned two Members to Parliament from the earliest period of representation. Population, in 1831, 21,227. Distance from London 155 miles.

SHRIEK, } Either, says Skinner, from the Danish
SHRIEK, } *skriger, clamo*, or from the D. *schrecken*,
SHRIEKER, } to tremble, *schriek*, tremour; or from
SHRIGHT. } the Ger. *schreyen*, to cry, *schrecken*, to
terrify, *schrecken*, terror; all of them, he adds, formed
from the sound: they (and the Sw. *shreka*) appear all
the same word, applied to the cry, and the feeling of
fear or terror, it causes. See *ante*, SCREECH, SCREAM.

And yet againward shrieked every nonne,
The pangs of love so straineth them to crie.
Chaucer. *The Court of Love.*

But the palace within confounded was
With wayling, and with ruful *shrikes* and cryes.
Surrey. Virgil. Æneis, book ii.

The pitteous mayden, carefull, comfortlesse,
Does throw out shrilling *shrikes*, and *shrieking* cryes,
(The last vaine helpe of women's greates distresse)
And with loud plaintes importuneth the skyes.
Spenser. Faerie Queene, book i. can. 6.

Till that, by fortune passing all foresight,
A salvage man, which in those woods did wonne,
Drawne with that ladies loud and piteous *shrigh*t.
Id. Ib. book vi. can. 4.

There dwells envy and confusion, disorder and sad remembrances,
perpetual woes and continual *shriekings*, uneasiness, and all the
evils of the soul.
Taylor. Sermon 3. vol. i. p. 54.

She cries, she *shrieks*; the fierce insulting foe
Relentless mock her violence of woe;
To chains condemn'd, as wildly she deplores;
A widow, and a slave on foreign shores.
Pope. Homer. Odyssey, book viii.

When, lo! fierce Scylla stoop'd to seize her prey,
Stretch'd her dire jaws, and swept six men away,
Chiefs of renown! loud-echoing *shrieks* arise!
I turn and view them quivering in the skies.
Id. Ib. book xi.

— Mercy! what alarm!
Dare aught on earth that sovereign beauty harm?
Again—the *shrieking* charmers—how they rend
The gentle air—the *shriekers* lack a friend.
Crabbe. Tales of the Hall, book vii.

SHRIEVE. See SHERIFF.

SHRILL, *adj.* } *Shrill* is plainly from the same
SHRILL, *v.* } source as scream or shriek, shriekel
SHRI'LLY, } or shrigle, shrill; it was anciently
SHRI'LLNESS. } also written shirle. G. Douglas
renders *vociferans* "with *skirllis* and with *shrekis*."

It is applied to a sound that is
Harsh, grating; piercing harshly upon the ear.

pan blewe þe trumpes fulle loud & fully *schille*.
R. Brunne, p. 30.

Certes he Jakke Straw, and his meinie,
Ne maden never shoutes half so *shrille*.
Chaucer. The Nonnes Preestes Tale, v. 1540.
As he fully *shrilly* shrigh

Turberville. To his Friend.

These parts first dispose the voice to hoarseness or *shrillness*.
Smith. On Old Age, p. 137.

At last they heard a horne that *shrilled* cleare
Throughout the wood that echoed againe,
And made the Forrest ring, as it would rive in twaine.
Spenser. Faerie Queene, book ii. can. 3.

No tree, whose braunches did not bravely spring,
No braunch, whereon a fine bird did not sitt,
No bird, but did her *shrill* notes sweetely sing,
No song, but did containe a lovely ditt.
Id. Ib. book ii. can. 6.

The armonye of them that pype in recorders, flutes, and dromes,
and the *shirle* showte of trôpettes, waites, and shames, shall no
more be heard in the to the deliyght of men.

Bale. Image, p. 3.

Being commonlie and most properlie taken in the worse part,
and signifieth *shrillie*, or noisefullie, squeaking.
Chapman. Homer. Iliad, book ii. Commentary.

The different tones melodiously combin'd,
Temper'd with art, in sweet confusion join'd;
The soft, the strong, the clear, the *shrill*, the deep,
Would sometimes soar aloft, and sometimes creep.
Parnell. On the Death of Mr. Viner.

Host against host with shadowy squadrons drew,
The sounding darts in iron tempests flew,
Victors and vanquish'd join promiscuous cries,
And *shrilling* shouts and dying groans arise.
Pope. Homer. Iliad, book iv.

Her golden trump the goddess sounded thrice,
Whose *shrilling* clang reach'd heaven's extremest sphere.
Philips. Cerealia.

Round the rough castle *shrilly* sung
The whirling blast, and wildly flung
On each tall rampart's thundering side
The surges of the tumbling tide.
Warton. The Grave of King Arthur.

SHRIMP, } In A. S. *scrimm-an*, is *arescere*, to dry,
SHRI'MPED. } to wither, and, consequentially, to con-
tract. Skinner doubts whether from the Ger. *schrump*,
a wrinkle, from the wrinkles on the back. Junius thinks
from the Ger. *krimpen*, to crimp or cramp, to draw to-
gether, because when boiled it draws into a gibbous
shape, *sc.* its lower half under its upper. It is applied
met. to

Any thing diminutive; contracted in its growth.

Scrimp, as adjective and verb, are common words in
Scottish writers. See Jamieson.

Religion hath take up all the corn
Of treading, and we borel men ben *shrimpes*;
Of feble trees ther comen wretched impes.
Chaucer. The Monkes Prologue, v. 13938.

The periwinkle, prawn, the cockle, and the *shrimp*.
Drayton. Poly-obion, song 25.

Beyond this lagune there is another large one, wherein is an
island and town, named Haniago, its inhabitants most fishermen,
whose chief employment is to take *shrimps*.

Dampier. Voyages, vol. ii. part ii. ch. vi. p. 127.

Such things as these go for wit, so long as they continue in
Latin, but what dismally *shrimped* things would they appear if
turned into English!

Echard. Grounds of the Cont. of the Clergy, p. 44.

Very true, says I, and I wondred how such a *shrimp* as you
could drag about such a great carcass as mine.

Search. Light of Nature, vol. ii. part ii. ch. xxiii. p. 242.

SHRINE, *n.* } See ENSHRINE. D. *schryn*; Ger.
SHRINE, *v.* } *scrain*; Sw. *skryn*; Fr. *esrine*; It.
scrigno; Sp. *escrino*; Lat. *scrinium*, a basket or chest,
in which books, writings, or other secret things were
deposited. We apply the word to

That which contains or holds, in which is placed or
deposited—any thing consecrated, sacred, holy, adored,
loved.

In Normandye he dyde, & thulke ger al so,
Seine Egwine at Euesham in *srine* was verst ido.
R. Gloucester, p. 478.

Now lies he in *schryne* in golde þat is rede.
R. Brunne, p. 23.

Forsooth (quod she) a tender creature
Is *shrined* there, and Pity is her name;
She saw an egle wreke him on a fie,
And pluck his wing, and eke him in his game,
And tender herte of that hath made her die.
Chaucer. The Court of Love.

But made her subtile workmen make a *shrine*
Of all the rubies and the stones fine
In all Egipt that she coude espie,
And put full the *shrine* of spicerie,
And let the corse enbaume, and forth she sette
This dead corse, and in the *shrine* it shette.
Id. The Legend of Good Women.

The spiritualtie all that ceason preached the Pope mightely,
built abbayes for recreation and quyetnes, *shrining* them alway
for saintes.

SHRIVE, v.

SHRI'VE,

SHRI'VING,

SHRO'VING,

SHRIFT.

Shrift is shrived, shriv'd, shrift.
Sw. *skrifta*, *skrift*, which Ihre thinks
they received from the early English
preachers of the Gospel. The word
is common in the A. S. ecclesiastical
writings. *Scrif-an*, to hear confessions (says Somner)
and enjoyne penance. *Scrift-boe*, a confessional. Ihre
adopts the derivation from the Lat. *scrib-ere*, to write,
because the penance required was given in writing:
Skinner also from *scrib-ere*, because the names of those
confessing were *written* down. Neither of these reasons
has introduced the word into the Italian or French.
Lye quotes three instances from A. S. version of Boe-
thius, where the Lat. *curare* is rendered *scif-an*; and
to *shrive* trees, Somner tells us, is to prune them; *pu-
tare*, *amputare*, *resecare*. To *shrive* is, by usage,

"To hear confessions, and enjoyne penance." Somner.
A necessary portion of the duty of those who had the
cure of souls.

Shrove-tide, the tide or time when people are shrived
or shriven.

Edward God bisouht, þat it suld be forgyuen,
& amendid with penance, and þerof clene be *scrijuen*.

R. Brunne, p. 65.

Unless some base hedge-creeping collybist
Scatters his refuse scraps on whom he list,
For Easter gloves, or for a *shrove-tide* hen,
Which bought to give, he takes to sell again.
Hall. *Satire* 5. book iv.

SHRIVE.
—
SHROP-
SHIRE.

SHRIVEL, *v.*, Skinner says, either from the D.
schrompeten; Ger. *schrumpeten*, to draw into wrinkles;
or from the Lat. *scribillare*. It is perhaps a diminutive
from *shrive*, which (Somner says) is—to prune; and,
consequently, to lessen, to diminish:

To draw up together, to contract, (into wrinkles.)

We need not bemoan the *shrivell'd* condition of the deceased, as
if they were stript almost of all substance corporeal, and were too
thinly clad to enjoy themselves as to any object of sense.

More. *The Immortality of the Soul*, book iii. ch. iii. p. 154.

Still at her *shrivell'd* breasts they hung, whene'er mankind she
curs'd,

And with these foster-brethren was our monster nurs'd.

Otway. *The Poet's Complaint of his Muse*.

He calls for famine, and the meagre fiend
Blows mildew from between his *shrivell'd* lips,
And taints the golden ear.

Cowper. *The Task*, book ii.

SHROFF is a corruption of the Arabic word *Sarráf*,
adopted and pronounced by the people of Bengal *Shar-
ráf*, *i. e.* a money-changer, and thence a "banker;"
the collybistes of the Greeks. (*Matth.* xxi. 12; *Mark*
xi 15.)

SHROPSHIRE.

SHROPSHIRE, or SALOP, one of the central Coun-
ties of England, is bounded on the North by Cheshire,
a detached part of Flintshire, and Derbyshire; by Staf-
fordshire on the East; on the South by Worcestershire,
Herefordshire, and Radnorshire; and on the West by
the latter County, and those of Montgomery and Den-
bigh. It is comprised within 52° 20' and 53° 4' North
latitude, and 2° 17' 30" and 14' West longitude, and it
embraces an area of upwards of 1341 square miles, or
about 858,240 statute acres.

Face of the
country.

The natural features of the County are picturesque
and varied. Bold hills range along its Southern and
Western borders, where it confines with Wales, whilst
towards the East its surface is gently undulated and
well wooded. The celebrated plain of Salop extends
lengthwise from Whitchurch, on the borders of Che-
shire, south to Church Stretton, a distance of about 30
miles; and it stretches breadthwise from Oswestry on
the confines of Denbighshire, to Coalbrook Dale on the
East, about 28 miles. It is divided by the Severn into
two unequal parts, and though flat when compared with
the hills that bound it, its surface is nevertheless diver-
sified. The celebrated Wrekin hill rises singly on the
South-East of the plain, or at least so much higher than
two adjoining eminences to the North-East of it as to
appear in solitary grandeur. Its height is 1320 feet;
it lies nearly due North and South, and its shape has been
likened to that of a whale sleeping on the surface of the
sea. "From the Wrekin, the South-Eastern boundary
of the plain crosses the Severn nearly at the place where
the river changes its Eastern to a Southern course; and
then it runs along Wenlock Edge, which stretches from
North-East to South-West; West of Wenlock Edge is
the range that contains *Caer Caradoc* and its Northern

prolongation, the Lawley hills. In the parallel of the
Southern extremity of this range, a hilly country extends
from the banks of the Severn to the mountains of Wales.
It contains the Clee hills on the East of Wenlock Edge,
and, on the West of the *Caer Caradoc* range the Long-
mynd, which belongs to the mountain system of Wales,
and covers the country between Church Stretton and
Bishopcastle; all these ridges extend from North-East
to South-West. The general elevation of this hilly tract
is from 800 to 1500 feet above the Severn, which is
about 150 feet above the sea high-water mark. It is
completely intersected by two straight and simple val-
leys, the direction of which is nearly North-East and
South-West, and by several smaller, which are parallel
to the larger, and through which small rivers descend to
the plain of Salop, or the basin of the river Teme. The
Western boundary of the plain of Salop is formed by
the Longmynd, the Breidden hills, and the hills which
extend from Llanymech Northward to the West of
Oswestry, and thence to Ruabon and to Hawarden
Park, in Flintshire." (*Geography of Great Britain*,
p. 62.)

The red sandstone which covers the Northern half of
Shropshire is considered by Mr. Aikin to be identical
with the *old red sandstone formation* of Werner. Its
Southern extremity rests upon highly elevated strata of
grauwacke. The general face of the tract covered by it
is an undulated country, with the Southern declivities of
the hills considerably steeper than the Northern; and
another circumstance characteristic of this kind of sand-
stone is the great number of *meres* or deep pools which
it contains. The *independent coal formation* is found
immediately adjacent to the red sandstone from Wom-
bridge, in the parallel of Wellington to Coal-port on the

Geology.

SHROP-
SHIRE,

Severn, a length of about six miles; its greatest breadth is about two. It rises West a little to the North, at an angle of about 6° , and is composed of the usual members, viz. quartzose, sandstone, indurated clay, clay porphyry, slaty-clay, and coal. The series is most completely seen in the *meadow-pit* of Madeley colliery, which has been sunk to the depth of 729 feet through all the beds, 86 in number, that compose this formation. The sandstones, which form part of the first thirty strata, are fine-grained, considerably micaceous, and often contain thin plates or minute fragments of coal. The thirty-first and thirty-third strata are coarse-grained sandstone, entirely penetrated by petroleum. But the first bed of very coarse sandstone or grit does not occur till at the depth of 430 feet; it is 15 feet thick. The next bed of sandstone deserving notice is 146 feet lower, and is 18 feet in thickness; it is called by the colliers the *big flint*. The lowest sandstone, the eighty-fifth in number, is named the *little flint*; it is about the same thickness as the first bed. Vegetable impressions are met with in most of the sandstone beds. Clay-porphyry occurs only once in the whole series, at the depth of 73 feet, where it forms a bed nine inches thick. When the indurated clay is compact, dull, and smooth, and meagre to the touch, it is termed *clod*; when glossy, unctuous, and tending to a slaty texture, it is called *clunch*. Ironstone first occurs about 500 feet from the surface. There are altogether six beds of iron ore, which form subordinate beds in indurated clay, and each bed is composed of balls, or of broad, flat masses. The slaty-clay, called by the colliers *basses*, is of a bluish-black colour and slaty texture. It usually contains pyrites; and when intimately mixed with coal, it insensibly passes into slaty coal; when combined with petroleum, into Cannel coal. "The beds of coal usually present a mixture of slate-coal and pitch-coal, rarely of Cannel coal: none of it possesses the quality of caking. Several beds are so penetrated by pyrites that the coal which they yield can only be applied to the burning of lime: these are called *stinking coals*. The first coal forms the ninth bed from the surface, at the depth of 102 feet, and is not more than four inches thick: it is very sulphureous. In the space between this and 396 feet lie nine other beds of stinking coal, none of which exceed the thickness of seven inches except the lowest, which is a little more than a foot and a half thick. The first bed that is worked is a five-foot coal, at the depth of 490 feet, between which and the big-flint sandstone already mentioned are a ten-inch and a yard coal. But the greatest deposit of coal is in the space (about 100 feet) between the big and the little flints, consisting of nine beds, the aggregate thickness of which is about 16 feet. Beneath this, and the lowest bed of the whole formation, is a sulphureous eight-inch coal." The rock on which the coal formation rests is either *die-earth* or limestone; the former is a name given by the miners to this bed, as indicative of the fact that hence downwards all the coal strata *die* or cease. The whole, but especially the Southern portion of this district, is considerably above the level of the plain of Salop. The dip of the strata varies: in the parish of Madeley it is towards the East; near Wellington and Linsell it is from North to North-East, about one yard in ten. The principal faults or breaks of the district run nearly South-East and North-West. Two of these have thrown the strata on the East and West sides, from 100 to 200 yards lower than they are in the middle. This elevated central district, which

does not affect the surface, is about seven miles in length, and from one to two in breadth; and it is here, on account of the greater facility of working the mines, that by far the greatest quantity of coal and ironstone has been procured. As the rocks on both sides of the river, at the entrance of Coalbrook Dale from Shrewsbury, are composed of limestone, which extends along Wenlock Edge as far as Ludlow, this singular combination of coal, iron ore, lime, and the facility of water carriage renders this tract the seat of the most extensive iron-works in the kingdom. To obtain a clear idea of this limestone formation, let the reader turn on the map to the South-Eastern extremity of the district, partially described above. Two parallel ridges of limestone run hence nearly North-East and South-West, the more Easterly of which consists of a line of hills between 500 and 600 feet above the level of the Severn. These hills are composed of beds of limestone and sandstone, rising to the North-West; and hence their South-Eastern sides present a uniform slope, whilst their North-Western are nearly precipitous. The names of the hills constituting this limestone tract are Mochtree forest, on the borders of Herefordshire, Norton Walls, Feifton forest, Munslow hill, Mogg forest, Benthall Edge, and Lincoln hill. They are separated from each other by short, strait valleys, which run nearly in the direction of their dip and rise: as far as Mogg forest, the elevation of the strata does not exceed an angle of 9° , but from Benthall Edge it rises at an angle of 12° . Soon after the strata change their direction to East by North, acquiring an elevation from three to four times as great, but preserving the same angle and direction. The other, or Western range of limestone, known by the name of Wenlock Edge, rarely exceeds 300 feet above the level of the river. It corresponds with the former range in its line of direction, and in its rise and dip; except that the angle made by its strata with the horizon is very uniformly 8° until it crosses the river, and crops out beneath and to the West of the coal strata at Little Wenlock, when it appears elevated at an angle of about 20° , which, at the Northern extremity of the range, rises to between 30° and 40° . Two circumstances, characteristic of this limestone deposit, are the uniformity of its line of direction, whilst there is such a difference of elevation between the two ranges, and the intimate connection of the elevated portion with an unstratified greenstone trap, of which no traces are to be found in the other part of the range.

Some detached, narrow, and broken coal fields occur in the plain of Shrewsbury, to the West of the Coalbrook Dale field; and, South of it, the Brown Clee and Titterstone Clee Hills contain several small coal fields. In the first of these hills the coals lie in very thin strata; the principal stratum in the last is six feet thick. The disposition of the coal measures in the Titterstone Clee Hill, which are cut asunder by a vast basaltic dike, above 100 yards wide, renders them interesting to the geologist. Eastward of these hills, and between them and the Severn, coal is worked in several points of a line of field about eight miles in length; and patches, rather than fields, of coal measures are met with in several other spots.

A peculiarity worthy of notice in the hills in the South-Western districts of the County, as the Bettus ridge, the Stipperstones, &c., is the flattishness and singular squareness of their shape.

The soil in the Eastern districts of the County is in agriculture.

SHROP-
SHIRE.

Soil and

SHROP-
SHIRE.

general of a sandy nature, and, in the more Westerly, is very shallow, overlying various rocks, and chiefly adapted to pasturage. However, the bottom of the wider valleys often consists of a stiff but rich clay. The moorlands, which were formerly rather extensive, have in great measure disappeared before the improvements in draining and enclosing. Agriculture is well understood in the County. The farms are commonly large, and are held on most varieties of lease; the greater number, however, are from year to year. The average rent of land is 17s. 2d. an acre. Wheat, barley, oats, peas, turnips, and potatoes constitute the bulk of the crops; hops, hemp, flax, and cabbages are raised in small quantities only. There is excellent meadow land bordering the Severn and many of the other streams, producing grass in great luxuriance through the natural manure deposited by the floods; but there has not been the same attention paid to the improvement of meadow and pasture, which has advanced other branches of rural economy. The greater part of the sheep are of the South Down breed; but there are many New Leicesters, and the fine woolled Welsh sheep are common in the hilly districts. The total stock of sheep in the County is estimated at more than 420,000; producing annually above 7000 packs of wool. Some fine oak woods still remain in the County; planting has of late years been carried into effect on a large scale, and the tracts of coppice to supply the demands for charcoal are very extensive.

Climate.

Owing to the irregularity of its soil and surface, there is a considerable difference in the climate of Shropshire. The harvest in the Eastern districts, where the land is warm and flat, is frequently a fortnight earlier than in the middle of the County where the vales are extensive, with a cold bottom; but the hay and corn harvests in these wide valleys precede those of the narrower vales on the Western side. The Easterly are the prevailing winds in Spring, and the Westerly in Autumn. The air, generally, is very salubrious.

Trade and
manufac-
tures.

The chief manufacture of the County is that of iron. About 6000 persons are employed in its various processes; and the number of blast furnaces between Ketley and Willey, in the great Eastern coal district, exceeds that within the same space in any other part of the Kingdom. South Wales apart, and with the exception of Staffordshire, more than double the quantity of iron is made in Salop than in any other County of the Empire. The produce of the 48 furnaces which were at work in the year 1830, was above 73,000 tons of iron. The quantity of coal annually raised is estimated at 300,000 tons. A considerable manufacture of flannels was formerly carried on in or near Shrewsbury; which town is likewise the market for the flannels of Merionethshire and Denbighshire, but the trade is now materially declining. There are several mills for dyeing woollen cloth in the County; and considerable manufactures of gloves and paper at Ludlow. Coloured china of all sorts is made at Coalport, in which town the Queen's or Wedgewood's ware is also made. Garden-pots and other vessels, of a coarse fabric, are manufactured at Broseley, as are also excellent tobacco-pipes. Glass is made at Donnington, carpets at Bridgenorth, paper and horse-hair seating at Drayton; and malting is carried on in most of the County towns to a considerable extent. Some linens and cottons are likewise manufactured near Shrewsbury.

Rivers and
lakes.

The principal river is the Severn, which has its source in a small lake on the East side of Plinlimmon. It goes

under the name of the Hafren river as far as Newtown, where it receives its proper denomination. Beyond Welsh Pool it becomes navigable for barges, and here it enters the great plain of Salop. In its further course it almost encircles the town of Shrewsbury, and, near Gloucester, it divides into two channels, which, reuniting soon afterwards, constitute a great tide river. Finally, below Gloucester it assumes the name of the Bristol Channel, and then falls into the Atlantic Ocean. Its principal tributary rivers are the Camlet, the Vyrnwey, the Tern, the Clun, the Ony, and the Teme. Innumerable rivulets and streams, besides these, adorn and fertilize the County. The lakes form a variety in the landscape scenery of Shropshire, rarely to be met with in a midland County. Ellesmere lake covers 116 acres, and there are several others of similar, or hardly inferior extent. It is worthy of remark that the side of the County most abounding in running water, has fewest pools of any size. The fish found in the Severn are salmon, flounders, trout, a few pike, perch, graylings, bleak, roach, shad, dace, gudgeons, chub, carp, a few lampreys, ruff, and eel. The Teme is celebrated for its grayling and trout.

Shropshire is intersected by several important canals; the principal of which are the Shrewsbury, which connects the Severn with the Birmingham and Liverpool Junction Canal, and the Ellesmere, on its Northern extremity, communicating with Denbighshire and Montgomeryshire. The roads, though much improved of late years, are still susceptible of much amelioration. It is worthy of commemoration that the first iron bridge constructed in Great Britain was erected in this County in 1777, by Mr. Abraham Darby, of Coalbrook Dale. It crosses the Severn about two miles above Coalport, and consists of a single arch 100 feet 6 inches wide, and rising 45 feet; it is as perfect now as when first put up. Another iron bridge, on a larger scale, was thrown over the Severn at Buildwas, by Mr. Telford, in 1797.

Salop is divided into 15 Hundreds, or districts, answerable to that denomination, and 216 parishes. It returns eleven Members to Parliament; viz. four for the County, and two each for the Boroughs of Shrewsbury, Bridgenorth, and Wenlock, and one for Ludlow. The place of election for the Northern division of the County is Shrewsbury, and the polling places, Shrewsbury, Oswestry, Whitchurch, and Wellington: for the Southern division, the place of election is Church Stretton, and the polling places, Church Stretton, Bridgenorth, Ludlow, Bishop's Castle, and Wenlock. According to the returns of 1831, the population of the County amounted to 222,503 souls; and from the same returns we learn that the occupiers of land employing labourers were 3832; occupiers of land not employing labourers 2139; labourers employed in agriculture 17,296; labourers employed in manufacture 1353; labourers employed in retail trade or handicraft 14,461; capitalists, bankers, &c., 1948; labourers, not agricultural, 11,585; other males, twenty years of age, 2800; male servants 1560; female servants 11,371. At Hales Owen nearly 500 men are employed in the preparation of iron for the forge, and at Madeley 250. At Dawley and other places in its vicinity many men are employed in the blast furnaces, but their number is not specified. At and near Shrewsbury seventy-four men are employed in iron castings and at forges, and in preparing the weighty apparatus of powerful machinery; nails are made at Wellington. The finer kinds of earthenware employ about

SHROP-
SHIRE.

**SHROP-
SHIRE.** 200 men at Madeley and Broseley; carpeting 90 men at Bridgenorth; glass is made at Wrockwardine; flannels at Oswestry, Church Stretton, and Worthen; and a small manufacture of hair-seating exists at (Market-Drayton) Drayton-in-Hales.

The annual value of real property in 1815 was estimated at £1,083,702; the profits of trade and professions in 1815 at £279,933. The sum expended for the relief of the poor in 1832 amounted to £86,077.

History
and anti-
quities.

When first known to the Romans, Shropshire was inhabited by the Ordovices and Cornavii, and its hills formed the stronghold where Caractacus so long and nobly resisted the progress of invasion. After his subjection, it became part of the Province called Flavia Cæsariensis. Subsequently to the departure of the Romans the County was the subject of frequent contention between the Saxons and Britons, as it afterwards was between the Norman conqueror and the Welsh. Shropshire was occasionally the scene of military contests during the wars of York and Lancaster; the most celebrated of which is the battle of Shrewsbury. During the civil war the County was conspicuous for its loyalty. Originally the Severn was the boundary betwixt England and Wales: the present limits of the County date from the overthrow of Welsh independence. Shropshire, as may be conjectured even from the foregoing brief review of its history, abounds in objects of antiquarian

interest. The chief Roman stations within its limits were Uriconium, now Wroxeter, Mediolanum, near Drayton, and Rutunium, near Wern, though antiquaries differ respecting the precise position of the two last. Watling Street enters the County on the East, between Crackley wood and Weston, and passes through it in an oblique line to Leintwardine, in Herefordshire. The most remarkable encampments are those of Bury ditches, and the Walls, and at Purslow, Barford Gate, and Hawkstone. No certain remains exist of the Saxon era, but there are many memorials of Norman grandeur, and of the stately magnificence of after times: as the Castles of Shrewsbury, Bridgenorth, Clun, Ludlow, immortalized by the residence of the Sidneys and the works composed there by Milton; Hangmond and Buildwas Abbeys; the Monastery of Wenlock; Lilleshall Abbey, where are some beautiful specimens of the Norman arch; Hales Owen Abbey; Wannington Castle; Boscobel House, with the oak that sheltered Charles II.; several priories; and numerous churches of interest to the antiquarian.

**SHROP-
SHIRE.**
SHRUB.

SHROWD, n. } See ENSHROWD.
SHROWD, v. } A. S. *scrud, vestitus*, clothed,
SHRO'WDY, } from *scrydan vestire*, to clothe.
SHRO'WDLSS. } Skinner. This past participle was formerly a general term for any kind of covering (see the Quotation from Pennant) or clothing, (Tooke,) though now commonly applied only to

That with which the dead are clothed, and (*shrowds*) with which the masts of a ship are dressed or clothed.

I shope me into a *shroud* as I a schepeherd were. Piers Plouhman, as quoted by Tooke; but see the Quotation in *v. Shrub, infra*.

And the erth waxeth proud withall,
For swote dewes that on it fall,
And the poore estate forget,
In which that winter had it set;
And then become the ground so proude,
That it wol have a newe *shroude*,
And maketh so quaint his robe and faire,
That it had hewes an hundred paire,
Of grasse and floures.

Chaucer. *The Romant of the Rose*.

I had routhe, and eke pite,
And gan anone, so softly as I coude,
Among the bushes prively me to *shroude*.

Id. *The Complainte of the Black Knight*.

The princes were even compelled by the hail, that the pride of the wind blew into their faces, to seek some *shrouding* place.

Sidney. *Arcadia*, book ii.

There I found my sword among some of the *shrowds*, wishing, I must confess, if I died, to be found with that in my hand.

Id. *Ib.* book i.

And in the midst thereof a silver seat,
With a thick arber goodly over-dight,
In which she often us'd from open heat
Herselfe to *shroud*, and pleasures to entreat.

Spenser. *Faerie Queene*, book ii. can. 7.

The towne then shew me; giue my nakednes
Some *shroud* to shelter it, if to these seas,
Linnen or woollen, you haue brought to cleanse.

Chapman. *Homer. Odyssey*, book vi.

If your stray attendance be yet lodg'd
Within these *shroudie* limits.

Milton. *MS. of Comus*, Trinity College, Cambridge.

As some fair tulip, by a storm opprest,
Shrinks up, and folds its silken arms to rest;
And, bending to the blast, all pale and dead,
Hears from within the wind sing round its head:
So *shrowded* up your beauty disappears.

Dryden. *The Conquest of Granada*, act v.

There is a small island called Santa Clara, which lies east and west; it is of an indifferent length, and it appears like a dead man stretched out in a *shroud*.

Dampier. *Voyages*, ch. vi. p. 147.

Mr. Hicks, who was commanding officer on board, took it into his head to punish him, by giving him twelve lashes with a cat-o-nine-tails; and accordingly ordered him to be taken to the gang-way, and tied up to the *shrouds*.

Cook. *Voyages*, vol. i. book ii. ch. iv. p. 326.

The far greater part stood exposed (at Paul's cross) in the open air; for which reason the preacher went, in very bad weather, to a place called the *shrouds*; a covered space on the side of the church, to protect the congregation in inclement seasons.

Pennant. *London*, p. 512.

To where a mangled corse
Expos'd without remorse,
Lies *shroudless*, unentomb'd, he points the way,
Points to the prowling wolf exultant o'er his prey.

Dodsley. *Melpomene*.

SHRUB, } A. S. *scrobbe, scrybe*.
SHRU'BBED, } Bushy trees of low growth are
SHRU'BBY, } called *shrubs*, and the word may
SHRU'BBERY. } have been originally applied to the bushes which sprung up in grounds where the trees have been *scrubbed* up.

In a some seýson. whan softe was þe sonne
ý shop into *shrobbis*.

Piers Plouhman, p. 1.

Neere at hand were growing diuers *shrubbed* trees, the boughes whereof (for the greater reuerence and exornation of the present solemnitie) he cutting and sliuing downe, perceiued blood in great abundance issuing from the broken branches.

Warner. *Albion's England*, book ii.

SHRUB.

Though they be well *shrubbed* and shred, yet they begin even now before the spring to bud, and hope again in time to flourish as the green bay-tree.

SHRUG.

Anderson. *Exposition of Benedictus*, (1573,) fol. 64.

Farre in the forrest, by a hollow glade
Covered with mossie *shrubs*, which spreading brode
Did underneath them make a gloomy shade,
Where foot of living creature never trode,
Ne scarce wyld beasts durst come, there was this wight's abode.
Spenser. *Faerie Queene*, book iv. can. 4.

They [rushes] cannot justly be reckoned in the ranke either of *shrubs*, or brier-bushes and brambles, ne yet of tall plants growing up with stems and stalkes.

Holland. *Plinie*, book xvi. ch. xxxvii.

First march the heavy mules, securely slow,
O'er hills, o'er dales, o'er crags, o'er rocks they go;
Jumping, high o'er the *shrubs* of the rough ground,
Rattle the clattering cars, and the shockt axes bound.

Pope. *Homer. Iliad*, book xxiii.

The land about it is dry and sandy, bearing only a few *shrubby* trees.

Dampier. *Voyages*, ch. vi. p. 135.

They lop off the small branches of the large trees, dig under the roots, and there burn the branches and small *shrubs* and plants which they root up.

Cook. *Voyages*, vol. iv. book iii. ch. ix. p. 59.

Enter a modern *shrubbery* formed of a selection of the most agreeable flowering *shrubs*, and consider, whether there is any thing in the garden of Alcinous, in the fields of Elysium, in Milton's Paradise, to be compared with the intermixture of the lilac, the syringa, the laburnum, the double-blossomed cherry, peach, and almond.

Knox. *Works*, vol. i. p. 559. *Essay*, No. 115.

These are their bread, the only bread they know;
These, and their willing slave the deer, that crops
The *shrubby* herbage on their meagre hills.

Armstrong. *The Art of Preserving Health*.

SHRUB. By an easy corruption of *y* to *h*, *syrop* becomes *shrop*, *shrup*, *shrub*. Tooke.

SHRUB, though almost a slang term for an intoxicating compound, is probably derived from the Arabic word *sheráb*, (beverage,) and more particularly "wine;" a term commonly used by the Arabs in Syria and Barbary, as well as by the Persians. From *sharábah*, "a draught," the physicians also in the Middle Ages got "sirapa," or "syrapa," whence our word "syrup."

SHRUG, *v.* } Wachter thinks from the same

SHRUG, *n.* } source as *shriek*, *q. v.* (which is

SHRUGGING, *n.* } also anciently written *shright*, very nearly approaching to Holland's *shrugged*.) It is applied to

A motion or action of the shoulders; by drawing or raising them towards the ears: (in expression of different feelings.)

The touch of the cold water made a pretty kind of a *shrugging* come over her body, like the twinkling of the fairest among the fixed stars.

Sidney. *Arcadia*, book ii.

Atticus is of opinion, that the shadow of elmes is one of the thickest and most hurtfull; neither doe I make any doubt thereof, if they be let to spread into great armes and boughs at libertie; marie if the braunches thereof, or of any tree within-forth be *shrugged*, (*constrictæ*.) I thinke that the shade will doe no harme at all.

Holland. *Plinie*, book xvii. ch. xii.

Yet though he cannot skip forth now to greet
Every fine silken painted fool we meet,
He them to him with amorous smiles allures,
And grins, smacks, *shrugs*, and such an itch endures,
As prentices or school-boys, which do know
Of some gay sport abroad, yet dare not go.

Donne. *Satire* 2.

Upon his being told that there were in the Centurion four hundred firelocks, and between three and four hundred barrels of powder, he *shrugged* up his shoulders, and seemed to be terrified

with the bare recital, saying, that no ships ever came into Canton river armed in that manner.

Anson. *Voyages*, book iii. ch. ix. p. 511.

Sir Smug, he cries,—for lowest at the board,
Just made fifth chaplain of his patron lord,
His shoulders witnessing by many a *shrug*
How much his feelings suffer'd, sat Sir Smug.

Cowper. *Hope*.

SHU'DDER, *v.* } D. *schudden*, *schudder*; Ger.
SHU'DDER, *n.* } *schutten*, *schuttern*, *quater*, *tremere*; plainly enough, says Skinner, from the It. *scuotere*, Lat. *excutere*, to shake off. Wachter from *quater*, To quake, to shake, to tremble, (with fear, horror.)

Alas, they make me *shoder*.

Shelton. *Colyn Clout*.

Saue howlings out and *shuddering* feare,
Came nought to eare or sight,
With grievous grones of dying ghosts.

Warner. *Albion's England*, book i.

I know you'l sweare, terribly sweare
Into strong *shudders*, and to heavenly agues
Th' immortall gods that heare you.

Shakspeare. *Timon of Athens*, act iv. sc. 3. fol. 91.

The fright was general; but the female band
(A helpless train) in more confusion stand;
With horrore *shuddering*, on a heap they run,
Sick at the sight of hateful justice done.

Dryden. *Theodore and Honoria*.

Who see dire spectres through the gloomy air
In threatening forms advance, and *shuddering* hear
The groan of wandering ghosts, and yellings of despair.

Blackmore. *Creation*, book iii.

But see Ierne's moors and hideous bogs,
Immeasurable tract. The traveller
Slow tries his mazy step on th' yielding tuft,
Shuddering with fear.

Dyer. *The Fleece*, book ii.

SHUFFLE, *v.* } The diminutive of *shove*: A. S.
SHUFFLE, *n.* } *scuf-ian*, to shove; to push. See
SHUFFLER, } SCUFFLE.
SHUFFLING, *n.* } To shove or push, (*sc.* the feet,)
SHUFFLINGLY. } to move, at low short steps; to

move at short distances; to move about, to and fro, disorderly, confusedly, irregularly; to move from, push out of the direct course, to evade; to move or push together, irregularly, hastily, (*sc.* to escape notice or detection, and hence) fraudulently.

On a night when the lieutenant and he for their disport were plaieng at slidegrote or *shooftbeoord*, suddenlie commeth from the cardinall a mandatum to execute Kildare on the morrow.

Holinshed. *Chronicles of Ireland*, Anno 1528.

Besides, as exiles ever from your homes,
You live perpetual in disturbancy;
Contending, thrusting, *shuffling* for your rooms
Of ease or honour, with impatiency.

Daniel. *History of Civil Wars*, book viii.

A shoeless soldier there a man might meet,
Leading his monsieur by the arms fast bound;
Another his had shackled by the feet,
Who like a cripple *shuffled* on the ground.

Drayton. *The Battle of Agincourt*.

The use of this perverse hypothesis is only to *shuffle* off all arguments that are drawn from apparitions.

More. *Immortality of the Soul*, book i. ch. xiii. p. 3.

The voice of conscience can be no more heard in this continual tumult, then the vagient cries of the infant Jupiter amidst the rude *shuffles* and dancings of the Cretick Corybantes, and the tinkling and clashing of their brazen targets.

Id. *lb.* book ii. ch. xviii. p. 142.

We shall be condemned for the evils that we have done, and shall then remember; God by his power wiping away the dust from the tables of our memory, and taking off the consideration and the voluntary neglect and rude *shufflings* of our cases of conscience.

Taylor. *Sermon* 2. vol. i. p. 39.

SHRUG.

SHUFFLE.

SHUF.
FLE.
—
SHUN.

A mere undistinguished chaos, where sense and reason, brute and man, are *shuffled* together without any order, like a confounded heap of ruins.

Scott. *Christian Life*, part i. ch. ii. p. 14.

One may judge from hence, that Socinus's pretended reasons against the notion of remembrance were mere *shuffle* and pretence, carrying more of art and colouring in them, than of truth or sincerity.

Waterland. Works, vol. vii. p. 64. *Doctrine of the Eucharist*, ch. iii.

We had fair weather, and a pretty smart gale of wind at east, for three or four days, and then it shifted to the south-west, being rainy, but it soon came about again to the east, and blew a gentle gale; yet it often *shuffled* about to the south-east.

Dampier. Voyages, ch. xi. p. 306.

Eusebius plainly denies the son to be *εκ του μη οντος*, in the same sense that he affirms it of creatures; and therefore must deny his passing out of non-existence to existence, unless he were the greatest prevaricator and *shuffler* imaginable.

Waterland. Works, vol. iii. p. 150. *A Second Defence of some Queries. Query 2.*

For soon he sees
A tall black man skulk through the trees;
He knew him by his *shuffling* pace,
His thread-bare coat and hatchet face.

Somerville. The Happy Disappointment.

Perhaps I may go *shufflingly*, for I was never before walk'd in trammels; yet I shall drudge and moil at constancy, till I have worn off the hitching in my pace.

Dryden. Spanish Friar, act i.

The paralytic, who can hold her cards,
But cannot play them, borrows a friend's hand
To deal and *shuffle*, to divide and sort
Her mingled suits and sequences.

Cowper. The Task, book i.

A provision of endless apparatus, a bustle of infinite inquiry and research, or even the mere mechanical labour of copying, may be employed, to evade and *shuffle* off real labour,—the real labour of thinking.

Reynolds. Works, vol. ii. p. 78. *Discourse 12.*

Shume.
Shoom.

SHUM, in Amharic, from the Æthiopic *Sēyūm*, "placed over," signifies "an overseer," "superintendent," and is the common title of governors of provinces.

Bruce's *Travels*; Ludolph, *Lex. Amharicum*.

SHUME (*shūm*, "black or unpropitious") is the epithet distinctively given, according to Mr. Jackson, (*Morocco*, p. 283; *Shabeeny*, p. 5.) by the Moors of the Sahrā or Great African Desert, to the insufferably hot wind from the East South-East which drives the parched sand in thick clouds over the vast plains of the Desert,* and evaporates every particle of moisture with such rapidity as frequently to reduce the travellers to the last extremity. When this wind springs up, and the káfilah or caravan is sufficiently numerous to be termed an a'kibah,† or "thickly crowded multitude," it is often necessary to strike the tents at once and proceed, in order to fly from the danger of being overwhelmed. Mr. Jackson, whose account is perhaps somewhat exaggerated, in consequence of the extravagant reports of the Moors, says, that he never felt any excessive inconvenience from the Shūm, North of the province of Sús-el-aksá.

Grey-Jackson, *Morocco*, 2d. ed. London, 1809, 4to.; *Id. Shabeeny's Timbuktoo*, London, 1820, 8vo.

SHUN, v. } A. S. *scun-ian*, *ascunian*, *onscunian*.

SHU'NLESS. } To fly, fly from or avoid. See

ESCHEW.

To fly from, move out of the way, avoid; to evade.

* Well represented in Captain Lyon's plate, *Travels in Murzúk*, p. 70.

† A'kibah, the collective noun from 'Ukáb, "the crowding together of camels towards water;" thence, "a crowd," "pressure," &c.

Ech man *shoneþ* hus companýe.

Piers Plouhman. Vision, p. 228.

Bot Henry David sonne, þat his heýr suld be,
Contek for to *schonne*, to Steuen mad feaute.

R. Brunne, p. 111.

I will beware, and make a glasse
of thee whilst I haue breath,
To *shunne* the sluttish sinfull sect,
thy tipling and thy toyes.

Turbervile. Aunsuere to vile Counsell of Epicures.

But when they be debard the same
which so they *shunde* before,
They crie and call for tysants [Ptisan] then
as soueraigne for their sore.

Id. Of the Afflictions of his Loue.

Disleall knight, whose coward corage chose
To wreake itselfe on beast all innocent,
And *shund* the marke at which it should be ment,
Therby thine armes seem strong, but manhood frayl.
Spenser. Faerie Queene, book ii. can. 5.

Alone he entred
The mortall gate of th' citie, which he painted
With *shunlesse* destinie; aydelesse came off,
And with a sudden reinforcement strucke
Corioles like a planet.

Shakspeare. Coriolanus, act ii. sc. 2. fol. 11.

It is not supposed that we should have power always to resist, unless we before-hand do what is in our power to *shun* temptation.

Atterbury. Sermon 4. vol. iii. p. 85.

SHUT, v.

SHUT, n.

SHU'TTING, n.

SHU'TTER,

SHU'TTLE.

Very variously written by our old authors. See SHOOT. D. *schutten*; Ger. *schutten*; A. S. *scyt-an*, to throw or cast.

To cast or throw to, *sc.* the door; to throw it close, to close it; to close in, to inclose, to include; to exclude, to close against, to close, to conclude.

To get shut of any thing; to get it thrown or cast off or away, clear away; to get clear of, rid or free.

Shuttle, see SHUTTLE.

Jesus cam while the ghatie weren *schit*, and stood in the myddil and seide, Pees to ghoul.

Wiclif. John, ch. xx.

The same daye at night, which was the morow after the Saboth day, when the dores were *shut*, where y^e dysciples were assembled together for feare of the Jewes, came Jesus and stode in the myddes, and said to thē, Peace be with you.

Bible, Anno 1551.

And on a day befell, that in that houre,
Whan that his mete wont was to be brought,
The gailer *shette* the dores of the toure;
He hered it wel, but he spake right nought.

Chaucer. The Nonnes Preestes Tale, v. 14733.

My windowes weren *shit* echone,
And through the glasse the sunne shone
Upon my bed with bright bemes.

Id. The Dream.

And if the dore be se *shette*,
That he be of his entre lette,
He will in at the wyndowe crepe.

Gower. Conf. Am. book v.

Syr Thomas More, a little before he was arrayned and condemned, (in the yere of our Lorde 1535, and in the xxvii. yere of the raygn of kyng Henry the eight,) being *shit* vp so close in prison in the tower that he had no penne nor inke, wrote with a cole a pistle in Latine to maister Anthony Bonuyse.

Sir Thomas More. Workes, p. 1454.

And (he) suffered grief so to close his heart, that his breath failing him with a dreadful *shutting* of his eyes, he fell down at her bed side.

Sidney. Arcadia, book iii. p. 695.

The king's a-bed.

He hath beene in vnusual pleasure,
And sent forth great largesse to your offices.
This diamond he greetes your wife withall,
By the name of most kind hostesse,
And *shut* vp in measurelesse content.

Shakspeare. Macbeth, fol. 136.

SHUN.
—
SHUT.

SHUT.

SHY.

The weaver said, Fie wench, yourselfe you wrong
Thus to let slip the *shuttle* of your tong.

Browne. Britannia's Pastorals, book i. song 4.

Just. An honest weaver, and as good a workman as e'er shot
shuttle. *Beaumont and Fletcher. The Coxcomb*, act v. sc. 1.

A thousand wayes he them could entertaine,
With all the thriftles games that may be found;
With mumming and with masking all around,
With dice, with cards, with balliards farre unfit,
With *shuttlecocks*, misseeming manlie wit.

Spenser. Mother Hubbard's Tale, p. 363.

I us'd your name
And urg'd th' importance home; but had for answer,
That since the *shut* of evening none had seen him.

Dryden. Don Sebastian, act iv. sc. 1.

And yet the wealthy will not brook delay,
But sweep above our heads, and make their way,
In lofty litters borne, and read and write,
Or sleep at ease; the *shutters* make it night.

Dryden. Juvenal. Satire 5.

Indeed their success was very near doing honour to their Ave
Marias; for, altering their course in the night, and shutting up
their windows to prevent any of their lights from being seen, they
had some chance of escaping; but a small crevice in one of the
shutters rendered all their invocations ineffectual.

Anson. Voyages, book ii. ch. v. p. 232.

Now, shepherds, clip your fleecy care;
Ye maids, your spinning-wheels prepare;
Ye weavers all your *shuttles* throw,
And bid broad-cloths and serges grow.

Gay. The Shepherd's Week. Pastoral 1.

If, after all, some headstrong hardy lout
Would disobey, though sure to be *shut* out,
Could he with reason murmur at his case,
Himself sole author of his own disgrace?

Cowper. Hope.

SHUTERIA, in *Botany*, a genus so called in
memory of the late Dr. Shuter, of the East India Com-
pany's medical service. It belongs to class *Pentandria*,
order *Monogynia*, and natural order *Convolvulaceæ*.
Generic character: calyx of five unequal sepals, corolla
campanulate; style one; stigma two-lobed, lobes ovate,
flattened; capsule one-celled, four-seeded.

Only one species, a climbing annual plant, native of
the East Indies, with cordate, angular leaves and
yellow flowers, except the bottom of the bell, which is
purple.

SHUTERIA, in *Botany*, a genus so called by Wight
and Arnott, after Dr. Shuter, of the East India Com-
pany's medical service, an excellent botanist. It belongs
to the class *Diadelphia*, order *Monogynia*, and natural
family *Leguminosæ*. Generic character: calyx four-
cleft, bibracteate at the base; corolla papilionaceous;
keel of one piece, shorter than the wings; vexillum
without callosities; stamens diadelphous; stigma capi-
tate; legume linear, compressed, hairy, continuous, five
or six-seeded, partitioned between the seeds.

This genus, which is nearly allied to *Glycine*, consists
of three species, natives of India; they are twining,
hairy plants, with trifoliate leaves, and axillary many-
flowered racemes.

SHY, *adj.* } D. *schouwen*; Ger. *schewen*; Sw.
SHY, *v.* } *sky*; to shun, to eschew, *q. v.*
SHI'LY, } To *shy*, is used in common speech
SHI'NESS. } (of a horse) as he *shies* at a post, starts
away from.

Shy, adjective, is applied to one who shuns, avoids,
evades company or society; shuns or avoids to be seen;
and thus timid, diffident, bashful, retiring, reserved;
one who shuns through fear of consequences, and thus,
wary, cautious.

'Tis not impossible
But one, the wickedst caitiffe on the ground,
May seem as *shie*, as grave, as just, as absolute
As angels.

Shakspeare. Measure for Measure, act v. sc. 1. fol. 80.

It can be no offence to the knowing and ingenious, that men
have a *shyness* and jealousy against such truths as they have not
been acquainted with.

More. Philosophical Writings. Preface, p. iii.

They are very *shy*, therefore it is hard to shoot them.

Dampier. Voyages, vol. i. ch. iv. p. 70.

It abounds with goats, who, not being accustomed to be dis-
turbed, were no ways *shy* or apprehensive of danger, till they had
been frequently fired at.

Anson. Voyages, book ii. ch. iv. p. 213.

To the account already given I must add, that there are in all
parts of this country a good number of Vicuñas or Peruvian
sheep; but these, by reason of their *shyness* and swiftness, are
killed with difficulty.

Id. Ib. book i. ch. vi. p. 92.

SIAGONA, in *Zoology*, a genus of *Celeopterous*
insects.

Generic character. *Antennæ* filiform; the basal
joint considerably larger than the others, and slightly
increasing in size to the extremity; *palpi* six, slightly
elongate, the terminal joint of the maxillaries a little
thicker at the apex; of the labial securiform; *labrum*
quadrate, dentate in front; *mentum* not jointed, cover-
ing the greater portion of the under side of the head,
very deeply notched, and with a bifid tooth in the
middle; head large and flat; *thorax* heart-shaped; body
depressed; legs moderate; *femora* stoutish; anterior
tibiæ slightly notched within, but not palmated, the
intermediate and posterior pair simple; *tarsi* pen-
tamerous.

Type of the genus, *Cucujus rufipes*, Fabricius; *S.*
rufipes, Degeer, *Coléoptères*, vol. i. p. 358. Twelve
species, none of which occur in Britain, and only two in
Europe, frequenting the Southern regions.

SIAGONIUM, in *Zoology*, a genus of *Coleopterous*
insects.

Generic character. *Antennæ* very long, pubescent,
filiform, the basal joint longest, stout, the second slender,
the remainder gradually increasing in size to the apex,
and oblong, the terminal one subovate; *palpi* four,
filiform; maxillary longest, apical joint cylindric-ovate;
labrum bilobed; mandibles dissimilar in the sexes, in
the males furnished with a very long tooth within, in the
females simple; head triangular-orbicular, as wide as
the thorax, armed in the males with a horn on each side
before the eyes, unarmed in the females; eyes hemi-
spheric; *thorax* obcordate, dilated in front and slightly
marginated; body linear, depressed; *elytra* long; legs
short; *femora* simple; *tibiæ* ciliated within, and the
two anterior pair denticulate without; *tarsi* five-jointed,
the terminal joint as long as the other four united.

Type of the genus, *S. quadricorne*, Kirby; Curtis,
Brit. Ent. vol. i. pl. xxiii. Three species, two of which
are European, the type inhabiting Britain, and the other
West Indian. They reside beneath the bark of decaying
trees.

SIALIS, in *Zoology*, a genus of *Neuropterous* insects.

Generic character. *Antennæ* short, setaceous, com-
posed of numerous simple joints, the basal one robust;
palpi filiform, the basal joint somewhat elongate-cylin-
dric; mandibles small; head moderate, as wide as the
thorax; eyes prominent; *ocelli* wanting; collar ample;
meso- and meta-thorax both transverse, tubercular;
wings four, deflexed during repose, all of nearly equal
size, coarsely reticulated, anterior dilated at the base of

SHY.

SIALIS.

SIALIS. the costa; *nervures* variable; legs stoutish; *tibiæ* with two very short spurs at the apex; *tarsi* five-jointed, the last joint but one bifid.

**SIB-
BALDIA.**

Type of the genus, *Hemerobius lutarius*, Linnæus; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. vi. p. 134. Two species; the typical one very abundant in Britain, frequenting the banks of rivers and lakes; the larva is aquatic, very active, and swims well; the female lays a great quantity of conical brown eggs; disposed with much symmetry on the leaves of aquatic plants.

SIAM. See TRANS-GANGETIC INDIA.

SIANKE, or **SYNKE**, are corruptions of the Javanese word Chinke or Chanké, (pronounced Chang-ké,) "clove," the *Caryophyllus aromaticus* of botanists. The word is correctly spelt Chanque by García, according to the Spanish orthography. *Calafur*, said erroneously to be used by the Turks and Persians, is a misspelling of Karanful, (pronounced Karamful,) borrowed by the Arabs from the Greek caryophyllon. Marsden, *Malayan Dict.*; Shakespeare, *Hindustani Dict.*

SIB, or } Goth. *sib*, *pax*, *gasibyon*, *reconciliari*.

SYB. } Junius. A. S. *sib*, *syb*, *sybbe*; which Somner explains peace, quietness, concord, agreement; kindred, alliance, affinity. *Sib-ian*, to make peace or pacify; D. *ghe-sibbe*; Sw. *sif*. No more *sib'd* than sieve and riddle, that grew both in a wood together. Ray, *North Country Words*; and see Jamieson. in v., and Gossip, ante. See also *Sibrit*, in Moor's *Suffolk Words*.

Alle that were ogt *ysyb* Edmonde the kyng.

Other in alyance of eny loue, to dethe he let brynge.

R. Gloucester, p. 315.

And ho is *sybbe* unto þuse sevene.

Piers Plouhman. Vision, p. 125.

And to poverte hym weddeþ

þe wyche is *sibbe* to Cryst self.

Id. Ib. p. 268.

And though so be that youre kinrede be more stedefast and siker than the kin of your adversaries, yet natheles youre kinrede is but a fer kinrede; they ben but liel *sibbe* to you, and the kin of youre enemies ben nigh *sibbe* to hem.

Chaucer. The Tale of Melibeus, p. 113.

But of hem two a man maie lere,

What is to be so *sibbe* of bloode,

None wist of other howe it stode.

Gower. Conf. Am. book viii.

But for to loke of tyme ago,

Howe lust of loue exceedeth lawe,

It ought for to be withdrawe.

For every man it shulde drede,

And nameliche in his *sibrede*,

Which tourneth oft to vengeance.

Id. Ib. book viii.

He wonneth in the land of fayëree,

Yet is no fary borne, ne *sib* at all

To elfes but sprong of seed terrestrial,

And whylome by false faries stolne away,

Whyles yet in infant cradle he did crall.

Spenser. Faerie Queene, book iii. can. 3.

Let

The bloud of mine that's *sibbe* to him be suckt

From me with leeches, let them break and fall

Off me with that corruption.

Beaumont and Fletcher. The Two Noble Kinsmen, act i. sc. 1.

SIBBALDIA, in Botany, a genus so named from Robert Sibbald, M.D., author of *Scotia Illustrata*. It belongs to class *Pentandria*, order *Pentagynia*, and natural order *Rosaceæ*. Generic character: calyx flat-tish, ten-cleft, the five outer segments accessory; petals five, linear-spatulate; stamens five or ten; styles five or ten, lateral; capsules five or ten, seated on an almost naked receptacle.

There are three species; one a native of the mountains of Scotland, *S. procumbens*, another of Altaia, and the other of Cappadocia. They are all evergreen, dwarf, glandless herbs, with trifoliate leaves and corymbose heads of yellow or white flowers. Nearly related to *Potentilla*.

**SIB
BALDIA.
SIBYL.**

SIBILANT, } Lat. *sibilans*, present participle of
SIBILA'TION. } *sibilare*, to hiss; from *sibilus*, which Quintilian has recorded to be one of the three words (*mugilus*, *sibilus*, *murmur*) formed from the sound (*ορομοταπεια*, i. e. *fictio nominis*) permitted to the Latin tongue.

Hissing.

All metals quenched in water give a *sibilation* or hissing sound; (which hath an affinity with the letter *z*;) notwithstanding the sound be created between the water or vapour and the air.

Bacon. Natural History. Cent. ii. sec. 176.

It hath been tried, that a pipe a little moistened on the inside, but yet so as there be no drops left, maketh a more solemn sound than if the pipe were dry: but yet with a sweet degree of *sibilation* or purling.

Id. Ib. Cent. iii. sec. 230.

It were easy to add a nasal letter to each of the other pair of hissing and *sibilant* letters.

Holder. Elements of Speech.

S has in English the same hissing sound as in other languages, and unhappily prevails in so many of our words that it produces in the ear of a foreigner a continued *sibilation*.

Johnson. English Dictionary. Letter *S*.

SIBINIA, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, clavate, eleven-jointed, rather short and stout, funiculus six-jointed, its three basal joints somewhat elongate, obconic, the first most robust, the remaining three short, with the apex truncate; club rather stout, oblong-ovate; *labrum* obsolete; head produced in front into an elongate, free, slightly bent *rostrum*, somewhat attenuated towards the apex; eyes large, lateral, rounded; *thorax* much narrowed in front, the base obsoletely sinuated; *scutellum* minute; *elytra* short, broad, depressed on the back, each rounded at the apex, and a little shorter than the abdomen; legs rather short and stout; *femora* unarmed; *tibiæ* slightly compressed, truncate at the tip, which is a little spinose; *tarsi* tetramerous.

Type of the genus, *Curculio viscaria*, Linnæus; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iii. p. 58. Ten species, three of which, including the type, are found occasionally in England.

SIBTHORPIA, in Botany, a genus of plants so called in honour of H. Sibthorp, M.D., Professor of Botany at Oxford. It belongs to class *Tetrandria*, order *Monogynia*, and natural order *Sibthorpiaceæ*. Generic character: calyx five-parted; corolla subrotate, five-lobed; stamens four or five, nearly equal; stigma capitate; capsule suborbicular, compressed, dehiscing at top.

A genus consisting of three species, small, creeping, radican, tufted herbs, with small, alternate, reniform, lobed leaves, and axillary, solitary, insignificant flowers. One species, *S. Europæa*, is a native of Cornwall and Devonshire, and the other two of South America.

SIBYL,

SIBYLLINE,

SIBYLLIST.

Lat. *sybilla*; *q. d.* *σιων βουλη*; *σιος*, *Æol.* for *ἑος*; and *βουλη* for *βουλη*. See Vossius: who is not satisfied with this, but has nothing better.

The pictures of the *Sybits* are very common, and for their prophecies of Christ in high esteem with Christians; described commonly with youthful faces, and in a defined number.

Sir Thomas Brown. Vulgar Errors, book v. ch. xi. p. 304.

SIBYL.
—
SICILY.

The other extreme may be, in concluding the whole business of the *Sibylline* oracles (as any ways relating to Christianity) to have been a mere cheat and figment; and that there never was any thing in those *Sibylline* books, which were under the custody of the Quindecimviri, that did in the least predict our Saviour Christ or the times of Christianity.

Cudworth. Intellectual System, book i. ch. iv. p. 282.

They did not all acknowledge the *Sibyl* to have been a prophetess neither, since upon Celsus mentioning a sect of Christians called *Sibyllists*, Origen tells us, that these were such as using the *Sibylline* testimonies, were called so in way of disgrace, by other Christians, who would not allow the *Sibyl* to have been a prophetess.

Id. Ib. p. 284.

The great agent in this affair is the *Sibyl*; and, as a virgin, she sustains two principal and distinct parts; that of the inspired priestess, to pronounce the oracle; and that of Hierophant, to conduct the initiated through the whole celebration.

Warburton. Divine Legation, book ii. sec. 4.

SICAMORE, or } Fr. *sycomore*; It. *sicomoro*;
SYCAMORE. } Sp. *sicomoro*; Lat. *sicomorus*;
Gr. *συκομορεα*, from *συκη*, a fig, and *μορεα*, *morus*. The large maple tree, ridiculously so named, says Skinner, though there may be some resemblance in the leaves and trunk to the Egyptian *sycomorus*. See the Quotation from Holland's *Plinie*.

There saw I Coll Tragetour,
Upon a table of *sicamour*,
Play an vncouth thing to tell,
I saw him carry a wind mell
Under a walnote shale.

Chaucer. The House of Fame, book iii.

The hedge also that yede in compas,
And closed in all the greene herbere,
With *sicamour* was set and eglatere.

Id. The Flower and the Leaf, p. 395.

In Ægypt likewise there be found many trees which grow not elsewhere; and principally the *sycomore*, which thereupon is called the Ægyptian fig-tree. The tree, for leafe, bignesse, and barke, is like unto the mulberie tree.

Holland. Plinie, book xiii. ch. vii.

SICCITY, Fr. *siccité*; It. *siccita*; Lat. *siccitas*, from *siccus*, dry. See **DESICCATE**.

Dryness.

They speak much of the elementary quality of *siccity*, or drie- nesse; and of things *dessicating*.

Bacon. Life and Death, p. 7.

That which is concreted by exsiccation, or expression of humidity, will be resolved by humectation, as earth, dirt, and clay; that which is coagulated by a fiery *siccity*, will suffer colliquation from an aqueous humidity, as salt and sugar.

Sir Thomas Brown. Vulgar Errours, book ii. ch. i. p. 55.

SICILY.

SICILY, the richest and most civilized, as well as the largest of the Mediterranean Islands, constitutes together with the Neapolitan dominions on the continent, the Kingdom of the Two Sicilies, of which it forms about a third of the superficies and population. Its shape is an irregular triangle, terminating in three celebrated capes: that to the North-East is called Capo Faro; that to the South-East, Capo Passaro; and that to the West, Capo Boco; being respectively the *Pelorum*, the *Pachynus*, and the *Lilybæum* of the ancients. The Northern side, or base of the triangle, is 215 British miles in length, from Capo Faro to Capo Boco; the South-Western, from Capo Boco to Capo Passaro, is 180; and the Eastern, from the last named cape to Capo Faro, is only 120. It lies between 12° 45' and 16° 10' East longitude, and between 35° 40' and 38° 15' North latitude: its superficies, according to Captain Smyth, cannot much exceed 11,300 square miles.

Surface,
Agricul-
ture, &c.

The appearance of the coasts of the island is highly romantic, and they abound in many naturally strong, defensible positions; while ridges of hills, prolongations of the Apennines, the general direction of which is from East to West, and which throw off branches to the Southward, intersect its interior. The principal Sicilian mountains are comprised in two chains, one running from the Faro of Messina to Marsala, and the other from Cefalù to Cape Passaro: but none of these are of very considerable height, the highest peak among them not rising above 6500 feet. (Ætna and Mount Eryx, the loftiest summits in Sicily, are both isolated mountains.) Their ramifications, however, diversify the surface in every direction, and form a picturesque assemblage of hill, ravine, and valley, the latter often spreading out into extensive plains, which are animated by the numerous flocks and herds of this ever pastoral country. The hilly regions are nobly wooded; the chief forests are those of Ætna, Gibel-Manna, Caronia, Traina, Noto,

Biscari, and Corleone. Cultivation appears very general, there being few waste lands, yet it is conducted rather laboriously than skilfully. The plough still in use merely skims the soil, a bunch of brambles supplies the place of the harrow, and the other agricultural implements are equally rude. Even the primitive method of treading out corn with cattle is still preserved. The system of agriculture generally followed is to commence with sowing wheat: this crop is succeeded by hemp, maize, lentils, or other pulse, and, in the ensuing seasons, usually by barley and beans, followed by mixed esculents and a fallow. The harvest commences towards the end of June, and continues through July and August. The best kinds of wheat grown are the *farro* or *Triticum spelta*, which is a long grain, nearly twice the size of common English wheat; and the *Majorca* or *Triticum sativum*, an oval, soft wheat. The former is commonly boiled whole, as a substitute for barley or rice; the flower of the latter, which is remarkably white, is used only for the best bread, biscuits, pastry, &c. The usual produce is from ten to sixteen for one; in very favourable years the return may be as great as twenty-eight; so that, as Captain Smyth observes, the once boasted hundred-fold of Sicily must be received as a poetical hyperbole. Pasturage is very negligently managed; and the culture of artificial grasses but little known. Hemp thrives well here; but, as its exportation is forbidden, very little is grown. Cotton is profitably cultivated in the neighbourhood of Terra Nuova and Catania. Saffron enters into the exports of the island; and the cultivation of sumach is attended with considerable profit. The olive grows on most soils, but chiefly affects the calcareous: the oil, in general, is of inferior quality, and only adapted to the manufacture of soap. The beans of Sicily are, according to M. Simond, of extraordinary size, and are largely exported to Spain and Portugal. Next to wheat, however, the grape-vine is the chief object of agricultural

SICA-
MORE.
—
SICILY.

SICILY. attention, and is highly profitable both to the grower and the revenue. The vineyards are usually in the vicinity of the towns. The Marsala is the only wine produced in the island which is exported to every part of the world: the other growths are chiefly confined to the Italian markets. It is calculated that the produce of a thousand vines varies from a pipe and a quarter to four pipes of wine, according to the season, their situation, age, and culture. A trade is likewise carried on in the fruit, the spirit, and the syrup of the *carubba* or locust, a species of bean; and the Indian fig, or prickly pear is a very general article of food during the time it is in season. The almond trees form numerous groves throughout the whole island; and both the nut itself, as well as the oil extracted from it, afford staple articles of exportation.

The land is leased out in large farms, to companies of farmers, or rather of shepherds, some of whom own flocks of from ten to twelve thousand sheep. The flocks are herded together, and once a year are numbered as follows:—there is a table prepared, divided into as many compartments as there are proprietors, and, whilst the sheep are made to pass through a narrow passage, a small pebble is thrown into the compartment of the proprietor to whom the animal belongs: the colour of the pebble serves to indicate the sex and age of the animal, and also whether the sheep is with young or not. The accounts, taken as above, are registered in the books of the co-partnery, and the profit or loss is apportioned according to the balance thus struck. The chief expenses are the rent, and the pay of the shepherds, who are all partners in the scheme. The returns proceed from the dairy, the wool, and the sub-letting of the better land to the small farmers.

Climate

The temperature, generally speaking, may be pronounced excellent. Malaria, however, is common in the autumn, being a species of less inveterate yellow fever. The medium height of the thermometer is 62° 5', of the barometer 29° 80', and of the pluviometer 26 inches. The thermometer in the hottest days rises as high as 90° or 92°, and very seldom falls below 36°, even in the depth of Winter. "The highest barometrical index," says Captain Smyth, "I have observed in very severe weather, and light Westerly airs, was 30° 47'; and the lowest, in gloomy weather and South-East gales, 29° 13'." The most annoying wind is the sirocco, or South-East; which generally continues three or four days, and, though blighting in its general effect in Summer, is favourable to the growth of several useful plants in Winter. The island has ever been subject to alarming and desolating earthquakes, of which it is remarkable that thirteen of the most destructive on record have occurred, though in different years, between the 10th of January and the 28th of March. These appalling visitations usually happen after heavy rains. The country sometimes labours under a drought from April to September; and the regular rains do not commence until November, between which month and March, besides occasional snow-storms, they fall, at different periods, in very heavy torrents, often accompanied with vivid and very dangerous lightning. The cold lasts but for a short period, being quickly invaded by Spring, the season which renders the island so delightful, and which has fired the imagination of the poets; the Summer is oppressively warm; and the Autumn is dangerous to debilitated constitutions.

Seas,
rivers, &c.

The Mediterranean takes the name of the Tyrrhenian

Sea to the North of the island; of the Sicilian on the South; and of the Ionian Sea on the East: the *Faro di Messina*, or Straits of Messina, which divide Sicily from the continent, are 15 miles in breadth at their broadest part, and, at their narrowest, only 2783 geometrical paces. The celebrated Scylla and Charybdis lie at the North entrance of the Straits, where they are five miles broad; and though the former is shorn of the terrors with which it was invested by antiquity, being only a common rock of bold approach, where the surges are no heavier than on any other part of the coast, yet Charybdis, now the whirlpool of Galofaro, still has its dangers. It is an agitated water, from 70 to 90 fathoms deep, circling in quick eddies, and is probably owing to the meeting of the harbour and lateral currents with the main one. Even in the present day small craft are endangered by it, and Captain Smyth states that he has seen a seventy-four gun ship whirled round on its surface; so that it must have been a perfect Maelström to the undecked boats of the ancients. The rivers of Sicily hardly deserve the title. They are mere mountain streams, few of which are navigable even at their mouths, and, in the dry season, their channels become, for some distance, tolerable roads.

We are indebted for the following excellent *résumés* of the geology and zoology of the island, to the valuable contributions furnished by Professor Jameson and Mr. Swainson to Mr. Hugh Murray's *Encyclopædia of Geography*. The remarks on the zoology are stated to be the result of personal observations, made during a long residence in the island.

"The native quadrupeds in former times appear to Zoology, have been much more numerous than they are at present: this diminution has not originated in the increase of population or of agriculture, for both of these, it is well known, have enormously retrograded since the splendid epoch of Sicilian history. The diminution of the larger animals originates in two causes: first, the scarcity of wood and shelter; and, secondly, the universal passion for shooting. The ancient forests of Sicily, which once sheltered the larger game, have been gradually diminishing, and the next century may possibly witness their total disappearance. The only fuel burnt throughout the island is wood and charcoal. Now a Sicilian landed proprietor never thinks of planting any other trees than vines or olives; to benefit his estate for the sake of those who are to inherit afterwards never enters his imagination. With such a constant and universal demand for fuel, and with no measures being taken to provide a future supply, it may therefore be easily imagined that wood is already scarce. The vast forests of *Ætna*, of which so much has been said, and which originally belted that stupendous mountain, have been so diminished in modern times, that they hardly exist but in name. In these regions immense quantities of charcoal are made, and sent to all parts of the island. Trees are felled every day, but not one is ever planted; in short, even in 1815, after the British troops had been in the island ten years, wood began to be so scarce, that their rations of fuel were principally brought from the opposite shores of Calabria.

"The scarcity of wild animals originates also in another cause: every Sicilian peasant carries his gun as constantly upon his shoulder as he does his cap upon his head; and he shoots at every thing. With but little shelter for retreat, or for breeding, and perpetually

SICILY. exposed to destruction by the gun, it is not surprising that Sicily in general should be as remarkable for its paucity of resident birds and quadrupeds, as it is for its naked, unwooded appearance. Its scenery is grand and magnificent; but every where it is deficient in wood and water.

"In former times, it appears that several wild animals, now seldom if ever seen, were met with in abundance. Authorities cited by Mongitore (*Sicilia Ricercata*, &c., 1742,) show that the wolf was always a scarce animal, and is now probably extinct. The wild boar was formerly common, and much hunted; and the early historians mention porcupines or spined pigs (*Porci spinosi*, *Armatidi spine*) as being wild in the forests of *Ætna*: that this animal should not have been originally a native of Europe appears, therefore, highly improbable. Fazello, one of the earliest Sicilian writers, asserts that fallow deer (*dama*) were found wild in abundance on the lofty mountainous chain of the *Madonia* (*olim* *Nebrodes*), and on that of *Dinamare* (*olim* *Neptuni*). From the latter, owing to its vicinity to *Messina*, both deer and forests have long since disappeared. We do not believe, indeed, that this noble animal is any longer wild in this island; but large herds are stated to exist in the woods of *Mimiano*, belonging to the Prince of *Paterno* and the Duke de *Montalto*, where they are preserved. The same authors mention the stag as being particularly numerous, both on the sides of *Ætna* and in the forests of the *Nebrodes*. Upon these latter mountains were also found numbers of wild goats, whose teeth were tinged with a golden hue, probably originating from the nature of some particular plant there abundant. Hares and rabbits are now almost the only native quadrupeds to be met with: the latter are not common, and the former are stated to have been introduced in the island by *Anassila*, tyrant of *Reggio*. (*Mong. Sic. Rec.* vol. i. p. 283.)

"Among the birds of Sicily must be reckoned many species common to the opposite shores of Africa; these are principally of the wading tribe. The swampy lakes and inaccessible morasses of *Leontini* and *Syracuse* afford shelter to vast flocks of water fowl, which arrive during the spring and autumnal migration. The *malaria*, a most virulent and fatal species of ague, engendered by these low lands, renders them almost uninhabitable during the greater part of the year, and is a sure protection to the birds themselves. The immense flocks of quails which pass by the way of Sicily to the Northern parts of Italy during the month of April is almost incredible; it is no uncommon thing for a good sportsman, with one dog, to bag from fifty to sixty brace the first day after their arrival. Bee-eaters, orioles, rollers, hoopoes are then common over every part of the island, and are pursued by numerous hawks and owls; but the whole disappear towards the beginning of May. The African flamingo is not an uncommon bird in the solitary marshes of *Syracuse*, where the pelican also is an occasional visiter. The beautiful purple heron, the night heron, the little bittern, the long-legged plover, the glossy ibis, the pratincole, and several other rare European species, are among the common migratory visitors, and give to the ornithology of Sicily an interest which it would not otherwise possess.

"The insects of Sicily are more numerous than might be expected from the bare and unsheltered nature of its surface. The character of its entomology

is decidedly more allied to that of Northern Africa than of central Europe. All those genera which delight in a hot, sandy soil are particularly numerous: as *scarabæus*, (*Mac Leay*), *trox*, *pimelia*, *scarites*, *gryllus*, *sphex*, *amphicoma*, *bembex*, *chrysis*, *osmia*, &c. Sicily is very rich in hymenopterous insects; and of the genus *Anthrax*, or sand-flies, we discovered nearly thirty species in the vicinity of *Messina* alone.

"The butterflies (*Papilionidæ*) are numerous, and comprise the most elegant species known in Europe. *Podalirius Europæus*, Sw., *Gonepteryx Cleopatra*, *Eurymus hyale*, Sw., *P. Daphidice*, *A. Lathonia*, &c. are common. Africa imparts to Sicily one of her most superb and imposing butterflies in the rare *P. Jasius*, *Jasia Europæa*, Sw., which we have occasionally captured near *Messina*.

"Flights of devastating locusts, unknown to the other parts of Europe, have occasionally afflicted this fruitful island. The earliest upon record is mentioned by Fazello, who says that (about the 15th of May, 1355) the heavens were darkened by vast clouds of locusts coming from Africa; that they spread over the island, and began to make all verdure disappear; but that a sudden change of wind taking place, as if by miracle, they departed in dense squadrons, and were driven into the Ionian sea, where their bodies, being cast upon the shore, caused such putrefaction, that a grievous plague ensued.

"More recent flights of locusts appeared in 1637, and in the four years following 1656; also in 1687, 1688, and 1689. But the most destructive appears to be that of 1708. These terrific insects, as Mongitore relates, first landed at *Sicli*; from whence, spreading themselves in vast armies over the whole island, they caused devastation and ruin during the five following years. In modern times the island has happily been spared from this scourge.

"The predominating rocks are tertiary, secondary, and volcanic; the older ones, or those of the primitive class, being less abundant. The primitive rocks are found at the North-East corner of the island, near *Messina*, where the prevailing kind appears to be gneiss. The transition constitute a chain of hills extending obliquely from *Melazzo* on the North coast to *Taormina* on the East. They consist chiefly of mica slate, clay slate, with beds of glance coal, quartz rock, greywacke, sandstone, and limestone. Nearer than these is a great deposit of sandstone, with a few subordinate beds of marl and limestone, which occupies a great part of the central chain of the island, and extends along part of the Northern coast. It first occurs to the East of *Palermo*, near the river *Pilato*, a few miles from *Cefalu*. It is older than the *Jura* or *Apennine* limestone. Resting apparently upon this sandstone is a formation of limestone and dolomite, composing the North-Western part of the island, and which appears as the equivalent of the *Jura* or *Apennine* limestone. Caves containing bones occur in it. Resting upon this formation is a deposit of marls and limestones, containing nummulites and hippurites, which appear to belong to the chalk and green sand of English geologists. Upon these rest a series of cretaceous limestone and marls of the older tertiary epoch. The fifth formation is an extensive tertiary limestone, found both North and South of the grand central range. Above this rests a still newer deposit of a conglomerate, containing shells of species now existing in the Mediterranean: it is well seen on the North coast,

SICILY. and to the south of Syracuse. Of the same age with this deposit is a bone breccia, which forms beds lying upon the preceding, and also occurs in caves; and in both situations contains bones of the elephant, hippopotamus, and deer, with a few of a carnivorous animal of the genus *Canis*. Still newer than this bone conglomerate is a diluvial deposit, of which there are two kinds: the oldest occupies considerable heights, the newest covers the bottom of valleys. The tertiary rocks, so abundant in the island, contain beds of common salt, sulphur, gypsum, alum, along with beautifully crystallized sulphate of strontites. Volcanic action appears to have been in operation from a very remote period in this island, as is evinced by the different sets of volcanic rocks which *Ætna* affords. At Macaluba, a hill near Girgenti, consisting of blue tertiary clay, there is a continual disengagement of carbonic acid and carbonated hydrogen, from small cavities, shaped like craters, which are filled with muddy water mixed with mineral oil. When the quantity of gas emitted is great, it throws up the mud to the height of 200 feet; these are called air volcanoes.

"Sicily is not rich in metals; the mountains to the north-west of Taormina present traces of a gold mine, said to have been worked at a very remote period. Some mines of silver, copper, lead, and iron are mentioned. Beds of sulphur occur abundantly in the blue tertiary clay; and though Sicily has long supplied Europe with that mineral, its stores are yet far from being exhausted. The blue clay also contains beds of rock salt, of which the most considerable are at Alimena, North-East of Castro Giovanni, where this substance is found both massive and crystallized."

Botany.

We learn from Smyth that the principal of the many delicate plants which flourish in the open air are some species of the musa, the lotus, the antholyza, the zizyphus, the nymphæa, the cannacorus, the cassia, and the euphorbia; and many rare species of the cactus, the acacia, the cyperus papyrus, and other botanical productions, more especially in the luxurious grounds of Palermo, Girgenti, Syracuse, Carini, and the *Ætnean* regions. The licorice plant grows in spontaneous abundance on the plains of Milazzo and Catania, and in the South-Western districts of the island, where a considerable quantity of licorice is manufactured for exportation. The *Ricinus palma Christi* grows luxuriantly in most parts of the country, but though the beans are as pregnant with castor oil as those of tropical growth, the Sicilians derive little advantage from the circumstance, being unacquainted with the proper mode of expressing it. The raising of the sugar-cane is now nearly discontinued; the cotton plant is an object of agriculture at Mazzara, and other places where the influence of the Westerly breeze is most felt; and the pistacio, fig, and date abound. The timber consists of elms, chestnuts, pines, oaks, ash, planes, poplars, willows, mulberries, &c.; and the different enclosures are surrounded by the *Agave Americana*, which forms an impenetrable fence. Such declivities as are too steep for cultivation, but have the advantage of a Northern aspect, produce an abundance of brushwood, consisting of the arbutus, the myrtle, the coronilla, several species of heath, the Spanish broom, and the evergreen oak: this is thinned every third year, and sold as faggots.

The geological and other physical features peculiar to the *Ætnean* region, will be found under the Article *ÆTNA*.

Sicily was formerly divided into three Provinces, **SICILY**, called *Valli*, or valleys, formed by the chains of the Apennines, viz. *Val di Mazzara*, which comprehended the Western angle of the island; *Val di Dimone*, which embraced the North-Eastern; and *Val di Noto*, the South-Eastern. The present division is into seven Intendancies or Provinces, as given in the following Table, and which are styled by way of distinction from the continental Provinces, *Dominj al di là del Faro*, or the domains beyond the Pharos.

Intendancies.	Population.	Chief Towns.
Palermo.....	438,000 ..	Palermo, Monreale, Corleone, Termini, Cefalù, Busaquino, Island of Ustica.
Messina.....	255,000 ..	Messina, Melazzo, Patti, Mistretta, Randazzo, Taormina, Castroreale, the Lipari Islands.
Catania	293,000 ..	Catania, Aci-reale, Mascali, Paternò, Bronte, Nicosia, Caltagirone.
Syracusa	190,000 ..	Syracusa, Augusta, Noto, Spaccanardo, Ispica, Modica, Scicli, Ragusa, Comiso, the Isle of Marzamemi.
Caltanissetta....	161,000 ..	Caltanissetta, Leonforte, Mazzarino, Terranova, Piazza, Castro-Giovanni, Pietra-Parzia.
Girgenti	199,000 ..	Girgenti, Palma, Naro, Mussomeli, Scaia, Sambucca, Alicata, Cannigata, Cattolica, Bivona; the Island of Pantellaria, (inhabited;) the Isles of Linosa and Lampedusa, (uninhabited.)
Trapani	146,000 ..	Trapani, Monte-Giuliano, Castellamare, Alcamo, Calatafimi, Salerni, Castelvetro, Mazzara, Marsala, the group of the <i>Ægates</i> .

Total 1,682,000

Three of the above have already been described in alphabetical order, viz. CATANIA, GIRGENTI, and MESSINA. We proceed to give an account of the important cities of *Palermo* and *Syracuse*.

Palermo, the ancient *Panormus*, is seated on the Northern coast of Sicily, in a fertile and well-cultivated plain, at the extremity of the gulf of the same name. To the North-West of the city is a fine mole running out from the arsenal nearly a quarter of a mile into nine and ten fathoms water, with a lighthouse and battery at its termination. The port thus formed is a very convenient one, and capable of containing a number of vessels; and though a heavy sea sometimes rolls into the bay, no danger need be apprehended by ships properly found in anchors and chain cables. The houses are built in the same fashion as those throughout Southern Italy, the roofs being flat, and, instead of windows, there being balconies with glass doors. Most too of the houses are provided with fountains, even to the second and third stories. The streets are straight, and for the most part terminate in the two principal ones, the *Toledo*, and the *Strada Nuova*. The finest promenade in the city is the *Marina*, along the seashore, which terminates in the botanic garden. "*Palermo*," observes Captain Smyth, "is regularly built, and with better finish might be esteemed an elegant city; but it presents an incongruous mixture of pomp and poverty, of fascinating gaiety and disgusting wretchedness, exemplified in noble ranges of palaces, disgraced at their bases by the stalls, shops, and '*mezzanini*,' or lofts of the lower orders; in gaudy equipages parading the same streets with sturdy mendicants, vociferously demanding food, or sluggishly taking their siestas on the pavement, and

SICILY. ridding each other of vermin between their napes." The chief buildings are the Royal Palace, an imposing edifice, constructed at different periods, but irregular and inharmonious; the Observatory, rendered celebrated by the discoveries of Piazzi; the *Vicaria* or public prison; the Hospital; the Cathedral, erected about 1180 by Archbishop Walter, an Englishman; the University, an extensive foundation, furnished with an anatomical collection, a printing-press, and a library of upwards of 30,000 volumes; and a multiplicity of churches, which are rather characterised by sumptuousness and profusion of ornament than by taste. The construction of the latter is for the most part uniform and monotonous, as they are generally built with an elevated façade, a large nave, and two side aisles, bounded by lateral chapels, and decorated with pillars, paintings, statues, flowers, and candelabra; the high altar faces the principal gate, with the choir immediately behind, and the chapels of the Virgin and Holy Sacrament in the transepts.

Palermo is an Archbishop's See, the seat of the Supreme Court of Justice of the island, and the residence of its Governor-General, who has now merely the title of Lieutenant, (*Luogotenente*.)

The *fête* of St. Rosalia, which is held in the month of July, yearly attracts immense crowds from every quarter of the island to Palermo, and gives an impetus to its trade, which is otherwise very considerable. Population 170,000. The lighthouse of Palermo stands in North latitude $38^{\circ} 8' 15''$, and in East longitude $13^{\circ} 21' 56''$.

Many fine specimens of Moorish architecture exist in the vicinity of this city. There are likewise some Roman remains in the neighbourhood, of which the Temple of Venus, on the site of the ancient *Segesta*, about 18 miles from Palermo, is one of the largest and most perfect extant of antiquity.

Syracuse.—The modern city of this name is a fortress of considerable strength, and a seaport, seated in a fine alluvial plain; but only memorable from its former greatness, with which its present state forms a melancholy contrast. Of the five magnificent and populous quarters into which it was divided, namely, *Ortygia*, *Achradina*, *Tyche*, *Neapolis*, and *Epipolis*, the first alone is still inhabited; and, on this petty isthmus, the cradle of ancient Syracuse, is all that remains of the vast and proud city which erst braved the power of Athens, of Carthage, and of Rome. Ruins scattered over a circumference of twenty miles, and some remaining monuments, are all that attest the existence of its pristine grandeur. Its port is now encumbered with sand, and can only admit vessels of small burden; the river Anapus, which runs into the sea on the West side of the harbour, is suffered to be itself contaminated, and its current much impeded by the pernicious practice of steeping hemp in it during the Summer; and the celebrated Fountain of Arethusa, which once received divine honours, has dwindled from a noble torrent to a petty stream in which the modern nymphs of the city wash their dirty linen. The streets of Syracuse are confined and narrow, and its public buildings, though numerous, have little to recommend them; "yet," says Captain Smyth, "it would be a respectable city were it not viewed as the wreck of one so celebrated in remote ages."

The chief of the ancient remains are the Temple of Minerva, now the cathedral, which has been disfigured by various alterations. the Theatre, hewn out of the

solid rock, and capable of containing upwards of 13,000 spectators; the Amphitheatre, a vast building, but inferior to the preceding; and the Ear of Dionysius, now called the *Paradiso*. This cavern, which is interesting from the fable attached to it, is in the shape of a parabolic curve, ending in an elliptical arch, with sides parallel to its axis, perfectly smooth, and covered with a slight stalactitic incrustation that renders its repercussions amazingly sonorous. It has been partly filled up, but is still 64 feet high, from 17 to 35 broad, and 187 deep. The echo is far from distinct, for if two or more people speak together, it occasions only a confused clamour. This much famed cave is included in the second of the *Latomie*; which were the quarries whence the stone for the construction of the city was originally drawn; and few spots are more productive of olives, oranges, lemons, citrons, pomegranates, almonds, and figs than this, with which so many painful ideas are associated. The Catacombs of Syracuse had probably the same origin as the *Latomie*; they form extensive subterranean streets of tombs, and, indeed, are usually considered larger than those of Rome.

Syracuse possesses a Royal College, two *Seminarii*, a public Library, and a Museum; the chief treasures of the latter, in statuary, are the Landolina Venus, and the *Æsculapius*. Population 14,000. North latitude $37^{\circ} 2'$, East longitude $15^{\circ} 12'$.

For the remaining towns we must adopt the succinct tabular plan of Captain Smyth.

Palermo.

Name of Place.	Population.	Situation and Post-miles from Palermo.
Monreale	12,000	On the side of Mount Caputo, 4.
Corieone	12,000	On the declivity of a mountain, bearing a fine forest, 24.
Termini	12,500	Under Mount Euraco, 24.
Cefalù	9,000	Under a conic mountain, on the Tuscan sea, 48.
Busaquino	8,000	Centre of a mountainous district, 36.
Ustica	1,700	Island in the Tuscan sea.

Messina.

Milazzo	8,000	On the neck of a long peninsula, 150.
Patti	4,000	In an amphitheatre of fine hills, 119.
Mistretta	8,000	On a high hill. Mytistratum of Polybius, 78.
Randazzo	4,700	On the side of <i>Ætna</i> , near a curious lake, 120.
Taormina	3,500	On the tabled summit of Mount Taurus, 149.
Castroreale	11,000	On a triangular and rocky mountain, 150.
Lipari	12,500	Capital of the Lipari or <i>Æolian</i> Islands.

Catania.

Aci-Reale	14,000	On a cliff of <i>Ætna</i> , overhanging the sea, 138.
Mascali	14,000	In a fine district of Mount <i>Ætna</i> , 140.
Paternò	10,000	On an inclined plain of <i>Ætna</i> ; ancient Hybla Major, 120.
Bronte	9,400	On the west side of Mount <i>Ætna</i> , 104.
Nicosia	12,000	On the ridge of a rocky hill; anciently Herbita, 80.
Caltagirone	20,000	Commanding situation on a rocky mountain, 100.

Syracusa.

Augusta	8,000	On a peninsula in the Ionian sea, 130.
---------------	-------	--

SICILY.

Syracusa—continued.

Name of Place.	Population.	Situation and Post-miles from Palermo.
Noto	13,000	On a rocky hill, in a superb situation, 149.
Spaccaforo	8,000	On a hill, near romantic dells, 150.
Modica	21,000	In two steep, but picturesque, valleys, 120.
Scicli	10,000	In a valley, among several mountains, 150.
Ragusa	16,000	In the middle of an Alpine mountain; ancient Hybla Hærea, 120.
Comiso	10,000	At the foot of a rocky mountain of Modica, 120.
Marzamemi	400	On a point of land, near C. Passaro, 161.

Caltanissetta.

Caltanissetta	16,000	On a fine plain; much linen made, 70.
Leonforte	9,000	A fine town, on a break of Mount Tavi, 90.
Mazzarino	9,700	On the mountain once called Mactorium, 88.
Terranova	9,000	On a hill, on the coast of the African sea, 120.
Piazza	13,000	A fine town on a hill; the Plutia of Diodorus, 100.
Castro-Giovanni	11,000	On a high mountain of Enna, in the centre of Sicily, 82.
Pietraparzia....	8,500	On a steep and inland mountain, 74.

Girgenti.

Palma	8,400	In a fine plain, amongst gentle hills, 86.
Naro	10,000	In a fine situation, on a height, 75.
Mussomeli	9,000	On the side of a large inland mountain, 50.
Siacca	11,000	On a rocky hill, at the foot of a mountain, 60.
Sambucca	9,600	On a hill, eight miles from the African sea, 50.
Alicata	11,000	Between Mount Ecnomus and the River Salso, 96.
Cannigata	15,000	Beautifully situated on the side of a mountain, 72.
Cattolica	7,200	On the side of a hill, on the South shores, 64.
Bivona	500	On an inclined, rocky, inland plain, 50.
Pantellaria	4,600	In the African sea.
Lampedusa	15	The Southernmost possession of Sicily.

Trapani.

Trapani	25,000	On a long and low isthmus, 60.
Castellamare ...	5,000	Jutting out into the gulf of the same name, 36.

Calatafimi	9,000	Between two hills, in a corn country, 36.
Salemi	9,000	On the top of a hill; the ancient Alicia, or Halycus, 50.
Castel-Vetrano ..	14,500	On an eminence, commanding an extensive plain, 50.
Mazzara	8,000	In a perfect plain, on the shore of the African sea, 60.
Marsala	21,000	In a plain, on the seashore, 70.

Population. The population of Sicily is raised by the authors of the *Dictionnaire Géographique Universel* to 1,780,000 inhabitants; of which number they compute that 300,000 live by agriculture and trade, and that the same number are maintained by the revenues of the church. They estimate the number of clergy, monks, &c. at 15,000; and of nuns at 12,000.

VOL. XXVII.

M. Huot states the Sicilian budget for 1823 to have been as follows: receipts 41,328,270 francs; expenses 52,349,310 francs; deficit 11,021,040 francs.

The bounty of nature towards Sicily is frustrated by the ignorance and imbecility of its government. Commerce is fettered by the most barbarous restrictions. The exportation of the very staple of the country—corn—is limited by a variety of oppressive regulations; all made with a view to benefit the revenue, and ending, as vexatious interference with industry ever does, in impoverishing it. “The government of this island,” says Simond, “seems to unite in itself nearly all the defects, both theoretical and practical, of which political institutions are susceptible. The laws barbarous, their administration corrupt; the taxes high, and levied arbitrarily and unequally; the land confined to a few proprietors by the nature of the tenure on which it is held; and farming leases, at least for church lands, obligatory on the farmer only. Produce cannot be transported from one part of the island to the other, for want of roads; so that a glut and a scarcity may exist in two different quarters of the same soil, and the obvious remedy be rendered impossible.” “So far,” continues the same writer, “is the system of vexatious interference carried, that a man cannot go in or out of town with a loaf of bread or a joint of meat, without a special permit.” Mr. Macculloch justly attributes the backward state of Sicily to its continued state of dependence, by conquest or otherwise, on a foreign domination. And “were the bounty of nature towards Sicily,” he eloquently remarks, “not counteracted by vicious laws and institutions, she would undoubtedly be one of the richest and finest of European countries. All that she requires is security of property and freedom of industry. Let but these be given to her, and a few years will develop her gigantic resources, and elevate Girgenti, Termini, and Sciacca, to a very high rank among corn-shipping ports.”

The following list of imports and exports is taken from the last named writer's *Dictionary of Commerce*:

“The great articles of export from Sicily are, grain, particularly wheat and barley; beans, wine, brandy, oil, barilla, lemons and oranges, lemon juice, almonds, salt, shumac, salt-fish, linseed, saffron, argol, cotton-wool, honey, &c. Wheat is largely exported. It is of a mixed quality, hard, and is generally sold from the public magazines, or *caricatori*, by measure, without weight. But the best hard wheat, grown in the neighbourhood of Palermo, is sold by the salma of 272 rottioli=476 pounds English; the difference between weight and measure being made good by the seller or buyer, as the case may be. Wine is principally shipped from Marsala; lemons, oranges, and lemon juice from Messina; salt from Trapani; and barilla from the Southern coast. But all the articles to be found on the coast may, for the most part, be had at Palermo; unless, however, the quantity required be small, it is usually best to ship them from the outports, the expense of their conveyance to Palermo being very heavy. The crops of barilla and shumac come to market in August; but brimstone, salt, oil, wine, rags, &c., may generally be had all the year round. The first shipments of lemons and oranges may be made in the beginning of November. Purchases of produce are always paid for in cash, generally half on making the purchase, and the other half on delivery, when in Palermo, and on receiving order for delivery, on the coast.

“The imports consist of sugar, coffee, cocoa, indigo,

SICILY. dye-woods, spices, iron, tin, hides, Newfoundland cod, cotton and woollen stuffs, timber for building, &c. We have no means of forming any estimate either of the quantity or the value of the principal articles of import and export. Silk is a staple produce of the island; but its exportation in an unwrought state, except to Naples, is prohibited."

SICK.

Social and literary state.

The value of the exports may be estimated at 5,600,000 ducats; and that of the imports at 6,750,000 ducats. (*Dictionnaire Géographique Universel.*)

The Sicilians present the usual characteristics of Southern countries; the dark complexion, fiery temper, and disinclination to labour. They are uninformed, but possess considerable native talent; are national in the extreme, and deplorably superstitious; but are hospitable, cheerful, and generous. Sicily nevertheless boasts some talented men in art and science; although fallen from her ancient renown in this particular. When we know, however, that justice is venal, that the confessor is all powerful in each family circle, cicisbeism universally prevalent, education limited and restricted in every possible manner, and that the chief distinction of the higher classes from the lower is inveterate pride, we can form no very favourable idea of the social state of the Sicilian community. The strong influence of custom is shown by the retention of many peculiarities in their daily habits, eating, drinking, &c., mentioned in the pages of classic authors.

The Sicilian dialect differs both in extent and phrase from the Italian. It retains a number of Greek and Arabic expressions, and many Norman and Spanish

words have crept in. This blending and interfusion of language, together with its multiplicity of vowel and open sounds, renders it "as harmonious, sportive, and pastoral, as the Syracusan Doric of Theocritus."

SICILY.
SICK.

Public libraries are numerous, but little attended; foreign authors are, in great measure, interdicted; the most commonly circulated of our works are Young's *Night Thoughts*, and Hervey's *Meditations*; there are many literary associations, but these have now dwindled down to clubs of writers of macaronics and of improvisatori. Of the few periodicals published, the most popular is the *Giornale di Scienze, Lettere, ed Arte per la Sicilia*, which has been published at Palermo since the year 1823, and has of late greatly increased in talent and interest.

The drama, originally fostered in Sicily, has given way to opera and mere spectacle. The Sicilians, however, have a species of dramatic amusement resembling the *Atellanæ* or *Mimes* of the ancients, which is cultivated with success, and admits the display of much imitative and satirical talent.

The political institutions of the island are included in the general account of those of *The Kingdom of the Two Sicilies*, given under the article NAPLES.

Swinburne, *Travels in the Two Sicilies*; Smyth, *Sicily and its Islands*; Simond, *Voyage en Italie et en Sicile*; Quattromani, *Itinerario delle Due Sicilie*; the articles *ÆTNA*, *CATANIA*, *GIRGENTI*, *MESSINA*, already given in their alphabetical order; and the various works quoted in the course of the present account.

SICK, adj. Goth *suiks*; A. S. *seok*; D. *sieck*; Ger. *siek*; Sw. *suik*, either from the D. *swaek*, weak, languid, or *swicken*, to shake, to agitate. Skinner. It may be from the A. S. *syc-an*, to suck; and applied, consequentially, from the weakness and ailing condition of *sucking* children, of *sucklings*.

PRO. When I was *sick*, you gaue me bitter pills,

And I must minister the like to you.

Id. The Two Gentlemen of Verona, fol. 26.

My Lord of Southampton and his eldest son *sikned* at the siege,
and died at Berghen.

Howell. Letter 15. book i. sec. 4.

For if such holy song

Inwrap our fancy long,

Time will run back, and fetch the age of gold;

And speckled vanity

Will *sicken* soon and die,

And leprous sin will melt from earthly mould.

Milton. Ode 14. v. 133.

Our heires waxe *sickishe* of our health,

Too long oure here abod,

Meane while the neerer to our graues

The further wee from God.

Warner. Albion's England, book v.

The medicine had scarce any other sensible operation upon her,
and did not make her *sickish*, especially when she slept upon it.

Boyle. Works, vol. ii. p. 145.

Whom Calepine saluting, as became,

Besought of courtesie, in that his neede,

For safe conducting of his *sickely* dame

Through that same perillous foord with better heede,

To take him up behinde upon his steed.

Spenser. Faerie Queene, book vi. can. 3.

And loue of vs,

Who weare our health but *sickly* in his life,

Which in his death were perfect.

Shakspeare. Macbeth, fol. 140.

YOR. I do beseech your maiestie impute his words

To wayward *sicklinesse*, and age in him.

Id. Richard II. fol. 29.

Thus conscience does make cowards of vs all,

And thus the natiue hew of resolution

Is *sicklied* o'er with the pale cast of thought.

Id. Hamlet, fol. 265.

P. Shut, shut the door, good John! fatigu'd I said,

Tie up the knocker, say I'm *sick*, I'm dead.

Pope. Prologue to Satires.

She, with one maid of all her menial train,

Had thence retir'd; and with her second joy,

The young Astyanax, the hope of Troy,

Pensive she stood on Ilion's towery height,

Beheld the war, and *sicken'd* at the sight.

Id. Homer. Iliad, book vi.

So much the more, as, from a little elf,

He had an high opinion of himself;

Though *sickly*, slender, and not large of limb,

Concluding all the world was made for him.

Dryden. The Cock and the Fox, p. 45.

Sickness is a sort of early old age; it teaches us a diffidence in
our earthly state, and inspires us with the thoughts of a future,
better than a thousand volumes of philosophers and divines.

Pope to Steele. July 15, 1712.

My personal maladies and *sickliness* cannot rightly infer the
inefficacy of the medicines I impart or recommended.

Boyle. Works, vol. v. p. 316. Preface to Receipts.

My ear is pain'd,

My soul is *sick*, with every day's report

Of wrong and outrage, with which earth is fill'd.

Cowper. The Task, book ii.

The doctrine of fate hath been still greiv'ing from age to age, in
absurdity and impiety; and therefore no wonder that virtue,
whose specific bane it is, should proportionably *sicken* and decline.

*Warburton. Works, vol. xi. p. 16. Defence of Mr. Pope in answer
to Crousaz.*

Years of dearth, it is to be observed, are generally among the
common people years of *sickness* and mortality, which cannot fail
to diminish the produce of their industry.

Smith. Wealth of Nations, vol. i. book i. ch. viii. p. 112.

SICKER, see SECURE.

SICKINGIA, in *Botany*, a genus belonging to class
Pentandria, order *Monogynia*, and natural order *Ru-
biaceæ*. Generic character: calyx five-toothed; corolla
campanulate, five-toothed; filaments five, inserted in the
corolla; anthers linear; stigma one; capsule woody,
two-valved; seeds winged.

This genus consists of two species, trees, natives of
the Caraccas, with opposite leaves, paniced terminal
inflorescence, and sweet-scented flowers.

SICKLE, *n.* } *D. sickel, seeckel*; *Ger. sichel,*

SICKLED. } *sechel*; *Sw. sikel*; *A. S. sicol.* Skin-

ner derives from the Lat. *secula*, itself *a secando*, to cut.
Varro, lib. iv. *Falces* are so called *a farre*, by the change
of a letter, and these (*falces*) are in Campania called
seculæ, *a secando*.

A tool or instrument with which corn, &c. is cut; a
reaping-hook.

And whanne of it self it hath brought forth fruyt: anon he
sendith a *sikil*, for reping tyme is come.

Wiclif. Mark, ch. iv.

And assone as the frute is broughte forth, anone he thrusteth
in the *syckell*, because the haruest is come.

Bible, Anno 1551.

Upon his head a wreath, that was enrold

With ears of corne of every sort, he bore;

And in his hand a *sickle* he did holde

To reape the ripened fruits the which the earth had yold.

Spenser. Faerie Queene, can. 7.

The fruitful Ceres to great Saturn born,

The first with *sickle* cropp'd the ripen'd corn.

Drayton. The Owl.

Their *sicklers* reap the corn, another sows.

Sandys.

Another field rose high with waving grain,

With bended *sickles* stand the reaper-train:

Here, stretch'd in ranks, the leuell'd swarths are found.

Sheaves heap'd on sheaves here thicken up the ground.

Pope. Homer. Iliad, book xviii.

When Autumn's yellow lustre gilds the world,

And tempts the *sickled* swain into the field,

Seiz'd by the general joy, his heart distends

With gentle throws; and through the tepid gleams

Deep musing, then he best exerts his song.

Thomson. Autumn.

Ye vanquishers of Greeks,

Beneath your spears yon servile herd will fall,

As corn before the *sickle*.

Glover. The Athenaid, book xxx.

SICUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* bi- or triarticulate,
the basal joint minute or obsolete, the terminal one
largest, conic, with an elongate, slightly curved simple
seta at the apex; *palpi* porrected, probosciform, in-
cumbent; wings two, with a single submarginal areolet,
and two complete discoidal ones, the hinder margin
with two or three; legs dissimilar; the anterior and inter-
mediate are both raptorial, with ample femora.

Type of the genus, *S. raptor*; Latreille, *Gen. Crust.
et Ins.*, vol. iv. p. 304. pl. xvi. fig. 11, 12. The in-
sects comprised in this genus are very numerous, and

SICK.

SICUS.

SICUS. modern writers have rejected the name, subdividing the genus into *Tachydromia*, *Platypalpus*, *Hemero-*
 SICY-*dromia*, &c.: nearly seventy species are found in Eng-
 DION. land.

SICYDION, from the Greek *σικυα*, a cupping-glass, Cuv. and Valenc. In *Zoology*, a genus of animals belonging to the family *Gobioides*, order *Pharyngi-*
labyrinthiformes, class *Pisces*.

Generic character. Lips fleshy; both jaws armed with a single line of fine hair-like, curved, sharp pointed, and flexible, close-set teeth; in the lower jaw and within the former some stout, conical, pointed, and slightly curved teeth; ventral fins connected so as to form a kind of disc or sucker like a cupping-glass.

This genus was formed by Cuvier and Valenciennes from the peculiar disposition of the ventral fins, which assume the form of a sucking disc or cupping-glass, the anterior part formed by the fleshy membrane itself, and the rest by the fan-like spreading of the ten short, soft, and branching rays, by means of which the fish is enabled to attach itself to the rocks. In this respect it resembles the *Cyclopteri*, whilst the form of its teeth connect it with *Salarias*, and its other general appearance approximates it to the *Gobii*.

S. Plumieri, Cuv. and Valenc.; *Gobius Plum.*, Bl. Five or six inches long; its general form is heavy; the head short and broad, and the throat toad-like; muzzle horizontally semicircular; anterior nostril midway between the muzzle and the eye, posterior much nearer the latter, both resembling the prick of a needle; upper lip very fleshy, and covering the fine teeth, which are golden coloured; lower lip also fleshy, but less bulky, and not concealing the hair-like teeth, which are shorter than those in the upper jaw, are more like ciliae, and on the outer surface of the jaw; the larger teeth, from twelve to fourteen in number, are placed within these, and between the two sets are two little round fleshy prominences, and a third at the commissure of the lips; tongue broad, but neither it nor the vomer furnished with teeth; preopercule and opercule rounded; branchial membrane supported by four rays, and connected below on the sides of the chest so as to leave only a vertical aperture in front of the pectoral fins, which are fleshy at their base, oval, and supported by nineteen rays, of which the middle are the longest, and all branching; the middle of the disc of the ventral fins is formed by the skin of the chest, and presents six little pits; first dorsal supported by six rays and commencing above the middle of the pectorals, and its third, fourth, and fifth rays expanding into flexible threads, of which the former two are twice as long as the depth of the body; the second dorsal fin arises immediately behind the first, has one simple and ten branching rays, of which the last is double; the anal has also the rays of similar number and form; caudal fin rounded, and having seventeen rays; head, throat, and shoulders near the pectorals, and all the fins not covered with scales, which upon the back and sides are of moderate size, and small on the belly: the colour of this species is deep olive-green, inclining to yellowish on the sides, and whitish on the belly; the ventral and caudal fins are nearly black, and the others blackish. It is found commonly in the rivers of the Antilles and at Martinique, where it is called *Sucet* from its using the ventral fins as a sucker. At Porto Rico the Spaniards call it *el Olivo*.

S. Lagocephalus, Cuv. and Valenc.; *Gobius Lagoc.* Pall. About three and a half inches long; is very similar

to the preceding, but neither head nor body is so wide; the fine teeth in the lower jaw so fine as to be easily overlooked, and of the larger, two stand by themselves, and at a little distance four or five smaller ones; both dorsal fins are not so high, the third ray of the first does not exceed the depth of the body; the second and the anal have each one simple and eleven branching rays; general colour reddish-brown, with darker brown cloudings on the back and sides; the fins brownish, except the sucker, which, together with the belly, is whitish; behind each ray of the second dorsal are four or five brown dots; anal edged with black and white; caudal blackish, with a whitish upper and lower edge. Is very common in the rivers and ponds of the Isles of France and Bourbon, where it is called *Bissique*, *Bichique*, or *Béchique*, names common to several *Gobies*. It is said that the adult fish never leave the rivers, but the spawn is carried down to sea, where it is hatched, and that at the time of new moon immense quantities of small fish having the characters of this species ascend the rivers. In this respect they resemble the Mediterranean *Gobies*; gliding over the shingles, and through every little aperture by which they can reach the fresh water. They are easily caught in osier baskets, set for the purpose, and the negro women dig little pools on the banks where they catch them in the sands; this fishery provides occupation for several horses during many days at the mouth of the little river St. Denis.

S. Laticeps, Cuv. and Valenc. Four inches long; the head very wide and full in front of the eyes; the inner teeth of the lower jaw of nearly equal size, and six on a side; the third dorsal ray has a filament about half as long as the depth of the body; colour blackish, and unspotted; throat and belly greyish; caudal surrounded by a whitish tinge. Native of the fresh waters of the Isle of Bourbon.

S. Cynocephalus, Cuv. and Valenc. About four inches long; head flat and narrower than either of the former; of the twelve inner teeth of the lower jaw the middle two and the last two are larger than the others; general colour black, inclining to olive beneath, and its fins mostly greenish. From the Island of Celebes.

See Bloch, *Ichthyologia a Schneider*; Cuvier and Valenciennes, *Histoire des Poissons*.

SICYDIUM, in *Botany*, so called from its near affinity to the genus *Sicyos*. It belongs to the class *Monoecia*, order *Triandria*, and natural family of the *Cucurbitaceæ*. Generic character: flowers monoecious; male flowers with a five-toothed calyx, and a five-parted corolla, and three filaments: female flowers with a trifid style, thickish trifid stigma, and a few-seeded fruit.

This genus contains one species, a trailing plant, with lobed leaves, many-flowered peduncles, and yellow flowers.

SICYOS, in *Botany*, a name derived from the Greek *σικυος*, a cucumber, so called from its affinity to that vegetable. It belongs to class *Monoecia*, order *Polyadelphia*, and natural order *Cucurbitaceæ*. Generic character: flowers of separate sexes; male one with a five-toothed calyx, and a five-parted corolla; filaments three or more, probably five, disposed in three bundles: female flowers with a trifid style and a trifid stigma; fruit one-seeded from abortion, usually beset with spines.

There are about twelve species known, all annual, trailing, intratropical plants, with the habit of *Cucumis*. Male and female peduncles many-flowered, usually rising together from the same axils.

SICY-
 DION.
 SICYOS.

SIDA.
SIDE

SIDA, in *Botany*, a genus so called from a name given by Theophrastus to an aquatic plant which is believed to be analogous with the present. It belongs to class *Monadelphia*, order *Polyandria*, and natural order *Malvaceæ*. Generic character: calyx naked, five-cleft; style multifid; carpels five to thirty, disposed in a whorl around the central axis, more or less connected, one-celled, one-seeded, awned or awnless at top.

This is a truly polymorphous genus, the species differing much in habit, structure of fruit, and seeds. There are about two hundred species known; they are either shrubs or herbs with, generally, yellow flowers, principally natives within the tropics. *S. Napæa* and *S. lævis* are the only hardy perennial, herbaceous species, both natives of North America.

SIDE, *n.* } D. *siide*; Ger. *seite*; Sw. *sida*; A. S. *sid*, *side*, *latus*, *longus*, long, large, great; A. S. *side* and *wide*, *longe lateque*, large and wide. Somner. Junius *Si'DING*, *n.* } (who derives the Lat. noun *latus* from the Gr. *πλατυς*, spacious, extended,) thinks *sides* also are so called, because in *latum extensæ*: right side, left side, are in old authors called right half, left half. See HALF.

The extent from hips to shoulder, in land animals; the corresponding part in aquatic; the parts running collaterally as the sides of an animal do; parts or parties opposed; extreme parts; the coast, the edge, the margin; the part opposed to centre, back, &c.

To place, or stand, to be, at the side of; in collateral position; as pair or match;—to match, to balance, to equipoise; and also, met., to take the side or party, to espouse, to engage, to enlist in, the cause or party.

Toward þe south *side* turned þei þar flete,
þar fader & þei o chance togider gan mete.

R. Brunne, p. 59.

For þer nas knygt in mony lond, ny stalewarde man,
þat in þe o *syde* þer was; & al for a wommon.

R. Gloucester, p. 9.

And thei schulen go aboute thee and make thee strait on alle *sidis*, and caste thee down to the erthe, and thy sones that ben in thee.

Wiclif. Luke, ch. xix.

For the dayes shal come vpon the, that thy enemyes shal caste a bancke about thee, and compasse the rounde, and kepe the in on euerye *side*, and make the euen with the grounde, with thy chyldren which are in the.

Bible, Anno 1551.

But non of the knyghtis openyde his *side* with a spere, and anon blood and watir wente out.

Wiclif. John, ch. xix.

But one of the souldiers with a speare, thruste him into the *syde*, and forthe with came there out bloude and water.

Bible, Anno 1551.

The lady tho was crope a *side*,
As she that wolde her seluen hide.

Gower. Conf. Am. book ii.

It is great wonder that men caste
Her herte vpon suche wronge to winne,
Where no beyete maie be inne,
And doth disease on euery *side*.

Id. Ib. book iii.

Therefore crossing her arms, and looking a *sideward*, upon the ground, do what you will, said she, with us.

Sidney. Arcadia, book iii. p. 543.

But lyke as his seruantes were seruyd, enyn soo became of hym, soo that he myghte goo or ryde frowarde or *sydewarde*, but towarde the chapell myght he in no wise atteygne.

Fabyan. Cronycle, ch. 127.

They were compelled to fight as it were by companies and parts, by reason of bogs and marishes, with such *sideling* banks on the sides that they could keep none araie.

Holinshed. Historie of Scotland. Mogall.

At their first encounter he ouerthrew the same Loth; but immediate the vpon two Pictish horsemen running at Colgerme *sidelinge*, hare him quite through.

Holinshed. Historie of Scotland. Conranus.

For then, thy minde is ill disposde, thy bodies powers are poore, And therefore are thy troopes so weake; the souldier evermore Follows the temper of his chiefe; and thou pull'st downe a *side*.

Chapman. Homer. Iliad, book v.

————— Fly! was he a full priest?

FLX. He belly'd for it, had his velvet sleeves,
And his branch'd cassock, a *side* sweeping gown,
All his formalities, a good cramm'd divine!

Ben Jonson. The New Inn, act v. sc. 1.

————— And ever closely eide
Sir Satyrane, that glaunces might not glide;
But his blinde eie; that *sided* Paridell,
All his demesure from his sight did hide.

Spenser. Faerie Queene, book iii. can. 9.

VIT. 'Tis impossible:

Foe, nor oppressing odds dare prove Vitelli,
If Clara *side* him, and will call him friend.

Beaumont and Fletcher. Love's Cure, act ii. sc. 2.

He *sided* there a lusty louely lasse,
And with some courtly termes the wench he bords,
He fains acquaintance, and as bold appears
As hee had knowne that virgin twenty yeares.

Fairefax. Godfrey of Bulloigne, book xix. st. 77

————— As I am confident
Thou dar'st not wrong thy birth and education,
By yielding to a common servile rage
Of female wantonness, so I am confident
Thou wilt proportion all my thoughts to *side*
Thy equals, if not equal thy superiors.

Ford. Perkin Warbeck, act i. sc. 2.

AUR. ————— In my country, friend,
Where I have *sided* my superiors.

Id. The Lady's Trial, act i. sc. 1.

————— Unnumber'd as the sands
Of Barca or Cyrene's torrid soil,
Levied to *side* with warring winds, and poise
Thir lighter wings.

Milton. Paradise Lost, book ii. l. 903.

These thoughts may startle well, but not astound
The virtuous mind, that ever walks attended
By a strong-*siding* champion,—conscience.

Id. Comus, l. 210.

Kings had need beware, how they *side* themselves and make themselves as of a faction or party; for leagues within the state are ever pernicious to monarchies.

Bacon. On Faction.

All rising to great place, is by a winding staire; and if there be factions, it is good to *side* a man's selfe, whilst he is in the rising; and to ballance himselfe, when he is placed.

Id. On Great Place.

Set with pearles, downe sleeues, *side* sleeues, and skirts, round vnderborn with a blewish tinsel.

Shakspeare. Much Adoe about Nothing, fol. 112.

* Such converts are sure to be beset with diverse sorts of adversaries; as the papists and their *siders*.

Sheldon. Mirror of Antichrist, (1616.) Preface.

* I defined heresy, not merely a mistake of judgment, (though in fundamentals,) but espousing such erroneous judgment, either teaching and disseminating it, or openly supporting and assisting those that do, *siding* with them in it.

Waterland. Works, vol. v. p. 86. No Comm. with Impug. of Fund. ch. iv.

He is much offended that you do stickle and keep on foot such questions, which may be better sopited and silenced than maintained and drawn into *sidings* and partakings.

Wood. Athenæ Oxonienses, part ii. p. 332.

Man's sickly soul, though turn'd and toss'd for ever
From *side* to *side*, can rest on nought but thee;
Here, in full trust; hereafter, in full joy.

Young. The Complaint. Night 9.

Whereas the chaffering with dissenters, and dodging about this or the other ceremony, is but like opening a few wickets, and

DERITIS.

leaving them at jar, by which no more than one can get in at a time, and that not without stooping, and *sideling*, and squeezing his body.
Swift. Works, vol. iii. p. 112. *Against Abolishing Christianity*.

But lo ! the storm itself assistance lends,
While one assaults, another wave defends ;
This lays the *sidelong* alder on the main,
And that restores the leaning bark again.

Rowe. Lucan. Pharsalia, book v.

Yet all this while I have been sailing with some *side-wind* or other toward the point I proposed in the beginning ; the greatness and excellency of an heroic poem, with some of the difficulties that attend that work.

Dryden. Dedication to the Æneid.

This house is generally at the root of a tree, but not of that upon which their other dwellings are constructed ; it is formed like an irregular *sided* cone.

Cook. Voyages, vol. ii. book ii. ch. vi. p. 201.

A man o' the town dines late, but soon enough,
With reasonable forecast and dispatch,
T' ensure a *side-box* station at half-price.

Cowper. The Task, book ii.

SID'ERAL, } Fr. *syderal*, *syderation* ; It. *sidereo* ;
SIDE'REAL, } Sp. *sidereo* ; Lat. *sidereus*, from *sidus*,
SID'ERATED, } a star, or rather constellation, from
SIDERA'TION. } Gr. *ειδος*, *forma*, *species* ; *sunt enim sidera formæ sive figuræ cælestes e stellis*. Vossius. As for the misliking of trees, (called *sideratio*,) whereby they consume, wither away, and crumble to powder ; it is a thing caused only of the weather and influence of some planet. Holland, *Plinie*, book xvii. ch. xxiv.

Sideral ; starry, stellar, astral.

Siderated ; struck, blighted, blasted, (by the stars or planets.)

These changes in the heav'ns, though slow, produc'd,
Like change on sea and land, *sideral* blast,
Vapour, and mist, and exhalation hot,
Corrupt and pestilent.

Milton. Paradise Lost, book x. l. 692.

So parts cauterized, gangrenated, *siderated*, and mortified, become black, the radical moisture or vital sulphur suffering an extinction, and smothered in the part affected.

Sir Thomas Brown. • Vulgar Errours, book vi. ch. xii. p. 410.

By the contagious vapor of the very eggs themselves, producing a mortification or *syderation* in the parts of plants on which they are laid.

Ray. On the Creation, part ii. p. 351.

Sideration, a blasting of trees or plants by an easterly wind, or excessive heat or drought.

Miller. Dictionary.

Ten thousand stars adorn the glittering train,
Fall when she falls, and rise with her again ;
And o'er the deserts of the sky unfold
Their burning spangles of *sideral* gold.

Broome. Paraphrase on 43d Chapter of Ecclesiastes.

SIDERITIS, in *Botany*, a genus of plants so named from the Greek *σιδηρος*, *iron*, on account of its supposed efficacy in healing flesh wounds. It belongs to the class *Didynamia*, order *Gymnospermia*, and natural order *Labiata*. Generic character : calyx tubular, with spinose teeth ; corolla with an inclosed tube, and a bilabiate limb ; upper lip erect, entire, or emarginately bifid ; lower lip spreading, trifid, the middle lobe the broadest, and usually emarginate ; stamens didynamous, the two upper ones very short, bearing two-celled anthers, the two lower ones longer, and bearing dimidiate anthers ; style bifid at top, the upper lobe terete, truncate, and stigmatiferous at top, the lower lobe dilated, and clasping the superior one at the base, and stigmatiferous on the top and edges.

This genus consists of above forty known species ; they are herbs or under shrubs, natives of the South of Europe, colder parts of Asia and Africa ; bracteas fringed, corollas usually yellow.

SIDERODENDRON, in *Botany*, a genus so called from the Greek *σιδηρος*, *iron*, and *δένδρον*, *a tree*, in reference to the hardness of the wood. It belongs to class *Tetrandria*, order *Monogynia*, and natural order *Rubiaceæ*. Generic character : limb of calyx small, four-toothed ; tube subglobose, tetragonal ; corolla with a long, terete tube, a glabrous throat, and four bluntish, spreading lobes ; anthers four, sessile in the throat of the corolla ; style bifid at apex ; berry dry, nearly globose, two-celled, two-seeded, naked at top.

This genus is nearly allied to *Coffea*, and consists of three species, natives of tropical America ; they are trees, with simple, opposite leaves, axillary peduncles, and red and white flowers.

SIDEROLITES, in *Zoology*, a genus of *Cephalopodous Mollusca*.

Generic character. Shell with a central spire, disciform, with contiguous whorls not conspicuous externally ; the disc convex on both sides, and covered with tubercular points, the circumference margined with unequal, radiating lobes ; *septa* transverse, imperforate ; apertures distinct ; somewhat lateral.

Type of the genus, *S. calcitrapoides* ; Lamarck, *Anim. sans vert.*, p. 376. The species of this genus are all fossil.

SIDEROXYLON, in *Botany*, a genus so named from the Greek *σιδηρος*, *iron*, and *ξύλον*, *wood*, from the hardness of the wood. It belongs to class *Pentandria*, order *Monogynia*, and natural order *Sapotaceæ*. Generic character : calyx small, five-parted ; corolla five-cleft, with roundish, concave segments, having a lobe in each recess ; stamens five ; stigma obtuse ; berry five-celled, five-seeded.

A genus consisting of thirteen species, natives of Asia, Africa, and America, all evergreen trees, with simple leaves and axillary and lateral fascicles of flowers.

SIEBERA, in *Botany*, a genus so called after Henry Sieber, a celebrated botanical collector. It belongs to the class *Syngenesia*, order *Superflua*, and natural order *Compositæ-Cynareæ*. Generic character : heads heterogamous ; involucre imbricated, the scales scarious, ovate, and drawn out into a spine each, inner ones the longest, and exceeding the florets ; palea of receptacle subulate ; florets of the disc hermaphrodite, numerous, those of the ray only three, and female ; corolla of the hermaphrodite florets five-toothed, and of the female florets bilabiate, the lips unequal and two-lobed ; style in the hermaphrodite florets inclosed, of the female ones exerted ; pappus of the hermaphrodite florets of five scales, which are longer than the corolla, subulate at top, and scabrous.

This genus consists of one species, *S. pungens*, a native of the Levant ; it is an herb with the habit of *Xeranthemum* and *Chardinia*, but differs from both these genera in the spiny scales of the involucre.

SIEGE, *n.* } See BESIEGE.

SIEGE, *v.* } Fr. *siège*, *siéger*, *assiéger* ; It. *assedio*, *assediare* ; Sp. *sitio*, *sitiar*, from the Lat. *sedes*, *sedere* ; as we say—to sit down before a town.

To set or beset ; to set, place, or station, *sc.* a force, an armed force, before or around.

Siege, a setting or besetting, (with like intent ;) also a seat, a stool, literally and consequentially.

be ost withoute of France bi *segede* hem anon,

SIEGESBECKIA, in *Botany*, a genus so called in
honour of John George Siegesbeck, a German botanist.
It belongs to the class *Syngenesia*, order *Superflua*, and
natural order *Compositæ-Asteroidæ*. Generic cha-
racter: achenia beakless; rays in one series, with obso-
letely lingulate corollas.

This genus consists of four or five species, all annual,
glandular, clammy herbs, natives of America, with oppo-
site, entire leaves, and small yellow heads of flowers; in-
volucrum leaflets in two series.

SIEGE.

SIERRA
LEONE.

SIERRA LEONE.

Name.

SIERRA LEONE, more properly **SIERRA LEONA**,
is the Spanish translation of the Portuguese words *Serra*
Lioa, i. e. Lioness Mountain, the name given to a moun-
tainous peninsula extending from Cabo Ledo (Cape
Joyful) or Tagrin, now called Cape Sierra Leone, to
Cape Shilling, and the Ilhas Bravas,* (Wild Islands,) now the Banana Isles. This peninsula is bounded by
two streams; one on the North, an estuary, called the
Tagrin† or Sierra Leone River, the other on the South,
the Bangué, (Guinea Pepper,) now Kates' River. Of
this tract, the greater part is now occupied by the
British settlement, and as such, has become the centre
of civilization and legitimate commerce in Western
Africa. It is, perhaps, not very chimerical to hope
that it may hereafter be the metropolis of a powerful
State, in alliance with all its neighbours between the
Gambia and Cape Mount; under its name therefore a
short account of all the country between those two
limits may be given, as an introduction to a more
detailed account of the colony itself.

Bounda-
ries.

This peninsula is the termination of an arm or di-
vergent branch issuing from the great chain, called
Kong (i. e. Mountain) by Mungo Park, and now known
to traverse Africa in nearly a straight line from East

to West; and the Western portion of which is the
Eastern boundary of the tract now described. Its highest
point is near Timbo, in 10° 30' N. and 10° 45' W., the
capital of Fúta Jállon, from the neighbourhood of which
rivers flow in opposite directions. In Africa, as in most
other islands and continents, the direction of the coast
follows that of the highest ridges whence the streams
running towards the coast or the interior issue; (Wal-
kenaer, *Cosmologie*, p. 105. *Recherches*, p. 399.) and
as there is sufficient reason for supposing that M. Mol-
lien saw the sources of the Gambia in about 11° 20' N.
and 11° 15' W., while those of the Cape Mount River o
Pisú are probably between 8° and 9° N. and 8° and 9°
W., the Eastern boundary of the tract under considera-
tion will be formed by a line running from North-West
to South-East, and measuring about four degrees or
240 geographical miles. The greater part of this area
is occupied by the declivity of these mountains, and the
valleys traversed by the streams descending from them
to the sea; the remainder is level alluvial land, accumu-
lated near their mouths in some places to a great extent.
Of those rivers the most considerable are—1. the *Rá* Rivers.
(*Mármol*, ix. 20. fol. 30.) or Casamansa, rising probably 1. Casa-
in about 13° N. and 15° 30' W., and forming a large manza.
delta before it enters the sea, its largest mouth being in
12° 35' N. 16° 43' W. Its upper course has not yet
been completely explored, and it has been supposed to
be an arm of the Gambia; but the improbability of that
supposition is clearly shown by the result of inquiries

lately made on the spot. (*Geograph. Journal*, iii. 72.) 2. The Rio de Santo Domingo, (St. Dominic's River,) Faring,* or Cachao, which enters the sea in $12^{\circ} 5' N.$ and $16^{\circ} 25' W.$, a little South-East of Cabo Roxo, (Red Cape,) in $12^{\circ} 22' N.$ and $16^{\circ} 51' W.$ This river appears to be connected with (3.) a branch of the Rio Grande, also called the River of Jéba or Jéva, and River of the Balantas, where it enters the sea in $12^{\circ} N.$ and $16^{\circ} 20' W.$; but the course of these rivers is very imperfectly known, as their marshy and thickly wooded banks exhale and retain pestiferous vapours which render the task of exploring their course extremely hazardous. 3. The Rio Grande, Bulóla, Kumba, or Kabú, one mouth of which, in $11^{\circ} 30' N.$ and $15^{\circ} 27' W.$, is opposite to the island of Bulam or Bulama, rises in about $11^{\circ} 40' N.$ and $11^{\circ} 35' W.$ (Mollien, ii. 70.) Its course is nearly West North-West, and it descends from the last chain of hills into the alluvial plain, in about $11^{\circ} 30' N.$ and $12^{\circ} 30' W.$ (Mollien, ii. 196.) 4. The Rio de Nuno Tristão, sometimes called Nuñes or Nunhes, (Núnyez,) and named from Nuno Tristram, one of the early Portuguese navigators, who was assailed and killed by the natives there in 1446, (De Barros, i. 118.) though wide at its entrance, has neither a long course nor any considerable depth beyond Kakandé, as the hills here approach nearer to the shore than they do further Northwards. Its source is probably near $11^{\circ} N.$ and $13^{\circ} W.$ The heights here come down to the sea; and behind Cape Verga, the extremity of a small island in $10^{\circ} 18' N.$, $14^{\circ} 23' W.$, the mountains rise immediately from the beach, and divide the alluvial tract watered by the Nunhez, from that which is formed by (5.) the Rio Pongo or Pongos,† which descends to the South-West from the high lands of Fúta Jállon, and was formerly one of the great outlets for the slaves brought down to the coast by the Fullas of that country. Near Tumbo Point, Cabo de Sagres of the Portuguese, off which lie the Ilhas dos Idolos, (Idol Islands,) in Spanish Islas de los I'dolos, shortened by our seamen into the Isles de Loss, the land again rises to a great height near the coast, and the Sangarí mountain, a very conspicuous landmark, lies between the (6.) Kokulo or Kakanji, which enters the sea by two arms—the Debrikka and Dembia—and (7.) the Mánia. 8. The Kolanko (Caranca of the Portuguese) and Kabá which unite near the sea form the Great Scarcies, *i. e.* Rio das Cárceres, or das Casas. 9. The Sierra Leone River, an estuary formed by the united streams of the Porto Logo, Rokél, and Bense or Bunch. 10. The Sherboro or Selbole, one of the arms of the stream called in the interior Kamaranka, which forms a large delta near

* Farim, according to the Portuguese system of orthography.

† The coast between the mouths of the River Núñez and Sierra Leone is ill laid down in the older Maps, and seems to have been little known to the earlier navigators; so that it is difficult to ascertain the correspondence between the rivers' names in their writings and those of modern writers. The territory of Serra Lioa or Bolmberre, (*i. e.* Bolam and Bure,) in the XVIth and XVIIth Centuries, extended to Cape Verga and was watered by the Rio das Piedras, (Stone River,) Pichel, Piodas Palmas, Pogone, (Pongos,) Cagranca, Kassas, (Das Casas,) Karokane, Kapar, Tambasine, Tagaring or Mitombo, River of Sierra Leone or Bange, (*i. e.* African pepper, *Piper Æthiopicum*.) (Blomert in Dapper, ii. 390.) The names of the rivers of the same coast, as given in our latest Maps, are Rio Pongo or San Domingo, Dulinka, Debrika, and Dembia, branches of the Kakanji, (Kokulo,) Tanáni, Mánia, (Capor?) Morebiá, (Moribáya?) Kissi or Fúricária, (San Vincente?) Tanna, Malakúri on North side of Salátuk Point, the Great Scarcies (Das Cárceres) or Kolantang, Little Scarcies or Kabba, and the Sierra Leone River, an estuary formed by the Rokél and Porto Logo.

the sea. 11. The Rio das Gallinhas, (Poultry River,) the Western boundary of the American Negro settlement called Liberia. 12. Pisú* or Cape Mount River, which has a South-Western course and descends from the Southern declivity of the great chain of Kong.

The whole of this tract, except on the ascent of the mountains, is extremely fertile and yields spontaneously the most valuable tropical produce. The hills abound in iron; but the precious metals are not, it seems, found in this region to the South or West of Bambúk. The lower lands, which in many places leave a large, nearly level belt between the mountains and the sea, are at the foot of the hills, and on their lower declivities covered with a dense forest, where the abundance of thorny creepers often renders the thicket impervious without a continual application of the hatchet; while the self-rooting mangroves obstruct the passage of the smaller streams, and by preventing a free circulation of the air, render the navigation of them a most hazardous as well as laborious task. To these impediments, which present so serious an obstacle to the progress of discovery, two others must be added, which, together with them, abundantly suffice to account for our ignorance of this country beyond the coast, though the latter has been frequented by Europeans for nearly four centuries. Those additional impediments are the subdivision of the whole into petty independent States, and the consequences of the slave-trade. These may be termed the moral, while the former are the physical obstacles to the progress of our acquaintance with this part of Africa, in many respects the most highly favoured portion of that continent, since it is blessed with abundance of water, and is screened by lofty mountains from the scorching blasts of the desert, which are scarcely rendered tolerable by their passage across the Mediterranean. But of these two impediments the one is almost entirely the cause of the other, as the evidence respecting the origin and consequences of the slave-trade abundantly demonstrates. Whenever petty warfare, and its concomitant kidnapping, become the readiest modes of procuring a constant supply of ardent spirits, and such European goods as are coveted by savages, war is the most profitable trade which a chieftain can carry on, and he has no longer any motive for encouraging industry among his dependents, or maintaining peace with his neighbours. Hence the minute subdivisions and mutual jealousies of all the Tribes scattered along these coasts. Hence, likewise, their unwillingness to suffer any communication with the interior. These causes, therefore, have checked cultivation, and often reduced large tracts to a wilderness: so that what with the hazard of passing through a disputed territory, and the impossibility of obtaining provisions in an uninhabited tract, the explorer has detention or starvation to apprehend at every stage of his journey. This perpetual state of warfare, so congenial to the ferocious temper of some of the native Africans, has likewise occasionally caused an entire displacement of one or other of their Tribes, so that the accounts of travellers who visited the country at distant periods are not always easily reconciled, and it is perhaps more surprising that they should be reconcilable at all than that such discordances should occur.

* Pissou (Pisú or Pisou) is perhaps the Plizoge (Plizohh or Plizokh) of Blomert, in Dapper; (*Afrika* ii. 15.) if so, the Rio Novo of the Portuguese, his Magwibba, must be the Manna of modern Maps.

The following are the various nations in this part of Africa, as far as can be ascertained:—1. The Faluppos, Felúps, or Flúps, who are scattered over the country between Kachaó and the Gambia, extending from the mouth of that river to Balóla, at the confluence of the Kasamansa and the Rio de San Domingo. (Astley, ii. 88. 116.) Many of them were, in the latter end of the XVIIIth Century, very wild; particularly those on the North side of the Zamené, or Kasamansa. Their country extends only about 20 miles inland. They appear now to occupy a territory between the Gambia and Kasamansa, extending inwards about 150 miles, and retain their independent, warlike habits. They are pastoral rather than agricultural, and, no doubt, devoted to fetishism,* that form of idolatry which, like the circular conical hut, seems to prevail throughout Africa, and leads them to reverence any remarkable objects in nature, trees, rocks, wild beasts, &c. Among the Flúps, the hair or wool, which is longer than that of other negroes, is drawn up in a pointed tress on the crown of the head, and their beard tressed into a sort of cue something like that of the ancient Egyptians. Golberry (*Voy.* ii. 409.) has given a figure of one of their armed warriors. Another people, named Airieos, are mentioned by the early writers as living in the same country as the Faluppos or Flúps. To the East of the Felúps, and intermixed with them, on the South side of the Gambia, live the Banyons, a brave, civilized, and industrious race, (Labat, v. 18.) to whose women M. Brue, whose papers were edited by Father John Baptist Labat, ascribes the singular way of keeping themselves quiet, which is attributed by earlier travellers to their neighbours the Papels, on the Rio de San Domingo. They are Pagans as well as the Felúps. Of their language nothing is said. The Kasangas, who occupied the banks of the Kasamansa, and are mentioned by Jarric, (v. 44.) were probably Flúps. Their King was subordinate to one of his neighbours, styled Jashem, who was a vassal of the Mandinga sovereign. They held a solemn festival, and made offerings at midnight, on the 29th of November, to China, their god, when their arakani or priest wore a blue silk veil, on which a bundle of twigs and the bones of those who had voluntarily offered themselves up to this idol were painted. (Dapper, i. 425.) 2. Between the Rio de Santo Domingo and the Rio Grande, the coast is possessed by the Papels or Papals, also called Biramas, Buramos, Bulams, or Bolms, from the low, swampy land which they inhabit, whence one of the adjacent islands has the name of Bulam or Bulama. These people are idolaters, who file their teeth to a point. Their women, when at work, fill their mouth with water "to keep themselves from prating." (*Om haar niet tot praa-ten te wennen*, says Dapper, i. 426.) They are doubtless the Bulloms of modern writers, who at present inhabit the Northern bank of the Sierra Leone River. The Timanís, whose country is called Timna or Timana, (Dapper, ii. 4.) occupy the mountainous peninsula of Sierra Leone Proper, and are probably derived from

the same origin, as their languages, though now widely different, seem to have some affinity. But Bolm was formerly the name of the country near Cape Mount, so that the Tribes called Bulams probably extended at that period further along the coast than at present. 3. The peninsula between the Rio Grande and the River of Jeba or Jeva is inhabited by the Balantas, a negro race differing in language (Mollien, ii. 259.) and features from their neighbours, and said to exceed them all in ignorance and ferocity; but this evil reputation may have arisen from their shyness and jealousy through fear of being kidnapped; for their rancour against white men, to whom they are said to give no quarter, (Labat, v. 189.) is no proof of any defect either moral or intellectual, when the character and conduct of the only Europeans with whom they have any intercourse are taken into the account. Their freedom from the practice of enslaving their countrymen, a distinction unknown throughout Western Africa, except among the industrious Krú-men, certainly appears to justify a more favourable estimate of their character. A girdle made of rushes forms their only clothing, and salt is the principal produce which they bring to market; but their industry is attested by the appearance of their country, and the great quantity of grain, vegetables, cattle, and poultry, with which they supply the shipping and neighbouring factories. (Labat, v. 193.) Their favourite dish is said to be a fricassee of rats. (Mollien, ii. 259.) They are bold seamen and daring warriors, as is manifest from their attack on a French brig in 1700, which they did not give up till after a six hours' engagement. They also defeated the Portuguese when they attempted to take possession of their country in 1695. A belief that their soil produces gold gave rise to this invasion; which, being foolishly undertaken in the rainy season, was the more easily repelled. Their government seems to be patriarchal, each family or community obeying its own head; but they formerly, at least, were tributary to the King of Kasamansa. (Labat, v. 194.)

4. On the Southern side of the Jeba branch of the Rio Grande, between it and the main stream, are the Biafares or Jolas, a negro race possessed of several petty Principalities. They are the handsomest of all the negroes on this coast, industrious, obliging, and peaceful. Their dress, which consists of large loose drawers, and a vest with wide sleeves, and their manners, which are courteous and engaging, give them a great resemblance to the Mandingoes, from whom, however, they differ entirely in language and religion; for they are Pagans, and have a great dislike of their Mohammedan neighbours. Biguba and Balola, on the Rio Grande, are their principal towns. Their Eastern boundary is formed by the mountains of Koli, a granitic chain crossed by the Rio Grande near Kadé, nearly in 11° 50' N. and 13° 30' W. (Mollien, ii. 202. 260.) The Bassarés inhabiting those mountains are said to be can- nibals.

5. Between the Rio Grande and the Kompúni River are the Lantímás or Landamás, to the South of Balóla, and on the banks of the Rio Núnhez. They appear to be joint occupants with the Nalús, or Nalubés. Fetishism is their religion, and they are tributary to the Fúlas at Lábe. Their secret association, called Simo, is the counterpart of the Pára of the Bulamo, (Winterbottom, i. 135.) and something like the Bellipáro of the Kwoyas, (Dapper, ii. 43.) near Cape Mount. The Simo, who is rarely if ever seen, resides in the Simo.

* The Portuguese word *feitico*, "a charm or amulet," corrupted by the negroes into *fetisho*, is the origin of this term, by which this peculiar species of superstition is very conveniently expressed. It consists more properly in sacrifices and acts of devotion to propitiate evil than adoration or gratitude for good. Worship, in a strict sense, seems to be hardly practised by any African Tribe. Their rain-makers and other diviners might well be called *feiticeiros*, i. e. sorcerers, by the Portuguese.

midst of the forest, whence he issues his orders, which are implicitly obeyed. When he quits his retreat, he is usually concealed under some grotesque disguise (see Gray, pl. iv. p. 56.) made of skins or palm leaves. His approach is announced by a horrible din of horns, drums, and other rough music, and all his followers are armed with whips, to scourge whomsoever they think fit. He is supplied with rum, rice, and other necessities or luxuries by the parents who wish their children to be initiated into his mysteries. From twelve to fourteen years is the age at which they can be admitted among his disciples, and circumcision is the first initiatory rite. They are then dressed in a petticoat of palm leaves, and live in the woods, in huts made of boughs, under the guardianship of the Simo. This lasts for eight or nine years; and at the close of their novitiate, they are received by their parents with great rejoicing, fine clothes, plenty of sheep-bells, and a dose of rum for their chief, who on these occasions allows himself to be seen. If the parents cannot repay him sufficiently, their children return with him into the woods. They come out, however, at the approach of the rainy season to help in clearing the ground. Women are the great object of their displeasure, and are unmercifully flogged if they venture into their retreats. The adepts plant a stake or tree at their doors, from the top of which they hang a white or coloured rag: to this stake, which they call Simo, they pay a superstitious reverence, and pretend to the power of conjuration by its aid. It is the Simo who decides all causes, and condemns to the red-water ordeal* those who deny their guilt. No battles are suffered to take place near the Simo's abode, and the suppliant who brings his offering must turn his back and cover his face with his hands: the Simo then pronounces his blessing, and sprinkles his votary with dust. Polygamy is allowed, and adultery common; but when discovered, it is punished by the sale of the culprit to the slave-dealers. Marriages are arranged with the parents of the bride, whose consent is never asked; but the proofs of her virginity are publicly displayed. An ox is sacrificed on the seventh day after the birth of a child, and the mother then appears in public for the first time after her delivery. A sheep is killed on the day of a funeral, and the grave "watered" with its blood; its flesh being eaten by all the neighbours of the deceased. But a much greater festival is held in his honour, one month after his interment, and the public banquets are then continued for several days. Palm-wine, the fermented juice of a plum called kóra,† jing-jing-dí the fermented juice of a cathartic root of a species of rhexia, and the bark of a tree which M. Caillié could never meet with, all furnish the Landamás with agreeable and inebriating liquors. These Tribes are very indolent, but skilful in collecting the wax and honey which are made by the innumerable swarms of bees which almost drive them out of their cabins. (Caillié, i. 227—240.)

who are mixed with the Landamás as herdsmen and cultivators, and famous for the dye and texture of their cotton cloths, which are much used by the Fullas at Tímbo. (Golberry, ii. 228.) Their territory, which extends from Kakandé Southwards, is very woody, and abounds in elephants, which they destroy by setting fire to the brushwood and thickets. Ivory is one of their chief articles of barter. (Mollien, ii. 260.) To the South, and perhaps mixed with the Naluwés or Nalús, are the Vagras, Vagás, or Bagós,* and once masters of the whole coast from the Núnhez to the Dembia and Mount Sagarí. They are Pagans, and, but for their vicinity to the sea, which enables them, when attacked, to withdraw to the adjacent isles, would have been reduced to vassalage by the Fullas. They differ greatly in manners from their neighbours the Landamás, and are hospitable and industrious. Their soil is alluvial, extremely fertile, and well adapted for the production of rice, which they cultivate with skill, furrowing and draining their fields nearly as is done in Europe; but, as among other savages, all the field labour is done by the women. They, as well as the men, are nearly naked, a mere strip of cotton cloth twisted round their waist and between their legs being their only clothing. A few beads form all their finery; the men wear a copper nose-ring, and several rings in their ears; and they shave the fore part of the head, but the women, while young, shave the whole of it. Their woolly hair is profusely greased, as well as their bodies, with palm-oil. A poniard and buckler of elephant-hide are their principal means of defence in war. They are courageous, and kill instead of selling their prisoners. Their government is patriarchal, each family forming a separate community. Fetishism is their religion, and they have a spiritual chief or Simo, but he is rarely consulted. Though pastoral as well as agricultural, they do not milk their cattle. In the manufacture of salt from the mud left bare at low water, their women are very expert; and in the rainy season both men and women cover their heads with a piece of mat. Their children are affianced when only seven or eight years old; the parents exchange daughters, and the betrothed girl goes to live in the house of her future husband. The marriage is celebrated as soon as the girl ceases to be a virgin; usually when she is eleven or twelve years old. An ox is slaughtered, and great feasting ensues; for the Bagós are very fond of eating and drinking. Parturition appears to be attended with scarcely any pain or debility. The woman delivers herself in public, carries her infant to the river to wash it, and then resumes her usual business. Polygamy is practised, but not to so great an extent as among the Landamás. Sacrifices are made at births and deaths; and when the head of a family dies all his treasures, i. e. a few old clothes procured from Europeans, are burnt; a hole six feet deep is dug before his bed-place, and his corpse is buried in it in an upright posture. A fire is lighted over it every evening, and his family talk to him, supposing that he hears what they say. In their persons, and especially in their cookery, the Bagós are very dirty; dried fish swimming in palm-oil, mutton with the skin and entrails all hashed up together, snakes, lizards, and monkey-meat are their greatest dainties; and all are washed down with copious draughts of palm-wine or rum, if it can be got. They are passionately attached

(Caillié, i. 240—249.)* They have been driven to the coast, and nearly extirpated by their warlike and ambitious neighbours the Súsús. (Winterbottom, i. 5, 6.) That people has established itself on the River Mánia, South of the high lands of Sangarí, and a colony of Mandingás occupies the bank of the Kissi or Fúrikáriá, formerly San Vincente, nearly as far as the Great Scarcies, (Rio dos Cárceres, *i. e.* Prison River,) where the territory of the Timanís begins. The Bulams, under the name of Bolm,† if that be not rather the appellation of the country than the people, again appear at the delta of the Kamaranka formed by the main branch of that river, the Kukboró, and the Bagrú, as far as the Shebar River, which is joined by the Búm kittam, the Northern and Western boundary of Turner's peninsula and the country called Kittam or Kedham. That territory is terminated by the Rio das Gallinas, (Poultry River,) between which and the Plizokha or Pisó are the Vaís or Faís, now half Muselmáns, and the Southernmost in this part of Africa, on the borders of the American negro settlement of Liberia. (*Miss. Reg.* 1823, p. 234.)

Sussoos. Of the nations at more than a small distance from the coast very little, as was before observed, is known. Between the maritime region and the sea, there is generally a belt of forest from 10 to 20 miles in breadth, which forms an almost impassable barrier. During the prevalence of the slave-trade it served as a natural defence to the more industrious and peaceful Tribes inhabiting the interior. Of these the *Gurrahs* and *Condoes*, first known to their American neighbours in 1828, six years after the establishment of the colony at Cape Mesurado, (Cape Moderate,) inhabit a country about 150 miles North-East of Liberia, and are in a high state of civilization in comparison with the Tribes near the coast: they have horses and other domestic animals, are acquainted with all the necessary arts of life, and, being Mohammedans, use the Arabic as their written language. Their territory is populous and well cultivated; regular fairs are kept, and internal commerce, incompatible with a constant state of warfare, is maintained. But these people are manifestly the Galas and Hondós of Blomert, (Dapper, ii. 16.) whose country lay beyond the great wood, eight or ten days' journey in breadth, to the North and North-East of the Vaís near Cape Mount. They were then, in the middle of the XVIIth Century, idolaters. Immediately to the North-East of the Vaís there is marked in the most modern Maps a country called *Kotchi*, and on the river Magwibba or Rio Novo a town named *Couscea*, which seem to be the same as *Koja*,‡ *i. e.* Quoja, if Dapper's authorities followed the Portuguese orthography. Further above in the interior were at that time the *Folhyas* and *Mendi manau*, names so like those of the *Fullas* and *Mandingás*, that it is probable those were the nations thus named. Liban,

to the North of Kittam and Bolm, (Bulam,) is probably identical with the Limbá to the West of the Mandingo State of Kúrankó, which is called Liban by Mollien. On the other side of the Kabá or Great Scarcies (Dos Cárceres) are the Súsús, who under the name of Súzís (a corruption of Súsú) reach the sea between the Kissi river and Mount Sangarí. This widely extended people, which is perhaps of the same race as the Mandingás, has in latter ages been frequently displaced by them. The Súsús were well known to the learned and philosophical Arab historian of Africa, Ibn Khaldún, from whose works a history of their intercourse with the Muselmáns might be obtained. The country in which the Kamaranka rises, is called Kissi, and is separated by the chain of Loma from Sán-gará, where the Jálíabá or Kwará rises, in about 9° 25' N. and 9° 45' W. Between Kissi and Fúta-Jállon lies Súlímána, a territory measuring about 60 miles each way, and bounded on the East by the Jálíabá. The Súlímás, a branch of the Mandingá stock, inhabit a mountainous but fertile tract of country, and, though warlike, are kind-hearted and hospitable. Their King is a Moslim, but most of his subjects are Pagans. They are fond of music, poetry, and oratory, and their gelle-men or minstrels are their historians, as the troubadours were in Europe in the Middle Ages. (Laing, p. 346, *et seq.*) If the British Government at Sierra Leone can succeed in establishing a permanent trade with this people, and turn the attention of themselves and their neighbours from war to profitable industry, their territory will offer a promising field to the missionary, as "the present state of religion amongst them," says Captain Laing, (*Trav.* p. 387.) "appears singularly favourable for the introduction of Christianity." To the North-West of the Súsús, between the Kolentang or Scarcies and the Rio Pongos, there is an area of about 100 miles square, probably inhabited by Mandingás, of which no account has yet been published. To the North of this are the high lands of Irnanké, inhabited by pastoral Fullas. This tract, which appears to be the Western declivity of the great chain of Kong, (*i. e.* Mountain,) gives birth to the Rio Grande and all the rivers which enter the sea to the South-West as far as the Kókulo,* which discharges its waters into the sea by two arms, the Debrikká and Dembia, at the foot of Mount Sangarí. (Caillié, i. 276.) These Fullas have aquiline noses, a copper-coloured hue rather than black, scarcely any peculiarity of the genuine negro, except woolly hair. They are well made, and have a dignified deportment. Their dress consists of a cotton shirt and short loose trousers; but as they habitually grease their bodies with butter, their odour is insufferable. Their women wear necklaces of amber, and take much pains to dress their heads with coloured glass beads. There are also many Jallón-kést† scattered over this country. They are the original inhabitants of Fúta Jállon, reduced to a tributary state by the Fullas, in consequence of their refusal to embrace the faith of Mohammed. They are mild and hospitable, and have a dialect peculiar to themselves, though they can all speak Mandingo. To the North-East of Irnanké, enclosed by a large bend of the Kumba or Rio

Grande, is the little State of Tenda Mayé, flat and sandy, but fertile and thinly peopled by an industrious race whose language is said to differ from that of all their neighbours. They are gentle, but improvident; most of them are Pagans, and tributary to Fúta Jállon. Their woods have fine timber trees, particularly the Bentang, (*Bombax Ceiba*), of which the long canoes used in the Gambia are made, and the tîr, (*Elæis Guineensis*), which supplies the negroes with oil. Very excellent iron and salt are also obtained to the South-West of Kadé, capital of this little territory. (Mollien, ii. 207—9.)

The country bounded by the Gambia, Kasamansa, Rio Grande, and Tenda, is called Kabu, whence the Rio Grande receives that name through a considerable part of its course. This tract is level and has a fertile soil; but as the periodical rains continue from May to October, while the winds are scarcely felt, its atmosphere is very unhealthy. There are many thick forests, but much ground is used for the cultivation of rice, maize, and millet, (*Sorghum saccharatum*.) Most of the inhabitants are Mandingós, whose language is predominant; but they are pilferers, insolent, inhospitable, and insatiable. Both they and their Fulla neighbours in the adjoining Fulla kondas, (Fulla villages) are Pagans, so that these defects in their character cannot be ascribed to the influence of Mohammedanism; but the Fullas, emigrants from Salum on the other side of the Gambia, have not those bad qualities, and it is to them that the traveller must look for aid in his journey. Their villages form a long wide street, and their brandy made from honey, and constant supplies of wax, grain, and game, make them the most active traders as well as the best friends to the stranger, but incessant feuds between contiguous villages render it difficult to pass through their country in safety.

Off the mouths of the Rio Grande, for as before remarked it enters the sea by an extensive delta reaching from 11° 30' N. and 15° 32' W., to 12° 5' N. and 16° 30' W., and its various branches embrace a large portion of the coast, there is a double group of islands called the Bijugas or Bissagos. This appellation is derived from the people inhabiting them, who were anciently called Jagos-Jagos, if Jarric (l. 5.) can be trusted; their name, however, is spelt in so many different ways, that it is difficult to determine which is to be preferred. They are called Bigiohos by Mármol, (ix. 19. fol. 30. b.) Bijagos by Jarric, and Beseghi by Ca da Mosto, the earliest writer by whom they are noticed; it is probable therefore that Bijago, softened into Bizago or Bisago, is the true name of the people by whom these islands were occupied when discovered by Pero de Cintra in 1462. The whole of this archipelago is divided into two parts, separated from each other by a channel of considerable width. The first, which is close to the main-land, and is distinguished by the name of "the Bisoós," consists of six large islands, Játa, Búsi, Bisao, (*i. e.* Bisago without the guttural,) Biafara, Mántera, and Bulam, together with several islets. The second division, lying to the South and West of the first, is exclusively termed "the Bissagos," and comprehends fourteen islands besides islets. Beginning from the North-West, they are Warango, Karáche, Corbella or Kazegu, Balachoka, Ilha das Gallinhas, Káuyabak, Arangena or Orango, besides the smaller islands called Papagayo, (Parrot,) Fermoso, (Beautiful,) Mel, (Honey,) and Cavallo, (Horse.)

The largest and best known of the first division, is the Island of Bisoó, nominally under the dominion of
